2023 North Florida Regional Water Supply Plan

First Addendum

November 12, 2025

The St. Johns River Water Management District (SJRWMD) and Suwannee River Water Management District (SRWMD) (collectively, the Districts) approved the 2023 North Florida Regional Water Supply Plan (2023 NFRWSP) in December 2023. Except as described below, this addendum incorporates by reference the 2023 NFRWSP. It has been prepared for the purposes of updating projects listed in Appendix K of the 2023 NFRWSP. The project descriptions for the updated water supply development, water resource development, and conservation projects are included in the updated Appendix K. The revised information contained within this addendum is essential in the Districts efforts to develop technical assistance documents for local governments to use in updating their comprehensive plans to address water supply issues, including the identification of alternative and traditional water supply projects necessary for meeting the water supply needs within their jurisdictions.

This first addendum appends the 2023 NFRWSP. Following are enumerated changes to the 2023 NFRWSP associated with this addendum.

Water supply development (WSD) projects: Appends the list of WSD projects, beginning on page 79 of the 2023 RWSP, to include an updated total of 60 projects with a total estimated benefit from these projects of 97 million gallons per day (mgd) at a total capital cost of \$1.3 billion.

Water resource development (WRD) projects: Appends the list of WRD project options, beginning on page 82 of the 2023 RWSP, to include an updated total of 24 projects with a total estimated benefit of 84 mgd at a total capital cost of \$1.9 billion. This list includes the Water First North Florida project. Water First North Florida is a 40 mgd project that is currently in the planning phase. Reclaimed water from the JEA Buckman and Southwest Water Reclamation Facilities will be passed through a wetland treatment system to further reduce nutrients before being pumped to strategically located aquifer recharge site(s) in the region. Treatment wetland and recharge facility siting investigations are underway. Water First North Florida will provide regional recharge to the Floridan aquifer. In addition to these regional benefits, when fully implemented, this project has the potential to increase flows at Lower Santa Fe River at Hwy 441 near High Springs and the Ichetucknee River at Hwy 27 near Hildreth by up to 17 cfs and 14 cfs, respectively. The estimated construction cost for the project is \$1.1 billion, not including land acquisition, easements, permitting or operation/maintenance costs. The project will provide sufficient benefits to the LSFIR MFLs to offset the impacts from current and projected 2045 water use.

Water conservation (WC) project options: Appends the list of WC projects, beginning on page 87 of the 2023 RWSP, to include an updated total of 32 projects with a total estimated benefit from these projects of 36 mgd at a total capital cost of \$83 million. This updated list includes the Florida Water Star Silver Plus project. The Florida Water StarSM (FWS) Silver certification program has been identified as a potential conservation program that would be beneficial in achieving the LSFIR MFLs. The FWS Silver certification program includes indoor, landscape, and irrigation requirements to reduce residential water consumption. Utilities have also been including an additional element to their FWS Silver certification program for outdoor use by limiting the provision of water for irrigation to the front and side yards only – FWS Silver Plus.

The Districts completed an assessment of the costs, water savings, and benefits of implementing these two programs for all new single-family, public supply customers in the Partnership area beginning in 2030. A FWS Silver certification program, at a 100% participation level, initiated in 2030 would reduce the 2045 public supply groundwater demand of 269.3 mgd by 2.6% or 6.9 mgd at an increased construction cost of \$1,400 per home when compared to traditionally built homes. The increased costs include indoor and outdoor BMPs and inspection costs. A FWS Silver Plus program, at a 100% participation level, initiated in 2030 would reduce the 2045 public supply groundwater demand of 269.3 mgd by 6.3% or 17 mgd with an overall savings in home construction costs of \$1,171 per home due to elimination of backyard irrigation system installation. Customers living in homes built to FWS Silver or Silver Plus standards could potentially save on average \$360/year to \$920/year in potable water and sewer costs.

Appendix K: Appends/replaces Tables K1, K2, and K3 in this appendix. These tables include details of the updated WSD, WRD, and WC projects, respectively, included in this addendum.

2017_20	NA	SJRWMD	Alachua	Reclaimed Water (for potable offset)	Innovation District Reclaimed Water system expansion	GRU	This project consists of expansion of reclaimed water distribution system pipelines to offset use of potable water for industrial cooling and irrigation in the Innovation District as it develops. RCW comes from MSWRF (rather than from KWRF)	Proposed	2035	0.11	NA	\$1.50	\$0.004	\$2.50
2023_26	NA	SJRWMD	Alachua	Reclaimed Water (for potable offset)	RCW Extension to Future University of Florida Golf Course	GRU	This project consists of an extension of RCW transmission and distribution to future UF Golf Course and includes upgrades to RCW pump station and RCW transmission backbone which is needed to support this project. Project site has not been identified.	Proposed	2026	0.70	NA	\$1.80	\$0.050	\$0.67
2017_23	NA	SJRWMD	Alachua	Reclaimed Water (for potable offset)	Reclaimed Water System Expansion into New Neighborhoods	GRU	This project consists of potential future expansion of RCW distribution system into new neighborhoods	Feasibility Review	2045	0.35	NA	\$6.50	\$0.01	\$3.29
2023_28	NA	SJRWMD	Alachua	Reclaimed Water (for potable offset)	RCW Storage Tank & Pumping Upgrade	GRU	This project consists of a RCW storage tank needed to support buildout of Brytan and extension of RCW into future new neighborhoods. Conserved/AWS benefit nominally estimated at 500,000 gpd based on the approximate sum of the volume from the 2 projects this project supports (Brytan RCW Expansion + RCW Expansion to New Neighborhoods). 2023_2	NA	SJRWMD	Clay	Reclaimed Water (for potable offset)	Regional Reclaimed Storage Reservoir (build as 200MG)	CCUA	Reclaimed water storage - This project consists of creation of wet weather storage to be used during dry season peak demand. Conceptual project assumes one or more large storage ponds (60-200 MG) for seasonal storage of surplus reclaimed water (4 months) to meet peak demand shortages at a minimum of 1 mgd delivery from ponds.	Feasibility Review	2035	1.0 - 2.0	NA	\$100.00	\$0.183	NA
2023_3	NA	SJRWMD	Clay	Reclaimed Water (for potable offset)	Reclaimed Storage Tanks	CCUA	Reclaimed distribution storage - This project consists of seven reclaimed ground storage tanks over five years (5.6 million gallons total). Additional reclaimed storage capacity will allow the utility to store more treated water during peak hours rather than discharging to surface waters. This will also reduce the use of augmentation well and maximize the use of RIBs.	Planning	2029	5.60	NA	\$13.11	\$0.23	NA
2023_4	NA	SJRWMD	Clay	Reclaimed Water (for potable offset)	Reclaimed Transmission Optimization for Isolation Projects	CCUA	Transmission system optimization to maximize reuse delivery - This project consists of four projects that will install transmission pipelines to isolated transmission and distribution systems. In conjunction with the Reclaimed Storage Tanks and SCADA projects, this will allow the utility to store more treated water during peak hours rather than discharging to surface waters. This will also reduce the use of augmentation well and maximize the use of RIBs. The Transmission/SCADA/Storage tank suite of projects collectively will position CCUA from an approximately 70% reuse utility to nearly 100% reuse this decade. This represents 2-3 mgd of additional beneficial reuse by the end of the decade.	Planning	2025	2.0 - 3.0	NA	\$8.51	\$0.00	NA
2017_27	NA	SJRWMD	Clay	Reclaimed Water (for potable offset)	Lake Asbury Reclaimed Mains Expansion	CCUA	This project will expand the reclaimed distribution system with over six miles of new reclaimed distribution mains in the Lake Asbury Master Planned Area (LAMP A). The expansion is expected to serve the equivalent of an additional 8,800+ single family residences.	Design	2029	NA	NA	\$8.51	\$0.00	NA
2017_23	NA	SJRWMD	Clay	Reclaimed Water (for potable offset)	Peters Creek WRF, Ponds, Reclaimed Storage & Pipeline (formerly Green Cove Regional RW WTP)	CCUA	This project consists of a new 1.5 MGD AADF Advanced Nutrient Removal WRF producing public access quality reclaimed water, 1.5 MGD wet weather storage ponds, approximately 0.8 MGD onsite reclaimed augmentation, 0.5 MGD RIBs for alternate discharge, and reuse water transmission pipes from the PC WRF to the Governors Park service area. The Peters Creek and Governors Park Reclaimed facilities are expandable, and will ultimately serve approximately 50,000 ERCs at buildout. Related to Project No. 2023_5 and 2023_10.	Construction/Underway	2024	1.50	NA	\$70.58	\$1.91	\$6.87
2023_10	NA	SJRWMD	Clay	Reclaimed Water (for potable offset)	Governor's Park Reclaimed Storage and Pumping	CCUA	This project consists of a new reclaimed distribution facility to serve the Governor's Park service area. The facility will include a 0.750 MG ground storage tank and high service pump station. The facility will receive water treated to reclaimed standards from the Peters Creek WRF. Related Project No. 2017_23	Construction/Underway	2024	0.75	NA	\$5.37	\$0.26	NA
2023_11	NA	SJRWMD	Clay	Reclaimed Water (for potable offset)	Saratoga Springs Reclaimed augmentation well, Storage and Pumping	CCUA	This project consists of a new reclaimed distribution facility to serve the Central Clay County service area. The facility will include a 0.750 MG ground storage tank, high service pump station, and an augmentation well. The facility will receive water treated to reclaimed standards from the CCUA Mid-Clay WRF.	Construction/Underway	2024	2.30	NA	\$6.18	\$0.81	\$1.15
2023_17	NA	SJRWMD	Clay	Reclaimed Water (for potable offset)	Reclaimed SCADA System Optimization	CCUA	This project will optimize use of reclaimed water system by use of SCADA and programming improvements to the reclaimed distribution system. These improvements will include operational changes and infrastructure additions (e.g. additional flow meters) to optimize the use of reclaimed water and reduce the use of water from augmentation wells. The Buckman wastewater influent contains wastewater discharges from a significant number of industrial customers. Prior to implementing a project for treating Buckman WWTF effluent as a supply for aquifer recharge, a pilot study is necessary to determine if pre-treatment with ozone is effective in breaking down industrial chemicals sufficiently to facilitate assimilation of the organic contaminants in the treatment wetland. The pilot study will be conducted over a two-year period following construction of the pilot wetland basins and appurtenant pilot components. A minimum of 6 months will be required to allow the wetland plants establish. Cost to design/permit/construct \$4.2M and 2.825 for monitoring/sampling/lab analysis/report. 2025_17	NA	DEP	All Counties	PS and CII Conservation	The Florida Water Loss Program	DEP	The Florida Water Loss Program (FWLP) is providing free water loss audit training and water loss control technical assistance to utilities throughout Florida. Building on the success of the previous statewide effort to tackle water loss, this enhanced program is designed for both new learners (those new to water auditing or loss control) and advanced learners (those with prior audit submissions through the program). What's being offered: Remote webcasts recapping the 2023-24 program highlights and an intro to offerings available; remote water audit validation sessions, in person workshops, and direct technical assistance. This program is currently available and will have funding through 2027.	Underway	2027	0.000	N/A	\$3.20	N/A	N/A
