10/16/2021 13:49	Pinellas		No	No				Remove the dam	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/16/2021 13:57	St Johns		No	No				Remove the dam please!	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.		
10/16/2021 14:03	Orange		No	No				Remove the dam.	It should not have been built in the first place.				
10/16/2021 14:05	Putnam		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing	Returned to original state	When the water is high and finally released	Keep fighting	?	
10/16/2021 14:06	Marion		No	Yes			2-5 times	Fishing Canoeing / kayaking Wildlife viewing	Return waterway to previous state before dam was installed and ruined portions of the waterway	Deterioration of surrounding landscape, current negative environmental impact	Extinction of wildlife, aquatic degradation of entire waterway to remain a current stagnant embarrassment to the state and our country	Discontinue the ongoing development of surrounding real estate. Stop sacrificing this valuable area that should be protected for generations to come in order for a select group of developers to line their packets	
10/16/2021 14:08	Brevard		No	No				That it be breached. Improvement of water will help animals.	A lot of money will be saved!	That thousands of acres of land and trees will be lost which will be horrible.	No! It must be breached to achieve the right outcome.		Flora and Fauna need to continue to thrive and we will see a rather dim outlook on life if this outcome fails.
10/16/2021 14:11	Manatee		No	Yes			1 time	Canoeing / kayaking Boating Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Even while manatees are still struggling with starvation from seagrass loss, the greatest long-term threat to these animals is the loss of warm water habitat that manatees need to survive the winter. Right now, 60% of Florida's manatees depend on power plant outfalls to keep warm and survive the winter - an unsustainable and unnatural situation. Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	Manatees have already reached record numbers of deaths this year due in part to starvation from seagrass loss. The greatest and looming long-term threat to the manatee is loss of natural warm water winter habitat.	No		It's needs to protect and support its natural beauty and wildlife. We need to remove the dam and restore the Ocklawaha River, which helps nature and manatees.
10/16/2021 14:16	St Johns		No	No				Remove the dam and restore the Ocklawaha River, for the sake of wildlife and nature.	Remove the dam and restore the Ocklawaha River	wildlife dies	no		
10/16/2021 14:20	Collier		No	No				Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/16/2021 14:20	Volusia		No	Yes			2-5 times	Wildlife viewing	It's time for its removal. It was a mistake when it was built and now that it requires millions in taxpayer dollars to maintain let's remove it and restore the Oklawaha/Silver River connection.	Mountains of scientific data outlining the benefits of removal.	More money wasted on a bad idea and continued environmental degradation.	None comes to mind.	
10/16/2021 14:39	Jefferson		No	Yes			1 time	Wildlife viewing	Remove the dam and restore the Ocklawaha River	The dam's removal helps to restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. It will also save 4-14 million dollars on a dam that serves no purpose and is past its life expectancy.	Water quality first and foremost, keeping the dam will continue to cause it to decline, cause invasive weed blockages, contribute to toxic blue-green algae, and fish kills.	No. Breaching the dam is 50 years overdue.	So little of natural Florida remains, it would be a shame to waste this opportunity to restore some!
10/16/2021 14:43	Palm Beach		No	No				Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	The failed Cross Florida Barge Canal Project left environmental destruction and burdensome infrastructure in its wake. The damming of the Ocklawaha River and creation of the Rodman Reservoir has smothered 20 springs, blocked manatee and fish migration, and destroyed thousands of acres of floodplain forest. We are at a crossroads. The Rodman/Kirkpatrick Dam that blocks the Ocklawaha River is in decline and in need of repair. Now the state has to decide whether to invest millions of taxpayer dollars in repairing and continuing to operate a dam with no purpose or remove it, finally reuniting the Ocklawaha, St. Johns, and Silver Rivers.
10/16/2021 14:45	Suwannee		No	No				Remove it	Biological degradation	Another colossal Florida fuck up	No compromises		
10/16/2021 14:47	Sarasota		No	Yes		1 time	More than 5 times	Wildlife viewing	Preservation and biodiversity increase				
10/16/2021 14:59	Manatee		No	No					Remove the dam and restore the rivers natural courses.				
10/16/2021 15:01	Pinellas		No	Yes		2-5 times		Other: Just enjoying the area	Breach the Dam and preserve the Reservoir	The loss			
10/16/2021 15:06	Seminole		No	No					Let it flow.	Continuing damage to Florida springs and ground water.	At least open the dam to more volume.		
10/16/2021 15:11	Orange		No	Yes			More than 5 times	Wildlife viewing	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam	Orlando Sentinel article The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/16/2021 15:13	Miami-Dade		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	Taken down	Overall long term environmental and human benefit	Same as above		
10/16/2021 15:20	Alachua		No	Yes			1 time		I would like to see the dam breached!!!	This will be the most cost effective way to preserve Florida's springs. It will protect the manatees, and fish and restore our natural beauty.		no this is the path we need to take to help the Florida environment	
10/16/2021 15:20	Palm Beach		No	No					The dam blocks manatee and fish migration, has smothered 20 springs, and has destroyed thousands of acres of essential floodplain forest.	The huge waste of taxpayer dollars on a flawed project that has been and will continue to be an ecological and environmental disaster for the Everglades and the State of Florida	Is public flogging of the selfish and uneducated bureaucrats who support this environmentally disastrous project allowed?		I would hope that the St Johns Water District Management realizes the unique and exciting opportunity they have here to do the right thing and restore the river to its former glory - for the sake of their children and grandchildren and all future generations.
10/16/2021 15:27	Pasco		No	No					I would like to seathe dam removed.				
10/16/2021 15:28	Broward		No	No					I would like to see the dam removed restoring the flow of the Ocklawaha, St. Johns, and Silver Rivers.	Environmental research.	Continued environmental degradation.	No, it's time to remove the dam now that millions of dollars would be necessary to maintain it. It is completely unnecessary.	
10/16/2021 15:35	Collier		No	No					My wife and I would like the dam to be removed. Maintaining the dam is also expensive and removing it will save $4-14 million on a dam that has no actual function, other than causing harm to springs and rivers.	My wife and I value Florida's natural ecosystems, including our amazing springs and wetlands. The dam is impairing about 50 springs and removing it will restore over 150 million gallons of natural water flow to the Ocklawaha, Silver, and St. Johns Rivers.	The dam is impairing natural water flow and water quality. Problems that will persist if the dam is left include invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. Healthy ecosystems are better for local economies, better for tourism (my wife and I enjoy ecotourism within Florida), and better for plants and animals. If the dam isn't removed, we will miss out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more. Why on earth would anyone pass on these benefits for a dam that has no function?	No. The dam has to go now. It's something that should have been done decades ago. Florida's natural ecosystems are so screwed up already. This should be an easy decision for restoration.	
10/16/2021 16:03	Polk		No	No					I want what is best for the poor, African Americans impacted by this dam. They are not employed by those operating the dam and have no voice in Putnam County. By removing this dam to improve the life of the poor people living off of the river and in this county, then that is the most important action to be taken. I also support the removal of the dam to return the flow of the Ocklawaha River as a tributary of and to the St. John's River. This action will improve wildlife, aquatic and marine animals migration and use of the Ocklawaha River.	Florida Humanities - Dr. Stephen Noll's lecture: Voices from Florida - Ditch of Dreams - The Cross Florida Barge Canal, 02/16/21 Miami Main Library	African Americans will continue to struggle for survival, not improve economically and remain underprivileged among the politicians and leisure sport fisherman controlling this dam. I also believe that the natural flow of the Ocklawaha River will improve fishing, wildlife and easier access for the manatee to reach inland to Silver Springs.	Employ local African Americans in any industry or retail operation that involves the river, dam and community.	I'm a strong supporter of the environment and conservation of our state's habitat. I also promote and support equality among all humans--regardless of Race, color, nationality or gender.
10/16/2021 16:04	Marion		No	Yes	More than 5 times	More than 5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	The damn should be removed and the River returned to its natural state.	The damn being there has killed the springs.	That the degradation and pollution which the damn has created will continue.	diverting the water around the damn	This abomination has gone on too long. It is time to side with Mother Nature!
10/16/2021 16:05	Outside of state / other	Virginia	No	No				Restore the river by breaching the dam.	By breaching the dam and restoring the river, 15,000+ acres of the Florida Wildlife Corridor will be regained or enhanced, benefitting species like Florida black bears and panthers, bobcats, bald eagles, and white-tailed deer.	Hundreds of manatees will be deprived of essential warm water winter habitat, harming their chances of survival in the future.	Simply put, NO.		It's time that big money starts paying attention to the environment, habitats and the countless number of species that are endangered everyday. There needs to be a way to stop the loss of habitats which lead to the loss of such great species like the Florida panthers, manatees, bobcats, eagles, black bears and white-tailed deer. Move forward with this exciting restoration project and revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife.
10/16/2021 16:10	Brevard		No	No				Remove the dam and restore the Ocklawaha River.	You already know this, but removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow and I live near the St Johns. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	It is time to start thinking of the health of the Planet. If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	Nope. And you already know why not.		
10/16/2021 16:22	Manatee		No	No				Restoration of bird habitat	The continued decline of habitat and water quality	Eventual disappearance of species	Maybe		

10/16/2021 16:23	Leon		No	No					Remove the dam and restore the Ocklawaha River.	Florida's DEP has assessed that the Rodman Dam is subject to catastrophic failure. Removing the dam will save $4-14 million on an unsafe dam that both is past its life expectancy and serves no purpose. In addition, removing the dam will help restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow.	The dam's catastrophic failure, which would destroy potentially hundreds of nearby properties and possibly kill people. Also, if the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	In addition to serving no good purpose, the dam is an eyesore. Why would I want to spend money visiting a decrepit, unsafe dam when there are plenty of other untouched places in Florida with more wildlife and unspoiled scenery? And even if money is spent to rehabilitate the dam, it still would be an eyesore and I wouldn't trust it to be safe.
10/16/2021 16:29	Duval		No	No					Oklawaha River's restoration		Environmental damage.	No	
10/16/2021 16:32	Seminole		No	Yes			1 time	boating Wildlife viewing	I would like to see the natural flow of the river be restored so that wildlife in nature could benefit from a healthy balance of the water flow as it was originally before humans caused destruction to what was natural.	The fact that wildlife and the woodlands have been compromised.	That our beautiful river might become stagnant and the health and well-being of wildlife could be diminished.		
10/16/2021 16:34	Leon		No	No					I would like for the dam never to happen.	Restoration is good, most dams are destructive.	I would be sorry for the destruction of natural beauty	No.	I care a great deal about the environment. There is too much destruction of this in our country, especially in Florida
10/16/2021 16:44	Volusia		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	As a native of the area and advocate for the pristine environment that attracted my parents and so many others, much of which is sadly no more, I strongly endorse the removal of Rodman Dam and the reopening of the original watercourse of the Ocklawaha as much as is feasible. I have had the pleasure of camping both at the campground and along the river with my kayak and I find the unsullied river one of the most beautiful places I have visited during a relatively long life. I particularly enjoyed the absence of motorized watercraft that allowed me an unmatched opportunity to witness and photograph wildlife in its natural state. I am also a great fan of Florida literature and history and have a deep appreciation for the role the Ocklawaha has played a role in the shaping of the image of Florida as an unspoiled treasure, thus making it not only a thing of beauty but an irreplaceable historic resource and national treasure as well.	The dam was part of a project that all indications have shown would have spelled environmental disaster for Florida. This was the conclusion of many people speaking not from emotion but from cold, hard fact. The evidence is so compelling that the federal government deemed it appropriate to abandon the project many years ago. Yet the dam, which is becoming more costly in very respect every year it exists, still remains in place chiefly for the benefit of a relative handful of the population. We are talking about the much broader picture of the interests of all Floridians and residents, both human and non-human, and those who visit the area expecting to find a bit of the rapidly-disappearing Old Florida.	As a taxpayer, I am concerned about supporting the upkeep of this useless and damaging structure. As an advocate for the natural world and all us depending on a pristine environment, I fear for the further damage to the ecosystem, a danger that had been recognized and acknowledged time and time again by experts in their fields. There are many, many places for anglers to pursue their interests, but there are so few resources such as the Ocklawaha remaining.	I cannot envision any half-measures that would achieve the restoration of the river to its pristine state. Perhaps the experts could come up with a compromise measure, but as a lay person who simply appreciates the river for what it is, and has no appreciation for the useless damage done to it, I cannot imagine any alternative scenario other than the removal of the dam.	Thank your for the opportunity to express my observations on the removal of Rodman Dam. As I see it, the structure is doing far more harm than good. So much of the damage that has been wrought to the state's environment is beyond recovery, and corrections would significantly impact the lives of many, but this is one thing we can do to mitigate the ongoing destruction that will have minimal impact on human activity, but make all the difference to our pristine waters.
10/16/2021 16:45	Orange		No	No					removed	Our Florida springs need to be restored. The River needs to be restored to it's former location to return to supporting all the wildlife that depends on the ecosystem as it was before it was rerouted and disturbed by humans. People need to stop destroying the environment for human purposes and put it back the way it was so Florida's natural resources benefit the plants and animals that rely on them. They were here before us and they are critical to Florida.	Destruction of the ecosystem by redirecting/halting the river has disrupted the flow of water to areas of Florida that need it, now more than ever.	Can't think of one.	
10/16/2021 16:54	Orange		No	No					The closing of the Rodman Reservoir/Kirkpatrick Dam!	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	The death of the afore mentioned water systems	No	Isn't it time to right a wrong?
10/16/2021 16:54	Manatee		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	This is an example of something that was done in the past that is no longer of benefit.
10/16/2021 16:56	Outside of state / other	NY	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for the state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important and will greatly benefit Florida's people, environment and wildlife.
10/16/2021 17:00	Duval		No	No					Removal or partial removal of dam and restoration of natural water flow.	Articles in local newspapers.	The health of the St Johns river.	Partial removal of dam.	
10/16/2021 17:04	St Johns		No	No					Please restore to pre-dam condition and reunite the rivers.	Wild life and the springs which were decimated.	The state of Florida will continue its decline of the environment always putting money before the people, animals and land that make up the beautiful parts of Florida.	I'm not sure	
10/16/2021 17:15	Marion		No	Yes		2-5 times		Wildlife viewing	tear it down, I would love to see the manatee back in Silver River and the mullet eating the algae on the eel grass at Silver Springs.	personal observation and reading materials produced by environmental groups	The cost to maintain a useless structure that harms wildlife rather than supports the natural flow of the river.	I don't know, what are you suggesting?	Just tear the damn thing down, it has no purpose there is no Cross-barge canal usage. The variety of fishing will
10/16/2021 17:19	Duval		No	Yes				Wildlife viewing	removed	Ocklawaha River can't flow normally.	further death of wildlife	no	improve and the health of the river and the 20 submerged springs can return.
10/16/2021 17:25	Pinellas		No	No					remove dam	restore springs and rivers to pre dam conditions.	spending public money to repair dam which does not provide environmental or broad public benefit	no	
10/16/2021 17:25	Palm Beach		No	No					We must remove the old dam and restore these rivers. Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Please do not let this chance for restoration go.
10/16/2021 17:28	Putnam		No	Yes		2-5 times		Wildlife viewing	I'd like to see the dam removed	Salt water intrusion	Continued decline of the river	Alternative programs to keep the river healthy	
10/16/2021 17:43	Sarasota		No	No					Removal	Water quality for springs. Access for Manatees.	Degrading spring water quality.	No.	
10/16/2021 18:01	Outside of state / other	Albuquerque, NM	No	No					The restoration of the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoration of the Ocklawaha River will facilitate the double benefit of providing essential warm-water winter habitat for hundreds of manatees and restoring more than 15,000 acres of the Florida Wildlife Corridor, which is essential to the welfare of Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed would have adverse effects on the survival prospects of manatees, Florida panthers, Florida black bears, bobcats, white-tailed deer, and other wildlife that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Restoration of the Ocklawaha River will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor, thereby benefiting communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this issue. I write from out of state because I believe wildlife and environmental protections and improvements are a national concern.
10/16/2021 18:27	Volusia		No	Yes		1 time	2-5 times	Wildlife viewing	Remove the dam and allow the reservoir to disapate.	The natural flow of water supports many forms of wildlife and plant communities which have been placed under unnatural stresses.	Continued interference in the natural order by this man-made dam, not to mention the unnecessary waste of taxpayer money in the maintenance of this unnecessary dam.	No!	
10/16/2021 18:45	Pasco		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/16/2021 18:46	Duval		No	Yes			1 time	Canoeing / kayaking	Simply removed back to natural flow.	Science not fishing stories.	Same old same old. Have you looked at the failed canal???? YUCK!	A Partial removal? Doubt that would work.	
10/16/2021 18:50	Volusia		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation.
10/16/2021 18:51	Palm Beach		No	No					Remove the dam and let the river flow freely.	Environmental analysis	Negative environmental consequences including degraded water quality	I would like to see the dam removed.	
10/16/2021 18:55	St Johns		No	No					Take it down to let the rivers run free	State and federal studies that support opening the rivers to improve their environment.	The rivers and wildlife will continue to deteriorate. We are losing species and wildlife numbers for many reasons - failing to take down a dam that serves no purpose should NOT be one of them.	Opening the dam for only partial river flow sounds more costly than simply taking it down.	
10/16/2021 19:08	Orange		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	This existing restoration will improve water quality and flow by generating an additional 150 millions gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
10/16/2021 19:12	Madison		No	No					Remove it.	Growing up in Ocala in the 1950s and early '60s, such that the Ocklawaha, Silver, and St. Johns Rivers are not just names to me. Silver Springs, which I swam in and boated on many times when I was young (I am 72), remains one of the most memorable (and magical) places I have seen, and I have lived in many states, in the Canadian Arctic, and have visited many more states, as well as countries in Africa, Asia, and Europe.	Not enough fresh water.	No.	Others, whom I trust (and have for years), have far more technical knowledge on the need for removing this dam than I do. I doubt they have stronger emotions about it. Some of these memories go as far back and as deep as any I have.
10/16/2021 19:26	Outside of state / other	Warrick County, Indiana	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation.
10/16/2021 19:28	Volusia		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking	Undamm the Ocklawaha River so that it flows freely, restoring the 15,000 acres of wetlands, a valuable resource as a carbon sink for counteracting climate change, also providing a filtering system for future water projects with Gainesville for cleaning reclaimed waters from the Gainesville area and surrounding areas.	There are not one, but, two pieces of evidence supporting my position: First, a recent paper in the Proceedings of the National Academy of Science has found that 1/3 of the emission reductions under the United Nations Climate framework could be supported by environmental preservation and conservation. Restoring Ocklawaha and the 15,000 wetlands acreage could be part of that solution. If your Florida administration does not support the need for emissions reduction, be aware that there is a readily available market for emission reductions projections in states like California which have RPSes. Many of the states with RPSes might help support this wetlands restoration on these grounds. My second "piece of information supporting my position" is what Orlando has done with other Orlando Wetlands Park. This area was created in collaboration with a water reclamation project such that the wetlands filtration capabilities might aid the city's need to supply clean water. What happened in Orlando might be replicated in Gainesville, aka attached the restoration of the Ocklawahan wetlands into a water reclamation project for human waster use.	It is not my concern. It is the planet's concern. If you restore the Ocklawahan wetlands to the benefit of humans ,(aka water reclamation), wildlife and the river,)you also benefit your local economy as well as the planet.	What a strange question. Maybe you folks ought to seek out retribution from the original oil company who funded the canal. They made a mistake, they didn't complete their project and didn't provide any economic benefit to themselves or Florida. Maybe they should pay for the restoration.Find the contract and hold them accountable.	
10/16/2021 19:33	Broward		No	No					Remove the damn. It is old, needs lots of work and will cost a lot of money. It serves no purpose and hampers wildlife	The condition of the dam and estimated cost to repair it	red tide will become a everyday occurrence. Wildlife habitat will be lost. Tourism will also be affected	absolutely not	please help our water and Wildlife
10/16/2021 19:34	Seminole		No	Yes			More than 5 times	Wildlife viewing	I would like to see the dam breached and the river restored to as close to natural as possible.	Recovery of 20 springs and a natural waterway for fish and manatees.	We will spend a lot of money to restore a completely unneeded dam. With the Cross Florida Barge Canal stopped it is not longer needed and just a continuing expense for the people of Florida.	No.	Florida's ecosystems are dependent on the natural flow of water. Our rivers are one of Florida's greatest assets and the natural flow greatly enhances that.
10/16/2021 19:38	Martin		No	No					remove the dam	I have seen too much destruction by dams in Florida. They do not produce power or any other benefit that I am aware of. All they do is prevent the rivers from their natural flow, which is good for wildlife and therefore people.	continued failure to recognize the potential of our great state	no	
10/16/2021 19:47	Outside of state / other	Oyster Bay, NY	No	Yes			1 time	Wildlife viewing	Get rid of them. Restore the Ocklawaha River.	The restoration of the river will benefit all wildlife preservation, especially manatees.	The loss of habitat for wildlife.	No.	Creating and preserving habitat for endangered wildlife is the most valuable thing anybody can do for Florida.
10/16/2021 19:49	Marion		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Let's give it draw down test. With open gates. To see what it looks after 5 years . Too see if mother nature restores it. Maybe it needs to close. But we can make a better decision with results or failure.	Just look up river. How those lake systems are all choked up and stagnant.	That a river is meant to be free to be alive.	To not give a real, measurable long term test.	
10/16/2021 19:56	Bay		No	No					I have never been but I would love to go.				
10/16/2021 19:59	Pasco		No	No					Free the Ocklawaha	The springs that are flooded due to this dam	I will be sad not to be able to visit the springs	Frequent drawdowns	
10/16/2021 20:11	Outside of state / other	Arizona	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/16/2021 20:12	Lake		No	No					Remove the damn and restore the Ocklawaha River.	Readings from Audubon Society in Florida	Wildlife will lose habitat	Not sure what options are available	
10/16/2021 20:14	Orange		No	Yes				Canoeing / kayaking Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Historic fish and manatees return as breach opens creating a free-flowing river and 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife.	Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway.
10/16/2021 20:24	Outside of state / other	Wisconsin	No	Yes			2-5 times		Other: Nature observing	Protect wildlife more	Protect wildlife is ignored	Concern for the wildlife first.	Thank you
10/16/2021 20:27	Palm Beach		No	No					Restore it and let function accordingly!!!	Have lived all over Florida for over 40 years, so I appreciate the natural beauty and diverse Wild Life, especially have a boat at time and exploring the rivers and forests. SIMPLY FASINATING!!!	THAT WE LOSE ANOTHER NATURAL WONDER OF OUR STATE!!!	THAT PEOPLE TAKE ALL THIS NATURAL BEAUTY FOR GRANTED!!!!	LOOK TO YOUR HEART AND NOT YOUR POCKET BOOK FOR ENDURANCE OF OUR BEAUTIFUL STATE!!!

10/16/2021 21:03	Citrus		No	Yes		2-5 times	More than 5 times	Canoeing / kayaking Boating Wildlife viewing	Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/16/2021 21:27	Orange		No	No					Breach the Rodman/Kirkpatrick Dam.	Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. this action is long over due.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
10/16/2021 21:28	Pasco		No	No					I would like to see the Kirkpatrick Dam completely removed.	The natural flow of water protects and nourishes all the land that surrounds it. I remember reading about waterways in North Florida that have no fish, no marine life, because of effluent from paper mills in Georgia. Even the St. Johns contained flesh eating bacteria. Additional water would help bring these areas back. If I were on this board, I would reverse the flow that Jeb Bush okayed and send all that filth back to Georgia. The Audubon Society writes that "removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and the. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose." Additionally, the park rangers at Orlando Wetlands Park tell visitors that by the time the brown water from Orlando's sewage system gets to the St. Johns, it is actually cleaner than the river itself. In short, everyone knows that the dam and the reservoir have caused far more problems than they solved. Add to that the enormous success of other dam removal projects, particularly in the Northwest where healthy salmon once again find their natural spawning grounds.	My biggest concern is that it will confirm my fear that my government cares nothing for quality of life or for preserving the planet. I don't think there's any way to ignore the fact that there is a huge, validated cancer cluster in that area. Isn't it time that people are just as important as dollars?	No. Any project short of removing the dam completely will turn into an excuse to do nothing to solve major problems.	I grew up in Florida during a time when swimming in rivers, ponds, and lakes didn't mean risking your life for catching deadly amoebae, or flesh eating bacteria. It could be that way again if only those who are tasked with the care of our environment would care for our environment.
10/16/2021 21:35	Orange		No	Yes		1 time	2-5 times	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	20 lost springs and Silver Springs ecosystem are restored	The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	No	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River. (characters: 514)
10/16/2021 22:09	Pasco		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing					
10/16/2021 22:34	Pinellas		No	Yes		1 time	2-5 times	Canoeing / kayaking Wildlife viewing	I would like to see Kirkpatrick Dam breached and the Ocklawaha River restored.	Continuing to maintain Kirkpatrick Dam, not to mention the millions of dollars it will take to make repairs, is a waste of taxpayer money. In addition, breaching the Dam will restore an important aquatic wildlife corridor for manatees, striped bass, and other species. It will also restore numerous natural springs and will diversify the recreational opportunities in the area. In addition, it will improve water quality, water flow, and an unobstructed River way.	The state would spend millions of dollars to repair the dam, and then would continue to spend money maintaining the dam and doing periodic drawdowns of Rodman Reservoir to control aquatic plant growth in the reservoir, which cause fish kills. This is a wasteful cycle that could be ended through partial restoration. The Dam does not provide flood protection, power, a water supply, or any other broad public benefit. Failure to breach the Dam will also impede access by manatees to Silver Springs.	No, partial restoration of the river is already a compromise position and is long overdue.	The ecological and economic benefits of partial restoration have been extensively documented. The vested interests of a few have stood in the way of restoration, which not only makes sense but has broad public support. Also worth noting is that a significant part of Kirkpatrick Dam and Rodman Reservoir trespasses on US Forest Service property. If the State decides to invest millions of dollars to repair the Dam, it would be a clear indication of an intent to keep the Reservoir. This would require the State to get approval from the USFS to occupy this land. Partial restoration of the Ocklawaha River is long overdue. As a stakeholder, a 40+ year resident of Florida, and someone who enjoys the natural beauty and wildlife of the State, I strongly support breaching Kirkpatrick Dam.
10/16/2021 22:41	Manatee		No	No					Restore the wet lands	Florida is quickly building itself into masses of population growth. We need to preserve and protect wildlife habitat before it declines	I've lived here for 6 years and a nature enthusiast. I see first hand as a Master Gardener the destruction of wildlife habitat that has significantly declined.		
10/16/2021 22:54	Broward		No	No					Breaching the dam and restoring the river	Restores natural Florida ecosystems	Lost opportunity to protect wildlife, water quality, local economy	No	
10/16/2021 22:56	Palm Beach		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Historic fish and manatees return as breach opens creating a free-flowing river. We have lost so many manatees this past year, this would be very important to their continued good health	Hundreds of manatees lose the opportunity to access essential warm water winter habitat	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. (characters: 479) 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. (characters: 521)
10/16/2021 23:06	Outside of state / other	Racine, WI is my location	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/16/2021 23:22	Pinellas		No	No					I would like to see the dam removed and the Ocklawaha River restored.	Removing the dam would help restore dozens of springs along with the Ocklawaha, Silver and St. Johns Rivers. The renewed natural flow of millions of gallons of water would restore vital wetlands and numerous species. Also, the dam is past its life expectancy and serves no purpose.	Water quality is a huge issue in Florida. the dam stays, water quality will continue to deteriorate with invasive weeds causing blockages and worse, toxic blue green algae. This is a once-in-a lifetime opportunity to restore habitat, flood protection, and so much more.	No. Improving water quality and saving wildlife can't wait. Time for this dam to go.	
10/16/2021 23:26	Outside of state / other	Oak Harbor Washington	No	No					I hope the dam is removed.	Manatees are having a difficult time right now. Removing the dam and restoring the river will provide warm water and help support manatee habitat.	More manatees will die.	No. The dam most go.	
10/16/2021 23:37	Broward		No	No					Need to breach the dam to get the river into a natural state. Will be better for wildlife and climate.	I agree with leaders and scientists from the Audubon Society	Harm to wildlife and climate.	Send me a proposal.	
10/16/2021 23:38	Outside of state / other	Michigan	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment, and wildlife.
10/17/2021 0:12	Orange		No	No					Legislators need to do what is best for the ecosystem and wildlife in the area.	Other areas around the country have had to make decisions like this which have negatively affected their ecosystems, and have permanently damaged these areas, causing wildlife to die, never to populate the area again.	The permanent death of wildlife.	Just keep the area the way nature has formed it.	Thank you.
10/17/2021 0:25	Santa Rosa		No	No					If the damage is simply an obstruction, remove it & low the flow of water for natural populations to thrive.	Naturalists more objective information.	Deterioration of the natural area ,& loss of living species	Perforations of the dam and slow destruction.	
10/17/2021 0:45	Outside of state / other	Wisconsin	No	No					Restore manatee habitat.	They will die without a restored habitat.	They die.	One where they don't die.	
10/17/2021 0:47	Outside of state / other	have visited Fla to observe the manat	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a concerned citizen of the world. It will benefit Florida and the planet
10/17/2021 2:49	Outside of state / other	Savannah	No	No					I want it breached to restore the river. My husband and I worry continuously that when we have children there won't be any manatees left. We worry about the damage and the impact of humans on our environment and we want a better world that thinks about wildlife and what is needed to sustain it.	It will connect three of the river ecosystems. I fully believe that everything in nature has a place and purpose, and this alone is an excellent start to bringing our manatee population back. I know it will affect the fish and plant life which will also affect our wonderful manatees.	I stated it above, but I worry about what world will be left for my children. I grew up in the mountains and we are getting it for mining and housing. I am continuously disappointed that this is an issue everywhere in America. We are in 2021, and we have no excuses left for taking care of our environment in a conscientious way.	No. I will not settle for less. This project has clearly been needed for a long time. We have plenty of resources available to make this happen, and make this happen quickly. It is simply a matter of what footprint we want left behind.	We lost a large part of our koala species in 2020. In past years we have seen declines in bats, bees, and artic animals. This year, it was our manatees. The year isn't over, and if we do not let this project happen, we will lose more, but it will be on all of us for not doing more. We have a responsibility to this planet. It is a gift, as is our wildlife, and it's our duty to treat it as such.
10/17/2021 5:01	Outside of state / other	Lacerville, CA 95667 in El Dorado Coun	No	No					Whatever is best to save and protect the Manitatees.	Manatees are large and gentle animals that deserve to live in peace and safety.	The loss of these special animals.	I do not know.	
10/17/2021 6:50	Orange		No	No					I would very much like to see a free flowing Ocklawaha River and the dam destroyed.	The deaths of forests of trees and the loss of a beautiful river and loss of access to many beautiful springs.	That the chance will not come again for it to happen in my life time.	No	The purpose of the dam was a failed project and the only benefit has been the creation of a good fishing lake. This is Florida and there is no shortage of fishing sites, so breach the dam.
10/17/2021 7:11	Alachua		No	Yes			2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	I'd like to see the dam removed.	I don't understand why this question is being asked.	The continued negative impact to species that rely on the natural flow of the river. I also don't want to see millions of dollars in public money spent to repair the damn when it should never have been built in the first place.	Not really.
10/17/2021 7:25	Alachua		No	No					The dam needs to be breached so the Ocklawaha River can flow freely again for the good of wildlife and the natural community, as well as the human community.	Breaching the dam will begin the process of habitat restoration for fish and manatees, as well as other benefits of restoring the 20 springs currently drowned by the reservoir.	We are in the middle of very stressful times for all plants and wildlife in all ecosystems due to global climate change. My concern is that we might add even more stress to wildlife populations already fighting to survive. Since the dam is already past its lifespan, and would require millions of dollars to make safe again, there has never been a better time to breach the dam.	No. There are no other reasonable solutions. This dam was built as part of a project that for good reason was never completed. It would be an absolutely senseless waste of money and opportunity to not breach the dam at this time. Thank you very much for taking the time to consider the thoughts and opinions of Florida residents.	We must not make this yet another political pawn in a "game" affecting the sheer survival of so many of Florida's native species, both plant and animal. With human-caused climate change upon us, now is the time for us to do what is right for other species we share this planet with, as well as for ourselves.
10/17/2021 7:40	Marion		No	Yes			1 time	2-5 times	Canoeing / kayaking	Breach the dam	Restoring flow of Ocklawaha River would retire lost springs	Adverse affect on wildlife	No
10/17/2021 8:21	Palm Beach		No	No					Remove the dam and restore the Ocklawaha River.				
10/17/2021 8:25	Pinellas		No	No					Breach the Dam	That it will restore the ecosystem	It will continue to harm the ecosystem	NO	
10/17/2021 8:27	Marion		No	Yes			2-5 times		Wildlife viewing	The dam was a result of the cross Florida barge idea, which was correctly stopped. As a result, all actions taken should be cancelled and misguided actions returned to the natural state.	The purpose of the land grab and the establishment of the dam no longer exists!!! Florida's water flow needs to be treasured and protected.	We already have environmental concerns in state so let's correct this one.	I do not think you could support an action that was done on a plan that was cancelled. Look at the land grab that was never corrected.	The Ocklawaha is treasure that should be restored and protected.
10/17/2021 8:44	Volusia		No	Yes	2-5 times				Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Leave it as is there is a lot of manatees in Rodman because most of there food is there plus Rodman is one of the top spots to bass fish	Its like it's own eco system in there	It would change an pretty much kill the eco system we would be losing one of the best bass fisheries in the state	No	Leave Rodman as it is what's done is done please don't start spraying vegetation this is why manatees are there pretty much all of food is gone in St. John's
10/17/2021 8:51	Leon		No	No						Tear it down	Audubon, Sierra Club info		
10/17/2021 8:55	Outside of state / other	UK	No	No					I would like to see the Ocklawaha River restored by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. 10/17/2021 9:42	Pinellas		No	No					Have the natural flow of the river/spring restored. Sam could become a bridge or wildlife viewing station highlighting native species	The dam is not in use	Disrupting Florida's natural ecosystem	Na	
10/17/2021 9:55	Alachua		No	Yes		3-5 times		Wildlife viewing	I would like to see the dam removed	The Ocklawaha's eco system need to be restored, to protect the wildlife that depends upon the river and the springs should be free to flow again.	That the damage to the environment and wasted funds to keep the dam in good condition will just continue.	I don't see one.	
10/17/2021 10:10	Charlotte		No	No					I believe it is critically important to preserve, protect and restore our critically endangered Florida ecosystems and the native wildlife who live there. Taking down and fully removing the Kirkpatrick Dam would be one very significant step towards that goal. Thank you, Mark A. Highsmith, Ph.D.	Natural springs are inundated by waters resultant from the dam. Forest lands have been washed away. To some extent these ecosystems can be restored by the removal of the dam.	Further loss of habitat and native species.	no	
10/17/2021 10:13	Orange		No	Yes			2-5 times	Canoeing / kayaking	Get rid of the dam. I've kayaked during a drawdown, as well as during the dammed times. It's so wonderful when the river is allowed to be free.	Experience	Continuing loss of habitat for native species.	No.	
10/17/2021 10:15	Alachua		No	Yes	1 time	More than 5 times	More than 5 times	Canoeing / kayaking Wildlife viewing Other: Photography/videography and paddle tours	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	The chance to restore over 50 springs, the Ocklawaha River, Silver River, and St John River ecosystems as well as the populations of countless species, including the west indian manatee. Also, it would be a huge win for the new Florida Wildlife Corridor Act.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or any other broad public benefit.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	I'm sure you're sick of hearing it but...#FreeTheOcklawaha. Please don't leave yet another environmental problem for my generation to follow through on/fix.
10/17/2021 10:16	St Johns		No	Yes		2-5 times		Fishing Fishing (shoreline/structure) Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	$4-14 Million in dam repairs saved on a dam past its life expectancy Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. $57 million in potential flood damages avoided to downstream property owners Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored	A storm event triggers a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 65% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and $50 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.
10/17/2021 10:21	Franklin		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/17/2021 10:28	Miami-Dade		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers $4-14 Million in dam repairs saved on a dam past its life expectancy Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. $57 million in potential flood damages avoided to downstream property owners	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. I'm also worried a storm event triggers a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	This exciting restoration will improve water quality and flow by generating an additional 150 million+ gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
10/17/2021 10:29	Alachua		No	No					Remove them!	The river will be more healthy without them	The fish die out		
10/17/2021 10:29	Collier		No	No					Manatee habitat Plants that help clean water. Stop any pesticides usage.	The red tide algae - I have lived here almost 30 years. It is getting worse and worse.	Continued decline of our precious waterways and animals.		
10/17/2021 10:32	Sarasota		No	No					Open dam return river to flow				
10/17/2021 10:45	Hernando		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	
10/17/2021 10:54	Brevard		No	No					Breach the dam to restore the Ocklawaha River	The dam is interfering with healthy springs.	We would lose the chance to restore the springs and improve the health of the struggling St. Johns River.	No	
10/17/2021 11:02	Duval		No	Yes			1 time	Wildlife viewing					
10/17/2021 11:14	Palm Beach		No	Yes			2-5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking	Breach the dam	Pollution reports	Loss of wildlife		
10/17/2021 11:23	Pinellas		No	No					I would like the state to discontinue operating "the dam with no purpose" and remove it, finally reuniting the Ocklawaha, St. Johns, and Silver Rivers.	The damming of the Ocklawaha River and creation of the Rodman Reservoir has smothered 20 springs, blocked manatee and fish migration, and destroyed thousands of acres of floodplain forest. The Rodman/Kirkpatrick Dam blocks the Ocklawaha River, is in decline and millions of taxpayer dollars would be required to repair it.	Losing the opportunity to restore springs that have been smothered, restore manatee and fish migration, and rehabilitate thousands of acres of forest. Wasting millions of $ in taxpayer money.	No	Thank you for doing the right thing for our state and the environment.
10/17/2021 11:24	Marion		No	Yes		1 time		Fishing	Repaired	Used to be beautiful there and want all animals to be happy in river again.	That animal would eventually die.		
10/17/2021 11:30	Putnam		No	No					I would like to see it destroyed.	The manatees are dying at alarming rate and need the flow of the rivers to get to warmer water.	more manatee deaths	no, remove the dam and let the natural flow of the rivers commence.	
10/17/2021 11:36	Outside of state / other	Essex Junction, VT	No	No					Though I don't live in Florida, I am concerned about the survival of manatees. Since I was little, I loved learning about manatees and how they live. I am concerned about all the manatee deaths that have happened so far this year. I would like restorative efforts to be focused on helping manatees survive. This means restoring the flow of rivers in Florida so that manatees can find naturally warm waters and healthy sea grass habitats. We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. This move would also restore 15,000+ acres of the Florida Wildlife Corridor, benefiting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. It would also keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me and will greatly benefit Florida's people, environment and wildlife.
10/17/2021 11:38	Duval		No	No					I would like to see the restoration back to the free-flowing Ocklawaha River. Breach the Rodman/Kirkpatrick Dam to reconnect the Silver Springs, the Ocklawaha and the St. Johns River finally.	All of the Science.	The continued degradation of the springs, rivers and the St Johns River instead of restoring the wetlands, improving water quality and restoring fish and wildlife habitat.	No. Breaching the dam and restoring the Ocklawaha are 50+ years overdue. I have been aware of this need for the 45 years I have lived in Florida. The Dam safety issues and improved water quality, wildlife habitat, and recreational opportunities can't be ignored or delayed any longer.	I have traveled by boat on the upper St Johns and I live near the point the St Johns River enters the Atlantic Ocean. What once was the only transportation system before we had roads and highways now has the science to document the mistake of the Rodman...Dam. It is time to correct this mistake to improve the springs, water quality, fish and wildlife habitat, economical and recreational opportunities and help our manatees. It is time. Thank you for listening.
10/17/2021 11:54	Duval		No	Yes			2-5 times	Wildlife viewing	Breach the dam to restore the health of the river, floodplain, forests and wildlife.	The report by Givler Engineering Inc., and the Ocklawaha River and Springs Environmental Analysis by The Howard T. Odum Florida Springs Institute			
10/17/2021 11:56	Alachua		No	Yes			1 time	Fishing	Believe the dam should be breached & Oklawaha River restored to natural flow	Continued degradation of dam & costs to keep it from failing totally.	Wildlife habitat would continue to decline and dam failure would cause unplanned for property destruction - also manatee losses would continue to worsen.	No - this dam should have been removed years ago. It has been discussed for decades with no action taken. The disrepair of dam is reaching critical status, and cost to rebuild it would be a waste of valuable funds.n	
10/17/2021 12:01	Duval		No	No					Restoration of the rivers and ecosystem and removal of the dam	The ecosystem	The destruction of the ecosystem and river systems	No	
10/17/2021 12:07	Marion		No	No					I think allowing the flow of the river to it's natural state would be beneficial for the environment.	Many items I have read.	Loss of our Manatee population.		
10/17/2021 12:18	Duval		No	Yes			1 time	Fishing	Breach dam	Help rivers, springs and habitat.	Adverse effect to water quality and environment.	No	

10/17/2021 12:20	Outside of state / other	NC	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/17/2021 12:32	Charlotte		No	No					I visit the springs with my family all year long. It is one of the most natural and cool thing to do all year long. To restore more than 40 springs and improve the natural springs and waterways just by dismantling the Kirkpatrick dam and saving the counties millions of dollars in not rebuilding an outdated and not needed infrastructure seems like a no brainer to me. DISMANTLE DAM AND RESTORE OKLawaha waterways.	Restoring natural springs and waterways and not wasting money. Florida tourism depends on the natural wonders of florida.	Wasted money to prop up useless and harmful infrastructure when jobs can be created elsewhere. The water systems are already threatened by poor management and wasteful practices	No.	
10/17/2021 12:36	Marion		No	Yes		1 time	More than 5 times	Wildlife viewing Other: I want to enjoy the lost springs which only appear when they draw down the lake level for maintenance.	Drained and restored to the natural state of the river.	The disappearing springs and natural flow of the river. Fishing could be achieved in any of the lakes in this region of Florida.	Keep pushing forward. It makes no sense to continue to maintain the canal, locks and damm. Look at the cost to maintain this debacle. It has accomplished nothing since its construction but to cost tax payers money to maintain something that was never used.		Free the Oklawaha. Let us enjoy this magnificent waterway they way nature intended. Let's do something nice for mother nature for once. The springs are declining and need to be restored instead of hampered.
10/17/2021 12:38	Duval		No	Yes		1 time	2-5 times	Wildlife viewing	Please remove the dam - it was unauthorized in NIXON's time. It never had any usefulness and continues to waste taxpayer money. It appears to be in need of serious repair, costing millions and achieving nothing.	It was created for a barge canal that was never built. Today, it would never have been built. The dam is dangerously degraded and would cost possibly hundreds of millions to repair. If not repaired, an uncontrolled breach could cost hundreds of lives. To do nothing is not a choice. Support the taxpayers of Florida and remove this impediment and allow the river to restore itself.	Perpetuation of an expensive, dangerous, and wasteful manmade mistake. If not removed, there may be permanent consequences for the St JOhns River (downstream) and for the restoration of the Oklawaha	No. The dam needs to be breached and done with.	When I was a child, my family would take a boat from Jacksonville, upriver to Welaka, then up the Oklawaha to Mount Dora. I fondly remember the wildness and beauty of the Oklawaha. I was also in the first boat to transit Buckman Lock into Rodman Pool. The starkness of the narrow passage and the hundreds of dead sapsrso trees in the pool struck me as sad. Truly reminded my of a scene from the Soviet Union. I hope we, as Americans and Floridians, are better than that. I hope we can admit our mistake and do what we can to fix it, instead of trying to make an ill-sided, ill-conceived project "work" as a weak and unreliable, weed-infested fishing hole.
10/17/2021 12:38	Broward		No	Yes	1 time	1 time	2-5 times	Wildlife viewing	Get rid of the dam!	Increases necessary water flow.	Putnam County and Silver Springs will lose $47 million in economic benefits in 10 years time, not to mention the terrible environmental damage.	Absolutely not ! This is 20 years past due! Do this to protect water quality and wildlife!	
10/17/2021 12:40	Orange		No	No					Exactly what you're proposing	It's the right thing to do	Further erosion and destruction		
10/17/2021 12:41	Marion		No	Yes		1 time	More than 5 times	Wildlife viewing	Drained	Taxpayer cost to maintain the barge canal, dammns and locks.	Further destruction to the forest and environment. Restore the natural rhythm of the forest.		Free the Oklawaha
10/17/2021 12:47	Alachua		No	No					That these manmade structures be safely removed or diminished to enable meaningful restoration and revitalization of natural hydrological features and natural habitats for the flora and fauna of the region feeding residents and visitors alike to a fuller appreciation of the unique beauty of our State of Florida.	The ongoing and overwhelming destruction of wild Florida that is visible everywhere across our state.	A significant, exemplary opportunity to halt and reverse the persistent destruction of wild Florida would be lost.	All efforts to restore disturbed areas are welcome, yet immediately placing more lands and waterways under protection would at the outset eliminate the need for costly rehab and restoration work in the future.	
10/17/2021 13:01	Seminole		No	No					I would like to see the Kirkpatrick Dam breached so that the Oklawaha River can resume flow and join the Silver and St John's Rivers to support the delicate ecological balance that supports wildlife, clean flowing fresh and salt water and the many springs that dotted along the way.	History and science. History explains why the dam was built and science explains why theses mistakes need to be corrected.	Humans have altered natural environments in the name of progress ignorantly for more than a century. But now we see and understand the effects of these actions and that it is in our best interests to have clean unrestricted waterways, good air and soil quality. With State Federal funds to help, not correcting these mistakes is at our peril.	No. At the time the Cross Florida Barge Canal was conceived and later promoted, it was naively thought that nature was something to be conquered in the name of progress and economic gain. Today, we know through science, research and witness of cause and effect, that there is no long term advantage to keeping the ill conceived dam in place.	I moved to Florida in 7th grade. Everywhere, it seemed to me at the time, fresh and salt water was beautiful and would be forever enjoyed by all. As a student at UF, I learned about the Cross Florida Barge Canal in a Florida history class. I've lived in Alachua, Broward, Pinellas, and Palm Beach Counties but spent most of my adult life in Seminole County. Having no environmental or scientific background, I can still understand the effects of daming waterways with a grotesque example of Lake Jessup which once was dotted with fishing camps and now is a shallow, silt-filled, alligator infested mess. I would like to see the removal of dams in multiple places throughout the state that were created along with a system of canals to impose man's will to drain 'useless swamp' for agricultural and development purposes. I understand from my Florida history class that the Rodman/Kirkpatrick Dam seemed like a good idea at the time. But now it's time to fix that mistake and restore the Oklawaha River.
10/17/2021 13:06	Outside of state / other	Wisconsin	No	No									
10/17/2021 13:10	Hernando		No	No					I would like to see the dam removed	Removing the Dam will help restore 50 springs,the Ockawaha,Silver,and St John's River.It will also save an estimated 4-14 million dollars in taxpayer money.	As an Audubon member and nature lover it would have just be one more area in Florida that Could Have been preserved (and won't)to help wildlife ,be used for water filtraion for our aquifer and used as flood protection.	No. The Dam needs to go.	With our continuing growth in Florida we must do what we can Now to preserve whats left of our Natural Resources for future generations.
10/17/2021 13:13	Orange		No	No						Breach the dam, drain the reservoir, restore the river	My biggest concern is that the damage already done will become more and more irreversible the longer this dam and reservoir remain in place.	The damage caused by a dam cannot be mitigated short of full removal.	Wild and scenic rivers are worthy of visiting. Man-made encroachments such as development, dams, motorized recreation destroy the experience and make it not worth the effort to visit.
10/17/2021 13:15	Alachua		No	No					Would like to see the Rodman Reservoir and Kirkpatrick Dam removed and the Ocklawaha River restored.	Reversing the adverse ecological effects caused by the reservoir and dam including uncovering 20 springs which are now flooded, enhancing warm water winter habit for manatees, and providing many miles of pristine river for kayaking.	No		The Rodman Reservoir and Kirkpatrick Dam are remnants of the Cross Florida Barge Canal (CFBC) project which was stopped by President Richard Nixon due to its significant adverse effects on the ecology of Florida. For the same reasons the CFBC project was stopped, removal of the reservoir and dam and restoration of the Ocklawaha River is long overdue.
10/17/2021 13:17	Duval		No	Yes			2-5 times		Open the dam				
10/17/2021 13:18	Hernando		No	Yes			1 time	Boating	Remove Dam	Environment	The river will never be restored	No	
10/17/2021 13:18	Miami-Dade		No	Yes			1 time	Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	
10/17/2021 13:19	Orange		No	Yes			1 time	Wildlife viewing	Veaning down the dam.	This dam has restricted water flow to many natural springs down stream resulting in reduced biodiversity.	The severe decline of the rivers and springs below the dam.	No, the water management must take action while public awareness and tax payer $ is on the table.	Taking the aged dam down would be the fiscally sensible action to take.
10/17/2021 13:45	Hillsborough		No	No					I want the dam demolished, and natural river flow restored.	Flow restored in the Colorado River Basin rapidly improved water quality and ecosystems downstream. Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	No	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.
10/17/2021 13:57	Martin		No	No					Breach the dam and return the healthy ecosystem.	Protecting animals and local environmental health.	Destruction of the natural ecosystem.	No.	
10/17/2021 14:03	Lake		No	Yes	1 time	2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking	Remove it	It should not have been built in the first place	Don't know	No	
10/17/2021 14:14	Pinellas		No	Yes		1 time		Wildlife viewing	Remove those dam and restore the Ocklawaha river	The dam currently serves no purpose and removing it will help restore 50 springs and help restore the natural flow to the St John's river as well as the Lower Ocklawaha	Water quality will continue to decline, opportunities to restore thousands of acres of forests which will benefit everyone and wildlife	No	
10/17/2021 14:15	Duval		No	Yes			2-5 times	Wildlife viewing	I want the Oklawaha River "freed"	It will help to make our river (St. Johns) & our springs...most especially Silver...healthier & more viable.	The death of the springs.	No	
10/17/2021 14:44	Outside of state / other	California	No	No					The dam needs to be breached in order to restore the Ocklawaha River	Breaching the dam will restore or enhance 15000 acres of the Florida Wildlife Corridor, benefiting a number of species that are in need of help Restoring the river would have a bigger impact on the manatee population than any other by giving them necessary warm water habitat during the winter	Many manatees would die, perhaps enough to make them extinct in the wild. It would also further endanger the Florida Panther and other wildlife having trouble navigating the wildlife corridor	No Breaching the dam is long overdue both for the wildlife and to restore water quality.	Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/17/2021 14:44	St Johns		No	Yes			2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking	Leave it as is. The ecosystem that has developed here over the last several decades is precious. The waterfowl, manatees, fish and people that have adapted, and thrived, on the reservoir should be left alone. Humans have altered Florida in so many ways, and Rodman is one of the few positive ones. Rodman should be left alone and continue to be the great ecosystem into which it has developed.	My personal time on Rodman.	The loss of habitat for all the species that rely on the ecosystem as it currently exists.	Maybe, as long as the reservoir doesn't change.	
10/17/2021 14:45	Lee		No	No					We would like to see the dam removed/breached and the rivers united. Let's restore natural processes to Florida's landscape! Keep Florida beautiful, please!		Tinkering with Florida's natural landscapes bring unforeseen problems.		
10/17/2021 14:51	Miami-Dade		No	No					Keep it safe for all our ecosystems	A concerned citizen about our warming system	Life of animals	No, but for sure if we all put our efforts together it will be accomplished.	
10/17/2021 14:52	Outside of state / other	Columbia, SC	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. Roughly 15,000 acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Thank you for your consideration. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/17/2021 15:23	Volusia		No	Yes			1 time	Wildlife viewing	The dam may be a boon for fishing and wildlife around the reservoir but it comes at much too high a cost for the health of the Ocklawaha River and Springs that are deprived of essential water flow.	Studies have shown that lack of millions of gallons of water flow per day due to the dam is causing serious harm to the quality of the Ocklawaha, St Joh's and Silver Rivers as well as numerous Springs like the Silver. Fish, manatees, birds and other wildlife as well as essential vegetation and forests are suffering from the dam's effects. There is no good reason for spending millions of dollars to repair the dam.	The dam should be removed. If not, water quality will continue to deteriorate, resulting in invasive weeds, algae events, fish kills. The restored flow of water will also contribute to new forest growth, flood protection and improved wildlife habitat. The local communities and counties, especially around Silver Springs and Putnam County will miss out on millions of dollars in economic impact from eco tourism and jobs in the construction and hospitality industry.	No. Removing the dam is most efficient and economical way to save the Ocklawaha and other rivers and springs. Other available means of restoration are far more costly and less effective.	Thank you for giving us the opportunity to provide input on this critical issue.
10/17/2021 15:26	Outside of state / other	Alaska	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	
10/17/2021 15:36	Seminole		No	No					Allow the work to be done so as to correct all the hasardous issues that have created this undesirable predicament.	Restore the animal and fish population	Greater destruction to our environment	No	
10/17/2021 15:38	Volusia		No	Yes			1 time		Restore natural flow.	The project was questionable to proper congressional approval. Part of this project may have been to attractfishing, camping and tourism.	Natural flows are always better. There are so many developmental projects in Florida that negatively alter the environment and wild life. Think of the legacy we give to our children.		
10/17/2021 15:42	Alachua		No	Yes			1 time	Wildlife viewing	I would like to see the dam removed and the free-flowing rivers established.	Three rivers restored, manatees habitat restored, and multiple recreation opportunities.	Environmental needs are essential and dam is unsafe	No. Water quality is unsafe for manatees and dam is unsafe	
10/17/2021 15:52	Duval		No	No					Remove /Open it up for free flowing water to springs and tributaries!	It is no longer needed for its original purpose (canceled Florida Canal) and it preventing the natural free flow of waters to important springs and tributaries.	It would continue to cause major decline in important springs and tributaries and their water quality and quantity.	No!	
10/17/2021 15:53	Alachua		No	No					Breach the dam, drain the reservoir, and re-establish the uninterrupted flow of the Ocklawaha River to the Atlantic Ocean	The science supporting the environmental benefits of this action and the economic opportunities afforded by freeing up the Ocklawaha.	Continued environmental degradation	Nope	
10/17/2021 16:05	Columbia		No	Yes			2-5 times	Canoeing / kayaking	The restoring of the natural flow and integration of the waterways	The integration of the ecosystems and the resiliency of the environment to come back to the most natural state.	continued and increased deterioration of the environment, especially with the additional impact of climate change and global warming.	Phased return of specific areas of the watershed with an emphasis on the most critical and the most responsive projects.	so many problems in society are overwhelmingly complex and difficult to address in manageable bites. This is one case where we know what we can do and can choose to make decisions to move forward in increments.
10/17/2021 16:07	Miami-Dade		No	No					I'd like to see it restored.	Manatees are currently dying in record numbers - but the greatest long-term threat to these animals is the loss of warm water habitat that manatees need to survive the winter. Restoring the Ocklawaha River is critical to ensuring the long-term survival of manatees. This river system, with over 20 connected springs, could provide essential warm water habitat for hundreds of manatees. With the species in crisis and many more die-offs likely if habitat is not restored, we need to do all we can to keep them safe from fatal temperatures.	We'll lose a habitat for manatees and they'll die off in record numbers.		
10/17/2021 16:21	Miami-Dade		No	No					The dam should be removed.	Photo and video reports about the situation and the habitat destruction this dam has caused.	More public money wasted on repairing a fam that shouldn't be there, as opposed to restoration of the wetlands and natural habitats.	No.	
10/17/2021 16:31	Outside of state / other	Erie County, NY	No	No						Breach it	Manatees are dying, because their habitat is degraded.	Florida's natural ecosystems will be destroyed.	NO
10/17/2021 16:28	Palm Beach		No	No						Remove	Native species habitats	Native species habitats	No
10/17/2021 16:46	Seminole		No	No					Breach the Rodman/Kirkpatrick Dam	- We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. - The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. - Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. - Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. - Hundreds of manatees loose access to essential warm water winter habitat. - Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
10/17/2021 16:49	Gilchrist		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing	It is the best fishing spot in North Florida	leave it like it is. and do more hydrilla removed.	losing a great fishing habitat and taking a lifetime to get the land back to usable land.	no	
10/17/2021 16:56	Pinellas		No	Yes	1 time	2-5 times	More than 5 times	Fishing Canoeing / kayaking Wildlife viewing	Keep it as is	It is beautiful	Manatees will perish	Nope	
10/17/2021 16:58	Brevard		No	No					Remove it and restore the riverflow.	We are strangling our river sheds. We need to restore a traditional flow and reunite the rivers and the ecosystems that rely on them. And...it's far too expensive to repair the dam, and the dam is just not needed.	We're screwing it up. Again. Even when this time we could do better and smarter for our fellow creatures and our shared environment.	No, the dam is either there or it isn't.	American Rivers has shown us through their projects, over and over again, that removing failing dams is a huge boon to the environment. Look at some of their success stories, and try to emulate them.
10/17/2021 17:20	Brevard		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	If not preserved, our natural treasures will disappear forever.
10/17/2021 17:22	Outside of state / other	IL	No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Just remove the dam!!!!
10/17/2021 17:32	Clay		Yes	Yes	1 time	2-5 times	More than 5 times	Wildlife viewing Other: nature walk	Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Please remove the dam and restore the Ocklawaha River.
10/17/2021 18:00	Marion		No	Yes		1 time		Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman Restoration of the Ocklawaha River by breaching the Kirkpatrick Dam	Three Rivers are restored . The Ocklawaha, the Silver, and Johns, and 50 springs restored. thousand s of acres would be restored	We would continue to destroy our environment	no	No cross Florida barge canal should equal no dam
10/17/2021 18:16	Putnam		No	Yes			More than 5 times	Wildlife viewing	Maintenance is required as it affects not just that area	Think about the dam breaking...	The dam would break and affect surrounding area	Of course if it involves saving the dam	Thank you for your time on this important matter!
10/17/2021 18:18	Putnam		No	Yes		1 time		Fishing (shoreline/structure) Canoeing / kayaking Wildlife viewing	I would like for the river to be free flowing.				
10/17/2021 18:20	Outside of state / other	Boone county, Missouri	No	No					If they do anything, as a tourist of Florida, I want the manatees' habitat to be protected	I just believe that nature needs us more than ever, even though I live in Missouri, I care for wildlife and I just speak for them.	That manatees habitat will be endangered so their populations will suffer	just protect manatee habitat, it is all I want and ask from officials	n.a.
10/17/2021 18:26	Alachua		No	Yes			1 time	Canoeing / kayaking	Have it removed to allow the river to flow freely. This dam serves no purpose.	I have spent hours with various older people that know this river and the springs prior to the dam and they all say that most beauty was destroyed by the dam. And I understand from Bob Knight that the dam has contributed to the pollution of the silver river. The first tourist attraction in Florida prior to disney is slowly dying	Long term negative effect of the Ocklawaha and the silver river	No. The dam should be removed.	I am a member of the Florida Paddling Trails Association and many, many kayak paddlers support my position.
10/17/2021 18:32	Marion		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing Other: photo taking	I feel its time for the dam to be removed instead of a very expensive repair and open up the river to its natural flow. Many species of fish and wildlife would benefit from this action and I feel the support is in favor of letting the river flow again. The economic factor has been decreasing and this could be heightened by more environmentally friendly sportsmen and river activity.	Recent studies	It would be a shame to not reopen the river and let nature return to what it was.	Not aware of any.	
10/17/2021 18:58	Volusia		No	No					Keep the dam up!!!	I visit the manatees at Blue Springs every year! Why are we trying to destroy one of the habitats!	The unnecessary death of all the manatees!!!	No	
10/17/2021 19:00	St Johns		No	No					I think it should be removed and let the way the river was running as nature made it. We are environmentally ruining the river in so many ways. We are letting swamps that filter the river naturally be filled in and built on. I don't see any groups actually fighting for the river.	The river should not be changed from its natural state by man.			
10/17/2021 19:03	Duval		No	No					Breach it to free oklawaha river	future harm to nature of damming other major rivers : look at colorado !!	water quality !!	tbd	
10/17/2021 19:24	Hillsborough		No	Yes		1 time		Canoeing / kayaking Wildlife viewing	They should be reopened/removed.	Besides restoring fish and wildlife, it will help save the endangered manatees.	Knowing that not everything ekwa done to protect our beloved manatees.	No, not in this case.	
10/17/2021 19:31	Palm Beach		No	No					ThaOcklawaha River needs to be restored by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most important manatee habitat restoration project in FL and it will provide essential warm water winter habitat for hundreds of manatees.	This deprives manatees of essential warm water in winter harming chances for survival now and in the future. Keeping the Ocklawaha dammed keeps 7,500 acres of forested wetlands flooded and impacts Florida panthers, Florida black bears, bobcats and white-tailed deer because they cannot easily travel through this area.	NO! This is 50 years overdue. Florida wildlife and water quality cannot wait any longer.	
10/17/2021 19:43	Lafayette		No	No					As a mother and grandmother, I believe it is our duty to protect and preserve wildlife as precious natural resources held in trust for all future generations. I also feel a deep responsibility as a Steward for all of Earth's Divine Creation. So I urge you to please restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Over 15,000 acres of the Florida Wildlife Corridor will be restored, helping and supporting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	I am gravely concerned that keeping the Ocklawaha dammed will keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	That's a hard NO. Wildlife and waited too long already and cannot afford to wait any longer.	Our responsibility for wildlife and lands will always be more important than politics or profit.
10/17/2021 19:45	Bay		No	No					I would like to see the Rodman Reservoir and Kirkpatrick Dam torn down, so that the river can flow freely as nature intended it to. This would also allow the local fish population to increase.	1.) Gainesville Sun Newspaper article "What next for Rodman." 2.) Florida Fish and Wildlife Conservation (2019) Rodman Reservoir. https://myfwc.com/fishing/freshwater/sites-forecasts/rwd/rodman-reservoir/	My main concerns are as followed 1.) the water system in my local area of Florida would be all messed up, nature intends rivers to flow freely, 2.) the fish population would decrease due to overfishing, and 3.) nitrogen levels could go up.	Plain and simple, removing/tearing down the dam.	As a Florida native to the Alachua county area, who has grown up going back and forth between Alachua, Putnam, and St. John's County, I would love to see the area of the St. John's river free flowing again. Everybody knows that rivers are meant to flow freely and this damn is preventing that and it needs to be torn down.
10/17/2021 19:53	Outside of state / other	Colorado Springs, CO	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/17/2021 20:15	Miami-Dade		No	Yes		More than 5 times		Canoeing / kayaking	Full breach of the dam and restoration of the natural flow of the Ocklawaha river.	There are 20 drowned springs caused by the damming of the Ocklawaha. This is a dam that is put in place to appease the very small group of sporting fisherman. This spring fed river would be restored to its natural state and within time support the ecosystem it once did including restoring wetlands, tidal flood plains and natural habitats to a whole host of fauna and flora. Economic and tax revenue from ecotourism (like in High Springs and Ft. White) would also help the local community.	Continued degradation of our most delicate wetlands and flood plains. Continued stresses on fauna and flora due to habitat deterioration.	No.	I line Miami-Dade county but own riparian property in Alachua on the Upper Santa Fe river and truly believe that I purchased this property on this spring fed river for its beauty. I would be appalled if anyone tried to disrupt its natural flow by damming or otherwise. Please weigh the benefits (both economical and environmental) to the cost of no action. Please breach this dam and restore this Ocklawaha's flow. Please free up the 20 springs so we all can enjoy nature's most perfect pools. Thank you.
10/17/2021 20:16	Marion		No	Yes		1 time		Wildlife viewing	I would like for the dam to be breached so that the Oklawaha River can return to its original state. The reservoir has covered 20 natural springs and is destroying the River and also causing numerous issues at Silver Springs and the surrounding area. It is also restricting the natural migration of manatees during winter and could be leading to the deaths of these magnificent creatures. Since Ige dam actually requires millions of dollars in repairs, it seems getting rid of it is the most logical solution.	I have read dozens of articles regarding this issue during my 35 years of residency on Marion County. The only positive spin is because of the fishing potential; but recent numbers show that less and less fishermen are actually visiting the area.	Loss of the vitality of the Oklawaha basin and eventual destruction of Silver Springs.	Partial breaching with full removal in phases.	
10/17/2021 20:22	St Johns		No	Yes		2-5 times		Wildlife viewing	Dam Gone	Bringing the river back to its natural state	Frustrated that the Ocklawaha River isn't free to bring back the buried springs and passage for Manatees	No	Remove Dam Free the Ocklawaha
10/17/2021 20:26	Alachua		No	Yes		2-5 times		Wildlife viewing	tear down the dam and restore the ocklawaha	the dam is unnatural and prevents migration of fish and manatees, tearing down the dam will restore adjacent harwood forests, reconnect silver river to st johns, improve water quality and improve recreation and ecotourism in the region	maintenance of status quo is maintenance of an unnatural condition	NO- tear down the damn and restore the Ocklawaha to a free flowing river as nature intended	
10/17/2021 20:33	Alachua		No	Yes			1 time	Canoeing / kayaking	Restore the Ocklawaha River!! Breaching the Rodman/Kirkpatrick Dam will restore the River ecosystem to its original natural state. The original purpose of this project was to support the cross Florida canal - which of course (thankfully) was not completed. The Dam has been harmful to water quality, wildlife and has limited environmental, recreational, and economic opportunities.	Three rivers -- Ocklawaha, Silver, and St. Johns, and 50 Springs would be restored! Studies as well as news reports show us that water quality throughout Florida is deteriorating which effects not only human health but wildlife as well. By restoring these Rivers and Springs more diverse opportunities will be created for everyone including a robust environment, healthy living, more recreational options, increased interaction with nature, and more options for economic expansion.	The best opportunity to undue the damage caused by this Dam would be lost and the cost to NOT restore the ecosystems impacted would be astronomical. It is critical to act NOW.	No. Breaching the Dam is 50 years overdue.	
10/17/2021 20:34	Pinellas		No	Yes		2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	To have it and any remnants of it completely removed.	I want the Oklawaha river, it's tributaries including the silver river, and all the wetlands surrounding it, returned to their natural state, so that amongst other things, wildlife can also use the area the way it was intended and the way many of them evolved to do.	Things will continue as they have for the past 50(?) years.	Not really. You could leave the reservoir drained, which would resolve part of the problem, but animals would still be restricted from moving freely up the river.	
10/17/2021 20:37	Orange		No	No					Breach the dam.	Manatees need more habitats.	No more habitat for manatees.	No.	
10/17/2021 20:41	St Johns		No	Yes		1 time	2-5 times	Canoeing / kayaking	I would like to see the reservoir drained, the dam breached and the gates & all mechanisms removed. The dam would not need to be completely removed to provide a safe future environment. This would allow the Ocklawaha floodplain to return to a natural state.	The Rodman reservoir provides little economic benefit to the surrounding communities and is a financial drain. Letting the river return to it's natural state (though it would be a long process) is in the best long term interest of the surrounding communities. It was an environmentally healthy and beautiful river before being destroyed for the ill-fated canal project. It is in the best interest of our descendants to return it to a natural state.	Habitat destruction is one of the most pressing problems that our planet is facing. Though the Ocklawaha floodplain is only one small segment of this problem it is still very important when looking at the big picture. Natural places are becoming more important than ever to maintain our earth's environmental balance.	Not really. Returning the Ocklawaha is long past due.	Restoring the river should have been done after the project was decommissioned. But, there were interests claiming that the reservoir was critical to the financial interests of the surrounding communities. This has not proven to be the case, AND it! In fact depresses the river ecosystem has suffered almost irreparable damage. It is time to right past wrongs against this once fertile and beautiful resource.
10/17/2021 20:51	Lee		No	Yes		1 time		Wildlife viewing	Restore the river by breaching the dam	50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months.	we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe.	Reaching a dam or improve water quality and quality of life for all wildlife way overdue 50 years overdue	Restoring a dam or improve water quality and quality of life for all wildlife way overdue 50 years overdueEverywhere in the United States everything is becoming polluted and wallet water quality is just bleeding would it be nice in our beautiful Cape Coral and Lee County if we could keep it beautiful and clean water and if breaching the dam creates that for our wildlife habitat that's crucial to clean water and healthy living for humans as well
10/17/2021 21:03	Marion		No	Yes	1 time	2-5 times	More than 5 times	Boating Wildlife viewing Other: Fascinated by the manatees!	Leave the dam as is.	It is used by many who fish, love observing wildlife that is flourishing in the area.	It will NEVER go back to how it was before the dam and it is unrealistic to think it will. The wildlife currently flourishing will not survive removal of the dam.	NO!!!!!!!!!!!!	Why must others who are not from this area insert themselves into something that does not affect them?
10/17/2021 21:19	Volusia		No	Yes			1 time	Other: Do not use. Just visited to see what it was.	Restore natural, original ecosystem !!	Continuity of Florida's beautiful waterways and wildlife. That is what Florida is all about. That is wheat makes us such a desired destination!!!!	Loss of wildlife, our natural ecosystem, loss of the real natural Florida, becoming like every other man made mess. Let's stay real. Let's stay Florida. Let's stay the beautiful place we are blessed to enjoy!!!	I don't know what that would be...	Thank you for asking!
10/17/2021 21:24	Marion		No	Yes	1 time	2-5 times		Other	remove the dam and open the area for more manatees and a variety of fish and recreational activities	age of the dam, lack of fish varieties,	that the opportunities present today will never be achieved	no	no
10/17/2021 21:25	Alachua		No	No					Take half of it down to help restore the Ocklawaha and springs.	A letter to the Monitor several years ago from Dr. Jim Clugston, which I am mailing to you.	Loss of fish and manatees as they are unable to get to parts of the river at certain times of the year when they need warmth.	Open up part of the dam. Totally opening it would flood the surrounding area and cause a lot of damage.	In the 1960's my family took a small boat down the St. Johns, Ocklawaha and Silver Springs. I remember the beauty of the area. Just don't want to see anymore destruction to the area. Thank you.
10/17/2021 21:43	Alachua		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	Breach the dam now and improve water quality and livelihood for many animals like manatees, plants, and the citizens who live around these areas.
10/17/2021 23:23	Alachua		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Canoeing / kayaking Wildlife viewing	Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every additional day the dam and reservoir remain in place results in additional environmental degradation.	7,500 acres of the lower Ocklawaha's historic forested floodplain, 20 freshwater springs, and many miles of natural river channel that were drowned as a result of dam construction would be restored. !! Thousands of acres of submerged aquatic plant communities would be able to regenerate in the restored river channel, and in the re-emerged spring run streams that drained into the Ocklawaha historically. !! 8,000 acres of stressed floodplain wetland located downstream of the dam would be enhanced. !! Imperiled plant species like the endangered Star Anise and threatened Harberlghtia, which are native to the banks of this region's spring run streams, could expand their range into the restored spring systems. !! Draining the Rodman Reservoir would remove the single-greatest barrier to plant and animal movement along the Ocala to Osceola (OSO) Wildlife Corridor by replacing the open water expanse of the Reservoir with a restored floodplain forest, to the benefit of many listed plant species native to the region including the Federally listed Clasping Warea and Scrub Buckwheat. !! Three river systems - the Ocklawaha, Silver and St. Johns - would experience significant environmental improvement from restoration.	The broad array of environmental benefits to native flora and fauna, including many imperiled species, that would result from restoration would not be possible. !! Water quality in the Rodman Reservoir and Lower Ocklawaha/St Johns River system would continue to decline. !! The economic benefits that would result from increased and enhanced recreational usage would be denied to the surrounding local communities. !! Residents and business owners in areas immediately downstream of the dam would continue to be under threat in the event of failure of a dam that has never, and will never, satisfy the purpose of its construction. !! Thousands of acres of submerged aquatic plant communities would be unable to regenerate in a restored river channel and in the re-emerged spring run streams, and 7,500 acres of floodplain forest would not be restored. !! The Reservoir would continue to be a barrier to movement by native wildlife and plant life along the length of the OSO Corridor, and compromise the value of Florida's investments in conserving lands like the Etonian Creek State Forest, and approved Florida Forever projects.	No. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration.	
10/17/2021 23:44	Okaloosa		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	The Ocklawaha River must be restored by the breaching of the Kirkpatrick Dam.	At least 15,000 acres of the Florida Wildlife Corridor will be restored benefitting Florida Black bears, bald eagles and deer. The restored Ocklawaha River will provide warm water winter habitat for hundreds of manatees making this the most impactful manatee restoration project in the state.	Continuing to dam the Ockawaha prevents hundreds of manatees from accessing essential warm water winter habitat.	NO, only the breaching of the Kirkpatrick Dam will provide the relief needed. This is very overdue.	Restoring the Ocklawaha River by breaching the Kirkpatrick Dam will provide manatees access to Ocklawaha natural springs that are currently submerged by artificially high water levels. This is critically needed. Thank you for your attention to this important issue. It is critically important to me as a Florida stakeholder..
10/17/2021 23:45	Hernando		No	No					Remove the dam and return the river to its natural state.	Improved habitat for land and water animals and plants.	Loss of habitat for native plants and animals.	No	
10/18/2021 0:16	Alachua		No	No					Destroy it and free the Oklawaha river	Don't wast taxpayer dollars repairing this dam	My tax dollars would be wasted repairing this dam and the environment will be further harmed.	No destroy this dam	Destroy this dam
10/18/2021 0:26	Volusia		No	No									
10/18/2021 0:42	Miami-Dade		No	Yes	1 time	More than 5 times	More than 5 times	Canoeing / kayaking Wildlife viewing Other: Hiking/Walking	Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/18/2021 0:44	Alachua		No	Yes			1 time	Wildlife viewing	Remove the dam and restore the Ocklawaha River.	Information from the Audubon Society about ecosystem damage caused by this dam.	Continued harm to the FL ecosystem.	No	
10/18/2021 1:45	Alachua		No	No					The dam removed and the river restored	Innumerable articles and essays from the environmentally enlightened.	Government Ethics	No	
10/18/2021 2:12	Seminole		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more. Please think long-term for our state, or pay in many ways down the line.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Our family cares about the environmental and financial impact of decisions made without important forethought for what will be driven down and/or damaged in the future. Thank you for your respectful consideration.
10/18/2021 3:48	Hillsborough		No	No									
10/18/2021 3:49	Outside of state / other		No	No									
10/18/2021 3:54	Duval		No	Yes			1 time	Canoeing / kayaking Other: Hiking	Take it out, return to the wild river	Nature rules! Let it do its job	Nature can't do it job	Not interested	I want to kayak on a wild river
10/18/2021 4:35	Lake		No	No					I believe the Dam has to be removed	Florida Springs Council information	Continued loss of springs and manatee	No, the environment is calling for this to be done	This project seems to be the most cost effective means to reviving springs and saving manatee
10/18/2021 5:37	Escambia		No	No					It should be removed	Wildlife movement/freedom must be restored by reuniting the waterways.	Extinction of wildlife and wasted money	No	
10/18/2021 6:27	Lake		No	Yes			2-5 times	Canoeing / kayaking	Remove it!	It's negative effect on springs	That you all lied about it.	No	Please.
10/18/2021 6:44	Alachua		No	No					Breach the dam and make the area more habitable for manatees and all other life forms- plants, birds, bats, fly, etc.	2021 data from the Clearwater Marine Aquarium Research Institute	Extinction and loss of natural habitat	No.	Thank you. Please consider what your actions may mean for the future of our environment and nature.
10/18/2021 7:08	St Johns		No	Yes		2-5 times		Other	I would like to see the dam removed. It is not in good condition and I have property downstream in Welaka that would be adversely affected if the dam were to fail. I also fish the Ocklawaha and it needs to run free again.	The reports on the condition of the dam. My personal observations of the reservoirs habitat. It is unnatural. The flooding of the free flowing springs should be undone as they would make great recreation spots. Also they would provide manatee with winter habitat	Catastrophic dam failure and loss of life and property.	Permanent draw down.	This is the right thing to do to correct a decades old mistake. It is on par with restoring the Everglades.
10/18/2021 7:26	Outside of state / other	New Jersey	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/18/2021 7:50	Putnam		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Boating Hunting Wildlife viewing	Maintain it	Life	Another big mistake	No, you can't half bake a cake	
10/18/2021 7:54	Alachua		No	Yes		2-5 times	More than 5 times	Fishing Hunting	Maintain the dam, even by launch fees if necessary. It is valuable resource for North Central Florida.	The local population adamantly supports the reservior.	Adverse impact to already too few areas to hunt and fish.	no	Do not let a small vocal group of environmental extremists destroy this asset!
10/18/2021 7:54	Pinellas		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	I would like to see the Dam removed and the restoration of the rivers in the area.	Not only will it increase the beauty of the area, but wildlife will increase and have more protection. In addition, The lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	If the dam stays Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No, Dam safety, improved water quality and wildlife can't wait.	
10/18/2021 8:12	Duval		No	No					I would like the dam to be removed to allow the river to move freely.	The restoration of the natural flow of the water way so that the health of the river and springs can be restored.	The continued destruction of the natural river and surrounding springs.	No	
10/18/2021 8:25	Sumter		No	Yes			2-5 times	Wildlife viewing	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	It will restore a healthier ecosystem - restoring more than a dozen natural springs. Fish and manatees will return as a breach opens, creating a free-flowing river. In particular, manatees gain essential warm water winter springs habitat.	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River to ensure a better future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This exciting restoration will improve water quality and flow by generating millions of gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources.
10/18/2021 8:32	Duval		No	Yes			1 time	Wildlife viewing	Go back to the way it was.	Nature knows best.			
10/18/2021 8:35	Leon		No	Yes		2-5 times	More than 5 times	Wildlife viewing	Remove the dam and let the river flow naturally	quality of the water would be improved for all fish and manatee	dam could break it's so old	no	I have been camping and vacationing in the Ocala National Forest for more than 30 years. we use the Ocklawaha River recreationally and the dam interferes with that.
10/18/2021 8:37	St Johns		No	No					If it helps the St. john's river I'm for tearing it down. Also the cost to tax payors seems very high initially with continuing maintenance costs	Helping the St. River remain fresh farther upstream.	Cost to tax payors. St, John's county's taxes are high enough already		
10/18/2021 8:39	Marion		No	No			1 time	Wildlife viewing	Decommissioning and restoration of natural waterways	published reports of restoration project endorsed by DEP and supported by SJRWMD and more recently by FORCE	continued deterioration of springs and particularly Ocklawaha River	unknown	Altho the adverse environmental effect of the misguided barge canal was recognized decades ago, this remaining vestige has been allowed to remain for the "benefit" for a small number of bass fisherman - to the detriment of our greatest natural resource for generations to come.
10/18/2021 8:41	Lake		No	No					The Dam should be removed	Valuable springs are lost, a free flowing river is lost, all this affects the hydrology of north central Florida.	More lost springs, more dead Manatees, less natural water flow in the tributary area to the St. Johns River.	Breaching the dam would be a far less desirable scenario to removing the dam.	I've been a Florida resident, business owner, public school teacher since 1984. We need to restore the natural water flow which the Kirkpatrick Dam and Rodman Reservoir block. Our waterways and natural flora and fauna are treasures that Florida is all too often squandering.
10/18/2021 8:43	Marion		No	Yes			1 time	Fishing	It should be breached or removed	newspaper articles	continued deterioration of waterways	unknown	

10/18/2021 8:52	Volusia		No	No					remove dam	restore the flow and improve conditions	degrading conditions	no	remove the dam
10/18/2021 8:57	Lake		No	No									
10/18/2021 9:19	Baker		No	Yes		1 time		Fishing Boating	Freed for natural resources	Damage to animals and springs	Perpetual devastation		
10/18/2021 9:20	Alachua		No	Yes			2-5 times	Fishing Canoeing / kayaking Wildlife viewing	I usually visit the reservoir during drawdown periods. I would like to see a test period where the Rodman is left at drawdown level for one year.	My personal observation is that the reservoir/river is much more interesting when the river is flowing within its banks. The fishing is better too, because the fish are contained in a smaller volume of water.	Continued controversy and environmental damage to the Ocklawaha River. Missed opportunity for eco-tourism instead of powerboat-centric bass fishing.	I believe a year-long drawdown is a good compromise which would give all constituents a period of first-hand experience on what the Ocklawaha would look like if the Kirkpatrick Dam was to be permanently breached. A final decision could be made at the end of the test period to extend the test period, refill the reservoir, or permanently breach the dam.	Thank you for the opportunity to comment.
10/18/2021 9:25	Seminole		No	Yes		1 time	1 time	Canoeing / kayaking Boating Wildlife viewing	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breeching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/18/2021 9:32	Outside of state / other	Rhinebeck, NY Dutchess County	No	No					Place emphasis on its role in providing habitat for some of Florida's most threatened species	The loss of habitat throughout the state, and the dwindling number of opportunities to protect what is left.	The further degradation of Florida's biodiversity.	I'm not sure what they might be.	Thank you for the opportunity to comment on this important issue.
10/18/2021 9:33	Duval		No	Yes			1 time	Wildlife viewing	Remove the dam and restore the river	The restoration of the springs will in turn will protect the St Johns River.	The St Johns River will continue to have more contamination and increased salinity.	No	
10/18/2021 9:43	Leon		No	Yes		1 time	2-5 times	Canoeing / kayaking Wildlife viewing	Remove the dam and restore the flow of the Oklawaha River.	Accumulation of sediments behind dam that deprives downstream habitats of nutrients	continued deterioration of downstream floodplain habitats	no	
10/18/2021 9:46	Pinellas		No	No					REMOVE THE D AM AND RESTORE OCKLAWAHA RIVER		THE CONTINUED DESTRUCTION OF FLORIDA'S NATURAL RESOURCES = REMOVE THE DAM AND RESTORE THE NATURAL FLOW OF FLORIDA RIVERS	no	I am a Floridian and my husband was a fourth generation Floridian - protection of Florida's natural resources is critically needed. PLEASE REMOVE THE DAM AND RESTORE THE OCKLAWAHA RIVER TO ITS NATURAL FLOW. THANK YOU
10/18/2021 9:50	Alachua		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	When dam is removed, this restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor, Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored and 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife If not done, water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.
10/18/2021 9:57	Clay		No	Yes	1 time	2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing Other: Camping	Leave the Kirkpatrick Dam and Rodman Reservoir intact.	Comon sense.	Tax dollars spent on the destruction of the dam and the loss of habitat for everything there now.	No	The dam area and beautiful reservoir are habitat for fish and animals. Also a great area for fisherman, boaters, campers and wildlife watchers. There are people who travel from other States to enjoy the area. Use the funds spent on destroying this area to do something about the phosphate retention ponds that leak into area rivers and into the Gulf. That would be tax dollars better spent.
10/18/2021 9:58	Alachua		No	Yes			1 time	Other: For limnology class	I would like to see the dam removed so that the Ocklawaha River can run freely.	I am most concerned that the dam impedes free movement of aquatic organisms up and down the river run.	I have 3 or 4: 1) the dam will continue to prevent aquatic organisms from freely moving up and downstream, 2) costs for dam maintenance and weed control in Rodman will continue, 3) Florida will miss an opportunity to attract a larger group of tourists who could enjoy the free-flowing river system, 4) we will miss a golden opportunity to conduct an interesting restoration project	No, it really is time to undo the debacle	Assuming there is a decision to remove the dam, there will be a temptation to manage all aspects of the system during recovery (e.g. selected re-vegetation of the exposed land). I would suggest letting nature take its course, and funding large numbers of UF graduate students to monitor the recovery process. We stand to learn a lot about recovery of both aquatic and terrestrial environments, following dam removal.
10/18/2021 10:01	St Johns		No	Yes		1 time		Fishing Canoeing / kayaking Wildlife viewing	Remove the dam and restore the natural flow of the river		Continued deterioration of the St. Johns River watershed	None that I am aware of	
10/18/2021 10:03	Alachua		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/18/2021 10:11	Sarasota		No	No					I'm definitely in favor of breaching the dam and restoring the Ocklawaha River and thereby the Great Florida Riverway. Removing key portions of this dam will re-establish traditional access to essential habitat for manatees, which, especially in view of the current crisis (manatee UME) has become more and more essential for the threatened species survival. Besides, this area will also provide significant recreation area for the human population.	As a manatee researcher, teach of environmental studies, and frequent user of the Marjorie Harris Carr Cross Florida Greenway, I'm well aware of the history of the Cross Florida Barge Canal project, which the dam was part of, and it's devastating impact on the environment. Florida manatees are more than ever in need of habitat, for feeding, resting, and access to warm water refuges. Therefore, removing parts of the dam and thereby giving manatees access to critical habitat is the only reasonable decision to make. Several governors and administrators have tried it, and it's not understandable for me, why none of them was successful. Not to forget the valuable services this ecosystem, once it is restored, will provide, such as water filtering, providing recreational space, providing habitat for divers fish species, just to name a few.	Besides the ongoing destruction of natural resources in central Florida, in particular the ongoing reduction of critical manatee habitat and food sources are my biggest concern. If this trend continues, the survival of the Florida manatee is severely in danger.	Any kind of opening at least parts of the dam will be beneficial.	
10/18/2021 10:14	St Johns		No	Yes			More than 5 times	Canoeing / kayaking Wildlife viewing	Remove the dam and let the Ocklawaha return to a natural state	The cost of maintaining the dam is a waste of taxpayer funds	Water quality declines due to stagnation and excessing vegetation	If the dam itself cannot be removed, at least remove the gates	
10/18/2021 10:15	Clay		No	No					I have looked at the Google maps of the site. I am familiar with river dam removal in the Pacific Northwest where I lived until moving to Penney Farms in 2017. I strongly support removal of the Kirkpatrick Dam and restoration of the area to achieve benefits both ecological and economic to Florida in general and the Riverway communities along the Ocklawaha, Sliver and St. Johns Rivers.	I have seen first hand the benefits of this kind of action in WA state, for fish and other species especially.	Continued environmental degradation and the inertia realized from lacking the political will to undue engineering boondoggles from the past.	I don't know of any.	
10/18/2021 10:16	Duval		No	Yes	1 time	2-5 times	2-5 times	Wildlife viewing	Allow natural water flow south as nature intended without impediment. Nature will restore the natural fauna and wildlife from the upper reaches to Florida city.	NATURE - push back further impediment, the Army Corps of Engineers, development and local government involvement.	Destroying the natural flow of the river of water and the Everglades. If fresh water is continued to be hindered south Florida fresh water wells will become saline & impossible to drink. Salt water can only be stopped by the southern flow of fresh water.		
10/18/2021 10:21	Lake		No	No					Removed	Freeing the springs and the manatees	Loss of habitat		
10/18/2021 10:30	Marion		No	Yes		1 time	1 time	Other	I would love to see the dam breached in order to help manatees, migratory fish and other native animals and plants.	The toxic chemicals being constantly dumped in the reservoir in order to keep down the invasive weeds. Also the 20 or so natural springs that will come back in breaching it.	Disappearance of native plant & animal species	I don't think so.	
10/18/2021 10:34	Flagler		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	f Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breeching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/18/2021 10:35	Orange		No	Yes			2-5 times	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to Florida's economy, drinking water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Restoration creates more diverse recreation opportunities for everyone to include tourists, increases visitation and adds hundreds of jobs during this time of economic insecurity.	5. Florida and the national economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. We are in the middle of economic hard times caused by Washington. We cant afford to lose this opportunity to reduce the possibility to put people to work.	No. I believe in the near future this dam will fail. Plus I believe we will lose the opportunity to use the money already allocated to envoirmental improvement to stave off the coming national recession caused by Washington.	As a Flori9dian who cares about Florida's economy, quality of life, environment and wildlife, I am asking you to restore the Ocklawaha River, to ensure a bright future for our state's people, visitors and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway.
10/18/2021 10:36	Hillsborough		No	No					Remove the dam	Saw a news program that exposed the damage being done to the Florida spring system by the dam.	Flow of water in the springs and the eco systems will be permanently be damaged	No. The dam is no longer needed	
10/18/2021 10:38	Sumter		No	Yes	2-5 times	More than 5 times	More than 5 times	Wildlife viewing	Remove it.	I love kayaking to Florida springs.	Natural Florida is being ruined by development.	No	Our springs are world famous. Let the manatees and fish enter the old river and Silver River.
10/18/2021 10:42	Marion		No	Yes		1 time	More than 5 times	Canoeing / kayaking Boating	Please remove the damn and free the Ocklawaha to its original state.	The springs have dissappeared/been covered up in the Ocklawaha. The stripers have dissappeared in Silver Springs, the mullet are gone and only a few manatees remain (although they are trapped). The damn was never meant to be there and it should be removed.	Silver Springs will continue to degrade.	I do not tink so.	
10/18/2021 10:42	Alachua		No	Yes		1 time		Other	breach or remove the dam!	By breaching the dam the natural water flow would be restored. Better fishing below the dam.	This fight will continue!	NO.	
10/18/2021 10:46	St Johns		No	Yes		1 time	2-5 times	Canoeing / kayaking Wildlife viewing	Restore the Ocklawaha River.	Personal knowledge and experience. I boated the Ocklawaha as a child with my family, going from Palatka to Silver Springs. We have not done so since the barge canal construction. I would like for my grand children to have that experience.	That the Ocklawaha would remain degraded and a monument to our State's propensity to choose commerce over the environment.	Permanently drawdown the reservoir and allow nature to reclaim the Ocklawaha River's historic floodplain and adjacent forests.	Let's do the right thing this time.
10/18/2021 10:50	Putnam		No	Yes			More than 5 times	Fishing Boating Wildlife viewing	remove the dam restore the river to its original course so fish and mammals can travel upstream with out interference	millions of dollars wasted on up keep of the dam and lock		no	
10/18/2021 10:53	Okaloosa		No	Yes			1 time	Canoeing / kayaking Other: I visited by canoe on a drawdown time to view the river as it should be. I was on the Board of the Florida Wildlife Federation at the time.	Remove the dam.	Health of the River system and allowing the Manatees to return.	Continued degradation of the River system.	No.	Fishing on the River will be available without the reservoir used by bass fisherman now. The diversity of the ecosystem as it returns to its prior state would enhance all wildlife.
10/18/2021 11:01	Alachua		No	Yes		2-5 times		Wildlife viewing Other	remove the dam to restore the origional flow of water	Cost of dam maintainance, poor fishing & other wildlife	cost for maintaining dam	no	
10/18/2021 11:02	Clay		No	No					remove the dam	having the additional flow into the St Johns River will hopefully bring faster recovery to the river	not having another solution going forward	any additional help for the river would be a good outcome	
10/18/2021 11:03	Outside of state / other	Georgia	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/18/2021 11:06	Duval		No	Yes			1 time	Other: curiousity	see the ocklawaha restored to natural state	flow of the springs and health of the st johns river	further deterioration of our natural water supplies	partial removal of the dam	the barge canal should never have been started
10/18/2021 11:12	Alachua		No	Yes		2-5 times		Wildlife viewing	Remove the dam.	The disruption in the natural cycles of the river caused by the dam.	Rodman reservoir will continue to hold back essential nutrients that historically flowed with the river downstream to the Atlantic, nutrients that supported the life of the river. The dam interfers with the upstream migration of important species of fish.	No.	
10/18/2021 11:13	Putnam		No	Yes	1 time	2-5 times	More than 5 times	Fishing (shoreline/structure) Wildlife viewing	Keep it	Rodman helps with lowering nutrient loads in the St. John's River.	Exposing nutrients at the bottom of Rodman will result in high nutrient loads reaching the St. John's River every time it rains. Even a effort to mine the nutrients would have a bad impact. The St. John's nutrient loads are too high even with Rodman filtering some of them.	Not really. Mitigation payments to Putnam and Marion counties would need to be in the millions each year for many year to come to offset for the positive impacts Rodman has on the economies of these relatively poor counties.	Imagine if someone wanted to drain Guntersville reservoir in Alabama where bald eagles have been reestablished into that ecosystem. Environmentalists would go nuts. Our environmentalists want to drain Rodman, home of several eagle families. It's nuts.
10/18/2021 11:15	Outside of state / other	NJ	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer. 10/18/2021 11:24	Lee		No	No					Remove the dam and restore the Ocklawaha River	Long term loss of natural habitat.	Long term loss of natural habitat.	No	
10/18/2021 11:24	Alachua		No	No					I do not care if the reservoir disappears and I do not want the dam to remain.	The years of proofs of environmental degradations and loss of vital habitat.	That long-range plans to restore wildlife corridors throughout the state are hampered.	no	none
10/18/2021 11:30	Alachua		No	Yes			1 time	Wildlife viewing	The dam needs to be removed to allow the free flow of the river.	Removal of the project has been a project of Florida Audubon Society for over 20 years	That the flow of the river remains blocked	not really	All conservation groups support the removal of this dam. We need to listen to them and not a small group of people who wish to fish there.
10/18/2021 11:42	Duval		No	No					Free the Ocklawaha to restore the rivers and the springs.	The dam is not serving the purpose it was intended for. The dam is now causing problems with our rivers and springs.	Long term effects to our environment	No.	The time is now to free the Ocklawaha and restore our rivers and springs for all of us and for the future generations.
10/18/2021 11:52	Marion		No	Yes			2-5 times	Wildlife viewing	I would like to see the Rodman Reservoir restored and the dam removed	There are many species of animals that would benefit from the restoration of the river. The dam is old and in need of costly repair. These funds could be used to make the river and hidden springs a healthy ecosystem	I am concerned about the damage to habitat and the cost of keeping the dam	I believe the entire dam should be removed	
10/18/2021 11:54	Pinellas		No	No					Breach the dam.	It would recover 20 submerged springs.	We are losing 20 springs that Floridians love to visit.	No	
10/18/2021 12:03	Putnam		No	Yes			2-5 times	Wildlife viewing Other: Events	Breach the dam	River connections restored	Fish and wildlife declines	no	Restoration is long overdue
10/18/2021 12:04	Marion		No	Yes	1 time			Wildlife viewing	Breach it, open river	Restore natural flow	Lose of forest if not drained, lose of saving future maintainer cost	No. Tear the dam down	Reversing a decision is hard but necessary
10/18/2021 12:09	Outside of state / other		No	No					I'd like to see the removal of this dam, as it adversely impacts to much wildlife, including Florida mandates.	The hundreds of supporters in Florida, and thousands off supporters worldwide that show many dams interfere with migration patterns of all kinds of speeches, including salmon in Alaska, fish in Canada, and now manatees in Florida. Particularly, Ed Izzwe (Director of Environmental sciences and chief scientist at SJRWMD) said that the Rodman Kirkpatrick Dam severed the vital migratory pathway for fish and wildlife that the Ocklawaha once provided. As such the dams initiated and sustained regional declines and fisheries and in fish and shellfish populations."	It would not directly affect me, but it would continue to severely harm the local wildlife. Without biodiversity, we are actually all impacted. With every species lost, we incrementally harm our life support: the very air we breathe the water we drink, and the food we eat.	They're usually no good alternatives to removing dams.	These are very well thought out questions, and I appreciate the opportunity to answer them. Also some of my answers seem "tree hugger", they are quite scientifically founded. Species dagradation/extinction affects everybody on Earth, even if only minutely. "No single snowflake feels it is responsible for the avalanche."
10/18/2021 12:12	Putnam		No	Yes			2-5 times	Boating	Dermo/restore river and build recreation and environmental venues	People of knowledge I trust	Continued outgo of public funds Degregradation of environment	Not aware of any	I own a small fish camp on the St Johns between the river and the locks. My fisherman like the natural rivers for bream fishing primarily.
10/18/2021 12:14	Marion		No	Yes			1 time		Would like to see it breached and finally dismantled	That breaching the dam would restore the Oklawaha river to its free flowing state thereby benefiting the environment and the folks living on the River and fishing the river.	That the decision makers would still disregard the benefits of a free flowing Oklawaha in favor of so called "sport fishing" in the reservoir.	Not really	
10/18/2021 12:17	Leon		No	No					I would like to see the flow of the rivers return to their natural undammed state.	The health of ecosystems and the manatees	The health of Florida wildlife that is already threatened		
10/18/2021 12:19	Marion		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	I would like the Kirkpatrick Dam to be removed and the river to flow freely again	The dam is obsolete, serves no purpose, costs millions of our tax dollars dollars to maintain and is detrimental to wildlife and our springs	My children will never see the "real" Ocklawaha and the area will continue to decline	Yes, you can breech the dam to allow for a more natural flow	The Ocklawaha's history dates back some 14,000 years and has historical and environmental importance. We have a chance to right a series of wrongs that started with the ill-fated Cross Florida Barge Canal. Today, the digs of the canal are now a haven for hikers and bikers. I would like to see the dam removed and the river allowed to recover. This has been successful with many other dams and it is past time. The U.S. Army Corps of Engineers has neglected their duties to upkeep the dam and do timely environmental assessments. The St. John's and Silver Rivers would also be improved by this effort.
10/18/2021 12:21	Levy		No	Yes	1 time	2-5 times	More than 5 times	Fishing Canoeing / kayaking Wildlife viewing					
10/18/2021 12:21	Citrus		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	
10/18/2021 12:21	Seminole		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing Other: Mostly hike in the area but also paddle. Especially during the drawdown.	Restored to its natural flow as much as possible. The Dam doesn't serve any purpose.	The Kissimmee River is a great example of other restoration projects that seem to be successful over time. I hope the same for this area someday.	Water quality for our wild animals.	Anything short of restoration isn't really restoration is it? It would depend on what the plan was and I would need to learn more about it.	It's time to free the Ocklawaha
10/18/2021 12:25	Outside of state / other	San Francisco	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a citizen who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("OSO") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/18/2021 12:26	Putnam		No	Yes		More than 5 times		Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Hunting Wildlife viewing Other	Vegetation issues.	Can't put a boat in at keen wood boat ramp	Destroy and hurt ecosystem		
10/18/2021 12:26	Duval		No	Yes			1 time	Wildlife viewing	Breach the Rodmon/Kirkpatrick Dam.	Hundreds of manatees would gain access to much needed habitat at a time when the manatee population is being decimated. Also, the dam is past its life expectancy and costs taxpayers millions every year for upkeep and repairs.	Hundreds of manatees lose access to warm water habitat and more millions $$ are wasted in the upkeep of the dam.	No. Breaching the dam is long overdue. I've been hearing about this problem for decades; it's time to act. Breach the dam.	
10/18/2021 12:29	Alachua		No	Yes			2-5 times	Wildlife viewing Other: Education)	I would love to see the dam removed and the Ocklawaha restored.	The springs and associated ecosystems are destroyed by a dam that is not needed for the reason it was created. Restoring this rare ecosystem would add valuable ecosystem services to the immediate area and Florida, overall. It's extremely rare to restore, it's very easy to destroy. For once, do the hard thing and restore.	One more riverine ecosystem continues to be destroyed. This is a chance to do something correct, but I worry that we won't even take this opportunity.	I imagine a free flowing Ocklawaha River, so I do not believe this can be done with the dam in place. So, no.	
10/18/2021 12:30	Duval		No	No					I sincerely believe the dam should be breached to allow the natural flow of water from the Ocklawaha River, eventually connecting to the St Johns River.	Hard to pinpoint just one! It would help the health of the St. John's River which is in such trouble with algae blooms. Of course the St. John's River could be helped in additional ways such as NOT dredging, eliminating septic tank ok, etc. But a free flowing Ocklawaha River is a huge step. It would also allow for Re establishment of natural flood plains, manatee habitats, native fish populations and so much more. Time has shown that previous good intentions of altering waterways throughout the U.S. has caused a multitude of problems with invasive species of plants and animals - this is a great opportunity to right this situation as the dam will need repairs - the time for restoration of the Ocklawaha River is overdue - let's get it done now!	That we lose this opportunity. In this time of realization of the effects of climate change we desperately need to restore flood plains to protect not only habitats for our wildlife but also our towns, cities and farms. Restoration of the Ocklawaha River will benefit everyone. I do recognize there are business owners that will be affected detrimentally they are in minority to the beneficiaries of restoration, not to mention the new businesses that will benefit (ie: instead of bass fishing there will be kayaking and other boating and fishing will stay - just not the same as currently.	No! There are just SO many benefits to breaching the dam I can't see how it can not be done.	
10/18/2021 12:39	Duval		No	Yes			1 time	Wildlife viewing	In the past we built dams without considering the ecological impacts of the environment. The natural systems functioned for eons. It is time to rethink the impact our past actions and restore the systems as nature intended.	The effects representing the reduction of fish and shell fish as a result of the Rodman Dam, as well as reduced oxygenation of the surrounding soil and water.	The continued deterioration of the St. John's River	There is no point in half measures.	
10/18/2021 12:41	Alachua		No	Yes			2-5 times	Other: Drive by		Blocks manatees and all other river wildlife	Please remove it and restore River to former state		
10/18/2021 12:45	Broward		No	Yes		2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Breach the Rodman/Kirkpatrick Dam.	Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Also. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No. Breaching the dam is 50 years overdue.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
10/18/2021 12:45	Marion		No	Yes		More than 5 times		Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Hunting Wildlife viewing	Leave it there	Many people rely on the dam for food. My father in law makes his living fishing in this river and destroying the dams will take away from many peoples way of putting food on the table			
10/18/2021 12:46	Outside of state / other	El Dorado County, CA, USA	No	No					that the steps do not hurt or alter the environment of the manatees	I have visited Florida to see the manatees and swim with them. They are creatures that are loooong protection of their wild environments and deserve protection.	That the manatees have even a less chance of survival.	I am not there to see these options.	
10/18/2021 12:50	Lake		No	No					Restore the Natural flow of the Ocklawaha River	Ecological Science	Natural Spring Degradition	No	No
10/18/2021 13:31	Outside of state / other	OH - Ohio	No	Yes		1 time	2-5 times	Canoeing / kayaking Wildlife viewing	Restoration of the Ocklawaha river.	Florida's beloved manatees are in trouble, and need all the help they can get, in this case a warm-water habitat during the winter months, that a breaching of the dam and river restoration could provide.	Manatees are in even bigger trouble.	Not in the case of the river and dam.	
10/18/2021 13:39	Duval		No	No					Remove the dam! Restore the natural flow to the St. Johns River!	Chronic green algae growth in the St Johns and its tributaries.	Our unique north-flowing river, a national treasure will continue to die a slow death.	No	Elected officials, vote to remove the dam that is part of a failed plan, the Cross-Florida Barge Canal. Vote to Save the St.Johns!
10/18/2021 13:46	Hernando		No	Yes	2-5 times			Canoeing / kayaking Other: Free diving	Restored to its natural, beautiful state and hopefully continue public use if people wouldn't trash the springs	The stripped bass population will die off without the release of the dam	That our springs will literally die	Release the dam, immediately	
10/18/2021 13:49	Pasco		No	No					Remove dam restore river	Manatees migration stifled	Wildlife area destroyed and fish died	No	
10/18/2021 13:53	Lake		No	Yes			More than 5 times	Fishing Boating Wildlife viewing	Yes	Natural flow	Sad to mess with nature	No	Thanjs
10/18/2021 13:57	Hillsborough		No	Yes			2-5 times	Other	Breach the damn	Free up natural migration of fish and manatees	Suffering of an now endangered species. As well as the lost opportunity to right a wrong! Don't spend more money on repairs.	NO	
10/18/2021 13:59	Broward		No	No					Open up the dam to restore water flow and save money on a useless project.	Restoring natural water flow	Cost to taxpayers for something that damages the environment.	Nov, even restoring seasonal flow via locks will cost money that doesn't need to be spent.	Let's get smart and restore natural water flow.
10/18/2021 14:03	Putnam		No	Yes	1 time	2-5 times	More than 5 times	Fishing (shoreline/structure) Wildlife viewing	Maintained as is	Florida Fish and Wildlife Conservation Commission publishes a list of the top bass fisheries in the State of Florida each year. Rodman, Lake Crescent & the St. Johns take 3 of the top 10 consistently. St. Johns River Water Management District documented over 12 different habitat types within the Rodman Reservoir Complex, more habitats than the Oklawaha River, The Rodman Reservoir Complex includes over a mile of river and flood plain swamp and there is now a greater number of species inhabiting the Rodman Reservoir area than before impoundment	the impact on tourist as well as locals recreation would be devastating to our community.	I cant think of any	
10/18/2021 14:04	Putnam		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing Other: We only catch and release when we fish our time is mainly relaxation and a get away I actually call it my happy place	The regular upkeep done and the Dam left in place	It's beautiful so many different wildlife and plants make it their home	If it's not kept like it is where will the wildlife go? There will be so much mud and muck dieting and decaying wildlife carcasses and such will cause havoc! We will not be able to enjoy the river at all for the remainder of our lifetime our kids and grandkids will not get too either. The flooding it will produce if taken out will cause mass destruction and leave just a trickle of our river This Fam is not the only one in place	Maybe lowering the dam gates but definitely not taking it all out!	Our Lakes are lower than I've ever seen them The water table is low now it will definitely be lowered by removing the dam Leave it be
10/18/2021 14:14	Orange		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Boating Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers and fifty springs are restored. Twenty lost springs and Silver Springs ecosystem are restored. Historic fish and manatees return as the breach opens creating a free-flowing river. Hundreds of manatees gain essential warm water winter springs habitat. The 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier. 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife. 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers. $4-14 million in dam repairs saved on a dam past its life expectancy. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. $57 million in potential flood damages avoided to downstream property owners.	1.We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. A storm event triggers a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic like the Blue Tilapia increase. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. This exciting restoration will improve water quality and flow by generating an additional 150 million gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration. Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.
10/18/2021 14:18	Columbia		No	Yes		1 time	2-5 times	Boating	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	20 lost springs and Silver Springs ecosystem are restored	The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/18/2021 14:19	Putnam		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Wildlife viewing	I would like to see the reservoir stay as it is, and how it has been for years. It shouldn't flow freely, it should remain as it has been.	The Floridians that enjoy the reservoir rely on it for a true Florida fishing experience. The dam supplies jobs to locals for maintenance also.	That opening the dam will cause irreversible damage to the fishery that has been established.	Allowing the water to flow more freely without fully opening the Channels.	
10/18/2021 14:19	St Johns		No	No					A free river flowing freely into the St Johns !	That a fishing place is not adequate reason to keep the dam in place!	That politicians are not willing to do the right thing as has been seen many times before!	No!	Everyone will benefit from restoring the Ocklawaha instead of just fishermen!
10/18/2021 14:32	Seminole		No	No					The removal of the dam and slow draining of the reservoir.	Twenty natural springs would be resurrected, providing habitat for numerous species of birds, animals and plants to enhance Florida's natural environment.	Money that could be better used would be wasted on trying to repair the dam, and many opportunities for Florida's native species to thrive would be lost.	No	Please do all you can to recover the treasures of natural Florida that have been lost because of the dam!

10/18/2021 14:39	Outside of state / other		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.	This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. This exciting restoration will improve water quality and flow by generating an additional $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.	NO Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Thank you for your consideration and cooperation
10/18/2021 14:45	Marion		No	Yes	2-5 times			Fishing Fishing (shoreline/structure) Hunting Wildlife viewing	Leave it the way it is	If you remove that damn it will displace wildlife and kill jobs	People that are relying on the fishery for a living will be hurt if the dam is removed ♪ also worry about the impact on the wildlife that have adapted to the way the river is now .	No keep it the way it is now or nothing	Leave the dam alone
10/18/2021 14:46	Outside of state / other	Quincy Mass	No	No					to use science and a lack of greed to assist nature in healing and allow wildlife to become visible again.	previous dam removal in Maine, NW area Oregon and Washington state, there are others I am sure.	more poor water quality, less wildlife and more algae from runoff, less area for recreation	destroy half the dam	with climate changing, wildlife threatened visitors will not visit to see dead fish and animals
10/18/2021 14:47	Brevard		No	Yes			1 time	Wildlife viewing	To be protected. Natural habitats provide for our economy, our natural beauty, animal habitats and us humans too. Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers	Human destructiveness will take everything down with it. Once it's gone it will be too late to realize we NEED our natural resources. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	You are in a wonderful position to do the right thing for Florida, for people who depend on clean clear water and all the animals who cannot live without. Please take this opportunity to make the right decision.
10/18/2021 14:47	Pinellas		No	Yes	1 time			Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait	
10/18/2021 14:47	Outside of state / other	Denver, CO	No	Yes			1 time	Wildlife viewing	Restoring the Great Florida Riverway by breaching this dam will re-establish access to essential habitat for manatees, bring back migratory fish, connect three river ecosystems, historic Silver Springs, and restore a lost riverway for anglers and paddlers from Ocklawaha's Harris Chain of Lakes to the Atlantic. It is time to save the Ocklawaha, Silver, and St. Johns Rivers, as well as historic Siver Springs.	Habitat fragmentation is putting species at risk; breaching the dam will help ameliorate this problem.	Further damage to wildlife and natural habitat, less opportunities for recreation	No	
10/18/2021 14:47	Outside of state / other	Utah	No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers $4-14 Million in dam repairs saved on a dam past its life expectancy Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. $57 million in potential flood damages avoided to downstream property owners	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. A storm event triggers a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. 10/18/2021 14:50	Outside of state / other	46077	No	No									
10/18/2021 14:51	Sarasota		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	100s of manatees gain essential warm water winter springs habitat	Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/18/2021 14:51	Outside of state / other	New York, NY	No	Yes			1 time	Wildlife viewing	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. A storm event triggers a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees lose the opportunity to access essential warm water winter habitat.	No. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. WATER QUALITY: This exciting restoration will improve water quality and flow by generating an additional 150 million+ gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.

10/18/2021 14:52	Palm Beach		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	20 lost springs and Silver Springs ecosystem are restored.	The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/18/2021 14:53	Broward		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	$5,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees lose the opportunity to access essential warm water winter habitat.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/18/2021 14:53	Outside of state / other	NY	No	No					I would like to see it dismantled in order to set the rivers free, as Nature intended.	Restoring the Great Florida Riverway by breaching this dam will re-establish access to essential habitat for manatees, bring back migratory fish, connect three river ecosystems, historic Silver Springs, and restore a lost riverway for anglers and paddlers from Ocklawaha's Harris Chain of Lakes to the Atlantic. It is time to save the Ocklawaha, Silver, and St. Johns Rivers, as well as historic Silver Springs.	Manatees , already extremely endangered, will not get the opportunity for critical habitat.	No.	This may be our last great opportunity to restore this riverway for people and wildlife.
10/18/2021 14:53	Palm Beach		No	Yes			1 time	Fishing	I would like to see the dam removed so that 15,000+ acres of natural habitat can be restored for fish and wildlife.	Restoration of dozens of natural springs, habitat for native fish and wildlife like manatees.	Costly upgrades to a dam that should be removed and a lost opportunity to restore natural habitat for native fish and wildlife.	No. The dam should have been removed years ago.	
10/18/2021 14:53	Marion		No	Yes				Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Hunting	Return to it's natural state				
10/18/2021 14:53	Outside of state / other	Wayne County, Michigan	No	No					The dam must be removed and the rivers natural flow restored.	Restoring the Great Florida Riverway by breaching this dam will re-establish access to essential habitat for manatees, bring back migratory fish, connect three river ecosystems, historic Silver Springs, and restore a lost riverway for anglers and paddlers from Ocklawaha's Harris Chain of Lakes to the Atlantic.	A vital habitat will remain inaccessible to vulnerable species and a healthy ecosystem and its benefits will be denied to humanity.	Sadly, the dam can either be breached or it can remain. There is no middle ground.	Florida suffers from numerous, man-made environmental catastrophes. Restoring the Great Florida Riverway would address an important one.
10/18/2021 14:54	Outside of state / other	TX	No	No									
10/18/2021 14:54	Outside of state / other	Silver Spring MD.	No	No						I used to live in St. Augustyne as a jid and spent much time at Silver Springs and in the woods along thev St. John's River.	Further dedgradation of a ket ecological reserve and resourc e.		I used to teach environmental history at Yale.
10/18/2021 14:55	Outside of state / other	WA	No	No					I would like to see them removed so that the rivers affected by them can be returned to a more natural state.	I have seen how beneficial dam removal has been for rivers and streams here in the Pacific Northwest, to include restoration of riparian zones, improvement of habitat for salmon and other keystone species, and improved areas for tourists to visit (and bring their money!) I believe that the removal of the Kirkpatrick dam would benefit Floridians similarly.	Continued ecological degradation through the continued interruption of natural hydrological processes and the cascading negative effects on the surrounding ecology.	No, take the dam down!	
10/18/2021 14:56	Outside of state / other	Rhode Island	No	No									
10/18/2021 14:57	Outside of state / other	IL	No	No					Breach the dam for full restoration.	Restoring the Great Florida Riverway by breaching this dam will re-establish access to essential habitat for manatees, bring back migratory fish, connect three river ecosystems, historic Silver Springs, and restore a lost riverway for anglers and paddlers from Ocklawaha's Harris Chain of Lakes to the Atlantic.	Loss of habitat and continued loss of natural animal population.		
10/18/2021 14:57	Pinellas		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. 10/18/2021 14:57	Duval		No	No						The time is now. Protect Florida's natural environment. Free The Springs.	Loss of Florida's natural beauty, death of the St Johns. This has been a disaster for our rivers!	NO!	Jacksonville wants our river back!
10/18/2021 14:57	Volusia		No	No					Removal of Rodman/Kirpatrick Dam and opening up the Great Florida Riverway.	Restoring the Great Florida Riverway by breaching this dam will re-establish access to essential habitat for manatees, bring back migratory fish, connect three river ecosystems, historic Silver Springs, and restore a lost riverway for anglers and paddlers from Ocklawaha's Harris Chain of Lakes to the Atlantic.	Destruction of natural habitat.	No.	It is time to save the Ocklawaha, Silver, and St. Johns Rivers, as well as historic Silver Springs!
10/18/2021 14:58	Outside of state / other	Grand junction, CO	No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Historic fish and manatees return as breach opens creating a free-flowing river	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No	This is an amazing opportunity to restore habitat for manatees and fish as well as an opportunity to improve water quality. Please take this chance to restore vital habitat while also saving taxpayer dollars by removing this unsafe dam. Thank you for your time, Joe Leonhard
10/18/2021 14:59	Outside of state / other	San Francisco California	No	No					We are finally getting smarter about respecting our environment and it's beautiful attributes. Reconnecting the rivers is crucial, and shows a long term strategy for enriching our waterways, supporting the wildlife that call these areas home and need them for survival and for the overall respect for our planet. Goodness knows, it's about time. Manipulation to suit our short term needs is not working.	Any legislation that supports the removal of the Rodman/Kirkpatrick Dam.	Starving our rivers and ignoring what nature has provided always backfires. Environmental impacts are severe and detrimental.	I don't see a compromise option.	Thank you for considering my comments. I appreciate this opportunity.
10/18/2021 15:00	Outside of state / other	Santa Fe, NM	No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier $5,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers 64-14 Million in dam repairs saved on a dam past its life expectancy Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. A storm event triggers a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/18/2021 15:00	Seminole		No	Yes			1 time	Canoeing / kayaking	Breach the dam	Restore the Florida riverway	Extinction of wildlife, destruction of natural habitat	No	
10/18/2021 15:02	Outside of state / other	Tucson	No	No					Remove dam and restore watershed to a close to natural conditions as possible. Habitat improvement to benefit all native species, particularly manatee and other threatened species.	The decline in manatee population.	Continued loss of threatened species.	I could support dam removal without additional habitat restoration.	
10/18/2021 15:01	Lake		No	No					restoring flow of water to restore ecosystems		pollution and loss of clean water for people and wildlife	no	
10/18/2021 15:02	Outside of state / other	Wisconsin	No	No						Reunite the Rivers	Damage to the waterway ecosystem	No	The health of our rivers effects all aspects of our lives. Natural systems can be powerful forces to rebalance large areas, which results t economic and human health.
10/18/2021 15:02	Polk		No	Yes			1 time	Other	Breach the dam	The springs! We support the natural springs!	Things would continue on as they have been.	Sure, a good fish ladder would be a start!	
10/18/2021 15:03	Outside of state / other	New York	No	No					that the environment is protected				
10/18/2021 15:03	Outside of state / other	Juneau AK	No	No									
10/18/2021 15:03	Outside of state / other	14527	No	No					Restoring the Great Florida Riverway by breaching this dam will re-establish access to essential habitat for manatees, bring back migratory fish, connect three river ecosystems, historic Silver Springs, and restore a lost riverway for anglers and paddlers from Ocklawaha's Harris Chain of Lakes to the Atlantic. It is time to save the Ocklawaha, Silver, and St. Johns Rivers, as well as historic Silver Springs.	This may be our last great opportunity to restore this riverway for people and wildlife.	More death for the animals and fish and birds.	no	
10/18/2021 15:04	Outside of state / other	Scotrun, PA	No	No					I would like for the Rodman Kirkpatrick Dam to be removed	In removing the dam, it will allow the ecosystem to better function	the loss of essential habitat for manatees, the loss of fish and the three rivers won't be united into the Great Florida Riverway	No	
10/18/2021 15:04	Alachua		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. AND $5,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. AND Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	There is NO scenario short of fully achieving this desired outcome that I could support.	Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.
10/18/2021 15:05	Jackson		No	No									
10/18/2021 15:05	Outside of state / other	Port Jervis, NY	No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.		$5,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea-level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	
10/18/2021 15:06	Outside of state / other	Bedford, Virginia	No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored Historic fish and manatees return as breach opens creating a free-flowing river	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/18/2021 15:06	Outside of state / other	California	No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Historic fish and manatees return as breach opens creating a free-flowing river	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea-level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	reaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.
10/18/2021 15:07	Duval		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing Other: Observing effectiveness of drawdowns...	Execute the plan to remove the spillway and restore the Ocklawaha River to its' original channel and provide enhanced recreational/fishing access to the entire floodplain.	The Rodman Pool is a corrupted, disfunctional ecosystem; a combination of facultative lagoon/retention basin that does a poor job of removing nutrients from the system while providing little ecosystem or recreational benefit. Restoring the floodplain forest would immediately reduce nutrient loading to St Johns River; very cost-effective. Bumps make power boating extremely hazardous; fishing in the pool is no better than fishing in the St Johns River. Migratory critters, including striped bass, can no longer reproduce in springs and springs suffer from lack of aquatic diversity.	Nutrients stored in the pool sediments will continue to be discharged into the St Johns during drawdowns that are required to control aquatic vegetation. Drawdowns and spillway maintenance are both a waste of taxpayer money and ineffective water quality management tools. Migratory species will still be blocked by the spillway and springs will continue to degrade due to lack of diversity. Ecotourism-based economic development in the region will continue to be blocked by political standoff between narrowly-focused Save Rodman business interests and broadly focused advocates for restoration. The many economic & ecosystem benefits claimed by Save the Rodman group have NOT been realized. A more sustainable, ecosystem approach is needed to enhance the economic & ecological value of this unique Ocklawaha River ecosystem.	Not really; over the past 30-years partial scenarios have been tried. The harsh reality is that periodic drawdowns have proven to be ineffective management approach that pleases nobody and does NOT achieve any significant water quality, economic, recreational or ecosystem benefits.	The most cost-effective management strategy for the St Johns River is to remove the spillway, leave the dam in place and allow the floodplain to naturally regenerate the hardwood swamp forest. Details were documented in the PBSJ Report some 20-years ago. Restore the river---NOW!
10/18/2021 15:07	Santa Rosa		No	Yes	1 time	2-5 times		Fishing Canoeing / kayaking Wildlife viewing	Dam removed and area restored to its natural state	UF scientists have produced a myriad of papers supporting this.	The literal death of one of the most beautiful areas on earth.	Banning all motorboats	Thank you.
10/18/2021 15:08	Duval		No	Yes			1 time	Other: I have gone there simply to look at it. I do not "use" the dam or the the reservoir in any practical way.	I would like to see the Kirkpatrick dam removed.	The fact that it would improve the health of the St. John's River. The river is one of the most magnificent (and vital) natural resources in the entire southeast.	That the health of the St. John's River would continue to decline.	I'm not an engineer, but perhaps we could at least let some of the water free. The reservoir would be somewhat depleted, but that's not a factor that is of much concern to me. After all, I want the dam removed entirely.	Some people will be negatively affected economically by the removal of the dam. That is unfortunate. However, let us not forget that many Floridians were harmed by this whole Cross Florida Barge Canal fiasco in the first place. Florida and the St. John's River are delicate ecosystems that have been hyper-stressed by industry, big agriculture, and an increasing population. Anything that we can do to right the wrongs that have had a negative effect on the health of the St. John's river would be a blessing. Please let Florida's rivers free. Thanks for reading this.
10/18/2021 15:09	Broward		No	No					It is my understanding that opening it is essential habitat for manatees and they need all the help they can get with all our boats on the water	animal protection	If wildlife suffered		
10/18/2021 15:09	Seminole		No	No					Breach it. Let the water flow.	Restoring the Springs affected by the useless dam, provide needed habitat for manatees, avoid unnecessary repair costs	Continual decline of manatees, more algae bloom issues	No	Now is the time. Let's do what's right for the environment
10/18/2021 15:09	Outside of state / other	NY	No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway. Opening up the river will re-establish access to essential habitat for manatees, bring back migratory fish, connect three river ecosystems, historic Silver Springs, and restore a lost riverway for anglers and paddlers from Ocklawaha's Harris Chain of Lakes to the Atlantic.	$5,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife - restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs.	The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Thank you for considering my comments and for your efforts to find a positive solution and beneficial outcome for the interests surrounding the Kirkpatrick Dam and Rodman Reservoir's environmental and economic impact.
10/18/2021 15:11	Outside of state / other	NJ	No	No					I would like to see all dams removed so that rivers can return to normal and fish may thrive.	Everything written about America's waters by Sylvia Earle, PhD: Sent: Friday, October 15, 2021 8:22 PM	My biggest concern is enormous, even fatal diminishment of most fish species.	you want me to choose something that makes fish extinction palatable?!!!	As our rivers go, so go our oceans. REMEMBER, we ARE the BLUE Planet.
10/18/2021 15:13	Marion		No	Yes			1 time	Fishing Wildlife viewing	I would like to see the dam gone!	Free the natural river in its original bed.	Cost!	Nope!	Free our river now!
10/18/2021 15:14	Sarasota		No	Yes			1 time	Wildlife viewing	Restoring the Great Florida Riverway by breaching this dam will re-establish access to essential habitat for manatees, bring back migratory fish, connect three river ecosystems, historic Silver Springs, and restore a lost riverway for anglers and paddlers from Ocklawaha's Harris Chain of Lakes to the Atlantic. It is time to save the Ocklawaha, Silver, and St. Johns Rivers, as well as historic Silver Springs	Free Water flow.	Wildlife threatened.	No	
10/18/2021 15:14	Pasco		No	Yes	1 time	2-5 times	More than 5 times	Wildlife viewing Other: Historic observation.	Dam breached and the environmental degradation halted.	A good look at the flooded river valley, the destruction of Wildlife, and the dead, underwater forest we allowed to be destroyed should support my position well enough. In case you shall need more, environmental reports on the destruction of the Everglades in the early 20th century and its affect on the people, flood water management, and wildlife of southern Florida should be warning enough against trying to play god and change the routes and volume of our river system. Its honestly bonkers children in middle schools do more for conservation than the people whom are paid to protect and represent us.	Continued degradation of the state of Florida's dwindling natural resources and wonder	Another renewable power source that does not absolutely destroy a once pristine river.	The author is a Historian studying Florida Studies at the University of South Florida St. Petersburg. Professionally a Curator of a Florida History museum, the author enjoys long walks on the beach and exercising his rights as a private pilot.
10/18/2021 15:15	Outside of state / other	Dacula, GA 39919	No	No					To reunite the Ocklrwaha, St. Johns and Silver Rivers and Silver Springs - The Great Florida Riverway.	This may be our last great opportunity to restore this riverway for people and wildlife.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea-level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. But, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	am a Georgia resident, with family and friends in Suwannee, Tampa, Ft. Myers, Miami, and Jacksonville. All of whom know I live to fish and paddle!
10/18/2021 15:16	Volusia		No	Yes			More than 5 times	Canoeing / kayaking	Breach the dam to restore ecosystems in the area.	Compromised ecosystems will be restored resulting in preserved wildlife habitats, increased opportunities for recreation as well as resulting financial savings/employment opportunities for Floridians.	A huge lost opportunity for multiple positive outcomes	no. Breaching the dam is the only way to achieve any of the positive resulting outcomes	Breaching the dam is a step that is long overdue and which, if completed, will result in multiple meaningful positive outcomes for Floridians and the environment.
10/18/2021 15:16	Putnam		No	Yes			2-5 times	Other: I've helped in cleanups.	I want it removed.	I've been on and around th St. John's River and the Ocklawaha for almost 62 years and can see the harm the dam has done to water flow, the rivers' ecosystems, and the screwing up of good old Florida!	We miss another chance to try to make things Right again.	increased water flow from the dam.	
10/18/2021 15:17	Outside of state / other	California	No	No					I would like to see it removed	The restoration of the Ocklawaha River will restore the economy, the wildlife and the water quality.	All the above mentioned areas: the economy, the wildlife and the water quality for Florida residents and international visitors will suffer.	No	
10/18/2021 15:17	Outside of state / other	Inver Grove Hts, MN	No	No					Remove Kirkpatrick Dam asap. Please see positive results on the Elwah River after two huge dams were removed.	Again, google Elwah dam removal.	Manatee deaths increasing, along with other mammals and fish. Please remove the dam.	No. Removal of the dam is the best, mist cost efficient way forward.	
10/18/2021 15:17	Outside of state / other	Oakland CA	No	No					I would like to see them removed	Knowing that this will restore fish populations that cannot migrate due to the Kirkpatrick Dam being an obstacle. Also, natural springs are currently covered, this dam has created a flood plain.	Climate change and species extinction	No	There are many dams that were useful but have silted up and outlived their utility. They are creating big problems and should be removed.
10/18/2021 15:18	Outside of state / other	California	No	No					Restored and maintained	environmental benefits	environmental imbalance		

10/18/2021 15:19	Outside of state / other	is reside in Florida. Parents had hom	No	Yes			2-5 times	Wildlife viewing	Dams are very harmful. I used to own property in Volusia County and my husband and I have spent many hours canoeing on Florida Rivers. Nature is one of the largest draws, if not the largest attraction for people to come to Florida. But the quality of water, the whole economy, wildlife and the flora would all be promoted by breaching the dam.	Dams harm rivers and it is well known that water will be very scarce and important to future generations. Dams are detrimental to the quality of the water. https://www.americanrivers.org/threats-solutions/restoring-damaged-rivers/how-dams-damage-rivers/ China is currently demonstrating the harm that comes from dams. It will save money to open the river. Money is saved when dams are gone. The Manatees will also be saved. My husband and I took many visitors to watch the manatees who are dying due to water quality, and degradation of plant life which causes them to starve. Make Florida more like I knew it in the old days. Beautiful, a place for animals and water life.	The further degradation of the animal, water life, and stealing clean water from our future generations. When water moves it is more lively, healthy and cleans itself.	In 2020, these states all removed dams; California, Connecticut, Illinois, Indiana, Iowa, Massachusetts, Michigan, Minnesota, Montana, New Hampshire, New Jersey, New York, North Carolina, Ohio, Oklahoma, Oregon, Pennsylvania, South Carolina, Texas, Vermont, Virginia, Washington and Wisconsin.	The number of dams already removed in the US is 1797. Last year 65 dams were removed. Consult with the states who have removed rivers. No state is more beautiful and natural than Florida. No states' rivers more deserve freedom than Florida's rivers. https://www.americanrivers.org/2021/02/69-dams-removed-in-2020/ Dams are yesteryear. Step into the future.
10/18/2021 15:19	Outside of state / other	VA	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("S2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/18/2021 15:20	Outside of state / other		No	Yes		1 time		Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	100s of manatees gain essential warm water winter springs habitat	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/18/2021 15:20	Sarasota		No	No					I want to see the dam disassembled	The evidence of the improvement of the ecosystem there , fish sustainability	This would be still another place in Florida that becomes irreparably damaged and continuing degradation of the whole ecosystem. Florida is in grave trouble.	no	I hope to visit there soon.
10/18/2021 15:20	Duval		No	Yes		1 time	Wildlife viewing	Remove the dam, reconnect the natural habitat.	Scientific studies	Pollution	No.	
10/18/2021 15:20	Osceola		No	No									
10/18/2021 15:21	Brevard		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers $4-14 Million in dam repairs saved on a dam past its life expectancy Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. $57 million in potential flood damages avoided to downstream property owners	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. A storm event triggers a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. The 300-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. (characters: 479)
10/18/2021 15:22	Outside of state / other	Idaho	No	No					To see a free flowing river.	Habitat loss and algae			
10/18/2021 15:22	Marion		No	Yes			2-5 times		I would like to see the dam removed, which is long overdue. This is imperative to restoring the natural flow of the waterway and to save the lost springs. It's also necessary to restore the natural ecosystems threatened due to the dam.	Creating a sanctuary for hundreds of manatee each winter.	The threat to the environment. Further exasperating the issues with the lost springs. The algae becoming worse.	No. This needs to be done immediately.	For the future of our beautiful state, for our children, their children, the dam needs to be removed. It is long overdue. Thank you.
10/18/2021 15:23	Outside of state / other	California	No	No					I think dams destroyed the natural flow of rivers and aren't environmentally sound.	What has happened to the Colorado River and many rivers in California.	The environment will continue to be savaged and add to climate change		
10/18/2021 15:24	Polk		No	Yes			1 time	Wildlife viewing	Remove the dam	A river that is dying. Spring that have disappeared and only reappear during a drawdown	The death of a river	No. That stupid dam serves no purpose	
10/18/2021 15:24	Polk		No	No					Immediate removal	All Florida waterways need to be free to flow to properly maintain our natural ecosystems	Decreased wetlands, decreased native plants and animals, increased costs in clean water and increased prices of all goods and services that rely on water for production	No	
10/18/2021 15:25	Outside of state / other	Ashland, Oregon (Jackson County)	No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	Restoration creates more diverse recreation opportunities for for family and everyone who enjoys the beauty and diversity of Florida. 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife. It increases visitation and creates jobs.	Florida's natural beauty and wildlife become further degraded and recreational opportunities are lost. Hundreds of manatees lose the opportunity to access essential warm water winter habitat.	No. It is time to get rid of un-needed dams that destroy habitat for wildlife and recreation	I have spent many wonderful days canoeing on Florida's rivers and do not wish to see these treasures destroyed for future generations.
10/18/2021 15:25	Outside of state / other	NJ	No	No					I would like it fully functional	It is needed to help animals	If it's not animals want survive	No	Please make sure it's completely fixed
10/18/2021 15:26	Outside of state / other	PA	No	No					Removal	Our mighty Susquehanna has numerous dams which threaten fish species and and no longer serve any productive benefit at all!!!!	The natural world the waterway is supposed to sustain!	NONE	Keep politics out of the equation and do the right thing for the environment and the natural world!!
10/18/2021 15:27	Outside of state / other	California	No	No									
10/18/2021 15:27	Outside of state / other		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier and 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/18/2021 15:27	Outside of state / other	Salt Lake City, UT	No	Yes			1 time	Fishing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns rivers plus 50 springs restored 100s of manatees gain essential warm water winter springs habitat 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers $4-14 Million in dam repairs saved on a dam past its life expectancy Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. $57 million in potential flood damages avoided to downstream property owners	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. A storm event triggers a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. The 300-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	
10/18/2021 15:28	Pinellas		No	No					Remove the dam. Restore the habitat.	Preservation of endangered species	The loss of multiple species.	I see no viable alternative to dam removal.	Please, please restore water quality and coastal resiliency.
10/18/2021 15:28	Outside of state / other	New York	No	No					Restoring the Great Florida Riverway by breaching this dam will re-establish access to essential habitat for manatees, bring back migratory fish, connect three river ecosystems, historic Silver Springs, and restore a lost riverway for anglers and paddlers from Ocklawaha's Harris Chain of Lakes to the Atlantic. It is time to save the Ocklawaha, Silver, and St. Johns Rivers, as well as historic Silver Springs.	20 lost springs and Silver Springs ecosystem are restored Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat	Continued death of manatees-more water degradation	No	
10/18/2021 15:29	Outside of state / other	Massachusetts	No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers	The 300-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future.
10/18/2021 15:30	Outside of state / other	Temecula, CA	No	No					I support the restoration of rivers to their original flow patterns due to the many significant ecological benefits that follow the restoration process. The only instance in which I would oppose the destruction of a dam that has created a reservoir is if no source of drinking water, other than the reservoir, exists for the affected population.	Virtually everywhere that dams have been removed and the original river flow patterns restored, the entire regional ecology has recovered from environmental pressures including the die off of plant and animal life.	The restoration of robust fresh water flow is essential in all of Florida's waterways, especially to prevent salt water incursion into previously fresh water wetlands.		
10/18/2021 15:31	Outside of state / other	Chicago, IL	No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Historic fish and manatees return as breach opens creating a free-flowing river	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. (characters: 521)
10/18/2021 15:32	Outside of state / other	NY	No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Historic fish and manatees return as breach opens creating a free-flowing river.	Hundreds of manatees lose the opportunity to access essential warm water winter habitat.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/18/2021 15:33	Outside of state / other	Phoenix Az- with Florida relatives	No	No					open the Florida waterway-revoe the dam	health of ground water & everglades	compromise in water quality-salt water encroachment own stream	increase downstream flow will help-dam removal needed	
10/18/2021 15:33	Outside of state / other	Illinois	No	No					Preserve		Construction of site		
10/18/2021 15:35	Outside of state / other	California	No	No					Remove it. Let the river flow	The natural world benefits from open rivers. Humans do, too	Living things will not thrive	No.	
10/18/2021 15:36	Outside of state / other	California	No	Yes			1 time	Fishing	I would like to have the Kirkpatrick Dam removed.	The Dam has caused a slow decline of wild life.	The water life will not recover	It is important to review how ecosystems have recovered when Old Dams have been removed. The steps leading up to achieve this goal need to at least be implemented.	
10/18/2021 15:36	Duval		No	No					Take it down	Its blocking the natural flow of the river	That it continues to deteriorate impact on the environment	no what's the point of leaving it up?	
10/18/2021 15:37	Palm Beach		No	No									
10/18/2021 15:38	Outside of state / other	32270	No	No									
10/18/2021 15:38	Charlotte		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Restoring the Great Florida Riverway by breaching this dam will re-establish access to essential habitat for manatees, bring back migratory fish, connect three river ecosystems, historic Silver Springs, and restore a lost riverway for anglers and paddlers from Ocklawaha's Harris Chain of Lakes to the Atlantic.	Restoring the Great Florida Riverway by breaching this dam will re-establish access to essential habitat for manatees, bring back migratory fish, connect three river ecosystems, historic Silver Springs, and restore a lost riverway for anglers and paddlers from Ocklawaha's Harris Chain of Lakes to the Atlantic.	Demise of our ecosystem and environment		It is time to save the Ocklawaha, Silver, and St. Johns Rivers, as well as historic Silver Springs.

10/18/2021 15:52	Broward		No	No									
10/18/2021 15:52	Lee		No	No					Removal of the dam.	Florida's diverse ecological systems are being destroyed for outdated ideas!	Our state will be nothing, but a piece of land with buildings and parking lots, if we don't step up NOW!!	No, not with the information I have so far.	
10/18/2021 15:52	Outside of state / other	OH	No	Yes			1 time	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	We need to preserve our beautiful eco systems, for all animal and plant life that requires what this dam is preventing. Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	Hundreds of manatees lose the opportunity to access essential warm water winter habitat. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. (characters: 521)
10/18/2021 15:53	Palm Beach		No	No						removal of the dam	we need a free flowing river for many reasons.	The continued damage the dam is creating daily to animals, springs and rivers.	I don't see how an scenario, other then removal/breach of the dam would have the desired benefit to so many.
10/18/2021 15:53	Flagler		No	Yes			1 time	Wildlife viewing	The Dam needs to be removed and the Oklawaha River restored - ASAP!!!!!	The dam should be removed so that restoration of 50 springs as well as the Ockawaha and St John's Rivers will receive 150 + million gallons a day of restored natural flow. Millions of dollars will be saved on the dam that is way past its life expectancy and serves no purpose.	Putnam county and Silver Springs will lose $47 million in economic benefits over the next 10 years. Florida will lose out on thousands of acres of forests that could have been restored providing water storage and filtration for downstream communities, flood protection, wildlife habitat and more.	NO! Breaching of the dam is 50 years overdue! Dam safety, improved water quality and wildlife cannot wait. Just do it!	

10/18/2021 15:56	Alachua		No	Yes			2-5 times	Wildlife viewing Other: Walking along the shoreline	I would want this once historic and scenic waterway restored to its once pristine, beautiful, and magnificent river as it was before the reservoir destroyed the winding river. As a multi generational native Floridian I want to see as many of our waterways protected for the generations to come.	There are many reasons both environmental and economic that supports the restoration of the Oklawaha to its natural state. This dam effects the quality of the water in at least 50 springs including the negative impact it has on Silver Springs and the Silver River. It does not permit native fish species to migrate from the St. Johns or for wildlife (fish, reptiles, manatees) to freely swim from springs, rivers, and even the ocean. The recreational value of a restored Oklawaha would have a greater benefit to the area than the current reservoir.	That continuation of this dam becomes even greater ecological impact to our environment. That more and more money will be required to repair the dam which could possibly breach one day flooding many homes along the lower river. That currently funding is available through different governmental sources to remove the dam and restore the river.	No, after all of the years of the environmental damage that has been done, it is high time that we restore the river to its life before the dam. Nothing short of total removal and restoration of the river should be considered.	About 60 years ago when I was in the Mcintosh, Florida Boy Scout Troop, our leaders borrowed two boats, launched them at Eureka and followed the Oklawaha out into the islands in the St. Johns where we camped for two nights. Both trips on the winding, scenic, pristine, beautiful river will never be forgotten. The 12 scouts, even in their golden years still talk about the amazing journey both down and up this magnificent historic Florida Waterway. It is my hope that my future great grandchildren will one day be able to have this same experience. Please restore this river so that many to come can experience it the way we did back in the 1950s. Thank you for the opportunity to add my voice to help make this back to what it was years ago.
10/18/2021 15:57	De Soto		No	No						15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	A storm event triggers a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/18/2021 15:58	Outside of state / other	California	No	No						Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat. 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers $4-14 Million in dam repairs saved on a dam past its life expectancy Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. $57 million in potential flood damages avoided to downstream property owners	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. A storm event triggers a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait. OR Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration. MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. WATER QUALITY: This exciting restoration will improve water quality and flow by generating an additional 150 million+ gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration. SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.
10/18/2021 15:58	Outside of state / other	New York	No	No						I would like to see Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/18/2021 16:00	Citrus		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Wildlife viewing		Preserve it.	Unsurpassed wildlife habitat for Manatees, Bald Eagles, Gators and Waterfowl. Great fishing too.	Loss of Wildlife	No	I can't imagine any better use of the land if the reservoir wasn't there
10/18/2021 16:01	Duval		No	Yes		1 time		Wildlife viewing		demolish dam and have a free-flowing river	the cross Florida canal will never be complete	More water is held and it will become poluted	no	
10/18/2021 16:02	Marion		No	Yes			More than 5 times	Fishing Wildlife viewing		I'd like to see the dam removed and the waterways restored.	A river used to run through it, and should again.	The dam deteriorating and causing havoc on surrounding land if it were to breach.	No. I support removing the dam and restoring the river to it's natural state before we intervened.	Thanks for listening.
10/18/2021 16:03	Outside of state / other	Mesa County Colorado	No	No						Remove the dam				
10/18/2021 16:11	Volusia		No	Yes			1 time			Return to before the dam	The barge canal will never be, so remove the parts of it that are in place now			
10/18/2021 16:11	Palm Beach		No	No										
10/18/2021 16:13	Outside of state / other	Boulder, CO	No	No						remove dam, restore are flowing river environment	improved ecosystems	Further damage to eco systems	no	Thanx for removing this dam.
10/18/2021 16:14	Outside of state / other	Los Angeles, CAUP	No	No						I would like the area restored to its wild state.				
10/18/2021 16:17	Outside of state / other	1 main st NYC	No	No						v				
10/18/2021 16:19	Outside of state / other	Maryland	No	Yes						Deny permit	Destruction of biological diversity in watershed	Destruction of biological diversity in watershed	small hydropower units	small hydropower has only 10% of the damage of dams but 1/3 the amount of power obtained
10/18/2021 16:26	Alachua		No	Yes			1 time	Other: To see draw-down.		Restore the free-flow of the Ocklawaha River and remove the dam.	The creation of Rodman Reservoir drowned 20 freshwater springs and drastically changed the water regime and native vegetation of the area. Removing the reservoir would allow restoration of animal movements and native plant regeneration. Of particular importance is the positive effect restoration of river and spring flow would have for the Florida manatee. This species currently passes through the locks into Rodman reservoir, and would very likely increase its use of the region, especially Silver Spring in the winter, if access was restored.	My biggest concern would be the lost opportunity to successfully restore an ecosystem, something we desperately need to be a lot more of as we move deeper into this era of climate change and its threats to man-made and natural environments. Restoring the Ocklawaha River is low-hanging fruit compared to many other environmental challenges, such as the recent loss of seagrass beds in the Indian River Lagoon. If we can't do this, at a time when the dam is failing anyway, what can we do?	Only if the Ocklawaha river-flow and springs are restored, along with the riverine habitat that has been lost.	The record-breaking number manatee deaths on the Atlantic Coast of Florida is directly related to the loss of habitat that is extremely important to manatees: seagrass. Power plant effluents that keep them warm in the winter are not sufficient. Restoring free access to springs and native riverine vegetation would help to support the Atlantic coast population of manatees, by providing both warm-water and food resources. Increased numbers of manatee sightings by Rodman lock-tenders in 2019 and 2020 may well be an indication that hungry manatees will quickly learn to utilize a restored river system.
10/18/2021 16:27	Orange		No	No						To open up the endangered springs and improve wildlife habitat.	Orlando Sentinel article of October 14, 2021	That our God given springs and associated rivers will be ruined.	Only if it will improve springs and river quality	I have been on the Lake Dora to Silver Spgs trip many times with my family over the years (I am 80 years old) and it is a piece of original old Florida. It seems this wild and wonderful natural wonder will disappear forever if something isn't done soon to arrest the abuse. We have the chance to fix things now and should act immediately!
10/18/2021 16:28	Outside of state / other	Chicago IL	No	No						Remove the dam. Restore the natural hydrology. Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	Restoration of the natural hydrology and ecosystems is the best thing for all creatures involved, and for the planet.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	NO! The dam never should have been built!	I know that some people will gooh-pooh my comments because I've never been there. I care about Earth; have a B.A. in Geography; my grandparents retired to St. Pete decades ago, so I have been to Florida and care about FL from personal experience while a child. I oppose all dams on principle.
10/18/2021 16:28	Outside of state / other	Minnesota	No	No						I think it is best to consult the Indigenous Elders and Leaders in that region to determine the best course of action for the river.	The Indigenous people have been stewarding this land and water for thousands of years and their wisdom has nothing to do with profiteering.	Our decisions are not aligned with wisdom and we're rapidly caterwauling toward destruction. My biggest concern is none of the same.	I don't think it's time for compromises on this. The powers that be have been in power for long enough. It is time to usher in a new era that respects Mother Nature.	
10/18/2021 16:28	Outside of state / other	CA	No	No						Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat. 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers $4-14 Million in dam repairs saved on a dam past its life expectancy Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs.	The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. A storm event triggers a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration
10/18/2021 16:29	Outside of state / other	Alaska	No	No						Remove	Free flow		Drought	
10/18/2021 16:30	Marion		No	No			1 time		Wildlife viewing	Restore the Ocklawaha river by dismantling of the Rodman/Kirkpatrick Dams.	Ocklawaha, Silver and St John's rivers and 50 affected springs can be brought back to the way they should naturally be.	The money is in the bank and action has been long overdue. Water quality, wildlife and many other things would benefit from it.	No!!!	
10/18/2021 16:31	Outside of state / other	Richmond, Virginia	No	No						It should be removed	Crisis for Manatees and other animals requires new protected habitats, also water quality protections	Continuing extinctions and degradation of water quality imperils the entire ecosystem and thus humans as well		
10/18/2021 16:31	Marion		Yes	Yes	1 time	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing Other: Own a business with a tackle shop in Fort McCoy		I would like to see the Dam stay in place and Lake Ocklawaha left as it is. I would like to see some facilities added and upgraded.	My name is John Jacob Smith and I own Fort McCoy Hardware. An important part of my business is selling fishing tackle and outdoor supplies to recreational fishermen and professional guides and also I sell a lot of supplies such as 50 lb bags of feed and PVC, etc. to the commercial fishermen that use the lake. Without their business my outdoor supply portion of my business would dry up and disappear and I also think it would be such a shame for the ecosystem that is in place there to be destroyed. Where would all the animals go?	My business would be greatly hurt and all the animals would be without a home. We don't have a lot to draw people to this area to get business in the doors and that is an important part of what does bring people in.	No	
10/18/2021 16:32	Outside of state / other	Phoenix, AZ	No	No						Free-flowing rivers have better fish and wildlife mobility as well as better water quality, and Florida needs cleaner rivers and wildlife protection.	The results of dam removal along our western US rivers.	Periodic risk of downstream damage and flooding should water breach the dam.	Management of pesticide and herbicide use along the waters might help clean up the river.	
10/18/2021 16:33	Outside of state / other	IL	No	No						I am advocating for the restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Dams used to be the solution, but not any more. Indeed, each day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	There are so many vitals places but this is compelling:100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier.	Again, so many concerns, but here is a hands on one:Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	Not really, I'm afraid, but at least temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	Many great reasons to proceed here, but here is one clear objective: breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.
10/18/2021 16:34	Outside of state / other		No	No										
10/18/2021 16:34	Outside of state / other	California	No	No						Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. This exciting restoration will improve water quality and flow by generating an additional 150 millionm gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
10/18/2021 16:36	Outside of state / other	CT	No	No						Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	100s of manatee would benefit from warm springs	Manatee and other threatened wildlife will have succumbed. Water quality will be diminished.	Absolutely not.	
10/18/2021 16:37	Outside of state / other		No	No						removal!	important for fishing	fewer gators		
10/18/2021 16:38	Outside of state / other		No	Yes						A decision with the least amount of environmental impact. There is a significant amount of nature and wildlife to be preserved and that is one of the beautiful aspects of Florida: the untouched and undeveloped areas of land. In these areas is where nature and wildlife can thrive. Thank you.	That I have been visiting Florida for 50 years and have lived there as well, I appreciate the pristine value of its natural habitats.	Unwanted and unneeded destruction.	It would depend.	Thank you.
10/18/2021 16:40	Marion		Yes	Yes		2-5 times	More than 5 times	Fishing Wildlife viewing Other: I work for a business that supplies local commercial and recreational fisherman.		My name is Jessica Ahlers and I work at Fort McCoy Hardware. I would like to see Rodman Dam left alone. My job relies a lot on the people that stop by our business to buy fishing supplies. Without them it would be a blow to our work and my job. Nature has taken over for over 50 years and doing away with the Dam would make that area a nasty scrub forest for another 50 years! Leave Rodman Dam and our business alone.	My job is helped a lot by the business that the commercial and every day fisherman that come here to buy gear and supplies brings in. Without the lake there out fishing tackle and outdoor supply business would be over.	Big chunk of our business gone and a lot of people no longer supporting our business. So many critters that would suffer and die.	Absolutely not	
10/18/2021 16:42	Outside of state / other	Elyria, OH	No	No						Restoration of the waterway!	Appropriate habitat for native animals and plants, while improving flood control	Species loss and increased flooding.	Partial is still an improvement.	
10/18/2021 16:45	Putnam		No	Yes		More than 5 times	More than 5 times	Wildlife viewing Other: walks		Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	The 100-mile St. Johns River Estuary will continue to be deprived of 150 mg of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored. If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide unimbibed passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe.	No. NO, please take me serious as it will be a huge MISTAKE if you don't fix this. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	I have been shocked by the amount of damaged waterways where it seems like Florida is only looking at how to make a buck and our future generations of both our children, other mammals, & wildlife will be affected and the decrease in clean waterways, will continue the deaths until extinction. Let's vote YES to creating a proven strategy it be the beginning of our Political Representatives help make Florida a better place and an example to the rest of the Nation that we are wise enough to know the Earth is in CRISIS! PLEASE HELP
10/18/2021 16:49	Marion		No	Yes	1 time	2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / Kayaking Boating Hunting Wildlife viewing Other		I would like from see it stay where it is and be maintained.	It is good for the community but also the wildlife including the manatees are important	The loss of Manatee habitat and jobs	I think it's very important the Rodman dam is maintained	
10/18/2021 16:49	Outside of state / other	New York	No	No						Make it accessible to and safe for manatees fish and birds.	Climate Chang's and human interference	Another block for protecting our environment	NONE	
10/18/2021 16:50	Outside of state / other	California resident, Florida visitor	No	No						Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.The dam harms the water quality and wildlife in the Great Florida Riverway	Historic fish and manatees return to a free-flowing river.	We miss this best opportunity with State and federal funds available and the dam is unsafe.	No. This should have been done long ago.	The Great Florida Riverway is a unique treasure of 217-mile system of rivers and spring that must be preserved and improved.
10/18/2021 16:51	Sarasota		No	Yes		1 time		Wildlife viewing		Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	I care about Florida's environment and wildlife. Please restore the restore the Ocklawaha River. Restoration will reunite the other rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. (characters: 479)
10/18/2021 16:51	Outside of state / other	MELLOTT, INDIANA	No	No						KEEP IT MOVING	KEEP IT MOVING	IT IS NEEDED, PLEASE	I DO NOT BELIEVE SO	
10/18/2021 16:54	St Lucie		No	No						Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Historic fish and manatees return as breach opens creating a free-flowing river, which also protects downstream property owners from potential flood damage.	Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss, while manatees and fish continue to die.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a Florida resident and stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.

10/18/2021 16:58	Seminole		No	Yes			2-5 times	Boating Wildlife viewing		Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	- Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier	- Hundreds of manatees lose the opportunity to access essential warm water winter habitat. - Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. - Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. - Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. - The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/18/2021 17:03	Duval		No	No						Dismantled to restore animal and plant preserves	Help manatees migration, keeping a rising sea level from turning the St. John river salty :(	Our wildlife and environment will continue to suffer as man makes selfish decisions upon selfish decision	I am not a Engineering subject matter expert, I care about Mother Nature , our people and planet	
10/18/2021 17:03	Outside of state / other	Nashville TN	No	Yes	1 time	2-5 times	More than 5 times	Fishing		Please leave it alone, it is a thriving ecosystem.	Over 700 Manatees have moved there this year because of the lush vegetation.	It would wipe out a large bass fish and manatee popyu		
10/18/2021 17:04	Seminole		No	Yes		2-5 times		Fishing Canoeing / Kayaking Boating Wildlife viewing		Leave it alone!!	It's a gorgeous wildlife refuge. Leave it the fkck alone!	More raping of the land to follow. Leave it the fkck alone!		

10/18/2021 17:04	Manatee		No	No					Restoring the Great Florida Riverway by breaching this dam will re-establish access to essential habitat for manatees, bring back migratory fish, connect three river ecosystems, historic Silver Springs, and restore a lost riverway for anglers and paddlers from Ocklawaha's Harris Chain of Lakes to the Atlantic.	free rivers benefit native wildlife	further loss of FL treasures- manatees	would need to learn more about what this questions implies.	It is time to save the Ocklawaha, Silver, and St. Johns Rivers, as well as historic Silver Springs.
10/18/2021 17:05	Outside of state / other		No	No									
10/18/2021 17:07	Outside of state / other	Overland Park, Kansas 66204	No	No					remove the dam	restoring wetlands			
10/18/2021 17:07	Flagler		No	Yes			1 time	Canoeing / kayaking	Restored natural flow	Ecological concerns	Damage to local ecology	Can't answer that question	I believe that, in addition to the positive impact on habitat and water quality, another free flowing River in Florida would be a big draw for eco- tourism and healthy tecreation.
10/18/2021 17:10	Outside of state / other	Riehen	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("OOO") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife.
10/18/2021 17:15	Seminole		No	No					Taken down	Restoration natural and original habitat	habitat would be lost, funds spent to repair would be wasted, lost income to local communities	this seems the only logical route but another solution is not impossible	the state needs to use wisdom and logic in making a decision
10/18/2021 17:16	St Johns		No	Yes			2-5 times	Fishing Boating Wildlife viewing	Nothing	Wetlands protect wildlife	Wildlife thrive in these areas. Without them it would be a catastrophic loss of wildlife.	No	
10/18/2021 17:19	Hillsborough		No	Yes					It must be removed. A major part of Florida's water resource and the common good of Floridians cannot continue to be be threatened or degraded for the sake of a few anglers. That damn dam MUST GO !	Common sense and 30 years of environmental experience (FL DEP retiree).	Adequacy and quality of major water resource issues, exacerbated by the effects of climate change .	NO	Doing what it right is never wrong.
10/18/2021 17:21	Outside of state / other		No	Yes			1 time	Other: Visited to see for myself after reading articles on dam removal and restoration of the Ocklawaha	Removal of dam and restoration of the Ocklawaha River and wetlands within the current Rodman reservoir.	Poor use of the land used currently by the dam & reservoir, low biodiversity. Area better suited for river restoration & habitat restoration around the river. Much more biodiversity could be achieved with removal. Plenty of lakes in Florida to bass fish in & probably much better fisheries.	Dam removal would lead to much better habitat for a variety of native Florida species. Impossible it would not work. Dam removal and restoration is a can't miss project and improvement for the St. John's River.	No, removal or nothing. Why else spend the public funds.	Please improve the Ocklawaha River. It is wonderful resource and could be attached to the St. Johns River with dam removal. Please carry this out so I and others can visit some day and spend our vacation money in Florida.
10/18/2021 17:22	Outside of state / other	Spokane, WA	No	No					Breach or removal	Free flowing waterways are better for ecosystems and fight climate change naturally.	Ecosystem collapse		
10/18/2021 17:22	Orange		No	No					Protect it. Listen to the people.	All the emails you've gotten on this.	A damaged water way.		Thanks for your time today.
10/18/2021 17:23	Leon		No	No					Restoration and preservation of the river and floodplain.	Removing the dam will restore natural river flows. uncover springs and restore native fish and wildlife habitat.	Water quality degradation and loss of imperiled specie habitat.	The best environmental outcome will come with dam removal.	This damn can no longer be justified merely on the economics of fishing as the restoration will still provide fishing opportunities along with river and floodplain restoration.
10/18/2021 17:23	Outside of state / other	54 S Nome St Aurora Colorado 80012	No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	100s of manatees gain essential warm water winter springs habitat	Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. (characters: 571)

10/18/2021 17:26	Outside of state / other	TX Resident	No	Yes			More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Keep the resource as is. This is a wonderful ecosystem with many aquatic species whom appear to be thriving. Not to mention the abundance of aquatic vegetation helps to filter an already polluted river system	This is one of the best and most healthy fresh water fisheries in FL. I visit every year and bring revenue to this part of FL solely based on this wonderful resource	Refuge for manatees and bald eagles whom are already endangered. Not to mention revenue lost to parks and wildlife dept and local residents/business owners	Is the dam functioning as it should? If so it should be left alone	
10/18/2021 17:28	Orange		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Boating Wildlife viewing Other: Hiking & Phography	Preservation in natural state, removing development as needed	These are irreplaceable and rare treasures	We'd become just more banal urban sprawl.		
10/18/2021 17:28	Seminole		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers	Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/18/2021 17:30	Outside of state / other	Penfield, NY	No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Historic fish and manatees return as breach opens creating a free-flowing river	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait	
10/18/2021 17:31	Volusia		No	No					Restoring the Great Florida Riverway by breaching this dam will re-establish access to essential habitat for manatees, bring back migratory fish, connect three river ecosystems, historic Silver Springs, and restore a lost riverway for anglers and paddlers from Ocklawaha's Harris Chain of Lakes to the Atlantic. It is time to save the Ocklawaha, Silver, and St. Johns Rivers, as well as	Making sure this will benefit wildlife and the environment	Wildlife and environment and welfare of all		
10/18/2021 17:33	Outside of state / other	Ohio	No	No									
10/18/2021 17:33	Washington		No	No					lake dam out.	For the health of the river.			
10/18/2021 17:34	Volusia		No	Yes	1 time	1 time	2-5 times	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers.	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/18/2021 17:34	Duval		No	Yes			More than 5 times	Fishing Canoeing / kayaking	Rodman should be left alone. The eco system is thriving. The fish, manatees, birds and other wildlife have a stable environment in which to survive. Any changes would devastate yet another piece of "Old Florida"	Do not alter the current landscape or waterway as it will have a negative effect on the delicate ecosystem.	Another piece of "Old Florida" would be gone.	No	
10/18/2021 17:35	Manatee		No	No									
10/18/2021 17:37	Duval		No	Yes	1 time	2-5 times	More than 5 times	Fishing	Nothing leave it alone				
10/18/2021 17:40	Seminole		No	No					It should be breached	There are 20 drowned springs that would be restored by breaching the damn as well as increase the fish population that has declined by 92%.	We miss the best opportunity to address the critical needs of the wildlife (manatees and fish population) and environment (water quality) that are currently at high public interest and we continue to waste money on an unsafe dam.	No, Breaching the damn is 50 years overdue	Manatees and fish will continue to die off if we don't restore their natural habitat and many springs will suffer. We must care for our environment.
10/18/2021 17:42	Hillsborough		No	Yes	1 time			Wildlife viewing	I would like to see the dam breached and the natural flow of water restored to the Florida water system.	The restoration of habitat, saving unnecessary money on repairs and an improvement to Florida's most important business, tourism.	Continued habitat degradation with loss of flora and fauna and the lost of income to the important tourism economy.	No, removal of the dam is the only solution to repair the damage inflicted when the dam was built.	
10/18/2021 17:48	Outside of state / other	Alabama	No	Yes			2-5 times	Wildlife viewing	Preserve manatee and wildlife habitat!	Life!	Extinction!	No!	
10/18/2021 17:51	Outside of state / other	CA	No	Yes					removal	environmental damage	habitat destruction	no	
10/18/2021 17:51	Alachua		No	Yes	1 time	2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Leave it as it is!	The wildlife and pollution mitigation from the Ocklawaha are important, but this is one of the best fishing locations in the State. The recreational enjoyment is immense and the economic impact of fishing has to be a driver also. There are many other much more pressing issues to deal with. Leave it alone!	Water quality would diminish, wildlife would die and people would not be able to enjoy the area like they have for years.	No. Leave it alone and go deal with the countless other issues that are out there.	
10/18/2021 17:53	Outside of state / other	Douglas, Alaska	Yes	No					Civility succeeding!	The 'Golden Rule'!!	devolution	Any public necessity privatized is demeaned! Each private capitalist devalues the synergistic gains gleaned of civil relationships in producing/creating together when their contributes is costing others!	
10/18/2021 17:54	Alachua		No	Yes			1 time	Other: Just to look	I would like to see the dam removed and the river returned to its original configuration	Information provided by those who seek to protect the environment and the native habitat	That the continued destruction of Florida's amazing habit continues to decline	Not really	
10/18/2021 17:54	Outside of state / other	Washington State	No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	5,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As someone who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for Florida's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.
10/18/2021 17:55	Outside of state / other	Sacramento, CA	No	No									
10/18/2021 17:58	Outside of state / other	CT	No	No					Reunite the natural rhythms and habitat of a great waterway	Nature regaining strength without interference	Onto sad decline of habitat and species	Bring down the dam	
10/18/2021 17:59	Miami-Dade		No	No					that you get this beautiful project done and help nature heal		manatees need their habitat ,waters need to flow where they were intended to by nature		
10/18/2021 17:59	Alachua		No	Yes			More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Maintain dam as it is.	Ecological benefits, environmental benefits. Actually is beneficial for survival of manatees.	Environmental harm, economic harm	No	
10/18/2021 17:59	Lake		No	Yes	1 time		2-5 times	Canoeing / kayaking Wildlife viewing	Bring the area back to its natural landscape.	In general, the ecology, or the natural balance of nature.	Development and its negative impact - allow the area to be preserved in its natural state	Hardly - it's either natural or unnatural	By allowing a natural flow of the stream again, will bring back a balance of nature into the entire Ocklawaha drainage area.
10/18/2021 17:59	Duval		No	Yes			2-5 times	Fishing	Leave it alone.	We are destroying the natural resources that we have. We need to protect it for future generations.	We will be taking away the habitat the birds, fish, manatees, alligators etc depend upon.	No!	Please preserve as much of our natural resources as possible. The wildlife don't get a vote but they were there first. Let's vote for them.
10/18/2021 18:03	Pinellas		No	No									
10/18/2021 18:08	Outside of state / other	Wyckoff, NJ	No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored; 20 lost springs and Silver Springs ecosystem are restored; Historic fish and manatees return as breach opens creating a free-flowing river; hundreds of manatees gain essential warm water winter springs habitat; 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier; 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife; 150+ million gallons a day of natural flow would be restored to the Lower Ocklawaha and St. Johns Rivers; $4-14 million in dam repairs saved on a dam past its life expectancy; restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. And $57 million in potential flood damages avoided to downstream property owners.	* Florida would miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. * The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. * Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. * A storm event triggers a dam failure or overtopping, resulting in potential damages to 537 property owners and up to $57 million in damages. * Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. * The 100-mile St. Johns River Estuary continues to be deprived of 150 million gallons/day of natural water flow to improve water quality, restore fish and wildlife habitat and reduce saltwater intrusion.	Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. As an American who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for the state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. This exciting restoration will improve water quality and flow by generating an additional 150 millions gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion, for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefiting water quality through enhanced biofiltration. Thank you.
10/18/2021 18:08	Alachua		No	No					Take it down!	Effect on environment is significant. Benefits to freeing up dozens of springs which could be used for recreation.	Springs would continue to be unavailable for recreation. Environmental benefits ignored.	I can't think of one.

No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Please make the right decision for future generations.
10/18/2021 18:38	Outside of state / other	Ontario, canada	No	Yes			2-5 times	Fishing	I would love to see it kept the way it is. It's a thriving eco system that supports many fish, manatees and several others animals. KEEP THE RODMAN AS IT IS!!!!	Thousands of species of fish and wildlife will be displaced and killed. Keep them alive	Killing animals.	NO!!!!!!	
10/18/2021 18:39	Outside of state / other	Tucson, AZ	No	No					I want the flora and fauna fully protected.				
10/18/2021 18:41	Duval		No	Yes			1 time	2-5 times	Fishing Wildlife viewing	I would like to see it left in place.	The reservoir is teeming with wildlife! From birds to bass and manatees.	The loss of a World-class bass fishery as well as habitat loss for endangered manatees.	None that have been brought to my attention.
10/18/2021 18:42	Outside of state / other	California	No	No						Release it.	Aquatic life, indian use.	Dry marshes, dying flow/aquatic life.	Compromise.
10/18/2021 18:45	St Lucie		Yes	No					I would like to see restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers $4-14 Million in dam repairs saved on a dam past its life expectancy Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. $57 million in potential flood damages avoided to downstream property owners	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. A storm event triggers a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.

10/18/2021 18:49	Outside of state / other	Sacramento, CA	No	No					No	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers $4-14 Million in dam repair's saved on a dam past its life expectancy Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. $57 million in potential flood damages avoided to downstream property owners	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. A storm event triggers a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/18/2021 18:53	Pinellas		No	No									
10/18/2021 18:54	Seminole		No	Yes			More than 5 times	Wildlife viewing Other: Native Plants, Butterflies & other Insects observations	Removal of all artificial impediments to the natural flow of the Ocklawaha River.	Restoring 7,500 acres of Wetland Forests that support habitats for native plants, animals & insects.	Reduced habitat for native plants, animals, insects etc. to thrive naturally in an artificially created environment.	No.	
10/18/2021 18:55	Marion		No	Yes	1 time	More than 5 times	More than 5 times	Fishing (shoreline/structure) Boating Wildlife viewing Other	I would love to see the beautiful ecosystem that has been created stay the same untouched. I would like to see whatever repair's necessary made to keep the dam remain in good working condition	Whether the decision in 1969 was a good one or not is irrelevant. The truth is for many years an ecosystem has been developing and now supports much wildlife. The beauty of this wildlife has brought many a visitor to our area thus providing needed revenue for our surrounding communities.	Destruction of wildlife habitat and loss of revenue!	I would say probably not but I would be willing to take such scenarios under consideration first before saying absolutely not.	It has been hard to hear arguments especially the lastest of structural unsoundness when the environmental groups have made it clear that they will settle for nothing less than river flow restoration regardless of what agruument they must derive to achieve this goal! Much change happened in 1969 with the construction of the dam maybe it was wrong or maybe it was not but regardless the years have created a complete and beautiful system that would also be completely destroyed, is this not just as tragic and destructive? Keep Rodman and show her the love she deserves!
10/18/2021 19:02	Outside of state / other	Helotes, Texas	No	No									
10/18/2021 19:02	Outside of state / other		No	No					Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riveraay.	Simply put dams create a dam to creatures that rely on the water system to flow between two points. We don't create a highway with no way to get through it. This is what a dam does.			
10/18/2021 19:04	Outside of state / other	Massachusetts	No	No					I would like to see restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riveraay.	The restoration of these three rivers, the Ocklawaha, Silver and St. Johns Rivers, and 50 springs would allow historic fish and manatees to return as the breach opens, creating a free-flowing river.	We would miss the best opportunity to do this because state and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. It is clear to me that breaching the dam is long overdue. Dam safety, improved water quality and wildlife can't wait.	Because I care about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for Florida's people and wildlife. Although I haven't been there lately, I have relatives and friends who live in Florida, and I care about the wildlife, anyway. This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.
10/18/2021 19:03	Outside of state / other	Maryland	No	No					removal so river and wildlife can return to pre-dam status	dam removal is being done with amazing results all over the US	it will happen happen eventually	partial removal	
10/18/2021 19:09	Brevard		No	No									
10/18/2021 19:11	Marion		No	Yes	2-5 times			Fishing Boating	I would like for it to return to its natural habitat, or for it to be better taken care of going forward!	There is no real reason for the Dam to be there also have you looked at the mess out there lately?	It will be unrecognizable for future generations with no fish to be caught no wildlife period.	Opening the dam or removing it completely.	
10/18/2021 19:14	Outside of state / other	Minnesota	No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Complete removal	Ecological and economic health of the river	Continued segregation of the natural habitat. Costly, aging infrastructure	No	
10/18/2021 19:18	Orange		No	Yes			1 time	Wildlife viewing	Take it down. Restore river to its natural flow.	Stats on manatee deaths.	Manatee deaths.	No	
10/18/2021 19:18	Washington		No	No									
10/18/2021 19:19	Duval		No	Yes			More than 5 times	Fishing Fishing (shoreline/structure)	Leave it alone	It will never be like it was it thriving now the more you mess with it the more damage is done	It will be unusable for a lot more voters and a lot of wildlife will be disrupted	No	
10/18/2021 19:22	St Johns		No	Yes	2-5 times			Fishing	Leave it as see and stop killing all the weeds. Also remove large floating trees from the access channels especially at the State park.	The State of Florida and the Federal Government spent lot of money building Rodman and ended up with a fabulous resource for fishing and hunting. Several Bald Eagle use Rodman to fish and live on. It is ridiculous to spend money destroying a beautiful place.	It is ridiculous to destroy a place to fish. I would never come to your community again and would vote against anyone who approved this psychotic move.	No don't do anything is the best and cheapest solution for the State. Why waste money you don't have. If people want this changed that must pay all of the cost forever.	Don't let a few radical people who don't pay for anything change the beautiful Rodman reservoir.
10/18/2021 19:22	Duval		No	No					Eliminate it	Many wetlands and their inhabitants have suffered because of the dam.	The circle of life being broken.	No	
10/18/2021 19:32	Putnam		Yes	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating	Reserve it and keep the same	The money that local captains get from it	Lose of money for local captions	Yes	
10/18/2021 19:32	Outside of state / other	CA	No	No					If it serves no useful purpose then the dam should be removed.	Restoration of natural water flow in Florida.	How continued blockage by the dam would be environmentally damaging.		How do the Native Americans of Florida, I assume mainly the Seminoles, view removal of the dam?
10/18/2021 19:32	Outside of state / other	d' ca	No	No									
10/18/2021 19:34	Pasco		No	No					complete destruction of the dam and reservoir.	saving the manatees - restoring our precious springs.	it is IMPERATIVE that the desired outcome IS achieved.	none	We must work diligently to keep our beautiful State of Florida in top condition always.
10/18/2021 19:45	Brevard		No	No					Clean up	earth falling apart	we will all die	work together	Thanks.
10/18/2021 19:45	Marion		Yes	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Leave it as is. Its a refuge for wild animals and one of the top bodys of water for fishing in the state.	My business relies on customers coming in to buy fishing supplys year round.	Loss of business.	Leave it as is	
10/18/2021 19:58	Alachua		No	Yes			2-5 times	Canoeing / kayaking Boating Wildlife viewing	Remove Kirkpatrick Dam and restore the Oklawaha River	I took my family kayaking on the Ocklawaha during a drawdown a couple years ago and it was an amazing, educational adventure. Restoration would benefit the fishermen but would allow many others to enjoy it as well. A free flowing river would also benefit the wildlife, especially the fish and manatees.			
10/18/2021 19:59	Lee		Yes	No					Removal				
10/18/2021 20:00	Clay		No	Yes		2-5 times		Fishing	Leave it be	Many people enjoy using the property for fishing, boating, and many other activities.	You would be taking a lot pleasure from people who have used this Beautiful place and count on it for their livelihoods.	No	Leave this place alone.
10/18/2021 20:02	St Johns		No	Yes		2-5 times		Wildlife viewing	Rimove the dam and create a natural environment that helps wildlife and allows for recreational activities like kayaking bird watching and even fishing from the river and in boats	The dam is old and needs repair. It should never have been built and the whole project has been scrapped	The environment is the big loser and we are throwing away money.		
10/18/2021 20:04	Outside of state / other		No	No									
10/18/2021 20:05	Lake		No	Yes	1 time	2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing Other: Wildlife Photograph	Take it back to pre construction conditions.			no	
10/18/2021 20:06	St Johns		No	No					The dam removed and the Oklahaha restored to its original flow	degradation of St. Johns River water quality	further degradation of St. Johns River water quality	partial removal of the dam, if feasible	
10/18/2021 20:09	Volusia		No	Yes	1 time	2-5 times	More than 5 times	Wildlife viewing Other: Birding	Remove the dam and reservoir and restore the natural flow of the river.	A multitude of studies and the 2001 restoration plan. There are 40 to 50 suppressed springs. This water is vital to the future of Florida for both the natural environment and for human consumption. We have to mange water properly to avoid scenarios similar to California	Again - water flow lost, recreation opportunities and growth missed. Optimizing this area for multiple interests in the population, not just for special interests. Mitigate explosive growth in the state and manage resources to support that growth.	NO	Let's restore our waterways to their beautiful roots.
10/18/2021 20:10	Volusia		No	Yes		2-5 times		Wildlife viewing	Take down the dam and restore the Ocklawaha River	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	o. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	The birds I've seen on the Silver and Ocklawaha River in their current state are magnificent. If the Ocklawaha was restored, I can imagine an amazing increase in the birding available
10/18/2021 20:10	Outside of state / other	Minnesota	No	No									
10/18/2021 20:10	Lee		No	No					Anything and everything to promote a healthy ecosystem, encourage and protect wildlife habitat, and protecting the water from pollution, pesticides and herbicides.	The water quality everywhere is degrading, habitat for wildlife grows increasingly smaller, climate change.	That we lose the most important and treasured things that make up Florida	Without a full commitment to improve all the aspects I said above it will fall like a deck of cards eventually.	
10/18/2021 20:11	Alachua		No	Yes		1 time		Canoeing / kayaking Wildlife viewing	Remove the dam and free the Ocklawaha!	$15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No.	Remove the dam. It was a mistake that needs to be rectified.
10/18/2021 20:14	Alachua		No	Yes	2-5 times	2-5 times	2-5 times	Other: To check out what's happening with it (safety...why it is there, what it looks like)	I would like to see the Dam removed and the Reservoir returned to its part of a normal, healthy, flowing river.	Science...to many studies to count. Riverine connectivity.	Continued degradation of the natural system!	Partial restoration (with the dam still being removed to allow for water to flow).	The time has come to finally allow the Ocklawaha River to run free!!!
10/18/2021 20:25	Palm Beach		No	No									
10/18/2021 20:27	Volusia		No	Yes			1 time	Other: I read about the area and went exploring. I am a 3rd generation Floridian and like to visit different parts of the State.	Remove the Dam and restore the natural flow and course of the rivers. Do not fund repairs to the Dam, reduce and remove it.	I've read about the cross Florida Barge Canal and its aftermath for many years in Local Florida Newspapers	That Florida does not make environmental progress. Future residents and visitors will depend upon Florida having a desirable landscape.	Minimum is to lower the dam and let the water overflow, remove the sediment from the bottom of the reservoir.	
10/18/2021 20:29	Outside of state / other	Northampton,MA	No	No					I would like to see it removed.	Manatees are endangered and I think this would improve their chances of survival by enriching their habitat.	The environment would be endangered.	Probably not.	
10/18/2021 20:41	Outside of state / other	CA	No	No					removal	springs restoration	corporate pollution	strong sanctions and laws stopping corporate irresponsibility	hollering that Jesus is coming soon does not excuse anti-conservation corporate actions. i.e. "Git yore profit rat now! the earth is evil! money is king, not some jesus guy!" (regards to James Watt...sick)
10/18/2021 20:46	Alachua		No	Yes			More than 5 times	Fishing Wildlife viewing	Even though I have fished there many times over the years (in bass trnys & for fun) I do believe for the overall health of the St. johns river it would be best to fill the lock canal & allow the Oklawaha to go back to its banks. something that bothers me is with all talk of removing Rodman dam there is no mention of Moss Bluff dam or the locks at Eustis/Griffin that also impede the historic flow of Oklawaha waters. It might be the best thing to just bring Rodman Pool down to its drawdown level & just leave it that way for an extended time say a year or two & just see how the area begins to recover.	I do not have one other than with the estimated cost of lock &dam maintenance it just seems like the perfect time to try & bring a more historic flow to the Oklawaha.	I guess it would be cost of keeping the lock & the dam in operating condition.	To be honest if it is decided to keep the dam & lock then I think there may have to be a fee put in place to try & recoup costs. The same is done @ a lot of salt water ramps & piers.	
10/18/2021 20:55	Outside of state / other	Hawaii	No	No					Open the river to benefit dwindling manatee numbers.	Manatees are losing numbers due to lack of food, water pollution & boat strikes.	That manatees will continue to die faster than they can reproduce.	Other actions to increase food supplies & reduce water pollution.	Restoring the Great Florida Riverway by breaching this dam will re-establish access to essential habitat for manatees.
10/18/2021 20:55	Outside of state / other	Ohio	No	No									
10/18/2021 20:56	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing	Take the Dam down & restore the river. Bring the stripers back, the river could be beautiful again.	All the aquatic growth in stagnant water.	River stays ugly	Open for discussion	
10/18/2021 20:56	Volusia		No	No					Remove the dam and restore the Ocklawaha	A natural ecosystem would be restored including 50 freshwater springs. Florida needs water, and restoring the natural flow of the Ocklawaha into the St. John's is an important step to conserving and maintaining our water supply.	More invasive species and the loss of native fish species - including at Silver Springs State Park where the invasive blue tilapia are now the dominant biomass. Loss of a natural riverine ecosystem.	Come on - take it out!	We need our wildlife corridors and this would take out a large body of water that currently is a barrier to terrestrial animals movements. At the same time, removing the dam and restoring the river will allow manatees to move inland to warmer waters during winter months.
10/18/2021 21:07	Outside of state / other	NC	No	No									
10/18/2021 21:16	Alachua		No	Yes			1 time	Boating	have the dam removed	the reservoir is not a natural feature.	too expensive to maintain	no	
10/18/2021 21:18	Pinellas		No	Yes	1 time	1 time	1 time	Wildlife viewing	I would like to see the dam removed and the riverway restored.		The continued loss of valuable habitat for the survival of manatees.	No	
10/18/2021 21:17	Pasco		No	No									
10/18/2021 21:22	Clay		No	Yes			2-5 times	Fishing Wildlife viewing	Leave Rodman alone to continue to thrive.	It is best to leave Rodman alone to provide precious resource for the community and the ecosystem	The ecosystem will be damaged	No	Rodman in it's current state is a valuable resource both for the community and for the ecosystem
10/18/2021 21:27	Outside of state / other	Crest Hill IL	No	No					I would like to see the dam breached.	Breaching the river would allow the manatees to be able to swim upstream to warmer water, and help many other species of wildlife.	The breaching of the dam is long overdue. 4 to 14 million dollars in repairs will have to be spent to repair the dam. Its negative environmental impact and the expense of repairing it make removing the dam perfect sense.	No	
10/18/2021 21:29	Palm Beach		No	No					Take it out, to restore the original confluence. Clean up Silver Springs, and makethe wildlife & ecosystem healthy again.	When I visit Silver Springs, the water looks "dirty" with silt. It is not nice and pretty, like other rivers that emit from our other Florida springs.	No moving forward with restoration.	I don't know these options.	
10/18/2021 21:35	Duval		No	Yes	1 time	More than 5 times	Boating	Raise the water level in the reservoir so that boating can be safer and not so dangerous and so that marine life can prosper and flourish.	it's simple, Larger and deeper fresh water habitat increase the chances for fish, birds and other reptiles, as well as other mammals have a better chance to flourish. It also makes the reservoir more accessible to every boater as well as makes it more accessible to Floridians to enjoy, making it safer to access and enjoy the water.	If the existing reservoir is drained, it will destroy the ecosystem that exists and the existing reservoir and the surrounding area will become a big, nasty swamp.	Complete the cross Florida barge canal as planned.	
10/18/2021 21:36	Palm Beach		No	Yes			More than 5 times	Fishing Canoeing / kayaking Boating Wildlife viewing	Leave it the way it is.	I have fished here for many years and have seen the wildlife and nature that exist presently it is truly one the the most unique ecosystems that have come across in my lifetime and needs to be preserved for its sheer beauty, wildlife and economic value from tourism and fisherman	The destruction of wetlands for the wildlife it supports currently	Sure leave it as is	
10/18/2021 21:37	Outside of state / other	Texas	No	No							The St. John's waterway is a delicate, eco-sensitive area. Any action that would endanger it's purity or scenic value, would be extremely detrimental to Florida and the southeastern United States.	no	
10/18/2021 21:38	Seminole		No	Yes			2-5 times	Canoeing / kayaking	Better water management and biological research to restore wildlife to its natural order		How we can have less impact on our florida water ways		
10/18/2021 21:44	Duval		No	Yes			1 time	Wildlife viewing	Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam to reunite the natural connection of Silver Springs, the Ocklawaha and the St. Johns River.	The science supports restoration. Studies by federal and state agencies have clearly demonstrated that restoration of a free-flowing, connected system is cost-effective and will provide significant ecological benefits to the St. Johns, Ocklawaha and Silver Rivers as well as Silver Springs. More information to consider: Three rivers, Ocklawaha, Silver and St. Johns, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish migration patterns and essential manatee habitat are reestablished 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of forested floodplain wetlands within the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs	We miss a historic opportunity to stop the ongoing ecological degradation caused by the dam and finally reunite the natural flow of these rivers. Breaching the dam would restore the natural flow of 150 mgd of fresh water, improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. A free-flowing Ocklawaha will reestablish 15,000 acres of forested wetlands and fortify downstream submerged grasses from Welaka to Jacksonville in the St. Johns River that are critical to river health and fish habitat. More information to consider: We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs, and invasive fish like the Blue Tilapia increase. Water quality declines, further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam and restoring the Ocklawaha are 50+ years overdue. Dam safety issues and improved water quality, wildlife habitat, and recreational opportunities can't be ignored or delayed any longer.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.
10/18/2021 21:45	Outside of state / other	California	No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway. More information to consider: We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs, and invasive fish like the Blue Tilapia increase. Water quality declines, further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam and restoring the Ocklawaha are 50+ years overdue. Dam safety issues and improved water quality, wildlife habitat, and recreational opportunities can't be ignored or delayed any longer.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.
10/18/2021 21:57	Washington		No	No					Restoring the Great Florida Riverway by breaching this dam will re-establish access to essential habitat for manatees, bring back migratory fish, connect three river ecosystems, historic Silver Springs, and restore a lost riverway for anglers and paddlers from Ocklawaha's Harris Chain of Lakes to the Atlantic. It is time to save the Ocklawaha, Silver, and St. Johns Rivers, as well as historic Silver Springs.	Preserving the ecological balance	Threats to wildlife and the environment	No	We must do what is best for our fragile environment.

10/18/2021 21:57	Outside of state / other	raymond, wa	No	Yes		1 time	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Hunting Wildlife viewing	We are at a critical juncture for the Ocklawaha River. St. Johns River Water Management District wants to hear your thoughts about breaching the Rodman/Kirkpatrick Dam to reunite the Ocklawaha, St. Johns and Silver Rivers and Silver Springs - The Great Florida Riverway. We are urging you to speak out. This may be our last great opportunity to restore this riverway for people and wildlife. Restoring the Great Florida Riverway by breaching this dam will re-establish access to essential habitat for manatees, bring back migratory fish, connect three river ecosystems, historic Silver Springs, and restore a lost riverway for anglers and paddlers from Ocklawaha's Harris Chain of Lakes to the Atlantic. 10/18/2021 22:02	Outside of state / other	British Columbia, Canada	No	No				I would like to see the Rodman/Kirkpatrick Dam removed and the Ocklawaha River restored.	$5,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife - most especially for 100s of manatees who will gain access to essential warm water winter springs habitat.	Millions in taxpayers' money will need to be spent unnecessarily to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. In addition a storm event could trigger a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages.	No. Only dam removal will avoid expensive, unnecessary dam repairs, the threat of flooding, and provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	I can see no positive reasons to maintain this dam. For me decisions are best made considering risks and benefits, and in this case I see no benefit in maintaining the Rodman/Kirkpatrick Dam, and I see a lot of benefit in removing it. How about you?
10/18/2021 22:05	Nassau		No	No				I would like to see it removed to allow nature to resume its natural flow. It's time to celebrate the restoration of the land and waterway to its previous glory.	The dam is in need of repair and was not used for it's intended purpose. Let the land and waterway be allowed to do what nature intended.	The species and habitat loss that continues to plague our great state will only get worse. Why wouldn't we seize the opportunity to give back the natural flow to migratory birds, the communities who lost out when the dam was put in operation and aquatic species?	The least I would support would be that the largest spans are removed and if the attachments to land would reduce flow instead of prohibiting it.	Free the flow!
10/18/2021 22:05	Outside of state / other	New York City	No	No					The removal of Rodman/Kirkpatrick Dam and the opening up the Great Florida Riverway.	Restoring the Great Florida Riverway by breaching this dam will re-establish access to essential habitat for manatees, bring back migratory fish, connect three river ecosystems, historic Silver Springs, and restore a lost riverway for anglers and paddlers from Ocklawaha's Harris Chain of Lakes to the Atlantic.	This may be our last great opportunity to restore this riverway for the American people and for wildlife.	No.	
10/18/2021 22:05	Lake		No	Yes		More than 5 times	Boating Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	The breaching of the dams will allow the river to flow freely and allow boaters and wildlife to be free as well.	Continued disruption of the natural river and wildlife. The Dan's are unnecessary.	No	
10/18/2021 22:07	Outside of state / other	Georgia	No	Yes		2-5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing	The dam and reservoir should be left as is to allow for continuation of all lake related activities	It is an outstanding natural resource with incredible opportunities for fishing, wildlife viewing, hiking, hunting and a varying other activities.	The fishing camp that I attend regularly would have a decreased appeal and property values for lakefront owners would diminish.	No, I can't think of any scenario where you partially blow a dam.	
10/18/2021 22:08	Outside of state / other	San Diego, CA	No	No		1 time	Wildlife viewing	I would like to see the Kirkpatrick Dam removed and Rodman Reservoir allowed to return to swamp forest over time and with assistance.	A free flowing Ocklawaha River will allow a major portion of the river to restore itself and allow manatees, channel catfish, stripped bass and American eel to migrate up the river once again. The St Johns River downstream will benefit from the more natural flows and improved water quality from the Ocklawaha. Drawdowns and use of herbicides will not be needed so costs will be greatly reduced and the dam and lock will not need repairs in the future, reducing costs as well. The Ocklawaha will be back on its ways to being a major waterway in the state and will provide the benefits that it has provided in the past.	The conditions in the Ocklawaha will continue to decline and costs to control the decline will only go higher. It will be a continuing disappointment for many while benefiting only a few.	Not really, it has just reached the time for Kirkpatrick Dam and Rodman reservoir to go!	You must also consider the Ocklawaha River upstream of Silver River...there are four dams up to the headwaters. The largest is Moss Bluff Lock and Dam which has altered the flows to where the median flow is equal to the minimum flow and the seasonal release of water is completely altered from its natural state. Making the flows more natural at Moss Bluff requires that the lakes in the Harris Chain be allowed to fluctuate more naturally...still an ongoing project that I was involved with from the 1990's till I retired in 2015. My wish is that the conditions in the upstream portion of the Ocklawaha River will be considered as well as the downstream...consider the entire river together instead of two separte entities!
10/18/2021 22:08	Outside of state / other	Monterey County, CA	No	No				Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Historic fish and manatees return as breach opens creating a free-flowing river	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. (characters: 521)
10/18/2021 22:13	Volusia		No	No				Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	100s of manatees gain essential warm water winter springs habitat	The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/18/2021 22:18	Duval		No	Yes		1 time	Canoeing / kayaking	I would like to see the dam removed and the Ocklawaha restored to its natural state.	- kayaked on the lower portion of the river and saw the beautiful trees and wildlife that exist there. I know that the reservoir is unnatural and the best thing for the environment (springs, flora, fauna) is a restored river. -It will also assist with reducing salinity in the St. Johns River, which will probably be increased due to dredging and sea level rise.	increasing salinity of the St. Johns River.	Not sure; I'm not familiar with all of the options.	
10/18/2021 22:30	Marion		No	Yes		1 time	Canoeing / kayaking Boating Wildlife viewing	Breach the dam and let the river once again become free flowing.	A healthy ecosystem relies on nature to act in natural ways. What might seem like an aid to the few by trying to humanize nature will later prove to be disasterous for the many.	Future generations of Floridians will inherit an ever greater amount of spoiled land to try and reconstruct back into its natural condition.	No; once an area is spoiled it can never be returned to its original, natural, healthy condition no matter the promises. This has been proven to be true over and over again.	Will comments actually save this river? I doubt that my comments will change the powerful influence of government officials, big money and enough, if any, politicians to carry the day for a healthier environment. But, try I must. Future generations depend on some of us trying to speak out for the yet unborn.
10/18/2021 22:43	Outside of state / other	MASSACHUSETTS (MA)	No	No				Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	$5,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.
10/18/2021 22:44	Orange		No	No				Breach the dam	Restoring the twenty springs	The state and federal monies are available, to save the springs. The dam is unsafe.	No.	
10/18/2021 22:46	Orange		No	Yes		2-5 times	Canoeing / kayaking	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	$5,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. 10/18/2021 22:47	Putnam		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Hunting Wildlife viewing	Leave it alone. The ecosystem is thriving and the wildlife is absolutely amazing there	Go look at it yourself. You won't go out there and no view the wildlife at its best	That it will take the rest of my lifetime for the ecosystem to recover from removing it.	No
10/18/2021 22:53	Alachua		No	Yes		More than 5 times	More than 5 times	Canoeing / kayaking Boating Wildlife viewing Other: I am an artist and visit frequently for painting, writing, and filmmaking. We have made a PBS film based on the Ocklawaha river the promise of restoration. of the river.	The dam needs to be breached and the river partially restored ASAP, as approved over 25 years ago by the Florida cabinet. The river needs to have its natural flow and natural level restored, giving free passage to many kinds of fish and wildlife.	it's hard to sift through all the scientific studies that support restoration. Scientific studies, studies of historical sites, economic studies of increased attendance by visitors for recreational use during the drawdowns,	In the meantime, there is toxic buildup in the reservoir from use of herbicides, dying plants, It is in fact a dig ecosystem. The dam is aging and becoming less safe as an aging infrastructure relic of the 60s. We need this river to be restored, the addition of a healthy free flowing river with its 20 springs, connecting the St. Johns to the Silver River and Silver springs is fo critical importance for species of all kinds, from aquatic to human.	No. This needs to HAPPEN. Intermittent drawdowns aren't enough to restore the river. Natural systems can only be suppressed so long. Fish and manatee populations are at a critical juncture for finding new refuge , feeding and spawning waterways. It is very important for Marion ot Putnam county to have this important treasure active and healthy, a source of touristic and recreational activity in their midst.	Thank you for your work on this project. I pray this effort leads to the health of the Ocklawaha as a natural system that has been restored. There are many reasons some resist change but the positive changes will benefit everyone.
10/18/2021 22:54	St Johns		No	No					Get rid of the dam.	Restore habitats and ecosystems.		
10/18/2021 23:07	Orange		No	No					Seeing the detrimental impact the dam has had on the springs, vegetation, and wildlife. Opening the dam will allow the area to get back to its former beauty.	The habitat will die permanently. All the springs will be killed and plants and animals will be wiped out.	More frequent draining of the reservoir can help.	
10/18/2021 23:09	Outside of state / other	CT	No	No					access to old/new habitat for endangered manatees by breaching the Rodman Reservoir/ Kirkpatrick Dam	We miss the best opportunity to do this: the dam is unsafe, state and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat).	no. breaching the dam is overdue since 50 years ago. drawdown to 11-12ft mean sea level should be only temporary if at all, only to avoid potential downstream damage in gas of dam failure. The only long-term solution is opening the dam and reuniting the Ocklawah, St. John and Silver Rivers and Ever Springs.	All through then nation, the need for restoration and dam removal is more and more obvious. This is the best time to restore the Great Florida Riverway. Manatees are like polar bears for this region: the most obvious endangered species, familiar and like by so many, and so essential for the ecosystem. But so many more (migratory and dependent) fish and wildlife would benefit, as well as recreation industry, anglers, boaters,, the entire watershed, surface waters and water cycle - the entire region...
10/18/2021 23:46	Outside of state / other	New York	No	No				Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	the welfare of the ecosystem and wildlife that inhabit these lands and waterways.	The destruction and extinction of the wildlife that inhabits these lands and waterways.	I'm afraid not.	Restoring the Great Florida Riverway by breaching this dam will re-establish access to essential habitat for manatees, bring back migratory fish, connect three river ecosystems, historic Silver Springs, and restore a lost riverway for anglers and paddlers from Ocklawaha's Harris Chain of Lakes to the Atlantic.
10/18/2021 23:50	Outside of state / other	Sacramento CA	No	No					Removed	I was raised in central FL and understanding the importance of the natural waterways and the ecosystems that they support. After reading about the pros and cons of this project, I think that it's important to restore the natural habitat	Unintended consequences having a greater negative impact for the natural ecosystems in the area	None	
10/18/2021 23:50	Outside of state / other	LEWISVILLE, TX	No	Yes		1 time	2-5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs would be restored 20 lost springs and Silver Springs ecosystem are restored Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier $5,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers $4-14 Million in dam repairs saved on a dam past its life expectancy Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. $57 million in potential flood damages avoided to downstream property owners	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. A storm event triggers a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	
10/18/2021 23:58	Osceola		No	No				Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Breach the Rodman/Kirkpatrick Dam to reunite the Ocklawaha, St. Johns and Silver Rivers and Silver Springs	Restoring the Great Florida Riverway by breaching this dam will re-establish access to essential habitat for manatees, bring back migratory fish, connect three river ecosystems, historic Silver Springs, and restore a lost riverway for anglers and paddlers from Ocklawaha's Harris Chain of Lakes to the Atlantic.		
10/18/2021 23:58	Alachua		No	Yes			1 time	Other: Just looking	It needs to go away. Period.	It is old and in need of repair. It serves to purpose. The Springs are covered up. The manatees can't use the area.	Unexpected dam failure. Manatees continue to die off. Springs are invisible to most.	No. The dam needs to go.	
10/19/2021 0:23	Outside of state / other	Placerville California	No	No									
10/19/2021 0:24	Outside of state / other	Anchorage, AK	No	No				Restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state. It will provide essential warm water winter habitat for hundreds of manatees. More than 15,000 acres of the Florida Wildlife Corridor will be restored/enhanced, benefitting other critical species as well.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their long-term chances of survival. Keeping the Ocklawaha dammed would also continue to negatively impact other critical species like Florida panthers, black bears, bobcats and white-tailed deer and their ability to easily travel through this vital section of the Florida Wildlife Corridor.	No.	While not a Florida resident, I am a stakeholder. Having spent more than 40 years visiting Blue Springs State Park, I am painfully aware of the ever-increasing challenges Florida manatees (and Florida's other wildlife) face for their survival. I'm writing to strongly urge the St. Johns River Water Management District to take immediate action to restore the Ocklawaha River and its vital network of natural warm water. This habitat is critical for manatees to be able to take refuge in cold weather and restoring it will help prevent their further unprecedented loss. [illegible] have been alarmed this year about the hundreds and hundreds of manatees that have already died, many from starvation as the seagrass they depend on for survival has disappeared. Meanwhile, the greatest long-term threat they face is the loss of warm water habitat. As the number of manatee deaths rise, St. Johns River Water Management District must act now to help protect manatees and their habitat. For many, their survival literally depends on your immediate action. Thank you for your service and for your strong consideration. [illegible] Respectfully, Danielle S. Williams[illegible] 2029 Blueberry Street [illegible]Anchorage, AK 99503[illegible] domithr_70@yahoo.com
10/19/2021 0:28	Outside of state / other	California	No	No				We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("OSO") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.

10/19/2021 1:32	Pinellas		No	Yes			2-5 times	Wildlife viewing Other: Sightseeing along the route.	What I would like to see happen is restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam! This structure, serving no purpose, and having been constructed for a project that didn't come to completion, the dam should be removed / breached to restore the natural state of the environment. We HAVE to take the opportunity that has come to restore some of the damage done when creating the dam to begin with. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs would be restored as well as 100's of manatees gain essential warm water winter springs habitat. With these protected mammals needing all the help they can get. Also $4-14 Million in dam repairs saved on a dam past its life expectancy. The free flow of the rivers would support endangered wildlife and help restore the native fish that aren't able to access the river system in it's entirety. There has been damage to the rivers systems in Florida enough. The most important piece of information is the fact that this dam was built to divert water to the Barge canal which NEVER happened and wasn't going to improve the environment or the interests of the citizens of Florida. Please consider that we have destroyed enough of the Earth's environment and continuing to do so is going to lead to the Earth being uninhabitable for humans.	There are several concerns should the dam not be breached, to name a few: Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. Those are necessary to improvement of life in Florida, to the environment and our ability to continue to be good stewards of the great state of Florida.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait. That says it all. Common sense should prevail here.	So, in conclusion, the State of Florida has been saying they want to breach the dam and restore the environment for years and years. What is the hold up? Stop allowing special interest groups to influence the state and keep them from doing the RIGHT thing here. Stop the insanity and restore the river system. Of course we would do this gradually so to avoid flooding with a huge amount of water all at one time.
10/19/2021 2:04	Volusia		No	Yes			2-5 times	Canoeing / kayaking	To maintain the Rodman Reservoir for future water storage and recharge area.	There is a group of people saying Free the Ocklawaha River as to imply the river is bound or the flow is restricted. The science says the same amount of water flowing into the reservoir flows out, except for leakage thru the floor of the lake and evaporation. This recycling of water helps the springs before it continues the journey to the ocean to become salt water. The water flowing from the springs could be used rather than flowing into the ocean, with less pumping for water from underground water sources. River systems with Reservoirs exist worldwide for many functions of use, so why not repurpose the lake rather than destroying it.....	What is next, tear down the dam at Deleon Springs Park ?		
10/19/2021 2:58	Outside of state / other	Salem, Oregon	No	No					Dam removal revitalizes a river. It's happening here in the Pacific Northwest, and it could happen in your area also.	Fish populations rebounded when Elwha dam was removed from Olympic National park in Washington.	I would be disappointed.	No, the dam's got to go.	I hope that the environment gets a boost from your taking the right action.
10/19/2021 3:00	Outside of state / other	Spokane, Washington	No	Yes			1 time	Wildlife viewing	I would like to see Kirkpatrick Dam breached.	The decline in the manatee and fish populations and the increase in algae in the blocked and fragmented river system.	The continued decline in manatee and fish species and continued harm to the region's ecosystems and losses to the economy from a decline in outdoor recreation.	No; nothing else achieves the many and extensive benefits to Floridians and the health of their ecosystems of removing the dam.	My father spent much of his youth in Florida, where he got to know the amazing and unique Florida species and ecosystems that inspired him to become a scientist and science teacher. Please make your name as the public officials who saved and restored Florida's river system rather than as those who presided over its loss.
10/19/2021 3:19	Citrus		No	No				Take it down	This article	More muck		

10/19/2021 3:21	Outside of state / other		No	Yes			More than 5 times	Wildlife viewing					I have always visited this area of Florida for wildlife viewing and being able to see manatees is an incredibly special experience given how critically endangered these amazing animals are. It saddens me incredibly to know that manatees have been dying in record numbers due to all kinds of human activities - pollution, boating accidents, encroachment on their natural habitats, etc - but the greatest long-term threat to these animals is the loss of warm water habitat that manatees need to survive the winter. After everything that I have read, I strongly believe that restoring the Ocklawaha River is critical to ensuring the long-term survival of manatees. This river system, with over 20 connected springs, could provide essential warm water habitat for hundreds of manatees. Given that the species is already in dire crisis and that many more will die if we fail to restore their habitat, we need to do everything that we possibly can to keep them safe from fatal temperatures and to ensure their survival as a species. Please help to protect this iconic and majestic creature!
10/19/2021 3:50	Outside of state / other		No	No					Breach the dam to improve water quality, wildlife habitat and economic and environmental gain.	Breaching the dam saves millions of dollars in restoration of a dam that is an environmental disaster.	Further environmental degradation on many levels.	No. The dam must go.	
10/19/2021 3:56	Outside of state / other	California	No	No									
10/19/2021 4:09	Outside of state / other	Indiana	No	No					I would like to see dams taken apart so that they no longer have such a strong impact on the surrounding environment. Restoration of the Ocklawaha River is crucial from day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	I would like to provide three very important reasons: More than 15,000 acres of the Florida Wildlife Corridor could be restored or enhanced for people and wildlife Over 150 million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers The estimated USD 4.14 million in dam repairs saved on a dam past its life expectancy	The impact on wildlife and the environment in general	Perhaps temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	
10/19/2021 4:28	Nassau		No	No					Remove these.	More fresh water going into the rivers	Our rivers would get to low	Just open the damns	
10/19/2021 5:14	Orange		No	No					Remove Kirkpatrick Dam and drain Rodman Reservoir.	These actions would restore 20 drowned springs and recreate manatee habitat.	The environment would continue to be degraded when a fully funded corrective action is available to the state.	No, we should have fixed this problem years ago.	
10/19/2021 5:35	Jackson		No	No					I would like to see the Ocklawaha River restored, for the benefit of human beings and wildlife, by breaching the Rodman/Kirkpatrick Dam.	15,000+ acres of the Florida Wildlife Corridor are restored and enhanced for people and wildlife. Restoration increases recreation opportunities, tourism and creates new jobs.	Hundreds of manatees are unable to access essential warm water winter habitat, native fish populations do not recover, forest habitat is not restored. Surrounding communities lose the chance for economic growth. Taxpayer money is spent on a dam which currently provides no public benefit.	No. Breaching the dam is 50 years overdue.	
10/19/2021 5:40	Outside of state / other		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam	20 lost springs and Silver Springs ecosystem are restored	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored; we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. WATER QUALITY: This exciting restoration will improve water quality and flow by generating an additional 150 million+ gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration.
10/19/2021 5:43	Outside of state / other	NM	No	No						help the planet			
10/19/2021 6:09	Santa Rosa		No	Yes	2-5 times	2-5 times	2-5 times	Canoeing / kayaking Wildlife viewing	Restoring the Great Florida Riverway by breaching this dam will re-establish access to essential habitat for manatees, bring back migratory fish, connect three river ecosystems, historic Silver Springs, and restore a lost riverway for anglers and paddlers from Ocklawaha's Harris Chain of Lakes to the Atlantic. It is time to save the Ocklawaha, Silver, and St. Johns Rivers, as well as historic Silver Springs.		Loss of wildlife , habitat loss , climate concerns	I don't think so!	
10/19/2021 6:10	Lake		No	No					Breach the Rodman/Kirkpatrick Dam to restore a free-flowing Ocklawaha River	Prevent further environmental degradation, allow native plant communities to regenerate, remove a wildlife corridor barrier, improve manatee access to warm-water habitats, improve water quality, avoid spending for dam repairs and invasive plant control.	Water quality and further native plant community degradation.	No.	
10/19/2021 6:17	Seminole		No	Yes			1 time	Canoeing / kayaking	Please remove the dam!!!	It is a waste of money to fix the dam. It has no purpose. Without it it would allow the springs to come back, birds, others etc. eco tourism for our state	Waste of a lot of money to keep it up	NO	Do the right thing get rid of the damn. It is the best thing in the long run
10/19/2021 6:25	Sarasota		No	No									
10/19/2021 6:48	St Johns		No	Yes	1 time	2-5 times			Removal of dam	Restoring river, springs and natural ecosystem	Continued blockage of river preventing manatees to navigate waters for food and flooding of springs	Not funding dam for ongoing repairs and steadily decreasing holding ability until full restoration of river	It's time.
10/19/2021 7:01	Outside of state / other	CT	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	
10/19/2021 7:14	Hillsborough		No	No					Eliminate dam and lock to allow for natural flow of river to pre dam amounts.	Many environmental organizations oppose the continued operation of the dam. It serves no purpose, is expensive to maintain and should be eliminated completely.	Further environmental damage.	Possibly a partial elimination of the dam that would allow the natural flow of the river and significant reduction of the Rodman Reservoir.	I feel the dam should have been destroyed years ago...the positive environmental impact on the surrounding area is something the State of Florida could be proud of if removed.
10/19/2021 7:21	Outside of state / other	Oakland, CA	No	No					The removal of Rodman/Kirkpatrick Dam and opening up the Great Florida Riverway.	Restoring the Great Florida Riverway by breaching Rodman/Kirkpatrick Dam will re-establish access to essential habitat for manatees, bring back migratory fish, connect three river ecosystems, historic Silver Springs, and restore a lost riverway for anglers and paddlers from Ocklawaha's Harris Chain of Lakes to the Atlantic.	Extinction of manatees.	No-there are only two choices: a dam or no dam.	
10/19/2021 7:23	Marion		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Preserve it.	Just the love that all the fisherman and wildlife enthusiasts have for the area.	From my understanding it would turn the Rodman Reservoir into a muddy swamp land, and kill off the fish and obstruct other wildlife who have made that area their home.		
10/19/2021 7:30	Duval		No	Yes	1 time	1 time	2-5 times	Wildlife viewing	Complete dam and lock removal and river restoration. Including removal of the partial structures at Eureka.	The dam does not serve the purpose it was originally intended. The barge canal project was cancelled because of it's environmental impact. The river should be returned to its natural state.	Continued impact on species that historically used the river. Loss of potential recreational opportunities by uncovering springs and restoring one of central Florida's last wild places.	Partial removal of the control structure at the old river channel without fully decommissioning the dam/lock.	
10/19/2021 7:32	Outside of state / other	Ohio	No	No					restore the river, breech the dam.	manatees are already not doing well we need to help them as much as we can.	manatees going from endangered to extinct.	no	no
10/19/2021 7:34	Duval		No	No					Restore the river and let it flow naturally	Research supports this as a cost-effective, natural solution to improve our river water quality.	Water quality and wildlife impacts	Open to creative ideas	Thank you!
10/19/2021 7:42	Hernando		No	No					To see the river restored and for wildlife and fishes to return to the area	Dam is not necessary any more	Loss of habitat for endangered wildlife	Let more water through a smaller structure	
10/19/2021 7:44	Jackson		No	No					Protect for manatees				
10/19/2021 7:46	Pinellas		No	Yes			2-5 times	Fishing Canoeing / kayaking	dam removed ant river restored to what is used to be!	we fished there in kayaks several times	it will get worse	no	
10/19/2021 8:06	Sarasota		No	No					environment impact is necessary to better understand the effects both positive and negative	more data is needed to make an informed decision	not knowing the negative outcomes before it happens	need more data	
10/19/2021 8:14	Levy		No	Yes			2-5 times		The dam should be removed	I am a professional aquatic ecologist who has worked on a number of successful river restoration projects with dam removals.	Lost opportunity for river restoration, floodplain forest habitat restoration.	Open the dam completely, leave it open.	Migratory native fishes, manatees, water birds and other wildlife would benefit from dam removal and river restoration. There are plenty of other places to go bass fishing in Florida.
10/19/2021 8:17	Clay		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing	Save it	Born and raised fishing Rodman Family tradition	Would be a sad day,	All	
10/19/2021 8:22	Duval		No	No					Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam to reunite the natural connection of Silver Springs, the Ocklawaha and the St. Johns River.	The science supports restoration. Studies by federal and state agencies have clearly demonstrated that restoration of a free-flowing, connected system is cost-effective and will provide significant ecological benefits to the St. Johns, Ocklawaha and Silver Rivers as well as Silver Springs. More information to consider: Three rivers, Ocklawaha, Silver and St. Johns, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish migration patterns and essential manatee habitat are reestablished 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of forested floodplain wetlands within the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs	We miss a historic opportunity to stop the ongoing ecological degradation caused by the dam and finally reunite the natural flow of these rivers. Breaching the dam would restore the natural flow of 150 mgd of fresh water, improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. A free-flowing Ocklawaha will reestablish 15,000 acres of forested wetlands and fortify downstream submerged grasses from Welaka to Jacksonville in the St. Johns River that are critical to river health and fish habitat. More information to consider: We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs, and invasive fish like the Blue Tilapia increase. Water quality declines, further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam and restoring the Ocklawaha are 50+ years overdue. Dam safety issues and improved water quality, wildlife habitat, and recreational opportunities can't be ignored or delayed any longer.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This exciting restoration will improve water quality and flow by generating an additional 150 million+ gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
10/19/2021 8:26	Outside of state / other	Stillwater MN	No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Restore habitat	Both habitat use for migratory fish, other animals and recreational use for humans.	Habitat and natural loss.	Na	Na
10/19/2021 8:33	Marion		No	Yes	1 time	2-5 times	More than 5 times		I would like to see the dam and reservoir stay as they are.	Absolutely a great fishery and brings in money to the area and state from other counties and other states by those fishing, fishing tournaments, and people camping.	A great fishery would be destroyed.	No.	
10/19/2021 8:40	Brevard		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The huge decrease in wild manatees in Florida and pollution in our waterways in Brevard	wild Manatees would become extinct	Increase the amount of manatee havens in clean water with enough sea grass for them to eat	
10/19/2021 8:42	Marion		No	Yes	2-5 times			Canoeing / kayaking	Remove th abomination	Nature	Continued destruction of the watershed	No	Return the area to it's natural state
10/19/2021 8:44	Marion		No	No					The breaching of the dam and lock, and the restoration of the natural flow of the Oklawaha River.	The fact that the dam is past its life expectancy, and was built only as a part of the Cross-Florida Barge Canal project.	The continued need for periodic Rodman Pool drawdowns, and the continuation of silt/muck deposition in that area.	No	
10/19/2021 8:44	Outside of state / other	Holland Charter Township, Michigan	No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	
10/19/2021 9:01	Outside of state / other		No	Yes			1 time	Fishing	I would like to see it preserved as it is.	My visit there and information from people who know the area well. It is thriving and supports lots of wildlife.	The loss of wildlife. Particularly manatees	No	
10/19/2021 9:03	Outside of state / other	Jesup, GA	No	Yes			1 time	Fishing	Leave it just like it is.	It's quite a treasure right now. I would hate to see it changed.	Loss of beauty and recreation	No	
10/19/2021 9:05	Outside of state / other	07830	No	No					I'm calling for the removal of Rodman/Kirkpatrick Dam and opening up the Great Florida Riverway.	Restoring the Great Florida Riverway by breaching this dam will re-establish access to essential habitat for manatees, bring back migratory fish, connect three river ecosystems, historic Silver Springs, and restore a lost riverway for anglers and paddlers from Ocklawaha's Harris Chain of Lakes to the Atlantic.	A lost opportunity to improve that environment and continued degradation of the river	Just remove the dam for the greatest effect.	
10/19/2021 9:11	Pasco		No	Yes		2-5 times	More than 5 times	Fishing Canoeing / kayaking Boating	Restored to natural state Removal of locks	Loss of striped bass fishery Notable degradation of Oklawaha River	Obstructions block free and easy movement of manatees throughout River areas Further degradation of River. A handful of boat salesmen are able to hold sway over facts of science	No	
10/19/2021 9:11	Duval		No	Yes				Wildlife viewing	help the st johns river	flow	death	no	
10/19/2021 9:22	Flagler		No	No									
10/19/2021 9:23	Monroe		No	No						Breached	Habitat loss	No	Do it
10/19/2021 9:27	Outside of state / other	Georgia	No	Yes			1 time	Fishing		I would like to see it left alone.	That the ecosystem would be disrupted.	No	
10/19/2021 9:30	Brevard		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	I have been there. It is beautiful and has lots of wildlife. It is obviously doing well.	Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/19/2021 9:30	Outside of state / other	Michigan 48315	No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/19/2021 9:34	Wakulla		No	No						Removed	The damn destroyed several Springs Downriver so removing the dam will restore the spring		full removal is necessary to restore the original habitat
10/19/2021 9:35	Brevard		No	No					As a lifelong resident of Florida, I would like to see the buried springs restored and the Ocklawaha River system also restored. The Ecosystem services value and thus economic benefits of a restored Ocklawaha are far greater than continued presence of the dam.	The consensus plan https://www.freetheocklawaha.com/216-2/	Continued degradation of Florida's environment, which also means further degradation to Florida's economy and culture.	The Consensus Plan https://www.freetheocklawaha.com/216-2/	Dams are very destructive
10/19/2021 9:36	Orange		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood-damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide unimbibted passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/19/2021 9:36	Alachua		No	No					Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/19/2021 9:38	Duval		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	The Ocklawaha need to be restored to her original state of flow; allowing the desecrated 10,000 acres of flooded forest basin to return as well. Silver Springs needs the wildlife as does the St Johns.	Undam the damn dam.	The chemicals used to treat the growth between draw downs is not sustainable. The Rodman Reservoir is unusable for fishermen as it is clogged and inaccessible from ramps. When will logic prevail?	Restoring the Ocklawaha is the way, everything is in place for this.	
10/19/2021 9:40	Marion		No	No	Yes		1 time		Other: Don't.				
10/19/2021 9:41	Outside of state / other	Nampa, Idaho	No	No					Please remove the dam. It will restore the rivers and springs, provide habitat for wildlife, and help the environment. Besides, the dam is unsafe.	Why spend a lot of money to repair an unsafe dam? The dam does not provide flood control, power, and other major benefits.	Money wasted. Loss of an opportunity to restore the rivers and springs and provide wildlife habitat. Also lost, would be the economic benefits that the restored ecosystem would bring.	Not really. It's an old dam that needs to come down. The benefits of removal are too many to ignore.	
10/19/2021 9:42	Outside of state / other	Baltimore, Maryland , USA	No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	$57 million in potential flood damages avoided to downstream property owners	The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. (characters: 479) SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River. (characters: 514)
10/19/2021 9:42	Lee		No	No					I want it breached or destroyed.	Restoring wild rivers is part of restoring the integrity of the entire ecosystem.	Further siltation and degradation of riparian land combined with increased evaporation of surface water.	No.	The restoration of wild rivers is our best chance at restoring wetlands that will prevent flooding and decrease species extinctions.

10/19/2021 9:43	Putnam		No	Yes		More than 5 times		Canoeing / kayaking Wildlife viewing Other	dam removed and the natural water flow restored	environment would decline with continued use of toxic chemicals to try to control harmful aquatic growth	problems worsening	no	needs to be done ASAP
10/19/2021 9:51	Pinellas		No	Yes			2-5 times	Boating Wildlife viewing	open the dam	The desiccation of the surrounding environment since the dam was built	We would forever loose the natural ebb and flow of the water and natural environment	no	
10/19/2021 9:57	Putnam		No	Yes		More than 5 times		Fishing Canoeing / kayaking Wildlife viewing Other: gas cashing in the area	We would like to see the continued operations supporting the Buckman Lock, Kirkpatrick Dam, Rodman Lake and all of the recreational areas surrounding it. This area is a thriving wildlife habitat, with world-class fishing that helps support a largely rural economy.	This area is one of Putnam County's top tourism assets drawing thousands of visitors each year. This asset delivers much needed profitable tourism dollars for our county. Much of the success of soliciting large-scale nationally televised tournaments is due to the presence of Rodman. Rodman Lake is featured annually as one of the top ten bass fisheries in the State and in the top 100 in the United States.	Tremendous loss of critical income to an already fiscally constrained County. Putnam County is a designated RAO (Rural Areas of Opportunity) - Defined as a rural community that has been adversely affected by extraordinary economic events or natural disasters.	We are unaware of any compromise that could help both sides achieve their desired outcomes. We respectively ask that the fate of Rodman Reservoir be guided by facts and reason, not overwhelming campaigns of misinformation.	I enjoy bring all my family and friends that come to visit and share in the history and beauty that is involved with the area.
10/19/2021 10:01	Outside of state / other	Minnesota	No	No					Removed to restore essential habitat for endangered species	Reversing critical habitat destruction		Stop destruction of our natural resources and ecosystems using all means. We are destroying our beautiful life giving planet	WE DEMAND THAT YOU TAKE A STAND FOR REVERSING THE DAMAGE THAT HAS BEEN DONE!!!!!!!!!!
10/19/2021 10:04	Alachua		No	Yes		2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Tha dam should be removed.	The dam obstructs springs, and migratory species such as manatees and striped bass. The cost of maintaining the dam is also a significant burden of tax payer dollars.	The impact on migratory species and the ecosystem of the Ocklawaha River, as well as the cost of updating the dam as its expected life-expectancy nears its end.	I can't think of anything.	
10/19/2021 10:06	Lee		No	No					The reservoir and dam created environmental destruction and burdensome infrastructure in its wake. The damming of the Ocklawaha River and creation of the Rodman Reservoir has smothered 20 springs, blocked manatee and fish migration, and destroyed thousands of acres of floodplain forest. Although I have never visited the area, I believe that any infrastructure that has a negative effect on the health of our environment should be removed or not be repaired as in the case of The Rodman/Kirkpatrick Dam that blocks the Ocklawaha River. And I am 100% opposed to investing millions of taxpayer dollars in repairing and continuing to operate it.	The damage that has been done to the environment and all the wildlife that has negatively affected by the dam.	The continued damage to the environment	I don't believe that there's another scenario that would accomplish the protection of the environment	
10/19/2021 10:11	Outside of state / other	Kentucky	No	Yes		2-5 times		Fishing Wildlife viewing	Leave it alone	Wildlife	Tourists will not visit. Manatee that it supports. Fishing.	Not that I know	It's an awesome reservoir please leave it like it is.
10/19/2021 10:12	Marion		No	Yes		2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Repair dam and leave it		Damage to the ecosystem and habitat that would irreversible		
10/19/2021 10:15	Duval		No	Yes	1 time	1 time	2-5 times	Wildlife viewing Other: Walking	Tha permanent removal or breaching of the Rodman Reservoir and Kirkpatrick Dam to restore the free flow of the Ocklawaha River renew the connection of Silver Springs, the Ocklawaha and the St. Johns River.	Numerous studies by federal and state agencies have shown that free-flowing springs and rivers provide a healthier environment for plants, fish, animals and humans.	My biggest concern is the water quality in Florida. The water table is dropping putting more demands on all of our fresh water sources. There's more saltwater intrusion, dead fish and aquatic plants, invasive weed blockages, and blue-green algae occurrences. We cannot afford to miss this opportunity at this time. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Dam safety issues and all of the water and environmental safety issues I listed above cannot be ignored any longer.	As a longtime Florida resident and homeowner who cares about Florida's future, I am very concerned about doing all that we can to protect the waterways and water quality. I am asking you to restore the Ocklawaha River by allowing the waters to flow freely over its 200+ mile system of rivers and springs. This restoration will improve water quality and flow by generating an additional 150 million+ gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. In addition, this project would uncover 20 springs submerged by the waters of the dam and it is it is essential to the restoration of Silver Springs, one of the largest artesian springs in the world and a major source of tourism. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River. This project will benefit communities, economies, and ecosystems throughout Florida. Thank you for your consideration.
10/19/2021 10:32	Pinellas		No	Yes		1 time		Wildlife viewing					
10/19/2021 10:35	Pinellas		No	Yes			More than 5 times	Other	I would love to see it completely removed.	My grandparents owned land near where the dam was, that forest has since been destroyed by the flood from the dam. Before I die, I would love to see it restored and back to its natural state.	Environmental disaster-it's already happening.	Just remove the dam.	
10/19/2021 10:35	Seminole		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	100s of manatees gain essential warm water winter springs habitat	Hundreds of manatees lose the opportunity to access essential warm water winter habitat.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	
10/19/2021 10:36	Marion		No	Yes		2-5 times		Other: viewing and crying	remove the dam restore the river	The environment, the river wants and needs to flow, the manatees want to survive	That Silver Springs will never become the haven for the fish and aquatic creatures that it was and still needs to be	no	
10/19/2021 10:37	Outside of state / other	Harvey, Louisiana	No	Yes		1 time		Wildlife viewing	Remove the dam & let Nature restore its most natural condition.	I'm not Donald Trump or the pseudo-governor of Florida.	The maximum environmental benefit would not be achieved.	Florida voting Democrat.	You know what to do. Stop wasting time.
10/19/2021 10:42	Marion		No	Yes	2-5 times			Fishing Other	Keep it the same.	I live on the lake	Mismanagement of shoreline properties and access.	Check again if conditions change.	I think this would be a disaster for homeowners here as their property values would fall and giving shoreland access could make the area more susceptible to crime and destruction of property. This is just a pending disaster for the wildlife in the area and especially the manatees.
10/19/2021 10:50	Marion		No	Yes	More than 5 times			Other: I ride my ATV starting at the Rodman Trailhead	Remove the dam. Expose the Springs.	I just believe like many do, that the dam serves no purpose. Afterall, if a drawdown needs to be conducted every four years to rid the waters of bacterial waste. that in itself says enough.	Generations missing out on the beautiful hidden springs: Depleting eelgrass and other vegetation due to the growing number of manatees in overpopulated areas.		
10/19/2021 10:51	Outside of state / other	Louisville Kentucky	No	Yes	1 time	2-5 times	More than 5 times	Fishing Boating Wildlife viewing	I have been visiting (hotel) the area for over a decade and one of the highlights is our trips to Rodman (fishing for me/scenery wildlife for my wife). Watching the world wake up at daybreak is truly spectacular! I hope that a compromise can be made that allows this reservoir to thrive for years to come.	The area is Alive with birds , fish , trees and even manatees. I am certainly not a biologist but how would they survive without the dam creating the environment that has evolved since it was built?	Loss of a diverse and thriving habitat	I am not sure	Thanks for the opportunity to have a voice
10/19/2021 10:57	Marion		No	Yes			2-5 times	Fishing Fishing (shoreline/structure) Wildlife viewing	Leave it alone, it will never be returned to its natural flow	Common sense	None	No	
10/19/2021 10:57	Clay		No	No					Dam removed and riverine system reestablished	species survival	Extirpation of native species dependent upon river habitat	No	
10/19/2021 11:00	Marion		No	No					Please remove it.	As a long-time resident of Florida, I have watched this natural wonder of this state die. We must do something to breathe life back into it before it is too late. The environmental and wildlife experts are in substantial and significant agreement that the dam needs to go.	would see this as another nail in the coffin of the environment.	None that have come to my attention.	From a cost/benefit perspective, the dam removal is a great investment of taxpayer dollars. It will immeasurably help the natural environment at relatively low cost. I cannot think of any investment of taxpayer money with a better return to the citizenry of this state.
10/19/2021 11:06	Outside of state / other	Cologne, Germany	No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	Historic fish and manatees return as breach opens creating a free-flowing river and 100s of manatees gain essential warm water winter springs habitat	Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Nature is the most important value in our lives. Please restore as natural as possible. Manmade dams have to be removed asap. If nature is dying, mankind is following suite.
10/19/2021 11:11	Outside of state / other		No	No					Manatees need protecting!	Updates from many environmental groups

10/19/2021 11:12	Outside of state / other	WI	No	No					Just protect the wildlife, including the manatees. Please!	Just protect the wildlife, including the manatees. Please!	Devastation for manatees	N/A	
10/19/2021 11:12	Miami-Dade		No	No									
10/19/2021 11:12	Outside of state / other	chicago	No	Yes	2-5 times		2-5 times	Canoeing / kayaking Wildlife viewing	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	Loss of wildlife habitat, loss of tourism, loss of nature	no	
10/19/2021 11:14	Outside of state / other	Northport, AL	No	No					We have entered a time when the ecological changes resulting from damming rivers and streams can generally be categorized as large. In the instance that a dam can be removed without adverse effect to property and safety, it is beneficial to carefully consider removal. In the case of Kirkpatrick dam, it appears that the benefits to the local economy, water quality, and ecology are positive. So, I would like to see the Ocklawaha River restored to a free flowing river.	The Ocklawaha, Silver, and St. Johns Rivers, 50 springs, 20 lost springs, and Silver Springs ecosystem would be restored. Hundreds of manatees would return to warm winter habitat. 15,000+ acres of the Florida Wildlife Corridor would benefit. Plus millions in dam repairs could be avoided, and millions in potential flood damages could be avoided.	We miss a great opportunity to do restore the Ocklawaha River to free flow. State and federal funds are available, and public interest is high. The Kirkpatrick dam is unsafe.	Given the availability of funds and the unsafe condition of the dam, I think that removal or permanent breeching of the dam make the most sense.	Generally we are at a point in time that all dams that can be removed, should be removed. The damage to ecosystems was unforeseen, so we need to restore as many of these ecosystems as possible. The situation of the Orca and the salmon in the Pacific Northwest is a perfect example of this problem.
10/19/2021 11:15	Outside of state / other	PA	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.

10/19/2021 11:17	Outside of state / other	Scottsdale,AZ	No	No					Have it removed	It would help restore the needed manatee and other wildlife sanctuaries.	The harm to wildlife and flooding dangers. Plus its upkeep continues to be a drain on financial resources better spent on things such as roads,and education		
10/19/2021 11:18	Columbia		No	Yes			1 time	Other: I don't use it all, but I would be thrilled to kayak on the Ocklawaha if the dam comes down.	I would like to see the dam removed and the river be free flowing again. I would like to see an eco-tourism industry arise-canoeing, kayaking, fishing, wildlife tours on the river.	I understand the dam needs expensive repairs and that the lake must also be drawn down every year to maintain water quality. We should not be spending money on these things that would not be necessary if the river were flowing in its natural state. Those in favor of the dam wish to keep it for basic fishing, but the savings from maintaining the dam could be used to help the fishing guides pivot to guide us fishing and touring on the river. It seems logical that allowing the river to resume its natural flow would benefit all the surrounding ecosystems, tributaries and the ST. John's as well.	The massive $$ that will need to be spent bringing the dam up to standards, and that the water quality in the St. John's River system will continue to deteriorate.	The dam is either there or it isn't. I'm not sure how there could be a partial scenario?	I think now is the time to remove the dam. You have ecological and financial reasons to remove it at this point in time.
10/19/2021 11:18	Marion		No	Yes	1 time	2-5 times	More than 5 times	Fishing	Keep as is, don't mess with a good thing.	Large m Mouth bass.			

10/19/2021 11:19	Outside of state / other	California	No	No				We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	- Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. - Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.

10/19/2021 11:22	Outside of state / other	Fleetwood, PA	No	No				I would like to see the Ocklawaha River restored by breaching the Kirkpatrick Dam.	By restoring the Ocklawaha River, it will provide an essential warm water winter habitat for hundreds of manatees. This habitat will have a great impact on the manatee habitat restoration project in the state. This restoration will also benefit species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	The death of hundred of manatees and the possible extinction of the manatees.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Please protect the manatees for our children and for all the children to come. These gentle mammals deserve to be protected and be provided with a warm safe place to live during the winter months. By restoring the Ocklawaha River, you not only help and protect the manatees, but other Florida wildlife that need a place to live. They are losing their habitats due to human encroachment every day. It is our job to protect these beautiful animals. Thank you for listening to me and considering my hopes and dreams.
10/19/2021 11:22	Outside of state / other	New York	No	No				Restoration of the Ocklawaha River by broaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat 100-mile St. Johns River Estuary from Welaka to Palatka to jacksonville is healthier 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers $4-14 Million in dam repairs saved on a dam past its life expectancy Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. $57 million in potential flood damages avoided to downstream property owners	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. A storm event triggers a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. (characters: 478) This exciting restoration will improve water quality and flow by generating an additional 150 millions gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefiting water quality through enhanced biofiltration. Thank you for your consideration. (characters: 536)
10/19/2021 11:23	Outside of state / other	MICH	No	Yes	1 time		Other- HIKING	KEEP IN NATURAL STATE - DO NOT DESTROY ENVIRONMENT	ANIMALS DO NOT DESTROY THEIR ENVIRONMENT - ONLY MANKIND DOES	HA, DESTROYERS OF NATURE	KEEP AREA IN A NATURAL STATE	
10/19/2021 11:23	Seminole		No	No				Remove the dam and restore the Ocklawaha river.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns rivers. The lower Ocklawaha and St. Johns rivers will receive 150 + million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	When the dam remains, Putnam county and Silver Springs will lose out on $47 million in economic benefits over 10 years: restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	
10/19/2021 11:24	Outside of state / other	Kansas City, MO	No	No				Restore the Ocklawaha River by breaching the Kirkpatrick Dam	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project and will provide essential warm water winter habitat for hundreds of manatees. Also 15,000 + acres of the Florida Wildlife corridor will be restored, benefitting other wildlife species.	The death of many manatees because of lack of warm water winter habitat.	No. The breaching of the dam is way overdue.	None at this time.
10/19/2021 11:24	Putnam		No	Yes			1 time	Canoeing / kayaking Wildlife viewing Other Dismantled	The desire for a free flowing Oklawaha River	Costs of upkeep for an unnecessary dam	Totally unnecessary dam	No
10/19/2021 11:25	Alachua		No	No				I have followed this story for years and it seems that the dam only benefits the fisherfolk but not the native environment. I would like to see the river free flowing once again.	environmental considerations	The lack of follow-through on a process that was started years ago.	I am not sure whether there is at this point. Perhaps a smaller lake could be created alongside the river to catch any overflow but that would still impede the natural flow.	
10/19/2021 11:26	Seminole		No	Yes	1 time		Boating Wildlife viewing	Dismantle Dam. Free river.	Statistics about return of wildlife. Dam unnecessary per many opinions.	Status Quo.	No

Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future and keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	
10/19/2021 11:35	Alachua		No	Yes	1 time	1 time	More than 5 times	Fishing Fishing (shoreline/structure) Boating	From the articles that I have read about manatees, springs, and the natural flow of the river and compared this to the information that I have gathered from fishing they do not match. Firstly the pattern of the manatees has been changed since the dam was constructed and therefore the manatees would have found other options for warm waters in the winter. Secondly the springs that are on the main lake portion of the the reservoir, (the part of the lake that is east of the Orange Spring boat ramp) those few springs are very small and while they do provide water to the lake there are not going to have the type attraction that Gilchrist Blue Springs has. These are very small springs that go unnoticed to most of the people that visit Rodman Reservoir. They do provide warmer water in the colder months for fish and other aquatic wild life to take refuge on to stay warm. This provides good fishing for those who do fish there in the colder months of the year. Lastly, the natural flow of the river is still flowing even though it has been "flooded over."Rivers will keep their natural path of flow unless the river channel it self is changed or damaged. This is proved to be true every 3-5 years when the lake is drawn down and you can clearly still see that the flow of the Oklawaha river going through the souther side of the main pool of the lake. While some may say the the river needs to be restored to its natural flow path. they are wrong because it has always been there.	I wish for the dam to stay and nothing to change from where the current state of the water is.	My biggest concern is that if the dam is removed and the water is let go, the ones who wanted it gone will regret their decision and realize that the things they wanted from their outcome will not be practical for many many years later when nature will have to reconnect the second scar that will be made to that area. Their wants are possible but not for immediate use and it will not be an immediate fix to the massive problems that releasing the water will bring.	No.	None.
10/19/2021 11:37	Outside of state / other		No	No				Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	First, the Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Secondly, restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to jacksonville will be healthier. Lastly, the dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the ecosystem and are severely impacted by invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/19/2021 11:45	Outside of state / other	Oregon	No	No				Sustaining conservation and protection	We must protect our Earth so she is thriving for generations to come.	Another part of our Earth dies.		
10/19/2021 11:46	Pinellas		No	Yes		1 time	2-5 times	Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No. Breaching the dam is 50 years overdue. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me and will greatly benefit Florida's people, environment and wildlife.
10/19/2021 11:48	Lake		No	No					Please protect and conserve our waterways, including all of the animals who rely on it.	We are stewards of God's Earth and its creatures.	It is our obligation to protect our environment and its inhabitants.	We must take every action to protect our home, now and in the future!	
10/19/2021 11:49	Brevard		No	No						While I'm aware that this year's manatee crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. Over 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation.		No.	
10/19/2021 11:49	Clay		No	Yes		2-5 times		Fishing	Keep it as is	Economic	Loss of an asset		
10/19/2021 11:51	Outside of state / other	Decatur, GA	No	No					Complete restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to water quality and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored including 20 lost springs. Historic fish and manatees return as breach opens creating a free-flowing river and they gain essential warm water winter springs habitat.	Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. Water quality declines further paving invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	No, breech the damn now because improvements to water quality and the health of wildlife cannot wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. This exciting restoration will improve water quality and flow by generating an additional 150 million+ gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today.
10/19/2021 11:51	Okeechobee		No	Yes		1 time		Canoeing / kayaking Wildlife viewing	Please restore the Ocklawaha River by breaching the Rodman-Kirkpatrick Dam, it's essential for wildlife which is already at-risk.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 300-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide unimbibed passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and are are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 300-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	Well, restrictions on feeding manatee is now being considered, But people's support, especialy children, is highly varying.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/19/2021 11:51	Brevard		No	No					The demolition of the Kirkpatrick Dam. This has worked in the Maryland area near Baltimore.	Manatee habitats are restored. Fish movement is extended upriver, thus opening a food door to black bear and other mammals.	The manatee is a Florida Treasure we have been granted by God to care for. Let's do just that.		
10/19/2021 11:51	Outside of state / other	Nashville TN	No	No					restore the river flow by getting rid of the dam	overwhelming benefits to numerous wildlife species	the depriviation of critical warm water habitat for manatees and other associated species would undermine populations and their potential for survival	Nope. The dam needs to go.	Restoring the interconnected flow among the streams and springs of this river system is vital to the health of the ecosystems and all species, including humans and their economy, along the Great Florida Riverway. I hope to visit the restored system someday!
10/19/2021 11:51	Outside of state / other	Pennsylvania	No	No					Protecting the natural environment.	Dams are harmful to nature	Environmental costs again.	none	
10/19/2021 11:52	Leon		No	Yes		1 time		Canoeing / kayaking Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Continued destruction of habitat of vulnerable and irreplaceable wildlife and vegetation.	No	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. 10/19/2021 12:02	Miami-Dade		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer	Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor. In esaence we lose species that are as much a part of Florida as us who were born and raised here.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	
10/19/2021 12:03	Putnam		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing	Leave it alone!	Great fishing	Best fishing days will be over.		
10/19/2021 12:03	Outside of state / other	Henderson KY 42420	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer. Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	Manatees are dying of starvation due to loss of habitat.	NO	In many other parts of the country, habitat is being improved by removing obsolete unneeded dams, with good results. The benefits of this process are clear.
10/19/2021 12:04	Outside of state / other	CT	No	Yes			1 time	Wildlife viewing Other	More conservation measures and greater enforcement of animal protection. Especially motor boats.	increase death rate of wildlife and decrease in re-population.	Extinction	A gradual increase in protected areas.	Boater and fishing habits that break the law and threaten wildlife must have stiffer enforcement and punishment.
10/19/2021 12:05	Alachua		No	Yes			2-5 times	Other: Visiting springs during draw-down by boat	Remove the Kirkpatrick Dam and restore the Oklawaha River.	Breaching the Rodmn/Kirkpatrick Dam would restore 20 drowned springs, making it the most beneficial and cost-effective springs protection project in Florida to date. Breaching the dam would aid migratory fish, improving fish populations in the Silver River and provide more warm water habitat to manatees, which are currently dying at an alarming rate. The ecotourism/economic benefits of restoring these ecosystems would be huge, far beyond those of keeping the dam/reservoir.	The continued decline of the lower St. Johns, Ocklawaha, and Silver Rivers, and loss of the 20 springs of the Ocklawaha.	No. The dam should have been removed 50 years ago. The second best time to do it is now.	Removing the dam could become a great example project, demonstrating the benefits of dam removal and river restoration.
10/19/2021 12:05	Outside of state / other	Palos Verdes Estates, CA	No	No					It's become apparent that dams are a structure that harms the environment and biodiversity. On the West Coast, dams are being dismantled in order to allow the travel of salmon as it's been shown how much harm that dams have done to the species. Electricity is no longer dependent upon hydropower. But dams also impede the water and sediment that are essential to the flow of rivers to the ocean. Estuaries, the cradle of oceanic species, depend upon this water and silt. Manatees have become endangered because of this lack of flow.	As we enter further and further into the depths of a world harmed by climate change, we need biodiversity to survive. Every species lost is lost forever and hurts not only other dependent species but human beings. We depend upon other species for survival, too, even if we do not directly interact with them.	You will have helped eradicate an important species.	We are in a time of bold action. The time for half-steps and measures has past is frankly, is not going to cut it anymore. Let the Ocklawaha River flow freely as God intended.	
10/19/2021 12:05	Outside of state / other	Beaufort, SC	No	No					Please restore the Great Florida Riverway while we can still help the wildlife who need this habitat.	The death and starvation of manatees	Extinction of manatees and other wildlife	Being a good steward mandates the ecosystem be restored, so compromise is not possible. You either fail at stewardship or you achieve what is necessary and do the right thing.	
10/19/2021 12:06	Outside of state / other	Kentucky	No	Yes		2-5 times		Fishing Wildlife viewing	I fully support the reservoir staying the same with the dam intact. The lake has provided world class habitat for fish and wildlife. Without the reservoir, the area will revert to a much less used area. Rodman Reservoir is beautiful, supports wildlife and should remain intact.	The amount of trophy fish, habitat for birds and other wildlife	Hundreds if not thousands of anglers and other sportsmen will lose a valuable resource.	If there is concern about manatee migration, design a better solution at the locks although it sounds like the system works well now.	The Corp of Engineers needs to stop spraying the environment with dangerous herbicide. Although I don't have data, I believe the lack of forage in Rodman and surrounding areas for manatee is a larger problem for their survival than the dam.
10/19/2021 12:07	Clay		No	Yes	1 time	2-5 times	More than 5 times	Wildlife viewing	I would like to see the Dam breached so the Ocklawaha River can flow. In addition to many other benefits, this will renew forest wetland and help native wildlife populations. There should also be economic benefits.	The Ocklawaha, Silver, and St Johns Rivers along with 50 springs would be restored.	The age and safety of the dam is of major concern. We should not miss this perfect opportunity to restore the Ocklawaha River and wildlife habitat.	NO, breaching the dam is already a compromise from total removal of the dam which would be my ideal outcome.	I am old enough to remember trips as a teenager to the Ocklawaha River before the Cross Florida Barge Canal and the Rodman Dam. It will never be the way it was, but breaching this 50 year old useless dam is our only hope of regaining any of the natural habitat and its native occupants.
10/19/2021 12:08	Outside of state / other	Washington state	No	No									My concern is for the manatees and whatever needs to be done to help these gentle creatures and save them from extinction. Manatees are an iconic part of Florida and one of our favorite things to see when we travel there..
10/19/2021 12:09	Pinellas		No	No									
10/19/2021 12:11	Palm Beach		No	No					Help the manatees, whatever that requires.	Please help protect!	Dead manatees.		
10/19/2021 12:11	Outside of state / other	Montana	No	No					One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	Defenders of Wildlife	Continued loss of warm water habitat that manatees need to survive the winter as currently 60% of Florida's manatees depend on power plant outfalls to keep warm and survive the winter, which is an unsustainable and unnatural situation.		Thank you

10/19/2021 12:12	Alachua		No	No					I would like to see the dam removed and natural flow restored to the Ocklawaha River.	We're not getting our money's worth. The dam was created as part of a now-abandoned canal project; we're just dealing with the side effects without getting the intended benefits of the canal. Last I read the dam would take $20M to remove, but costs $1M a year and needs $2M in repairs. There are a few federal programs that might be able to help cover this cost. Florida has a big eco-tourism industry, and removing the dam would open up more of the Ocklawaha to water sports and related businesses (kayak rentals, campgrounds, etc). That would increase tax revenues (and general health outcomes) for a county that could use more businesses. Additionally, the manatee population has been declining in the last few years, and a restored Ocklawaha would provide another warm-water habitat for them to live. This, in turn, would be a bigger eco-tourism draw.	Ongoing ecological damage and maintenance costs of the dam.	If the river can be restored by other means, I'd support that.	
10/19/2021 12:17	Outside of state / other	North Carolina	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. More than 15,000 acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No-Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/19/2021 12:20	Outside of state / other	CA	No	No					to restore the Great Florida Riverway while we can still help the wildlife who need this habitat.	There are no jobs on a dead planet. Our biodiversity must be protected for the long term sake of the planet	Destruction of natural habitat and destruction of important species	No	Even while manatees are still struggling with starvation from seagrass loss, the greatest long-term threat to these animals is the loss of warm water habitat that manatees need to survive the winter. Right now, 60% of Florida's manatees depend on power plant outfalls to keep warm and survive the winter - an unsustainable and unnatural situation. Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond.
10/19/2021 12:21	Marion		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing Other: Manatee viewing&	We would like to see it stay the same. The water is so clean. The fish you catch catch can be eaten by everyone, no restrictions. The weeds can be controlled by drawdowns, no chemicals. We have been fishing there for over 50 years as well as our large family. We love to see the many families who fish at the dam site. Many times there are so many they move to shoreline and set up umbrellas to fish from. The fish from the reservoir feed many people, some who need help. So many people are moving into Florida we need to preserve this great body of clean water for use by the surrounding counties.	Clean water available to the residents and visitors of Florida.	Loss of good source of drinkable water. Loss of great source of healthy food for everyone, especially the less fortunate who depend on this.	I don't understand why anyone would want to prevent people from fishing and boating on this body of water. Having a reservoir allows the fish to replenish and be available as food source for people and for birds and animals. If turning the reservoir into a State Park would keep the reservoir, that would be an option.	We are seeing many manatees all over the reservoir for the past several years. Mullet, both large and small, are using the reservoir. I think they are heading to the springs to stay warmer in winter and using the reservoir as a food source.
10/19/2021 12:23	Columbia		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing	Stay just as it is	This is one of the most diverse healthiest ecosystems I have ever been to	Wildlife suffering	Debris cleared from channel	This reservoir needs to be left just as it is with the channels cleared a little better for navigation purposes
10/19/2021 12:24	Outside of state / other		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	The Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/19/2021 12:27	Putnam		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing	leave it alone 2 wrongs dont make a rite!	The river will never be the way it was.	One huge weed patch. nothing will grow if its drained thats how deserts are formed	turn rodman into a national park	
10/19/2021 12:29	Outside of state / other		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer. 10/19/2021 12:35	St Johns		No	No					I would like that dam to be breached. Creating a free-flowing Ocklawaha River will greatly improve our state's water quality, among other benefits.	More than 150 million gallons a day of natural water will be restored to the St Johns River, the beautiful river that I live close to.	We would miss this window of opportunity to use available State and Federal funds and address critical environmental needs. Breaching the dam will improve wildlife habitat, water filtration, a cooling canopy, and natural flood protection. Leaving it in place means more invasive species and algae events. Besides we taxpayers are spending millions of dollars every year to repair this 50 year old structure on a cross-Florida canal that was never finished.	No. The world is losing habitat and species every year. Wildlife cannot wait.	I care about Florida's environment. I ask you to breach the Rodman Dam to restore the Ocklawaha River. It is the heart of the Great Florida Riverway, more than 200 miles of rivers and springs that flow into the Lower St Johns estuary at the Atlantic Ocean. This is THE most beneficial and cost-effective springs project in Florida today. It will uncover 20 springs that have been submerged. It will restore Silver Springs, one of the largest artesian springs in the world. And the additional millions of gallons of natural water flow will help restore the lower St Johns River.
10/19/2021 12:37	Sarasota		No	No					Dam be removed	Manatee protection (let nature free)	manatee protection - they are getting trapped in the reservoir or worse in the lock system	no	
10/19/2021 12:37	Highlands		No	Yes	1 time		Fishing (shoreline/structure) Boating Wildlife viewing		We need to restore the Ocklawaha River, breaching the Kirkpatrick Dam.	The Ocklawaha River is the most impactful habitat for the manatee restoration project in my state and it will give the manatee warm water winter habitat for many, hundreds even.	If the Oklawaha is dammed, would keep about 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact our species , Florida panther, Florida black bears, bobcats and white-tailed deer that can't easily travel through this vital section of the Florida Wildlife Corridor.	NO, Breaching the dam is overdue by 50 years and wildlife and water quality can't wait any longer. It is imperative.	As one of many stakeholders who care about Florida's environment I ask you to restore the Ocklawaha River, the very heart of the Great Florida Riverway. This will ensure a bright future for our state's people and wildlife, especially the manatees. This restoration will also improve the water quality and flor, support coastal resiliency and strengthen a vital wildlife corridor.
10/19/2021 12:38	Putnam		No	Yes	2-5 times	More than 5 times	Fishing Canoeing / kayaking		Remove the Dam & restore the river	There are 20 drowned springs that would be restored by resorting the river. Striped bass populations will restore to original numbers. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Help the falling manatee population	Continued decline of fish & manatee populations & the ongoing cost to maintain & operate the dam & lock systems could be better used by the state.	No. The dam must be removed.	Please restore the springs to their natural beauty. Also, help the manatee population.
10/19/2021 12:44	Outside of state / other	Harrisville, RI	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Flo
10/19/2021 12:45	Osceola		No	No					I would like to see the Dam removed and natural water flow restored.	The increase in diversity of native flora and fauna which will occur if the dam is removed and natural water flow restored.	Continued decline of native flora and fauna populations.	Is there a way to restore natural water flow without removing the dam?	Although I understand those who rely economically on the dam may be negatively impacted in the short term if it is removed, in the long run removing the dam is the most sustainable choice both environmentally and economically.
10/19/2021 12:46	Alachua		No	No					Restoration of the river by breaching the Rodman/Kirkpatrick dam.	Restoration of the ecosystem and wildlife.	Possible decline in water quality, unnecessary expense in repairing the dam. loss of funds now available.	A drawdown could lessen the risk of property damage in interim.	
10/19/2021 12:46	Orange		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	Breach it!	Restoration of the natural flow and habitats, especially the spring environments.	It's a waste of money not too. And there's a perfect window right now - the funding is there as is public interest.	No, 50 years overdue tbh.	Manatees have enough to deal with without this ridiculous mess. Breach the dam! Restore the flow!

10/19/2021 12:50	Seminole		No	Yes		2-5 times		Wildlife viewing Other: Part of my husband and my outings every Wednesday to drive on a road we haven't been on yet in Florida	Removed = Breached	All around Environment for Natural Florida and preserving it for the Birds and Wildlife Also to free the Springs that are under a body of Water now.	Another piece of the most beautiful state of Florida has succumb to foolish overtake of it's natural state of being. I would like to say I was part of the effort that let the Ocklawaha Flow Again! It's exciting !	No. Full removal of the Dam is the only thing that would be acceptable to me.	I believe Ron DeSantis will do the right thing. I have great confidence that this effort will result in freeing the River & Springs.
10/19/2021 12:52	Outside of state / other	SOUTH CAROLINA	No	No					BREACH THE DAM THAT IS HOLDING BACK THE OCKLAWAHA RIVER TO INCREASE THE SURVIVAL OF OUR MANATEES ALLOWING THEM ACCESS TO ADDITIONAL WARM WATER TO SURVIVE THE WINTER.	EDUCATIONAL INFORMATION ON THE SURVIVAL OF OUR MANATEES	MANATEES BECOMING AN ENDANGERED SPECIES HEADING TOWARDS EXTINCTION	THIS MAY BE TOO EARLY AND TOO HARD FOR SOME PEOPLE TO BELIEVE, BUT WITH EVERY EXTINCTION THAT HAPPENS, WE GET CLOSER TO OUR OWN.	
10/19/2021 12:52	Putnam		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing	Leave it alone!!!!		saltwater intrusion, blue green algae and overall Destruction of a real good ecosystem	No	
10/19/2021 12:54	Outside of state / other	West Chester, PA	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is over 50 years is overdue. Wildlife and water quality cannot wait any longer.	
10/19/2021 12:55	Outside of state / other	Milwaukee, WI	No	No					I believe it is important to restore the flow of waters to the Ocklawaha River and this can only be done by breaching the Kirkpatrick Dam.	This is key towards restoring manatee habitat by providing warm water during the winter for hundreds of manatees. This would also benefit species like the Florida black bear, Florida panther, bald eagles, white-tailed deer, and bobcats.	Keeping this area dammed and flooded certainly impacts many animal species and deprives the manatee of a critically important winter habitat. The long-term effects of not doing this would extend a myriad of negative effects well into the future all of which might be avoided	I have not heard of any scenarios that would not impact wildlife in a negative fashion.	
10/19/2021 12:57	Alachua		No	Yes		2-5 times		Fishing Boating	Remove dam	What it used to look like	It gets worse		
10/19/2021 13:00	Outside of state / other	Champaign, Illinois	No	Yes		1 time		Canoeing / kayaking Wildlife viewing	eliminate the Rodman/Kirkpatrick dam	15,000 acres of Florida wildlife corridor are restored for wildlife habitat	thousands of forestsed acres would not be restored which could have improved wildlife habitat. Also, the marked improvement in water quality and ecosystem quality would not be achieved. What a lost opportunity!	No. It is long overdue to eliminate this unnecessary dam	
10/19/2021 13:06	Hillsborough		No	Yes	2-5 times	2-5 times	2-5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing Other: I enjoy seeing the birds, animals and especially the manatees.	We have enjoyed the reservoir for decades and would like to see it stay the same. We have spent many vacations fishing on the reservoir and at the dam.	The water is not polluted and we can enjoy eating the fish. We love to see the many birds and animals. We even see manatees all over the reservoir.	We would lose our favorite lake to fish. We love the camping in this area. I think pure clean drinking water is important in Florida since so many are moving into our area.	Maybe make it into a State park and have a camp grounds near the dam. Many of us use that area to fish and the local parks to camp. I cannot axe tearing down a wonderful lake that so many Florida citizens enjoy whenever we can.	My family and I have enjoyed this reservoir for over 40 years. We now bring our grandchildren with us. We see bears, deer, manatees, alligators, turtles, and so many different birds. We can fish the dam when we want beside many other families. The picnic and bathrooms are so nice and clean. We live in Hillsborough County and can even make the trio to and from our home in one day. We have introduced many of our Friends who now use Rodman Reservoir.
10/19/2021 13:08	Orange		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing (shoreline/structure)	stop spraying THE WEEDS	Caught bass with open sores , and skinny sometimes both because of chemicals	polluting out water ways	no it needs to stop	
10/19/2021 13:10	Columbia		No	No					The Dam should be torn down	Restoring the natural flow of the Ocklawaha river could conceivably help the St. John's River with its current problems	More degradation of the natural environment in Florida	Not really	
10/19/2021 13:10	Marion		No	Yes	More than 5 times			Fishing Canoeing / kayaking Boating Wildlife viewing	Be removed	Quality of the river	We'll know who's pocket your in	No	
10/19/2021 13:13	Putnam		No	Yes	1 time	2-5 times	2-5 times	Fishing Fishing (shoreline/structure) Boating	Left alone , kept at its natural environment.	Bachelor in science , enjoys nature. Grew up in Florida , here in Putnam. The Rodman is an essential piece of nature that shows the beauty of Putnam. IT we continue to destroy our environment , Putnam will be destroyed. Let's preserve our nature , conserve our ecosystem and keep Putnam beautiful	The disruption of our ecosystem	N/a	
10/19/2021 13:14	Seminole		No	No					I would like to see the restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, biodiversity and wildlife is inflicted throughout the Great Florida Riverway.	There are so many important pieces of information that apply, it is hard to choose one over the other but 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife is high on the list. Breaching the dam and adding back so much acreage to the Florida Wildlife Corridor goes hand in hand with the Florida Wildlife Corridor Act signed into law on June 29, 2021 by Governor Ron DeSantis.	My biggest concern is missing the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical, such as water quality issues, habitat restoration for birds, fish, mammals, amphibians and reptiles as well as macro-and microphytes; plus, the dam is unsafe. With close to 1,000 manatee deaths due to starvation, they need every possible place that has food to forage. Additionally, the people in the area stand to make a better living from a greater scope of visitors visiting a healthy flowing river than from a deteriorating dam that offers only a handful of creational opportunities.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife cannot wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people, and wildlife, and to its biodiversity. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoration will improve water quality and flow by generating an additional 150 million+ gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefiting water quality through enhanced biofiltration. Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River. Breaching the dam could set yet another example of Florida's forward-thinking approach to habitat restoration and providing safe spaces for our wildlife as with the Florida Wildlife Corridor. This truly is an exciting opportunity not to be missed on so many levels. Thank you for your consideration.
10/19/2021 13:15	St Johns		No	Yes		2-5 times		Wildlife viewing	Restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Would restore manatee habitat and provide thousands of acres of the Florida Wildlife Corridor benefitting Florida black bears, panthers, bobcats, bald eagles, and white-tailed deer. We must pull back what we've taken from these beautiful species.	We'll lose the species that are indigenous to Florida which we're so proud of. They are part of our Florida family and we need to protect them.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer! We have pushed it to the limit, as usual. If we don't do something now it may be too late.	It's time for us to stand up for Florida wildlife! This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. It's important for us and the communities it has richly blessed/served. Time for us to give back!
10/19/2021 13:18	Outside of state / other	Illinois	No	No					The state must do what is right to protect all wildlife in the area, especially manatees. You must breach the dam to allow manatees to access more warm water habitat.	The record number of deaths of manatees this year. And that too large of a percentage of warm water for them comes from power plant output, which is not sustainable for the environment. There needs to be a natural way for manatees to get to warm water habitats, and that can happen through breaching the dam.	The extinction of manatees	No- you must restore the Ocklawaha River and breach the damn to allow manatees to have warm water for winter survival.	Please do the right thing for the manatees, other wildlife and the people of this country who want to see manatees in their life. The earth belongs to these creatures as well as to humans. We can not continue activities that lead to extinction and must protect other living beings.
10/19/2021 13:20	Alachua		No	Yes		2-5 times	2-5 times	Other: I don't use them . I just look at them and feel the loss of the river and the springs.	I would like to see the river restored to its natural state.!	I am comparing the river I knew as a child with I see today. I am aware of the negative impacts on the living things in the dam's surroundings.	That this will remain as evidence of our state's lack of commitment to rectifying an environmental tragedy.	No	
10/19/2021 13:24	Outside of state / other	State of Hawaii	No	No					Let the water flow to the wildlife	Love your neighbor as yourself, we are all one big family down here.	Extinction, we will be next...	Use your life to make a difference, to help others--love is mercy and compassion, not abuse of power...	The wildlife was here before we were, they are part of our balance in this world-how we treat them is part of our test in this life.
10/19/2021 13:30	Outside of state / other	Lacey WA USA	No	No					I care -- and the vast majority of Americans care -- about ALL ECOSYSTEMS EVERYWHERE!!!! Everything is interconnected, so EVERYBODY must PROTECT ALL ECOSYSTEMS!!!				I'm a 73-year-old lifelong Christian who cares about God's Beautiful Creation. YOU MUST PROTECT THIS ECOSYSTEM from abuse!!!
10/19/2021 13:31	Volusia		No	Yes			1 time	Fishing Canoeing / kayaking Wildlife viewing	remove the dam	healthier aquatic habitats	poor water quality		
10/19/2021 13:32	Marion		No	Yes	2-5 times	2-5 times	2-5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing Other: We love to camp and fish on the Rodman Reservoir and samp at the parks.^	We want the Rodman Reservoir and Dam to stay as it is. We have enjoyed it for years.	The water is clean for use by the counties that are near it. It does not just flow into the ocean. The Florida population is growing and needs this reservoir. The fish are healthy to eat. The reservoir does not require chemicals to control weeds like most Florida lakes.	Loss of clean potable water for Floridians and visitors. Loss of healthy food source for everyone who fishes the dam and reservoir. Many of the families are the less fortunate who need this to feed themselves.	Maybe turn this area into place where families who are less fortunate can camp and catch fish over weekends. This would be great fun plus eating healthy fish from unpolluted water. Every citizen could enjoy more of what our state has to offer.	When we get to go on reservoir in a boat, we see all kinds of wildlife. We have seen manatees, alligators and lots of birds. We even saw a Florida panther one time at dusk.
10/19/2021 13:41	Manatee		No	No					Remove the damn to restore natural flow	The springs need to be restored and manatees need to gain access. Remove the man-made blockage	That more manatees will die. And our springs will not be restored to their natural state	No. Remove the dam	Remove the dam so that manatees may regain access to warm winter springs and also allow citizens to enjoy the springs in their natural state. This will also save taxpayers money by eliminating this costly dam that serves no good purpose
10/19/2021 13:42	Lake		No	Yes			1 time	Canoeing / kayaking					
10/19/2021 13:43	Duval		No	No					Restoration and preservation of the river and surrounding areas. Restore to "Old Florida".	n/a	The affects on the sealife and manatees.		
10/19/2021 13:47	Outside of state / other	Greensboro, North Carolina	No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	I would like to see the Kirkpatrick Dam breached and the Ocklawaha River restored.	Restoring the Ocklawaha River will provide access to essential warm water winter habitat for hundreds of manatees and will also restore critical acreage to the Florida Wildlife Corridor.	While the Ocklawaha is dammed up, manatees are blocked from their warm water winter habitat and 7,500 acres of forested woodlands that form a critical part of the Florida Wildlife Corridor remain flooded by the Rodman Reservoir	No.	I am a former resident of Florida and I frequently visit family members and friends that still live there. I love the state but, unfortunately, there's been a historic disregard for Florida's most valuable asset - its unique and beautiful natural environment. It's past time to reverse that. Restoring the Ocklawaha River is a good step in that direction.
10/19/2021 13:49	Alachua		No	Yes		1 time	2-5 times	Canoeing / kayaking Boating	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam	Historic fish and manatees return as breach opens creating a free-flowing river. 20 lost springs and Silver Springs ecosystem are restored.	Historic fish populations are not regained in the Ocklawaha River and Silver Springs. 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	Temporarily drawing the reservoir down to 11 or 12 ft. MSL as a first step until full restoration occurs. However, this should be only an interim step because a drawdown alone does not provide sufficient environmental benefits for fish, manatees, and Ocklawaha and Silver River springs	District studies (Hendrickson 2016) have indicated that full restoration will not have a major adverse impact on water quality of the downstream St. Johns River.
10/19/2021 13:49	Outside of state / other	Minnesota	No	No					That manatees are protected. I visit them in winter				I think it is imperative at this time in history, that waterways are protected for the water, the habitats, and the wildlife.
10/19/2021 13:49	Outside of state / other	Pennsylvania	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam. Dams have always been a detriment to wildlife. Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer. What would be your biggest concern if your desired outcome is not achieved? Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor. Is there any scenario short of fully achieving your desired outcome you could support? No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer. Other comments: As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Extinction of manatees	No	
10/19/2021 13:52	Outside of state / other	MA-Massachusetts	No	No					restore manatee habitat				
10/19/2021 13:53	Alachua		No	No					The dam should be *removed* to allow the Ocklawaha River to flow as it should.	With population and development soaring, the integrity and ecology of Florida's freshwater springs, streams and rivers are being threatened. To my knowledge, the cost of maintaining the Kirkpatrick Dam far exceeds its economic benefits, while it adds completely unnecessary pressure to a freshwater ecology that is already degrading *rapidly*.	Further degradation of water quality and the ecology that thrives on Florida's freshwater reserves.	*NO*. Just *remove* it. History is finally offering Florida a once-in-a-lifetime opportunity to rectify a deeply regrettable mistake (the Kirkpatrick Dam). It would be absolutely insane not to do it. Not to*capture* it.	Florida's freshwater resources are a **NATIONAL* (if not *international*) treasure. Protecting, maintaining and ensuring the ecological integrity of Florida springs and rivers should be our state's TOP environmental AND *fiscal* priority.
10/19/2021 13:58	Duval		No	No					free the St. John's River by removing the Dam	health of St. John's and Silver Springs	the best natural resources in Florida (St. John's and Silver spring) would eventually be destroyed	no, because we need to preserve the health of this major, beautiful river!	
10/19/2021 13:59	Putnam		No	Yes	More than 5 times			Fishing Fishing (shoreline/structure)	Nothing leave it just as it is	My family loves going there to fish	Closing it would be a mistake	Nope	
10/19/2021 13:59	Pinellas		No	Yes		More than 5 times		Canoeing / kayaking Wildlife viewing	Restore the flow!	This dam has destroyed the flow at multiple springs and state manatees desperately need our attention to this matter!	Threatened habitats that are relies upon by keystone species, as well as losing more springs	No! It's 50 years over due..	
10/19/2021 14:04	Marion		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Canoeing / kayaking Boating Hunting Wildlife viewing	It remain a beautiful place to continue to build family memories.	The happiness it brings to residents and visitors.	Damaging the beautiful environment we live in.	No.	
10/19/2021 14:07	Volusia		No	No					More knowledge needed	lack of information on it's value and history .	Another generation with little understanding and irresponsible development of precious natural resourcre		
10/19/2021 14:14	Seminole		No	Yes			1 time	Boating Wildlife viewing	Returned to its natural state by removing the dam	Save the manatees & other species	Manatees & their survival	I am open to suggestions. Manatees are in trouble & need assistance	
10/19/2021 14:15	Alachua		No	Yes			1 time	Other: curiosity					
10/19/2021 14:17	Alachua		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	I would like to see the restoration of the free flow of the Ocklawaha River by removing the dam.	Restoring the natural flow of the river and springs would improve water quality, and improve habitat for fish, manatees and other wildlife. In addition, dam repair expenses would be avoided and recreational use would increase.	The river systems will continue to degrade and my taxes will continue to be wasted on maintaining an unneeded dam.	No, because I don't see any other solutions that would be as effective.	Removing the dam would expand recreational opportunities, improve our water resources, and save tax dollars.
10/19/2021 14:23	Outside of state / other		No	No					Breach the Dam	Dams need to be removed across the country to restore wildlife habitat. In this case, it would restore manatee habitat and the Florida Wildlife Corridor.	The long term survival of manatees would be impacted.	No	
10/19/2021 14:28	Pasco		No	No					Breach the Kirkpatrick Dam and restore the Ocklawaha River to its original flow to offer manatees a warm water habitat to stay during the winter months.	Manatees' deaths in 2021 are already higher than all of the Manatees' deaths in 2020. The need for these precious creatures to have a safe warm water place for their winter habitat is critical to the species survival in Florida's waters.	That the rate of Manatee deaths will continue to climb, endangering the future of these mammals that are so bad beFlorida's image here in the state and internationally.	No. We need to save the manatees in Florida while we still can.	Please help the manatees continue to survive in Florida's waters for generations to come.
10/19/2021 14:28	Sarasota		No	No					TAKE THEM DOWN!!! REMOVE THE MANATEE AMONG OTHER SPECIES, BARRIERS.	The dam blocks manatee access to areas they need.	Manatees will become extinct	No	The Manatees have suffered more this past year than ever before due to humans.
10/19/2021 14:29	Alachua		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Boating Wildlife viewing Other: scientific survey for potential sturgeon spawning habitat - hard clay or pebbly clay or gravel substrate in the river above the dam	I am a retired fishery biologist who led riverine, estuarine, migratory, and marine fish population and life history and restoration research for 50 years, with 25 years on the Suwannee and other Florida rivers. I have led fish studies for private clients, and for university, state and federal agencies. Thus, my perspective is drawn from direct experience in Florida and in the United States over 1,500 dams removed between 1990 and 2018. Almost universally, recovery of key migratory and riverine fish populations has been rapid and dramatic, typically restoring high profile sport fisheries for fishes like Salmonids, Striped Bass, Shad, and Sturgeon - as reported in the Christian Science Monitor (3 Aug 2014) "Setting rivers free: As dams are torn down, nature is quickly recovering". From my experience, I concur with this finding. The Rodman dam and the warm, shallow, weed-filled, manmade reservoir are a barrier to both coastal anadromous fishes (American Shad, River Herring, Striped Bass, Atlantic and Shortnose Sturgeon, American Eel) seeking to spawn in cool, well-oxygenated Ocklawaha River (OR) headwaters, and/or conduct early larval and migratory development in both the river and in the low-salinity waters of the St Johns River (SJR) below the confluence. The reservoir breaks the flow of plankton, nutrients and fish larvae - disrupting the vital connection between the OR and the SJR estuary. The SJR (vs the OR) lacks the hard and gravelly substrate, flow velocity, and high oxygenation that anadromous fishes require for spawning. The dam is similarly a barrier to the downstream migration of Hydrilla-Catfish into the OR and Silver River and Silver Spring, both depleted up to 90% above the dam and in Silver Spring. All of the above fish species are high profile sportfishes, sought by recreational fishermen. Largemouth bass and sunfishes can be angled in almost every river, lake, spring, and creek in Florida. The SJR system, with the OR restored, is the ONLY Florida East Coast river system suitable for spawning at the southern range limit of the anadromous fishes above. A reconnected OR with restoration of large, high profile, high-dollar recreational angling for species like Striped Bass and American Shad (and potentially sturgeons if delisted later). I recommend removal of the dam to restore the fundamental ecology of the OR-SJR ecosystem and promote recovery of economically valuable, high-profile migratory sportfish species.	There is a large body of recent scientific publications & newspaper/online reports documenting the almost immediate and dramatic recovery of important sportfish species following dam removal in the USA. A few key examples: 1.) American Shad returning in mass a tributary of the Delaware River, NJ, blocked by 4 dams since 1700s, removed in stages 2008-2018. - https://statelimpact.npr.org/pennsylvania/2017/08/16/dam-removal-helps-american-shad-return-after-disappearing-for-centuries/. 2) Atlantic Salmon, American Shad & Alewife returned upon full removal of 2 dams on the Penobscot River, ME, giving access to upriver rapids, spawned 3100 acres and 30 miles of spawning habitat. - https://www.fisheries.noaa.gov/insight/successful-fish-passage-efforts-across-nation. 3) Embrey Dam built 1900 removed 2004, Rappahannock River, VA - American Shad & Striped Bass regained access to spawning grounds. Largemouth Bass and Channel Catfish also moved upstream into high quality habitat. - https://riverfriends.org/embrey-dam-before-and-after/. 4) Rogue River, CA/OR, 4 dams built 1900s, removed 2007-2010 - Enabled upstream spawning ground access & improved habitat for Chinook Salmon, Steelhead, Coho Salmon - https://www.fisheries.noaa.gov/insight/successful-fish-passage-efforts-across-nation. 5) Edwards and Halifax dams, Kennebec & Sebasticook rivers, ME, built 1837, removed 1999 & 2008 - Restored access to upper river with immediate return of Atlantic Sturgeon, Alewife, American Shad, River Herring, Rainbow Smelt, Striped Bass and seals that feed on Alewife. Alewife spawning run jumped from 78,000 in 1998 to 5.5 million in 2018 - River Herring jumped up to 10s of billions. Improved water quality with dramatic resurgence in abundance & diversity of aquatic insects, mayflies and stoneflies, prime forage for sportfishes. - https://thenevelator.org/edwards-dam-removal/. 6) Fox River, WI, old low-head dam and locks - lock gates removed early 2000s, lock channel converted to a low angle constructed boulder & gravel substrate rapids, dam breached on lock side to provide attraction flow for Lake Sturgeon. immediately enabled Walleye to ascend to spawning grounds; then Lake Sturgeon. - pers. comm. Dr. Ron Bruch, Director of WI DNR (retired). All post-dam-removal scientific and public reports document return, re-population, and spawning recovery in high-profile sportfishes. Resulting restored sportfish access has seen local economic boom in recreational fisheries.	From a fishery perspective, the OR, Silver River and Silver Springs are seriously depleted in native riverine and migratory anadromous/catadromous fishes, particularly large keystone ecological and sportfish species including American Shad, River Herring, Striped Bass, Atlantic Sturgeon, Shortnose Sturgeon, American Eel. Accordingly, the overall SJR system is similarly depleted due both to historical overfishing over the species' ranges, habitat quality decline, climate change - but most significantly the loss of the only suitable upriver spawning area in the system - the OR. The OR is also seriously depleted in abundance of Channel Catfish and White Catfish, historically the two dominant large resident predator fish species (Howard Odum original data + Florida Springs institute recent fish count surveys). Exotic species, particularly Blue Tilapia, now dominate in Silver Spring, suppressing the largemouth Bass population in the process, but outcompeting for benthic spawning habitat. From my perspective, the optimal outcome would be to remove the dam, enhance passage of native migratory and riverine fish species, reconnect the freshwater OR to the low to mid salinity SJR estuary, restoring the critical mixing zone in terms of oxygenation, nutrient flow, plankton production, and larval fish developmental habitat. This is not just a matter of restoring sportfishing in the OR, but restoring overall SJR ecosystem ecological function. My concern is that we let this opportunity pass for such a critical historic restoration of the ecosystem - with ecological benefits across the scale from plankton to fish larvae, to aquatic insects, to forage fish, to large sportfishes - and with highly probable economic benefits as visitors descend upon the SJR for a unique Florida opportunity to angle large trophy-type fishes such as Striped Bass and American Shad (and potentially the two sturgeon species when sufficiently recovered to be delisted from federal and state protection). Anglers seeking fishing opportunities for these species come from great distances and spend a great deal of money in the process. Leave the dam in place and we are saddled with a silt-filled, weed-congested, low productivity manmade lake with rather mundane fishing opportunities. And, Florida taxpayers are saddled with the expense of maintaining an aging and degraded dam, and of doing a periodic drawdown to kill off weeds and remove muck.	As a fishery biologist, my view is that the optimal action is removal of the dam with accompanying restoration of the overall aquatic ecosystem of the OR and its confluence with the SJR. Holistic restoration would allow for natural repopulation, spawning, and recovery of migratory fishes, facilitate the movements of native riverine fishes, restore the critical river to estuary to ocean connection, enhance larval fish and aquatic insect populations, restore manatee access to Silver Spring, and allow more than 20 now-submerged springs to re-emerge. I see great economic benefits in all regards in terms of sportfishing, increased visitorship, and enhanced ecotourism (springs, manatee watching, sportfishing, boating, kayaking. There is a less-desirable alternative to full dam removal that could be considered - to restore passage for anadromous fishes, riverine fishes, and manatees. But, this would not result in many of the other desirable outcomes just listed, and probably would preclude boat passage through the dam. The alternative would be to permanently open the locks, remove the four 35-ft tall control gates from the dam, leaving the lower fixed 6-ft high concrete sill (Ogee weir) in place, but constructing a long, low-rise, boulder and gravel inclined (less than 3-degree) 'ramp' that would be passable at mean water levels from both sides. An inclined ~130 ft long concrete spillway ramp is already in place downcurrent (URS Corporation Southern, Kirkpatrick Dam and Spillway Condition Assessment, Sept. 2015, Fig. 1-4). An instructive example is the modified dam and lock on the Wolf River, WI, cited in (b) two sections above. This would have to be carefully engineered such that bottom fishes like sturgeons and catfishes would use the inclined ramp (up on one side of the dam sill, down on the other). Such bottomfishes will not pass a fixed concrete sill, even if only a few feet high, and will not ascend a slope of more than ~3 degrees along a constructed fish passage 'ramp' (simulated rapids). Even those species that typically migrate at mid-depth or subsurface, like American Shad and Striped Bass, would benefit - as would numerous other resident river fishes that normally move along the bottom. Manatees passage would be questionable. I do not recommend this alternative action given its limited benefits. Also, the locks would have to be permanently opened, probably reducing water depth in the canal to a level insufficient for boat passage.	
10/19/2021 14:33	Putnam		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Boating	We would like to see the continued operations supporting the Buckman Lock, Kirkpatrick Dam, Rodman Lake and all of the recreational areas surrounding it. This area is a thriving wildlife habitat, with world-class fishing that helps support a largely rural economy.	This area is one of Putnam County's top tourism assets drawing thousands of visitors each year. This asset delivers much needed profitable tourism dollars for our county. Much of the success of soliciting large-scale nationally televised tournaments is due to the presence of Rodman. Rodman Lake is featured annually as one of the top ten bass fisheries in the State and in the top 100 in the United States.	Tremendous loss of critical income to an already fiscally constrained County. Putnam County is a designated RAO (Rural Areas of Opportunity) - Defined as a rural community that has been adversely affected by extraordinary economic events or natural disasters.	We are unaware of any compromise that could help both sides achieve their desired outcomes. We respectively ask that the fate of Rodman Reservoir be guided by facts and reason, not overwhelming campaigns of misinformation.	
10/19/2021 14:33	Alachua		No	Yes			1 time	Wildlife viewing	Remove the Dam and let the river flow	increasing number of manatee deaths	continued degradation of this former outstanding waterway	no	

10/19/2021 14:35	Alachua		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing	to keep it in place. It creates a nice wildlife sanctuary enfoyed by many species of plants and animals. Also great fishing.		Just go there and see for yourself,	Loss of the created sanctuary.	None.	
10/19/2021 14:38	Putnam		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Canoeing / Kayaking Wildlife viewing Other: Manatee research	Leave it as is		Manatee food surce	Manatee and wildlife death	No	This is a fine area pls leave alone
10/19/2021 14:39	Broward		No	Yes	1 time	More than 5 times	More than 5 times	Wildlife viewing Other: Exploring and just enjoying nature. Not tearing it up and leaving a mark.	Stay untouched, wild and pristine without humans leaving their darned footprints like they always do.		I LOVE MOTHER NATURE!!!! Every single, solitary one of us need to care for and protect her, everywhere we go. Not just this particular park or damn. That's any forest, mountain side, desert, canyon or waterway. TRUE!!!	That the mammals and animals would suffer. And you know they will!! Every single thing humans do has an impact on wildlife. Whether land, sky or sea... There's a chain reaction. I'd be mortified if any negative impacts were placed upon Mother Nature and her creatures.	Simply protect that which needs to be protected to the fullest extent. There's no second choice or other option.	Only do what's RIGHT & CORRECT. NOTHING FOR MONEY OR SALES OR CORPORATIONS. JUST THINK OF THE ANIMALS AND LAND AND WATER.
10/19/2021 14:41	Putnam		No	Yes		2-5 times		Wildlife viewing	REMOVE THE DAM. Would like to see the decaying dam REMOVED to allow a free flowing Ocklawaha with beautiful springs.		Correction of a tragic mistake. Science supports a FREE FLOWING RIVER as an important artery to the St. Johns	Further decay, strangled off fresh water spring's & an uninhabitable river for our threatened Florida Manatees.	Not sure	FREE THE OCKLAWAHA. Time to make thing's right.
10/19/2021 14:42	Outside of state / other	Boise, ID	No	No					BE KIND and CONSIDERATE to the Manatees!					SAVE THE MANATEES!
10/19/2021 14:42	Lee		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.		Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/19/2021 14:47	Marion		Yes	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / Kayaking Boating Wildlife viewing Other: Own 12 acres of property on the reservoir	I would like the reservoir and dam to remain intact for recreational, economic and water supply reasons. I would like to see the water management district place the reservoir in its future water supply plans as an alternative, reliable and plentiful source of water. Given the tremendous population growth in the region, there is no way the Floridan Aquifer can supply all needs in the decades to come. It would make more sense to use the reservoir than build expensive desalination plants along the St. Johns River. We need to keep more of Florida's freshwater in the state versus allowing it to run off to the ocean. Hydropower is also a very real option here. I also would like the government to recognize that after more than 50 years, a new and valuable ecosystem exists and restoring the river will destroy a tremendous asset. While the restoration cost is often cited as about $30 million, I do not think this is possible. This is an older figure and unrealistic. Correct restoration would expose an enormous amount of land that would require control of invasive species, plantings, etc. Will we want to see another massive killing of the cypress trees along the current shore? A potential decline in fish populations? Fewer birds? A reduced wildlife corridor? These are some issues raised in prior SJRWMD reports. Furthermore, I would support some of the recreational facilities under discussion (restaurant, etc.) but this can be done with the dam and reservoir still in place. Considering the effort and money spent on this issue, should we not be focused on more pressing environmental needs throughout the region? Finally, I would like the government to recognize that proponents for restoration are utilizing campaign tactics that draw in opinions from people far outside the area, including those who know little about the dam other than to join ranks with activists on a nationwide bandwagon to bring down dams. I would like the water management district to consider only the needs of people in the Rodman Reservoir area and consider the unique circumstances of this place.	There are many arguments to be made but water quality and supply are tops. The Rodman pool cleanses water going to the St. Johns, according to district reports. And it is a viable alternative water supply. Furthermore, sampling of fish and wildlife is one aspect of scientific investigation. But direct observation by people regularly at the reservoir should also be given great weight. The reservoir is home to a tremendously robust wildlife population, including abundant fish. I regularly see manatees, so I do not believe claims that they are sparse or have difficulty accessing the area. In the reservoir, manatees have access to abundant and healthy eel grass and other vegetation that serves as a reliable food source where other sea cow populations around the state are starving. In short, this is a thriving ecosystem more than a half century old. Why destroy what we can see with our own eyes is a valuable asset for the hope that we'll create another ecosystem that's better? We cannot be sure it will be an improvement. With more than 75 miles of river, the very short section with the reservoir actually adds some diversity. The reservoir is providing more benefits than harm, especially to the local economies - now and for the future.	I own 12 acres of property along the reservoir so my biggest concern is loss of property value and also of potential economic loss to the area and county if I do not follow through on business plans for the land that are dependent upon the reservoir. I am concerned about the change in water pressure affecting everyone's wells. I am concerned about salt water intrusion. How far will this problem extend along the river without the protection of the dam? Furthermore, I am concerned that the promised benefits of restoration will not come to fruition. I do not believe these buried springs will emerge as beautifully and pristine as promised. What I suspect is that they will be closer to muck holes than the springs the public is envisioning and used to swimming in -- all because of a clever marketing scheme. Swimming in the large Blue Springs? Won't it be covered in a mucky bottom with large alligators roaming? The other springs are so small, what will they really produce for recreation?	No, the dam and reservoir should remain as is. For arguments sake, if you are doing restoration for environmental reasons, it should be done fully and properly. All of that is likely well over $500 million at my best wild guess due to the magnitude of the project. Partial restoration is a shortcut for convenience and removes the reservoir and dam without full consideration of the entire ecosystem it will be a grave mistake that will have negative repercussions for the environment for years to come.	I find it odd that there is so much less controversy and attention paid to changing the other end of the Cross Florida Barge Canal by the Inglis Locks and Dam and Lake Rousseau. This dispute over the Rodman Dam has raged due to a feud between two now-dead people perpetuated in large part by heirs, eager college students, and people who have never visited Rodman, or understand how it helps the health of the St. Johns River or realize the desperate need for alternative water supplies. They have not grown to know the majestic ecosystem born so long ago. These river restoration proponents are well funded, well staffed and spreading a one-sided version of this debate to people far and wide via avenues ranging from the internet to local tour boats. Those fully knowledgeable about this issue are much fewer and more likely the locals who have lived near, worked on and experienced the reservoir and have seen its progress through the decades. Though the number of these individuals is smaller, they should have an audience on this issue. Restoration proponents also are now marketing this issue as more than just the Rodman Reservoir but as an entire multi-river system injured by one dam. Is this credible? We should all see through marketing to uncover the facts and the best solution for the economic and environmental well-being of the area -- keeping the reservoir and dam and the thriving ecosystem now in place.
10/19/2021 14:58	Outside of state / other	Whitfield County, Dalton, Georgia	No	Yes			More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	I would very much like to see the Reservoir and Dam kept intact and maintained.		The fish, aquatic plants, alligator, and bird habitat that will be lost if the Dam is removed is staggering in terms of area. I've fished from Florida to Alaska, and there is nothing else quite like Rodman Reservoir anywhere else in our great Nation.	Loss of recreational use and the resulting economic impact for an area that is already reeling from Covid-19 impacts on tourism.	Demolishing the Dam doesn't really leave any happy mediums.	
10/19/2021 15:01	Marion		No	Yes	1 time	2-5 times	Fishing Fishing (shoreline/structure) Wildlife viewing	Restoration		Wildlife	Death of wildlife and ecosystem	Depends	
10/19/2021 15:03	Alachua		No	No				I would like to see the dam removed to free the Ocklawaha River.		The environmental impact of the dam on the natural flow of the river is getting worse and worse. If kept, the dam needs much repair and the money would be better spent to remove it.	The river and the wildlife it supports would slowly die off.	No	
10/19/2021 15:14	Volusia		No	Yes		1 time	2-5 times	Wildlife viewing	Remove the dam and restore as much of the habitat as feasible, including the historic Ocklawaha.		The dam's purpose never came to fruition and it has simply become an impediment to wildlife and ecotourism. The dam is well beyond its life expectancy and will require millions of dollars in repairs. Additionally, the dam will have to be brought up to current requirements which will cost even more money. The water quality is frequently unacceptable requiring pivoting of scheduled events. There are 50 plus springs that would be restored helping wildlife and human alike. The 2001 final environmental impact statement outlined the way forward and the opportunity to finally move forward is upon us. With the lower Ocklawaha receiving additional flow, tourism will increase.	Wasting money on repairs to a purposeless dam to bring it into compliance. Continued water quality degradation, killing wildlife and making the area less usable/desirable for human enjoyment. Loss of ecotourism dollars.	No, the 1976 congressional deauthorization request should have paved the way but we now have an unprecedented opportunity to move this long overdue restoration forward.	At the Daytona Beach Museum of Arts and Sciences, I absolutely love the Saturday Evening Post's Ocklawaha black prints and various oil and water colors depicting old Florida and the principle mode of transportation in long ago Florida!
10/19/2021 15:16	Volusia		No	No					Please restore the natural flow		Thank you to the articles published in Florida Phoenix and Daytona Beach News Journal	An irreversible loss of habitat.		
10/19/2021 15:16	Marion		No	Yes		More than 5 times		Fishing	Remain		fishing industry	lose best fishing in sounding area	no	
10/19/2021 15:21	Outside of state / other	Richmond, VA	No	No					For the dam to be breached or removed entirely.		The ecosystem has been separated for far too long and the natural flows of the river should be restored to their natural state. Fish and manatees need to be able to complete their migration patterns and are unable to do so with the dam as an obstacle.	We will have more species on the endagered species list and	Breaching the dam.	
10/19/2021 15:24	Outside of state / other	CO	No	No					Restore the Ocklawaha River by breaching the Kirkpatrick Dam		Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/19/2021 15:24	Outside of state / other	Stanardsville, VA	No	No					I believe that the Kirkpatrick Dam much be breached in order to restore the Ocklawaha River that is critical habitat to manatees.		The restoration of the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees who desperately need it for their survival. In addition, more than 15,000 acres of the Florida Wildlife Corridor would be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer. These animals need this habitat more than we need a dam.	The death of hundreds of manatees who depend on the warm waters during the winter months for their survival. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to negatively impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. this dam should have been breached a long time ago, and time matters to the survival of precious wildlife.	I care deeply about Florida's environment, and I am asking you to restore the Ocklawaha River, the absolute heart of the Great Florida Riverway, to protect a bright future for Florida's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me and will greatly benefit Florida's people, environment and wildlife.
10/19/2021 15:26	Outside of state / other	Portsmouth, NH	No	No					You need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.		Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Also, keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No, there is no half-way action when it comes to dams. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Do the right thing and restore the natural habitat for so many species. What's good for them is also good for humans.
10/19/2021 15:28	Bradford		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Leave it as it is. Maintain the lake as needed to control the grass.		Water quality as it leaves the reservoir.	Florida will loose a valuable asset. To both locals as well as visitors.	Make Rodman a state park. Improve the boat ramp and parking lot.	
10/19/2021 15:33	Marion		No	Yes			2-5 times	Canoeing / Kayaking	Breach the dam & restore the Oklawaha to its natural flow.		The dam serves no useful purpose, floods natural habitat & restricts movement of manatees & other water wildlife. The dam is costly to maintain & could fail.	The Oklawaha will not be able to flow freely and naturally.	Either the dam stays or goes. I don't see any other scenarios.	I've paddled both sides of the dam. The dam is an obstruction that restricts many river activities that could be available to everyone if it were gone.
10/19/2021 15:35	Putnam		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing	Return to natural free flowing rivers and estuaries. Science supports preserving our natural waterways by removing man made obstacles to nature.		SCIENCE	Continued degradation of the natural status of all wildlife in the St John's / Ocklawaha river estuaries and wetlands.	A bridge that would allow boat and wildlife free flowing access without human intervention.	
10/19/2021 15:35	Orange		No	No										
10/19/2021 15:40	St Johns		No	Yes		2-5 times	2-5 times	Canoeing / Kayaking	remove the damn and restore the Ocklawaha River		loss of native Florida lands and springs	loss of true florida	open the flood gates to allow the lake to drain	
10/19/2021 15:41	Hernando		No	No					Breach the dam and let the water flow naturally.		There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4.14 Million in dam repairs.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No! This project is way over due!	60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/19/2021 15:43	Sarasota		No	No										
10/19/2021 15:43	St Johns		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Wildlife viewing	Keep it as it. It's an amazing area full of fish and wildlife. Incredible ecosystem as it is. It produces better water quality, more fish, more wildlife and recreation.		All of the facts and studies performed on the water quality. My experience on the lake and river below show that there are tons more fish and Wildlife on the lake.	Losing the lake would destroy the fishery, kill animals, remove recreation and remove loyal local businesses. Get on a boat on a Saturday, done around and talk to people and you'll know for yourselves.	No. Keep the lake and dam/lock operational.	Please visit the lake and get on a boat and see for yourselves. Study the water quality facts. See the wildlife. It's a blessing to have and a mistake to destroy.

10/19/2021 15:47	Outside of state / other	Virginia (VA)	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 10/19/2021 15:49	Marion		No	Yes			More than 5 times	Fishing	restore the natural flow	all	lack of concern by public	no	
10/19/2021 15:54	Outside of state / other	Massachusetts	No	No					Remove the dam and restore the river and wetlands	The river and wetlands are necessary for manatees and other wildlife and native plants to survive.	Manatees will go extinct and additional animals will become endangered. The river/wetlands restoration will protect against flooding	NO	
10/19/2021 15:55	Broward		No	No					Please restore the Great Florida Riverway for the manatees and othe Florida wildlife by allowing them to access additional warm water habitat. Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat. Thank you.	Even while manatees are still struggling with starvation from seagrass loss, the greatest long-term threat to these animals is the loss of warm water habitat that manatees need to survive the winter. Right now, 60% of Florida's manatees depend on power plant outfalls to keep warm and survive the winter - an unsustainable and unnatural situation.	Losing the decades long struggle to save the manatees from extinction.	Not to my knowledge.	
10/19/2021 15:56	Outside of state / other	Massachusetts	No	No					Restoration to restore habitat!	Loss of habitat-decrease in food supply.	Stabilize the population where possible	Do what you can-where you can!	
10/19/2021 15:58	Outside of state / other	District of Columbia	No	Yes			1 time	Wildlife viewing	restore the Ocklawaha River by breaching the Kirkpatrick Dam	restoration of the Reservoir will provide essential warm water winter habitat for hundreds of manatees. In addition, a large number of acres in the Florida wildlife reservoir will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer	Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor. And manatees won't have access to manatees of essential warm water for their winter habitat.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a visitor to Florida, I care greatly about Florida's wildlife and their habitat. Please ensure a bright future for Florida's people and wildlife.
10/19/2021 16:17	Miami-Dade		No	No					Removing the dam and restoring free flow of the river. I just returned from a long extensive tour of central Florida, remaining fragmented scrub habitat and piloted a boat for 3 days up and down the St. Johns River and wildlife refuge adjacent. It was magnificent in it's wildlife, and absolutely appalling in its lack of protection and polluted waters and sewage pouring into it. Also visited Manatee areas and the accelerating death of that iconic species is an indication of an abject lack of waterway protection in this state.	Restoration of a flowing river that will help save Manatees, an iconic Florida beloved animal on the brink of extinction.	Manatee loss of an essential expanded habitat and accelerated death leading to extinction as power plant effluent becomes diminished.	No.	Florida waters are becoming so damaged and polluted that they will not support aquatic life and will not recharge aquifers with drinkable water to support a growing population. Free flowing river systems oxygenate and clean waters, provide habitat and on balance, are vastly more valuable economically to this state for tourism and environmental amenities than a questionable reservoir that has so greatly damaged this river.
10/19/2021 16:20	Duval		No	No					I feel the dam must be made either sustainable or unable to pollute the Environent. The manatees are a HUGE part of the Florida ecosystem and a priceless part of our culture. These gentle sea cows are beautiful and useful in maintaining waterways.	The majority of natural springs which foster their winter grounds.	The decimation of a species .	Yes, but pollution must be stopped!	
10/19/2021 16:22	Outside of state / other	Colorado	No	No					Breach the dam so water can flow into the Ocklawaha River.	To keep manatees and wildlife alive!	The extinction of several species	Is there a different way to give manatees and other wildlife the warmth and food they need to survive the winter? Come on...let it flow	When are people going to realize that we are all connected to....well, everything? We cannot lose a whole species without losing a part of ourselves (no matter how woo woo that sounds)
10/19/2021 16:24	Hillsborough		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing	Leave this beautiful area as is.	We own a house on the lake and have for 13 years.	All the wildlife will be gone.	no	
10/19/2021 16:25	Outside of state / other	Pennsylvania	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. 10/19/2021 16:30	Outside of state / other		No	No					Please restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/19/2021 16:30	Outside of state / other	Pennsylvania	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/19/2021 16:33	Outside of state / other		No	No					Save & protect all animals	The Ocklawaha River is the heart of the Great Florida Riverway, which, if restored, could provide essential warm water habitat for hundreds of manatees in the winter. Manatees have already reached a record number of deaths this year - and if we don't restore additional areas of their natural habitat, we could lose even more manatees in the future.	Manatee & wildlife deaths and/or harm or suffering		
10/19/2021 16:36	St Johns		No	Yes			1 time	Other: Wanted to see it to know what exactly it looked like and what it did	I'd like to see it breached/removed.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. Truly- there is no legitimate reason to keep this dam in place.	No. Breaching/destruction of the dam is the only feasible outcome in this situation	I am a sixth-generation Floridian. My children are 7th. I grew up in Marion County where I enjoyed a childhood full of visits to all of the Springs. I spent my teenage years on Lake Weir, where my parents still live. I'd like to see the natural Florida I love around for my young children and their children to enjoy! So little is left of a truly wild Florida. Here in the central and northern part of the state, we have the opportunity with this project to restore some of our lost wilderness and prevent the outrageous destruction of nature seen in South Florida. The data on the breaching of the Rodman Dam speaks for itself- the money is available for the project and the benefit for the natural world- which also equates to benefits for we humans is truly immeasurable. Please carry out this project!!!! As someone whose family traces its roots back to the early settlers in this State, I take great pride in the beauty that is Florida. I'd like to see that beauty preserved and protected for future generations. Thank you for your consideration. Kate Houston, descendant of the Alderman and Rauleson clans: cattlemen, orange grove owners, Crackers,
10/19/2021 16:39	Alachua		No	Yes			2-5 times	Canoeing / Kayaking	Removal of the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. The best opportunity to do this is now. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat).	No	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Springs are inland Florida's most unique natural resource and their natural flow should be restored wherever possible.
10/19/2021 16:46	Palm Beach		No	Yes			More than 5 times	Fishing (shoreline/structure) Canoeing / Kayaking Wildlife viewing	Remove it.	Restore natural habitats.	Manatee deaths.	No.	
10/19/2021 16:47	Putnam		No	Yes			More than 5 times	Fishing (shoreline/structure) Wildlife viewing Other: Picnicing with grand and great grandchildren.	Maintained and kept open for boats and fishermen.		Restoring it to what it was,will be one ugly sight.		

10/19/2021 16:49	Marion		No	Yes			More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	We should keep Rodman Reservoir and the Kirkpatrick Dam	Scientific studies have shown the ecological impact on the wildlife that inhabit the reservoir and surrounding area would be devastating if the dam was removed. It would also require the removal of another dam to have any chance of restoring the river--without that other dam's removal, things would be a mess. The economic impact on the area by removing the reservoir would also be a calamity	Loss of wildlife habitat, loss of the economic benefits, loss of tourism, loss of one of the best recreational fishing resources in the entire state that is also nationally recognized.	No	
10/19/2021 16:49	Outside of state / other		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation.
10/19/2021 16:51	Outside of state / other	New York	No	Yes			1 time	Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick dam.	This: Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	More loss. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway.	No. It's already a half century overdue	
10/19/2021 16:57	Marion		Yes	Yes			More than 5 times	Fishing Boating	I would like to see the Dam left in place.	The lake supports so much wildlife and is the lifeline to the professional and recreational fishing industry in our area which I am a part of. It is also a manatee sanctuary and what sense would it make to do away with it.	The fishing and boating industry would be dealt a fatal blow if the Dam were removed and the lake was gone. Plus where would all the wildlife that call it gone go?	No. The lake needs to be retained.	My name is Lynn Phillips and my family and I own one of the largest boat dealerships in Florida. Located in Ocala. Without Lake Ocklawaha and the Dam that creates it, there would be a massive hit to the fishing, tourism and boating industries in our part of the state. The economic impact of the Dam being removed would be extremely harmful.
10/19/2021 16:57	Pinellas		No	Yes			More than 5 times	Other: I have property down stream from the Dam. I have fished the river for over 40 years	I am in favor of removing the dam. The water levels down stream are so erratic and causes more trees to fall	I won 20 acres of land on the river and have seen it stressed over the last 40 years	The river looking is natural beauty and clearness. It is limiting the fish population	Improve the dam to have a through way for normal travel of fish and manatees etc.	The would barge canal project has caused disruption of natural land and displaced people from land that was owned for years by families. Springs are covered up and grass has grown where it never did. Even if the river was rerouted to use the dam opening as the water outlet and keep the straight section it would be a great improvement and still provide a recreation are that many enjoy.
10/19/2021 16:57	Outside of state / other	Claremont, N.H.	No	No					Damn the Dam! Let the river be FREE!	What it will do to the Environment & the Economic Impact!	Too much environmental destruction!	No.	
10/19/2021 17:02	Putnam		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Leave it alone	If Rodman is taken down then the manatees and other wildlife will have to relocate when we have another drought , because the headwaters of the Ocklawaha is a Dam and it would be up to Marion counties discretion to either drain their lakes to feed the Ocklawaha or keep the gates shut ! They have already proven in the past that they are going to keep their lakes full and starve the Ocklawaha	If Rodman is removed then the manatees that inhabit these waterways will have to try and rely on the St. John's River that the FWC and the spray communist have destroyed as far south and north as the river runs ! Depleting almost all of the vegetation that these animals are dependent on . Rodman has a smorgasbord of vegetation for these animals to eat and if it is destroyed all of their food will be gone	Just leave it be	
10/19/2021 17:02	Seminole		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Springs are restored	Survival of the springs and wildlife	Need to breach the dam. Period	
10/19/2021 17:02	Outside of state / other	Colorado	No	No					Restoring the Great Florida Riverway by breaching this dam will re-establish access to essential habitat for manatees, bring back migratory fish, connect three river ecosystems, historic Silver Springs, and restore a lost riverway for anglers and paddlers from Ocklawaha's Harris Chain of Lakes to the Atlantic. It is time to save the Ocklawaha, Silver, and St. Johns Rivers, as well as historic Silver Springs.	Status and trends of dam removal research in the US Volume 4 March/April 2017 Ryan Bellmore plus	species and balance would be lost forever	A long term committed and funded plan	Please think of seven generations
10/19/2021 17:03	Duval		No	No					For it to come down & it's water flow slowly returned, so that the natural flow can be returned to river communities.	The rising salinity levels, algae blooms, and decrease of important aquatic plants & animals in the St John's River	Continued degradation of the St John's and it's estuaries and subsequent communities	Nope	
10/19/2021 17:05	Marion		Yes	Yes	1 time	2-5 times	More than 5 times	Fishing Boating Other: I own Miller's Boating Center and Rodman is such an important factor in my business	Rodman Dam and the lake need to be retained.	My name is Jeff Miller and I own Miller's Boating Center in Ocala, FL. We have one of the largest boat dealerships in the state. Rodman is basically the cornerstone of the professional, recreational, tournament angling, waterfowl hunting and boating industries in our region. The St. John's and Lake George have fallen on hard times. The other major draw to this area is Orange Lake which goes dry from time to time. So Rodman is the lifeline for the tournament anglers, professional guides, etc in our area. It's the one constant. It is absolutely crucial to our industry here and a huge national draw also.	That the fishing and boating industry would be dealt a fatal blow.	No	
10/19/2021 17:10	Baker		No	Yes		More than 5 times		Fishing Canoeing / kayaking Boating Wildlife viewing	Keep it as is	Enjoyment	Loss of habitat	No	
10/19/2021 17:12	Marion		Yes	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Boating Hunting	Leave the dam in place	I work for a business that relies on all the fisherman that use Rodman. It is the one stable body of water when all the other areas are facing water level or water quality issues. It's so important to the tournament guys and guides that use our business. Where would all the wildlife go if that lake was drained? It doesn't make sense to disturb nature again here.	That our business is severely hurt and all the wildlife being handed a death sentence.	No way	My name is Brandon Phillips and I am the service manager here at Miller's Boating Center here in Ocala/Marion County.
10/19/2021 17:13	Duval		No	Yes	1 time			Boating Wildlife viewing Other: don't care to use it in its present state	Take it down and restore this beautiful piece of Florida to return to its natural state so we can show it to our northern visitors	It's a financial boondoggle that can be rectified with big positive cash flow in a short period of time and thereafter helping the local communities in the future	Peeing away taxpayer money year after year and not improving the quality and quantity of fresh water flowing into the St Johns river	No. Breeching is 50 years overdue after Washington stopped the ill-fated project of the Cross Florida Barge Canal. Wildlife habitat, safety, and water quality/quantity need this dam to go away ASAP.	The once-great Silver Springs economic future is dependent on visitors seeing all the fish and manatees that they used to enjoy before the lock and dam were installed. This will give us boaters a chance to show our northern friends what beautiful natural Florida looks like; maybe travel all the way from the St Johns up to the Lake Harris Chain of lakes. We can only dream.....! Thanks for considering this important undertaking.
10/19/2021 17:18	Outside of state / other	Bluffton, SC	No	No					Breach the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	Manatees have already reached a record number of deaths this year. The greatest long-term threat to these animals is the loss of warm water habitat that manatees need to survive the winter. Right now, 60% of Florida's manatees depend on power plant outfalls to keep warm and survive the winter - an unsustainable and unnatural situation.	Extinction of the spicies	An alternative to providing acess to warm water habitats for Manatees.	
10/19/2021 17:18	Marion		Yes	Yes		2-5 times	More than 5 times	Fishing Boating Wildlife viewing Other: I	I would like to see Rodman Reservoir and the Dam retained.	My name is Larry and I am a salesman at Miller's boating in Ocala. Rodman is so important to our industry as it is the one stable environment that all of the tournament anglers, fisherman and duck hunters use in this area and what drives a huge portion of our boat sales here at Miller's. Without the stability that Rodman provides the fishing industry here would most likely collapse. There are so many people that rely on the lake for income whether it be boat dealerships, guides, commercial fishermen, tackle stores, restaurants, hotel, etc, etc that it's loss would be unreplaceable.	The fishing industry's collapse and all the people's livelihoods lost.	No	
10/19/2021 17:18	Duval		No	No						Freeing up the St Johns to flow	St Johns River and Silver Spring would be destroyed	No	
10/19/2021 17:23	Marion		Yes	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing	I want the dam left as is!	I am a fishing guide who just got his Captain's license and this will be how I support my family. It's a world class fishing lake and draws people from all over. It's been there 50 plus years and how can people even consider destroying that ecosystem now?	I'd have no job and the displacement of all the animals. It would be an eye sore for decades.	Not at all !	My name is Tim Ricks and I am a just starting fishing guide. I just got my Captain's license and am starting a business to take people fishing in Rodman
10/19/2021 17:24	Citrus		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam	Loss of manatees gain essential warm water winter springs habitat	Further water quality decline, millions in cost to maintain the dam	No, This is 50 years overdue. Ecosystems, water quality, and wildlife hang in the balance	
10/19/2021 17:28	Putnam		Yes	Yes	1 time	More than 5 times	More than 5 times	Fishing Boating Other: Own a boat dealership and service shop	Leave the dam alone	My name is G. Scott Smith and I own S & A Leisure in Welaka, FL. My business is dependent on the local guides, tourney anglers, recreational fisherman in this area. Without that lake business would be tough. Where would all the manatee go?	Massive blow to my business and more starving manatee. According to the lock tenders over 700 manatee have come into Rodman looking for food	No	
10/19/2021 17:30	Outside of state / other	MI	No	No									I have visited Florida and been able to see Manatees in the wild. They are such sweet gentle creatures. If only people were the same. What is good for the animals, is good for humans, too. I wish more people would recognize that.
10/19/2021 17:33	Outside of state / other	CA	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/19/2021 17:33	Putnam		Yes	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing	I'd like to see the reservoir left in place	I fish and boat on the lake many times a month and also work for and am the parts manager at Big Boys Pkay Toys here in Palatka. It's so very vital to our business and the local economic my. Plus it's a wildlife haven. I've seen so many manatee there this year.	A huge loss to my workplace and a huge blow to our local economy and the loss of so much habitat. There are more animals now that are living on the lake than would be here if it were gone!	No	My name is Alex C. and I am the parts manager at our boat dealership here in Palatka
10/19/2021 17:34	Clay		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating	Leave it as is	Nothing wrong with it as is. This would create an irreversible mess if drained. Rodman is a habitat for many species that would not survive if drained.	The same Manatees that the FWC claims to protect they are starving to death because they spray chemicals unnecessarily. What little vegetation is left for them to eat is being poisoned therefor they have nothing but poisoned vegetation	No	Stop trying this garbage
10/19/2021 17:36	Outside of state / other	Oregon	No	No					removed	too many dams causing too much environmental disruption such as interfering with salmon lifecycles.	a are compromised local environment	probably not	
10/19/2021 17:39	Outside of state / other	St Paul , MN	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/19/2021 17:42	Putnam		Yes	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Wildlife viewing	I would like to see the lake and the dam stay in place!	My name is Rodney and I am the owner of Big Boys Pkay Toys here in Palatka. The lake is crucial to my business. It is a staple of my industry and is healthy at a time when so much of the waterways in our area aren't. If it were gone it might be the end of the industry in our area. We were one known as the bass capital of the world. But with the algae blooms and all the grass being gone in Lake George and the St John's if Rodman were gone it would pretty much be the end of what draws to and drives so much of our business. Not to mention all the additional nutrients that would be getting cleared before it enters the St. John's . It would make a potentially bad situation even worse. KEEP RODMAN DAM INTACT	Massive loss of business. Decreased water quality. Loss of a way of life	No	
10/19/2021 17:43	Lake		No	Yes			1 time	Canoeing / kayaking	implement the fully reviewed DEP plan for partial restoration	Increased manatee habitat	no improvement for wildlife corridors, as desired by the legislature. Also continued herbicide spraying degrading the environment	I don't even really understand your question. Poke a hole in the dam? either it stays, or it goes. There's pretty compelling arguments for it to go.	
10/19/2021 17:44	Indian River		Yes	No									
10/19/2021 17:45	Outside of state / other	Austin, Texas	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	• Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	
10/19/2021 17:46	Putnam		Yes	Yes	1 time	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing	Leave it just as it is	It's a thriving ecosystem and I work for a business that gets a lot of our income from boat sales related to the lake and supplies for the people that use it. My name is Jason H and I am the rigging manager at my dealership.	A huge portion of our business would be gone and a beautiful lake would be destroyed. The people that want it done either have never seen it or are being lied to.	No	
10/19/2021 17:47	Santa Rosa		No	No					Make it go away. Let our waters flow!	Past history of diverting water flow in Florida has never been a good idea.	Continued degradation of our still beautiful and unique State of Florida	I suppose anything toward allowing the water to go where it wants to go is helpful but Mother Nature knows best.	In the movie Out Of Africa, the character Baroness Blixsen, after her homemade dam broke said "let it go, this water lives in Mombasa anyway." Hmmm...listen up, Florida. Also, our time for environmental corrections is at 11:46...could we hurry this up?
10/19/2021 17:53	Putnam		Yes	Yes			2-5 times	Boating Wildlife viewing	Rodman Dam need to stay in place	My name is s Kristin Hedstrom and my family owns Sunrise Marine here in Palatka, FL. Rodman Reservoir is vital to our business. We live in an area that is low income and Rodman is a national attraction. It provides an influx of money into our area through tourism and the marine and fishing industries. Without it there would be no fishing industry here.	One more loss to the economy of this area and to our business.	No	
10/19/2021 17:58	Citrus		No	Yes		1 time	2-5 times	Wildlife viewing	Remove the dam and restore the Oklawaha River in its historic channel.	The Reservoir has low biological value outside of fishing and is unsconomical to maintain.	The reservoir becomes eutrophic, fishing collapses, the dam fails, and the reservoir becomes a mudhole filled with invasive vegetation.	A stepped irreversible drawdown of the reservoir is not a bad outcome.	There is no purpose in maintaining this vestige of the Cross Florida Barge Canal.
10/19/2021 18:13	Outside of state / other	Gaseopia	No	Yes					Fishing	Nothing. Continue management as is.	Great fishing location.	Loss of a unique environment for wildlife and recreation.	No. Don't change it.
10/19/2021 18:17	Clay		No	No						Dam removed		Poor water quality	No
10/19/2021 18:30	Pinellas		No	Yes			1 time	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Every day the dam is in place, harm is inflicted to the economy, water quality, and wildlife is throughout the Great Florida Riverway.	The amount of money blown on this scam at this time with all our economic and health problems.		
10/19/2021 18:33	Duval		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing	leave it as is.	It is a World renowned tourist attraction, fisherman comes from far away states just to fish Rodman.	Loss of a tremendous attraction to Florida.	None come to mind.	We have miles and miles of river flowing into Rodman, those who want the river as it was has that already. Those who want the pool should have theirs as well. A win win.
10/19/2021 18:35	Lake		No	No					Restoration of the Ocklawaha River by removing the dam.	Natural environment for animals, plants and human interaction.	Green way North South for wildlife.	Make a hole in the dam so that the river could flow to the St. Johns via its natural route.	
10/19/2021 18:38	Broward		No	No					I support the restoration of the Ocklawaha River by breaching the existing dam and draining the Rodman Reservoir for the broad range of environmental and economic benefits that restoration would provide.	Environmental and economic benefits which would result from the restoration.			
10/19/2021 18:40	Hillsborough		No	Yes			1 time	Wildlife viewing	I would like to see the dam removed and the natural habitat restored.	Understanding the negative history that multiple dams and water projects have had on the florida environment.	That florida wildlife will not regain more living space.	No.	Please tear down this dam.
10/19/2021 18:44	Volusia		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Restore the Ocklawaha River and get rid of the dam.	Manatee, and other Florida wildlife, are treasures of our state, and the dam is harming their habitat.	Every day that passes is a day that ecosystems are more deeply damaged by the dam.	No. A drawdown of the reservoir will not provide significant environmental benefits.	Manatees are dying rapidly, and more die-offs will keep happening if we don't allow them access to warm winter habits. the Ocklawaha's springs and Silver Springs. Please do the right thing for them and for everyone who loves the natural beauty of Florida!
10/19/2021 18:48	Clay		No	No					Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam to reunite the natural connection of Silver Springs, the Ocklawaha and the St. Johns River.	The science supports restoration. Studies by federal and state agencies have clearly demonstrated that restoration of a free-flowing, connected system is cost-effective and will provide significant ecological benefits to the St. Johns, Ocklawaha and Silver Rivers as well as Silver Springs. Three rivers, Ocklawaha, Silver and St. Johns, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish migration patterns and essential manatee habitat are reestablished 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of forested floodplain wetlands within the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs	We miss a historic opportunity to stop the ongoing ecological degradation caused by the dam and finally reunite the natural flow of these rivers. Breaching the dam would restore the natural flow of 150 mgd of fresh water, improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. A free-flowing Ocklawaha will reestablish 15,000 acres of forested wetlands and fortify downstream submerged grasses from Welaka to Jacksonville in the St. Johns River that are critical to river health and fish habitat.	No. Breaching the dam and restoring the Ocklawaha are 50+ years overdue. Dam safety issues and improved water quality, wildlife habitat, and recreational opportunities can't be ignored or delayed any longer.	As a life long Floridian and outdoors enthusiast I cannot see any benefit to keeping the dam. As a state we have continuously destroyed our ecosystem over the past century all to our detriment. Let's put it all back the way it was. Thank you.
10/19/2021 18:48	Pinellas		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	I'd like to see that area restored to its' natural "beauty".				

10/19/2021 18:52	Lee		No	No					Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every additional day the dam and reservoir remain in place results in additional environmental degradation.	7,500 acres of the lower Ocklawaha's historic forested floodplain, 20 freshwater springs, and many miles of natural river channel that were drowned as a result of dam construction would be restored. Draining the Rodman Reservoir would remove the single greatest barrier to plant and animal movement along the Ocala to Osceola (O2O) Wildlife Corridor by replacing the open water expanse of the Reservoir with a restored floodplain forest, to the benefit of many listed plant species native to the region including the Federally listed Clasping Warea and Scrub Buckwheat. Three river systems - the Ocklawaha, Silver and St. Johns - would experience significant environmental improvement from restoration. Recreational sport fishing would be enhanced by allowing the Florida strain of the Striped Bass to reclaim what used to be its primary spawning habitat - the Ocklawaha. An estimated $14 Million in dam repairs, measured in 2006 dollars, would be saved by avoiding repairs to a dam that has exceeded its life expectancy and never fulfilled the purpose for its construction. Economic analyses conducted by researchers at the University of Florida demonstrates the economic impact from eco-tourists who use the natural portions of the Ocklawaha River is twice that of the anglers and boaters using the Rodman Reservoir, and annual use of the Reservoir's recreation sites has been on a downward trend since records began in 2004 as water quality and fish production have continued to decline year after year.	The broad array of environmental benefits to native flora and fauna, including many imperiled species, that would result from restoration would not be possible. Water quality in the Rodman Reservoir and Lower Ocklawaha/St Johns River system would continue to decline. Taxpayers will perpetually be on the hook for repair and maintenance of the dam and Reservoir, and continue to be liable for any loss of life or property damage that would result from a dam failure.	No. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration.	
10/19/2021 18:55	Clay		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Removal of the dam that should have been taken down when the Cross Florida Barge Canal was stopped.	About 15,000 acres of the Florida Wildlife Corridor would be restored or enhanced for people and wildlife	A storm event could trigger a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages, or taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	If the dam can not be totally removed, breaching the dam as is done during drawdowns would be the next best scenario.	
10/19/2021 18:57	Duval		No	No					Breach the existing dam. Drain the Rodman reservoir.	This will restore the Ocklawaha River. This will bring well documented environmental recreational, and economic benefits. Not only will the Ocklawaha River restoration experience a broad range of benefits, but also provide significant improvements to the St Joe's and Silver Rivers.	It's the will of the people. Time has come to take action for positive change to save wild Florida.	No	
10/19/2021 19:00	Palm Beach		No	No					Fix dam removed	The natural environment not a man made environment	Loss of habitat to support wildlife	No	
10/19/2021 19:01	Outside of state / other	United States	No	No					I would like to see it move forward with little or no environmental impact.	The need to combat climate change!!	That the impact would be something bad or detrimental!!	No	
10/19/2021 19:03	Duval		No	No					Return to its natural flow	A restored watershed of Florida will not only preserve our natural economy but will leave a legacy to future generations to enjoy nature. Enough destruction. Time for preservation and restoration of what's left from our beautiful and unique State.	Loss of the natural flow of our State's watershed which is completely disfunctional because of human intervention. Protect the acuifer and the watershed.	No	Restore Florida in every way you can. Act now.
10/19/2021 19:04	Lake		No	No					I support the restoration of the Ocklawaha River by breaching the existing dam and draining the Rodman Reservoir for the broad range of environmental and economic benefits that restoration would provide.	The environment	Further damage to the environment		
10/19/2021 19:05	Hillsborough		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Knock the damn dam down!	the reservoir is an ecological wasteland	further buildup of nutrients leading to complete filling in of the reservoir with invasives	stop pouring pesticides into the beleaguered reservoir	
10/19/2021 19:05	Pasco		No	Yes			1 time	Wildlife viewing	Restoration for wildlife to be the main goal.	Extinction. We need to turn the corner and change policy to prevent the loss of Flora and Fauna native to Florida.	We do not have the luxury of failing. We are at a crisis point and if we don't provide a desired outcome we will loose as a society and extinction will quicken.	I don't see any alternative but doing what is best for the Flora and Fauna. Businesses can make big money with the change. It will just be a different kind of business.	Just do it!
10/19/2021 19:08	Outside of state / other	Virginia	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me and will greatly benefit Florida's people, environment and wildlife.
10/19/2021 19:10	Outside of state / other	St. Louis, MO	No	No					Please restore manatee habitat. Thank you.	Too many manatees are dying because of a food shortage for them due to over fishing & a change for the worse in their ecosystem.	Manatees would become extinct.	No, not really.	Kindly do the right thing for manatees in Florida.
10/19/2021 19:11	Seminole		No	No					Breach the dam.	Restoring the Ocklawaha River is crucial to the survival of the manatee.	Further suffering and death of manatees.	No.	
10/19/2021 19:12	Pinellas		No	Yes			1 time	Other	get rid of the dam	allows more folk access to the area rather than just a few		no	
10/19/2021 19:14	Duval		No	No				Other: In the '80s as a tourist, to learn what it was	Remove the dam, clean out the silt filled reservoir and let a free-flowing Ocklawaha River resume its flow. unhindered.	We're finally learning - and making changes to restore - the natural flows of river and streams to recover the essential environment required for animals, plants and humans. Do we have to lose more species to turn the lights on? Is it reasonable to spend taxpayer dollars to maintain an artificial ecosystem around the dam that is harmful to plants and animals AND also contaminates the water? Why are special interest groups still blocking the river's restoration when numerous Florida agencies are on record since 1971 to remove the dam?	Florida will continue to destroy the natural areas and wildlife that created this unique state. AND our children and grandchildren will be paying for the destruction.	No. This cannot just be partially done. It is overdue by 50+ years. It is time to fix stupid.	I'm in my late 70's. I grew up in N Florida and clearly remember excursions into central and south Florida to visit special places. My children were born in the 70's and even then Silver Springs was depressing. Grandchildren "visit" Disneyworld. Jacksonville is undertaking an urban trail system the "Emerald Trail". It will restore several creeks that empty into the St. Johns and relieve flooding problems decades old. It can be done.
10/19/2021 19:18	Marion		Yes	Yes	1 time	2-5 times	More than 5 times	Fishing Boating Wildlife viewing Other: jeep riding	I would like to see the Rodman Reservoir and Kirkpatrick Dam preserved for the benefit all of people and wildlife that enjoy it now.	Land owner, life-long participant of outdoor activities on and around the reservoir, family enjoyment, and ecological preservation.	Loss of natural beauty surrounding the reservoir and loss of a way of life for thousands of people who enjoy the area.	Not that I am aware of at this point	Save Rodman Reservoir
10/19/2021 19:20	Hernando		No	No					Remove the dam and allow the river to return to a natural flow	Dams in general disrupt ecosystems. From everything I have read the Kirkpatrick Dam is no different.	Continued deterioration of the existing ecosystem	Removing the dam would meet that description. No one can be absolutely certain of the outcome once the dam is removed. There is a lot of unknowns that hopefully will be mentioned and measured and used to help to inform policy makers in the future.	Sometimes mitigation is a blessing, others times a curse. We need to collect the data needed to take a better look at the problem.
10/19/2021 19:20	Orange		No	No					I would like to see the dam REMOVED.	Natural Florida needs to be restored to support native plants and wildlife. This is a rare opportunity to correct an engineering mistake.	I am deeply saddened by the loss of the Florida I used to know. I am concerned that spending 3 million dollars to fix the dam would be a waste of money.	I can't think of any.	
10/19/2021 19:21	Orange		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This exciting restoration will improve water quality and flow by generating an additional 150 million+ gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
10/19/2021 19:25	Broward		No	No					I would like to see the damaged Rodman Reservoir.Kirkpatrick Dam demolished to allow the water to flow naturally to the river. The damaged and would take a lot of tax payer dollars to repair though this dam also prevents manatees and other fish to enter the reservoir area and prevents the natural flow of the water.	To allow the natural flow of the water and ecosystems to hopefully return to the area and the damaged area cleaned up instead of damming it up.	Whether an environmental impact study report was done before building the dam and creating the reservoir? What is the environmental impact study report reads now and ecosystem?	What the options? Repair the Reservoir/dam: Cost to tax payers? Demolish the dam, remove pieces of the dam responsibly and allow the natural flow of the water return to the river and hopefully ecosystems will be restored prior to the dam installation.	Thank you for this opportunity to speak regarding the Rodman Reservoir/Kirkpatrick Dam.
10/19/2021 19:29	Highlands		No	Yes		1 time	More than 5 times	Canoeing / kayaking Wildlife viewing	open up the navigation of oklawaha to st johns	restore to prior original situs	continued drowning of the original river and spring system	make a start and commit funds for completion	
10/19/2021 19:31	Sumter		No	No					Breach the dam for a free- flowing Ocklawaha.	Significant environmental improvement would occur from restoration to the Ocklawaha, Silver and St. Johns rivers. Manatees would regain open access to the Ocklawaha and Silver Springs.	Downstream from the dam businesses and residents would continue to be under threat in the event of failure of a dam. Environmental bene fits to flora and fauna that would result from restoration would not be possible.	No compromise would result in the ecological and economic benefits of breaching the dam.	
10/19/2021 19:33	Outside of state / other	Chula Vista, CA	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. Also, 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Also, keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. Restoring the Great Florida Riverway is critically important to many stakeholders and will greatly benefit Florida's people, environment and wildlife.
10/19/2021 19:42	Outside of state / other	Maine	No	No									
10/19/2021 19:44	Polk		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing Other: Manatee viewing	Stay the same. It is a great clean water source for Florida residents and visitors. Great location for fishing since the water is so pure. No chemicals are needed to control the weeds. Great recreation for residents and visitors.	Clean water source with NO pollution. No chemicals needed. Central location for Florida residents to use. Good food source for all economic residents.	Loss of potable water. Loss of food with healthy protein source. We have been visiting this area for so many years.	I really want to keep this reservoir available for use for anyone who wants to. Great clean water, good fishing. Great location for camping andwildlife viewing. We get to see manatees up close, alligators, bears and deer at water edge. So many people use the water at the dam for fishing and picnicing. This is a beautiful area. We have seen more than a hundred people fishing and enjoying the dam area, catching healthy fish to feed their families.	This clean water would just be wasted by going out into thr ocean instead of being utilized as drinkable water for surrounding counties. Make a state run park out of the dam and reservoir and put in more state run campgrounds. Change fees so the State of Florida can let it pay for itself. I have loved this part of Florida all my life, especially with my family.
10/19/2021 19:46	Manatee		No	No									
10/19/2021 19:48	Miami-Dade		No	No					Removal of the dam and restoration of the rivers to their historical flows				
10/19/2021 19:51	Outside of state / other	Pennsylvania	No	No					No further water restrictions.	Science and Manatee protection	That Manatees would die.	That Environmental experts are involved.	
10/19/2021 19:52	Volusia		No	No					Breach the dam and execute the recovery plan. And limit the amount of tax dollars spent doing so.	Since the canal was never completed and it will not be completed, the obsolete structures associated with earlier attempts should be breached to allow the original environment to return.	My biggest concern would be the need to spend more dollars on the structures to make them safe.	Certainly. The dam must be breached and the original water flow restored.	
10/19/2021 19:53	Lake		No	Yes	1 time	1 time			Remove the dam and drain the reservoir	The conservation arguments that make that make the case that the dam and reservoir obstruct the long term health of the river and watershed		Speculative	
10/19/2021 19:56	Volusia		No	No					Breach the dam	There are 20 drowned springs that would benefit from breaching the dam. Also there has been a 92% decline in fish populations in Silver Springs. Restoring the migratory routes will help with the fish population improving the health of Silver Springs.	Millions of tax payers dollars spent to repair the dam. Not to mention this has been a rough year for manatees. Not breaching the dam keeps them from essential warm water winter habitat.	No. Breaching the dam is long overdue.	2021 has been a deadly year for the manatee. They need their natural habitat restored for long term benefits. Thank you for your consideration.
10/19/2021 19:56	Hillsborough		No	Yes			1 time	Wildlife viewing	Get rid of the dam	Wildlife, water quality and conservation	Poor water quality, poor conservation	Let the dam go	
10/19/2021 19:57	Brevard		No	No					I think it would be a tragedy to spend millions of hard earned tax dollars to repair a dam for a cross state barge canal that is never going to happen at this point. We have an incredible opportunity to allow for a mistake to be rectified and to create an incredible additional of natural beauty to our great state.	The big things that all seem incredibly positive to me is the fact that the dam can become a surplus of income for our state through increased eco-tourism rather than costing somewhere between 3 and 5 million dollars to be used a very small portion of the population. The idea that thousands of acres of submerged land and aquatic plant life could come back once the water level subside where it's been forced with the dam. The fact that manatees and all types of fishing life would have access to this area again, which in itself should be enough to make this happen.	My biggest concern is that instead of creating a surplus of economic stimulus over the next decade for our state, money that could be turned around to be used to provide other positive environmental benefits to our state without any increase in taxes, we would instead have to waste millions of dollars to repair something that has no actual benefit.	No, I do not see any partial measure that would even make sense. You can't halfway repair the damn, so we either are forced to waste millions of dollars on something that shouldn't be there, or we finally create something that will make our gorgeous state even more gorgeous.	I really appreciate the fact you all are taking the time to ask the citizens are thoughts on this, I really hope to hear that the breaching of the dam is something that will be occurring in the very near future!
10/19/2021 19:59	Lee		No	No									
10/19/2021 20:01	Alachua		No	No					I would love to see the Rodman/Kirkpatrick Dam breached to allow for the full restoration of a free-flowing Ocklawaha River most particularly to allow for restoration of nature, including the access that Manatees would regain from the warm water habitats.	There are many! e.g. the approximately $14 Million that would be saved in dam repairs. If the dams failed, even with repairs (highly possible given climate change), the damage to homes and cost to the economy would be considerable, and their are many tourism benefits, and benefits to nature.	There would be considerable sums of money spent on a failing dam, with the risk of continuing failure, and continuing damage to wildlife.	No, the dam is a disaster waiting to happen. Breaching it would provide a sustainable and economically viable solution.	
10/19/2021 20:05	Outside of state / other	Kent WA	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Manatees will suffer.		
10/19/2021 20:12	Outside of state / other	LA California	No	No					Take the dam down, restore the ecosystem	All the animals will be in a better position to survive especially the manatees, they need the warm water to survive.	The ecosystem will not support the animals that depend on it.	No.	
10/19/2021 20:12	Orange		No	No					I believe that is breaching the dam can restore a historic natural flow of water that only ceased by intervention of industry would be the most beneficial solution to protecting and preserving the bedrock of Florida to future generations.	The Kissimmee river restoration project that begins to restore the regenerative watershed, one of the nations largest, that south Florida had been before an epoch was suddenly paused for the sake of grazing land in a manner note sustainable for future generations.	Florida would continue to corrode with further poisoning of water from habits that are corrosive to long-term existence for the benefit of temporary and short term gains.	The scenario seems like a did or didn't achieve outcome with any "middle ground" being a scapegoat for failure to achieve the outcome desired by the majority.	It is my hope that the conversation can lean more on how to properly allow for the reintroduction of previous labelled to prairie land and away from keeping a few boat ramps running. Florida is overflowing with boat ramps and water areas. This can allow for more land to become habitat for our wildlife that is losing habitat daily and add to the wildlife corridor.
10/19/2021 20:13	Alachua		No	Yes			1 time		Remove the dam. restore flow of Ocklawaha river	The damage that the dam has done to Florida's springs	Environmental degradation.	No	
10/19/2021 20:14	Duval		No	No					Remove dam and permit free flow of the various rivers.	The fact that the St Johns River has been negatively impacted by the damming of the Oklawaha.	The continued decline of the St Johns River.	not really	
10/19/2021 20:15	Sarasota		No	No					I'd like them gone and the river restored.			No	
10/19/2021 20:18	Seminole		No	No					Breach the Rodman/Kirkpatrick Dam.	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/19/2021 20:21	Outside of state / other	GA	No	No					Please protect the manatees. There are so few left.	Protecting the manatees.	Manatees and other wildlife going extinct. Manatees are endangered bow.	Set aside this area for the 30/30 and give rent manatees a home. Stop motorized boats and jet skiing in this area so the manatees will not be hurt. Canoeing and kayaking would be okay. Make it a haven for wildlife. There also so few places in Florida these days that are of refuge for animals and people.	
10/19/2021 20:22	Miami-Dade		No	No					Breach it to restore water flow to natural areas.	Native plants need to be nurtured and preserved in the affected area.			
10/19/2021 20:23	Leon		No	No					Restoring the Great Florida Riverway by breaching this dam will re-establish access to essential habitat for manatees, bring back migratory fish, connect three river ecosystems, historic Silver Springs, and restore a lost riverway for anglers and paddlers from Ocklawaha's Harris Chain of Lakes to the Atlantic. It is time to save the Ocklawaha, Silver, and St. Johns Rivers, as well as historic Silver Springs.	Restoring the Great Florida Riverway by breaching this dam will re-establish access to essential habitat for manatees, bring back migratory fish, connect three river ecosystems, historic Silver Springs, and restore a lost riverway for anglers and paddlers from Ocklawaha's Harris Chain of Lakes to the Atlantic. It is time to save the Ocklawaha, Silver, and St. Johns Rivers, as well as historic Silver Springs.	Wildlife & habitats gone for good. PEOPLE ARE DESTROYING HABITATS VITAL FOR WILDLIFE	Nope	Restoring the Great Florida Riverway by breaching this dam will re-establish access to essential habitat for manatees, bring back migratory fish, connect three river ecosystems, historic Silver Springs, and restore a lost riverway for anglers and paddlers from Ocklawaha's Harris Chain of Lakes to the Atlantic. It is time to save the Ocklawaha, Silver, and St. Johns Rivers, as well as historic Silver Springs.
10/19/2021 20:23	Pasco		No	Yes			1 time	Other	Let the river flow again	Remembering the way it was before the dam seeing pics of the steam boats on the river the beautiful river before	Loss of history of the river and water habitat	No	It was so sad that politics ruined the river and habitat and all that went with it like it wasn't important
10/19/2021 20:31	St Johns		No	Yes		1 time		Fishing Boating	Get rid of the dam the fishing in the river is just as good as rodman	Fish below the dam and there is great hus fishing if the dam is removed the fishing is still good and we have a truly free flowing river system	I will still fish but will always be disappointed people have not done the right think the dam is stupid buss are on both sides	No remove the stupid dam like we have done all over this country and let the water flow free	I fish the ocklawaha below the dam every week end and catch bass and bream just like they do in Rodman I think the fishing and use of the river will just get better
10/19/2021 20:31	St Johns		No	Yes		2-5 times		Wildlife viewing	Dismantle and allow the Ocklawaha River to flow back into its natural state.	The simple fact that given the chance, ecosystems that have been disrupted can be allowed to return to their natural state and flourish.	That the natural beauty of the area and its hidden springs will never be experienced by future generations. I'm old enough to remember pre-Rodman years.	No.	Thank you.

10/19/2021 20:36	Volusia		No	No					Restore back to its original state with no dam.	The adverse affect on the area	Contonsation of the original issues without resolve. Why spend unnecessary funds on a project that was never used as intended. We have water shortage issues. Breaching the dam would help resolve the problem with additional water flow. Utilizing funds more appropriately and in the process create a win-win situation.	No, why continue putting money into a Project that was never implemented when other excellent solutions to existing critical issues can be better served spending less money.	
10/19/2021 20:38	Marion		No	No									
10/19/2021 20:43	Palm Beach		No	Yes	1 time	1 time	2-5 times	Canoeing / kayaking Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees, an iconic species integral for the health and survival of the ecosystem at large. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future when record numbers have already starved and died, setting off a chain reaction in the environment and imperiling the species that makes waters in balance. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/19/2021 20:49	Collier		No	No					I support the restoration of the Ocklawaha River by breaching the existing dam and draining the Rodman Reservoir for the broad range of environmental and economic benefits that restoration would provide.				
10/19/2021 20:49	Sumter		No	No					Restore natural water flows	PMPS	Loss of native plant diversity		
10/19/2021 20:50	Outside of state / other	Springfield, Oregon	No	No					it's time to restore manatee habitat!	even while manatees are still struggling with starvation from seagrass loss, the greatest long-term threat to these animals is the loss of warm water habitat that manatees need to survive the winter. Right now, 60% of Florida's manatees depend on power plant outfalls to keep warm and survive the winter - an unsustainable and unnatural situation. Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	Loss of these precious maanatees. We cannot make any ourselves!	The very closest you can get!	
10/19/2021 20:51	Okeechobee		No	Yes					Removal	The dam changed the ecosystem limiting fish species diversity and affecting the health of Silver and many other springs. Manatee habitat needs support and expansion.	Continuing degradation of the river system.	Can't think of one. That dam needed to go 30 years ago.	All the science points to the need to remove the dam. There are plenty of places to fish. Just do it!
10/19/2021 20:58	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Develop it, maintain it, focus resources on it.	Saving our planet, helping wildlife, clean air.	Destruction of natural resources and fish and game.	Blowing up the dam is not the answer. Any invested person with an ounce of intelligence can see that.	
10/19/2021 21:01	Indian River		No	Yes			1 time	Wildlife viewing	removal				
10/19/2021 21:05	Orange		No	Yes			1 time	Other	Rodman Dam was an ecological disaster from it's conception, and the voices of science and naturalists were hidden from the public. The dam must be removed and the "reservoir" drained withe underlying land restored to it's natural state. This is for environmental and species conservation. But beyond that, it has to be done to protect the water supply 25 million residents and millions of tourists must have, including the members of the SJRWMD.	The relevant. information is public record.	Decimation of the springs, wildlife, aquafers and rivers of the Peninsula, the collapse of the state's economy and the loss of most of Florida for human habitation.	No.	Members of the SJRWMD need to set aside their continuance of doing the bidding of corporate and PAC interests and, for one noble moment in history, do their jobs to benefit all life in peninsular Florida by voting to restore the Ocklawaha and surrounding lands to the cindition they were in before this same body approved the greatest boondoggle in the state's history. For once, choose the correct course of action.
10/19/2021 21:07	Outside of state / other		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/19/2021 21:07	Duval		No	Yes		2-5 times	More than 5 times	Fishing Boating Wildlife viewing	Keep the reservoir	We need the cheap freshwater supply and it supports a wide variety of wildlife	Loss of habitat and a great freshwater supply that is not managed well	Closing off the locks and forcing all the flow down the oklawaha	
10/19/2021 21:13	Duval		No	No					Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam to reunite the natural connection of Silver Springs, the Ocklawaha and the St. Johns River.	The science supports restoration. Studies by federal and state agencies have clearly demonstrated that restoration of a free-flowing, connected system is cost-effective and will provide significant ecological benefits to the St. Johns, Ocklawaha and Silver Rivers as well as Silver Springs. More information to consider: Three rivers, Ocklawaha, Silver and St. Johns, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish migration patterns and essential manatee habitat are reestablished 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of forested floodplain wetlands within the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs	We miss a historic opportunity to stop the ongoing ecological degradation caused by the dam and finally reunite the natural flow of these rivers. Breaching the dam would restore the natural flow of 150 mgd of fresh water, improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. A free-flowing Ocklawaha will reestablish 15,000 acres of forested wetlands and fortify downstream submerged grasses from Welaka to Jacksonville in the St. Johns River that are critical to river health and fish habitat. More information to consider: We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs, and invasive fish like the Blue Tilapia increase. Water quality declines, further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.
10/19/2021 21:15	Outside of state / other	Ohio	No	No					The restoration of the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River would be the most important manatee habitat restoration project in the state and would provide essential winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed would deprive manatees of essential warm-water winter habitat, harming their chances of survival in the future.	No. Wildlife and water quality cannot wait any longer.	
10/19/2021 21:16	Alachua		No	Yes	More than 5 times			Fishing Wildlife viewing	Harvester cabbage removal	other than the weirds that blow the cabbage around,no more chemical spraying,this is waters that could be used for future drinking water.	nothing, they would ruin a great ecosystem if removed including hurtingothe surrounding economys	nope	
10/19/2021 21:16	Pinellas		No	No				Boating	I would like to see the dam destroyed and a return to a more natural flow of the river.	I am most excited that this would give hundreds of manatees access to warm springs, which will help keep them healthy & happy during the winter months.	We need to get this project moving forward right now. We have state & federal funding to work with, there are a lot of people interested the problems the dam is exacerbating, and, if we don't act now, this opportunity may pass us by.	No. This dam has out-stayed its welcome by half a century. It's time for it to go!	We can save some manatees & make Silver Springs even more beautiful. The benefits far, far outweigh the costs.
10/19/2021 21:17	Charlotte		No	No					Florida truly needs to breach the Kirkpatrick Dam in order for our world renown manatees to be able to get to warm water which they desperately need in order to survive and thrive.	Restoring the Ocklawaha River allows the manatees the warm water they need; it is extremely important for their having a future. The Florida Wildlife Corridor will benefit the panthers, bears, eagles, deer, and bobcats.	In time, there will be no Manatee in FL. This affects Florida's income from tourism, not to mention the simple fact that we allowed the Manatee to die--or shall I say murdered them, as its breaching of the Kirkpatrick Dam should have been done about 50 years ago.	NO, We need to breach the "f^_ dam!	I care very much about Florida's water and wildlife. That is why we moved here full time eight years ago. We came, not for the tourist beaches, but for the true Florida interior with it's waterways & wildlife. Please respect our wildlife and our natural lands.
10/19/2021 21:17	Manatee		No	No					That which preserves the most of Florida's native habitat for its insects, plants, animals and birds!	The position of the Florida Native Plant Society	That more of Florida natural environment is lost to human development that serves our purposes only.	Again, I support the position of the Florida Native Plant Society.	Support and protect all of Florida's natural habitats for our present and future generations.
10/19/2021 21:19	Leon		No	No					Please remove the dam so the Ocklawaha can flow freely!		The health and well-being of so many people and ecosystems would be sacrificed to the narrow interests of a few.	No. Remove the dam.	
10/19/2021 21:22	Outside of state / other		No	Yes			More than 5 times	Fishing Boating Wildlife viewing	It should be maintained exactly as is.	Supports an incredible number and diversity of birds and other wildlife that would not be supported in its absence. Provides food and safety for a large number of Manatee. Has some of the best fishing for trophy large mouth bass in the country. Tourism provides an economic boost to an area of the state that needs it. It also does a major job of filtering the water that flows thru it. I pride myself on being an environmentalist and conservationist. But I believe humans can make changes and improvements that actually improve our environment and create more habitat for wildlife. I believe Rodman Reservoir is a perfect example of that, providing incredible habitat and opportunities for outdoor recreation and helping to make up for many natural areas that have been destroyed by development.	I would be concerned with the loss of habitat for a wide range of wildlife including the endangered manatees. It would also take away the opportunity for outdoor recreation and economic support. I also fear it would take generations to revegitate the area currently covered by the lake creating a real eyesore for many years.	No, I don't understand what the proponents of destroying Rodman are trying to accomplish. So I am not aware of any other partial outcome that wouldn't destroy all the current benefits of the reservoir. I believe the reservoir is now providing more support and habitat for aquatic wildlife and manatees than it could if the dam were removed and the reservoir drained.	Before COVID and some health issues I was traveling from Iowa and spending 6 to 9 days per year on Rodman. I expect to return to that level.
10/19/2021 21:22	Alachua		No	Yes	2-5 times			Wildlife viewing	Remove the dam Use the wood in the water for use within the park Gravel building materials Having the dam open with help manatees migration, mullet migration, large shrimp migration Water flow would help with the vegetation build up and algae	The dam is in critical condition Catastrophe collapse would cause flooding Florida Defenders have done research	Total collapse of the spring shed Silver Springs is in need Okalawaha River 20 hidden springs will continue to be lost	Yes restoration of the Okalawaha River Healing would start immediately	
10/19/2021 21:24	Outside of state / other		No	No					Have the dam taken down	Flood by river as a dam was being built and watched the river, the life in it, and the economy around it be destroyed.	continued destruction and degradation of this system and the river economy	open the dam and allow flooding to annually.	
10/19/2021 21:25	Outside of state / other	Erie County, NY	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide unmhibited passage, particularly during cold winter months. when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/19/2021 21:25	Outside of state / other	Glendale, California	No	No					Create a safe place for the manatees.	Manatees are close to extinction and they are an integral part of the ecosystem	More manatees would perish	I don't know	For too long interests other than the environment have prevailed. Unless we change our focus, the world we are leaving for future generations will be uninhabitable for all of us
10/19/2021 21:26	Hillsborough		No	No					Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every additional day the dam and reservoir remain in place results in additional environmental degradation.	Over 20 of the lost Ocklawaha / Historic Silver Springs, as Rodman Springs, and many miles of natural river channel that were drowned as a result of dam construction would be restored. Thousands of acres of submerged aquatic plant communities would be able to regenerate in the restored river channel, and in the re-emerged spring run streams that drained into the Ocklawaha historically. 6,000 acres of stressed floodplain wetland located downstream of the dam would be enhanced. Imperiled plant species like the endangered Star Anise and threatened Hartwrightia, which are native to the banks of this region's spring run streams, could expand their range into the restored spring systems. Draining the Rodman Reservoir would remove the single greatest barrier to plant and animal movement along the Ocala to Osceola (O2O) Wildlife Corridor by replacing the open water expanse of the Reservoir with a restored floodplain forest, to the benefit of many listed plant species native to the region including the Federally listed Clasping Warea and Scrub Buckwheat. Three river systems - the Ocklawaha, Silver and St. Johns - would experience significant environmental improvement from restoration. Manatees would regain open access to the warm water habitats of the Ocklawaha and Silver Springs. Migratory fish including the Striped Bass, American shad, American eel, and the critically Endangered Atlantic Sturgeon and Shortnose Sturgeon would once again have open access to the Ocklawaha system if the dam is breached.	The broad array of environmental benefits to native flora and fauna, including many imperiled species, that would result from restoration would not be possible. Water quality in the Rodman Reservoir and Lower Ocklawaha/St Johns River system would continue to decline. The economic benefits that would result from increased and enhanced recreational usage would be denied to the surrounding local communities. Residents and business owners in areas immediately downstream of the dam would continue to be under threat in the event of failure of a dam that has never, and will never, satisfy the purpose of its construction. Thousands of acres of submerged aquatic plant communities would be unable to regenerate in a restored river channel and in the re-emerged spring run streams, and 7,500 acres of floodplain forest would not be restored. The Reservoir would continue to be a barrier to movement by native wildlife and plant life along the length of the O2O Corridor, and compromise the value of Florida's investments in conserving lands like the Etonian Creek State Forest, and approved Florida Forever projects. Taxpayers will perpetually be on the hook for repair and maintenance of the dam and Reservoir, and continue to be liable for any loss of life or property damage that would result from a dam failure. Imperiled plant species like the endangered Star Anise and threatened Hartwrightia, which are native to the banks of this region's spring run streams, would be unable to expand their range into the unrestored spring systems.	No. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration. The survey concludes with the option of providing additional comments (at your own discretion if you wish to elaborate on anything or add personal reflections or considerations). Remember that you do not need to be a local resident, or even a Florida resident, to participate in the survey! Take an expensive view of ecotourism and recreational usage by including Silver Springs, the Ocala National Forest, the St Johns River, and important land conservation projects like the Etonian Creek/Cross Florida Greenway Florida Forever project. Ultimately, we all have a stake, environmental and economic, in whether Florida finally restores a free-flowing Ocklawaha River.	
10/19/2021 21:26	Outside of state / other	Albuquerque, NM	No	No					reunite the Ocklawaha and St. Johns Rivers and Silver Springs by removing parts of the dam	re-establish access to essential habit for manatees and other wildlife	negative impact to wildlife		
10/19/2021 21:26	Pinellas		No	Yes	2-5 times	More than 5 times		Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing					
10/19/2021 21:27	Broward		No	No					Open up	Manatee habitat	Manatees	No	

10/19/2021 21:29	Duval		No	No					Remove the dam and let the river return to its natural state.	River increasing development seems to be saving the St Johns River with more demands for water and pollution. Lessons learned from the failures in the Everglades should be followed.	Increasing degradation of the St Johns River.	No		
10/19/2021 21:30	Duval		No	No					I believe that reuniting the Silver Spring water systems with the St. John's River system will positively benefit the ecology of the area; notably migrating fish species and "wandering" animal species, such as the manatee. If total or partial removal of the dam would reunite these river systems, I am all for it.	Information given to me by the Save the Manatee club has given me the basis of the ecological information I am referencing.	Florida's ecosystems are fragile, made more stable by being interconnected, and are being asked already to support populations that are too large to handle. The more segmented the different river systems remain, the less stable they remain in the type of large weather events that are becoming more common.	Any portion of removal, subverting, or detouring around the dam that allows free, two-way intermingling of the rivers would be acceptable to me.		
10/19/2021 21:31	Outside of state / other	New Jersey	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to $37 property owners and up to $57 million in damages. The dam is an economic boondoggle. 10/19/2021 21:36	Outside of state / other	Marysville, MI 48040	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("OOS") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/19/2021 21:36	Orange		No	Yes			More than 5 times	Wildlife viewing	Leave it for the Manatees	It could kill manatees they need it to survive	The extinction of the Florida Manatee

Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/19/2021 21:38	Volusia		No	No										
10/19/2021 21:39	Brevard		No	Yes			1 time	Wildlife viewing	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to $37 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/19/2021 21:39	Outside of state / other	Humboldt County, CA	No	No					Dam removal	The dams have blocked access to migratory fish and manatees.	Manatees going extinct from lack of suitable habitat. Damage to other migratory species that are blocked by dams.	No.		On the west coast of California we have experienced similar problems with dams and native salmon survival. Losing species is a forever decision. The dams need to go.
10/19/2021 21:39	St Johns		No	Yes			2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing Other: photography	We have an aging dam that serves no practical purpose, nearing the end of its life, and removing it will restore threatened manatee habitat, as well as helping restore countless springs, 20 of which are flooded and unaccessible for wildlife as well as humans.	That things remain as they are, the ecosystem continues to deteriorate, and we spend even more tax dollars maintaining a dam whose sole purpose was never realized, and now serves only a very small percentage of the population of our state.	No, there really is no compromise, or any way to achieve the needed outcome, short of a full breach of the dam and complete restoration of the Ocklawaha River!		Removal of the dam and restoration of the river is so long overdue, it's hard to express adequately in words. It's vitally important to restore this piece of grand, old, wild Florida before it's too late. Thanks so much for taking this action to gather what I'm sure will be overwhelming support for dam removal and restoration, it's in Florida's best interest!
10/19/2021 21:43	Lake		No	No										

10/19/2021 21:43	Lake		No	No					Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every additional day the dam and reservoir remain in place results in additional environmental degradation.	7 day area in the lower Ocklawaha's historic floodplain, 23 freshwater springs, and many miles of natural river channel that were drowned as a result of dam construction would be restored. - Thousands of acres of submerged aquatic plant communities would be able to regenerate in the restored river channel, and in the re-emerged spring run streams that drained into the Ocklawaha historically. - 8,000 acres of stressed floodplain wetland located downstream of the dam would be enhanced. - Imperiled plant species like the endangered Star Anise and threatened Harhertighta, which are native to the banks of this region's spring run streams, could expand their range into the restored spring systems. - Draining the Rodman Reservoir would remove the single greatest barrier to plant and animal movement along the Ocala to Osceola (O2O) Wildlife Corridor by replacing the open water expanse of the Reservoir with a restored floodplain forest, to the benefit of many listed plant species native to the region including the Federally listed Clasping Warea and Scrub Buckwheat. - Three river systems - the Ocklawaha, Silver and St. Johns - would experience significant environmental improvement from restoration. - Manatees would regain open access to the warm water habitats of the Ocklawaha and Silver Springs. - Migratory fish including the Striped Bass, American shad, American eel, and the critically Endangered Atlantic Sturgeon and Shortnose Sturgeon would once again have open access to the Ocklawaha system if the dam is breached. - At least 150 million gallons a day of additional natural flow, and potentially much more, would be restored to the Lower St. Johns River, improving water quality and increasing resiliency of the entire St Johns/Ocklawaha River system by impeding the salt water intrusion resulting from sea level rise. - The large expenditures required for herbicide treatments to control the growth of invasive aquatic weeds and to conduct other ongoing maintenance needs, including periodic drawdowns, in a futile attempt to maintain water quality and recreational access in the stagnant	- The broad array of environmental benefits to native flora and fauna, including many imperiled species, that would result from restoration would not be possible. - Water quality in the Rodman Reservoir and Lower Ocklawaha/St Johns River system would continue to decline. - The economic benefits that would result from increased and enhanced recreational usage would be denied to the surrounding local communities - Residents and business owners in areas immediately downstream of the dam would continue to be under threat in the event of failure of a dam that has never, and will never, satisfy the purpose of its construction. - Thousands of acres of submerged aquatic plant communities would be unable to regenerate in a restored river channel and in the re-emerged spring run streams, and 7,500 acres of floodplain forest would not be restored. - The Reservoir would continue to be a barrier to movement by native wildlife and plant life along the length of the O2O Corridor, and compromise the value of Florida's investments in conserving lands like the Etoniah Creek State Forest, and approved Florida Forever projects. - Taxpayers will perpetually be on the hook for repair and maintenance of the dam and Reservoir, and continue to be liable for any loss of life or property damage that would result from a dam failure. - Imperiled plant species like the endangered Star Anise and threatened Harhertighta, which are native to the banks of this region's spring run streams, would be unable to expand their range into the unrestored spring systems	No. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration.	
10/19/2021 21:44	Palm Beach		No	No					Restore the Ocklawaha River by breaching the Rodman - Kirkpatrick dam.	Breaching the dam would restore freshwater flow and provide crucial habitat for wildlife, especially manatees.	death of many (more) manatees	a drawdown alone would not be sufficient	I am a Florida resident of more than 50 years and I care deeply about Florida's environment and wildlife (and citizens)!!
10/19/2021 21:45	Hillsborough		No	Yes		1 time	2-5 times	Canoeing / kayaking Other: hiking	Breach the Rodman/Kirkpatrick Dam	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 last springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	- No. Breaching the dam is 50 years overdue.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
10/19/2021 21:47	Charlotte		No	No					Helping the reservoir out. Save the manatees				
10/19/2021 21:48	Outside of state / other	New Mexico	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. 10/19/2021 21:52	Palm Beach		No	No					Remove portions of it to allow MANATEES to migrate and thrive	That the rivers should be restored as NATURE MADE THEM. Manatees and other animals should not have to navigate artificial barriers	Stagnation of the waters, pollution, death of species, fish, manatees, wild birds.	No.	Please reunite the rivers and return to a more natural state. Florida has been decimated by overbuilding, sewage, red tides, loss of habitat ... loss of wildlife of all kinds. Do we want more of that???
10/19/2021 21:53	Lake		No	Yes			2-5 times	Wildlife viewing	Remove it.	To restore the original flow to benefit the environment and wildlife.	That it will never happen in the future.	No	
10/19/2021 21:53	Outside of state / other	Mobile, AL	No	No					Breach the Rodman/Kirkpatrick Dam in order to restore the Ocklawaha River.	The Rodman Dam affects three rivers, more than 50 springs, and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and keeps hundreds of manatees from obtaining refuge and food in the cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem that are essential habitat for manatees, and provide thousands of acres of habitat within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife.	Not breaching the dam means not providing the essential warm water and forage habitat for manatees at a time when they are dying at an alarming rate due to habitat loss in other areas. Manatees can use the Ocklawaha and Silver Rivers; but, to do so, they must pass through a manually operated lock that is dangerous and open only intermittently. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the river system. State and federal funds are available; public interest is high, environmental needs are critical, and the dam is unsafe.	No. Breaching the dam is more than 50 years overdue. Dam safety, improved water quality, and wildlife need to happen now. Temporarily drawing the reservoir down to 11- or 12-foot mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow, and an unobstructed blueway.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, more die-offs will occur in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. Sixty percent of Florida's manatees currently depend on power plant outfalls to keep warm in the winter - this is an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/19/2021 21:53	Volusia		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Protect the area and wildlife - especially the manatees and other protected species	Declining numbers of said species	Loss of habitat and destruction of the eco system	None	
10/19/2021 21:54	Marion		No	No					Restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. ±5,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/19/2021 21:55	Orange		No	Yes	1 time	2-5 times	More than 5 times	Wildlife viewing	Allow wildlife to enjoy this area	It is critical to the environment.	We would have lost the ability to make an important impact on the environment	No	
10/19/2021 21:56	Miami-Dade		No	Yes		2-5 times		Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored	The lower St. Johns, Ocklawaha, and Silver Rivers, 20 last springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.
10/19/2021 21:59	Outside of state / other	Lake County, Ohio	No	No									
10/19/2021 22:02	Lee		No	No					Remove them so that the Ocklawaha River can run freely.	Restoring the Great Florida Riverway would also restore the Florida Wildlife Corridor	Florida wildlife will continue to dwindle.	I would have to see the proposals.	
10/19/2021 22:02	Seminole		No	No					Take down the dam and restore the river to pre-"barge canal" status.	Many years of watching this boondoggle. It was stopped for valid reasons and should have been restored at once.	Continued degradation of the Okalwaha, and it's many springs including the iconic Silver Springs, which I did visit before the dam was built. Also, decreased potential for manatee habitat.	No. All the way.	This was an ill conceived project to start with.Kind of like the channelization of the Kissimmee River., That has been restored. Time for the Oklawaha.
10/19/2021 22:02	Miami-Dade		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood-damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dams, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway

10/19/2021 22:03	Outside of state / other	Metropolis, Illinois	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	1) 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer. 2) Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	1) Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. 2) Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/19/2021 22:03	Outside of state / other	Evansville Indiana	No	No					The natural habitat returned to it's natural state.		Animal die off.	No	
10/19/2021 22:03	Hillsborough		No	No					Breach the dam	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the opportunity to save critical wild life	No	
10/19/2021 22:04	Lake		No	No					Their removal/.r	Restoring the River to its original design by God.	Continued challenge for wildlife dependent on the River and surrounding area.	No.	
10/19/2021 22:04	Duval		No	Yes		2-5 times	Boating Wildlife viewing		Breach the Dam	The continuing decline of both the Ocklawaha and St. Johns Rivers.	See above. The same answer.	No	
10/19/2021 22:05	Palm Beach		No	Yes		1 time	Fishing Fishing (shoreline/structure)		Protect manatees	Manatee literature.	The manatee population would decline.	No.	
10/19/2021 22:06	Outside of state / other	Oklahoma	No	No					That the manatees have safe passage	My love for animals and their god given habitats.	The welfare of the animals loosing their natural habitat.		
10/19/2021 22:07	Outside of state / other	Snohomish Washington	No	No					Protect manatees and habitat				
10/19/2021 22:07	Clay		No	No						Habitat for protected species, like Manatee, trouts.	Ruining the eco system that is not reversible.	Put back manatee to endangered species.	Not just habits for creatures, but think about future generation that has to live with OUR decisions and suffer, or miss the opportunity to appreciate the Florida rivers, lake.
10/19/2021 22:08	Manatee		No	No					To improve the dam to help save the manatees	Saving the manatees	Take care of the environment.		
10/19/2021 22:08	Outside of state / other	Ferndale, WA	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. - I have used material provided by the Save the Manatee Club, because they have done tremendous research on the subject, and I share their concern and respect for all of God's wildlife. Thank you for your consideration.

This useless, destructive damn dam will be completely removed and fully reclaimed by the end of this decade or sooner.	Manatee MUST survive! Worthless, outdated dams must not.	This useless, destructive damn dam will be completely removed and fully reclaimed by the end of this decade or sooner.
10/19/2021 22:36	Monroe		No	No					I think the dam should be removed so that the Ocklawaha River can flow freely.	It's a waste of taxpayer money to try to repair such an old and relatively useless dam. Furthermore, restoring the historical flow of the river would improve water quality for humans and for the ecosystem as a whole.	The dam will eventually fail. We will have lost the opportunity to improve the environment while simultaneously wasting millions.	No. The State of Florida is already nearing ecological disaster because of our greed and lack of foresight concerning the Everglades.	
10/19/2021 22:37	Alachua		No	Yes		1 time		Other: I do not use the Rodman Reservoir for recreation because of the dam. Once the dam is removed, my family, friends, and I will go there often.	The dam must be removed and the Ocklawaha River with its many submerged springs restored. The wilderness area that was drowned by building the dam must be restored. Free the Ocklawaha!	Rodman Dam destroyed a healthy ecosystem, and the continued decline of water quality, spring flow, wetland forests, fish, wildlife, and recreation has led American Rivers to designate the Ocklawaha River as one of America's Most Endangered Rivers® of 2020. Removing the dam will help restore numerous now submerged springs as well as the Great Florida Riverway, comprised of the Ocklawaha, Silver, and St. Johns Rivers. Fish and manatee migration will be unhindered at last, providing access to much needed resources such as wintering sites for manatees. Submerged cypress forest and wilderness areas will be restored. The Lower Ocklawaha and St. Johns Rivers will receive more than 150 million gallons a day of restored natural flow, and millions of dollars will be saved on repairs of a dam that is past its life expectancy. Removing Rodman Dam and restoring the Great Florida Riverway is vital to improving overall ecological and economic health for North and Central Florida.	If the dam remains, more Floridians will be deprived of experiencing a healthy riverine ecosystem with all its benefits (clean water, clean air, multitudes of recreational opportunities, economic wealth). If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years. Restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. 10/19/2021 22:39	Lake		No	No					Remove it	Health and welfare of manatees	Manatees are in dire need of healthy grazing areas. Sadly, they are diminishing. Removing the dam would reopen feeding areas for manatees.	No	
10/19/2021 22:41	Outside of state / other	West Virginia	No	Yes		2-5 times		Fishing	Rodman Reservoir is the only reason we drive 12 hours one way 2-3 times a year !	The many memories my family has made on the lake	We would have to find a new favorite place to fish.	No	I have fished all over the east coast. And Rodman Reservoir is by far the best fishery I have ever fished. It would be a disgrace to ruin that !
10/19/2021 22:44	Miami-Dade		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Removing key portions of this dam to will re-establish traditional access to essential habitat for manatees, bring back migratory fish, and restore a lost riverway for anglers and paddlers	The dam is past its useful life. Bringing back traditional water flows to Ocklawaha, St. Johns Rivers and Silver Springs will help reestablish critical habitat for manatees and expand recreational opportunities	Continued decline in the manatee population and loss of this habitat for people to learn from/study		
10/19/2021 22:46	Orange		No	Yes		2-5 times		Canoeing / kayaking	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/19/2021 22:46	Miami-Dade		No	No					Conservation efforts made towards local manatee populations		Loss of biodiversity, ecosystem collapse		
10/19/2021 22:46	Pinellas		No	No					remove completely	restore natural waterway	entrenched position of authorities	perhaps	
10/19/2021 22:50	Outside of state / other	Silverton, OR	No	No					I'd like the dam removed in order to restore the flow of the rivers, to restore wetlands, to rejuvenate the springs, and to provide habitat for manatees, birds, fish, and all sorts of wildlife that has had their habitat sharply curtailed by structures such as this. Dams are basically an outmoded type of structure, as evidenced by all the dams currently being decommissioned and taken down in the U.S. Now that we know how detrimental and destructive they are, there's no reason to maintain them or to double down on their usage. I learned about this dam because I've been a supporter of the Save the Manatee org for many years. So I know just how vulnerable the manatee population is - but I also see how wildlife and the landscape have been impacted over the years by man's insatiable need to keep building and building. The level of greed is insane, and it's at the expense of this one earth we have.	The facts and evidence speak to not just this dam as a boondoggle, but to dams in general as being massively destructive.	That the U.S. will continue on its death spiral of ruining the environment entirely, until there are no more trees, no wildlife, no fish, no clean water, just a barren dystopian wasteland. We are heavily on that path, and it's a short-sighted one. So many states, Florida included, still have some natural beauty left, and people like me who are very much into the outdoors and adventuring and nature would love to visit, if you show me that you care about us as tourists more than you care about money from corporations. Tourism is sustainable - the corporate money will dry up once you pollute the last bit of water or level the last tree.	No.	Think about what the U.S., the world, this earth will all look like in 20 years if people continue on this path of not giving a damn about the environment and the creatures who inhabit it, i.e. other than us.
10/19/2021 22:52	Martin		No	No									
10/19/2021 22:52	Outside of state / other	New York	No	No					I feel it is best to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. More than 15,000 acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida's black bears, panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. If the Ocklawaha River remains dammed, it will keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No, breaching the dam is 50 years overdue--wildlife and water quality can not wait any longer.	
10/19/2021 22:53	Lake		No	No					Remove the dam, or at least create some sort of travel access for manatees and other essential wildlife.	Too many manatees have been dying of late and anything that can be done to protect their dwindling population needs to be.	Manatees could go extinct during my son's lifetime. And that would be tragic.		

10/19/2021 22:54	Outside of state / other	Julian, West Virginia	No	Yes		1 time	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	For it to be left as is. It is a wonderful fishery, has abundant wildlife, manatees are thriving there. Love to see the eagles. Wonderful and unique ecosystem.	I have visited this reservoir numerous times in the last five years. Every year the wildlife seems to be thriving more every year. I have read many reports from both sides. The benefits of Rodman seem favorable.	Would hate to see the reservoir destroyed.	No	
10/19/2021 22:56	Pinellas		No	No				Help preserve the manatee habitat	Drastic loss of life in the past year of manatees throughout their Florida habitats.	Drastic further loss of m a relee life throughout their Florida habitats.	None.		
10/19/2021 22:58	Brevard		No	No				I would like to see it dismantled and the waterways opened back up to allow aquatic life to thrive once again in the warmer waters.	The dam serves no purpose, would cost too much to restore, costs too much to maintain for no real purpose and if damaged could cause very significant and devastating flooding.	There would be continued prevention of natural aquatic waterway function that is so essential to endangered wildlife like the manatee and native fish populations.	No. I think the dam is antiquated and serves no purpose, thus blocking the natural waterways and aquatic habitats.		
10/19/2021 22:59	Pinellas		No	No				Save the dam	Manatees	Manatees	Save the Manatees		
10/19/2021 23:01	Outside of state / other	Kent, WA	No	No				Take down the damn, restore river flow	Both land and water ecosystems near dam need to be restored to original	Ongoing environmental disruption	The dam is either there or not there. Restore river flow by taking out the dam.		We made a lot of mistakes by putting in so many dams. We have to back those dams out now.
10/19/2021 23:02	St Johns		No	No				Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. 10/19/2021 23:06	Outside of state / other	Edenton NC	No	Yes	1 time	1 time	1 time	Wildlife viewing	Restore the Ocklawaha River by breaching the Rodman-Kirkpatrick Dam	The dam prevents hundreds of manatees from having refuge and forage in cold weather. It would restore freshwater flow,uncover drowned springs which manatees need	We will miss an opportunity to provide much needed warm water refuge for manatees. Manatees must pass through a manually operated lock which is dangerous.	No. This action is 50 years overdue. Safety water quality and wildlife can't wait	2021 has been the deadliest year for manatees. Unless their natural habitat is restored it will only get worse.
10/19/2021 23:06	Duval		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Canoeing / kayaking Hunting Wildlife viewing	Leave it in place. All though the CFBC was a disaster project what is being proposed is not an environmental restoration plan it is an environmental destruction plan. The wildlife habitat and environment that has been left in it's wake in Rodman Reservoir is a beautiful gem for wildlife, Floridians and all who visit here.	The most important information to support this is that proponents of removing the dam have no real information or plan other than to remove the dam and hope something good happens. Having owned several hundred acres of land that borders the reservoir I'm very familiar with what the land has looked like before the dam and will look like if the dam is removed. Without a true complete restoration and reforestation plan and process this will be an even worse environment mental disaster with more mud, silt and other gunk being washed into the St. John's River. No one is willing or able to pay the price for a true restoration and even at that a tremendous amount of diversity for wildlife and tremendous wildlife habitat will be lost.	In short, an environmental and economic disaster from the loss of a tremendous wildlife habitat and the revenue that comes from it. Then as the worst takes place and someone has to pay for the cleanup and backlash caused by an impossibly funded and poorly executed destruction of the Rodman Dam.	Keep dam intact and improve water flow and water control of Ocklawaha on its way through Rodman Reservoir into the St. John's River.

While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/19/2021 23:26	Outside of state / other	Canada	No	No				We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.		As someone who's been to Florida many times I feel special care must be given to Florida's environment as it's such a unique place-this dam from what I've read is a complete environmental disaster and I'm hoping the state will knock it down.Keep Florida's species alive;keep Florida's forests and wetlands alive-take it down.
10/19/2021 23:27	Broward		No	No				I would like the Dam to be investigated to develop a plan to work with environmentalists and scientists to determine the best solution for the environment, wildlife and for the local residents. I plan to move around the central part of Florida to retire. I plan to be outdoors and visit all parts of Florida. I hope to become active in preserving some part of our natural landscape.	Allowing the natural flow to aid Florida's manatees.	The manatee population will decrease.	A study to confirm the positive use of the dam.		
10/19/2021 23:29	Pasco		No	No				brought back to it's natural state	emptying the reservoir would help with everything from manatee migration to keeping a rising sea level from turning the adjacent St. Johns River salty.	the reservoir will be worthless, and dead.	At this late in the game.... no...should have improved/repaired it years ago.. but it wasn't, so.. now restoration is a must.		
10/19/2021 23:32	Brevard		No	No				I would like to see these dams removed so as to unite the St. Johns River to the Ocklawaha and Silver Springs. This will re-establish access to essential habitat for manatees.	Almost 1000 manatees have died since January in Florida. Every effort must be made for the manatees to be viable.	My concern is for the ongoing survival of the manatees.	Provide access to habitat for manatees.		
10/19/2021 23:32	Sumter		No	No				I want to save the manatees!	Please keep the dam from harming the manatee population!	The dwindling manatee population in Florida will be greatly decreased!	I'm not sure.		
10/19/2021 23:43	Broward		No	No					Help the animals				
10/19/2021 23:49	Pinellas		No	No									
10/19/2021 23:50	Outside of state / other	Canada	No	Yes			More than 5 times	Wildlife viewing	More wild life viewing	I spend a lot when I'm in the area so jobs benefit from wild life viewing	I won't come back		
10/19/2021 23:51	Hendry		No	No				Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam	Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.

10/20/2021 0:08	Alachua		No	No				Removing key portions of this dam, which is past its life expectancy, will re-establish traditional access to essential habitat for manatees, bring back migratory fish, and restore a lost riverway for anglers and paddlers.	Environmental protection and enhancement of Florida's natural beauty.	Ongoing habitat loss and/or destruction for manatees			
10/20/2021 0:08	Outside of state / other	CA	No	Yes			1 time	Wildlife viewing	protecting wildlife with educating public	future	bad		
10/20/2021 0:12	Sumter		No	No					I support the restoration of the Ocklawaha River by breaching the existing dam and draining the Rodman Reservoir.	Environmental and economic benefits that restoration would provide.	That would be sad.	No	
10/20/2021 0:17	Outside of state / other	Lake Hughes, CA	No	No					A benefit for the manatees that are threatened	Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	Degradation of the species	Restoring habitat by other means.	This action is important to maratee survival.
10/20/2021 0:22	Volusia		No	No					Leave the dam alone.	Things	A lot of things	Leave the dam alone	
10/20/2021 0:26	Pinellas		No	No				Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood-damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. 10/20/2021 0:59	Broward		No	No					yes	yes	no	no	no
10/20/2021 1:01	Outside of state / other	Boise	No	No					Whatever is best for the manatees and the surrounding wildlife.	The livelihood of the wildlife. We humans have done enough damage long enough. It's take we consider things outside of ourselves, like wildlife and our environment.	That once again humans chose economic gain and themselves than animals and the environment.		Let's do what's right for the animals.
10/20/2021 1:04	Outside of state / other	Arizona	No	No					Breach the dam to allow the Ocklawaha River to restore manatee habitat and stop their decline.	Even while manatees are still struggling with starvation from seagrass loss, the greatest long-term threat to these animals is the loss of warm water habitat that manatees need to survive the winter. Right now, 60% of Florida's manatees depend on power plant outfalls to keep warm and survive the winter - an unsustainable and unnatural situation.	The inevitable loss of a species. Everything on the planet has a purpose to create and maintain balance in our ecosystems. If species start disappearing we can never get them back, and could have unforeseen, devestating consequences on our environment for generations to come.	No	Thank you for considering my views on this important issue.
10/20/2021 1:13	Osceola		No	No					Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every additional day the dam and reservoir remain in place results in additional environmental degradation.	There are many benefits and I will include a few: 1. Draining the Rodman Reservoir would remove the single greatest barrier to plant and animal movement along the Ocala to Osceola (O2O) Wildlife Corridor by replacing the open water expanse of the Reservoir with a restored floodplain forest, to the benefit of many listed plant species native to the region including the federally listed Clasping Warea and Scrub Buckwheat 2. Three river systems - the Ocklawaha, Silver and St. Johns - would experience significant environmental improvement from restoration 3. At least 150 million gallons a day of additional natural flow, and potentially much more, would be restored to the Lower St. Johns River, improving water quality and increasing resiliency of the entire St Johns/Ocklawaha River system by impeding the salt water intrusion resulting from sea level rise 4. An estimated $14 Million in dam repairs, measured in 2006 dollars, would be saved by avoiding repairs to a dam that has exceeded its life expectancy and never fulfilled the purpose for its construction 5. The large expenditures required for herbicide treatments to control the growth of invasive aquatic weeds and to conduct other ongoing maintenance needs, including periodic drawdowns, in a futile attempt to maintain water quality and recreational access in the stagnant waters of the Reservoir, would become unnecessary 6. $57 million in potential flood damages to downstream areas around the community of Welaka would be avoided in the event of a dam failure 7. Economic analyses conducted by researchers at the University of Florida demonstrate the	1. The broad array of environmental benefits to native flora and fauna, including many imperiled species, that would result from restoration would not be possible. 2. The economic benefits that would result from increased and enhanced recreational usage would be denied to the surrounding local communities. 3. The Reservoir would continue to be a barrier to movement by native wildlife and plant life along the length of the O2O Corridor, and compromise the value of Florida's investments in conserving lands like the Etonian Creek State Forest, and approved Florida Forever projects. 4. Residents and business owners in areas immediately downstream of the dam would continue to be under threat in the event of failure of a dam that has never, and will never, satisfy the purpose of its construction. 5. Taxpayers will perpetually be on the hook for repair and maintenance of the dam and Reservoir, and continue to be liable for any loss of life or property damage that would result from a dam failure.	No. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration.	Be the hero! When future historians look back at these times, which side of history will you be on? Not only does it make environmental sense, but economic sense too!
10/20/2021 1:19	Orange		No	No					The dam should be breached for the natural river way to return	Re-establish an important ecosystem for manatees	Continued, unnatural environmental degradation for no reason	No, the dam no longer serves a purpose, and nothing could be more important than protecting manatees and fish that could use the passageway for transportation, shelter and food.	Thank you for asking the questions and taking input from locals.
10/20/2021 1:20	Outside of state / other	I lived in Dade County	No	No									
10/20/2021 1:47	Outside of state / other	Mason County, Washington state	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. 10/20/2021 2:08	Outside of state / other	Southern California	No	No					I would like to see them removed.	The need for wildlife to be able to traverse the waterways unimpeded.	Another missed opportunity to bring the state of Florida back into some semblance of ecological health.	Any step that benefits wildlife would be a positive.	Florida should join the trend in taking down unnecessary, harmful dams.
10/20/2021 2:25	Outside of state / other	Morro Bay, CA	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam. Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No		
10/20/2021 2:29	Outside of state / other	London, UK	No	Yes			2-5 times	Wildlife viewing	Recovering the wildlife habitat by removing the old dam and access to the manatee habitat can be used not only to help nature but promote wildlife sightseeing which could contribute to the local economy.	As far as I understand the dam is way past his life expentancy and more of a threat than a benefit for the local area in case of flood.	In case of a breach of the old dam that can be a threat for the wellbeing of pople living in the area and endangered wildlife such as the manatees who need the protection. The old construction may contribute to the pollution of the local water resources.	Using environment friendly methods to ensure a better future for the local community like building bypass channels and recovering rever vegetationalong the river beds that will support the water management better.	
10/20/2021 2:32	Outside of state / other		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Historic fish and manatees return as breach opens creating a free-flowing river	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	This exciting restoration will improve water quality and flow by generating an additional 150 million+ gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
10/20/2021 2:37	Orange		No	Yes	1 time	2-5 times	Wildlife viewing		Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	We desperately need to help our manatees, it's our responsibility and the best scenario to restore natural and essential warm water habitats.
10/20/2021 2:39	Santa Rosa		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/20/2021 2:41	Duval		No	Yes	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Hunting Wildlife viewing		Keep it the way it is	Grew up on Rodman as a kid and want to show it to my kids and grandkids			
10/20/2021 2:46	Outside of state / other	St. Louis, MO	No	No					Please remove the parts of the Dam which are necessary to restore natural habitat for manatees and other fish and open the river for recreational activities.	The quickly dwindling population of manatees in FL. I recall driving all the way from VA to FL with my daughter's Girl Scout troop and their families to see the FL manatees in 2003. Without the manatees, we would not have made the trip. Since then our family has been supporters of saving the manatee population in FL.	The further dwindling and eventual death of Florida's manatee population.	I am not sure. My family and I feel it is if the utmost importance to restore the traditional access of manatees and other marine life to their native habitats.	
10/20/2021 2:48	Outside of state / other	St. Mary's, GA, just across the state line	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.

10/20/2021 5:44	Putnam		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure)	Leave it alone	All of the reservoir would be dry kenwood would dry up cause it wouldn't be nothing there but an ecological disaster caused by man's hands again ... the clue is when gates are open there is nothing but little stream flowing thru the way it is now is cause of gates.. just leave it alone	Save rodman		
10/20/2021 5:48	Outside of state / other	Indiana	No	No					Tear it down	Manatees and other wildlife would be able to move more freely throughout the waterways to have access to food and warmer waters in the winter	The past few years have been really bad for manatee populations, so not doing something now to help them recover could move them from "threatened" to "endangered" or worse.	Removing only parts of the damn so that wildlife can still get through the waterway unimpeded	
10/20/2021 5:50	Bradford		No	No					Preservation	Maintain the natural wilderness, preservation.	Destroyed life, ecosystems, the lists go on and on.	No	
10/20/2021 5:52	Duval		No	No					Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every additional day the dam and reservoir remain in place results in additional environmental degradation.	Think how dynamic the Ocklawaha, Silver and St. Johns... would experience significant environmental improvement from restoration. Manatees would regain open access to the warm water habitats of the Ocklawaha and Silver Springs. ☑ Migratory fish including the Striped Bass, American shad, American eel, and the critically Endangered Atlantic Sturgeon and Shortnose Sturgeon would once again have open access to the Ocklawaha system if the dam is breached. Recreational sport fishing would be enhanced by allowing the Florida strain of the Striped Bass to reclaim what used to be its primary spawning habitat - the Ocklawaha. ☑ At least 150 million gallons a day of additional natural flow, and potentially much more, would be restored to the Lower St. Johns River, improving water quality and increasing resiliency of the entire St Johns/Ocklawaha River system by impeding the salt water intrusion resulting from sea level rise. ☑ An estimated $14 Million in dam repairs, measured in 2006 dollars, would be saved by avoiding repairs to a dam that has exceeded its life expectancy and never fulfilled the purpose for its construction. ☑ The large expenditures required for herbicide treatments to control the growth of invasive aquatic weeds and to conduct other ongoing maintenance needs, including periodic drawdowns, in a futile attempt to maintain water quality and recreational access in the stagnant waters of the Reservoir, would become unnecessary. ☑ $57 million in potential flood damages to downstream areas around the community of Welaka would be avoided in the event of a dam failure. ☑ Economic analyses conducted by researchers at the University of Florida demonstrate the economic impact from eco-tourists who use the natural portions of the Ocklawaha River is twice that of the anglers & boaters using the Rodman Reservoir, & annual use of the Reservoir's recreation sites has been on a downward trend since records began in 2004 as water quality and fish production have continued to decline year after year. ☑ When accounting for revenues generated by increased recreational usage, a cost-benefit analysis determined restoration would produce a cumulative net benefit of $47.3 million over	The broad array of environmental benefits to native flora and fauna, including many imperiled species, that would result from restoration would not be possible. ☑ Water quality in the Rodman Reservoir and Lower Ocklawaha/St Johns River system would continue to decline. ☑ The economic benefits that would result from increased and enhanced recreational usage would be denied to the surrounding local communities. ☑ Residents and business owners in areas immediately downstream of the dam would continue to be under threat in the event of failure of a dam that has never, and will never, satisfy the purpose of its construction. ☑ Thousands of acres of submerged aquatic plant communities would be unable to regenerate in a restored river channel and in the re-emerged spring run streams, and 7,500 acres of floodplain forest would not be restored. ☑ The Reservoir would continue to be a barrier to movement by native wildlife and plant life along the length of the CSO Corridor, and compromise the value of Florida's investments in conserving lands like the Etonian Creek State Forest, and approved Florida Forever projects. Taxpayers will perpetually be on the hook for repair and maintenance of the dam and Reservoir, and continue to be liable for any loss of life or property damage that would result from a dam failure. ☑ Imperiled plant species like the endangered Star Anise and threatened Hartwrightia, which are native to the banks of this region's spring run streams, would be unable to expand their range into the unrestored spring systems.	No. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration.	This should be an easy obvious decision. This is the opportunity for a win win for the environment and economy and residents. Please Restore a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.
10/20/2021 5:56	Orange		No	Yes	2-5 times	2-5 times	2-5 times	Canoeing / kayaking Wildlife viewing	The dam should be removed/	The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs. Habitat for wildlife, especially Manatees would be restored. Economic boon to area in tourism.	Maintaining the decrepit dam is a waste of public funds. The environmental impact of the dam will continue to degrade the area. Economic and environmental losses will continue.	No	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs.
10/20/2021 6:09	Citrus		No	Yes			More than 5 times	Canoeing / kayaking Wildlife viewing	Take down the man made dam!!! We have created enough environmental problems.	To let the natural waterway and habitats recover back to its original ecological health and purpose.	Decline in a healthy wildlife population and ecosystem! And more unnecessary expenses to tax payers for something that never should have been done in the first place!!!		it's the right thing to do!
10/20/2021 6:09	Duval		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Open it to allow access for the manatees to feed. Restore the Ocklawaha river.		Endangered manatees are losing habitat and lives!

10/20/2021 6:16	Broward		No	No					Restore the river to its natural flow	Wildlife especially manatees would thrive in the restored natural habitat	Manatees and other wildlife would continue to become endangered	No	
10/20/2021 6:17	Brevard		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide unimbibed passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/20/2021 6:27	Lee		No	No					Remove dam & open waterways to springs	Protect wildlife such as manatees	More manatees will be unprotected & they need the springs to stay warm.	Only one that protects wildlife & environment	
10/20/2021 6:33	Lafayette		No	No					Removal of all are parts of dam to reestablish river flow between the St. Johns and other important waterways.	Dam is beyond life expectancy so it's either removal or repair, so now is the perfect time to reestablish river flow.	Continued loss of wildlife habitat by not reestablishing water flow. Along with a host of other issues as can seen by the Everglades.	Partial removal, as long as at least some water flow is reestablished.	
10/20/2021 6:35	Outside of state / other	United Kingdom	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	View this message on our website. Save the Manatee Club JOIN US: Tweet on Twitter Share on Facebook Instagram_Applcon_Aug2017.png Wanted: Voices for the Great Florida Riverway Dear Emma, If you haven't completed the St. Johns River Water Management District's short survey on the future of the Rodman Reservoir and Dam, please take a few minutes to do something that will influence the decision on this 50-year-old dam and help manatees. This is the most significant opportunity we have had in two decades to convince leaders it's time to reunite the Ocklawaha and St. Johns Rivers and Silver Springs. Removing key portions of this dam, which is past its life expectancy, will re-establish traditional access to essential habitat for manatees, bring back migratory fish, and restore a lost riverway for anglers and paddlers. We have sample answers you can use for the survey below. Please share this with your family, friends, and colleagues. Take Survey button We appreciate your support for manatee and aquatic habitat protection! Kim Signature Kimberleigh Dinkins Senior Conservation Associate Save the Manatee Club	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. 10/20/2021 6:37	Alachua		No	No					No impact on the manatee s	The love of the manatee			
10/20/2021 6:38	Brevard		No	No					I would love to see the dam removed, the reservoir safely drained to restore the Ocklawaha River to its natural state, allowing manatees and other wildlife access to inland springs.	Manatees and other wildlife and native plants are in crisis due largely to habitat loss and loss of access to nesting/food/resources. As Florida's population continues to increase, we need to restore and permanently protect critical habitat. Rivers are essential wildlife corridors providing the most resources for the greatest diversity of plants and animals.	The continues degradation of the ST John's River, the continued decline of manatees and many plants and animals found ONLY in Florida, as well as the ongoing urban and suburban sprawl perpetually encroaching and endangering the Florida springs. Natural wetlands, waterways and estuaries perform many necessary services. WE NEED them.	Not really. There are other options, but none with the multiple benefits of restoring the Ocklawaha River.	Thank you for the opportunity to share my wishes and concerns. We have lived on Florida for just over three years and have been hoping to bicycle the Ocala area. The pandemic put our plans on hold, but we will get there this winter. The removal of the dam would increase recreational opportunities. Thank you!
10/20/2021 6:41	Outside of state / other	Durham, NC 27712	No	No						Better environment for Manatees	Manatees!!!	No!	Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/20/2021 6:50	Marion		No	Yes		2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Have it removed and let the manatees go up the river into Silver Springs as there are 5 manatees in the silver river that have gotten through when dam is opened	I can't believe the bass fishermen when they say millions of dollars are brought in by fishing.			
10/20/2021 6:55	Citrus		No	No		1 time		Wildlife viewing	Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	Spending $4+ million funds to repair a dam that's failed in its' original intent is a waste of public funds. Those funds should be spent on restoration instead. The environmental and cost benefits of restoration far out weight keeping the sad legacy of the Cross FL barge canal in place.	The Cross FL Barge Canal was a huge mistake and there is a lesson to learned for this generation and the next. That is the Man should not and can not be allowed to plunder the environment for RICHES and simply leave the mess for future generations to clean up. Giving a "pass" the Rodman Dam sends the wrong message to all Floridians that the environment is to be consumed, when it should be cherished.	No !	
10/20/2021 6:58	Hernando		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Breach the dam	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	Money wasted loss of manatee habitat	No	
10/20/2021 6:59	Broward		No	No					the restoration of the Ocklawaha River by breaching the existing dam and draining the Rodman Reservoir for the broad range of environmental and economic benefits that restoration would provide.				
10/20/2021 7:03	Miami-Dade		No	No					Don't know	Don't know	Don't know		
10/20/2021 7:03	Hillsborough		No	Yes		1 time		Wildlife viewing					
10/20/2021 7:06	Alachua		No	Yes			1 time	Other: I don't	Remove the dam and it's infrastructure. Allow the river to return to its natural state, along with the surrounding environment.	The restoration of what was once one of the most beautiful rivers in Florida. The cost of maintaining the dam and managing the reservoir would be eliminated.	The opportunity to get the dam removed and river restoration started will be put off until sometime in the future, if ever. Now is the time to get it done.	No, the dam never should have been put in and it is long overdue for removal.	
10/20/2021 7:07	Marion		No	Yes		2-5 times	More than 5 times	Fishing	Remove the Dam and let nature return.	Trees were not removed to ground level and the stumps are a danger to all.	Cost to maintain.		
10/20/2021 7:09	Wakulla		No	No					remove	it is human made, and made for humans which makes it probably not good for anything else including the environment and wildlife.	increased environmental degradation	no	
10/20/2021 7:09	Indian River		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	Removed	Let the area return to a more natural state for the benefit of beleaguered manatees			
10/20/2021 7:12	Miami-Dade		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide unimbibed passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. 10/20/2021 7:18	Outside of state / other	New Jersey	No	Yes			1 time	Wildlife viewing	I would like to see parts of the dam removed.	It will unite the waterways and allow for increased habitat for many species of wildlife.	Continued separation could be detrimental to the species living in the area.	At least one area that allows for the waterways to reconnect that allows wildlife to safely swim through.	
10/20/2021 7:19	Broward		No	Yes			1 time	Wildlife viewing	restoration to natural state, revitalization of natural springs	loss of access to natural springs and natural habitat	irrevocable environmental damage, to natural wildlife habitat change natural water resource balance	controlled release of water held back by dams, restoration of natural water flow restoration of water flow into the St. John's river	this is a state and federal moral obligation.
10/20/2021 7:21	Osceola		No	No									
10/20/2021 7:23	Marion		No	Yes		1 time		Fishing Wildlife viewing	Remove the aging structure to restore natural flow, including into waterways in Marion County.	Continued impedement of the natural process of a free-flowing river disrupts the environment, wildlife and the natural order.	That the political machine will, once again, win out over constituent opinion and concerns.	Not at this point. It's a failing structure - why not let it go?	
10/20/2021 7:29	Franklin		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	
10/20/2021 7:30	Citrus		No	Yes			1 time	Wildlife viewing	Breach the dam to restore a free flowing river	Draining the dam would remove a barrier to plant and animal movement in the ocala osceola wildlife corridor by restoring a flood plain forest to benifity plant and animal species on the move to adjust for climate change impacts.	Water quality in the reservoir and down stream would continue to deteriorate,and the people and businesses would continue to feel a threat of dam failure.	No spend the funds to breach the dam and not waste them on a inadequate patch job	Protecting Florida water quality is an environmental and economic issue that should be a very high priority for florida government
10/20/2021 7:36	Outside of state / other	Cumberland Wisconsin	No	No					All necessary concerns to be taken care of to protect wildlife and the lands.	Protection for the future if manatees	Dangers to manatees	I support all marine wildlife rehabilitation in Florida and other habitats	grew up watching the bald eagles be saved. Only we can protect the future. If our wildlife. Especially the manatees

10/20/2021 7:41	Alachua		No	No					NOT spending millions to repair the dam and to instead permanently breach the dam, restoring the natural flow of the Ocklawaha River.	I have never been to the dam and reservoir, but I have paddled the Ocklawaha River and Silver Springs and they are beautiful, but manatees and migratory fish including the Striped Bass, American shad, American eel, and the critically Endangered Atlantic Sturgeon and Shortnose Sturgeon do not have access to these waterways. Breaching the dam would not only restore native plant communities essential to a resilient ecosystem in the face of climate change, it would also restore the 20 springs flooded by the dam and would remove the single greatest barrier to plant and animal movement along the Ocala to Osceola (O2O) Wildlife Corridor by replacing the open water expanse of the Reservoir with a restored floodplain forest. Three river systems - the Ocklawaha, Silver and St. Johns - would also experience significant environmental improvement from restoration, protecting our freshwater systems. At least 150 million gallons a day of additional natural flow, and potentially much more, would be restored to the Lower St. Johns River, improving water quality and increasing resiliency of the entire St Johns/Ocklawaha River system by impeding the salt water intrusion resulting from sea level rise.	Water quality in the Rodman Reservoir and Lower Ocklawaha/St Johns River system would continue to decline. The Reservoir would continue to be a barrier to movement by native wildlife and plant life along the length of the O2O Corridor, and compromise the value of Florida's investments in conserving lands like the Etonian Creek State Forest, and approved Florida Forever projects. Taxpayers will perpetually be on the hook for repair and maintenance of the dam and Reservoir, and continue to be liable for any loss of life or property damage that would result from a dam failure.	Only full removal of the dam. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration.	
10/20/2021 7:42	Hillsborough		No	Yes		2-5 times	Fishing Boating						
10/20/2021 7:42	Pinellas		No	No					Remove key portions of this dam; which is past its life expectancy; will re-establish traditional access to essential habitat for manatees, bring back migratory fish, and restore a lost riverway for anglers and paddlers.	The manatee are disappearing from our waters! And from the earth - we MUST help these gentle giants survive and help the water ecosystem we have in Florida	Socialist democrats are ruining our country and we (as the people) will be forced into lives that we cannot influence and aspire to.		
10/20/2021 7:43	Sarasota		No	Yes		1 time	Canoeing / kayaking Wildlife viewing Other		Do the right thing and protect manatee habitat	protect wildlife	would be very disappointing		Do the right thing and protect Manatee habitat
10/20/2021 7:45	Broward		No	No					Bring it back to it's natural state	Algae growth	killing off of the Manatee's and water uality	no	
10/20/2021 7:47	Okaloosa		No	No					Remove the dam or at least part of the dam.	The restoration of key waterways degraded by having the useless dam in place.	Continued degradation of some once beautiful waterways and springs. It would be great to have Silver Springs back to the way it was when I visited many times in the past.	No	Get the job done and remove at least part of the Rodman Dam.
10/20/2021 7:53	Monroe		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 300-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood-damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide unimbibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 300-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	Please restore the Ocklawaha River. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/20/2021 8:00	Palm Beach		No	No					Removing key portions of this dam, which is past its life expectancy, will re-establish traditional access to essential habitat for manatees, bring back migratory fish, and restore a lost riverway for anglers and paddlers.	Save the manatee research	Species endangerment or extinction		
10/20/2021 8:00	Marion		No	No					For the river to returne to its natural flow	endangered manatee, the dams are not natural	will the manatee flurish		
10/20/2021 8:06	Miami-Dade		No	Yes		2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	it's time to restore the Ocklawaha River for Florida's wildlife. Time to breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat. Stop messing with mother nature.	REALLY???	Disgust with you.	NO	
10/20/2021 8:08	Pinellas		No	No					Return the area to natural state without the dam and reservoir.	Long, ongoing studies	Missed opportunity to restore an important part of Florida's environment.	I would have to see it in writing.	
10/20/2021 8:14	Duval		No	No					Anything that would help to support the ecosystem and ensure safety for all wild life				
10/20/2021 8:17	Brevard		No	Yes		2-5 times	Canoeing / kayaking Wildlife viewing Other: Hiking		Restored	Environmental concerns			
10/20/2021 8:17	Charlotte		No	Yes		1 time	Wildlife viewing		Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 300-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood-damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide unimbibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/20/2021 8:24	Marion		No	Yes		1 time	Wildlife viewing Other: Sightseeing.		Close it to restore natural water flow, especially the Ocklawaha river.	NO more delays !!!	Trending toward natural environment being disregarded in future.	No!	I have been very patient on this issue for over a decade ... Get it done !
10/20/2021 8:24	Volusia		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Canoeing / kayaking Boating Wildlife viewing	Keep it in place	The Reservoir has become a wildlife refuge and creates an economic impact on the surrounding community.	The local economy will suffer and people will lose their livelihood	No	
10/20/2021 8:27	Brevard		No	No					Create the natural waterway.	Allows manatees and fish to use the river.	More fish and manatee declines	No	
10/20/2021 8:27	Indian River		No	Yes		1 time	Canoeing / kayaking		I think all water areas in FI should be kept clean	It is important for our wildlife	wildlife may die	I am a native Floridian grew up in Wabasso and it pains me to see so many people move in . We also have a FI Native and no plan.	
10/20/2021 8:34	Outside of state / other	Spruce Michigan	No	No					Absolutely	Providing habitat for Manatees	Death	I want it all	
10/20/2021 8:35	Monroe		No	Yes		1 time	Other: There is no legitimate use for the monstrosity.		Blow up the dam	There is no legitimate use for the monstrosity.	Growing harder to destroy the monstrosity.	NO	Blow the dammed dam.
10/20/2021 8:37	Alachua		No	Yes	1 time		Wildlife viewing		Remove the damn -- let the Oklawaha flow free.	Needed for migration of various species.	Continued degradation of the ecosystem	Tear down a portion of the dam, allowing partial flow.	
10/20/2021 8:37	Putnam		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Canoeing / kayaking Boating Wildlife viewing	I would like to see it maintained and further developed. There are many opportunities to create expanded recreation. Adding things like a museum, visitors center, and event venue would all be incredible additions. There is also the chance to include more hiking opportunities, including adding accessible paths and educational paths. This could give schools an option for field trips to both learn about Putnam County's natural areas, how springs work and feed large bodies of water, the history of the canal, how dams and locks work, what the US Army Corps of Engineers do, and how we can protect natural habitats in the future (which could possibly include how large project like the canal are not the best ideas going further). I would additionally like to see more viewing platforms for those wishing to see wildlife.	Personal experience. Growing up, Rodman was a primary source of food for my family, and in doing so, it created family outings. I also spent much of my early childhood at the Kenwood boat ramp during local fishing tournaments. For many families, it offers free recreation and outdoor activities. Many birthdays were held at the campground, as it was one of the few places for inexpensive gatherings.	The amount of time it would take for the ecology to adapt to the new conditions. The reservoir and the surrounding areas have created new habitats for wildlife and plant life. Eliminating water coverage would be detrimental to the biology that has grown in the area. Similar to clearing large areas of land, the geography of the area would be affected just as much as the fauna who have created homes. The reservoir is already used for fishing tournaments, creating revenue for the county which is needed. As the county focuses on outdoor recreation and tourism, taking any opportunity away from that just seems illogical. If anything, there is the chance to create two marketing strategies for recreation: fishing/boating during normal operations and kayaking/spring exploration during drawdown.	Not really. To think that the Ocklawaha River would return to its previous state in our lifetime is ridiculous. While the mistakes of the past can be learned from, those mistakes created what exists in our time. The river of yesteryear is gone, but the reservoir is there today. Those fighting for eliminating the reservoir in favor of restoring the Ocklawaha seem to miss the opportunities that exist.	I do wish there were less chemicals used to combat biological growths. It kills off areas for fish to habitat. Finding a natural way to do this would be preferable.
10/20/2021 8:37	Citrus		No	No					They need to go away	Allow the river to remain in in its natural state	A great loss to natural Florida		
10/20/2021 8:38	Volusia		No	No					Don't build the dam.	It will not be good for the manatees that live in that area.	That the manatees would be harmed.	No.	We must protect the manatees!
10/20/2021 8:39	Marion		No	Yes		1 time	Canoeing / kayaking		Restore natural flow	Manatee growth	continued loss of manatee		
10/20/2021 8:39	Polk		No	No					I would like to see the Kirkpatrick Dam/Rodman Reservoir breached and for an unhindered, free flowing Ocklawaha River to be fully restored.	There are numerous and a myriad of reasons supporting the breach of the Kirkpatrick Dam/Rodman Reservoir and restoration of the Ocklawaha River. The restoration of this natural environment will actually increase job availability and entrepreneurship through ecotourism, something Floridians have a history of priding ourselves on. From our beaches on the coast to our inland waterways, breaching the dam increases opportunity for income earning. Researchers at the University of Florida demonstrated that ecotourism from natural areas of river had twice the economic impact of anglers and boaters who use the reservoir. Additionally, monies can be saved and relocated by working with the natural environment, saving $14 million+ in dam that has surpassed its life expectancy. Allowing a controlled breach and restoration of Ocklawaha could save the Wekiva community potentially $57 million from damages resulting from a dam failure. The full development and restoration of the Ocklawaha River by breaching the Kirkpatrick Dam and Rodman Reservoir brings real economic and environmental resources that benefit nearby communities and Floridians at large.	The economic benefits through ecotourism would not be fully realized, in effect taking away from local and macro Florida communities. Without breaching the dam and restoring the River, there are very real direct and indirect economic losses citizens would suffer.	No; decades long talks have taken enough away from both Florida citizens and the natural environment.	I was born and raised in Florida, where my family has long had roots in the community. I attend the University of Florida and proudly call this state home. I know the full potential of Florida has not been recognized, and I am certain this is one of the truly appropriate steps in seeing the realization of that potential.
10/20/2021 8:40	Alachua		No	Yes		1 time	Other: I don't use it		bear it down	habitat destruction - free flow of water - free flow of manatee	more destruction of our river	no	
10/20/2021 8:41	Outside of state / other	Pennsylvania	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. 10/20/2021 8:46	Brevard		No	No					Reunite the rivers, it's good for wildlife and good for tourism! Breach this old, delapidated dam!	The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood-damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	More environmental degradation, more useless expenses for taxpayers, less tourism, fewer manatees and other species that our tourist economy depends upon. Just a loss-lose situation for all stakeholders.	No, the dam must be breached. It is an old, shameful mess and the result of outmoded ways of thinking about managing our environment. Its day is done. Let's look to the future!	Let's do the right thing, Floridians! Restore the river!

10/20/2021 8:46	Broward		No	No					That away be found to join the rivers and allow more water access for the manatees.	That changes need to be made and the manatees will pay the price.	No	No	
10/20/2021 8:47	Indian River		No	No									
10/20/2021 8:47	Miami-Dade		No	No					Restore the Ocklawaha River	This dam is old and past it's time. We need to restore the freshwater flow to support the animal life that lives in and around the rivers.	That no change will be made and the manatees will pay the price. The dam is just a big problem since it's so old and eventually there's going to be major damage due to it's failure. It's unsafe.	No there isn't.	It's important to the health of Florida that the Ocklawaha River be restored. The restoration would bring back the natural connection to the springs, rivers and estuaries that are essential to our ecosystem.
10/20/2021 8:49	Outside of state / other	Lafayette, Indiana	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood-damages. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	On top of all of the other reasons to help manatees, they are my favorite animal. They are gentle giants, their number one "predator" is humans, and they are smart, playful, and fascinating. Please help save them.
10/20/2021 8:51	Alachua		No	Yes		2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Breach the dam. There has never been a case where a river is IMPROVED by the existence of a dam.	It absolutely angers me that as a taxpayer I am paying to upkeep a dam that is not only useless, but actively HARMFUL to not only the Ocklawaha but other rivers and systems, like Silver and St Johns.	More taxpayer money thrown away. The ecological harm continues.	What other outcome could there possibly be?? You either breach the dam or you don't. Breach the dam.	This dam is, and always has been, a terrible waste of money. Not just taxpayer money in upkeep and invasive aquatic plant management, but in the dollars that could be coming in from a more diverse tourism. Not just fishermen and power boaters, but kayakers, spring visitation, camping, shoreline fishing, hiking, Silver Springs rebounding as a destination. I understand a handful of folks have fallen in love with the damaged version of the river because that's what they grew up with but the science and economics if restoration simply don't support anything but restoring this river.
10/20/2021 8:54	Marion		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.
10/20/2021 8:54	Citrus		No	No					Remove the aging dam and let nature take over	Removing key portions of this dam, which is past its life expectancy, will re-establish traditional access to essential habitat for manatees, bring back migratory fish, and restore a lost riverway for anglers and paddlers.	Manatees will continue to suffer with loss of habitat and food		
10/20/2021 8:56	Outside of state / other		No	No					Remove dam. Restore waterways. Enhance biodiversity, fishing opportunities and passive recreation. These are all high values in Florida	Years of seeing dam deteriorate, etc.	A lost opportunity for Florida, Florida's fragile environment, and Florida tourism.	Nope.	
10/20/2021 8:56	Hillsborough		No	Yes		1 time	2-5 times	Wildlife viewing	Please restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood-damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide unimbibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway.
10/20/2021 8:57	Outside of state / other	Colorado	No	Yes		1 time	2-5 times	Wildlife viewing	Restore the Ocklawaha River - the dam's breaching is 50 years overdue	The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood-damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	Florida's environmental degradation is accelerating at an ever-increasing rate. Your manatees are under serious pressure (as is other wildlife). As an FSU alum who takes my family back to Florida as often as I can- I am deeply worried about its ecosystem - I feel like it's wasting away before my eyes. This is an opportunity to make a change that can have many beneficial ripple effects.	No.	I loved Florida's incredibly diverse environment when I lived there (alligators and palmetto bugs and all) and I still do. I stay engaged on wildlife/conservation issues in the state in a number of ways and love spending time with and tourist dollars there. Please choose to protect the assets that are unique to your state.
10/20/2021 9:03	Flagler		No	No						Same as above	My biggest concern is lost habitat and species	No	
10/20/2021 9:05	Putnam		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Boating Other: Using the launches to access the Ocklawaha river. Not the reservoir.	I would like to see the Rodman Dam blown up, demolished!	Restoring the Ocklawaha to it's natural state, which will improve the health of Silver Springs, the St. Johns River and the Florida aquifer.	The quality of our drinking water and the water of the Silver River, St. Johns and Ocklawaha will continue to deteriorate. The Kenwood boat ramp, Payna's Landing ramp and others will continue to be unusable because of the weeds.	No!	Citizen's tax dollars are paying to maintain a useless dam. We are also paying for boat ramps that are not always accessible. This is an irresponsible use of resources. And, we are paying for poison to be sprayed to kill the weeds. That is not healthy for the aquifer or the river. This is all very destructive for the environment and disrespectful to tax payers.
10/20/2021 9:07	Outside of state / other	Cedar Rapids, Iowa	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. 10/20/2021 9:13	St Johns		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Manatees, a healthier estuary that reduces the potential for downstream flooding in our changing environment, and the creation of jobs through eco-tourism	A compounding decrease in water quality that impacts tourism in North Florida	While decreasing the reservoir level to 11 or 12 ft would reduce the likelihood for damage to downstream property owners, it does not support the wildlife restoration that breaching the dam would.	Thank you for your consideration of these arguments in favor of removing the dam.
10/20/2021 9:14	Outside of state / other	Illinois	No	No			1 time	Fishing Fishing (shoreline/structure) Wildlife viewing	Restore the Ocklawaha River by breaching the Kirkpatrick Dam	15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("OOO") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife.
10/20/2021 9:15	Volusia		No	No					Remove parts to allow manatees to move more	Manatees are dying and need more water options to thrive	Lack of respect for manatees	No	I adopted a manatee years ago. They play a huge role in our marine ecosystem. Eating only seagrass, manatees keep the ocean floor clean for other marine life to thrive.
10/20/2021 9:15	Outside of state / other	Vermont	No	No					I would like to dam to be breached.	Limiting the rivers will provide important recovery possibilities for endangered manatees and other wildlife.	Endangering the continued existence of manatees and other wildlife.		
10/20/2021 9:17	Manatee		No	No					To improve the dam to help save the manatees	Saving the manatees	Take care of the environment.		
10/20/2021 9:17	Outside of state / other	Orange County Calify	No	No						No			
10/20/2021 9:17	Broward		No	Yes			1 time	Wildlife viewing	eliminate it.	It would aid our manatees and restore a more natural situation there.	Loss of our manatee population and of the outdoor recreation it would provide for fishermen and many others.	No	Please consider this carefully, it has long-term effects.
10/20/2021 9:22	Alachua		No	Yes	1 time	1 time	2-5 times	Canoeing / Kayaking Other: Triathlon in the area	Please remove it.	Cost of maintenance to the dam, salt water intrusion into st. John's river	Continuing needless spending and salt water intrusion	Not particularly	
10/20/2021 9:25	Outside of state / other	Rhode Island	No	No					I would like to see the Ocklawaha River restored by breaching the dam.	The dam is more than 50 years old and was never used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. An unexpected breach , in contrast, has the potential to result in more than $57 million in flood damages. Restoration creates more diverse, recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities. It would also help restore Florida's unique and irreplaceable natural environment.	I worry that taxpayer money would be wasted and that damage to the natural environment around the dam would continue.	No. The economic and environmental benefits are attainable only through a breach.	My family last visided the St Johns River several years ago. We did so because of its wildlife and natural environment. Florida depends on tourism, and tourism depends on the preservation of its environment. We could go virtually anywhere, but a healthy manatee population and a healthy watershed would bring us back repeatedly to the St Johns region.
10/20/2021 9:25	Orange		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	20 lost springs and Silver Springs ecosystem are restored	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/20/2021 9:25	Leon		No	Yes				Fishing Boating	Keep and maintain the Reservoir and Dam	It is a First Class recreational area that provides Florida sportsman an opportunity to enjoy the outdoors.	Less wildlife areas to enjoy	No	Florida has a unique ECO system in Rodman that benefits everyone
10/20/2021 9:36	Pinellas		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide unimbibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. 10/20/2021 9:48	Volusia		No	Yes			2-5 times	Fishing Boating	Open the Dam to restore natural water flow	Look at the Kissimmee River. Quit trying to outsmart mother nature.	The health of all of the waterways that are a part of this chain.	What are the other options.	I'm pretty confident that Mother Nature is more capable than man is.
10/20/2021 9:49	Duval		No	No					Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam to reunite the natural connection of Silver Springs, the Ocklawaha and the St. Johns River.	The science supports restoration. Studies by federal and state agencies have clearly demonstrated that restoration of a free-flowing, connected system is cost-effective and will provide significant ecological benefits to the St. Johns, Ocklawaha and Silver Rivers as well as Silver Springs.	We miss a historic opportunity to stop the ongoing ecological degradation caused by the dam and finally reunite the natural flow of these rivers. Breaching the dam would restore the natural flow of 150 mgd of fresh water, improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. A free-flowing Ocklawaha will reestablish 15,000 acres of forested wetlands and fortify downstream submerged grasses from Welaka to Jacksonville in the St. Johns River that are critical to river health and fish habitat.	No. Breaching the dam and restoring the Ocklawaha are 50+ years overdue. Dam safety issues and improved water quality, wildlife habitat, and recreational opportunities can't be ignored or delayed any longer.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This exciting restoration will improve water quality and flow by generating an additional 150 million gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.

10/20/2021 9:49	Outside of state / other	Pittsburgh, PA	No	Yes	1 time		Wildlife viewing	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 300-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 300-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/20/2021 9:49	Duval		No	No				Do not rebuild. End it for the new abundance of water into the St. Johns River basin.	Amount of water added to river basin	The state of the St. Johns River			
10/20/2021 9:51	Duval		No	No				The Ocklawha River needs to be restored to its natural flow.	Ecological/environmental research and concerns	Further degradation of Florida's waterways and the ensuing threats to life and eco-systems.	...like what?		
10/20/2021 9:51	Duval		No	No				Take it down please.	The quality of water in our springs.	The quality of water in our springs.	No. Please take it down.		
10/20/2021 9:51	Duval		No	No				I would like to see the dam broached so the water can run freely again.	The argument for the way it would help the environment.	That the environmental importance of Florida is being overlooked for political and capitalist gain	Unsure		
10/20/2021 9:52	St Johns		No	Yes		More than 5 times	Wildlife viewing	Remove it and restore the Ocklawaha River.	Help to maintain our state's estuaries, thee dam was never used for it's initial purpose and it destroys wildlife habitat. And draining it is a huge waste.	The continued destruction of our estuaries for flora, fauna, clean water, and wildlife in general.	No		
10/20/2021 9:52	Sarasota		No	No				I support the restoration of the Ocklawaha River by breaching the existing dam and draining the Rodman Reservoir for the broad range of environmental and economic benefits that restoration would provide.	I) 7,500 acres of the lower Ocklawaha's historic forested floodplain, 20 freshwater springs, and many miles of natural river channel that were drowned as a result of dam construction would be restored. II Thousands of acres of submerged aquatic plant communities would be able to regenerate in the restored river channel, and in the re-emerged spring run streams that drained into the Ocklawaha historically. III 8,000 acres of stressed floodplain wetland located downstream of the dam would be enhanced. I) Imperiled plant species like the endangered Star Anise and threatened Harhenbitia, which are native to the banks of this region's spring run streams, could expand their range into the restored spring systems. I) Draining the Rodman Reservoir would remove the single greatest barrier to plant and animal movement along the Ocala to Osceola (O2O) Wildlife Corridor by replacing the open water expanse of the Reservoir with a restored floodplain forest, to the benefit of many listed plant species native to the region including the Federally listed Clasping Warea and Scrub Buckwheat. I) Three river systems - the Ocklawaha, Silver and St. Johns - would experience significant environmental improvement from restoration.	Continuing environmental degradation. And as the dam fails, it threatens communities downstream. I would not want to see more money spent to rebuild the failing dam.	I am not aware of any other proposals.	Thank you.
10/20/2021 9:52	Clay		No	No				Take it down and restore the river system to a natural flow!	The salt water intrusion of the St. John's river could be fixed if this dam was taken out.	Loss of natural habitats and flow to the river systems	No. Take the dam out it should have never been left when the cross FL barge canal was not completed	Thank you for allowing me to comment on this issue.
10/20/2021 9:53	Broward		No	No				I would like to see it removed to help restore the flow of rivers and support fragile migratory animal life				
10/20/2021 9:53	St Lucie		No	No				Stop it	Problems and manatee death don't	Dead manatees	No	
10/20/2021 9:53	Brevard		No	Yes	2-5 times		Canoeing / Kayaking Wildlife viewing	I would like for the safety of all of the biodiversity within to be prioritized.	The current state of our manatees, eutrophication and the concerns with food sources for manatees.	Further reduction of our manatee populations and loss of other forms of biodiversity.	No. We need to make bold decisions and take bold actions now.	
10/20/2021 9:54	St Johns		No	No				Please remove the dam and restore the waterways to their natural pre-damn state.	That removing damns will significantly restore the health and diversity of our waterway systems, help prevent salt water intrusion, and improve the bio diversity and even general diversity for recreation of our Florida waterways.	Unnecessary costs of maintaining an antiquated dam that actually harms our ecosystem.	No.	
10/20/2021 9:54	Duval		No	No				Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam to reunite the natural connection of Silver Springs, the Ocklawaha and the St. Johns River.	The science supports restoration. Studies by federal and state agencies have clearly demonstrated that restoration of a free-flowing, connected system is cost-effective and will provide significant ecological benefits to the St. Johns, Ocklawaha and Silver Rivers as well as Silver Springs.	We miss a historic opportunity to stop the ongoing ecological degradation caused by the dam and finally reunite the natural flow of these rivers. Breaching the dam would restore the natural flow of 150 mgd of fresh water, improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. A free-flowing Ocklawaha will reestablish 15,000 acres of forested wetlands and fortify downstream submerged grasses from Welaka to Jacksonville in the St. Johns River that are critical to river health and fish habitat.	No. Breaching the dam and restoring the Ocklawaha are 50+ years overdue. Dam safety issues and improved water quality, wildlife habitat, and recreational opportunities can't be ignored or delayed any longer.	This restoration will improve water quality and flow; support coastal resiliency; and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.
10/20/2021 9:54	Clay		No	No				Restored to its natural state, allowing natural flow and biodiversity development. We rarely perceive of the extenuating effects of interference with nature. We can reverse the damage by giving these waterways back to Mother Nature.	Blue algae blooms, stagnant water and fish kills.	Tax dollars needed to preserve a dam that serves no purpose.	Continue to invest in rerouting flows around the dam.	Thanks for taking on this battle!
10/20/2021 9:55	Clay		No	Yes		1 time	Wildlife viewing	Breach the dam and let water flow back to the Oklawaha River and St. Johnsfiver tributaries as it was before the dam	The state of the St. Johns River & its tributaries	Pollution in and to the river and its tributaries cannot properly be removed. Clean water is a huge need to the state, including central and north Florida.	no	
10/20/2021 9:56	Duval		No	Yes	2-5 times		Wildlife viewing Other: sightseeing	I would like to see the Kirkpatric Dam removed so the river can be restored to its natural state.	There is so much salt water intrusion, and restoring the river would eliminate much of that. Alsol, our beautiful springs would have more water and be more attractive to tourists and residents alike	I am concerned about the high cost of maintenance over years and years as the Dam gets older.	Not really	I pray that the Kirkpatrick Dam is removed and the Oklawaha River restored.
10/20/2021 9:56	St Johns		No	Yes	1 time		Canoeing / Kayaking Boating Wildlife viewing	Remove or breach	Pollution reports	Expensive repair or replacement and health of river		
10/20/2021 9:56	Collier		No	Yes		2-5 times	Wildlife viewing	Remove the dam and restore the Oklawaha River.	Removing the dam hopefully will restore 50 springs and the Ocklawaha, Silver, and St. John's Rivers and their natural flow, plus saving millions of dollars on a repair of the dam	The loss of $ 47 million in economic benefits to Putnam County and Silver Springs over 10 years, as well as loss of potential forests , flood protection and wildlife.	No. The dam must be removed.	My wife grew up in Putnam County. Her two brothers still live there. Removing the dam will benefit Putnam County ecologically and economically.
10/20/2021 9:58	Leon		No	No				Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 300-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/20/2021 9:59	Volusia		No	Yes	2-5 times		Wildlife viewing	I would like to see the damn removed and the area restored.	Water quality and wildlife	Water quality and wildlife habitat being ruined		
01/20/2021 10:02	Duval		No	No				remove the dam and restore Ocklawaha river	This would increase freshwater flow into St Johns River and restore wetlands.	loss of more wetlands and salt marsh habitat	no	Get this done! We've been dithering about this since I moved here in 1974!
10/20/2021 10:02	Duval		No	No				I would like the dam dismantled	The health of our rivers and estuaries.	The algae bloom in the St. Johns River and also the slow death of our springs.	no, it is time to get rid of the dam and allow nature to be free and make our waterways healthy again.	
10/20/2021 10:03	Collier		No	No				Remove the dam as an impediment to the free-flowing Ocklawaha, Silver and St. Johns River systems. The dam is inhibiting the benefits to wildlife, fish migration and environmental restoration in the Florida Wildlife Corridor.	Water quality. Restoring a free-flowing river system will improve water quality and increase resiliency of the St Johns/Ocklawaha River system by impeding the salt water intrusion resulting from sea level rise. A free-flowing river system will allow fish (and other wildlife including manatees) to access food and nursery opportunities throughout the river system.	A continued expense and risk for the watershed, to maintain the dam integrity, apply herbicide treatment to encroaching invasive plant species, supplement dwindling fish stocks in a deteriorating reservoir, and mitigate the risk to down river communities as the dam ages to eventual collapse.	No. Putting a bandaid on a building catastrophe will not fix the problem of an impeded river flow that will never benefit the Florida Wildlife Corridor. With the increase of extreme weather events, the continual maintenance of the Kirkpatrick Dam will only become more costly for a dam that never realized its reason for installation.	Restoring natural ecosystems should be the primary consideration going forward. Maintaining an ill-conceived impediment to the free-flow of river systems is not beneficial to the Florida Wildlife Corridor.
10/20/2021 10:03	St Johns		No	No				Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam	Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 300-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. 10/20/2021 10:04	Marion		No	Yes	1 time		Canoeing / Kayaking	Remove the Rodman Dam & Restore the Ocklawaha. The reservoir is not necessary,	Results of studies showing the degradation of water quality and explosion of non-native fish species in the Silver & Ocklawaha.	Degradation of the water system and supply that we all (humans, wildlife, surrounding forests, etc.) depend on to maintain our health and prosperity	No. Years of the status quo has led to continuing degradation.	We have a great opportunity to finance the removal of the Rodman Dam and benefit everyone (taxpayers, visitors, sportspeople, wildlife). We'd be stupid to let this opportunity go by.
10/20/2021 10:04	Outside of state / other	Panama City Florida	No	No				Manatees Rule!		That manatees are not allowed to move freely into another area		
10/20/2021 10:05	Duval		No	No				Remove the dam.	Removal of the dam will support the resiliancy and health of our river system.	Continuing the input of tax money to support a failing dam.	No.	
10/20/2021 10:06	Orange		No	No				remove the dam and restore the flow of the river	the original waterway was more productive for the environment	continued degradation of the environment	no	
10/20/2021 10:07	Alachua		No	Yes	1 time		Fishing Boating Wildlife viewing	Remove Kirkpatrick dam and allow free flow of oklawaha river	The amount of herbicides used to clear out weeds is criminal.	That the reservoir will bezome sicker and pollute our natural resources. Also the dam is in need of repair that will cost taxpayers a lot of money.	No	
10/20/2021 10:08	Marion		No	Yes	2-5 times		Fishing	Keep as is	Environmental and recreational. Greatest bass fishing in state		No	
10/20/2021 10:08	Leon		No	No				Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	Restoring the Ocklawaha River will provide 150 + million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns rivers. The 300 mile St. Johns Estuary from Welaka to Jacksonville will be healthier.	If Florida does not act now we miss the best opportunity to provide warm water and forage habitat for manatees when they are dying at an alarming rate due to habitat loss.	No. Breaching the dam is 50+ years overdue!	2021 is the deadliest year on record for manatees; unless their habitat is restored, there will be more die-offs in the future. The greatest long term threat to the manatee is loss of natural warm water winter habitat.
10/20/2021 10:09	Gadsden		No	No				Whatever is in the BEST INTERESTS of the Flora and Fauna, NOT humans!! The ENVIRONMENT MUST BE the PRIORITY!! It is well beyond time humans start making Sacrifices and changes!!	Have you seen what is happening on our Planet??? Also, decades worth of printed evidence.	The LOSS of yet another necessary Natural environment for human ONLY benefit. Confirmation that the "Powers that be" STILL are NOT listening, nor do they care!	NO!!	Sadly, I have NO DOUBT it'll be let down and broken hearted by the decision. The environment ALWAYS loses, which means we ALL lose too. When will we learn?? You'd think it would've been long BEFORE NOW. !!
10/20/2021 10:10	Putnam		No	Yes	2-5 times		Fishing Fishing (shoreline/structure) Canoeing / Kayaking Boating Wildlife viewing	Let the river go back to it's natural course.	Health of the watershed, natural beauty of a wild river, not practical to keep a reservoir healthy in Florida.	Continued waste of public money to maintain an unhealthy ecosystem.	no	Considering the political mentality of North central Florida there isn't a snowballs chance in hell of success but hey, one can try.
10/20/2021 10:10	Levy		No	Yes	More than 5 times	More than 5 times	Fishing Wildlife viewing Other	I want it to stay just the way it is now	The beauty of the wildlife is overwhelming most beautiful place I've ever seen fishing is awesome too	I will have to find a new place to go	No	I believe that taking out the dam would ruin the natural resources with the eco system
10/20/2021 10:12	Outside of state / other	Durham, NH	No	No				I am in support of whatever action would most benefit the manatee!	The "Save the Manatee" newsletter	Further loss of manatee depleting their population and ability to reproduce and live safely.		
10/20/2021 10:13	Collier		No	Yes	1 time	2-5 times	More than 5 times	Wildlife viewing				
10/20/2021 10:14	Lake		No	No				The Long-term maintenance for this damn is a cost the Florida people do not need to continue paying in light of no benefit .	To restore 7500 acres to their original, natural state in light of all the over development in Florida will have long-term lasting benefits.	We lose one more opportunity to care for A small corner of the world which can nurture Florida's diversity let alone another chance to help the manatees.	No	The Rodman dam was a mistake: to go back and correct this mistake can only improve our environment in the state overall. Please take this action today. I'm 75 years old and I grew up in Florida visiting the different springs open to the public. When I have traveled across the country and tell people I'm from Florida one of the unique conversations we have is about the MANATEES. Please do everything possible to give these magnificent animals a fighting chance.
10/20/2021 10:15	St Johns		No	Yes		2-5 times	Fishing Boating Wildlife viewing	Keep it as is.	Don't fix what is not broken.	A wonderful recreational area would be destroyed.	Not sure. Depends on options offered.	
10/20/2021 10:15	Marion		No	Yes		2-5 times	Canoeing / Kayaking	Restore the flow of the original river.	Water quality, which natural flow and fish will improve with the damn being removed or released.	Boat traffic and speed. Need to also protect the Manatees !!	Additional funding for clearing the water, adding fish, reducing algae, etc	
10/20/2021 10:16	Osceola		No	No				Restore access to manatee waterways	animal welfare is more important than corporate interests	Our children will not be able to enjoy a healthy manatee population in the future		
10/20/2021 10:18	St Johns		No	No				Restore the Saint Johns River flow	I've been paying attention to the multiple assaults on the Saint Johns River, from deepening the channel for jaxport, to the ever increasing strain of supporting our burgeoning population, which draw unprecedented amounts of water from it, and then pollute it with their effluents.	Water crisis, faster and worsening salt water incursion,	Don't know	
10/20/2021 10:18	Broward		No	No								
10/20/2021 10:18	Alachua		No	Yes	1 time	More than 5 times	Fishing (shoreline/structure) Wildlife viewing	Remove portions of the damn to support manatees and fish migration	save the manatees	the manatees	I don't think so	
10/20/2021 10:19	Seminole		No	No				We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/20/2021 10:20	Santa Rosa		No	Yes		1 time	Fishing Boating Other: Camping	Maintain the reservoir as is, it is an outstanding fishery and established eco systems	years of outstanding fishing	loss of an outstanding bass fishery in FL	No	
10/20/2021 10:20	Duval		No	No				I would like the Rodman/Kirkpatrick Dam to be breached to restore the Ocklawaha River to be free-flowing . Studies by federal and state agencies have demonstrated that restoration of a free-flowing, connected system is cost-effective and will provide significant ecological benefits to the St. Johns, Ocklawaha and Silver Rivers as well as Silver Springs.	This is the moment to stop the ecological degradation that this 50 year old, unnecessary dam has caused. Breaching the dam would restore the natural flow of 150 mgd of fresh water, improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	Water quality declines, further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam and restoring the Ocklawaha are 50+ years overdue. Dam safety issues and improved water quality, wildlife habitat, and recreational opportunities can't be ignored or delayed any longer.	I do NOT want taxpayer money spent on restoring this dam!
10/20/2021 10:20	Outside of state / other	UK	No	No				Removal or breaching of the dam.	Reports of record mortality rates among manatees in 2021 and impact of the dam on their ability to seek refuge and food.	That the terrible loss of manatee life will continue.	No.	I am not a resident of Florida but over the past 30 years my family and I have been frequent visitors and a major reason for that has been the wildlife of which the manatee is amongst the most beautiful and important. The reports of record manatee mortality are heartbreaking and if this can be prevented or even reversed by providing safe passage to refuge and feeding grounds then I believe the breaching or removal of the dam to be more than worth it, for state residents, for visitors and most of all for this wonderful creature.
10/20/2021 10:21	Nassau		No	Yes		2-5 times	Wildlife viewing	Complete removal	Restoration of the river	Damage to thr river	no	

10/20/2021 10:21	Duval		No	No					It restored and linked up with the other 3 rivers, water flow restores to the springs in the area	Water flow , quality of water	The water and surrounding natural areas would continue to not become a huge part of our scenic and nature of Florida.	I think it needs to be fully restored back to before all the changes were made.	
10/20/2021 10:22	Outside of state / other	California	No	No									I just want the manatees protected. They are priceless, unique and beautiful.
10/20/2021 10:23	Duval		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam to reunite the natural connection of Silver Springs, the Ocklawaha and the St. Johns River.	The science supports restoration. Studies by federal and state agencies have clearly demonstrated that restoration of a free-flowing, connected system is cost-effective and will provide significant ecological benefits to the St. Johns, Ocklawaha and Silver Rivers as well as Silver Springs.	We miss a historic opportunity to stop the ongoing ecological degradation caused by the dam and finally reunite the natural flow of these rivers. Breaching the dam would restore the natural flow of 150 mgd of fresh water, improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. A free-flowing Ocklawaha will reestablish 15,000 acres of forested wetlands and fortify downstream submerged grasses from Welaka to Jacksonville in the St. Johns River that are critical to river health and fish habitat.	No. Breaching the dam and restoring the Ocklawaha are 50+ years overdue. Dam safety issues and improved water quality, wildlife habitat, and recreational opportunities can't be ignored or delayed any longer.	WATER QUALITY: This exciting restoration will improve water quality and flow by generating an additional 150 millions gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
10/20/2021 10:26	Miami-Dade		No	No					If the dam was removed the natural flow of the water would restore migratory patterns for manatees and fish, as well as allow 3 rivers to converge again. This natural flow is important for clean water & the environment as a whole to thrive.	Science	We lose more natural habitat, natural water sources & land around the rivers.		
10/20/2021 10:26	Lake		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. The dam is past its life expectancy, breaching the dam saves $4-$4 Million in dam repairs.	Putnam County and Silver Springs economies lose the opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply, or another broad public benefit. It's about time someone starts thinking about wasting the taxpayer's hard-earned money. It seems to be the theme in government projects. Let the taxpayer pay for it when people right now are over-taxed and underpaid.	No. Breaching the dam is 50 years overdue	SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Look at the big picture and the positive results. For people who want to make a positive impact on the economy, the wildlife and stop beating up the taxpayers, this shouldn't even be a question. The moral thing to do and in everyone's mind would be to breach the dam. Seriously, future generations will thank you.
10/20/2021 10:28	Pinellas		No	No					Remove the dam to reunite the rivers	The positive impact this will have on local wildlife, especially manatees	Restricting the flow of the river will have a negative impact on wildlife	No	
10/20/2021 10:28	Lake		No	Yes			1 time	Other: Visited to see the dam while kayaking the Ocklawaha	Get rid of both by breaking the dam to restore the River. The cross Florida barge canal is a distant nightmare. The Ocklawaha River is a precious resource blighted by these relics.	I 7,500 acres of the lower Ocklawaha's historic forested floodplain, 20 freshwater springs, and many miles of natural river channel that were drowned as a result of dam construction would be restored. II Thousands of acres of submerged aquatic plant communities would be able to regenerate in the restored river channel, and in the re-emerged spring run streams that drained into the Ocklawaha historically. III 8,000 acres of stressed floodplain wetland located downstream of the dam would be enhanced. IV Imperiled plant species like the endangered Star Anise and threatened Harperhgtia, which are native to the banks of this region's spring run streams, could expand their range into the restored spring systems. V Draining the Rodman Reservoir would remove the single greatest barrier to plant and animal movement along the Ocala to Osceola (O2O) Wildlife Corridor by replacing the open water expanse of the Reservoir with a restored floodplain forest, to the benefit of many listed plant species native to the region including the federally listed Clasping Warea and Scrub Buckwheat. VI Three river systems - the Ocklawaha, Silver and St. Johns - would experience significant environmental improvement from restoration. Preserving, conserving and restoring the native plants and native plant communities of Florida I Manatees would regain open access to the warm water habitats of the Ocklawaha and Silver Springs. II Migratory fish including the Striped Bass, American shad, American eel, and the critically Endangered Atlantic Sturgeon and Shortnose Sturgeon would once again have open access to the Ocklawaha system if the dam is breached. II Recreational sport fishing would be enhanced by allowing the Florida strain of the Striped Bass to reclaim what used to be its primary spawning habitat - the Ocklawaha. II At least 150 million gallons a day of additional natural flow, and potentially much more, would be restored to the Lower St. Johns River, improving water quality and increasing resiliency of the entire St Johns/Ocklawaha River system by impeding the salt water intrusion resulting from sea level rise. IV An estimated $24 Million in dam repairs, measured in 2006 dollars, would be saved by avoiding repairs to a dam that has exceeded its life expectancy and never fulfilled the purpose for its construction. II The large expenditures required for herbicide treatments to control the growth of invasive aquatic weeds would be limited	The dam will fail and the state will waste millions of dollars restoring it in a misguided attempt to please bass fishermen. Breach the dam and fishing on the restored Ocklawaha will be better than it ever was in the stagnant reservoir.	No	
10/20/2021 10:29	Outside of state / other	Knoxville, TN	No	No					I would like to see the Ocklawaha River restored by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam adversely impacts many rivers, springs and forested wetlands. It also prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months.	Florida has the opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/20/2021 10:30	Indian River		No	Yes		2-5 times		Wildlife viewing	I support the restoration of the Ocklawaha River by breaching the existing dam and draining the Rodman Reservoir	I support wild and scenic rivers	Continued development of the area	No	
10/20/2021 10:30	Osceola		Yes	Yes			2-5 times	Canoeing / kayaking	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 300-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood-damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 300-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood-damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	IF Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 300-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. A free flowing Ocklawaha will reestablish 15,000 acres of forested wetlands and fortify downstream submerged grasses from Welaka to Jacksonville in the St. Johns River that are critical to river health and fish habitat.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/20/2021 10:30	Volusia		No	No					reconnect the Oaklawaha	improved water quality	more manatee deaths and further water deterioration	no	
10/20/2021 10:31	Duval		No	No					I would like to see it removed	It was part of a failed plan to construct a cross Florida canal. It serves no other purpose. The river should be returned to its original state.	I would refer you to the volumes of data that speaks to outcomes of similar engineering projects that had unintended results. If the river was allowed to return to its natural state. Florida would save millions of dollars not having to maintain the dam.	Can't see any way around not returning the river to its natural state.	
10/20/2021 10:33	Duval		No	No					Restore the River.				
10/20/2021 10:33	Outside of state / other	Saint Joseph MO	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam	The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood-damages.	manatee extinction	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. 10/20/2021 10:34	Lee		No	No					Restore the Ocklawaha by breaching the dam	Habitat and wildlife	Environmental	Please act now to make local wildlife flourish	
10/20/2021 10:34	Lee		No	No					Dam removed and area returned to its natural state.	Restoring areas to their natural state is better for the overall environment.			
10/20/2021 10:36	Brevard		No	Yes			2-5 times	Wildlife viewing	I would like to see the dam breached and the rejoining of the river.	To provide a reestablishment of the ecosystems for the open waterways of the Great Florida Riverways to ensure wildlife habitat.	More manatees, migratory birds and other wildlife species will suffer from the dam staying up.	No	Save the Ocklawha, Silver and St. Johns Rivers to provide eco-strength to the wildlife.
10/20/2021 10:38	Brevard		No	No									
10/20/2021 10:38	Outside of state / other	ved in Brevard, Pinellas, and Marion (	No	Yes			More than 5 times	Fishing Canoeing / kayaking Boating Hunting Wildlife viewing Other: Majority of visits have been on River below the dam	I would like to see the dam destroyed and the river restored to its former winding, sometimes flooding, self, in order that the hunting, fishing and wildlife viewing I experienced in the wetlands along the river before the dam might return for my grandchildren.	All I can present is my memories of the beauty of the lower river and it's wetlands, and the abundance of deer, squirrels, fish, turtles and alligators that I enjoyed there as a young man from the early 1950's through 1968. These wetlands no longer exist, to the detriment of wildlife, fish, water quality, and general enjoyment of the river.	There are many, but if I had to choose one I would pick the continuing degradation of water quality, both in the river and in the ground, due to the continuing build-up of fertilizer and heavy metals in the sediment behind the dam. While flushing can prevent their presence as long as we insist on allowing and even encouraging mining, industrial agriculture, and golf courses in the river basin, I think a free flowing river would flush some pollutants out and distribute others so that fewer would percolate into the ground water.	Remove the dam, without restoring the river. The river will slowly restore itself, although this may take a century or more.	Upon moving to Florida in 1954, my father purchased a small lot to use as a hunting/fishing camp near Moss Bluff. In the years after the dam and river dredging were completed, we witnessed the gradual drying up of the river edge wetlands and the diminishing fish and wildlife in the area, and the lowering of the underground water table and the increasing foulness of the river as all the organic matter left on the reservoir bottom decayed and as floating water hyacinths choking the boat landings were sprayed and rotted. While the dam and channelization of the river were not the sole causes of the lowered water table and reduced water quality, they certainly had a negative effect. I know that our visits to the camp gradually reduced after the dam, and we spent less time on the river and more in the forest, until we stopped going to the river altogether. I suspect we would not have purchased the land or built the cabin or spent our money in the area if the river had been dammed and channelized at that time. From an economic point of view, I believe that the loss of an artificial fishing lake where high powered boats race from spot to spot is more than compensated for by the return of a scenic natural river bordered by fish and wildlife nurturing wetlands supporting kayakers, float fishermen, birdwatchers, and others who come to enjoy the Real Florida.
10/20/2021 10:38	Washington		No	No					I just want to save manateeee	the die there (right?)	the manateeeeeeez!	taking down the dam	comments.
10/20/2021 10:40	Pinellas		No	Yes			2-5 times	Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/20/2021 10:40	Duval		No	Yes			2-5 times	Fishing Canoeing / kayaking Wildlife viewing Other: exploring through Ocala NF	I would like to see it breached and have the historical water flow restored	Restoring water flow improves water quality for entire water management district. Improved water quality will bring back more fish populations which will bring back more wildlife diversity. With out the dame, Tropical storm flooding will be less of an urgent issue.	Water quality problems, tropical storm flooding issues, floodplain habitat not restored, wildlife habitat not improving, poor wildlife diversity	-	-
10/20/2021 10:40	Liberty		No	No					-	-	-	-	-
10/20/2021 10:40	Outside of state / other		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood-damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. 10/20/2021 10:41	Duval		No	Yes	2-5 times	2-5 times	Canoeing / kayaking	I've been on the river during drawdowns. Please restore the River and save our springs.	Information from St John's Riverkeeper showing the benefits	Plan B will not be necessary	No. Free the Ocklawaha now! Bring back our native species, let the manatees use the springs.	The fishing can only get better
10/20/2021 10:42	St Johns		No	Yes		2-5 times	Wildlife viewing	Restored to its natural state	Health of St John's River	Salt water intrusion	Uncertain.	
10/20/2021 10:42	Broward		No	No					Return the watershed to it's natural state and restore the Ocklawaha River by breaching the existing dam and draining the Rodman Reservoir	Partnering with natural systems through restoration has a broad range of environmental and economic benefits which are longer-lasting and sustainable than mechanical systems like dams	The on-going wellbeing of the community and overall ecology of the area. Moving into the next decades, the state is showing little progressive action to protect our state through natural systems	No	
10/20/2021 10:43	Alachua		No	Yes			1 time	Wildlife viewing	I would like to see the restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam, restoring the river system to its pre-1960s natural state.	Three important rivers, the Ocklawaha, Silver and St. Johns Rivers, and 50 lost springs will be restored.	We miss the best and possibly only opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe.	No.	
10/20/2021 10:46	Marion		No	Yes	2-5 times			Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating	Leave it alone.	Personal experiences.	That if restored to it's original state, that stretch of the Ocklawha will become an underutilized body of water.	No.	
10/20/2021 10:47	Duval		No	No					Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam to reunite the natural connection of Silver Springs, the Ocklawaha and the St. Johns River.	The science supports restoration. Studies by federal and state agencies have clearly demonstrated that restoration of a free-flowing, connected system is cost-effective and will provide significant ecological benefits to the St. Johns, Ocklawaha and Silver Rivers as well as Silver Springs.	We miss a historic opportunity to stop the ongoing ecological degradation caused by the dam and finally reunite the natural flow of these rivers. Breaching the dam would restore the natural flow of 150 mgd of fresh water, improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. A free flowing Ocklawaha will reestablish 15,000 acres of forested wetlands and fortify downstream submerged grasses from Welaka to Jacksonville in the St. Johns River that are critical to river health and fish habitat.	No. Breaching the dam and restoring the Ocklawaha are 50+ years overdue. Dam safety issues and improved water quality, wildlife habitat, and recreational opportunities can't be ignored or delayed any longer.	
10/20/2021 10:48	Orange		No	No					Open up the dam to connect waterways	Manatees, fish and people would benefit if the waterways were connected by demolishing the outdated dam	Stagnancy	No	
10/20/2021 10:49	Duval		No	Yes				Canoeing / kayaking	Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam to reunite the natural connection of Silver Springs, the Ocklawaha and the St. Johns River.	The science supports restoration. Studies by federal and state agencies have clearly demonstrated that restoration of a free-flowing, connected system is cost-effective and will provide significant ecological benefits to the St. Johns, Ocklawaha and Silver Rivers as well as Silver Springs.	We miss a historic opportunity to stop the ongoing ecological degradation caused by the dam.	No. Breaching the dam and restoring the Ocklawaha are 50+ years overdue. Dam safety issues and improved water quality, wildlife habitat, and recreational opportunities can't be ignored or delayed any longer.	
10/20/2021 10:50	St Johns		No	No					Removing it	It is impeding the health of the ecosystem and thus the livelihood of ecotourism			
10/20/2021 10:50	Volusia		No	No					make the ocklawaha free flowing again. Remove the ocklawhaw dam and Rodman Reservoir				
10/20/2021 10:50	Outside of state / other	Milwaukee, WI	No	Yes			1 time	Wildlife viewing		The manatees deserve a healthy and safe place to live.	The safety and endangerment of manatees and other local wildlife		
10/20/2021 10:53	Broward		No	No						Yes.			
10/20/2021 10:53	Charlotte		No	No					Restore the waterway by removing the dam	Important for wildlife movement	Health of manatee	No	
10/20/2021 10:54	Lee		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam	The dam prevents manatees from getting to a safe refuge in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife.	IF Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe	No.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatly long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/20/2021 10:55	Duval		No	Yes			1 time	Other: Hiking	I think it is time to restore the river.	The natural system should be restored.	We will continue to restrict flow and harm our resources.		
10/20/2021 10:55	Orange		No	No					I would like to see the dam breached and connection of waterways restored	Many pieces of information support my vote to restore Ocklawaha river flow.	Loss o manatee environment and other indigenous fish. Health of Florida's waterways.	No	
10/20/2021 10:56	Marion		No	No					As a nature lover I have just become aware of this issue. I would like to see improved water quality, healthy springs with additional recreational activities.	No manatees in Silver Springs as a result of the dam. Just think about positive impact from that one change to the Silver Springs area.	Poor Springs health. Lack of natural wildlife and poor Manatee Habitat.		
10/20/2021 10:57	Marion		No	Yes		1 time	More than 5 times	Other: T o observe the damage being done to the Ocklawaha River	I'd like to see the dam breached and the Ocklawaha River restored as a natural flowing river. This would restore water quality, wildlife habitat, and enhance the economy in the community of Silver Springs when as many as 200 manatees and numerous migratory varieties of fish might return to the headsprings. attract tourists.	A University of Florida study commissioned by the Silver Springs Alliance, the Sierra Club, the Florida Defenders of Wildlife and other groups which concluded both the health of three rivers, the Ocklawaha, Silver and St. Johns, plus the economies of communities from Silver Springs to Jacksonville would be enhanced when the dam is breached.	That an aging and dangerous dam built for the now defunct Cross Florida Barge Canal would continue to disrupt a natural river system, cost taxpayers money, and mostly benefit bass anglers and not a larger group of public stakeholders.	Breaching the dam is the best solution, but I understand that this should be done gradually to avoid damaging personal property downstream and inflicting sudden ecological change to creatures that have adapted to the stagnant conditions at the dam.	As a 72 year-old native Floridian, I've seen the wholescale destruction of Florida from one end to the other inflicted by commercial interests, offen headquartered far outside Florida. Only rarely do we witness meaningful restoration effort that the breaching of the Rodman Dam now offers. Don't squander this unique opportunity to heal the damage in these environmentally-unjust times.
10/20/2021 10:58	Outside of state / other	Wisconsin	No	No					Removal of the Kirkpatrick Dam would free the Ocklawaha to flow naturally as it wends toward the St. John's River, restore habitat suppling warm waters to Manatee habitat. Having visited Manatee sites in the Key Biscayne area and north of North Captiva Island, we tell Wisnowbirds and friends to visit and enjoy these Florida sites. Tourism $$s result.	In Wisconsin dam removal has not only saved the state the cost of replacing current unsafe dams, but also current and future maintenance costs. The reward has been improved water quality and recreational opportunities for people - and wildlife. Discussions run hot in the lead-up to decisions, but all experience the reward of sustainable results and lower long-term costs. Recreational income improves.	Further loss of desirable places for people and wildlife to recreate depreciates Florida's outdoor assets that draw folks to your state.	Not really. With an elevation of 0' above sea level, it's clear the Ocklawaha needs to run free to help prevent further salt water incursions into coastal ground waters.	None.
10/20/2021 11:00	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	maintained as is. maybe more wheelchair access. perhaps a pier off the dam upstream of the spillway	over 30 years as a water operator, my understanding of flows and the Floridan Aquifer, tell me that "restoration" is not possible.	loss of a man made resource that provides habitat for critters.	no compromise when it comes to Kirkpatrick dam, no removal, destruction!. I would like to see this put into LAW so we can finally put this issue to rest. It's been a long time!	

10/20/2021 11:03	Collier		No	No					Help the manatees	Manatees	Manatees	Unsure	
10/20/2021 11:05	Brevard		No	No					Remove	Removing key portions of this dam, which it past its life expectancy, will re-establish traditional access to essential habitat for manatees, bring back migratory fish, and restore a lost riverway for anglers and paddlers.	Long-term survival of Florida's manatee population	no	
10/20/2021 11:05	Brevard		No	No					Removing key portions of this dam, which it past its life expectancy, will re-establish traditional access to essential habitat for manatees, bring back migratory fish, and restore a lost riverway for anglers and paddlers.	Helping the manatees!	We have lost nearly 1000 manatees this year. We need to support this species before it is too late!	That would depend on the science.	Thank you!
10/20/2021 11:06	Miami-Dade		No	No					Breach the Rodman/Kirkpatrick Dam.	Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs.	Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years.	No. Breaching the dam is 50 years overdue.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
10/20/2021 11:07	Marion		No	Yes	1 time	More than 5 times	More than 5 times	Canoeing / Kayaking Wildlife viewing	keep the dam open and restore the natural flow of the Ocklawaha	All the research and information provided by the Defenders about current environmental conditions vs. past; my observation of the use of Rodman Reservoir (very poor boating; death of waterlogged trees around the shores; drowned springs; explosion of invasive water vegetation which requires poisonous spraying)	continuing deterioration of the watershed and continuing spraying of the waterways	NO. Either the dam is open or it is closed. Cannot be halfway pregnant. The local economy will greatly benefit from opening the waterway.	It is ludicrous that "some" local interests/coupled with the Corps of Engineers continue to put obstacles to the implementation of the will of Congress (no more money for Rodman Dam) and of the taxpayers (no more money for the dam and give us back our river!!!). SHAME ON THEM!!!
10/20/2021 11:07	Hillsborough		No	No					Breach the dam and drain the reservoir	wildlife	loss of wildlife		
10/20/2021 11:08	Brevard		No	No					Create the natural waterway.	Allows manatees and fish to use the river.	More fish and manatee declines	No	
10/20/2021 11:08	Duval		No	Yes		1 time	Fishing Canoeing / Kayaking Wildlife viewing		Remove the damn.	The dam was part of the cross Florida barge canal project that was abandoned in the early 1970s. Even the Republican administration recognized it as a debacle environmentally and economically. It has long since passed the time when the natural flow of the river should be restored. Doing so will help all downstream systems including the St. Johns River.	The St. Johns River is continuously being stressed, in part because of removal of its natural flows. Salinity levels would be reduced and we could expect a healthier River green system with better fishing than currently exists at the Rodman dam.	I'm not aware of any proposal short of preaching the dam that would restore natural flows and improve my fishing and kayaking experience.	
10/20/2021 11:09	Alachua		No	Yes		2-5 times	Canoeing / Kayaking Wildlife viewing		Remove the dam and restore the natural flow of the Oklawaha River.	The ratio between number of acres of natural area divided by the human population of Florida is rapidly decreasing due to population growth and natural area lost to development. Removing the dam would be a small step toward mitigating this problem.	Florida would become less attractive and plants and animals would continue to suffer losses.	no	
10/20/2021 11:11	Seminole		No	Yes		2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing Other: Water quality improvements/ 30 years with FLORIDA LAKEWATCH	Breach the Rodman/Kirkpatrick Dam. Open the waters up for natural restoration	•There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	•We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. •Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue. This must be done now.	SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
10/20/2021 11:11	Alachua		No	No					I would like to see the Rodman/Kirckpatrick Dam breached.	Florida's springs are our most treasured natural resources and 20 springs are currently drowned by the Rodman/Kirckpatrick dam. Breaching the dam would free those springs and provide much needed winter habitat for manatees, which are currently experiencing their deadliest year on record. The breaching of the dam would additionally restore habitats for migratory fish and would save $4-14 million in dam repairs.	I am concerned that hundreds of manatees will lose access to warm water winter habitats. In addition millions of dollars of taxpayer money will be spent keeping up this dam that provides no broad public benefit.	No. The breaching of this dam is long overdue.	Thank you for your consideration.
10/20/2021 11:13	Hillsborough		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	As a lifelong Florida resident, I am very concerned about our rivers and springs which have been inhibited from providing natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months by this dam. The environment is Florida's treasure and we need to do all we can to keep it healthy and protect wildlife. Also the tax burden that this dam which is more than 50 years old without ever being used for its intended purpose is concerning. Our taxes should not be wasted!	By not restoring the Ocklawaha River, the environmental impact now and in the future is unacceptable for Floridians who count on healthy waterways to protect our native wildlife and provide recreational opportunities. Also, again, the amount of taxpayer's money that will be required to repair the dam is concerning and could be better spent. This is not reasonable.	No. Breaching the dam is overdue. Dam safety, improved water quality and wildlife cannot wait.	As a native Floridian, I have seen many changes which have negatively impacted our environment. I care about Florida's environment and wildlife and think it is our responsibility to act responsibly to ensure a great environment for the future of Florida. I am asking you to make a responsible decision to restore the Ocklewaha River to ensure a brighter future for our state's people and wildlife. Thank you.
10/20/2021 11:16	Miami-Dade		No	No					I would like for the local manatee population to be able to move freely through the waterway.	Manatees play a critically important role in maintaining the health of our waters and require uninterrupted access in order to migrate to warmer waters, feed on sea grass, and reproduce.	I would be very concerned for the continued decline in the manatee population, as they were moved from 'endangered' to 'threatened' protection status 5-6 years ago and are now being reconsidered for endangered status due to increases in water pollution, habitat interruption/destruction, and human interference.	Water channels specifically designated for manatee migration	Save the manatees!
10/20/2021 11:16	Seminole		No	Yes		2-5 times	Other: No use for it.		It needs to be removed in order to restore the natural flow of the river.	A plethora of information available that supports returning the river to nature.	Further harm to a critical ecosystem.	No. remove the dam.	
10/20/2021 11:17	Hillsborough		No	Yes					Preservation				
10/20/2021 11:20	Palm Beach		No	No					I support the restoration of the Ocklawaha River by breaching the existing dam and draining the Rodman Reservoir for the broad range of environmental and economic benefits that restoration would provide.	I support the restoration of the Ocklawaha River by breaching the existing dam and draining the Rodman Reservoir for the broad range of environmental and economic benefits that restoration would provide.	I support the restoration of the Ocklawaha River by breaching the existing dam and draining the Rodman Reservoir for the broad range of environmental and economic benefits that restoration would provide.	I support the restoration of the Ocklawaha River by breaching the existing dam and draining the Rodman Reservoir for the broad range of environmental and economic benefits that restoration would provide.	I support the restoration of the Ocklawaha River by breaching the existing dam and draining the Rodman Reservoir for the broad range of environmental and economic benefits that restoration would provide.
10/20/2021 11:20	Alachua		No	Yes		2-5 times		Canoeing / Kayaking Wildlife viewing	Remove the dam.	Environmental protection	Loss of many species.	Not that can think of	Free the ocklawaha
10/20/2021 11:23	Outside of state / other	New York	No	No					I would like the dam to be disassemble to restore the Ocklawaha River.	Not only is the dam past its life expectancy and an unexpected breach or major repair program would wreak havoc on people and animals physically it would also be a huge financial burden for taxpayers. More importantly though is protection of the waterways and springs as habitats for manatees, birds, bears, panthers and other wildlife. Manatees need warm places to be in the winter and removing the dam would bring back more places for them to be. They nor fish should not have to uses locks which is sketchy and also supports invasive species living downstream. The natural food web has been disrupted by the dam. A natural water flow is the best option for people and animals.	Manatee and wildlife survival.	I can't think of a scenario right now.	Thank you for hearing the public.
10/20/2021 11:24	Union		No	Yes		1 time	2-5 times	Wildlife viewing Other: Seeing manatees!	We need to do more to protect manatees, who are already dying at an alarming rate. Please restore the Ocklawaha River for Florida's wildlife!	The greatest long-term threat to these animals is the loss of warm water habitat that manatees need to survive the winter. Right now, 60% of Florida's manatees depend on power plant outfalls to keep warm and survive the winter - an unsustainable and unnatural situation. Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	Manatees will continue to die off and will no longer grace our beautiful state!		Please restore Florida's Riverways!
10/20/2021 11:24	Duval		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Historic fish and manatees return as breach opens creating a free-flowing river	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/20/2021 11:24	Leon		No	No					Remove the dam.	Restoration of natural water flows.	Loss of natural habitat.	No	
10/20/2021 11:25	Volusia		No	Yes	1 time	2-5 times	More than 5 times	Wildlife viewing	Remove dam. Restore natural environment.	risk to environment	further damage to environment	no	
10/20/2021 11:27	Marion		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / Kayaking Boating Hunting Wildlife viewing	This man made ecology holds water for a large part of the state including wells for many in the area. To destroy it would simply kill many species of animals and starve many others.	Living there and seeing the eco system thrive	Dry wells for many dead manatees the entire eco system will fall all animals eagles etc will starve to death.	No	This is a thriving place for all wildlife! Lets remember what happened in other areas like spring hill Florida when the water was piped out! Hundreds of thousands of sink holes dry wells Florida needs fresh water! It was a a mistake to make it however now a larger one to remove it.
10/20/2021 11:27	Franklin		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood-damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide unimbibed passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to $37 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration
10/20/2021 11:27	Duval		No	Yes		1 time	Canoeing / Kayaking		Take the dam down and let the Ocklawaha go back to what is was.	The suppression of the environment during the years of the dam on the rivers.	We will bose the rivers and the true ecosystem	No	
10/20/2021 11:27	Putnam		No	No					I would like to see the dam removed and the river restored to its natural state.	Positive results of other dam removals around the country.	None. It would be a 100% positive outcome.	No	
10/20/2021 11:31	Alachua		No	Yes	1 time	More than 5 times	More than 5 times	Boating Wildlife viewing Other: Surveying invasive plants and general conditions on the reservoir	I conducted research with Dr. Jerry Shireman for the Corps of Engineers in the late 70's and early 80's on managing the reservoir (Primarily regulating water levels to optimize fisheries production and provide information on minimizing the need for invasive aquatic weed control. The final report we completed recommended periodic major drawdowns to reduce the amount of forage species and increase production of strong year classes of sportfish as well as providing free invasive weed control. Rodman remains a premier fishing lake and the cost of invasive plant control on the 9,000 acre reservoir remains just a fraction of the cost of invasive weed control on any other similar size water body in Florida. The reservoir is highly manageable with few residents living on the shoreline, it has developed for 50 years its own unique and diverse wildlife habitat and serves many ecological and economic functions that benefit the public. Thus, my conclusion is that the reservoir should be maintained as such and certainly not altered in any significant manner.	The reservoir receives water from the most eutrophic chain of lakes in the state of Florida and among other ecological functions benefits the downstream receiving waters by removing significant amounts of nutrients from the upstream lakes and from the major silver springs inflow. The water retention average of 20-30 days does not significantly affect the salinity levels in the St. Johns and , though I know of no major studies, the flooded 9,000 acre flood plain probably aids significantly to recharge of the decreasing underlying aquifer, considerably more than the restored river would be able to accomplish. During the drought of 2012/13 all the major recreational lakes in north Florida, orange, Santa Fe, Suwannee River, etc. were inaccessible to boaters while rodman was unaffected. I believe that water is becoming a limiting resource in the state with excessive population growth and demand for ground water as well as surface waters will continue to rise and be particularly severe during periodic drought levels, which are not uncommon in the history of the state. The recent study on the economic benefits of the restored river over estimates the recreational use of the restored river by including the fisheries value of the tailwaters are Rodman dam. These fisher people fish the tailwater for two major reasons: one is that many of these people do not own or could afford the expense of boats and motors and the tailwater flow attracts fish to that location similar to the "Fish Jubilee" that Archie Carr discusses in one of his books when heavy rains cause fish to concentrate in areas of high water flow downstream of culverts and other locations. In summary, the Reservoir as currently managed, facing population growth and declining water supplies, provides far greater current and future ecological and economic benefits that a restored river.	My concerns should be clear from the above discussion. Interesting, that if the reservoir were not already there, there will be a discussion about construction of shallow Stormwater Treatment Areas, similar to those in S. Florida, to treat the water from this watershed before entering the St. Johns River!!	My support would depend on the scenario's being considered.	
10/20/2021 11:38	Levy		No	Yes	1 time	1 time		Canoeing / Kayaking	Tear the Dam thing down!	The ecological and social devastation that has happened.	The ecology continues to get worse.	No!	
10/20/2021 11:38	Outside of state / other	Fairfax, VA	No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood-damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provoda essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide unimbibed passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to $37 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder planning to retire in Florida who deeply cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a sustainable future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/20/2021 11:38	Outside of state / other	Missouri	No	Yes			1 time	Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees.
10/20/2021 11:39	Duval		No	No					Remove or breach the dam to improve the Ocklawaha, Silver Springs & St. John's Rivers overall health, as well as help mitigate salt intrusion in Duval County.	The interview on WJCT with the St. John's River-keeper, which guided me to review pertinent sections of the online 2021 State of the River Report.	The current environmental impacts will only grow more severe affecting the quality of life of the majority of citizens of N.E. FL	Just about any solution as per the 2021 State of the River Report that RiverKeeper.org is willing to accept	So, will the power & influence of elite special interests or will the interests, mid-term and longterm, of everyday citizens' Health & quality of life prevail?
10/20/2021 11:44	Duval		No	Yes			2-5 times	Fishing (shoreline/structure)	Remove it				
10/20/2021 11:45	Marion		No	Yes			1 time		Would like to see it breached and finally dismantled	That breaching the dam would restore the Ocklawaha river to its free flowing state thereby benefiting the environment and the folks living on the River and fishing the river.	That the decision makers would still disregard the benefits of a free flowing Oclawaha in favor of so called "sport fishing" in the reservoir.	Not really	
10/20/2021 11:50	Miami-Dade		No	Yes		1 time	2-5 times	Wildlife viewing	Take it down, reunite the rivers.	Needs to go back to it's more natural state	Wildlife is already struggling, we may lose some key animals such as manatees that have had a hard time lately. They need help.	Not that complicated.	
10/20/2021 11:50	St Lucie		No	No					Demolish the dam drain the reservoir	restoration of the natural flow of Ocklawaha River, its flora and fauna, restoration of the Floridan Aquifer and drinking water	Lost natural habitat, impact on Floridan Aquifer and the state's drinking water		
10/20/2021 11:51	Marion		No	Yes	More than 5 times			Fishing Fishing (shoreline/structure) Boating Hunting	Nothing. Just to keep it maintained and as trash free as possible.				
10/20/2021 11:53	St Johns		No	No									
10/20/2021 11:54	Outside of state / other	Centre county, PA	No	No					Remove barriers to Manatee habitat. Do the right thing, so that these endangered mammals have safe and clean habitat to live in.	Information that was provided to me by The Save the Manatee organization.	That the manatee population would continue to decline, most likely to extinction.	I would be in support of other so called scenario's that continue to support the protection and preservation of the Manatee and it's vital habitat.	
10/20/2021 11:57	Duval		No	Yes				Boating Wildlife viewing	The dam is falling apart and needs to be removed before it fails and puts people AND properties in jeopardy. It was never a good idea. It would cost a LOT of money to make it safe, money that would be BETTER spent restoring the free flow of of the rivers and surrounding springs thereby improving water quality and the grass beds needed by fish populations for breeding and manatees for food.	Latest statistics. Manatees are freezing in winter because they cannot access the springs and now they are starving because the grass beds are silted and choked due to low flow conditions. Fish stocks are declining because they can't breed in the muck. Algae blooms are getting worse, killing fish, polluting the waterways, making people sick and making river activities VERY unattractive to locals and tourists. Saline intrusion is starting to contaminate our fresh water - water that we rely on to DRINK.	Dead fish. Dead manatees. Dead springs. Dead people. A lot of wasted/misplaced dollars. If the dam fails, we would be subject to huge lawsuits because people and properties WILL be hurt, if we ALLOW our aquifers to fail we will be trucking in water from WHERE - the Great Lakes? Or spending ridiculous sums for desalinization plants which would, in turn, contaminate our coastlines. How shortsighted is that!!!		
10/20/2021 11:57	St Johns		No	Yes			2-5 times	Wildlife viewing	Breach and destroy the dam and return the natural flow that nature intended. It was be great to add boat access ramps and access points for is to use	It never should have been built as it changed the rivers flow and has created problems since.	Water quality will suffer	No it needs to be taken down.	
10/20/2021 12:00	Duval		No	No					Removed	Newspaper articles.	St John's river will increase salinity wise.		
10/20/2021 12:01	Volusia		No	Yes	1 time	2-5 times	More than 5 times	Fishing Boating Wildlife viewing	That the Kirkpatrick Dam be removed. I and fellow fishermen find it unsustainable for bass and other fish species. We would like to allow the natural flow of the river be restored.	Personal experience.	My biggest concern is if the natural flow of the river is not restored we will have pooled pollution in the dammed area. The natural flow and spawning ground for fish and the biodiversity that sustain fish and other aquatic species are stunted. It's not proven to be sustainable to fish and all that support them.	No.	
10/20/2021 12:05	Brevard		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam	We have badly neglected our waterways in Florida favoring industry over ecology. Florida is far behind other natural resources rich states in natural protections its time to act. The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide unimbibed passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration
10/20/2021 12:06	Sarasota		No	No					Preserve the Manatee habitat	The number of manatees dying from starvation	Saving the manatees	No	
10/20/2021 12:06	Duval		No	No					Breach the dam to restore the natural connection of the Springs and Rivers.	Science supports the return to natural flow. Also, the dam is 50 years old so in removing it now this will be cost effective.	Further deterioration of the Springs and the St Johns River. I currently live in Jacksonville and want to see the River thrive. When I was a child my family drove to Florida from NJ every year to visit my grandparents and we loved to go to Silver Springs - it is sad to see its current state.	No	
10/20/2021 12:14	Flagler		No	No									
10/20/2021 12:15	Outside of state / other	Silhwater, Minnesota	No	No					Take the Dam down, its well overdue.	Removing the dam with increase freshwater habitat for manatees, who have MANY threats including the future shut down of power plants, that currently have warm water out flows that manatees use to survive the colder winter waters.	Deaths of more manatees.	No.	I have read of MANY other benefits besides manatee survival , that will happen if the Dam is taken down. In one fell swoop, much good would come from the removal of the dam. Please take the Dam down. Thank you.
10/20/2021 12:19	Sarasota		No	No					We need to do everything possible to protect our wildlife and natural areas.	Florida's manatees are dying at an alarming rate. We must protect our iconic species and natural beauty.	That special interests will overrule what is best for Florida's scenic areas and the animals who depend on us to protect them.		
10/20/2021 12:16	Orange		No	No					Whatever is best for the manatees	The projection by experts who know what best supports the manatees.	Further decline of our big mammals.	I'll have to see what the outcome is and what the experts say.	
10/20/2021 12:17	Marion		No	Yes			2-5 times	Canoeing / Kayaking	Restore the Oklawaha river flow	need to restore migratory routes for manitees and fish	decreasing biodiversity and poor water quality	No	
10/20/2021 12:20	Lee		No	No					Breaching of the dam.	Manatees need the restoration of river flows to survive in this area of Florida. We are at a critical point in terms of keeping the manatees from extinction.	We would be ignoring the science that supports removal of the dam in order to foster the continued existence of the manatees in this area.	No. Please support removal (breach) of the dam.	Too many species are being lost permanently due to unintended consequences of human action and development. Preservation of habitat is essential if we are to keep our interactions with ecosystems from harming them.

10/20/2021 12:20	Volusia		No	No					I think you need to start by looking at the amazing success of the restoration of flow of the Kissimmee River. Arguably, the Oklawaha R. could be even more beautiful with restoration, and provide so many opportunities for recreation. I have heard that many springs were drowned as a result of the dam. What a shame to lose these resources. The downstream floodplain would be restored - it took less than a year for the floodplain of the Kissimmee R. to attract wildlife, especially wading birds whose populations have decreased dramatically due primarily by loss of habitat. Imagine the river once again teaming with fish, including striped bass, and other wildlife (otters maybe?) that are able to move freely again. Studies have shown that the use of Rodman Reservoir has declined due to increasingly poor water quality and declining fish populations. This obviously negates arguments for keeping the reservoir for fishing. Manatees, whose die off this year is a tragic record, would regain access to warm water habitats of the Ocklawaha R. and Silver Springs. Restoration of flow in the Ocklawaha would also benefit Silver Springs (a gem) and the St Johns River (lifeblood of east central and north Florida). Another very important consideration is that the restored flow will would improve water quality and increase the resiliency to sea level rise on the Lower St Johns River. Removal of the dam is a win win situation for Florida.	Number one would be water quality. Number two would be the continued degradation to the environment and wildlife. Number three would be the cost to taxpayers to restore a failed system.	No. Breaching the dam is long overdue.	Florida's economy is built on tourism attracted to the state's many water bodies. I don't understand why we continue to squander those natural resources. I never knew a free-flowing Ocklawaha, I would like to enjoy that and I would like the state to restore it for me and future generations.
10/20/2021 12:22	Alachua		No	No					Open the dam to provide restoration of the river and its integral ecological relationship to the St. Johns River and Silver Springs.	I believe a free-flowing Ocklawaha River, would have a favorable economic impact in the Putnam County area. It would provide families and tourists activities around the water. Fishing, kayaking, outdoor exploration.	Further Loss of wildlife. Further destruction of ecological features.	I am not certain of partial scenarios.	
10/20/2021 12:24	Miami-Dade		No	Yes			1 time	Wildlife viewing	I would like to see the dam opened to restore the Ocklawaha river to its normal flow.	The river ecosystem is ecologically degraded due to the dam; restoring the flow would restore the ecosystem and also provide recreational activities not now available.	The riparian ecosystem would remain degraded.	I don't understand how anything short of restoring the normal river flow would allow Ecosystem recovery	
10/20/2021 12:25	Marion		No	Yes			1 time	More than 5 times	Wildlife viewing Other: I like to walk along the edge of the Reservoir/Dam and try to envision what the natural river must have looked like before the destruction of the area was done decades ago. The sight of the Ocklawaha flowing freely through this current bottleneck must have been spectacularly beautiful - with the assortment of birds, fish, and manatees migrating through the waters.	I hope the dam will be breached (at least) and the years of sedimentary gunk that has accumulated on the bottom of the reservoir can be flushed out to restore the flow of the mighty Ocklawaha River to it's former glory as a fully functioning river system and wildlife habitat. Restoring the system of "drowned" springs along the length of the rivers would be another positive aspect to the breaching of the dam.	The Reservoir and Dam have served their purpose over the last five decades. Bass "fisherfolk" have had all this time to sponsor and compete in fishing tournaments (even though now, the largest fish that are currently winning these contests are actually being caught outside of the Reservoir). Now it is time for them to move aside for the larger good, accepting fishing along the banks of the restored Ocklawaha River instead of in that algae cesspool, aka the Reservoir. We have all been waiting for an opportunity to allow all citizens to enjoy the free-flowing river. The return of migrating fish species and manatees all the way to Silver Springs would be an economic benefit to Marion County as well as Putnam County because of the impact of tourist dollars along the whole route. Imagine the opportunities to kayak, canoe, snorkel, and sightsee in pontoon boats, watching restored fish and manatee populations along the St. Johns, Ocklawaha, and Silver Rivers! The news reports of record deaths of our state rock stars, manatees is devastating to learn about. With the reduction of power plants along the Florida coasts, this restored ecosystem would give these mammals a safe and bountiful location to live - and not die of starvation because of decreased sea grass beds along our blighted coastlines. Hundreds of manatees could be saved by the breaching of the dam.	I worry that good money will be thrown away if authorizations are made to try to repair this decrepit, outdated, useless dam and reservoir. How long do we indulge fishermen who want to to keep the status quo of a dying lake? Talk of using the water in the reservoir as a source of drinking water for Putnam County residents is ludicrous; it is not clean or safe enough for anyone to drink. Algae blooms are not a result of a free-flowing water system but of toxic water quality. People who say that breaching the dam will cause increased algae blooms don't acknowledge the scientific facts about water quality and quantity. So many hard working people have spent years developing solutions to these problems; bass fishing is not a reasonable argument for the degradation of the St. Johns River system.	As far as I am concerned, breaching the dam is a compromise position. The best solution would be remove all vestiges of the reservoir and dam but, failing that, breaching the dam and maintaining some type of "pool" (reservoir) would be a compromise for both sides of the issue. Taxpayers should not have to pay to maintain this boondoggle any longer. There are many other infrastructure projects that deserve our attention and money - not to shore up a decaying dam and a filthy reservoir for sport fishing.	Incredibly, the power of a number of Florida governors over the years, acting on behalf of all Floridians, has not been enough support to break the local Putnam County politicians' control over this issue. They are insincerely assuming that this is merely a local issue and that the dam/reservoir/river belongs to them and not to the state of Florida. This provincial view has been tolerated long enough. The time has come for the St. Johns, Ocklawaha, and Silver Rivers to be given back to Floridians and the American public as an enhanced free-flowing river ecosystem! Breaching the dam to restore the network of springs along the length of the river system can only be another positive outcome. I appreciate the opportunity to finally give my input about this issue to the SJRWMD in the hope that it will be taken seriously. Thank you for acting on the positive solutions that are being offered to mitigate this ongoing disaster. Free these rivers!
10/20/2021 12:27	Outside of state / other	Michigan	No	No					Cleanliness	Idk	Idk	Idk	
10/20/2021 12:28	Duval		No	No					I would like to support the manatees and anything that will help them for future.	My love for the manatees.	The impact it would have for manatees and other wildlife.		
10/20/2021 12:28	Duval		No	Yes				Canoeing / kayaking	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway	As the great great great granddaughter of a Florida Pioneer family and a 47 year old who started supporting Save the Manatee when I was a teen it breaks my heart to see their habitat along with many other species being impacted. Breaching the dam would give this wildlife additional opportunities to thrive.
10/20/2021 12:31	Hamilton		No	No				Boating	Breach or remove the dam and restore natural water levels.	The dam is supported by sport and hunting enthusiasts that put their wants above the needs of other people and wildlife. Their boats, gear, tackle, and invasive habits are destructive to the diversity of Florida's sensitive ecosystem. They argue openly that the absence of manatees improves fishing and water clarity. I have more sympathy for the manatees that have died in record numbers this year. They need access to the river and it's lost springs. We have a responsibility to respect the plan and design of nature. We are foolish to think we can improve upon healthy productive ecosystems because we find them hostile and uncomfortable. Our "improvements" are blunders. Mining, canals, oil and gas exploration and developments have crisscrossed Florida with scars and diminished a natural paradise that could feed millions without pollution and degradation to a mismanaged, crippled, pathetic example of the sad results of human ambition, hubris, and greed. We must emphatically undo past engineering mistakes that threaten the viability of continuous habitation in South Florida.	That nothing changes, the status quo remains, and the cheated youth must die with the too-proud-to-admit-they -were-wrong-elderly.	No. I think that motorized boats should not be allowed so far up the rivers anyway. They are obnoxious and the wakes cause massive erosion and silting.	If you love Florida, read the Gulf by Jack E. Davis. May you be blessed with wisdom and kindness.
10/20/2021 12:52	Gilchrist		No	Yes			2-5 times	Other: During drawdowns boat to see lost springs.	Breach the Rodman Dam and restore the flow of the Ocklawaha River.	The restoration of three rivers (Ocklawaha, Silver and St. Johns) and close to 50 springs will create more diverse recreation opportunities for everyone, increases visitation and add supporting jobs.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	NO	Please restore the Ocklawaha for the people who love wild Florida, the manatees, the ecosystem, the taxpayers. PLEASE.
10/20/2021 12:54	Miami-Dade		No	Yes			1 time	Wildlife viewing	Restore the springs	Let the water flow		Get rid of the dam	
10/20/2021 12:54	Escambia		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	It needs to be removed...especially as old as it is.	Our ecosystem	Our ecosystem	Not really	Save our wildlife and our environment.
10/20/2021 12:55	Outside of state / other	Vancouver, Washington	No	No				Boating	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam	The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood-damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	Although I do not live in Florida I care deeply about manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/20/2021 12:55	Polk		No	No					I would like the dam to be breached and the reservoir to be drained.	We are spending to maintain something that would have $52.5 million more value in its natural state.	Loss of water quality	No.	
10/20/2021 12:58	Miami-Dade		No	No					Restore by breaching ASAP!!! I'm a fourth generation Floridian. It's time to do what's right for ours and future generations of Floridians.		Shortage of clean water		
10/20/2021 13:01	Duval		No	No					I would like to have the dam breached to allow the natural flow of water through the Ocklawaha River.	The primary benefit of the dam is to provide fishing, however, it costs the state millions of dollars to maintain the reservoir. Opening the dam will not eliminate fishing in the river but will help restore the natural forces that ensure the health of the river both up and downstream of the dam.	Ecological cost to the Ocklawaha river below the dam.	It is hard to imagine a scenario that would be adequate - the dam would either be breached or not. If the dam gate could be opened so that it is effectively breached without damaging the actual dam might be an option, but seems unlikely.	Thanks for the opportunity to publicly comment on this issue. Our rivers are such a vital resource for this area.
10/20/2021 13:03	Manatee		No	No					Restore the river by breaching the dam	The dam has an intense impact on our waterways and wildlife. Breaching the dam would allow native fish and manatees to find warmer and safer waters. A breach is also less expensive than a repair.	Continued decrease in water quality, decrease in wildlife life quality and health (therefore a decrease in human quality of life), wasted money on repairs.	No	I am a sixth generation Floridian and would like to see our waters improve and wildlife to prosper.
10/20/2021 13:05	Putnam		No	Yes			2-5 times	Other: I go there and shake my head at the travesty of this man-made atrocity.	I would like to see the natural flow of the river restored.	The scientific studies and information for supporting the restoration for the health of the environment, the Silver and St. Johns rivers, manatees and fish, the forests and native plant life, the springs, etc. are exhaustive.	The continued degradation of the natural systems that depend on a healthy Ocklawaha.	Not really. This is a state recreational area, it belongs to all of us and it is being underutilized.	The continued use of pesticides to keep the waterway open, is a huge waste of tax payer money. We are poisoning ourselves when we poison nature. Shameful when you think a restored flow would take care of itself without the use of poisons.
10/20/2021 13:05	St Johns		No	Yes			1 time	Other: None it sucks	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood-damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/20/2021 13:09	Pinellas		No	No					I would like to see the damn removed. Removing the dam will re-establish access to essential habitat for manatees, bring back migratory fish, connect three river ecosystems, historic Silver Springs, and restore a lost riverway for anglers and paddlers from Ocklawaha's Harris Chain of Lakes to the Atlantic.	dams have been shown to negatively impact animal habitat and migration patterns	that animals will not have access to the appropriate habitat	no, i want the dam removed	
10/20/2021 13:16	Duval		No	No					I would like to see the Ocklawaha River restored by breaching the Rodman/Kirkpatrick Dam	The dam is more than 50 years old and has surpassed its life expectancy without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more that $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	The 100-mile St. Johns River Estuary will continue to be deprived of 150mgd of natural water flow to improve water quality, restore fish and wildlife habitat and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	NO. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 feet mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish. manatees, water quality or water flow.	I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies and ecosystems all along the Riverway.
10/20/2021 13:17	Marion		No	Yes	1 time	2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Wildlife viewing Other	I would like to see the dam left as it is.	It is not broken, doesnt need to be fixed.	Loss of a habitat, and wildlife	None I am aware of	
10/20/2021 13:20	Volusia		No	Yes			1 time		Remove the dam	return to natural eco system because the project has never been completed	ability to restore the riverway		
10/20/2021 13:24	Sarasota		No	No									
10/20/2021 13:27	Outside of state / other	Massachusetts	No	Yes			2-5 times	Wildlife viewing	Restoration of the Great Florida Riverway by breaching the dam; so that the three rivers are joined together.	Rejoining the three rivers will revitalize all of the water wildlife and underwater nature, which is what I want to see when I visit.	That marine life will suffer. I would not visit again.	No	
10/20/2021 13:30	Wakulla		No	Yes	1 time	1 time	1 time	Other: Nature preserve	Nature preserve with safe ecological water conservation plan that preserves wildlife and water quality.	Friends of Wakulla River, Florida Native Plant Society, USDA, Florida Forestry and Florida Fish and Game officials all call for safe water conservation plan to support the wildlife and rivers that depend on it.	Danger for waters and wildlife and habitats that depend on its safe regulation.	Nope - we need to do this right. We've been doing this wrong for too long.	
10/20/2021 13:32	Sarasota		No	No					Remove key portions that will allow manatees to thrive and survive				
10/20/2021 13:32	Duval		No	No					As a native Floridian, I would like to see the great florida riverway restored. I think the benefit of fresh water added to the precious springs in our state would be very beneficial to all concerned.	The most important information is the enhanced bio filtration Of our water. This is one of our state's most important natural resource. Bringing tourist dollars and upholding our way of life.	This old question of not opening this waterway is contrary to common sense. If we continue to postpone projects that directly benefit fresh water flow, results could become catastrophic.	No scenario is acceptable except this one. 150 million gallons of fresh water into st johns river cannot be underestimated.	I have been to the ocklewaha river. It is beautiful but has an ending that is not natural. I want florida to embrace ecological change. As a voter i will reflect that. Thank you
10/20/2021 13:32	Sarasota		No	No					Remove key portions of the dam to allow manatees to thrive and survive				
10/20/2021 13:33	Clay		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Canoeing / kayaking Wildlife viewing	Keep it as is, it's is a very unique ecosystem in it own, why change it		The economic value to the surrounding counties as well as the wildlife that calls it home, nesting eagles, manatees, all the species of fish, as well as other wildlife that calls it home	No	It has been 50 years, why change what thousands of people per year enjoy
10/20/2021 13:35	Leon		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. 10/20/2021 13:35	Orange		No	No					Please breach the dam and drain the reservoir to enable restoration to begin for our treasured and vital Ocklawaha River.	Short- and long-term environmental and economic benefits on behalf of Florida's flora and fauna, as well as future generations of Floridians.	Honestly, and perhaps, naively, I feel this project is aligned with your organization's posted mission/vision and values on behalf of Florida's diverse natives, residents, and visitors. This river restoration is exactly the type of forward-thinking project I would expect the experts and scientists of our St. Johns River Water Management District to embrace and implement as stewards of our finite resources and funds.	No.	As I take time to review information about this project and participate in this survey, I trust you will take time to read our responses and thoughtfully incorporate our feedback. Optimistically, I congratulate you on moving forward with this river restoration which may become a model for other communities around the world while fulfilling your mission/vision, and creating a bright future and indelible legacy for Florida. Thank you.

10/20/2021 13:36	Outside of state / other	Oregon	No	No					Restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. As well, keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No! Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As an American citizen who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for this nation's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a [illegible] and will greatly benefit all citizens of the US and Florida's people, environment and wildlife.
10/20/2021 13:37	Brevard		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to $1? property owners and up to $1? million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economics have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/20/2021 13:37	Outside of state / other	New Jersey	No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	I am in favor of restoring the original ecosystem - I do not believe that chopping up river ecosystems is a good idea.	Contributing to Environmental destruction.	Mitigated damages would be preferable to doing nothing. I still prefer removal of the dam.	
10/20/2021 13:40	St Johns		No	No					Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam to reunite the natural connection of Silver Springs, the Ocklawaha and the St. Johns River.	The science! 150+ million gallons a day of natural flow would be restored to the Lower Ocklawaha and St. Johns Rivers	Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs, and invasive fish like the Blue Tilapia increase. Water quality declines, further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	No, now is the time to do this!	
10/20/2021 13:43	Orange		No	No						I would like to the flow of the Ocklawaha River restored by the breaching of the Kirkpatrick Dam.	The area would lose biodiversity important to a healthy environment.	No. Breaching the dam in my opinion is the best solution for the long term outlook of Florida wildlife survival, water quality, and economically, recreationally, and aesthetically for the citizens of Florida.	
10/20/2021 13:45	Pasco		No	No						Breach the Rodmon/Kirkpatrick Dam.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No	
10/20/2021 13:46	St Johns		No	Yes		1 time	Wildlife viewing			Let it be breached and allow the free flow of the Ocklawaha River	Studies (science) have shown that restoring the free flowing will provide ecological benefits to the Ocklawaha, St. Johns and Silver Rivers.	Not really....	
10/20/2021 13:49	Outside of state / other	Bow, Washington	No	No					Please restore the Ocklawaha River by breaching the Kirkpatrick Dam	Florida wildlife is very important to the ecosystem and tourism industry, and removing the dam will have a direct benefit to manatees and other Florida wildlife. Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Continued loss of manatee populations due to lack of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. 2021 is the deadliest year on record for manatees. The greatest long-term threat to the manatee is loss of natural warm water winter habitat. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. The Florida ecosystem is in crisis. Wildlife and water quality cannot wait any longer.	Please restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for Florida's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. This exciting restoration project will revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway will greatly benefit all citizens of the US and Florida's people, environment and wildlife.
10/20/2021 13:55	Volusia		No	Yes		1 time	Other: The natural flow of water is the solution for all living things. Do no harm is the answer for every decision. The dam harmed every aspect of the land, the water, the plants, and all the animals that had their homes within it. We must let natural landscape provide for life first, not pleasure		Remove it ASAP. BRING BACK WHAT IT WAS BEFORE THE DAM WAS MADE.	Florida			is beautiful because of all the natural plants and animals. Ishtors come to see
10/20/2021 13:56	Hillsborough		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife.	Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to $1? property owners and up to $1? million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economics have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	
10/20/2021 14:03	Alachua		No	Yes		1 time	Other: I cruise the river to enjoy the sights and silence.		I'd like to see the damn dam partially removed, with a 75-foot opening cut in the center. Then add a bridge so that traffic on Rodman Road can still move	The dam obviously creates an unecessary distortion -- an aberation -- of Nature.	That political corruption continues to grow, like a cancer, in Florida.	A fifty-foot cut might work.	Allowing the return of natural river flow is the right thing to do. It's hard to imagine denying this.
10/20/2021 14:07	Alachua		No	Yes		2-5 times	Canoeing / kayaking		Please take down the damn dam and let the Ocklawaha flow free !!! 🙏🙏🙏	Wildlife and tree restoration. Make strong pathway for manatee	More cost $$ to maintain. And killing the river	Only freeing the oklawaha is my request 🙏🙏🙏	it's overdue and the right thing to do 🙏🙏
10/20/2021 14:11	Putnam		No	No			Other: Enjoying the scenery		no opinion	There are too many different sets of 'cast in stone facts' on both extremes of this question. Claims of 20 springs bubbling forth if water is uncapped as a source of fighting off sea level rise seem suspect. The reality those uncapped springs are linked to three foot drop in water levels of uphill lakes with impact on fire fighting abilities and homeowner insurance rates seem less suspect.	Loss of public use/enjoyment on the rivers with a loss of the multiple Ocklawaha river courses / beds now downstream from the damn dam. Those river branches run fast and deep now. Those river branches are well used now. Will they lose their charm of being practically in the wilderness now?		Commenting about the position of the Riverkeeper which is: Recommendations from St. Johns Riverkeeper: Restore the natural flow of the Ocklawaha River by breaching the Rodman Dam and reuniting Silver Springs, the Ocklawaha and the St. Johns Rivers. Restoration would help offset increased salinity and improve water quality, by increasing the flow of freshwater into the St. Johns by at least 150 million gallons of water a day and restoring over 7,500 acres of forested wetlands. I find it extremely difficult to accept the statement that "at least 150 million gallons per day" would be increased flow if the dammed dam was knocked down. Logic is that, after the Rodman pool comes to level it is currently fresh water in minus evaporation is the amount of fresh water out which ought to be for short of 150 million gpd. Are their "facts" fact? You all need to show the public "fact" and not like Dr. Fauchi shows "fact" on the Chinese Communist bug pandemic. Likewise what is the definition of "restored forested wetlands"? If 7,500 acres are "restored" they would logically become other than wetlands. PLEASE show how you ascertain "fact" and show the public the truth before doing anything else.
10/20/2021 14:12	Nassau		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Remove Kirkpatrick Dam and restore the flow of the Ocklawaha	Restore the flow of the Ocklawaha River, see the springs restored and protect the historical biodiversity of the region.	Far reaching, continued environmental degradation.		
10/20/2021 14:15	Indian River		No	Yes		1 time	Wildlife viewing		I would like a restoration of a free flowing river that would then allow connection to Silver Springs and St. John's River.	In a time with increased population explosion in Florida, our springs need to be restored and protected. Fish, manatees, and birds depend on our wetlands. 20 lost springs and Silver Springs will be restored with the opening of the Ocklawaha River.	The loss of the wetlands that make Florida the beautiful state that it is. South Florida's incursion on the everglades is devastating. We shouldn't let that happen in any part of Florida. Let's take action, and restore natural water flow that will improve wildlife habitat, water filtration, flood protection. and flow that would prevent further salt water incursion in our fresh waterways and aquafers.	No. In these fragile times of rapid climate change with increased storms, droughts, fires, and floods; we need to protect and restore our environment.	The restoration will improve water quality and flow for numerous rivers. The preservation of clean water and clean air are my highest priorities. The preservation of natural habitat is important for all of us.
10/20/2021 14:20	Marion		No	Yes		More than 5 times		Wildlife viewing Other: Walking and picnicking					
10/20/2021 14:24	Alachua		No	No					Breach the dam so that water will free flow in the Ocklawaha river.	7,500 acres of the lower Ocklawaha's historic forested floodplain, 20 freshwater springs, and many miles of natural river channel that were drowned as a result of dam construction would be restored. Native plants and native plant communities, as well as manatees and migratory fish would gain access an be restored.	Environmental benefits to native flora and fauna species, including endangered species would not be possible.	No. The dam must be breached to allow the sustainability of native species.	We all have a stake, environmental and economic, in whether Florida finally restores a free-flowing Ocklawaha River. Ecotourism and recreational dollars will be affected as well as environmental sustainability.
10/20/2021 14:25	Alachua		No	No					I would like to see the dam removed, so the Ocklawaha River can run freely, smoother, without treachery, and in a more stable and natural environment.	In any amount of research, there lies true, key elements to validate the reality of things. To you, it may not matter, but to the environment, the wildlife, the activists, the advocates, nature, the continued efforts to protect and preserve the land that once was, it matters. To Earth, our gracious life force, it matters a great deal.	My biggest concern is for the continued detrimental damage that is being forced upon the environment. In no way has life been this cruel to our forgiving planet than it has been in the past 100 years or so, there is no more time to waste, we are the ones who need to change how we act upon the outside world that we plunge ourselves into on a daily basis. Today, we can change a little area of the world for the better (slam/reservoir), tomorrow we can tackle bigger, more widespread issues that hinder all ways of life.	I mean, there are always going to be the exceptional few that feel like the go-getters are beating a dead horse. In recent discussions, yes, there is a lot that stands in the way of accomplishing things that will eradicate and erase the hardships that the government implements to kill off any natural beauty that is left to experience. It really is a pitiful thing to witness. The more you educate yourself on the problem, the more willingness you desire to become a part of the solution.	
10/20/2021 14:25	Outside of state / other	Georgia	No	Yes			1 time	Other: none of the above	Remove the dam.	Ecological impacts of the dam are well noted in environmental surveys.	Continued ecological impacts.	None	
10/20/2021 14:29	Marion		No	No					I would like the dam removed to restore the natural flow of the river.	information surrounding the health of the waterway and the viability of the plants and animal life that are in the Ocklawaha.	Continued degradation of the water quality	No. The dam needs removed.	
10/20/2021 14:34	Clay		No	Yes		2-5 times		Wildlife viewing	Eliminate	Conservation groups	Not enough support for environment	Any scenario that does not support a healthy environment and ecosystem, I'm against.	Too many developers in Clay County and what's worse is the lack of environmental impact reporting. Florida ecosystems need more support!
10/20/2021 14:36	Palm Beach		No	No					whatever is best for manatee and wildlife	Paddle the Loxahatchee river each morning at sunrise. Our river is dying and I will make some noise to help my river or any of our Fla water ways. We used to see an abundance of manatees and last two years, hardly any. Im very concerned and motivated to help!!!	wildlife numbers getting more depleted as our state grows.	we need to educate everyone on these issues	I am happy to me a local vacata for the manatees. Just let me know how I can help or reach out to someone else you already have in the Jupiter area.
10/20/2021 14:36	St Johns		No	Yes		2-5 times	Canoeing / kayaking		Please remove the Kirkpatrick Dam and restore the Oklawaha River.	Improve water quality and improve habitat and flow for animals in the river. The fishing they even improve.	Poor water quality and riverine life for animals	Similar to the Kissimmee, restoring the river would be best.	Please restore the Oklawaha.
10/20/2021 14:42	Santa Rosa		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing	Am a local citizen of Putnam county and I love where I live. Love to fish Rodman as well as taking tons of wildlife photos out there. It's a little piece of heaven for me.	That the Oklawaha River would never look the same and it would take 100s of years to even think it would be the same.	Leave Rodman alone.		
10/20/2021 14:43	Marion		No	No					Breach the dam! Keep fishing, boating and the park for picnicking , maintain pavilions and bathrooms	I would like to have the dam breached to restore the fish to their natural migration up the river and return the river to original levels and expose the springs now covered by water.	The lose of breeding areas for many fish and the lose of the true Florida Landscape.	NO - the dam is too expensive to maintain, wasting tax dollars.	I live near the Ocklawaha and Silver Rivers and would like to see the restoration of both rivers which would reicult with the breaching of the dam! We have more small boats, kayakers and paddle boarders than we do bass fishers. Breaching the dam will open the area to a new influx of tourist dollars for those that want to see the natural Florida. Not all tourist these days are headed for the beaches or Disney!
10/20/2021 14:44	Orange		No	No						Removing key portions of this dam, which is past its life expectancy, will re-establish traditional access to essential habitat for manatees	manatees		
10/20/2021 14:46	Duval		No	Yes			1 time	Canoeing / kayaking	Please breach the Rodman/Kirkpatrick Dam to reunite the natural connection of Silver Springs, the Ocklawaha and the St. Johns River.	A free-flowing, connected system is cost-effective. It will benefit the St. Johns, Ocklawaha and Silver Rivers, not to mention Silver Springs. The science supports restoration. Everyone benefits from restoration. Our tourist economy needs visitors to wonderful spaces like Silver Springs. This makes our lives better and adds jobs.	We miss a historic opportunity to stop the ongoing ecological degradation caused by the dam and finally reunite the natural flow of these rivers. Breaching tm dam would restore fish dowanst foam of 150 mgd of fresh water, improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. A free-flowing Ocklawaha will reestablish 15,000 acres of forested wetlands and fortify downstream submerged grasses from Welaka to Jacksonville in the St. Johns River that are critical to river health and fish habitat. If we miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam and restoring the Ocklawaha are 50+ years overdue. Dam safety issues and improved water quality, wildlife habitat, and recreational opportunities can't be ignored or delayed any longer.	Fresh water is not an unlimited resource. We have so much fresh water that could be clean and available for all residents of Florida. We could restore natural springs that would attract tourists, as well as making Florida a better place for those of us who call it home year round.
10/20/2021 14:48	Martin		No	No							Near the dams down	so the rivers can be reconnected	Wildlife: fish, manatees and river dolphins	no	
10/20/2021 14:52	St Johns		No	Yes		More than 5 times	More than 5 times	More than 5 times	Fishing Boating Hunting Wildlife viewing	Leave it alone. It's perfect	It supports a wealth of wildlife as it is. It would damage what has been established since the damn was built.	It would damage my business. More importantly it would damage the wildlife habitat that is beyond extraordinary at this time.	No	
10/20/2021 14:55	Indian River		No	Yes			1 time	Boating	Connect a free flowing Ocklawaha to the St. Johns.	Negative impact on wildlife and water flow.	Continued degradation of water quality.	NO	
10/20/2021 14:58	Hillsborough		No	No					Remove them	Florida's natural landscape is one of our greatest assets. The dams have had a negative impact that removing them would correct. This is long overdue.			
10/20/2021 14:58	Alachua		No	Yes			2-5 times	Wildlife viewing	Remove the dam entirely	It is killing the life of the waterway			
10/20/2021 14:58	Marion		No	Yes		2-5 times		Wildlife viewing	Remove and allow the River to flow naturally.	Allowing the natural environment to reclaim itself	Continued interruption of natural river flow.	Can't think of any.	
10/20/2021 15:03	Duval		No	No					Removed indefinitely	Rivers should not be dammed.	Health of the estuary.		No
10/20/2021 15:06	Outside of state / other	Niagara Falls, NY	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/20/2021 15:07	Lee		No	No					Breach the dam to return the natural waterways for manatees				
10/20/2021 15:08	Duval		No	Yes			2-5 times	Canoeing / kayaking	I would like to see the river restored to it's natural state.	Science supports restoration. Now is the time to do this.	We will miss an opportunity when S is available To accomplish this goal. The status quo is not acceptable.	No	
10/20/2021 15:09	Duval		No	No					Breach the dam	Doing so will significantly improve the health of the St. Johns River, 2 or 3 springs and vast stretches of wetlands.	The dam could fail, threatening numerous homes and lives, destroying businesses and homes and infrastructure.		
10/20/2021 15:15	Brevard		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to $1? property owners and up to $1? million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economics have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.

10/20/2021 15:26	Outside of state / other	SC	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/20/2021 15:28	Pinellas		No	No					I would like to see restoration of a free-flowing Ocklawaha River by breaching the Dam. Each day that the dam and reservoir stay in place causes additional environmental degradation.	There are numerous reasons that the river should be restored. (1) To start with, 7,500 acres of the lower Ocklawaha's historic floodplain, 20 freshwater springs, and many miles of natural river channel that were drowned as a result of the dam construction would be restored. (2) At least 8,000 acres of stressed floodplain wetland located downstream of the river would be enhanced. (3)Draining the Rodman Reservoir would remove the single greatest barrier to plant and animal movement along the Ocala to Osceola (O2O) Wildlife Corridor by replacing the open water expanse of the Reservoir with a restored floodplain forest, resulting in a benefit to many listed plant species native to the region including the Federally listed Clasping Warea and Scrub Buckwheat. (4)Three river systems--the Ocklawaha, Silver and St. Johns--would experience significant environmental improvement from restoration. (5) Imperiled plant species such as the endangered Star Anise and threatened Hartwrightia, which are native to the banks of this region's spring run streams, could expand their range into the restored spring systems. (6) Manatees would regain open access to the warm water habitats of the Ocklawaha and Silver Springs. (7) Migratory fish including the Striped Bass, American shad, American eel, and the critically endangered Atlantic Sturgeon and Shortnose Sturgeon would once again have open access to the Ocklawaha system if the dam is breached. (8) At least 150 million gallons a day of additional natural flow , and potentially much more, would be restored to the lower St. John's River, improving water quality an increasing resiliency of the entire St. John's/Ocklawaha River system by impeding the salt water intrusion resulting from sea level rise. (9) An estimated $14,000,000 in dam repairs, measured in 2006 dollars, would be saved by avoiding repairs to a dam that has exceeded its life expectancy and never fulfilled the purpose of its construction. (10) The large expenditures required for herbicide treatments to control the growth of invasive aquatic weeds and to conduct other ongoing maintenance needs, including periodic drawdowns, in a futile attempt to maintain water quality and recreational access in the stagnant waters of the Reservoir, would become unnecessary. (11) $57,000,000 in potential flood damages to downstream areas around the community of Welaka would be avoided in the event of a dam failure. There are many other additional supporting reasons.	The Reservoir would continue to be a barrier to movement by native wildlife and plant life along the length of the O2O Corridor and compromise the value of Florida's investments in conserving lands like the Etoniah Creek State Forest and approved Florida Forever projects. Additionally, taxpayers would be on the hook for repair and maintenance of the dam and Reservoir , and continue to be liable for any loss of life or property damage that would result from a dam failure.	No. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration.	
10/20/2021 15:29	Marion		No	Yes	More than 5 times			Fishing	Nothing. Keep it like it is.	Its been this way for over 50 years, changing it now would mess up there decoy system	The ecoy system	No	Leave rodman alone; its been here before I was born. Over 50 years
10/20/2021 15:31	Volusia		No	Yes	2-5 times			Fishing Fishing (shoreline/structure) Wildlife viewing	Leave it alone.	Good for fishing and wildlife.	You would be destroying a great habitat for wildlife.	None	
10/20/2021 15:31	Volusia		No	No					Restore the Ocklawaha River				Restoring the Ocklawaha River would allow American eels to migrate upstream which are a significant source of food for wildlife. The Rodman Dam is an aquatic barrier that poses a threat to the survival of migratory fish species that need to access the Ocklawaha River past the dam. Suitable freshwater habitat for larval development which means a free-flowing river is vitally important. The adult stage of the catadromous species spawns in the Sargasso Sea, drifts at sea for 1-2 years, then stays in freshwater or estuarine habitats from 3-20 years before migrating back to the Sargasso Sea. A single adult female may produce more than 2 million eggs. Dams are a significant barrier on both the upstream and downstream eel migrations, resulting in a precarious conservation status.
10/20/2021 15:34	Outside of state / other	west chester pa	No	No									
10/20/2021 15:35	Lee		No	No					Restore the Ocklawaha River by breaching Rodman/Kirkpatrick Dam. Restoring the Ocklawaha River will provide 150 millions Of gallons of natural, fresh water to lower Ocklawaha and St. John's Rivers, making them more resilient to saltwater intrusion and improving water quality downstream.	First, the dam is unsafe. Secondly, the sharp increase in manatee deaths due to lack of warm winter waters. Breeching the dam is necessary to provide uninhibited passage for manatees during the winter months.	If Florida does not act now to provide essential warm water and foliage habitat for manatees at a time when they are dying off at an alarming rate we miss the opportunity to help manatees survive.	No	We must protect Florida's manatees and restore their natural habitat. Thank you.
10/20/2021 15:38	Duval		No	No					Breach the dam and restore the river.	Data showing that breaching the dam would improve water quality in the Ocklawaha and the St. Johns River	Continued and increasing pollution in the waterways	no	
10/20/2021 15:38	St Johns		No	Yes	2-5 times			Wildlife viewing	Permanently removed		Continued loss of natural habitat	No	
10/20/2021 15:46	Orange		No	No									
10/20/2021 15:46	Outside of state / other	Spokane, WA	No	No					Restoring free flowing rivers is an important goal for improving fish and wildlife habitat and for mitigation of climate change.	We need to restore free flowing rivers.	Habitat degradation and increased water warming.		
10/20/2021 15:48	Outside of state / other	Oakland, CA	No	No					Demolish the dam and let the river run free.	We are liberating rivers all over the country, to great ecological success. Join the movement!	We continue to interfere with nature.	No	
10/20/2021 15:54	Alachua		No	Yes	1 time	2-5 times	2-5 times	Wildlife viewing Other	Remove the dam.	The dam results in stagnant water and prevents fish and other creatures from moving in the river.	Continuing costs to support this useless dam.	No	Get on the to partially remove the dam so the river can flow.
10/20/2021 15:59	Pinellas		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing Other: to look at condition of the dam	The dam should be removed and the Oklawaha and submerged springs returned to their natural state.	The value of large springs is immense, just look at Rainbow Springs and Ichetucknee. There are very large springs submerged by the waters of the dam.	The dam will breach during a major storm event and cause untold destruction. Keeping the dam also restricts the movement of aquatic organisms. Of particular interest to me is the spotted turtles about which I have published several scientific papers. It is already very rare in Florida. If measures are not taken to encourage populations, in the future, it will become a candidate for endangered species lists.	Either the dam stays or goes, I don't see that there is an intermediate option.	This issue has existed for a very long time. The dam should be removed once and for all. Cheers, PM
10/20/2021 16:02	Alachua		No	No					I would like to restore the Ocklawaha River by getting rid of Kirkpatrick Dam.	It will restore natural habitat in and around the Ocklawaha River.	It will deprive manatees of warm water they need in the winter.	No. I was against building the dam in the first place. "Save the Ocklawaha!"	
10/20/2021 16:08	Duval		No	Yes			2-5 times	Boating	Open the Damn to allow the natural flow of the spring water back into the St. Johns River	It would allow boating fishing and site seeing via boat	that the dam would fail and cause extensive damage.	No	
10/20/2021 16:11	Outside of state / other	Berkeley, CA	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. • •10,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. •Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/20/2021 16:12	Manatee		No	No					I would like to see the dam breached, so that the Ocklawaha River can be restored.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/20/2021 16:15	Nassau		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier.	The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No	
10/20/2021 16:19	Outside of state / other	Gainesville, GA	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway.
10/20/2021 16:19	Duval		No	No					Restore the Ocklawaha and return its flow back to the st. Johns River.	The damn is aging and we'll need continuing maintenance to avoid failing. Nearby properties could potentially be threatened. It seems obvious that it could be subject to catastrophic failure. It's time.	The st. Johns River continues to be at risk. It makes sense that by doing this we will fortify the 100-mile St Johns River Estuary.	No answer	
10/20/2021 16:23	Indian River		No	No					Return to natural setting.	Just doesnt need to be there.	Wildlife suffering	No	
10/20/2021 16:26	St Johns		No	Yes			More than 5 times	Fishing	Remove (deconstruct) the dam and return the area and Aquawalla river to its natural condition	Help restor Silver Springs, increase fresh water flows to the St Johns	continued salt water intrusion further up river.	no	The time has come to restore the river. The original intent of the Dam and the creation of a cross Florida barge canal are long past. Fortunatly it never happened
10/20/2021 16:31	Citrus		No	Yes	1 time	2-5 times	2-5 times	Wildlife viewing	I would like the spring to be freed. I'm a republican but I believe the river is more important than a dam for fishing.	The future of wildlife and health of the spring and it's ecosystem is more important.	Same as above.	No.	
10/20/2021 16:34	Putnam		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing	Leave it alone	Memories fishing, boating, raft race for charities and much more	The younger generations would not the opportunity to experience what I have.	This county is known for our outdoor recreation. Coming from other parts of the east coast of USA the Rodman Dam and surrounding extremities is on of my favorite places to get away. Taking down this Dam would a huge mistake. The organization working to deplete the Dam has no business messing with it	
10/20/2021 16:34	St Johns		No	Yes			More than 5 times	Fishing Canoeing / kayaking Boating	Protect our natural water way an yet have recreational	The water management in Florida is critical to Florida's survival of natural beauty	We loose wetlands and estuary	Conservationist of Florida natural beauty	
10/20/2021 16:39	Columbia		No	Yes		2-5 times	More than 5 times	Fishing	The dam should be removed and restore the natural flow of the river	It would be better for the manatee and fish population.	Continued degradation of marine habitats and waste of resources to keep an outdated dam that does not benefit the public	No, the dam should have been removed long ago	Dams are being removed and restoring rivers to their natural flow all around the world. The benefits of removal far outweigh keeping the dam.
10/20/2021 16:39	Putnam		No	Yes			1 time	Other: I don't, it's not good for any recreation. Only the river channel is worth using. Remove the dam and let the river flow.	I was there with the first stick of dynamite and Lindon Johnson. Saw those monster tree crushers just destroy a beautiful forest. I have been an advocate of removing the dam as long as the movement has been going. I wait for each drawdown to go out on the river and enjoy the beauty without the flooded wetlands. I hope that in my lifetime I will be able to leave my home in Welaka and boat the entire Ocklawaha. There is no downside to removing the dam. These reports of all the bass and bass fishermen at the pool are overblown. It would improve tourism in Welaka for boaters, giving them full access to the Ocklawaha. Mother nature will do her thing and within a few years the pool area will be a young and beautiful forest, and the many springs that are now drowned, will be accessible and beautiful to see. Please do the right thing and stop this money pit. benefiting no one.	Increase in access to the river banks, now flooded. Bank fishing and camping. Increased use and enjoyment.	Then we will continue to fight the fight again.	NO, the dam must be removed, allow the river to flow, and mother nature to restore its health	
10/20/2021 16:43	Outside of state / other	Tennessee	No	No					I strongly believe that these structures should remain as they are. Many wildlife has made these structures their habitat/niche. It's a major role in their environment.	We're losing to much wildlife to mankind, making many endangered or worst case extinct. If these structures are brought down the endangered Dugong (Manatee) which Florida so strongly protects, will start migrating into man made waterways. Becoming ever more endangered and into polluted waters.	My biggest concern is the well being of our wildlife. Keeping ecosystems intact for ourselves, our children and our future. We are here on Earth so let's keep protecting and progressing forward. The moon and space sure look cold and lonely and void of life.	Sometimes and adults we think to much or use science when there could be a simple solution to a problem.	
10/20/2021 16:52	Duval		No	Yes			1 time	Other					I support water quality, preserving the aquifer and our environment
10/20/2021 17:07	Outside of state / other	Sacramento, CA	No	No					Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River. The dam is harmful to the economy, water quality, and wildlife throughout the Great Florida Riverway.	Breaching would result in over 150 million gallons of natural flow per day to the Lower Ocklawaha and St. Johns Rivers. Then over 15,000 acres of the Florida Wildlife Corridor would be restored or enhanced for people and wildlife. Also, the public would save $4-14 Million in dam repairs on a dam past its life expectancy, plus $57 million in potential flood damages to downstream property owners. Finally, restoration would create more diverse recreation opportunities for everyone, increase visitation, and add supporting jobs.	A storm event might trigger a dam failure or overtopping, resulting in potential damages to 537 property owners and up to $57 million in damages.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs could avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	Restoration will improve water quality and flow by generating an additional 150 million+ gallons per day of fresh water into the St. Johns River and Estuary. This infusion of water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration.
10/20/2021 17:08	Broward		No	No					Returned to the natural god given way it was prior to near sited morons	take a physical look at any natural restoration	it would be a terrible shame upon the floridian ecosystem	none	ive and support the natural world the way it took thousands and thousands of years to developе
10/20/2021 17:10	Marion		Yes	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Boating Other: commercial shiner fishing	I'd like to see it there forever	I am an apprentice commercial shiner fisherman and catch bait there and sell bait to the guides and shiner fisherman. It supports us local commercial fisherman in this area and we would be left with nothing if it were gone.	That my job would be gone	No I can't see anything good but the lake staying there	My name is Aydan Davis
10/20/2021 17:11	Volusia		No	No						no development	over development	very minimal development.	
10/20/2021 17:12	Duval		No	No					I'd like to see it removed and the area restored to its original splendor.		Continuing to spend tax payer money to maintain a pond and dam that is nothing more than a beacon of a failed project and worse, is negatively affecting us.	Sure. Limit and cap the removal of water for profit from our springs all over the state.	This dam is akin to the office building on I-4 that has sat unfinished for years. It is a beacon of a failed project that in this case thankfully was not completed.
10/20/2021 17:12	Osceola		No	No					Breach the dam and return the environment to its natural state prior to 1968.	The barrier to plant and animal movement along the Osceola and Ocala Corridor and the destruction of the lower Ocklawaha's historic forested floodplain as well as the NATURAL river channel is a major part of the destruction that happened due to the Cross Florida Barge canal initiative. It is well known that this was a disastrous environmental project. It is our moral responsibility to work toward the restoration of this entire area.	The continued barrier to the movement of wildlife and plant life and the continued deterioration of the environment which existed prior to the 1968 debacle.	No. The environmental destruction caused by the original project is understood by many. The restoration of this area of Florida is long overdue and I see no reason that this cannot be addressed in its entirety.	The loss of so much habitat in Florida is disconcerting especially when the intentional projects such as the Cross Florida Barge Canal had so little foresight. In the least it was halted, but much damage had already been done. We have lost so much, but I thank you for being courageous in addressing past mistakes.
10/20/2021 17:13	Duval		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing Other: Family picnic	Leave it the way it is now. Preserve.	Ecosystem. Community involvement. Part of our history.	Ecosystem damaged.		
10/20/2021 17:15	Brevard		No	No					Please breach the Rodman/Kirkpatrick Dam to reunite the Ocklawaha, St. Johns, and Silver Rivers and Silver Springs.	Too many manatee dying	Manatee could become extinct.	If there's another way to save the wildlife - manatee and all others, then I'm open to that. But I think we have an obligation to care for this endangered species.	
10/20/2021 17:20	Clay		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	100s of manatees gain essential warm water winter springs habitat	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	By partially freeing the river, some changes could begin for flora fauna and river health.	This change is important for the people of Florida and for so many aspects of the environment.

10/20/2021 17:22	Alachua		No	Yes		2-5 times		Boating Wildlife viewing Other: Seeing hidden springs during draw down	Breach the dam and let the river flow naturally	Water quality will improve with less herbicide used and clearing of muck that accumulates	The opportunity to grow a healthy, broad based tourist industry with hiking, biking, boating, fishing that would attract tourists to the area for multi-day stays would be lost. Waiting would mean wasting money on continued repair of the dam and loss of species that would be able to spawn in the fresh waters available in the springs of the area but are very difficult to assess for manatees and say going fish that spawn in fresh water.	No, breaching the dam is the minimal solution that makes economic sense	Please take this opportunity to improve the area and make a better wildlife corridor between the Ocala National Forest and the Osceola. Our fresh water and tour destination matter to the whole state an are appreciated far and wide
10/20/2021 17:23	St Johns		No	Yes		1 time		Wildlife viewing	Removal od the Springs can flow naturally to the St John's River	The rivers health is vital to our area, and clean fresh water isn't supposed to be clogged by a dam. Springs are very important to tourism, endangered species, and our water supply.	Water quality for animals and humans. Endangered species are stopped from migrating.	Organized , slow removal. Still keep the bass fishing tourism coming.	
10/20/2021 17:23	Duval		No	Yes		More than 5 times		Fishing Fishing (shoreline/structure) Boating	It needs to stay and be restored if needed	It is a vital peace to the conservation of that area	Fish and wildlife would tack a huge hit!	No	
10/20/2021 17:25	Hillsborough		No	No					If needs to be removed since it serves no purpose, especially with the cross Florida canal never being finished. It being removed will allow the 20+ springs to be brought back to life and allow manatees to use the Ocklawaha and Silver Rivers for winter refuge since most other springs in the state of Florida don't have the food resources they need. In return the it would allow the fish population to return to Silver River. This bridge serves no purpose and only disrupts nature from being able to strive. Fisherman see this sight as a fair opportunity to catch bass but have no idea how much they could flourish if this giant Dam was not in the way.	All of the above. Plus the pointless money of almost 20 million in tax payers dollars to fix something that doesn't need to be there in the first place.	The demise of Silver River and a decline in manatee population due to resources being withheld because of a Dam built by humans.	No, This Dam need to be gone.	
10/20/2021 17:34	Orange		No	No					restore to nature	The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4.14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities	Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 year	As person who grew up in Florida and who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riveway, to ensure a bright future for our state's people and wildlife.	
10/20/2021 17:36	Volusia		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Boating Other: Camping	Maintain it as it is.make upgrades to manatee sensors in locks when available.	There have been several reports put out about the quality of water leaving the reservoir after the toxins are filtered.	That those unfiltered toxins end up in an already devistated st. John's River.	No	Rodman is no different than the other impoundments built at the head waters of the St John's River. Stick Marsh,farm 13 , Anson Garcia. They all filter out the bad stuff before being released into St John's. Which continues to be sprayed with defoliate despite the fact that the grass is all gone due to high water and over spraying.there are other impoundments being built on highway 27 south of lake Okeechobee for the everglades restoration project designed to do the exact same thing.so to tear down down something that has been proven to work when the same technology is being used all around the state makes no sense to me.
10/20/2021 17:38	Outside of state / other	Olympia, WA	No	No					I would like to see the Kirkpatrick dam be removed to restore this important landscape for both the people and wildlife.	Removal of the dam would re-open the waterway to a free flowing system that would contribute to the health of manatees and fish and support water travel and tourism.	The continued negative and downward trend for far ranging migratory fish and wildlife and reduction in the quality of life for people.	I support the full removal of the dam to occur as soon as possible. A temporary drawdown of the reservoir for less than 2 years might work to provide for safety co cost reductions ONLY IF a full and binding commitment to immediate dam removal simultaneously occurs.	Do the right thing, remove the dam, now is the time to make it happen for the benefit for all.
10/20/2021 17:39	Pinellas		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed degrives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	We, Pinellas and Lake Area Trout Unlimited, are asking you to restore the Ocklawaha River, the heart of the Great Florida Riveway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riveway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riveway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riveway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/20/2021 17:44	Orange		No	No					Breach the dam. Restore the river to its original path.	Data about the restoration of natural habitat, including the re-emergence of innundated springs.	Funding is available now. We are are a critical juncture in terms of spring revitalization, water quality, wildlife habitat, and eco-tourism oportunities.	No. The retirement of the dam is long overdue.	This is not not only the right thing to do from a conservation perspective in a year that has seen record manatee die-offs and the degradation of natural systems, but it will be an economic engine that will promote jobs and quality of life for all Floridians
10/20/2021 17:45	Outside of state / other	Colorado	No	No					Removing old dams to allow wildlife to flourish	Manatees rely on staff access	Manatees will continue to decline and become extinct	Putting the health of manatees and other wildlife first and foremost	
10/20/2021 17:45	Levy		No	Yes	1 time	2-5 times	More than 5 times	Fishing	Returned to natural state				
10/20/2021 17:50	Marion		No	Yes		2-5 times		Boating Wildlife viewing	Eliminated so the river can retake its natural course.	The manatees are dying and need inland refuges like the Silver River. There would be many more, as well as healthy, non-invasive fish species that could freely travel again. It may decrease bass fishing around the dam, but restoring the river would improve recreation for the entire 40+ mile stretch between the Rodman Dam and Silver Spring.	Extinctions	There is no way to leave the dam intact and restore the river ecosystems below it.	There could be more varied and plentiful fishing opportunities along a restored river. There could be new recreational development for hunting and fishing. There could be a huge boom in manatee population here.
10/20/2021 17:55	Orange		Yes	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing	Keep everything exactly the way it is.	It is the foremost big bass lake in the state of FL, unmatched!!! Guided on that body of water for the past 19 years and year over year produces big fish that people come from all over the world to catch. It has provided a habitat for so many different wildlife species. Tragedy if the Dam is removed!	Destroy the habitat that has been created for the fish, for the wildlife, and for what I've always known since I was a little kid growing up on that body of water.	Hard no!	
10/20/2021 18:01	Pinellas		No	Yes		2-5 times		Canoeing / kayaking					
10/20/2021 18:01	Marion		Yes	Yes		1 time	More than 5 times	Fishing Boating Other: Own a cabin rental and restaurant business in Salt Springs	I would like to see Rodman Dam stay as is.	We own Bass Champions Restaurant and Lodge in Salt Springs, FL. We cater to the fisherman and hunters that use Rodman Reservour. We have 10 cabins that we rent as well as a restaurant that caters to fisherman coming here to fish Rodman. It is maybe the most important attraction to this area for my business and it would be pretty catastrophic if it weren't here. It's a beautiful lake with tons of animals and I can't see how any person who calls them self a naturalist would want it destroyed.	Our business would be majorly harmed. We couldn't replace the lost income .	Not at all.	My name is JL Snowden and I am the owner of Bass Champions Restaurant and Lodge in salt Springs, FL
10/20/2021 18:02	Lake		No	Yes		1 time		Wildlife viewing	Restore the Ocklawaha River flow by breaching the Rodman/Kirkpatrick Dam. This will help restore water and wildlife quality and save money spent on maintaining the dam and put it toward improving the quality of more lakes, rivers and springs.	Three rivers, Ocklawaha , Silver and St. Johns Rivers and 50 springs are restored. Fish and manatees are again able to migrate the rivers and springs. 15,000+ acres of the Florida Wildlife Corridor are restored and enhanced for people and wildlife to enjoy. Millions of dollars saved on repairs of a dam past its life expectancy. Millions of dollars saved on potential flood damages avoided to downstream property owners. Recreational sport fishing would be enhanced by allowing the Florida strain of the Striped Bass to reclaim what used to be its primary spawning habitat- the Ocklawaha. The recreational development component included in the restoration plan would benefit nearby residents and expand eco-tourism, and more than compensate for loss of the Reservoir.	The broad array of environmental benefits to native flora and fauna, including many imperiled species, that would result from restoration would not be possible. Water quality in the Rodman Reservoir and Lower Ocklawaha/St Johns River system would continue to decline. The economic benefits that would result from increased and enhanced recreational usage would be denied to the surrounding local communities. Residents and business owners in areas immediately downstream of the dam would continue to by under threat in he event of failure of a dam that has never and ill never satisfy the purpose of its construction.	No. Breaching the dam is 53 years overdue and there is no compromise that would achieve even a fraction of the environmental and economic benefits of restoration.	
10/20/2021 18:07	Marion		Yes	Yes		More than 5 times		Fishing Boating Wildlife viewing Other: We own Bass Champions Restaurant & Lodge	I'd like to see it left just as it is.	My name is Michelle Snowden and my husband and I own Bass Champions here in Salt Springs in Northeast Marion County. We have 10 cabins that we rent to fisherman primarily who fish Rodman and a restaurant where we employ 20 or so people. A great deal of our business is from out of state fisherman that come here and rent our cabins and eat at our restaurant during their stay. It's important to our business because of the proximity to Rodman Lake. Without it we would lose a huge portion of our livelihood.	Huge and devastating loss to our business.	No	
10/20/2021 18:07	Volusia		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Boating Other: Camping	Maintain Rodman as it is. Upgrade manatee sensors in the livks	Several studies that say Rodman cleans out toxins	Unfiltered toxins will continue to damage the River. Already over sprayed and no grass	No	
10/20/2021 18:09	Gilchrist		No	Yes	1 time	More than 5 times		Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing Other: Water Quality Sampling	Maintain the dam and lock as intended when first constructed. It is clear the environmental benefits of retention outweigh the desires of a few outspoken persons with sway over large groups of folks who have never followed the studies or even visited the Rodman complex. Things we would like to see happen are reopening of the Kenwood Campground which already has a well and septic facilities and could provide added revenue to the Greenway. We'd love to see a dock/kayak/canoe launch on the pool side of the dam and a slide system and launch on the south side of the dam to make it easier for kayakers and canoeists to traverse the dam and continue downstream. Add a raised observation platform at the point north of the dam at west end of it for birdwatching and general viewing of the complex. Upgrade manatee protection sensor systems at the lock to the current, much improved technology. Add a hydroelectric generator to fund maintenance and enhancements throughout the greenway through renewable, green technology. Recognize Rodman for manatee habitat that it is and recognize it as a wildlife refuge utilized by many threatened and endangered species. I'd also like to see harvesting of problematic vegetation around boat ramps and access points rather than spraying. During the next drawdown disposal areas within the reservoir could be bermed up with an access point where the recovered vegetation could be deposited to create virtual islands and when the vegetation decays wetland trees could be planted.	While there are many supporting documents showing the environmental and water quality value of retaining Rodman dam and Lake Ocklawaha, the most important is The Hendrickson report (Technical Publication SJ2016-1) for the SJRWMD, which highlights the potential to substantially increase detrimental nutrient loads that come from a free-flowing Ocklawaha River. This publication says exceedance of TMDLs may increase from 65 days during reservoir full times to 129 days at Racy Point with a free-flowing river without a mitigation plan for offsets elsewhere in the Middle or Lower St Johns River Basin. There is also a publication called "Springshed Nutrient Loading, Transport and Transformations" by Matthew Cohen, University of Florida (UF - School of Forest Resources and Conservation at https://www.researchgate.net/publication/255649621_Springshed_Nutrient_Loading_Transport_and_Transformations which discusses the increasing nutrient loads coming from the States springs and looks at their origins. This publication has information directly related to Silver Springs and explores some of the existing and potential effects that are currently attributed to other causes. It also highlights the anthropogenic effect when land is converted from forest and farmland to an urbanized landscape. Add in the human population growth projections by UF School of Liberal Arts Bureau of Economic and Business Research which is consistent with the "FWC 2060" document prepared in 2010 fwc2060.pdf (myfwc.com) and there is no doubt that man made effects have the potential to have substantial negative impacts on Florida's ground water and surface waters. With the potential of over 3 million more people living within the SJWMD boundaries in the next 25 years, many within the Silver Springs springshed area, and Rodman's documented buffering effect (see Florida Lakewatch Rodman Monitoring Data), there is no reason to even consider breaching the dam.	Retaining Rodman is essential to the health of the St Johns River, which as of this date, 10/14/2021, has at least three documented algae blooms happening right now. With increases that will occur as the population increases in both the Ocklawaha and St Johns river basins the outlook is bleak enough. Take away Rodman's nutrient and turbidity buffering, and it will only increase the likelihood of severe degradation of the water quality and the negative impacts on aquatic life will be profound and irreversible. I cannot stress enough the value of the refuge Rodman and its abundant vegetation is currently providing for starving manatees as we speak. That will also be gone and the limited and endangered vegetation in the rivers will likely decline substantially with the water quality degradation that accompanies population growth.	Many of the proposals I put in the first section like added amenities are wish list items, so they are negotiable since we've lived without them so far. The Hydroelectric Generation option would provide funding far into the future for maintenance and Greenway's improvements but is still negotiable. Where I draw the line is removal of the dam or even "Partial Restoration", which is a myth. There is unequivocally no reason to proceed down this road considering the potential nightmare scenarios that come along with it. The dam must be retained at all costs.	It's sad that those who wish to see the dam removed have sway over a large group of people who have never been to or seen Rodman, have never looked at he water quality issues we will face in the future based on population increases alone. People who could not find Rodman Reservoir on a map, much less know there is roughly 20 miles if ditched and diked river that needs addressed or that the headwaters start on the northern edge of the Green Swamp and encompass the Harris Chain of Lakes. They don't know the problems with the ecology and chemistry of the water coming from Silver Springs and it's deleterious effects on everything downstream. They believe the manatees are suffering from Rodman's existence, which could not be further from the truth. The worst part is that they are willing to lie and cheat to achieve their goals and bold face tell you "well, you know what we are trying to do" or post on their Facebook page that you can only send one email response to this solicitation then say "how many email addresses you got"!!! Rodman is an invaluable resource, born of a short sighted vision. We cannot be that short sighted again to remove this amazing ecosystem that has resulted from the joint venture between man and nature and will serve us well into the future. Thank you! .
10/20/2021 18:26	Putnam		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing	Leave dam, add more recreation assets, (campgrounds, docks and boat ramps etc)	Great fishing ,boating ,wildlife ecosystem	Loss of a great wildlife ecosystem	No	
10/20/2021 18:34	Lake		Yes	Yes	1 time	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing	Stay the same and not change	My businesses and my family rely on the Rodman reservoir for not only income but education	Loss of jobs and loss of habitat for the state	No	
10/20/2021 18:34	Putnam		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Leave it the way it is.	If Rodman was taken down than most of the wildlife that call it home will have to relocate because there waters will be less than a third of what they have now ! Then they would have to rely on the already vegetation stricken St John's river thanks to the FWC and their spray communist that have all but destroyed that river as far south and north as it runs . You would never have a free flowing river when the headwaters is a man made dam that is controlled by Marion county . If we encounter another drought Marion county will shut the gates and starve the ocklawaha from the water it would need to sustain the manatees and other wildlife that need Rodman at full pool . You would have to destroy a whole chain of lakes to make the ocklawaha a true free flowing river.	The manatees and wildlife that call Rodman home will have to rely on a dead river to feed themselves	Nothing but leaving it as is	
10/20/2021 18:35	Putnam		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Bring back the Kenwood camp site. Possible walking trails, canoe launch at both sides of dam, and orange springs	The recreation it provides to the community, also the income and attraction for sportsmen. The reservoir provides clean water during droughts as it is a natural filter. There has been 700 + sighting this year alone	Lose of a vibrant eco system. Lose of manatee breeding grounds. Fish and gator breeding grounds. A huge lose to Putnam county income and attraction and resources	No	
10/20/2021 18:39	Osceola		No	No					I support the restoration of the Ocklawaha River by breaching the existing dam and draining the Rodman Reservoir for the broad range of environmental and economic benefits that restoration would provide.	Environmental and economic benefits!	Water quality will continue to decline.	No! Breaching the dam is 53 years overdue.	
10/20/2021 18:47	St Johns		No	No					Free the river, natural flow	Science data from UF and other sources	Water quality concerns	Not really	
10/20/2021 18:51	Outside of state / other	Lexington, KY	No	Yes			2-5 times	Wildlife viewing	The dam should be removed and the river restored.	I grew up in central FL and have been aware of the dam and it's effects on wildlife for decades	Loss of manatee and other wildlife habitat.	No	Free the River. Restore manatee migration. Restore the riverine ecosystem.
10/20/2021 18:58	Duval		No	Yes		2-5 times		Fishing Canoeing / kayaking Wildlife viewing	I would love the dam to come down and restore the river	Manatee travel, uncovering the springs and the restoration of the river back as it was naturally			
10/20/2021 19:01	Manatee		No	No					Reunite the Ocklawaha and St. Johns Rivers and Silver Springs. Removing key portions of this dam, which is past its life expectancy, will re-establish traditional access to essential habitat for manatees, bring back migratory fish, and restore a lost riverway for anglers and paddlers.	Reunite the Ocklawaha and St. Johns Rivers and Silver Springs. Removing key portions of this dam, which is past its life expectancy, will re-establish traditional access to essential habitat for manatees; bring back migratory fish, and restore a lost riverway for anglers and paddlers.	Survival of the manatees.		
10/20/2021 19:01	Jefferson		No	Yes			2-5 times	Fishing	Leave it alone. It is a thriving eco system	Personal experience of myself and the tens of thousands of others	That once again a thriving system could be ruined due to a few dissenting people	No	Rodman reservoir is home to numerous species of fish, waterfowl, manatees, and other animals. It brings in millions of dollars in tourism and is thriving! Leave it alone
10/20/2021 19:02	Volusia		No	Yes			More than 5 times	Canoeing / kayaking	Please get rid of that useless money pit! Return the Oklawaha to a free flowing river. It should have been removed years ago.	Paddling the river at the end of the drawdown, seeing with my own eyes how badly that area wants to thrive and renew. Seeing the water quality and swimming in cannon springs made it as clear as that spring water that the dam must go!	That lives will be lost when that antiquated monstrosity fails.	Either it goes or it stays there is no middle ground and it is past time for it to go!	Do something meaningful with your position and help start the healing of that area by removing the damn. You can help fix the mistakes made by many so long ago.
10/20/2021 19:06	Outside of state / other	Louisiana	No	Yes			More than 5 times	Fishing Boating Wildlife viewing	It should stay as it is and not be tampered with in any way.	I try to go at least once a year to enjoy the fishing and the wildlife it has to offer. I feel if the reservoir is changed it could be detrimental to the many species of wildlife that thrive there and call it home.	It should be left the way it is.		
10/20/2021 19:14	Duval		No	Yes				Other: It has been many years and was just a couple of day trips	I would like to see the river restored and the environmental damage caused by the dam construction reversed	1. Salt water intrusion in the St. Johns River 2. the possibility of the dam overflowing and flooding the region with current changes in climate conditions 3. the tax dollars needed to continue to support a dam that was part of a barge project that was never realized.	- the tax dollars needed to restore and the possibility of the dam overflowing and flooding the region with current changes in climate conditions which would need more tax dollars	not really -	If most Floridians would like the river restored, hopefully Tallahassee will pay attention. It has been disappointing that other issues that have been voted on by Floridians (such as keeping daylight saving time and restoring voting rights to felons) have been thwarted at the state level.
10/20/2021 19:17	Hillsborough		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	The Great Florida Riveway, to ensure a bright future for our state's people and wildlife, especially manatees. Thank you for your attention to this important issue. Restoring the Great Florida Riveway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/20/2021 19:19	Hillsborough		No	No					Breach the Rodman/Kirkpatrick Dam to reunite the Ocklawaha, St. Johns, and Silver Rivers and Silver Springs - The Great Florida Riveway	Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for wildlife.	The 100-mile St. Johns River Estuary will continue to be deprived of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No	Restoration would benefit people and animals.
10/20/2021 19:20	Orange		No	Yes			1 time	Other: Viewing the destruction of the River.	As described. Remove the dam, drain the reservoir, assist nature in a natural restoration of the riverine vegetation.	Kissimmee River Restoration, and countless other dam removals throughout the US for ecosystem restoration.	Continued degradation of the ecosystem. This is a travesty and has gone on long enough.	No.	Just do it, and at the least cost possible. Leave a small portion (Less than 10%) of the dam and interpret it to visitors.
10/20/2021 19:23	Duval		No	No									
10/20/2021 19:25	St Johns		No	Yes	1 time			Fishing	Remain the same	Manatees conservation		Wildlife	Not at this time
10/20/2021 19:26	Flagler		No	No					Improve the water quality	an excess of manatees dying	extinction of the manatee population	no	Please help save a prehistoric creature
10/20/2021 19:26	Duval		No	Yes			1 time	Wildlife viewing	restore flow	preservation of natural flow into st johns	river quality	no	
10/20/2021 19:29	Duval		No	Yes		1 time	2-5 times	Fishing Wildlife viewing	Keep it the same. I am very concerned that draining the reservoir will damage Florida's water supply, cause salt water intrusion into the aquifer, and forever damage Florida. It is my belief that permitting flesh water to drain into the SJR and the ocean will waste it, that the positive head from the reservoir slows the drainage of spring water, and that draining it could be disastrous.	There are many springs known to exist under the reservoir and likely some as yet undiscovered. As an engineer I studied fluid mechanics and as a marine Engineer studied naval architecture. I have a firmly held belief that the positive head pressure supplied by the reservoir reduces the flow rate, preserves fresh water, and protects our water supply.	Florida's water supply would be destroyed forever rendering it uninhabitable.	IDK.	

10/20/2021 19:41	Lee		No	No					I would like to see the Dam removed so we can begin the process of nurting Florida's natural environment back to health. Times have changed and I feel like it's more beneficial now for it to be removed, not only for migrating manatees and other wildlife, but us as well. More and more people are vacationing and visiting places that are natural and "untouched" and wanting to see wildlife in the wild. The removal of the dam and restoration of the surrounding areas could eventually draw tourist.	The most important piece of information is that there's scientific proof that the removal of the dam will be beneficial to Florida's environment and wildlife.	Manatee population continuing to stay at a dangerous level and surrounding water quality getting worse	Finding a way to make the people opposed to the removal to realize how it could benefit them as well and start to find a common ground	
10/20/2021 19:44	Miami-Dade		No	No					I would like to see the dam removed and the area restored to its natural condition.	Restoring this area would allow more freshwater downstream so that manatees and migratory fish would be able to navigate historic routes. It would also improve historical spring access and improve wildlife habitat downstream.	We would continue to lose valuable habitat and wildlife.	No.	
10/20/2021 19:45	Outside of state / other	Pnnsylvania	No	No					The dam needs to be removed. As an aquatic ecologist I know how damaging dams are to river ecosystems. Although I have not been quite as far north as the Rodman Reservoir, I have been on other rivers in Florida and know how important free flowing rivers are to manatees and migrating fish.	Free-flowing rivers allow the normal flow of water and sediment downstream with the seasons. Aquatic organisms, including fish, can move freely up and down a river for spawning. Dam removal would help restore the Ocklawaha, Silver and St. Johns Rivers ecosystems.	There is currently funding available for dam removal and failure to remove the dam would continue the ecological damage. The rivers would continue to be disconnected.	No. Dams need to be removed whenever possible. In the area I live, hundreds of dams have been removed and once again provide quality habitat for aquatic organisms and riparian vegetation.	
10/20/2021 19:46	Marion		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Boating	Stay the same	Can't go wrong with fission	My biggest concern is losing all that wildlife big bash country	My biggest concern is losing all that wildlife big bash country	There's actually people out there who make a living off those places you'll be taking livelihood away from good people.
10/20/2021 19:47	Sumter		No	No					Remove it	It hurts manatee habitat	More manitees will die	Restore the habitat	
10/20/2021 19:50	Marion		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	I would like the removal of the Rodman dam .	The ability of manatees and fish to move freely through the rivers affected	Decline of already declining manatee numbers.	I don't know	
10/20/2021 19:53	Clay		No	Yes	1 time	2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Hunting Wildlife viewing Other: It's a peaceful get away from reality.	I would like to see it all stay the exact same way it is now, nothing needs to change, it bring in visitors and tourists from all over to view wild life, fish, hunt, and just get away from reality	I grew up in this area, we came up here all the time to ride the forest and the reservoir was a nice place to stop and take a break and relax	I'm afraid it will kill local businesses, stop almost all fishing tournaments, and kill a lot of the wild life that lives there	It will kill a lot of the wild life that rely on it	
10/20/2021 19:55	Putnam		Yes	Yes		More than 5 times		Fishing Boating Wildlife viewing	Continue to be a world class nature Eco. system.	Rodman Reservoir continues to be an important fiber for the water entering into the St. Johns River.	We moved to Putnam County 24 years ago to fish and boat on Rodman Reservoir. We must keep Rodman Reservoir for future generations of Americans to enjoy.	No.	
10/20/2021 19:58	Flagler		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood-damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway. 2021 is the deadliest year on record for manatees, unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway.
10/20/2021 19:59	Pinellas		No	No					I want the Kirkpatrick Dam removed and the river restored as much as possible to its original footprint.	The wonderful informational website: https://www.freetheocklawaha.com/	First remove the dam. Then it may take years to restore the rivers to their natural paths.	Get it started and make future plants to complete the project!	For over fifty years, the Rodman/Kirkpatrick Dam has impacted so many communities along the 217-mile Great Florida Riverway - the Ocklawaha, Silver and St. Johns Rivers and historic Silver Springs. We can unite all our communities for a better future.
10/20/2021 20:00	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing	Stay just like it is	Rodman is one of the most beautiful places to visit. The wildlife that lives there has made it home. If you take it way you are destroying a wonderful nature preserve.	That it was destroyed for all the wrong reasons	No	
10/20/2021 20:01	Columbia		Yes	Yes	2-5 times	More than 5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Remove the dam and features associated with it and restore the free flowing Ocklawaha River	Ocklawaha's unique geology and the unique processes that formed it make it a river unlike any in Florida. This also makes it the oldest river in the peninsula. Additionally, the swamp-forest and wildlife associated with this river make it a true gem of wild Florida.	My biggest concern is for the continued obstruction to the movements of wildlife that would normally be moving and migrating up and down the river. Manatees are losing habitat in South Florida, so allowing them unimpeded access to the huge, warm water refuge of Silver Spring would be a tremendous benefit to the species. Other species, including mullet, catfish and others would also benefit from being able to move up and down the river. Aside from the natural benefits, it is troublesome that a huge sum of taxpayer dollars are spent every year to maintain this manmade fishing hole. If the dam is removed, the free flowing Ocklawaha will cost nothing to maintain.	No	The fact that this incredible river continues to be blocked, simply for recreational fishing--a tiny sliver of our overall Florida community and economy--is the height of irresponsibility.
10/20/2021 20:02	Suwannee		No	No						Yes	Restore Manatee habitat	Manatee well-being	No	
10/20/2021 20:03	Volusia		No	No					remove Kirkpatrick Dam and restore the Oklawaha River to oc's original state	Documentaries of the ecological damage to the River ecosystem	Manatees and other wildlife suffering greatly.	no.	
10/20/2021 20:07	Orange		No	No					As with the Everglades, free flowing natural water is a plus. The Kirkpatrick Dam should be removed.	We own a vacation home in Lake County and realize that this would benefit us.	The loss of natural wildlife.		
10/20/2021 20:08	St Johns		No	Yes	2-5 times		2-5 times		Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam to reunite the natural connection of Silver Springs, the Ocklawaha and the St. Johns River.	The science supports restoration. Studies by federal and state agencies have clearly demonstrated that restoration of a free-flowing, connected system is cost-effective and will provide significant ecological benefits to the St. Johns, Ocklawaha and Silver Rivers as well as Silver Springs. More information to consider: Three rivers, Ocklawaha, Silver and St. Johns, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish migration patterns and essential manatee habitat are reestablished 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of forested floodplain wetlands within the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs	We miss a historic opportunity to stop the ongoing ecological degradation caused by the dam and finally reunite the natural flow of these rivers. Breaching the dam would restore the natural flow of 150 mgd of fresh water, improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. A free-flowing Ocklawaha will reestablish 15,000 acres of forested wetlands and fortify downstream submerged grasses from Welaka to Jacksonville in the St. Johns River that are critical to river health and fish habitat.	No. Breaching the dam and restoring the Ocklawaha are 50+ years overdue.	
10/20/2021 20:12	Putnam		No	Yes			1 time		Remove the dam	Loss of habitat for species that rely on a free flowing river	Status quo	Leave the dam in place and open a bypass channel around the dam.	It's time!
10/20/2021 20:12	St Johns		No	Yes	2-5 times	More than 5 times	More than 5 times	Canoeing / kayaking Boating Wildlife viewing	I am in favor of a free-flowing Ocklawaha and the restoration of this natural system by breaching the Rodman/Kirkpatrick Dam	The science supports restoration. Studies by federal and state agencies have clearly demonstrated that restoration of a free-flowing, connected system is cost-effective and will provide significant ecological benefits to the St. Johns, Ocklawaha and Silver Rivers as well as Silver Springs. More information to consider: Three rivers, Ocklawaha, Silver and St. Johns, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish migration patterns and essential manatee habitat are reestablished 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of forested floodplain wetlands within the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs	We miss a historic opportunity to stop the ongoing ecological degradation caused by the dam and finally reunite the natural flow of these rivers. Breaching the dam would restore the natural flow of 150 mgd of fresh water, improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. A free-flowing Ocklawaha will reestablish 15,000 acres of forested wetlands and fortify downstream submerged grasses from Welaka to Jacksonville in the St. Johns River that are critical to river health and fish habitat.	No. Breaching the dam and restoring the Ocklawaha are 50+ years overdue. Dam safety issues and improved water quality, wildlife habitat, and recreational opportunities can't be ignored or delayed any longer.	Kindly consider my submission. Thank you
10/20/2021 20:21	Hillsborough		No	Yes			1 time			Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years.	No. Breaching or removing the dam is well overdue.	As a lifetime Florida resident who grew up in this area, I have seen the springs and waterways change for the worse over my lifetime. Restoration to the original state of waterways is a way to restore this. Please give this all consideration.
10/20/2021 20:24	Sarasota		No	Yes			2-5 times	Boating Other Wildlife viewing	I think the dam should be breached to restore the natural flow of the river. Protect the environment	Wildlife			
10/20/2021 20:26	Marion		No	Yes			1 time	Fishing	Dam destroyed to rubble	The reservoir is ugly, gross, and lacking of any use except fishing which would still be able to do with a river instead of a cesspool	Millions spent on an outdated dam, idea, and recreational (fishing) concept with the loss of natural springs and a healthy flow of water to the St. Johns	no. Dam must go	
10/20/2021 20:28	Brevard		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam	The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. 10/20/2021 21:12	Outside of state / other	Maine	No	No					To restore the Ocklawaha River by breaching the Kirkpatrick Dam.	15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Only breaching the dam will restore the area to its natural state, for wildlife and manatees.	Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm-water habitat for hundreds more manatees.
10/20/2021 21:17	Outside of state / other	MI	No	Yes			2-5 times	Wildlife viewing				No	
10/20/2021 21:18	Citrus		No	No						Looks like this needs to be removed to help the manatees, they are in dire straits on the east coast with not enough food	The beginning of this article it talks about the health of 3 rivers before the dam & reservoir was built	Lose more manatees	
10/20/2021 21:20	Indian River		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood-damages. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/20/2021 21:22	Duval		No	No					Remove the dam, so that the natural habitat can flourish and return to its natural state.	I heard the a representative of the River Keepers talking about it on NPR.	It would be unfortunate for Florida and everyone in it. Human development is inevitable but we need to protect the environment and help it flourish. That way it will be there for our children and our children's children	Not really, just get rid of the dam	We all win if we are champions for our environment
10/20/2021 21:25	Alachua		No	Yes		1 time		Canoeing / kayaking	remove the dam and return the river to its natural state.	just looking at the river and the reservoir.	it will take time for the river to be restored, and the longer we wait the harder the job will be.	No.	
10/20/2021 21:30	Alachua		No	Yes		1 time		Wildlife viewing	Remove the dam	Restore the river and surrounding environment to its original state	The continued degradation of the area.		

10/20/2021 21:32	Lee		No	Yes			2-5 times	Wildlife viewing	Removing key portions of this dam, which is past its life expectancy, will re-establish traditional access to essential habitat for manatees, bring back migratory fish, and restore a lost riverway for anglers and paddlers. Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood-damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/20/2021 21:34	Sarasota		No	No					Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue.	Manatees are dying unnecessarily. 2021has been the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs.
10/20/2021 21:35	Miami-Dade		No	Yes			2-5 times	Wildlife viewing	I would like to see the dam breached for the sake of river and ocean health.	The knowledge that manatees need warm water to survive the winters.	species extinction	nope	Thank you for restoring the Great Florida Riverway
10/20/2021 21:43	Alachua		No	Yes		1 time		Boating	Open up to river access				
10/20/2021 21:46	Seminole		No	No					Open it up and restore the normal flow of the river.	Since much of Florida is being paved over and developed, thousand of acres of submerged lands will dry up and be available to our dwindling land animal populations. Restoring the natural flow of the river will improve aquatic wildlife as well.	Along with the negative environmental impacts of the dam we would also need to pay for upkeep on the dam.	Create an opening wide and deep enough to get the flow and water levels back to where it was before 1968.	Back in the '60s the government made quite a few messes across Florida. Much of this was altering the natural water flow. Now we are trying to get things back to where nature intended. We don't need a barge canal.
10/20/2021 21:48	Alachua		No	Yes	2-5 times			Wildlife viewing	Remove the dam.	I believe that the area should be restored to its original condition. Remove the dam.	Continued degradation to the natural resources and wildlife that try to survive here.	No	
10/20/2021 22:01	Lake		No	No					Want the Rodman/Kirkpatrick dam removed.	20 springs and thousands of acres of wetlands would be restored. Fish populations would increase, attracting sport fishing business. Important manatee habitat would be restored.	Millions of taxpayer dollars are spent unnecessarily to repair the dam. This dam provides no public benefit. No flood protection, water supply or power.	No. Removing this environmental disaster is the only desirable option.	Restoring the Ocklawaha River is the most cost effective project to protect our springs in FL today. This is a great opportunity!
10/20/2021 22:02	Duval		No	No					Back to nature	Florida loves to pave paradise. I say the fewer structures and restrictions, the better.	Crooked-assed Florida bullshit. Maybe DeSantis'll try to tell us that dirty water is best for drinking.	Perhaps.	
10/20/2021 22:03	Duval		No	No					I would like to see the dam breached/removed and the natural flow of fresh water restored.	The most compelling information to me is that breaching the dam is ecologically important. I have read about this several times over the years and it seems that the strongest argument for breaching the dam is that this is the best thing to do ecologically. The strongest argument for status quo seems to be that the reservoir supports local businesses. I believe it is best to side with the results of ecological studies and breach the dam. If the studies are correct, the result will be an area that will be healthier than what exists now, which it seems to me would yield a healthier economic outcome as well.	If the dam is not breached, I would be concerned that the health of all the affected waterways and springs would decline. It seems algal blooms in the St. Johns River are getting worse, and starvation deaths of manatees due to a decrease in prevalence of aquatic vegetation is getting national attention. From what I understand, the additional fresh water flow that would be gained by breaching the dam could help decrease downstream algal blooms and support the growth of aquatic plants.	I like to think I am the kind of person that can compromise when needed; however, this situation seems more like a question of whether to turn a switch on or off. Yeah, some switches you can hold in a position that is part way between On and Off, but that requires a lot of attention and does not achieve any part of either possible outcome. I think the dam should be breached.	I thought I read that the dam was at its end-of-life, there was funding to breach the dam and there was political support (the governor?) for it. If so, I'd like to see it happen before someone takes away the funding. I was raised in Jacksonville Beach, where I live now. I visited Silver Springs as a kid. When I attended UF I often drove through Palatka on my way to Gainesville because it is a pretty drive through that area. I've traveled the St. Johns River from Sanford to the Atlantic Ocean. I drove up 19 through the Ocala National Forest just this past Saturday, not because that was the fastest route, but because it was the calmest. There is great beauty there and even greater potential. There is potential to restore the Ocklawaha and adjacent areas; there is potential to improve water quality in the St. Johns, and there is potential to increase the economic impact that healthy waterways have on adjacent communities. Thank you for listening.
10/20/2021 22:15	Clay		No	Yes	2-5 times			Canoeing / Kayaking Wildlife viewing	Removed	To preserve endangered manatee and migrating fish species and restore historic river	Damage to wildlife and water quality	No	I have had the privilege of enjoying the River since prior to the damn dam all my life. Total waste of money.
10/20/2021 22:19	Hillsborough		No	No				Other:	Restoration of the Ocklawaha River.	Manatees are struggling with starvation from seagrass loss; the greatest long-term threat is the loss of warm water habitat.	We would lose more manatees and other wildlife.		We can't let the recovery of manatees, a conservation success story, be reversed.
10/20/2021 22:23	Citrus		No	Yes	1 time	2-5 times	More than 5 times	Fishing (shoreline/structure) Wildlife viewing	Reinstate the normal flow of water	This will allow the hidden springs to come to life again, help with fish and manatee populations as well as improve water quality and clarity on the river	That things stay the same or continue to worsen	Open the flow without completely removing the dam.	
10/20/2021 22:24	Clay		No	Yes	2-5 times			Wildlife viewing	I would love to see you guys reserve it I love seeing all the wild animals	I love witnessing these gentle creatures from the distance	If they decided to destory this magical place	I don't have any pictures	
10/20/2021 22:28	Hillsborough		No	Yes					I would like to see the dam breached, so that a free-flowing river system can be restored.	Many studies show the detrimental effects dams have on ecosystems.	That the dam is a hazard if not removed.	Not really.	
10/20/2021 22:31	Putnam		No	Yes		1 time		Wildlife viewing Other: Hiking	I would like to see the removal of the Rodman dam so that many rivers could be rejoined and fish could thrive.	The environment has suffered terribly since the Rodman Dam was installation.	I'm afraid the Ocklawaha, over 50 springs, and possible the St. John's river will suffer.		
10/20/2021 22:34	Outside of state / other	New York	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood-damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/20/2021 22:35	Leon		No	No					I would like to see the dam breached and the natural river channel restored.	The reservoir has been a major barrier to wildlife and plant movement between the Ocala and Osceola National Forests.	Perpetuation of the barrier to wildlife and plant movement	No.	
10/20/2021 22:52	Seminole		No	Yes		2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Very difficult question. If posed 50 years ago I likely would've been strongly opposed to the creation of the Rodman dam and Reservoir. Today however the reservoir has created a new biome widely enjoyed by hunters, anglers, and other outdoor recreationists. Wow I would like to see the Ocklawaha restored to it's Natural course, I'd also like the Rodman Reservoir to remain intact.	The Rodman Reservoir is an important and widely used habitat yet, The natural course of rivers is equally important.	The Reservoir will be lost and the natural course of the alcohol ha ha won't be restored. Admittedly mine desired outcome may be utopian.	Assuming this question is designed to appeal to people who either feel the river should be restored or the reservoir should be maintained unconditionally I'd prefer a solution where the reservoir is maintained and the Ocklawaha finds a course similar to its historical flow.	Save the Reservoir and Restore the River. Good luck!
10/20/2021 22:52	Orange		No	No					I'd like to see the clearing of items and changes made in order to allow the manatees access to the warm waters so they can survive. Provide vegetation so they can eat and feed their young.	Manatees are a large part of florida heritage. I personally adopted Anne two years in a row. She's had many babies. I'm sick of how many manatees that have been lost due to no access to warm springs or food.	They would no longer be any left, eventually they'd all freeze or starve to death	Not really. The only outcome needed is providing help NOW anyway possible! They need our help. We are their voice. Let's all pitch in and create a livable environment so they can begin to thrive again . Before it's too late.	
10/20/2021 22:59	Orange		No	Yes	2-5 times	2-5 times	2-5 times	Other: just viewing the area	removed Rodman dam; restoring the natural flowing river.	Removing the dam would allow the hydratic hammock, plus hardwood forest would return 9-14,000 acres which the dams currently has flooded. Allowing the forest the support neotropical bird species (US signed migratory bird treaty). Increase riparian landmass would allow for addition filtration of nutrients (fertilizer). Removal would allow natural migration of fish including sturgeon etc, and manatees to continue up to silver springs. Potential a broader base of ecotourism, fishing, exploring newly exposed springs (20+), birding, kayaking, swimming etc. Palatka would benefit much from a broader based of Ecotourism. Bike trail could be establish to connect to keystone trail, allow with a number of other activities mentioned above. A good example is Winter Garden, prior to the west Orange trail it was a dying downtown, after establishing bike the town has boomed with Ecotourism being the base to create all the downtown business. Removing the dam would allow endangered creatures, fish, snails, manatees, and neotropical birds such snail kites, wilson warblers to have breeding, feeding areas restored.	continues spending of public money a long dead project, poor water quality, deaths of manatees in the locks, endangered fish species unable to migrate up river. A slow death of the river. At some point the river will return - the dam will fail with very bad human cost down river. We can do this logically or just let nature do it. It up to you. I prefer a controlled engineered solution.	not really, being half pregnant is not a natural state. Just remove it.	Thank you for taking the time to ask - I appreciate the ability to put my 2 cents in. Eugene Stoccardo
10/20/2021 23:03	Outside of state / other	Raleigh, NC	No	No									Please restore the manatee habitat!
10/20/2021 23:14	Orange		No	No					Taken down	Manatee deaths	More manatee deaths	No	Hope it happens!
10/20/2021 23:15	Alachua		No	Yes			2-5 times		Remove the dam and free the river.	History. The dam is unnecessary and its removal is long overdue.			
10/20/2021 23:17	Outside of state / other	Phoenix, AZ	No	Yes		1 time		Wildlife viewing Other: hiking	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. £5,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm-water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife.
10/20/2021 23:17	Alachua		No	Yes		1 time	2-5 times	Fishing Wildlife viewing Other: Field trips about landscape ecology and ecological restoration	I want to see the dam breach to accomplish partial restoration that results in the return of a free-flowing Ocklawaha River.	All of the biological and ecological science as well as the research on the recreational economy of a restored Ocklawaha River supports restoration. That includes information on the return of native fish migrations, rare fish habitat, restoration of Silver Springs, manatee conservation, riverine forest wildlife habitat, ecological benefits of flooding in restored floodplain habitat, and regional and statewide wildlife corridor benefits.	That the reservoir will continue to degrade and the ecological integrity of the river will also continue to diminish.	No, partial restoration is the only reasonable goal. Retaining the reservoir is expensive and not worth the special interests served by the reservoir.	
10/20/2021 23:23	Bay		No	No					Preserve native plants	Not many native plant areas left so must preserve what we can.	Please, no construction in that area.	Like a state park, share the space with native species and people.	
10/20/2021 23:26	St Johns		No	Yes		1 time		Canoeing / Kayaking Other: Hiking	Return to its natural state				
10/20/2021 23:30	Palm Beach		No	No					Returned to the way it was originally.	success of other restoration projects	?	possibly ?	
10/21/2021 0:17	Alachua		No	Yes		1 time		Boating	Remove the dam	Restore the river to allow the re-emergence of the springs and wildlife	Continued use of taxpayer funds to maintain an obsolete and unneeded reservoir	Partial destruction of the dam.	
10/21/2021 0:46	Outside of state / other	California	No	No					Breach the dam and reservoir so the manatees can have access to warm water.	They don't have enough warm water and breaching the dam would allow them access to warm water habitat.	Manatees not surviving.		
10/21/2021 1:42	Outside of state / other	MN	No	No					Even white manatees are still struggling with starvation from seagrass loss, the greatest long-term threat to these animals is the loss of warm water habitat that manatees need to survive the winter. Right now, 60% of Florida's manatees depend on power plant outfalls to keep warm and survive the winter - an unsustainable and unnatural situation. Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	Manatees have already reached a record number of deaths this year - and if we don't restore additional areas of their natural habitat, we could lose even more manatees in the future.	We need to make sure we use every tool to help save manatees and other wildlife from habitat destruction and pollution. The recovery of manatees has been a conservation success story until now - we can't let this progress backslide on our watch.	Save the manatees.	
10/21/2021 1:53	Hillsborough		No	Yes			1 time	Wildlife viewing	Remove dam, drain reservoir, and let river flow.	Biography of Marjorie Harris Carr	Continued manipulation and degradation of an important riverine system.	Such an?	
10/21/2021 2:37	Palm Beach		No	No					I want to support manatees in any way possible!!	Waterways that encourage the thriving of manatees!	Manatees might perish and eventually become extinct!	I don't know of any to help manatees.	
10/21/2021 2:47	Sumter		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood-damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/21/2021 3:01	Union		No	No					Remove the dam and restore the flow of the river.	Surveys and photos showing the decline of the river bottom, water quality and springs.	The continued decline of the river.	I've read that about $1 million dollars a year is spent on the reservoir. That would give greater return if the natural flow of the river is restored.	

10/21/2021 3:33	Hernando		No	Yes		1 time		Canoeing / kayaking Wildlife viewing	Please safely and without environmental destruction, remove the dam and restore the historic river flow.				
10/21/2021 4:07	Lake		No	Yes		1 time		Wildlife viewing	Breach Rodman/Kirkpatrick dam	Hundreds of manatees would gain access to much needed habitat at a time when manatees are experiencing the deadliest year on record	Hundreds of manatees would not have access to essential warm water habitat	No. Breaching dam is 50 years overdue	
10/21/2021 4:15	Bradford		No	Yes	2-5 times	2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Wildlife viewing					
10/21/2021 5:20	Marion		No	Yes		2-5 times	More than 5 times	Fishing Boating	Save Rodman	Fishing	The muddy mess left behind	No	Save Rodman!!!!!
10/21/2021 5:25	Marion		No	Yes		More than 5 times		Fishing Boating	Remain in place	Removing it would destroy best fishing area in area		None	
10/21/2021 5:35	Marion		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Boating	Leave it alone	Keep water levels up	Eco systems would be destroyed	No	It's a great fishery with many great attributes, I have seen many manatees while being there. It also brings in a lot of revenue to local businesses.
10/21/2021 5:38	St Johns		No	No					Breach the dam to restore the Ocklawaha and the springs, wetlands and floodplains	The mitigation of the St. Johns River dredging; the provision of fresh water to the St. Johns	That all the benefits of breaching the dam would not be achieved		
10/21/2021 5:48	Putnam		No	Yes	2-5 times			Fishing Canoeing / kayaking Boating Wildlife viewing	Nothing	Rodman is one of the best fisheries in the state, it helps the putnam economy and is a landmark destination for fisherman all over the country.	Many people's livelihoods depend on rodman. Draining the reservoir would greatly effect the putnam economy.	No	
10/21/2021 5:51	Orange		No	No					Restoration of a free flowing Ocklawaha River by breaching the Rodman reservoir and Kirkpatrick dam.	Restoration of the natural river channel.	Loss of native plant habitats and ecosystems Aquatic plant communities would regenerate Endangered plant species would recover and regenerate Restoration of the native flood plain The negative effects to native flora and fauna Taxpayers will always be footing the bill for the regular upkeep and maintenance for an unnecessary dam	No	
10/21/2021 5:54	Alachua		No	No					I support removing Kirkpatrick Dam and restoring the free-flowing Ocklawaha River	It is time to stop spending nearly $1 million of our tax dollars to maintain this obsolete reservoir	Continue a big waste of $$	no	
10/21/2021 6:08	Lake		No	No									
10/21/2021 6:12	Duval		No	Yes			1 time	Canoeing / kayaking	Tear down the dam and let the water flow naturally	Wasted tax dollars that could be spent on river preservation	The imbalance of the eco system would continue to threaten our wildlife	I believe the choice is dam or no dam, so no	
10/21/2021 6:19	Alachua		No	Yes		1 time		Wildlife viewing	The Rodman/Kirkpatrick Dam should be breached to restore the Ocklawaha to a free-flowing river.	Twenty fresh water springs would be restored, as well as 7500 acres of forested floodplain. Fish and manatees would be able to migrate into the river as they did for eons before we blocked their way. The dam has exceeded its lifespan and needed repairs are very expensive. It makes more sense to save that money and have the economic benefit from increased tourism along the river.	The continued degradation of the Lower Ocklawaha/St John's River system. It is too expensive to maintain and the damage that would be caused if the dam fails could be catastrophic.	No. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration.	Thank you for this opportunity and I hope you can make a decision that benefits all living beings.
10/21/2021 6:25	Clay		No	Yes	More than 5 times			Fishing Fishing (shoreline/structure) Boating Wildlife viewing Other: Fantastic wildlife Habitat. Eagles, Ospreys, Gators	Nothing, keep it as is.	This is one of the richest fisheries in the US, North America. In the top 10 Bass lakes in North America. It has created a fantastic wildlife Habitat. Not many places you can go in the state of Florida and see LIVE Bald Eagles thriving here.	Taking down the dam would create one of the largest mud holes in the state. The local economy would take a large negative hit. If the dam was removed today my Grandchildren not yet born would never see nothing but a baron mud flat and not be able to enjoy the rich wildlife habitat that exist today.	I would have to see what options are available.	Most of the so called environmentalist wanting to destroy this don't even live in the state of Florida. I would support an additional fee on fishing licenses to pay for the maintenance of the dam and the lock.
10/21/2021 6:28	Lake		No	Yes	1 time	2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Leave it as it is and has been for 50 yrs.	There is no reason to tear down the dam. The cost is too high and the results uncertain. We have stability now and we should leave it alone.	The fishing/tourism dollars generated by the reservoir would evaporate.	There is no middle ground on tearing out the dam. It is either there or it is not.	
10/21/2021 6:33	Alachua		No	Yes			1 time	Canoeing / kayaking	Release the dam to allow the natural flow of water return to the area relieving it of the back-up vegetation, allowing the springs to be showcased. Also, fishing would improve	http://blogs.ifas.ufl.edu/cssjrp/2021/08/16/drawdowns-a-brief-look-at-rodman-reservoir/	The area surrounding the dam would continue to loose the advantages of a healthy	More frequent drawdowns.	
10/21/2021 6:40	Seminole		No	Yes			2-5 times	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling camps, and recreation benefits.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Florida's water systems are in critical danger and needs to be protected as much as possible. Breaching the dame and restoring the river, benefits everyone and and everything, from recreational use to wildlife and the health of other water systems.
10/21/2021 6:43	Duval		No	No					Please breach the dam and allow free flow of Ocklawaha River into the St. Johns River.	Health of the St. Johns River	Health of the St. Johns River continues to deteriorate.		
10/21/2021 6:46	Duval		No	No					removed and let Ocklawaha run free	article from St Johns river keeper	damage to st johns, loss of ecosystem and springs	not really	
10/21/2021 6:49	Alachua		No	No					Restore the river and remove the dam.	Restoration of ecosystems. Improve/restore springs and manatee habitats that have been lost unnecessarily.	Ecological decay. Continued rise in deaths of manatees. Never seeing springs flow that would otherwise if it weren't for this dam.	No	In my understanding of this reservoir and dam it serves the needs of people who like to fish and otherwise offers no other significant benefit. Why would we want to keep the dam if it's expensive to care for and is detrimental to the environment in so many ways? Just so people can fish there? Please remove the dam and restore the natural river flow. Thank you.
10/21/2021 6:50	St Johns		No	Yes			1 time	Other: kayak on the river	Dismantle the dam to restore the river's natural flow	The St. johns river needs the fresh water and wildlife needs our protection to thrive again. A few anglers and their economic impact have blocked the return to the natural flow of things for far too long. Removing the dam and reservoir will change and improve the scheme of things vis a vis tourism, recreation.	The overall health of both rivers will be negatively impacted, as will the wildlife.	A crackdown on our activities that impact the area's ecosystem. Eliminate septic systems, fertilizer runoff, uncontrolled development and pollutants. The reservoir has buried many fresh water springs that are tied to the Florida aquafer. Free them.	The Ocklawaha River has been a tourism attraction for more than 150 years. It is a natural treasure that should be nurtured. Bass anglers will thrive when the dam comes down.
10/21/2021 7:01	Putnam		No	Yes			1 time		Opened up to free the Oklawaha	History	Typical lacck of focus by bested interests	No	This is a very biased survey
10/21/2021 7:02	Marion		No	Yes		1 time	More than 5 times	Fishing	Id like to see the Ocklawaha River restored to its natural flow pattern and all impediments removed.	The work of the scientists and other environmentalists have proved to me the health of the Ocklawaha and St. John's Rivers would be vastly improved by the removal of the dams. Personal observation also plays an important role. I can remember as a youngster the amount to catfish and striped bass that would migrate up the review and could be viewed in large numbers all the way up to the Silver River and Silver Springs headwater. Today these species are all but absent. It doesn't take a scientist to tell that something is terribly wrong and the waterway is suffering a demise.	The continued demise of the entire river ecosystem and the over decline in the health of the St. John River.	Any plan that moves towards restoring these vital ecosystems to their natural state.	The disastrous Cross Florida Barge Canal program was thankfully halted and subsequently defunded. Now it is time to complete righting this horrible wrong by beginning the restoration process. It will be arduous for sure, and there will be public outcry in opposition. But it is the right thing to do now and will prove to have been a most generous act by future generations of Floridians.
10/21/2021 7:03	Hillsborough		No	Yes			2-5 times	Canoeing / kayaking	Y'd like to see it removed and the Ock be restored to it's natural flow.	The dam is obsolete and has a negative impact on the ecosystems on the river.	The continued over development of Florida's waterways.	No	Free the Ock
10/21/2021 7:12	Outside of state / other		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat	Hundreds of manatees lose the opportunity to access essential warm water winter habitat.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/21/2021 7:14	St Johns		No	Yes		More than 5 times		Canoeing / kayaking Wildlife viewing Other: Walking	Remove the dam and reservoir and restore the river to its natural state	The dam is not used as intended. I believe a natural river is better for recreation, environment and enjoyment for all.	Environmental impacts	No	
10/21/2021 7:30	Seminole		No	No					Breach the dam!!!	Several springs would be restored, fish populations increase, and manatees would gain access to more waterways	Springs wont be restored	No, this is years overdue.	
10/21/2021 7:33	Marion		No	Yes		2-5 times		Fishing	Remain	There is a large amount of native Florida wild life that relies on this body of water.	A large number of native wildlife would be displaced.	Maybe maintaining a lower water level.	
10/21/2021 7:34	Alachua		No	No					Free the Ocklawaha and restore to its original state	Degradation of the springs	Spiraling downward of destroying our springs	not sure I'm all for compromise but it seems that either we have a dam or not	
10/21/2021 7:38	Putnam		Yes	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Stay as is!	- fish for a living and Rodman Reservoir is a main stay in the rotation of fishing spots.	What happens to all the wildlife, fish and American Bald Eagles that call the Reservoir home now that the eco systems are in place!	Rodman Reservoir is now home to a complete eco system. Manatees, trophy black bass, Americans symbol of hope the Bald Eagle and so much more. Man started the cross Florida Barge canal and it has become so much to the wildlife. So no leave it as is, is the only out come acceptable.	
10/21/2021 7:38	Citrus		No	Yes		2-5 times		Wildlife viewing					
10/21/2021 7:39	Alachua		No	No					deconstruct damn and return natural flow	needless cost of maintenance and disruption of natural environment and animal habitat due to damn	Continued disruption of nature due to damn		
10/21/2021 7:42	Marion		No	Yes			2-5 times	Canoeing / kayaking	Take it down now to improve the rivers increase fish populations and help manatees	Damn is past its life expectancy and our Florida resources will not last for future generations protection is need immediately	Death to some of our precious springs wake up	No	Stop making this about politics and protect Florida precious resources
10/21/2021 7:45	St Johns		No	No					Remove the dam to restore natural water flows downstream.	Times Union article	Continued algae blues.	Not that I can think of.	None
10/21/2021 7:49	Marion		No	Yes		2-5 times		Canoeing / kayaking	Tear it down	Helping the silver Ocklawaha rivers will increase fish life	Death to springs	No	Should never be there
10/21/2021 7:54	Seminole		No	No									
10/21/2021 7:59	Alachua		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	I would like to see the dam removed for the benefit of taxpayers, fish, wildlife and recreational users of the river.	It costs taxpayers more than $1 million a year to maintain a reservoir that provides no public benefit.	The dam will continue to deteriorate and maintenance costs will skyrocket.	No.	
10/21/2021 8:01	Marion		No	Yes			2-5 times	Fishing Boating Wildlife viewing	Nothing, leave it alone!!!	The habitat and eco system that has been established from this dam over the years is unbelievable. from the birds to the manatees it's a wonderful environment.	You would loose an incredible fishery. Rodman is a top 10 destination for catching big bass. Not to mention the loss of revenue for the surrounding businesses and the people that make a living off the lake.	No	
10/21/2021 8:03	Marion		No	No					restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea-level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.
10/21/2021 8:05	Alachua		No	No					Get rid of the dam and restore natural water flow to save taxpayer $ and help the river dp what rivers should do	Trusted FL environmentalists have indicated this is better for the environment.			
10/21/2021 8:06	Outside of state / other	Ohio	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4.14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide unimbibed passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. 10/21/2021 8:09	Outside of state / other	Ny	No	No					Protect habitat for manatees.	The number of deaths and starvation due to sea grass loss.	More needless deaths of innocent manatees.	No	It is our responsibility to protect wildlife!
10/21/2021 8:10	Hillsborough		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	Hundreds of manatees gain essential warm water winter springs habitat if the river flow is restored. More and more manatees are dying every year from their habitats and food sources growing smaller.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe and will cost millions of dollars in taxpayers' money to temporarily fix.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	We need to start taking better care of our land. This is one big step that can make huge changes for our Florida wildlife. If we continue to make these decisions that harm our environment, wildlife will continue to die, our water will continue to become polluted and the beautiful springs that are natural to Florida will no longer be beautiful. This is also financially the best option in many ways.
10/21/2021 8:24	Clay		No	No					I would like to see the dam removed completely	A growing chorus of environmental groups and others are convinced that the best way to improve the quality of the st johns is to restore the free flowing water.	We live on the st johns. The algae blooms are so bad that we worry about going out on the river and certainly wouldn't eat anything caught in the river. And what is happening to our manatee population is distressing. They are, starving because we are allowing their food source to be polluted.	No. I sympathize with the businesses that have grown along side the dam and fear for their livelihoods. But I think the dam removal can open up other opportunities which would allow everyone to win.	The dam removal has been an ongoing debate for years. We have an opportunity to do the right thing for our waterways. Please don't let this chance pass us by.
10/21/2021 8:32	Marion		No	Yes		2-5 times		Wildlife viewing	Restore the rivers	scientific information	Loss of Silver River, St John's River& theOklawaha River	None	
10/21/2021 8:33	Marion		No	Yes		2-5 times			Return River to natural state	Environmental concerns and the debility to navigate the old route from Jacksonville to Silver Springs			
10/21/2021 8:35	Pinellas		No	Yes	1 time	2-5 times	1 time	Canoeing / kayaking	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. Although this year's crisis was mostly due to starvation from loss of seagrass, the long-term threat to the manatee is loss of natural warm water winter habitat. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. As a taxpayer and resident of Florida, who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our wildlife and people. Thank you for your consideration to this important matter.
10/21/2021 8:35	Orange		No	No					remove the dam and restore to natural beauty which will bring fresh water.	More fish, manatees could get to silver springs, now the manatees have to go through the locks, improve water quality in the St. Johns River.	Waste a lot of money to repair the dam.	No options remove it...JUST DO IT.	
10/21/2021 8:36	Outside of state / other	Kentucky	No	Yes	1 time	2-5 times	More than 5 times	Fishing Fishing (shoreline/structure)	Leave it as it is! Fantastic fishing and amazing beautiful wildlife.	Devastating ecological impact of removing the dam destroys the post-dam habitat that has emerged over the last 40 year (1960). Visitors from all over the world come to Rodman	Ruins the beauty and destroys the fishing and fish habitat. Two wrongs don't make a right!	Catch and release on Rodman only	Stop tinkering with this. The canal project is dead. Rodman, for better or worse, is part of this legacy. There is a thriving ecosystem there. Leave Rodman alone!!!
10/21/2021 8:37	Miami-Dade		No	No					I support the restoration of the Ocklawaha River by breaching the existing dam and draining the Reservoir for the broad range of environmental and economic benefits that restoration would provide.	examples of other restorations	losing water sources		
10/21/2021 8:39	Duval		No	No					Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam to reunite the natural connection of Silver Springs, the Ocklawaha and the St. Johns River.	The science supports restoration. Studies by federal and state agencies have clearly demonstrated that restoration of a free-flowing, connected system is cost-effective and will provide significant ecological benefits to the St. Johns, Ocklawaha and Silver Rivers as well as Silver Springs.	We miss a historic opportunity to stop the ongoing ecological degradation caused by the dam and finally reunite the natural flow of rivers. Breaching the dam would restore the natural flow of 150 mgd of fresh water, improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. A free-flowing Ocklawaha will reestablish 15,000 acres of forested wetlands and fortify downstream submerged grasses from Welaka to Jacksonville in the St. Johns River that are critical to river health and fish habitat.	No. Breaching the dam and restoring the Ocklawaha are 50+ years overdue. Dam safety issues and improved water quality, wildlife habitat, and recreational opportunities can't be ignored or delayed any longer.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway.
10/21/2021 8:44	Hillsborough		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Canoeing / kayaking Boating Wildlife viewing	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4.14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide unimbibed passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway. We must ACT NOW	We continue to watch our land and environment be compromised and as a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway.
10/21/2021 8:46	Seminole		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Allowing for the free movement of manatees and other wildlife	Manatees will not have free access to food and water	No	Restore the springs, the water quality, the wildlife and the natural landscape that was and should be The Ocklawaha.
10/21/2021 8:47	Lake		No	No					I would like to see changes to help the environment and manatees.		Continued destruction of manatee habitat	Not sure	
10/21/2021 8:50	St Johns		No	No					Remove the dam and allow the river to flow	The science supports this position. Environmentally this is the right path.	Environmental = St Johns river environment, health of springs, health of forested lands.	No. This is a mistake that needs corrected.	
10/21/2021 8:50	Lee		No	Yes			1 time	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs.	Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait	

10/21/2021 8:51	Duval		No	Yes			1 time		Remove the Dam. This is not republican or democrat ...its just common sense. People talk and talk about doing the right thing, caring for the environment, helping the planet, etc. This is as obvious as it gets.	The Dam stops the huge natural flow, fact. The dam removal is only restoring what nature intended, fact. The dam removal heals the St Johns river, fact. This should be the easiest decision you will ever make.	Continued decline of the St Johns river affects all of us in northeastern Florida.	No, it just needs to be removed and the flow restored. You can do this, please.	Being a former employer and a former City councilman I understand issues with various sides. You are trying to listen to both, that is good. At some point action is required on this dam. We have been watching this issue for over 21 years that this area has been home to us. Discussing this amazing water flow with hundreds of folks during that time, I have never met anyone that wants the dam to remain! All decisions carry some difficulty, but this issue is clearer than any I have ever seen. Please do the right thing for the river and our beautiful north and central Florida. Thank you.
10/21/2021 8:56	Pasco		No	Yes	1 time	More than 5 times	More than 5 times	Wildlife viewing Other	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam	If prevents natural migration of fish and hundreds of manatees to get to refuge and Forage during the winter. Restores freshwater flow and uncover springs that are essential to manatees and provides thousands of acres for Florida birds and wildlife to live. Bears and panthers too.	Continue ue decline of Florida wildlife. If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other. areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/21/2021 9:06	Marion		No	Yes		2-5 times		Fishing Fishing (shoreline/structure) Boating Hunting Wildlife viewing	Leave it as it is	Huge wildlife habitat and fishery's	Detrimental natural habitat and animal sanctuary destroyed	It supports some much wildlife leave it as it is	
10/21/2021 9:07	Duval		No	Yes	1 time	1 time	1 time	Wildlife viewing	Remove the dam and restore the flow into the Stjohns River.	I am a native Floridian and I am angry at all the destruction of what I considered so great about growing up along the river in the 50's and 60's. The St. John's River is vital to a very large area for recreation and commerce. It needs to be restored just like the Kissimmee River.	Continued worsening of our great river until it is nothing but sludge without life.	No	
10/21/2021 9:09	Seminole		No	No					I'd like to see it breached	restoration of Florida's waterways	further degradation of our waterways	no	
10/21/2021 9:11	Duval		No	No					remove the dam and restore the reservoir			remove the dam only	
10/21/2021 9:12	Leon		No	Yes				Canoeing / kayaking Wildlife viewing Other: canoe trip many years ago and a site inspection when I worked for FWC many years ago	remove the dam; let the river flow	years of involvement in the issue when at FWC and various studies	lost opportunity to do the right thing for the river	no	
10/21/2021 9:13	Alachua		No	Yes		2-5 times		Wildlife viewing	Re-establishment of the Lower Ocklawaha River by breaching the dam, allowing for the range of water levels and flows to approach historical patterns prior to dam construction.	Documented suppression of springs within the affected area and periodic backwater impacts in the Silver River		Any scenarios that allow for achieving a wider fluctuation of water levels, creating a more dynamic and natural system.	
10/21/2021 9:13	Clay		No	Yes	1 time			Canoeing / kayaking	I strongly favor removing the dam in order to allow the Ocklawaha River to return to its natural flow.	The environmental benefits and mitigation of algae blooms will improve the health of the St. John's River. As an avid paddler who enjoys kayaking on the pristine Florida spring-fed rivers, the dam removal will expose more springs and increase recreational miles of clean water.	The St. John's River's health will decline.	No. The east-west canal project was a bold idea that failed and deserves bold action to reverse the damage to one of the state's best features, rivers.	
10/21/2021 9:15	Duval		No	Yes		1 time		Other: I wanted to see the dam and the reservoir to learn what is happening to it.	I would like to see the reservoir and dam removed and the river to flow freely.	I believe what the Riverkeeper says and how it will benefit the river especially in NE Florida.	The St. Johns River will be in jeopardy as it will result in it being unhealthy.	no	Please let the river flow as it is intended.
10/21/2021 9:15	Martin		No	No						No further damage	More damage to the environment	Yes	
10/21/2021 9:16	Seminole		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs, and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitats for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers, and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/21/2021 9:16	Orange		No	Yes			1 time		I would like to see the dam, the last remnant of a canceled, discredited and environmentally ruinous plan to divide the Florida Peninsula, breached to restore the natural flow of the Ocklawaha River.	Restoring the Ocklawaha will restore 20 natural springs, hundreds of acres of forested wetlands and clear the route between Silver Springs and the Atlantic for fish, manatees and boaters.	If the dam is not breached, it could require millions of dollars in maintenance, a huge waste of money for taxpayers to maintain an obsolete piece of infrastructure that does harm to the environment.	No. The environmental and economic benefits of breaching the dam dwarf any supposed benefits of keeping it. This is not a close call.	The only argument for spending millions of dollars to maintain the dam is the supposed recreational and economic benefits from the Rodman reservoir. The benefits in those categories would be greater from restoring the natural flow of the Ocklawaha and restoring the natural springs along its route. Many more ecotourists will come to enjoy a restored river and give a boost to the local economy through their spending.
10/21/2021 9:18	Nassau		No	Yes		2-5 times	More than 5 times	Fishing	Please leave Kirkpatrick Dam and Rodman Reservoir as it presently is. Though changes to the area when the dam was built took place, the reservoir and dam have been there all these years and think about all the abiotic change which will take place if removed; plus fisherman enjoy the fine fishing the reservoir provides.	Damage and change to the environment would happen if the dam is removed.	Damage to the fishing reservoir.	N/A	N/A
10/21/2021 9:18	Putnam		No	No					It's time to reunite the Ocklawaha and St. Johns Rivers and Silver Springs for fish, manatee, and other wildlife	It will save the Silver and St. Johns Rivers, as well as historic Silver Springs and their riverine ecosystems.	Not breaching the dam would not create a huge economic and environmental impact for northeast Florida		
10/21/2021 9:19	Marion		No	Yes	1 time	2-5 times	More than 5 times	Wildlife viewing	The Rodman Reservoir and Kirkpatrick Dam should be dismantled. This should have been done years ago when the Cross Florida Barge Canal was scrapped.	Saving the natural wetlands and wildlife.	Continued destruction of the environment and wildlife.	No.	
10/21/2021 9:21	Putnam		No	Yes			1 time		Removal of the dam/restoration of the Ocklawaha River.	Data provided by the St Johns Riverkeeper as well as other scientific sources/studies.	The health and future of the St Johns River and its tributaries.		
10/21/2021 9:22	Duval		No	Yes		1 time	1 time	Wildlife viewing	for it to be removed	the health of the St. Johns River depends on freshwater flows from its tributaries and the dam is holding back massive amounts of water.	the health of the SJR would continue to decline and saltwater intrusion would continue to get worse. eventually, much of the lower SJR would be functionally dead.	perhaps an agreement to let a substantial amount of additional freshwater flow through the dam each day.	
10/21/2021 9:22	Duval		No	Yes		1 time	1 time	Wildlife viewing	Remove the Dam, and restore the River to its natural state as before.	The Dam was never practical, and totally political. The River needs its restoration. The fishermen and women will have many other places to fish.	See above. The needs of the public far outweigh the recreational needs of the people who fish.	NO	Thanks greatly for your efforts.
10/21/2021 9:22	Putnam		No	No					The dam(s) should be removed to allow natural free flow of water and nutrients throughout the entire rivershed system.	Grass beds in the St. Johns River have suffered from changes in nutrient levels and salinity, negatively affecting fish and wildlife populations.	Continued degradation of habitat throughout the riversheds.	If the dam is not removed, there should be a water release schedule and discharge volumes that more closely mimic historic natural flows, i.e., higher releases during rainy seasons and lower flows during the dry season.	Retaining unnatural flows and discharges when not needed for water supply or flood control is detrimental to fish and wildlife populations and their habitats. The argument for economic impact makes no sense when one does not see the major fishing tournaments being held on the Rodman. They are being held on the St. Johns River. Restoring natural flows and discharges would benefit the entire river system in this part of Florida.
10/21/2021 9:23	Duval		No	No					removed/dismantle the dam	The need to restore the flow of the Ocklawaha River to help the springs and the St. Johns River	continued degradation of the Springs and the St. Johns River	Not that I've heard, seen or read about	Keep up the good fight!!
10/21/2021 9:23	St Johns		No	No					Reunite the river and help restore the natural ecosystem. There is so much destruction of habitat and we are facing so many consequences of human exploitation and mismanagement of resources.	This is the most significant opportunity we have had in two decades to convince leaders it's time to reunite the Ocklawaha and St. Johns Rivers and Silver Springs for fish, manatee, and other wildlife. Too many dying Manatees. 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers $4-14 Million in dam repairs saved on a dam past its life expectancy Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. $57 million in potential flood damages avoided to downstream property owners	A storm event triggers a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees lose the opportunity to access essential warm water habitat.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife cannot wait. Drawdowns are temporary fixes.	Manatees - Water Quality - Springs These are essential to this region of Florida. HELP PRESERVE THEM. PLEASE.
10/21/2021 9:23	Lake		No	No					Breach it and restore rivers springs it has covered	Fish populations have declined 92%. Manatees would have more warm waters to retreat to . It would improve Solver Springs	Continued decline in natural habitat and increased nonnative species. Areas with increasing populations will benefit from more availability of local fish!	No	I hope you all use uncommon sense.
10/21/2021 9:25	Palm Beach		No	Yes		2-5 times	Boating		Returned to it's natural flow	to improve the quality of the water.	lost all viable recreation and native habitat	I don't know of one.	
10/21/2021 9:25	Leon		No	Yes		1 time	Canoeing / kayaking Wildlife viewing		Remove the dam as soon as possible.	The area needs to return to its natural state. Our wildlife and our tourism industry need it.	Wildlife will suffer. A once- FL treasure will not be returned to its pre-dam condition.	Hard to see a halfway point between a day and no dam. Do you have any suggestions?	Please remove the dam as soon as possible.
10/21/2021 9:25	St Johns		No	No									I support your position
10/21/2021 9:31	St Johns		No	Yes			2-5 times	Other: Visit to see the damage it causes	Take out the damn dam.	Restoration of the Ocklawaha and Silver Rivers. Welaka right next door to the dam touts itself as the "bass capital of the world" so the reservoir is not needed for bass fishing.		no	
10/21/2021 9:33	St Johns		No	No					Restore the River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide unhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/21/2021 9:34	Brevard		No	No					I would like to see the area restored and the dam removed.	The environmental disruption of over 7500 acres of forested wetlands plus the downstream impacts should be reversed.	The continued disruption of natural systems.	Perhaps. I would have to see the options.	The project was ill-conceived from the beginning, and restoration should be completed.
10/21/2021 9:34	Clay		No	No					To remove the Kirkpatrick Dam	The health of the St Johns River and for all the wildlife such as manatees that rely on the springs that makeup our waterways.	More damage to the way the ecosystem is supposed to be.	The Kirkpatrick dam needs to be removed	
10/21/2021 9:34	Putnam		No	Yes		More than 5 times		Other: Just checking on the logjam at the dam.	Breach it so the Ock can resume its free flow to the sea.	Awareness that the pond obliterates the beauty of numerous springs covered by its waters, prevents the free movement of manatees and fishes through the river system, and destroys the natural beauty of the landscape.	That the dam might fail catastrophically and that we continue with this ill advised destruction of the natural beauty of Florida.	Nope. Get rid of the dam. It's been 50 years of special interests prevailing. Time for real Floridians to win back a slice of their heritage.	Breach the dam.
10/21/2021 9:35	Outside of state / other		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/21/2021 9:36	Jackson		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing					
10/21/2021 9:36	Lake		No	Yes		1 time	2-5 times	Boating	That the Ocklawaha be made navigable from Silver Springs to the St. Johns River.	The Ocklawaha is not currently navigable from Silver Springs to the St. Johns River.	That there will never again be boat traffic between the Harris Chain of lakes and the St Johns River.	No	
10/21/2021 9:40	Brevard		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	Breaching of the Rodman/Kirkpatrick Dam to restoration of the Ocklawaha River by. The economy, water quality, and wildlife is heavily negated throughout the Great Florida Riverway while the dam stays in place.	The Ocklawaha, Silver and St. Johns Rivers, SJ springs, and associated ecosystem are restored.	Millions in taxpayer dollars are unnecessarily spent to upkeep and repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit while negatively impacting broad ecosystems.	No. Breaching the dam is decades overdue. Dam safety and potential flood impacts to downstream properties, improved water quality, and enhancing wildlife/ecosystems simply can no longer wait.	As a long time Floridian who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning millions of dollars in net benefit over the coming years and removing an estimated $57 million dam safety risk while increasing regional visitors and economic benefit. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you very much for your consideration.
10/21/2021 9:41	Palm Beach		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Remove dam	It blocks natural flow of river and creates unnatural conditions affecting wildlife habitat and ecosystem functions	That we failed again to make a simple change to help our natural environment	No	
10/21/2021 9:42	Duval		No	No					restoration of the natural flow from the beginning this boondoggle should never have been started	Extensive reading over the years has lead me to believe that it is the best plan to promote and maintain the health of the St Johns River and its tributaries.	further degradation of the River	begin the process and the improvements that will occur will encourage full restoration.	do not stop
10/21/2021 9:43	Clay		No	No						Removed			
10/21/2021 9:44	Osceloa		No	No					It would be ideal to see the Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam	It is vitally important to Restore the Ocklawaha River as my understanding is it will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. This is vitally important to the future of FL.	I have several major concerns. It seems if Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide unhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Certainly in addition, literaly millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Currently I understand thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. This is a situation that needs immediate action.	Absolutely not! Breaching the dam is 50+ years overdue already.	As a resident of the state of Florida who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. My family and every single resident of Florida need this action taken.
10/21/2021 9:45	Lake		No	No					Open the dam and let the water through	Dam is at the end of its life. A planned take-down of it is better than a "weather event" take down. The springs and the wetlands need the water. The water collected behind the dam is ugly and not native Florida and will not improve in value to fish, recreation and water collection in the future.	Springs recovery and clean-up (fewer septic tanks, chemical protections) are slowed/ stopped because there is more water to disguise the damage. Unrestricted growth. Unrestricted mining that pollutes the waterways.	increase water flow through the dam, natural connection between the "collected waters" and the waterways so there is some natural balance of water, native plants and fish, etc.	This has been studied to death. A few people with lots of money want no change because no change benefits them. The majority of people who live in the area and naturalists have wanted the change for years-decades.

10/21/2021 9:47	Orange		No	No					I would like to see a permanent breach of the dam to begin the restoration of the tributary ecosystem that once existed in the Ocklawaha river system.	7,500 acres of the lower Ocklawaha's historic forested floodplain, 20 freshwater springs, and many miles of natural river channel that were drowned as a result of dam construction would be restored. Thousands of acres of submerged aquatic plant communities would be able to regenerate in the restored river channel, and in the re-emerged spring run streams that drained into the Ocklawaha historically. 8,000 acres of stressed floodplain wetland located downstream of the dam would be enhanced. Imperilled plant species like the endangered Star Anise and threatened Harbenglitia, which are native to the banks of this region's spring run streams, could expand their range into the restored spring systems. Draining the Rodman Reservoir would remove the single greatest barrier to plant and animal movement along the Ocala to Osceola (O2O) Wildlife Corridor by replacing the open water expanse of the Reservoir with a restored floodplain forest, to the benefit of many listed plant species native to the region including the Federally listed Clasping Warea and Scrub Buckwheat. Three river systems - the Ocklawaha, Silver and St. Johns - would experience significant environmental improvement from restoration. Preserving, conserving and restoring the native plants and native plant communities of Florida I Manatees would regain open access to the warm water habitats of the Ocklawaha and Silver Springs. I Migratory fish including the Striped Bass, American shad, American eel, and the critically Endangered Atlantic Sturgeon and Shortnose Sturgeon would once again have open access to the Ocklawaha system if the dam is breached. I Recreational sport fishing would be enhanced by allowing the Florida strain of the Striped Bass to reclaim what used to be its primary spawning habitat - the Ocklawaha. I At least 150 million gallons a day of additional natural flow, and potentially much more, would be restored to the Lower St. Johns River, improving water quality and increasing resiliency of the entire St Johns/Ocklawaha River system by impeding the salt water intrusion resulting from sea level rise. I An estimated $14 Million in dam repairs, measured in 2006 dollars, would be saved by avoiding repairs to a dam that has exceeded its life expectancy and never fulfilled the purpose for its construction. I The large expenditures required for herbicide treatments to control the growth of invasive aquatic weeds and to conduct other ongoing maintenance needs, inclu	Residents and business owners in areas immediately downstream of the dam would continue to be under threat in the event of failure of a dam that has never, and will never, satisfy the purpose of its construction.	No. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration.	
10/21/2021 9:48	Seminole		No	No					Clean up the river.	Manatees are dying at an incredible rate.	Loss of manatees.	I would have to see what alternatives are offered.	
10/21/2021 9:49	Orange		No	No					Restoration of the Ocklawaha River as outlined in the USFS environmental impact statement	Partial restoration is intended to restore river hydrology and floodplain function to near preconstruction conditions through breaching the dam, with limited removal and/or alteration of structures and alteration of the topography. This alternative will retrieve National Forest System lands at the lowest cost while restoring river and floodplain hydrology. Additionally, FDEP's Marjorie Harris Carr Cross Florida Greenway State Recreation and Conservation Plan is updated and continues to say "The Governor and Cabinet, sitting as the Board of Trustees of the Internal Improvement Trust Fund, have an established policy that the Ocklawaha River should be "partially restored" with the FDEP as the lead agency. However, the Legislature has not appropriated funds for this purpose. If funds are made available and permits are issued, it is the intent of the FDEP to undertake this restoration."	The permit has lapsed, and the state of Florida is operating structures on USFS lands without a permit. Since 1968, the dam has closed off flow of the Ocklawaha River, flooded more than 7,500 acres of forested wetlands, 16 miles of river and at least 20 springs, and blocked upstream migration of many fish and aquatic species impacting the ecosystem from the St. Johns River to Silver Springs and beyond. Additionally, it prevents boats from navigating the entire river system. It was a bad idea whose time needs to come to an end.	No	
10/21/2021 9:50	Palm Beach		No	Yes		More than 5 times	Hunting Wildlife viewing Other: Camping, hiking and off-roading (legally accessible NF roads/historic jeep trails, etc.). Note that these activities supported numerous local businesses over the past 20 years I've been visiting...	Decommission and restore river/springs. Include efforts to address concerns with loss of lake fishing habitat, where practical.	Roadman reservoir serves no real function aside from supporting a small lake/fishing economy, which while definitely important, can be mitigated through a well thought out economic development strategy that would help to transition existing businesses, residents who live in and/or frequent the area, from a very limited use to broader tourism options (retained fishing, expanded river use [kayaking/canoeing/scenic trips], spring access and trails, etc. etc.) as the river/springs are restored. Understandably, the transition would span several years, AND would need to contemplate grant funding, or other resources to help those who can document financial hardship (business loss)...	Simply put, the Rodman Reservoir was a mistake, the loss of which destroyed significant environmental habitat with zero mitigation. There is zero reason to justify not working towards decommissioning.	Reduce lake levels to allow for retention of "some" semblance of lake area, with funding for locks to allow for partial restoration of river (and any springs that may be within areas that become exposed).	
10/21/2021 9:52	Leon		No	Yes			1 time	Wildlife viewing Canoeing / kayaking	Remove the dam and get back to natural Florida				
10/21/2021 9:54	Putnam		No	Yes			More than 5 times	Wildlife viewing	I would like to see the dam removed.	Environmental impact of the dam.		Other environmental remediation of the dam and its surrounding impact on the Ocklawaha watershed.	
10/21/2021 9:56	Volusia		No	No					All dam's that restrict water flow only for the purpose of electric generation should be dismantled in lieu of greener and less ecologically devastating power generation facilities.	Dam's create an artificial eco-systems that disrupt the natural wildlife's habitats and migration.	That the delay of the restoration of the natural flow of water will continue to degrade the habitat for the area.	no	
10/21/2021 9:57	Citrus		No	Yes	1 time	2-5 times	More than 5 times	Boating	Save the Manatees	Endangered Manatees	Sad. No plans for Manatees to	Nope.	
10/21/2021 10:00	Lake		No	No					Breach the Rodman/Kirkpatrick dam!!!	Manatees will gain access to the river, exposing 20+ springs!	Hundreds of manatees could lose access to warm water during the cold months	No. this breach is a long time coming.	
10/21/2021 10:04	Orange		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. A storm event triggers a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canops, and recreation benefits. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Save the manatees, restore our springs. As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. This exciting restoration will improve water quality and flow by generating an additional 150 million gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration. Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 65% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.
10/21/2021 10:05	Volusia		No	No					Removal	News reports	Expense to maintain	Partial removal	
10/21/2021 10:07	Outside of state / other	Pennsylvania	No	No									
10/21/2021 10:10	Alachua		No	Yes			1 time	Wildlife viewing	remove the dam and restoring the free-flowing Ocklawaha River	Proposals to restore the river have been proposed for over 30 years and have met with resistance from politicians and fisherman. The will of the people have requested that these old measures of restricting water flow be removed so that Florida can again experience the true habitat restoration.	The pressure for development will continue to hinder any attempts to sustain Floridas unique natural ecosystems.		
10/21/2021 10:10	Duval		No	Yes			1 time	Other: sightseeing	Remove it.	Health of the St. Johns River	Continued degradation of the St. Johns River	No	
10/21/2021 10:14	Marion		No	Yes			1 time		DEMOLISH IT LET THE WATER GO FREE	Pollution in all of our waterways. MANATEES dying saalife dying, invasive species proliferating NESTLE stealing water from GINNIE SPRINGS.	FLORIDA DROUGHT AND DEVASTATION	NONE get rid of the dams that were built for a canal that never happened. We are running out of time.	We are running out of time.
10/21/2021 10:14	Pinellas		No	No					The whole river system should be opened up as it was designed in nature to preserve our natural resources and wildlife	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.	death of more manatees, loss of habitat for Floridas wildlife		
10/21/2021 10:16	Sarasota		No	No					Allow the free/natural flow of the river.	The vital need for water available, clean, to ensure water supply for generations.	Poor water supply, unclean contaminated and unusable water.	Not really.	
10/21/2021 10:16	Duval		No	Yes			1 time		REMOVED	Love of Oklawaha		No	
10/21/2021 10:19	Putnam		No	No					I'd like to see it removed amd water flow restored to the ecosystem.	Manatees need winter homes and forage. Ecological balance can be restored if the dam Comes down. Also, there are funds available amd legislative authority from 20+ years ago. Why hasn't it come down yet?	We need to reverse the mistake that cross florida canal created. There is. I reason to wait longer to restore the natural ha it at. Otherwise the effects of climate change can create u known Consequences.	No. I can't see a compromise. From what I understand, it's only the sports fishermen who want the dam. But the rest of us want a healthy ecosystem. Why do the anglers get to have their way decade after decade? We have an opportunity here. Let's take it.	
10/21/2021 10:19	Lee		Yes	Yes			1 time	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs.	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canops, and recreation benefits.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 65% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.
10/21/2021 10:19	Marion		No	No					DEMOLISH THEM THEY ARE USELESS WE NEED THE FLOW OF WATER	Manatee deaths, ginnie springs water taken by Nestle,	The river would be more polluted and more invasive species will destroy our waterways The dams were built for canals THAT NEVER were built.	NONE SAVE OUR WATER	
10/21/2021 10:22	Alachua		No	Yes	1 time		1 time	Canoeing / kayaking	Remove it.	This dam is an impediment to the health of the Ocklawaha River and all of its associated ecological communities	Continued ecological blight and a negative impact on nature tourism	Long-term, no.	I hope you all what I will be an overwhelming request for its removal by the people of Florida.
10/21/2021 10:24	Orange		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam to benefit our economy, water quality, and wildlife throughout the Great Florida Riverway	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	Thousands of acres of forests are not restored that could provide improved wildlife habitat, natural flood protection, cooling canops, and recreation benefits.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/21/2021 10:26	Lake		No	Yes	1 time			Canoeing / kayaking Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/21/2021 10:27	Alachua		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Wildlife viewing Other: Family gatherings and visits with our sons boyscout troop.	I would like to see it maintained as a recreation spot for visitors for fishing, boating and canoeing, hiking and exploring and enjoying the wildlife. We have been going there for these things for the past 25 years and raised our Eagle Scout son out there.	We have seen many wild life cratures in the wild there. Eagles, manatee, black bears, foxes, racoons, deer, a Florida Panther, hawks, turkeys, etc. We raised our son and took his scout troop there for years to learn valuable skills and appreciation for Florida wildlife. He became an Eagle Scout. Our family has lived in Florida since the 1850s, this is one of the last places we can enjoy and learn about our Natural heritage in Florida.	That this place would be lost and missing in the experience and heritage of our famy. No more holiday gatherings or wildlife viewing experiences.	No there is not. We were married out there at the dam. We have many memories and value its current state to continue the tradition of teaching our children and grandchildren about the natural world.	My family and I are Native Americans who came to pioneer Florida in the 1850s. We have seen to much change and destruction of the natural habitat of Florida. Destroying or changing its present state would take away a last place for us to gather and enjoy our heritage!
10/21/2021 10:28	Duval		No	Yes			1 time	Fishing	I would like to see it revert back to letting the Ocklawaha flow back into the St Johns River	The salinity of the St Johns	MORE ALGAE BLOOM AND SALINITY		
10/21/2021 10:28	Broward		No	Yes			1 time	Canoeing / kayaking	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Hundreds of imperiled manatees will gain essential warm water winter springs habitat	Hundreds of manatees lose the opportunity to access essential warm water winter habitat.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/21/2021 10:30	Citrus		No	No					Breaching of the dam.	Spillway it would benefit a number of rivers and streams including the St. Johns and it would help preserve aquatic wildlife. East coast manatees need all the help they can get right now	Continued devastating loss of manatee population.	Not unless manatees and fish were allowed to travel freely on the Ocklawaha.	
10/21/2021 10:30	Duval		No	Yes			1 time	Fishing	I would like to see it removed to allow the natural flow of the river. The dead trees are a hazard to boating and the springs need to be restored.	Unnecessary change in natural flow of river that impacts water quality of the SJWD. The river is beautiful above the dam but the reservoir is ugly and unnatural.	Continued unnecessary deterioration of water quality in Florida.	no	Very good survey. It requires responders to give a legitimate reason why they want action taken. I volunteer at Crystal River Wildlife Refuge, and my primary concern is protection of manatees.
10/21/2021 10:30	Sumter		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	Remove the dam and allow restoration of the river to take place. When reservoir is partially drained for drawdowns you can see the old river channel emerge. Natural restoration of the floodplain first will begin immediately with removal of the dam. Retaining the dam will be very costly as it will likely have to be rebuilt to current USACE standards for earthen dam structures. Makes no sense to retain this dam and reservoir.	USACE earthen dam standards and simply watching the old channel emerge when reserv our is drawn down.	Continuing environmental loss as reservoir clogs with aquatic weeds and high public cost of maintaining/ bringing earthen dam up to USACE standards.	A first step would be to lower the reservoir to lowest possible level by removing lower sill of the concrete gate structure.	It was an ill conceived idea 50 yrs ago and needs to be reversed. Florida's economy depends on tourism and we need to keep it beautiful and natural.
10/21/2021 10:30	Polk		Yes	Yes		2-5 times		Fishing Fishing (shoreline/structure) Canoeing / kayaking Wildlife viewing	Opened up in specifically chosen sites.	Research on dam effects on fish and wildlife	Loss of habitat for Manatees		Please make a long overdue decision to remove dam/reservoir and restore the Ocklawaha River.
10/21/2021 10:32	Lake		No	Yes			1 time	Wildlife viewing	Please breach the dam so that we can restore our wildlife corridors.	Restoration of critical rivers and springs. Now, is the time to fix this problem.	Declining water quality and interference with the natural order. Since the dam does not provide electricity or flood control taxpayer dollars are being wasted.		
10/21/2021 10:34	St Johns		No	Yes			1 time	Wildlife viewing	Return to its natural flow	Natural flow of water and animal migration	Same ol, same ol not looking forward state	Not sure	
10/21/2021 10:35	Charlotte		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Wildlife viewing	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	Florida has suffered decades of environmental stress, and 2021 is no different. As one of Florida's most treasured asset, the Florida Manatee, 2021 has been the worst year on record for these gentle creatures. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/21/2021 10:36	Marion		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway.
10/21/2021 10:36	Orange		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	There are so many, but restoring the flow of the Ocklawaha helps manatees, springs and rivers are healthier and the restoration creates more recreational opportunities.	We miss the best opportunity to do this. State and federal funds are available, public interest is high and environmental needs are critical.	No.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.

10/21/2021 10:38	Pasco		No	No				Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. 10/21/2021 10:39	Marion		No	Yes			2-5 times						
10/21/2021 10:43	Alachua		No	Yes		1 time	2-5 times	Fishing Boating	Remove the dam and restore the natural flow of the river	The renewal of the natural springs and the ability for the river to flow naturally			
10/21/2021 10:45	Nassau		No	No					River restoration	People and wildlife will benefit			
10/21/2021 10:46	Duval		No	Yes			1 time	Other	Being removed	Health of the St. John's river			
10/21/2021 10:46	Leon		No	Yes	2-5 times	1 time	2-5 times	Wildlife viewing Other: Area hiking, cycling and camping.	I would like to see the Kirkpatrick dam removed to allow the Ocklawaha river restored to its natural state. the dam was a mistake in the first place. It should have been removed years ago.	The springs of Florida are known worldwide. It is also common knowledge that our springs are under stress. The Rodman Reservoir suppresses the natural flow of springs in the area including world famous Silver Springs. The water obscures and supresses many springs that flow into the Ocklawaha. Wildlife would move more freely on and in the Ocklawaha as it has for millennia, restoring manatee access to the Silver River/Springs and other important habitats. Future maintenance of the dam does not make economic sense considering our already crumbling and neglected infrastructure.	Continued degradation of Florida's springs system and water quality. Missed opportunity for increased manatee access to warm water habitat. Increased algae blooms and weed infestations. Continued waste of funds on an environmental mistake made many years ago.	No. The Kirkpatrick dam shouldn't have been built in the first place. It should have been removed in 1971 when the Barge Canal was scrapped.	The best time to remove the Kirkpatrick Dam was 1973. The next best time is today.
10/21/2021 10:52	Alachua		No	Yes		2-5 times		Canoeing / Kayaking Wildlife viewing Other: Hiking					
10/21/2021 10:52	Alachua		No	Yes	2-5 times	More than 5 times		Fishing	Have it removed and connect the rivers as God created them.	The barge canal fiasco has been abandoned, time to try and repair the damage it has caused.	Continued damage to fish, manatees, and springs	Remove the flood gates and let the river flow.	
10/21/2021 10:53	St Johns		No	Yes		1 time		Wildlife viewing	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide unimbibed passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. 10/21/2021 10:54	Duval		No	Yes			1 time	Wildlife viewing	I would like them removed	The increase flow of fresh water to the St. Johns river will increase the water quality in Clay, St. Johns and Duval counties.	Continued degradation of river water quality	Remove the dam & lock gates	
10/21/2021 10:54	Alachua		No	Yes		2-5 times		Boating Wildlife viewing	The entire system must be returned to its natural condition. Starting 65 years ago that area was our favorite recreation/camping spot in Florida. My children long for it to be restored.	I sell real estate for a living and have seen the natural environment become more and more important to folks coming to the University of Florida or just retiring to our area.	Without water there will be what would become a dead zone and not support human activity or the life of our manatees and other precious wild life.	No	
10/21/2021 10:54	Lake		No	Yes		2-5 times	More than 5 times	Canoeing / Kayaking Boating Wildlife viewing	I would like to see it removed, allowing the river to return to its natural state	The millions of dollars wasted on maintaining and repairing the dam. The fact it shouldn't be there, as the cross Florida barge canal project was scrapped decades ago. The restriction of access upriver to wildlife, including manatees. And the abundance of local alternatives for local anglers, so they and their businesses can continue to be successful	Wasted tax payer money indefinitely, environmental impacts of chemical sprays intended for vegetation control, and continued limitation on areas manatees can utilize, especially in light of development growth projected in the future.	No, the dam must be breached. However this could be done in a planned, stepped fashion, to reduce impact on those who say they will be negatively effective to allow them time to adjust. My preference would be the immediate removal, return to the natural course, and cessation of wasted millions of dollars	Removal will enhance economic opportunities in the area and the local economy will be supported by those wanting the dam. Those worried will be rewarded with increased interest in the area, and more concentrated areas for catching game fish. It will be a win-win
10/21/2021 10:56	Clay		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing	Keep the Dam, I've been fishing Rodman for 20 year, why destroy something that been there so long??	Fishing	Very disappointed in the state	No	
10/21/2021 10:57	Duval		No	Yes			1 time		Remove the dam	Restoration of springs and flow into st johns	What a lost opportunity	No	
10/21/2021 10:58	Duval		No	Yes			1 time		Please remove the dam and restore the river	The health of the St. Johns river	Increased flooding from dredging St john's and freshwater needed to improve health of St. Johns.	no	
10/21/2021 10:58	Duval		No	Yes		1 time		Wildlife viewing	Restore the Ocklawaha River and protect the North Florida water system, including the St. Johns River.	Removing the Ocklawaha River was the wrong. We need to restore the natural life of the river and the land around and create a water system that supports the ecology that can survive.	We may loose a great deal of wild life because the salinity of our rivers is increasing due to dredging. We need the free flow of the river to reestablish a viable ecology.	No. That dam has been around 50 years,it's a drain on ecology and our economy. It needs to go.	I am concerned about the homes that are in danger if the dam breaks. After 50 years, the dam is getting weak and could go with a hurricane or even a big rain. We need to help those people protect their homes.
10/21/2021 10:59	Seminole		No	Yes			1 time	Other: I had heard about it but never seen it before Canoeing / Kayaking Boating Wildlife viewing	Remove dam and restore river and floodplain	Overall net environmental benefit to watershed; restores natural balance	If restoration is not accomplished now then when will restoration ever be achieved... long term operation and maintenance of existing system is pointless... public resources could be better deployed to enhance public's access and enjoyment of river and surrounding land and water resources	Better maintenance of system and improve navigation; more public access	Good luck
10/21/2021 11:00	Duval		No	Yes			1 time		Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam to reunite the natural connection of Silver Springs, the Ocklawaha and the St. Johns River.	The science supports restoration. Studies by federal and state agencies have clearly demonstrated that restoration of a free-flowing, connected system is cost-effective and will provide significant ecological benefits to the St. Johns, Ocklawaha and Silver Rivers as well as Silver Springs. More information to consider: Three rivers, Ocklawaha, Silver and St. Johns, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish migration patterns and essential manatee habitat are reestablished 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of forested floodplain wetlands within the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs	We miss a historic opportunity to stop the ongoing ecological degradation caused by the dam and finally reunite the natural flow of these rivers. Breaching the dam would restore the natural flow of 150 mgd of fresh water, improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. A free-flowing Ocklawaha will reestablish 15,000 acres of forested wetlands and fortify downstream submerged grasses from Welaka to Jacksonville in the St. Johns River that are critical to river health and fish habitat. More information to consider: We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs, and invasive fish like the Blue Tilapia increase. Water quality declines, further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. The 300-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam and restoring the Ocklawaha are 50+ years overdue. Dam safety issues and improved water quality, wildlife habitat, and recreational opportunities can't be ignored or delayed any longer.	Second Paragraph Options by Topic: OVERVIEW: This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration. MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. WATER QUALITY: This exciting restoration will improve water quality and flow by generating an additional 150 million+ gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
10/21/2021 11:01	Duval		No	Yes		1 time		Wildlife viewing	Remove the dam and let the water flow naturally.	The dam had been around 50+ years. It's weak. It could fail at any time.	Our North Florida depends on a strong river and a thriving natural water system.	No.	Thank you for considering my thoughts.
10/21/2021 11:03	St Johns		No	Yes			1 time	Boating Wildlife viewing	I would like to see the dam removed and natural river flow restored	From my aquatic ecology training (MS) I am aware that dams are an unnatural barrier that dramatically alters the ecology from riverine to lacustrine, destroys wetlands, degraded water quality and prevents fish (and manatees in this case) from migrating to their spawning, nursery and/or overwintering habitats.	The biggest tributary to Florida's largest river will remain cut off from the system and unable to contribute to the resilience, health and productivity of that river (St. Johns).	Not really. Drawing down the reservoir to river level and keeping it there helps with some of the problems, but why keep paying to maintain the dam in that case?	The dam was built for a purpose that never came to fruition (cross-FL canal) that presumably would have justified the many impacts it caused. It should have been taken down immediately but was not due to an expectation of great socio-economic benefits that never materialized. Studies have shown that a restored natural river with appropriate access can be dramatically more beneficial locally as well as to the State of Florida than continuing to pay to maintain the current degraded system.
10/21/2021 11:04	Duval		No	No					Demolish dam and restore river flow and flooded zone.	St. John's River pollution and animal habitat destruction.	Eventual death of River life.	No.	
10/21/2021 11:06	Miami-Dade		No	Yes			2-5 times	Wildlife viewing	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide unimbibed passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to $37 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/21/2021 11:09	Alachua		No	Yes			1 time	Canoeing / Kayaking	I support partial restoration of the Ocklawaha River by breaching the Dam at the natural river channel, west of the main Rodman Dam structure.	Partial restoration is supported by the Florida Department of Environmental Protection's Greenway Plan and is supported by almost all scientific assessments of the Ocklawaha Restoration Project, all agency recommendations, two environmental impact statements, and conservation organizations across the state	Diversification of indigenous species in the Ocklawaha River system is my biggest concern. Habitat loss is increasing due to many factors including human encroachment, population increase, and climate change. Partial restoration of the Ocklawaha River will increase wildlife habitat in North Florida and allow greater species diversity.	No. This is already a compromise.	
10/21/2021 11:09	Clay		No	Yes		2-5 times		Canoeing / Kayaking Other: Science, sampling	Removal and restoration of the of the river channel and wetlands.	The freshwater inputs to the St. Johns River are critical to mitigate rising sea levels and saline upgradient creep due to channelization and deepening at the mouth of the St. Johns River. We need to stop losing a large amount of water through evaporation behind the dam.	the wetlands, and middle and lower St. Johns river basins will suffer from salt stress, and lack of river inputs from the tributaries.	Breaching without total removal. Otherwise, not really.	
10/21/2021 11:10	St Johns		No	No					I would like to see it breached and removed. And the Ocklawaha run free!	The present condition of the water system is shameful. The damage to the ecosystem, the river and wildlife is disgusting. The Cross Florida Barge Canal project was halted years ago. The fact that the Dam still exhausts is a failure in government leadership and policy. Florida IS it's beautiful waterways and natural habitats. Greed, business and money have ruined Florida most important assets! Bring old Florida beauty back to our state. Protect our water sources. Protect our fish and wildlife. Most importantly our beloved Manatees and their habitats. Make Silver Springs the beautiful place it once was. Act NOW, before it's too late. Thank you from a life long Florida resident who loves this state.	Continuing to destroy the natural beauty of Florida and it's waterways!	No. Needs to be done in full now.	Florida is our waterways! Restore and protect them now before it's too late.
10/21/2021 11:11	Duval		No	Yes			1 time	Fishing	Remove the damm	Releasing the water into the river.		No	
10/21/2021 11:14	Seminole		No	No					Breach of the dam to restore the natural habitat.	Information concerning the fragility and uniqueness of Florida's ecosystem	More degradation and loss to Florida	No	
10/21/2021 11:14	Duval		No	No					Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam to reunite the natural connection of Silver Springs, the Ocklawaha and the St. Johns River.	The science supports restoration. Studies by federal and state agencies have clearly demonstrated that restoration of a free-flowing, connected system is cost-effective and will provide significant ecological benefits to the St. Johns, Ocklawaha and Silver Rivers as well as Silver Springs.	We miss a historic opportunity to stop the ongoing ecological degradation caused by the dam and finally reunite the natural flow of these rivers. Breaching the dam would restore the natural flow of 150 mgd of fresh water, improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. A free-flowing Ocklawaha will reestablish 15,000 acres of forested wetlands and fortify downstream submerged grasses from Welaka to Jacksonville in the St. Johns River that are critical to river health and fish habitat.	Breaching the dam and restoring the Ocklawaha are 50+ years overdue. Dam safety issues and improved water quality, wildlife habitat, and recreational opportunities can't be ignored or delayed any longer.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.
10/21/2021 11:15	Hernando		No	Yes	1 time	2-5 times	More than 5 times	Wildlife viewing	Preserve it	Resident	Wildlife will die		
10/21/2021 11:16	Lake		No	Yes			More than 5 times	Boating Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored. 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier	The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	** I am familiar with the issues. Also, I read and recommend a fascinating book titled "Ditch of Dreams", that was very influential to me.
10/21/2021 11:16	Seminole		No	Yes		2-5 times		Fishing Canoeing / Kayaking	I am an avid kayaker and fisherman. I would like to see the Rodman Reservoir/Kirkpatrick Dam removed, the Ocklawaha river restored and the surrounding land to be protected once it remerges.	The reservoir and dam are mistakes from decades ago. The original purpose for both was quickly deemed pointless.	We are destroying a river and missing out on restoring an incredible and unique ecosystem.	No. Removing the dam and restoring the natural flow is the only goal.	It makes zero sense that we are keeping a relic from a failed idea decades ago. For what? Bass fishing? I am a huge fisherman of all species. Bass populations will improve along the river and natural fish migrations will return. As a fisherman, I am more excited about the prospect of catching a variety of fish including bass as well as being surrounded by a pristine environment. Can you imagine being able to paddle from Lake Harris to the Atlantic Ocean? There is no telling what we could catch. Remove the dam. Restore the river. Thank you for your time.
10/21/2021 11:21	Marion		No	No					Take it down and free the river.	The quality of the water in the Silver River and the lack of native fish that were there when I was a child.	The ultimate destruction of the priceless Ocklawaha and Silver Rivers.	None.	Please do not spend money to repair a dam that does NOTHING. Please restore this beautiful river to its natural state. Fishermen will ultimately enjoy more than they do with the reservoir. I have seen this, as did my father, his father, and his father on this beautiful river.
10/21/2021 11:21	Duval		No	No					remove them	nature	nature is degraded	no	
10/21/2021 11:21	Duval		No	Yes			1 time	Wildlife viewing	Ocklawaha River restoration	information from the Free the Ocklawaha River Coalition - For Everyone, and 1000 Friends of Florida	continued degradation of the Ocklawaha and St Johns river systems	yes, partial restoration if it includes removal of the dam	
10/21/2021 11:22	Alachua		No	No					I would like to see the Ocklawaha River restored by getting rid of the Rodman/Kirkpatrick Dam	The dam is past its life expectancy and it is not good for the ecosystem	I don't want to see taxpayer dollars used to repair a dam that is bad for the environment. My understanding is that the dam is not safe and a storm could trigger a dam failure so I want to see the natural flow of water restored instead of repairing it.	No	Florida's rivers are the best part of Florida. As a long-time Florida resident and an avid kayaker, I care deeply about the environment and Florida's wildlife. Please restore these rivers!
10/21/2021 11:22	Miami-Dade		No	Yes				Other: General nature and scenery viewing and experience	Remove the dam, restore the free flowing Ocklawaha		The continued loss of habitat that supports a large variety of species, more than the reservoir does.		All over the state we can relate to this loss of wild river. Even the Everglades - viewed as a river or rivers - is one we can look to. The longer the Rodman Dam is in place, the harder it will be to restore or to mitigate the damage from the loss of the river. If the river is never restored, loss is permanent and will continue to increase. Fishing in a lake created artificially is not a god-given right or essential to our environment.
10/21/2021 11:23	Putnam		No	Yes		More than 5 times	More than 5 times	Fishing Wildlife viewing	Maintain the locks & dam. Reinstate the campground at Kenwood Landing. Continue maintenance at all boat launch areas and add improvements . Eventually add more areas to expand camping, hiking, boating, kayaking and nature viewing areas .	Besides Rodman being one of the greatest recreational assets for our great state for residents and non residents alike I believe the greatest asset is the water retained in the reservoir. Future water demands could be devastating without this resource .	Loss of recreational use, income for to many people and businesses to mention here . Valuable water source if needed. But the biggest loss would be losing a unique environment and the thriving wildlife that exists there now.	There will be no compromising on my behalf !!! The reservoir should be kept as is and maintained and further improvements in the future .	It would be a sad day in many lifetimes to see such an ecological paradise destroyed by those who want to restore a river that they and many generations after will never see . I would tell those that would destroy Rodman to spend a day on the lake and it's tributaries look long and hard look at the beauty that has been created from what they believed was an environmental mistake .
10/21/2021 11:23	Duval		No	Yes			1 time	Wildlife viewing	The Ocklawha River needs to be restored to its natural flow	Ecological/environmental research and concerns	Further degredation of Florida's waterways and the ensuing threats to life and eco systems.	...like what?	
10/21/2021 11:23	St Johns		No	No					I want to see free flowing clear waters to recover that ecosystem.	The reports by conservation groups I trust.	Further manatee and other species losses.	No	
10/21/2021 11:23	Alachua		No	Yes		1 time		Other: To learn about the devastation it has caused to our Florida springs	Remove the dam and reservoir and restore the natural flow of the springs and the Silver and St. Johns Rivers	Research studies of the damage that has been caused and the significant value to be achieved by restoration, as well as the continual support demonstrated by the voters of Florida for projects that support the restoration and preservation of our state's natural waterways and natural areas.	Continued and irreversible deterioration of the St. Johns River system and the Floridan aquifer, including permanent stoppage of the 20+ springs which are responsible for "flushing" the riverways and upon which the ecosystems of our state depend for survival.	No	We currently have such a scenario (a periodic drawdown of the reservoir) that was intended to allow the springs to perform the natural flushing. This has proved to be ineffective due to many factors, including increased human intrusion into the system, climate change and other factors. It is time for the last remnant of the failed cross-Florida barge canal boondoggle to be removed, and our wonderful and unique Riverways restored.
10/21/2021 11:25	Alachua		No	Yes		1 time		Boating	Remove Kirkpatrick Dam and restore the Ocklawaha to its natural state. Additional recreational sites could be developed along the river's edge to increase use of the area and benefit local economies. Reestablishing the wildlife corridor is also important, as our native wildlife has seen much of its habitat destroyed. Additionally, when water levels are at their natural state, many springs come back to life on the river. They help improve water quality in the river, which would also encourage additional fishers and recreational opportunities on the river	The dam itself is not in great shape and repairs to the dam are expensive and ongoing. If it fails, downstream properties/houses/businesses could be flooded. Constant management is required to keep unwanted vegetation at bay in the reservoir, including managing hydrilla. The dam has ruined a large portion of the Ocklawaha River by keeping it flooded, ruining the area for fishers and recreation. Removing the dam would eliminate these issues.	That the dam would fail; properties would be flooded and possible loss of life could occur.	Breaching the dam, but retaining the levy could be a partial solution. That could still allow for some bank fishing from the levy.	On my last visit to the Rodman Reservoir/Kirkpatrick Dam, there were no boats visible in the reservoir. Having the huge number of submerged stumps and remnant dead trees still standing in the water makes navigating the reservoir challenging. Restoring it to its natural state would improve the visual appeal, and revive interest in the Ocklawaha River itself, which could be of economic benefit to those living on the river and to local businesses.
10/21/2021 11:25	Duval		No	No					To feed St Johns river, and its tributaries, take down the dam. St Johns River needs more water to flush out pollution. Also area springs will be replenished.	Scientific studies and what the river WAS before the dam.	Death of the St Johns River	Partial removal of the dam	Please think of the world we are leaving our children and grandchildren
10/21/2021 11:26	Outside of state / other	Pittsboro, NC	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier.	We will miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide unimbibed passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to $37 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/21/2021 11:27	Seminole		No	Yes		1 time	2-5 times		I would like to see the dams breached to restore historic flow and wildlife movement.		Continued degradation of fish Florida natural world.	No

10/21/2021 12:06	Duval		No	No					Breach the dam	The environmental advantages to the Sjllwar and the Ocklawaha.	Continued environmental damage	A full permanent drawdown would be an improvement over the status quo.	
10/21/2021 12:07	Alachua		No	No					They should be removed so the Ocklawaha River can be restored to its natural state.	Returning the rivers, springs, and ecosystems to their natural state	Loss of an opportunity to make things right plus waste of taxpayers' money to repair aging dam	No. The dam should never have been built to begin with.	
10/21/2021 12:08	Leon		No	Yes	1 time	1 time	2-5 times	Canoeing / kayaking Wildlife viewing Other: Hiking, cycling and camping.	The Ocklawaha River restored to its natural state by breaching the Kirkpatrick Dam. Thee dam is harmful to the economy, water quality, and wildlife throughout the region. The dam should not have been built in the first place, and should have been removed in 1971 when the construction of the Florida Barge Canal was halted.	The Ocklawaha, Silver and St. Johns Rivers and 50 springs would be restored along with 15,000+ acres of the Florida Wildlife Corridor for people and wildlife.	State and federal funds are currently available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. We should not miss this opportunity to restore the Ocklawaha.	No. The dam should not have been built to begin with but since it was, it should have been removed 1n 1971, 50 years ago, when the Cross Florida Barge Canal was scrapped. The time to remove it is now.	Do it now before there is further damage to Florida's springs, water quality and general ecosystem.
10/21/2021 12:10	Marion		No	No						DEMOLISH THEM ASAP WE NEED THE FLOWING WATER	Florida would have massive die offs of natural species and we will RUN OUT OF WATER	NONE	SJRWMD has NEVER done anything to save our water. They are pawns for NESTLE. I do not trust them to save our waterways. In my opinion, they are beholden to Nestle and NOT the Florida residents.
10/21/2021 12:15	Hillsborough		No	No					I believe the Rodman/Kirkpatrick Dam should be breached to enable the free flow of the Ocklawaha River.	The ability to help restore the native ecosystem while also avoiding the taxpayer expense of maintaining reservoir and dam.	The continued negative impact on the native ecosystem and the taxpayers	I am open to any suggestions that eliminare the maintenance expenses and restore the water flow.	
10/21/2021 12:16	Pinellas		No	Yes			2-5 times	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Doing this will enhance our quality of life, quality of water, protect our wildlife. The Rodman/Kirkpatrick Dam degrades Florida inherent beauty which is a increasing drag on our tourism economy	There are many positive benefits. Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 50 best springs and Silver Springs ecosystem are restored Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers $4-14 Million in dam repairs saved on a dam past its life expectancy Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. $57 million in potential flood damages avoided to downstream property owners	We miss the best opportunity to improve our situation. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. A storm event triggers a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait. Half measures will not work.	Aside from protecting Manatees and other wildlife, This restoration will improve water quality and flow. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. I was not able to go to the beach this summer because of red tide. This effects local tourism and the very important contribution it makes to our local economy in a negative way. Every effort we make to improve the environment and protect wildlife pays us back directly by improving ecotourism. It's the smart thing to do and it's the right thing to do.
10/21/2021 11:50	Duval		No	No					As I have heard described, the plan to breach the dam (rather then a costly repair), restore the natural waterway, enhance/protect not only that area but the St.John's and Silver Springs, while providing for the recreation aspect as well. Respect and enhance Nature.	I have heard about Rodman Dam issues for most of my life. Problems in structure and nature only get worse. Protect Nature…for everyone.	Further damage to that area, Silver Springs and St.Johns impact. We have ongoing issues with the St.Johns and decades ago worked to improve the river and clean up the filth and dangerous flow of damaging waster into the river. Here we are again.	Any way to return natural flow of waters and protect the environment is progress and some protection.	Humans are great at polluting and exploiting nature… for profit or short term views of long term damage. Nature does best if allowed to be, flow, thrive as created. We all need to be better Stewards of these gifts.
10/21/2021 11:52	Marion		No	Yes	1 time	1 time	More than 5 times	Fishing Canoeing / kayaking Boating Wildlife viewing	Please take it down completely. It serves no purpose and damages the eco system.	The reservoir covers many springs and blocks the flow of clean water, manatees and other fish.	The Damn repairs will cost millions and the dam might fail anyway	No,	I am a bass fisherman. Bass pros who do not support this are misinformed. The bass will still be there and be healthier too.
10/21/2021 11:55	St Johns		No	No					Breach the dam and restore thenatural flow of the Oklawaha River.	Latest reports on the toxic algae blooms in upstream portion of the river, and the general decline of water grasses and habitat for important flora and fauna in the river's ecological community indicate a dire need for a source of freshwater to offset the irresponsible management of the river by communities up and down the river.	The St. Johns River will continue to degrade faster.	No.	Breaching this dam and restoring the main tributary (Ocklawaha River) to the St. Johns River should have happened years ago. In addition, restrictions on fertilizers (agricultural and residential) should be increased and the horrendous practice of allowing municipal sludge to be dumped in the river should be stopped. Sadly, Florida (including this agency) has never met an environmental regulation or problem that it was more than happy to ignore/
10/21/2021 11:56	Alachua		No	Yes			More than 5 times	Other: Video/Photography	Restoration	The original river level-sustained wildlife tens of thousands of years before it was dammed.	The levee and its lock are getting older and will soon require extensive repairs.	If the river were to overflow because of a shift in storm water it could breech the dam.	For more than 50 years the dam was never utilized for its intended purpose. If the project was completed it would be a very different situation.
10/21/2021 11:56	Marion		No	Yes		More than 5 times		Fishing Other	Two wrongs don't make a right, leave it as is. However, would like see the sale of our water discontinued with closeing the well across the st. from Silver Springs.	Water conditions of Silver Springs head waters.	For those individuals who are responsible for our future water needs to be held ACCOUNTABLE when making bad decisions.	Drop the issue of draining Rodman altogether. I'm tired of these individuls who will not let the subject alone. If draining Rodman would help the environment I would be all for it however, it will not help.	LEAVE RODMAN ALONE.
10/21/2021 11:58	Alachua		No	Yes			More than 5 times	Other	I worked at the power plant and saw the river transformed into a sump, it was painful	Look at what the Oklawaha was. It will never be the same but it can be much better than a stagnant pool.	Eutrophication.	No	Every time man tries to improve on nature it fails. Learning to live with nature instead of changing nature for convenience is hard.
10/21/2021 11:58	Citrus		No	No									
10/21/2021 11:59	Orange		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/21/2021 12:00	Duval		No	Yes			1 time	Other: I have been to the lock but haven't got into the reservoir	Restore water flow to the Ocklawaha, Silver and St. Johns Rivers, and 50 springs. This will mitigate salt water incursion in the lower St. Johns and restore storm and flood buffering capacity to the water shed.	The reality of being able to avoid $57 million in potential flood damages avoided to downstream property owners	If that happens, then water quality continued to decline further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. BAD, BAD, AND WORSE.	No, this had got to be done now. Climate change and other hazards will otherwise continue degradation of our most important environmental asset - the St. Johns River.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. (characters: 517) This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration. (characters: 517)
10/21/2021 12:00	Duval		No	Yes			1 time	Wildlife viewing	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Let the Rivers run free. Restore the natural habitat for wildlife.	If not breached and remove the Dam will need very costly repairs to protect downstream communities.	The cost of repairing the damn or the damage it will cause if it fails.	No.	It has been fifty years, it never has served the function for which it was built. Get rid of the damn.
10/21/2021 12:02	Duval		No	Yes			1 time	Canoeing / kayaking Boating Wildlife viewing Other: don't "use" the Reservoir/Dam ; would like to boat up the river once restored	Please take it down asap so all the benefits of nature can take over and be restored to its original beauty	All of the many benefits that the Free the Ocklawaha organizations has researched and presented form a powerful advocacy for its restoration.	That we blow it again!!! Once when the ill-fated lock and dam were first created back in the 1960s leading to the environmental disaster that we now have; and then we didn't take the opportunity to fix the it and reverse the financial boondoggle that has been going on for over 50+ years. The economic reasons are significant, especially to taxpayers like myself.	No, I don't think so. It seems simple to me: take away the short section of the dam and let the river seek its natural level. You can't be 1/2 pregnant!	I'm not going to repeat all the reasons that the Free the Ocklawaha group has presented--I just believe they are all true. This should be an excellent trip for kayaks and small boat to make long journeys once the river flows freely again.
10/21/2021 12:04	Orange		Yes	Yes		More than 5 times		Fishing	I would like to see moving forward, that rodman reservoir and the dam be utilized to help the manatee situation and find some common ground. In doing that I feel like there has to be a way to give the manatees access to the ocklawaha River as well as rodman reservoir through some sort of engineering peace of work.	The most important part of what I would like to see is the coexistence of the anglers as well as the manatees I know many anglers that are in full support of working to keep the manatees alive.	My biggest concern is that the St John's River water Management will decide what's best for the angler as well as the manatee. With that being said I feel like that there will be some political pressure placed on the St Johns River water management. What I would like to see is one of Florida's number one angling spots, kept and improved for both the angler as well as the manatee.	Of course I'm the type of person that can fully support compromise. My compromise would be something that would help the manatees and help the anglers. I would definitely support something to help the manatees and provide a safe haven for them.	I know that we're focused only on the rodman reservoir, but there are other places that are in need of Manatee research. These places could become a safe haven for the Florida manatee. Most people have never seen manatees in lake Apopka. The lake Apopka springs have many benefits for the Florida manatees. The lake is less used the lake is vast with many different microhabitats that could support the manatee. I am one of the very few people that have seen the manatee at the lake Apopka springs. It's just my thought.
10/21/2021 12:05	Lake		No	Yes			1 time	Wildlife viewing	Breaching the dam.	Breaching would restore the Ocklawaha River and natural habitats for manatees. It would save the costs of repairing the dams.	Continued stress on manatee population which requires access to the springs beyond the dam.	No.	Ocklawaha River needs to be restored in order to improve manatee access and recreational activity on and around the river and the springs.
10/21/2021 12:05	Duval		No	No					Fund and proceed with planning for dam removal.	Understanding the impact of wetlands on downstream water quality.	Water quality will continue to degrade in the lower St. Johns River at a faster pace causing irreversible damage.	Longer-term, planned removal of the man-made impoundment.	It's time to return the St. Johns Basin upstream of the dam to its natural state.
10/21/2021 12:06	Pinellas		No	Yes			1 time	Canoeing / kayaking					
10/21/2021 12:06	Duval		No	No					Breach the dam	The environmental advantages to the Sjllwar and the Ocklawaha.	Continued environmental damage	A full permanent drawdown would be an improvement over the status quo.	
10/21/2021 12:07	Alachua		No	No					They should be removed so the Ocklawaha River can be restored to its natural state.	Returning the rivers, springs, and ecosystems to their natural state	Loss of an opportunity to make things right plus waste of taxpayers' money to repair aging dam	No. The dam should never have been built to begin with.	
10/21/2021 12:08	Leon		No	Yes	1 time	1 time	2-5 times	Canoeing / kayaking Wildlife viewing Other: Hiking, cycling and camping.	The Ocklawaha River restored to its natural state by breaching the Kirkpatrick Dam. Thee dam is harmful to the economy, water quality, and wildlife throughout the region. The dam should not have been built in the first place, and should have been removed in 1971 when the construction of the Florida Barge Canal was halted.	The Ocklawaha, Silver and St. Johns Rivers and 50 springs would be restored along with 15,000+ acres of the Florida Wildlife Corridor for people and wildlife.	State and federal funds are currently available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. We should not miss this opportunity to restore the Ocklawaha.	No. The dam should not have been built to begin with but since it was, it should have been removed 1n 1971, 50 years ago, when the Cross Florida Barge Canal was scrapped. The time to remove it is now.	Do it now before there is further damage to Florida's springs, water quality and general ecosystem.
10/21/2021 12:10	Marion		No	No						DEMOLISH THEM ASAP WE NEED THE FLOWING WATER	Florida would have massive die offs of natural species and we will RUN OUT OF WATER	NONE	SJRWMD has NEVER done anything to save our water. They are pawns for NESTLE. I do not trust them to save our waterways. In my opinion, they are beholden to Nestle and NOT the Florida residents.
10/21/2021 12:15	Hillsborough		No	No					I believe the Rodman/Kirkpatrick Dam should be breached to enable the free flow of the Ocklawaha River.	The ability to help restore the native ecosystem while also avoiding the taxpayer expense of maintaining reservoir and dam.	The continued negative impact on the native ecosystem and the taxpayers	I am open to any suggestions that eliminare the maintenance expenses and restore the water flow.	
10/21/2021 12:16	Pinellas		No	Yes			2-5 times	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Doing this will enhance our quality of life, quality of water, protect our wildlife. The Rodman/Kirkpatrick Dam degrades Florida inherent beauty which is a increasing drag on our tourism economy	There are many positive benefits. Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 50 best springs and Silver Springs ecosystem are restored Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers $4-14 Million in dam repairs saved on a dam past its life expectancy Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. $57 million in potential flood damages avoided to downstream property owners	We miss the best opportunity to improve our situation. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. A storm event triggers a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait. Half measures will not work.	Aside from protecting Manatees and other wildlife, This restoration will improve water quality and flow. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. I was not able to go to the beach this summer because of red tide. This effects local tourism and the very important contribution it makes to our local economy in a negative way. Every effort we make to improve the environment and protect wildlife pays us back directly by improving ecotourism. It's the smart thing to do and it's the right thing to do.
10/21/2021 12:17	Orange		No	Yes			1 time	Canoeing / kayaking Other: Cleanup	I would like to see the dam breached and bring back ecosystem for surrounding areas.	The dam was never used for its intended purpose. Moreover, it changed the whole ecosystem of the wetlands and surrounding rivers and streams. Why not learn from the past and move forward to bring back a better future of Ocklawaha river.	We could be the one who never learn from the past and ignoring to preserve our precious Florida ecology.		
10/21/2021 12:18	Duval		No	No					Dismantled and natural ecosystem restored which would help get rid of the algae bloom by restoring natural grasses	The Army Corp of Engineers identified the Ocklawaha as one of the most effective mitigation projects to offset the impacts of dredging	Pollution and toxic algae bloom	No. We demand action.	
10/21/2021 12:20	St Johns		No	Yes			1 time	Canoeing / kayaking	Remove the dam and restore the Ocklawaha River flow to the St. Johns River. The time is LONG overdue for the state of Florida to address the stresses to the St. Johns River caused by rapid population growth and the Kirkpatrick Dam.	As a native Floridian and a resident of the state for all but three of my 81 years, I am convinced that it is time to put this relic of the Florida Cross Barge Canal fiasco to rest. Numerous studies support both the pro's and con's of this issue. I have lived during the time that the Ocklawaha was running free, the construction of the Barge Canal and long family ownership of property on the St. Johns River. My long life, observations and common sense lead me to the conclusion that it's time to come down on the "pro" side of the studies and to call for the removal of the Kirkpatrick Dam. We have studied this thing to death.	As a state, we will have missed the opportunity to contribute to the much needed improvement of the St. Johns River and the river basin. Population losses continue to stress the river (excess water consumption, runoff of pollution and other issues addressed in many studies) and we must continue to address the problem. Putnam County's support is critical to this effort for improving the St. Johns River basin.	I do not see how the underlying issue lends itself to a partial solution. If so, the problem would have been solved long ago.	
10/21/2021 12:21	St Johns		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	Remove the Dam and restore the free flow of the Oklawaha river	The science behind it and the fact that the Army Corps of Engineers is recommending	Continued degradation n of the St Johns River	NO	It is time to take action, too long has this gone on. There is no reason to keep the dam in place as it was a part of the ill fated Cross Florida Canal.
10/21/2021 12:23	Duval		No	No					Get rid of the dam	Army Core says it would off set effects of dredging	More damage to the st johns	No	
10/21/2021 12:25	St Johns		No	Yes		1 time		Canoeing / kayaking	Removed for free flow	Studies showing the negative impact to the St. John's and silver springs	The health of the St. John's and silver springs continuing to fail		
10/21/2021 12:26	Collier		No	No					Restoration of the ocklawaha river	The reservoir causes an incline in bird species	Bird species would decline	The reservoir is removed.	
10/21/2021 12:26	Seminole		No	Yes		2-5 times		Fishing Canoeing / kayaking Wildlife viewing	I would like to see the dam removed	I want to see this river restored to its original condition	The health of this ecosystem	Dam removal in its entirety. No other option	Thank you for considering my opinion.
10/21/2021 12:29	Duval		No	No					TAKE IT DOWN	We need this water to flow freely! Water is our most precious resource and we seem to keep cutting it off and giving it away. our springs are drying up.	See above.	No, for 50 years we have been trying to get this done. Who is the power behind keeping the damn dam?	Surely, this is not all about bass fishing!
10/21/2021 12:33	Seminole		No	No					Whatever is best for our environment, especially the manatees	Without our environment's health, we can't be healthy	Species will die off and irreversible damage to our land		

10/21/2021 12:34	Duval		No	No				Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam to reunite the natural connection of Silver Springs, the Ocklawaha and the St. Johns River.	The science supports restoration. Studies by federal and state agencies have clearly demonstrated that restoration of a free-flowing, connected system is cost-effective and will provide significant ecological benefits to the St. Johns, Ocklawaha and Silver Rivers as well as Silver Springs.	We miss a historic opportunity to stop the ongoing ecological degradation caused by the dam and finally reunite the natural flow of these rivers. Breaching the dam would restore the natural flow of 150 mgd of fresh water, improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. A free-flowing Ocklawaha will reestablish 15,000 acres of forested wetlands and fortify downstream submerged grasses from Welaka to Jacksonville in the St. Johns River that are critical to river health and fish habitat. More information to consider: We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs, and invasive fish like the Blue Tilapia increase. Water quality declines, further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam and restoring the Ocklawaha are 50+ years overdue. Dam safety issues and improved water quality, wildlife habitat, and recreational opportunities can't be ignored or delayed any longer.	This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration. MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 30 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.
10/21/2021 12:36	Citrus		No	Yes	2-5 times		Wildlife viewing Other: Picnic going	Breach the dam to restore natural water flow.	The dam inhibits natural water flow impacting multiple rivers, springs, and forested wetlands. And the useful lifespan of the dam has expired. There is no need to spend taxpayer money to maintain a structure that negatively impacts the environment.	Manatees and other species would not be able to access rivers inhibiting access to food sources and breeding areas. Also, cost to taxpayers to maintain the dam may be excessive.	I cannot think of a compromise position I could support.	
10/21/2021 12:39	Duval		No	Yes	1 time		Wildlife viewing	Remove the dam.	The dam is not needed and the return of the fresh water from the river to the St. Johns is a very positive natural move.	What could possibly be a reason for not achieving the outcome?	No	
10/21/2021 12:39	Manatee		No	No				I would like to see the Rodman reservoir Kirkpatrick dam BREACHED, thereby restoring the Ocklawaha river.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/21/2021 12:40	St Johns		No	Yes	1 time	1 time	Canoeing / kayaking	Remove	Dead manatee d	More algae	No	
10/21/2021 12:41	Outside of state / other	Virginia	No	Yes	2-5 times	More than 5 times	Wildlife viewing	I would like to see portions of the dam that have outlived their useful life dismantled and removed, so that critical access for migratory fish, manatees, and other creatures in the three impacted rivers can be restored. The freshwater impact on the Lower Ocklawaha and St. Johns Rivers are particularly important for manatees who need more spaces where they can thrive, especially in cold months.	The dam is more than 50 years old and was built with an expected useful life of 50 years. It has never been used for any of its intended purposes, and various Democratic and Republican administrations have noted – and, indeed, taken action based on -- its negative environmental impacts. The current dam is useless, is not properly permitted, and impedes the sustainability of critical Florida ecosystems.			
10/21/2021 12:42	Citrus		No	Yes	2-5 times		Canoeing / kayaking Wildlife viewing	Open the waters back up. This isn't natural or good for my home state of Florida	Being born here and seeing the destruction to our land and wildlife.	More devastation to the environment and wildlife that in turn, destroys everything including people.	No	
10/21/2021 12:43	Brevard		No	Yes	More than 5 times		Wildlife viewing Other	I would like to see the dam removed.	To restore the Ocklawaha to its natural flow and to increase the native biodiversity including the reintroduction of Manatees to the system. The dam is a holdover from a project that has been permanently tabled and is currently harming the environment. Potentially the concrete could be used in artificial reef building	That the natural flow would not be restored and the biodiversity would be harmed/ongoing maintenance costs of the dam.	No	
10/21/2021 12:44	Marion		No	Yes	More than 5 times		Boating Wildlife viewing	Removed		More environmental damage and more taxpayer $ to maintain	No	
10/21/2021 12:46	Duval		No	No				From all I have read from both sides of the issue, I firmly believe that the Kirkpatrick Dam should be removed for Environmental reasons.	Facts stated by the St Johns Riverkeeper and other environmental groups.	That the area would continue to decline.	Do not really know of any alternative suggestions that would be appropriate.	
10/21/2021 12:46	Marion		No	Yes	1 time		Wildlife viewing	Removed	River flow	Same or worse problems every year	No	Please remove the dam and bring back the River we know
10/21/2021 12:48	Duval		No	No				Breach the dam to free the Ocklawaha river	Historic fish and manatees return as breach opens creating a free-flowing river	Yes miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wai	
10/21/2021 12:49	St Johns		No	Yes	2-5 times		Other: Hiking	Tear down the dam and restore the river	Natural water flow that has a domino affect on fish, springs water for the state	Fish, insects, animals and people will all be affected in the future	No	The aquifer needs the Ocklawaha River to be restored.
10/21/2021 12:52	Martin		No	Yes	1 time		Canoeing / kayaking Wildlife viewing	I would like to see the dam breached and the rivers united	Breaching the dam would open wildlife, improve fisheries, help imperiled manatees, boost recreation and tourism and have a beneficial economic impact.	Lost opportunity to do the right thing that benefits the local community and our state.	Breaching the dam is really the right thing to do.	
10/21/2021 12:52	Clay		No	No				Remove the dam and restore the river.	have lived in Florida since 1954. I miss "Old Florida". We should restore as much of it as we can!	Further damage to the Florida environment.	No	
10/21/2021 12:53	Duval		No	Yes			Other: sightseeing (not in the last five years)	The dam should be removed for the health of the St. Johns river	The continued algae bloom and salinity of the river. This would restore a healthy habitat for the fish and wildlife.	The further devastation of the beautiful St. Johns river.	no	none
10/21/2021 12:54	St Johns		No	Yes		1 time	Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam. To protect the manatees, other wildlife and the environment	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer. The Ocklawaha River is considered endangered and is important to our ecosystem	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. As someone who cares deeply about the environment we need to protect the environment and it's inhabitants; we've kicked th can down the road for far too long and need to fix things and this is the first great step to achieve that
10/21/2021 12:54	Pinellas		No	No				removal of all the dam and its works	it will open new areas of grass for manatees and free the springs water flows	that the dam is being protected by entrenched fishing parties	not really	I wish you the best of fortune with this campaign
10/21/2021 12:55	Alachua		No	No				The dam be removed	The economic and environmental opportunities it will bring	Conservation	No	
10/21/2021 12:57	Marion		No	No	2-5 times	More than 5 times	Other: As a bridge over the river	I would like to see it removed.	It was planned as a part of the cross Florida barge canal project that was fortunately ended. As a result of the project ending, reasonable efforts should be made to return the river to the state it was in prior to the project.	That state and federal funds would continue to be used to support and maintain Rodman dam and it would continue to be an unnecessary impediment to the free flow of the Ocklawaha river.	Replace the Rodman dam with a vehicle bridge, boat ramps and water craft launch and fishing pier.	I believe the Rodman Reservoir only serves a small percentile of the public as the tree stumps and other underwater obstacles prevent the vast majority of the boating public from enjoying this body of water. Only those with expert knowledge can safely use this lake.
10/21/2021 12:57	Duval		No	No				I'd like to see the dam taken down and the Ocklawaha River restored.	Research from the Army Corp. of Engineers.	A missed opportunity to improve the health of the St. Johns River.	No	
10/21/2021 13:00	Duval		No	No				Removing cause of harm to water and wildlife.	The restoration of 3 rivers.	Further declining of water quality	No	Reasons for breaching are compelling.
10/21/2021 13:01	Brevard		No	No				Removal to free the st johns river	The dam blocks the natural flow of water through the st johns	Continued miss-management of Florida's most valuable commodity (water)	Upwind needs to make plans to restore all natural flows of fresh water. They continue to go directly against the will of the public much like other florida water management districts. Times are changing this will no longe be allowed	
10/21/2021 13:01	Alachua		No	Yes	2-5 times	More than 5 times	Fishing Other: Boat trip upriver	I don't know. Remove it.	Bass fishing has fallen off.	Fishing industry would suffer.	no	
10/21/2021 13:02	Duval		No	No				Take down the dam	We are killing one of the greatest resources - the St. John River all in the name of progress.	Death to not only aquatic grasses but the animals who depend on them. Continued salt water intrusion and tide levels.	Take down the dam. Fishermen have many other Florida lakes to fish in. Get citizens to be more cognizant of the damage we are doing daily. I taught school for 40 years and children seem to understand the dilemma more than deep pocketed citizens and companies.	This damage did not happen in a day and cannot be fixed in a day. Put moratoriums on construction, septic take and wastewater dumping. Use code enforcement to punish the guilty. Don't let deep pockets ruin this beautiful place we call home - Florida.
10/21/2021 13:02	St Johns		No	No				Dam to be removed.	Listening to NPR and reading Jax Times/Union.	The effect the dam has on St John's River and childhood tourist spot, Silver Springs.	No.	
10/21/2021 13:04	Duval		No	No				Remove the dam, drain the reservoir, return the St. John's to an unpolluted free flowing river	50 years ago my parents took a farewell boat ride down the Oklawaha River. Their photos are stunning and sad. That this great beauty was destroyed for nothing is devastating. We must bring the river back to its natural state, even if it takes generations.	That the St. John's becomes a failed river impacting the quality of life for people and wildlife who live this river.	Any effort to open or remove the dam should be supported. Small steps are better than no steps.	I would lobe to one day take a photo journey down the river as my parents did before the dam.
10/21/2021 13:05	St Johns		No	Yes		2-5 times	Canoeing / kayaking Wildlife viewing	Remove the dam and restore the natural flow	The continued use of the St. Johns by Georgia Pacific and others as a sewer drain for their waste products	That the river will become so polluted all we can do is look at it and not go in	No, just do it.	
10/21/2021 13:11	St Johns		No	No				The right thing for the environment				
10/21/2021 13:13	Volusia		No	Yes		1 time	1 time	Wildlife viewing Other: Photography	It should have been removed many many years ago. I am 75 and my husband is 86 and we are both natives of central Florida, so we have long been aware of the damage it has done. We are heart-broken about having lost 1000 manatees this year and we want the river to become healthy once again. Thank you.	The loss of a thousand manatees!	Damage to our natural springs.	We don't know of any good reason to leave things as they are.	We hope you will get many many more responses from Floridians who want to improve our environment.
10/21/2021 13:14	Volusia		No	Yes		More than 5 times		Fishing	I would like to see the damn removed.	The estuary is in dire need for the original fresh water flow to be restored	The fishery will be depleted	No	
10/21/2021 13:15	Duval		No	No				Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers	Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs, and invasive fish like the Blue Tilapia increase. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/21/2021 13:17	Alachua		No	Yes	2-5 times	2-5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing	Leave it alone	Fishing is great	No fish habitat left	Maybe	
10/21/2021 13:18	Hillsborough		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	I would like to see the dam breached to allow for the outlying ecosystems and springs to return to their native and normal forms.	Since the dam was built, the surrounding ecosystems have seen a dramatic decrease their natural rejuvenation process. Species who relied upon these native systems have stopped spawning and it has caused significant disruption to our springs.	Permanent loss of environment and natural habitat that make Florida what it's meant to be.	No	
10/21/2021 13:18	Brevard		No	Yes			1 time	Other: I don't use	I support the restoration of the Ocklawaha River by breaching the existing dam and draining the Rodman Reservoir for the broad range of environmental and economic benefits that restoration would provide.	FL Department of Environmental Protection 1997 Environmental Resource Permit	Failure to achieve the extensive environmental benefits that restoration will bring.		
10/21/2021 13:20	Seminole		No	No				Breach the dam, open the water flow	It's helps the manatees and springs	Further depletion of natural springs water flow and harm to manatee habitats	No	There is no purpose for this dam (the canal from a LONG time ago never went though) it doesn't need to be here anymore. Please protect Florida's natural environment. The natural areas are shrinking each day, we need to restore the waterflow and keep Florida beautiful.
10/21/2021 13:20	Orange		No	No				Breach the dam to allow the Ocklawaha river to be restored.	Save millions of dollars in dam repair and maintenance costs. Restore 20 lost springs. Allow manatees to gain access to warm spring water. Restore thousands of acres of the wildlife corridor.	Loss of opportunity for improved water quality and loss of opportunity for removal of a large barrier to the wildlife corridor from Ocala to Osceola National Forests.	No. Breaching the dam is way overdue. Dam safety, water quality and wildlife protection needs to be addressed.	
10/21/2021 13:25	Lake		No	No				would like it removed / breached.	The dam is past its life expectancy, breaching the dam saves millions of dollars in dam repairs and upkeep. Taxpayers should not continue to repair and maintain a dam that is actively harming an ecosystem.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	no	
10/21/2021 13:25	Orange		No	No				Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife.	Hundreds of manatees lose the opportunity to access essential warm water winter habitat.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/21/2021 13:25	Duval		No	Yes			1 time	Canoeing / kayaking Boating	I would like for the dam to be completely removed and the reservoir drained.	Knowing the benefits of a free flowing Ocklawaha River, including provoding expanded recreational and tourism opportunities, restoring springs helpful to manatees, and improving the water quality of the Oklawaha and adjoining rivers such as the St. Johns.	Wasting money on maintaining a dam that is destructive and that should have been at least breached decades ago. Also, leaving the dam intact would cause even more damage to the Oklawaha, Silver Springs and the St. Johns River.	Yes - breaching the dam instead of completely removing it.	
10/21/2021 13:27	Lake		No	No				Breach the Rodman/Kirkpatrick Dam.	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	no	
10/21/2021 13:28	St Johns		No	Yes			More than 5 times	Fishing Canoeing / kayaking Boating	Protect our natural water way an yet have recreational	The water management in Florida is critical to Florida's survival of natural beauty	We loose wetlands and estuary	Conservationist of Florida natural beauty	
10/21/2021 13:29	Marion		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Leave it alone	Anything government touches is screwed			
10/21/2021 13:31	Clay		No	No				Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam to reunite the natural connection of Silver Springs, the Ocklawaha and the St. Johns River.	The science supports restoration. Studies by federal and state agencies have clearly demonstrated that restoration of a free-flowing, connected system is cost-effective and will provide significant ecological benefits to the St. Johns, Ocklawaha and Silver Rivers as well as Silver Springs. More information to consider: Three rivers, Ocklawaha, Silver and St. Johns, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish migration patterns and essential manatee habitat are reestablished 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of forested floodplain wetlands within the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs	We miss a historic opportunity to stop the ongoing ecological degradation caused by the dam and finally reunite the natural flow of these rivers. Breaching the dam would restore the natural flow of 150 mgd of fresh water, improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. A free-flowing Ocklawaha will reestablish 15,000 acres of forested wetlands and fortify downstream submerged grasses from Welaka to Jacksonville in the St. Johns River that are critical to river health and fish habitat. More information to consider: We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs, and invasive fish like the Blue Tilapia increase. Water quality declines, further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam and restoring the Ocklawaha are 50+ years overdue. Dam safety issues and improved water quality, wildlife habitat, and recreational opportunities can't be ignored or delayed any longer.	I have personally watched at least 12 trees in my neighborhood die from saltwater intrusion. This is a threat as Florida faces concerns from climate change. Recent hurricanes have been a warning to us. Show courage and restore the habitat.
10/21/2021 13:32	Duval		No	Yes			2-5 times	Wildlife viewing	remove the Dam, allow the water to flow its natural original way.	History.....the Dam has been allowed to stay for the use of local fishermen, supported by various crooniies,politicans.	1- excessive and increasing costs to keep & maintain the Dam. 2- damage, pollution to the river,other areas upstream.	no, remove the Dam.	The Dam has been allowed to remain for many years due to the support or selfish individuals and politicans who do not care about the issue the Dam causes.
10/21/2021 13:33	Hamilton		No	Yes			1 time	Fishing Wildlife viewing	Dam removal	Free flowing natural river system	Wasted tax dollars	No	
10/21/2021 13:35	Levy		No	Yes			2-5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Wildlife viewing Other	Remove it and restore the Ocklawaha as far as possible.	Experiencing first-hand the Oklawaha prior to the dam (as I did) would best answer this question. That is not possible today, however there is much evidence and specific data on the beneficial effects of restoring the Oklawaha flow. I believe doing so will be a significant step in healing some of the damage done, particularly post-WWII until present, in the terribly short-sighted haste to completely repurpose Florida's land and water.	The lost opportunity to significantly slow the continuing impairment and destruction of Florida's own ecosystem, it's negative effect on healthy human life. Healthy sea life, including bird and animal migration that reach far beyond the State's physical boundaries will continue to erode. The disastrous effects of more coastal salt-water intrusion into the underground fresh water reservoir on which millions of Floridians daily depend are but a few problems that would not be at least partially mitigated to a meaningful extent.	I am not certain what that could be and though every action may have unintended consequences I believe those consequences will be minimized by restoring as far as possible the historic Oklawaha flow from beginning to end.	It's not a secret that many Florida residents are polarized on this subject (as well as so many other critical topics). I and other Floridians believe restoring the historic flow of the Oklawaha however is tangible and will be of enormous benefit as long as air, water, land, and life exist on this wonderful peninsula that we know as Florida.
10/21/2021 13:37	St Johns		No	Yes			1 time	Wildlife viewing	Breach the dam & restore the natural rivers & springs to their natural states for the benefit of wildlife and enjoyment by the public			NO	
10/21/2021 13:37	St Johns		No	No				open it up. we have property on the river. the algae problem is getting worse. the dredging will have an impact long term	the algae problem we see every year	continued degradation of the health of Our river, one of this state's biggest natural assets	not familiar with any	please take seriously for our children
10/21/2021 13:38	Marion		No	No				Demolish it. Both were made for a canal that was never built and it is KILLING OUR WATER FLOW	dead manatees, invasive species, lower water tables	DROUGHT AND MAYHEM	NONE	SIRWID in my opinion only listens to NESTLE and is not at all engaged in protecting our water. FLORIDIANS need water champions to save us.

10/21/2021 13:39	Broward		No	No					Thousands of acres of natural plants could be restored, contributing to eco diversity, biodiversity, and helping to arrest climate change. Biodiversity and restoration of natural habitats are critical to arrest and reverse climate damage.	rapid collapse of more species of plants and animals continues a downward cycle of devastating economic effects.	No. This dam has got to go.		
10/21/2021 13:41	St Johns		No	No					I would like to see them open them up and tear the dam down.	We saw so much algae on the river at our property. It makes us afraid to fish, swim or boat on the river. It is also very unsightly.	No. Breaching the dam is 50 yrs overdue.	Please save the river for our children and grandchildren! Thank you.	
10/21/2021 13:50	Marion		No	Yes	1 time	More than 5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	I would like to see the dam removed completely	Fish, eels and manatees will be able to migrate.	The continuing spraying of vegetation with poison	No	Release the Ocklawaha and let it flow so the fish, eels, and manatees can get to the springs. Get the river back to the normal level so all the springs are again visible. Stop spraying the vegetation with poison, the manatees eat those plants.
10/21/2021 13:50	Outside of state / other	Oregon	No	Yes		1 time		Fishing	Remove the dam!	The estuary needs more clean water flowing in	Fish kills	No	
10/21/2021 13:51	Outside of state / other	California	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use The Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/21/2021 13:52	Duval		No	No					REMOVE THE RESERVOIR AND DAM	TO RESTORE TO FORREST AND WETLANDS AND 20 SPRINGS	THE ENVIROMENT WILL SUFFER GREATLY	NO THE DAM SHOULD BE REMOVED. EVERTHING RESTORED AS IT WAS!!	I WAS AROUND TWENTY YEARS OLD WHEN THIS OCCURRED , AND IT UPSET ME THEN , BECAUSE IT HAS EFFECTED THE ENVIROMENT ,TO COVER SPRINGS AND FORREST AND WETLANDS IS SO SAD. THE WHOLE DEAL WITH FLORIDA BARGE CANAL SHOULD HAVE BEEN STOPPED AND NEVER STARTED!!!
10/21/2021 13:53	St Johns		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Restoration		Ecological death		
10/21/2021 13:54	Putnam		No	Yes		2-5 times		Fishing Fishing (shoreline/structure) Wildlife viewing	maintain the dam and lock as is	Florida Lakewatch Rodman Monitoring Data; Springshed Nutrient Loading, Transport and Transformations	Rodman is essential to the health of the St. John's River. Removal would increase degradation of water quality & negative impacts on aquatic life & wildlife	no	
10/21/2021 14:00	Gadsden		No	No					Restoration of what it was prior to the 60's. We paddle a lot in the panhandle and west Florida and on one trip, I met a fisherman from Alabama who was camping and fishing in Florida. The place we met had been dammed and he said he visited it annually. Assuming that he would be against removing dams, I prefaced my remarks that he wouldn't agree with me, but I understood that parts of the Oklawaha was once a nice paddle. He quickly responded that he grew up before the Ocklawaha was dammed and he still remembers those days as a kid, on that river. But, he said, he wouldn't be returning -- "they ruined that", he said. He just wanted to remember it as it was. Then, he said, "You would have loved that river, too." I'd love it if that old man would be able to visit his home place to find it closer to what it was when he was young. I'm much older than he is, but I'd like to live to see how beautiful it could be again. We paddle all over the US & Canada, even at our age, and I would love to paddle the Oklawaha as it once was.	At one time dams were considered important to the economic vitalization of areas which had no electricity and very little economic opportunities for the young. We were not as expansive in our use of our natural resources then, nor did we have that much knowledge about the impacts of these dams. on natural systems. A dam which was created as part of a maritime transportation route was probably premature. Maintenance and bringing the aging dam may not be economically feasible. Removal of the dam would provide a new potential for a new type of economy based on sustainability and which would provide not just jobs, but healthy lifestyles for families. I would vote with our discretionary dollars -- I'd love to paddle down the Oklawaha -- the whole stretch of it. It would be a lovely place to meet up with our children and grandchildren for our periodic family get togethers.	We would miss an opportunity to restore as many natural systems for cleaning our waters and air in Florida. Our growth is growing faster than our capacity to restore natural systems to help sustain the life of every Florida resident.	Every issue with strong opposing opinions should be negotiable.	We have paddled a short section of the Ocklawaha with Paddle Florida. If the dam is not there, it could become one of the premier and annual paddles which this organization sponsors, attracting paddlers , almost half from out of state or the country. I'd be the first to sign up for that long paddle, if that happens. Hopefully, I won't have to wait till I'm 100, but more that I would be able to do it before I turn 90.
10/21/2021 14:00	Pinellas		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	This exciting restoration will improve water quality and flow by generating an additional 150 millionn gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
10/21/2021 14:01	Putnam		No	Yes					We would like to see the continued operations supporting the Buckman Lock, Kirkpatrick Dam, Rodman Lake and all of the recreational areas surrounding it. This area is a thriving wildlife habitat, with world-class fishing that helps support a largely rural economy.	This area is one of Putnam County's top tourism assets drawing thousands of visitors each year. This asset delivers much needed profitable tourism dollars for our county. Much of the success of soliciting large-scale nationally televised tournaments is due to the presence of Rodman. Rodman Lake is featured annually as one of the top ten bass fisheries in the State and in the top 100 in the United States.	loss of critical income to an already fiscally constrained County.	We are unaware of any compromise that could help both sides achieve their desired outcomes. We respectively ask That the fate of Rodman Reservoir be guided by facts and reason, not overwhelming campaigns of misinformation.	
10/21/2021 14:03	Miami-Dade		No	Yes		2-5 times		Fishing	Remove the dam	Water Quality	Na	Na	None
10/21/2021 14:08	St Johns		No	Yes				Wildlife viewing	Breach the Dam	The fact that it's causing problems with wildlife	Destruction of our natural habitats		
10/21/2021 14:08	Marion		No	No					I would like to see it removed completely in order to restore the Ocklawaha and Silver Rivers to their natural and historic flow.	For two main items that concern me. Firstly I've sadly watched the decline of Silver Springs water quality over the past 30 years as the algae overtakes the beautiful green eel grass. In addition to providing more natural flows that should help flush nitrogen, breaching the dam will allow more algae eaters to access the springs. My second item is more critical and may have a more immediate impact. Manatees are starving in coastal waters and this would open much more habitat to support them.	The continued decline of two beautiful rivers and unnecessary manatee deaths. I am also deeply concerned about taxpayer funds continuing to be wasted on a dam that harms water quality and that has a very short remaining life as the reservoir silts up.	No, removal of the dam is the only good long term solution.	I believe managing a resource for just one group of users (bass fisherman) is short sighted and does not make economic sense and is ignoring the decline in fishing popularity. By removing the dam, many additional springs will be available for recreation and the river will be available for historic tours as well.
10/21/2021 14:09	Putnam		No	Yes		1 time		Wildlife viewing	Deconstructed	Flooding of other natural waterways.	Loosing more Manatees	Not that has a beneficial resolve.	
10/21/2021 14:12	Broward		No	Yes		1 time		Fishing					
10/21/2021 14:12	Alachua		No	Yes		1 time		Canoeing / kayaking	The Rodman/Kirkpatrick Dam should be breached, asap.	Breaching the Rodman/Kirkpatrick Dam will reunite and save the Ocklawaha River, the St. Johns River, and Silver Springs, creating a huge positive economic and environmental impact for Northeast Florida.	These rivers and their ecosystems will continue to be damaged and deteriorate and an opportunity for thriving eco-tourism will be squandered.	Respectfully, no, because this dam does not compromise in the damage it has caused and continues to cause.	
10/21/2021 14:14	Marion		No	Yes			2-5 times	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Springs and 3 rivers restored, manatees gain more habitat. No sense in paying more for a dam that's outdated!	We miss the best opportunity to do this...funds are available, environmental needs are critical, and the dam is not safe.	No. Dam safety, improved water quality and wildlife can't wait!	Help save Silver Springs!
10/21/2021 14:15	Duval		No	No					Get rid of dam.		The continued deterioration of the St. John's River		
10/21/2021 14:16	Duval		No	Yes			1 time	Wildlife viewing	I would like to see it opened up and allow the natural habitat to be restored	In other locations in this nation, when dams are removed , the result is a healthier ecosystem for all communities that are linked to the adjacent water resources.	we are facing ecological strains on water resources and natural habitat; releasing this river would help restore the important connecting water resources and habitat	haven't heard of any	
10/21/2021 14:17	Marion		No	Yes			1 time	Wildlife viewing	Get rid of the dam. Let the river system renew itself.	Time to reunite the St. Johns and Ocklawaha River Systems. We are facing grave climate change in the years to come. We must protect our surface and ground water. The Silver River and Springs are also part of this eco-system along with the flora and fauna.	We need free flowing rivers, not places to breed mosquitos.	No	
10/21/2021 14:17	Volusia		No	Yes			2-5 times	Canoeing / kayaking	Preservation	Nature			
10/21/2021 14:17	Hillsborough		No	Yes		2-5 times		Canoeing / kayaking Boating Wildlife viewing Other	The removal of Dam and restore the natural flow.	Years of following reports by various groups. ie.St.Johns River Keeper,I,FREE the Okalawaha. And the Carr family that continues to be active. Karen Chadwick as well.	Complete failure of the structure, Causing uncontrolled flooding.		
10/21/2021 14:18	Marion		No	No					Tear it down allowing the river to restore it's natural course	The invasive species of fish That are being allowed to multiply.	Irreversible degradation to Florida's aquifer and the loss of native species	anything less would not be acceptable.	
10/21/2021 14:21	Marion		No	Yes		1 time		Wildlife viewing	Restore the Ocklawaha by breaching the dam.	4 springs and 50 springs would be restored.	The opportunity is here for us now and restoration is long overdue.The time is now.	No, improved water quality and environment for wildlife is essential and our duty to provide, along with safety measures for the public.	
10/21/2021 14:23	Miami-Dade		No	Yes			1 time	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating	Clean up the damage that has occurred	Water quality and natural habitat that's been destroyed			
10/21/2021 14:24	Marion		No	Yes		1 time		Wildlife viewing	Breach the dam and restore the river	All the additional fresh water that would flow into the St Johns	The habitats that would remain submerged	no	
10/21/2021 14:25	Putnam		No	No					Come down	Return the Ocklawha to its original form.	Health of the river deteriorating	Not really	
10/21/2021 14:26	Seminole		No	Yes			1 time	Fishing Boating	Remove the damn	Infor-mation from free the oklawaha	The migration of fish species will continue to suffer	No	
10/21/2021 14:31	Miami-Dade		No	No					Have it removed	Restoring the natural habitat	mankind's destructive ways	Open to suggestions	
10/21/2021 14:34	St Johns		No	No					To preserve the ecological purity of our waterways. I encourage preservation of the dam.	The St. Johns Riverkeeper is a valued advocate for what I believe represents our common interests.	A public treasure would be threatened.	Not with the same cost/benefit.	
10/21/2021 14:41	Marion		No	No						Restoring			
10/21/2021 14:43	Brevard		No	No					If you breach the Rodman/Kirkpatrick Dam it will restore the Ocklawaha River	The Rodman/Kirkpatrick impacts three rivers, 50 springs and more than 15,000acres of wetlands. The natural migration of Florida's native fish and prohibits many manatee from obtaining refuge and forage in cold weather. Breaching the dam would allow fresh water to flow, uncover drowned springs in the Silver Springs ecosystem, which is essential habitat for manatees and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife.	If Florida does not breach the dam we will miss an opportunity to provide essential warm water and plant life for manatees especially at a time they are dying at very high rate due to habitat loss in other places. Even though manatees use the Silver and Ocklawaha Rivers, they must must pass through a manually operated lock that is dangerous and operates intermittently. Breaching the dam is necessary to provide uninhabited passage especially during cold weather when springs provide critical warm water discharges for manatees.		
10/21/2021 14:53	Orange		No	No					I would like it to be fixed thank you	I am an undergraduate student and I have heard from other peoples experiences that this is a need	My biggest concern is our health and safety	I could support what the majority of the people are supporting	
10/21/2021 14:55	Orange		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	A storm event triggers a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.
10/21/2021 14:56	Palm Beach		No	No					breach the dam in order to provide the environmental benefits to the Silver and St. Johns Rivers, as well as historic Silver Springs and their riverine ecosystems		continued degradation of the northeast Florida environment	the breach has been needed for decades, so it needs to be done asap	Ylou have the opportunity to right a past environmental wrong - just as we are now trying to right the wrong of Everglades destruction. Florida's environment is important for health and the economy; our natural environmental heritage is precious and needs to be preserved and remediated
10/21/2021 15:00	Broward		No	No									
10/21/2021 15:00	Lake		No	Yes			More than 5 times	Wildlife viewing	Restore	The Manatee deaths	Wildlife lost more destruction to habitat		
10/21/2021 15:05	Pinellas		No	No					Remove the dam	This will increase the health of our water	Bad water quality will continue for future generations and a massive waste of money on repairs	No, it's long overdue	Save our water
10/21/2021 15:05	Hillsborough		No	No					I would like to see the dam breached and the Ocklawaha River restored. It was reportedly the most beautiful river in Florida prior to the dam.	I would help the manatees travel to springs during the colder weather, using natural migration patterns that were disrupted by the dam.	If it time to act to protect manatees. In addition, breaching the dam would remove the need to repair the dam, which is expensive.	No. The environment requires this action.	My Crystal River's Kings Bay shows, the improvement of the environment has a positive impact on business and tourism. I believe breaching the dam is the right thing to do, but it will also help the local economy...
10/21/2021 15:06	Marion		No	No					Remove it	Removed and the natural ecosystem restored to allow natural movement of water and wildlife with the opportunity for ecotourism.	Reuniting the three rivers and freeing 20+ natural springs will provide cleaner water at the natural temperature. This will bring back wildlife and restore some of FL's natural beauty.	Wildlife will continue to suffer and will be at risk, along with private property and human life, due to an aging dam.	No, the dam needs to go.
10/21/2021 15:07	Miami-Dade		No	Yes			1 time	Fishing	Remove it	That the dam is affecting the estuary health	The health of the estuary could decline	Removing the dam and helping the estuary.	
10/21/2021 15:07	Putnam		No	Yes		2-5 times		Canoeing / kayaking Boating Wildlife viewing Other: I visit the area many times during the drawdown.	I would like to see the river return to its original course.	The suffering of waterfow. The reduction of manatees and fish migration paths because of the damage. Starvation of manatees due to loss of sea grasses because of the plants clogging the waterways and being sprayed with herbicides.	Springs and water quality will be diminished more than it already is. Herbicide spraying will be increased. My tax dollars are destroying nature.	No. The Rodman Dam serves a small sports fishing population. This isn't why the damage was built. It hurts our ecology. Taking down the dam is way overdue.	We're living in a time of climate change. Our water resources are vital to our quality of life, humans, animals and plants. It is a known fact that when people can use the waterways for their livelihoods and recreation, they work harder to protect them. We can restore this river system now and begin to see a healthy ecology immediately.
10/21/2021 15:14	Citrus		No	Yes		2-5 times		Canoeing / kayaking	Removal to free the river	Public opinion	Water quality	No	
10/21/2021 15:15	Lee		No	No									
10/21/2021 15:16	Leon		No	No					Gradual removal - section at a time until fully removed.	This dam is responsible for flooding better than 9,000 acres of National Forest. It is the direct cause of the smothering of 20 natural springs and blocking migrating manatees, striped bass and other marine life.	A continued loss of habitat and natural resources.	Partial removal of the dam to allow the river to heal.	Hey-hey, ho-ho, this damn dam, has got to go! Hey-hey, ho-ho, this damn dam, has got to go!
10/21/2021 15:16	Outside of state / other	North Carolina	No	Yes		1 time		Fishing Wildlife viewing	Remove the dam and restore free flowing water and preserve the wetlands	St. John's river keepers	That we'd lose a vital estuarial artery and it's natural flow which includes the preservation of the ecology and its wildlife.	No	
10/21/2021 15:17	Pinellas		No	Yes				Canoeing / kayaking Wildlife viewing	Demolish the Rodman Kirkpatrick dam in order to restore the natural flow of the Ocklawaha River.	The 100 mile stretch of the Ocklawaha from St. Johns River Estuary from Welaka to Palatka to Jacksonville will be healthier, restoring needed water quality for humans and wildlife.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe.	No. We've been talking about removing the dam since I've been in high school, and now I'm 60. It's time, now that it's ending it's safe lifespan and before anymore taxpayer money is spent and the Ocklawaha's waterway can benefit all Floridians, humans and wildlife together.	Really, it's time before we spend any more taxpayer money just so a small segment of sport fishermen can fish, but the dam will end up unsafe and compromised by its failing structure and the increased threat of toxic algae will end fishing anyway.
10/21/2021 15:18	Duval		No	No						The dam should be removed and the River restored.	The river will continue to degrade causing loss of habitat for fish and wildlife.	No	
10/21/2021 15:19	Lee		No	Yes		2-5 times		Canoeing / kayaking Boating	I would like to see the restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Historic fish and manatees return as breach opens creating a free-flowing river.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Please do what is best for wildlife and the environment. They do not have a voice. Be theirs.
10/21/2021 15:21	Alachua		No	Yes			2-5 times	Canoeing / kayaking Boating Wildlife viewing	Breach the dam, close locks and restore natural river flow. Maintain the area as part of the Cross Florida Greenway. Provide improvements for better recreational access to the restored river and the springs that are submerged under the reservoir.	Research studies have shown that the dam and locks disrupts movement of aquatic and terrestrial wildlife. In particular, migratory fish are not able to reach the upper portions of the river and manatees cannot easily reach winter refuges in Silver Springs and other springs. Black bears and other land-based animals are blocked from north-south movement along the Ocala-to-Osceola corridor. In addition, use of the Rodman Reservoir has been declining over the past 10 years, and it is no longer a productive fishery. Also, maintenance of the dam is a waste of millions of dollars of taxpayer money.	Continuation of the status quo will simply lead to continued degradation of habitat and decline of important wildlife populations. The local economy will also continue to suffer from lack of investment and visitor spending.	No. Breaching of the Rodman dam would be necessary to achieve river restoration. However, to minimize restoration costs, there is no need to remove the dam completely to restore natural river flows, and no need for reforestation of the river floodplain as this will happen naturally.	Restoration of the Ocklawaha river will attract additional visitor spending and provide an economic stimulus to Putnam and Marion Counties, an economically distressed region of the state.
10/21/2021 15:22	Leon		No	Yes			1 time	Wildlife viewing	I would like to see the dam removed and the river restored to its natural path.	The Rodman Dam has stopped the natural flow of water in the Ocklawaha River and diminished the watershed thereby.	The restoration is something that has been sought for years. Fish and wildlife have diminished and the waterway is unnatural as it stands now.	I realize that the Rodman Dam is now enjoyed by some for fishing and other activities. These activities can be enjoyed in a naturally flowing Ocklawaha River. The river will provide recreational opportunities for all.	
10/21/2021 15:24	Brevard		No	Yes			2-5 times	Boating Wildlife viewing		Removed	Removal of the dam would allow the flow of natural springs that were covered by the reservoir and allow for one of Florida's most wild rivers to run free again.	Invasive aquatic plant removal would have to continue on the reservoir costing money and at great expense to the environment.	
10/21/2021 15:30	Orange		No	No					To reunite the Ocklawaha and St. Jones Rivers	Articles about the benefits of the project and data and information from the 1000 Friends of Florida	The water quality continues to diminish and the negative impacts on fish and other wildlife.	Would have to know what they options would be and impacts.	
10/21/2021 15:34	St Johns		Yes	Yes	1 time	1 time	1 time	Wildlife viewing	Open the waterway please!	We need to reunite the rivers and make Florida river's cleaner for people, pets and sea life.	Sea life and lives are at risk	Fundraising	Educate in public schools
10/21/2021 15:34	Nassau		No	Yes			1 time	Wildlife viewing	reuniting rivers	benefits the fish	Springs should be submerged	energetic walkers	thank you for your attention
10/21/2021 15:34	Duval		No	No					connect the rivers; breach the dam	St. Johns Riverkeepers	further degradation of Florida rivers	no	
10/21/2021 15:35	St Johns		No	Yes			1 time	Other: Just wanted to see it----	Restore the river!!!	Numerous reviews of the value of restoring free flow of the river	Continued water quality issues in Silver River and St. Johns Rivers	Not really---	
10/21/2021 15:38	St Johns		No	Yes		1 time		Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier.	100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Educate the children in public schools. Have them help to fundraise!
10/21/2021 15:41	Outside of state / other	usa	No	No									
10/21/2021 15:42	Brevard		No	No					Restore the river by removing the Rodman Dam- open it. Let the waters flow.	Problems with algae blooms, dying sea grass fish kills and manatees dying will be improved with increased water flow.	loss of wildlife, including fish as a food source	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/21/2021 15:43	Hillsborough		No	Yes		1 time		Other	Free flow of water	Manatees can not travel to the many springs and eat the invasive water plants	Sediment built up would need dredging		
10/21/2021 15:44	Nassau		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers	Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.
10/21/2021 15:46	Duval		No	No					I strongly support removal of the Rodman/Kirkpatrick dam to restore the free flow of the Ocklawaha River. The restoration of wetlands, springs & habitat destroyed by the dam would be a big win for Florida's embattled natural environment.	A) I understand it, the aging dam, if retained, would require millions in repairs. Set against those costs is the restoration of Ocklawaha, the Silver & the St. Johns Rivers and 50 springs - at a time when Florida's rivers, underground aquifer, and creatures like the endangered manatee would all benefit greatly from the dam's absence. This seems a no-brainer to me.	The St. Johns River estuary, already under pressure from development and the increased saltwater intrusion from Port-related dredging, would further deteriorate, while taxpayer funds would be wasted on a dam whose public benefit is negligible. No flood control, no power, why do we need it?	No. It seems to me eliminating the dam is decades overdue. At this point, retaining it is more unsafe than breaching it; and we need the improved water quality and wildlife habitat right now. The Ocklawaha River is the very heart of the Great Florida Riverway. Elimination of the Rodman dam will reunite this 217-mile stretch of Florida rivers with benefits to communities and ecosystems all along that route. At a time when Florida homeowners are anxious about rising sea levels and out of control algae blooms, this restoration of river flow will support coastal resiliency while also enhancing water quality and flow and improving wildlife habitat. Please support the breaching of the Rodman dam & restoration of the Ocklawaha River.	I'm a homeowner and and taxpayer who cares about environment and wildlife and I am not alone. Even in today's insanely divisive political atmosphere, one subject I find my friends of all political leanings agree on is their love for Florida's rich natural world. Florida's natural beauty is at the heart of its attraction not only for those of us who live here but also the millions of tourists who form a central core of the state's economy. This is a rare and timely opportunity to do something right with economic & environmental benefits to the surrounding areas.
10/21/2021 15:46	Osceola		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored; 15,000+ acres of restored Florida Wildlife Corridor enhances Florida wildlife and natural recreation areas for everyone.	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.

10/21/2021 15:48	St Johns		No	Yes			1 time	Fishing Canoeing / kayaking Boating Hunting Wildlife viewing	Remove it.	Restoring water quality to the Saint Johns river	I don't have any. It's a failed project that need to be fixed	No.	
10/21/2021 15:48	Marion		No	Yes			2-5 times	Canoeing / kayaking	Allowing the river to flow freely by removing or breaching the dam.	Restoration to more natural state and flow of three river systems : Ocklawaha, Silver and St. Johns	The continued degradation of the Silver River and ecosystem.	No	
10/21/2021 15:51	Hillsborough		No	No					Please open the dams	I want everything to go back to how Nature intended	All the harm that is being done to the fish animals plants and humans	No	
10/21/2021 15:53	St Johns		No	Yes			1 time	Fishing Canoeing / kayaking	Tear it down and restore the flow of the Ocklawaha River and let the submerged Springs be seen again! Let the natural fish habitat be restored so that the Silver River can return to its historic route and the natural wildlife cycles in and out of the water can resume.	I have lived in the area on and off for decades. There is no reason to believe that the local fishing-based tourism industry will be impacted and if anything the environment for fish will be improved thus creating more local job opportunities not less, including in the Kayaking business.	The Florida river system will continue to choke and die. More and more springs access will be lost as they also stagnate and die. Any hope of natural traditional fish mating and seasonal migration route restoration will be permanently lost.	No.	Look, we've let this artificial abomination stand for far too long as it is. It has been long since past time to tear down the dam and let the natural flow be restored and let the floodplain return to nature. No good thing has ever come from these ditch engineering projects from the 20th Century! Even now Florida is working to tear down all of the redirected drainage from the south into the Everglades to restore the natural flow and that is exactly what should be done for the Ocklawaha.
10/21/2021 15:53	Marion		No	Yes				Other: Fished on it one time back in the 80's	Restore the Ocklawaha, get rid of the dam	Clearing up Silver Srings & Silver River so the fish can come back, especially the algae eaters.	Silver Springs will be a dying spring & the river too.	No	I remember the river back before the dam was built. The Springs had such clear water and lots of fish. I was shocked when I went back in the late 70s & 80's & saw what had happened. I realize there may be some other factors that made the water awful but I believe the restoration will greatly improve the Springs.
10/21/2021 15:54	Marion		No	Yes		1 time	2-5 times	Wildlife viewing	restore the river as it originally was	Interruption of wildlife migration upriver	Loss of wildlife.	No	
10/21/2021 15:54	Hillsborough		No	No					Clear water	Aquaforinoz@friends	Pollution and wildlife decay	Open the dam and let water run naturally	Save our springs
10/21/2021 15:55	Marion		No	Yes		2-5 times		Wildlife viewing Other: River watching especially at Eureka.	I want to ride a small pontoon boat from the Silver or Ocklawaha River to St John's River. Ocklawaha Lake above Hog Valley and it's endless piles of deadwood aren't pretty or natural. . I want to see the Kirkpatrick Dam opened up and eliminated so that the reservoir may become the natural lands and springs it was before.	The most important information that supports my desire is the Natural flow that will once again allow the fish and game habitats, as well as, the Beauty will be restored.	My biggest concern is the continuation of a big watery mess of a lake as well as the gradual deterioration of an already faltering dam or worse yet the expense of a new dam. The across Florida Canal hasn't happened, not likely to. That idea has been ditched. Sorry. No pun intended.	Not that I have heard told or thought of yet.	Come out and drive that dirt road from Hog Valley, by the deadwood piles and the messy lake to the dam. You'll see what I'm saying. Thank you.
10/21/2021 15:56	Marion		No	Yes	1 time	1 time		Other: see how dam is effecting free flowing water	remove dam put back to natural from eliminate government mistake	i have seen what it loos like back stream	it will always be there		put back to natural there are plenty of places to fish in FL
10/21/2021 15:58	Duval		No	Yes			1 time	Wildlife viewing	The dam needs to be removed to allow the free flow of the river	Manatees are kept from navigating to the spring.	Degration of manatees and fish continue to be blocked as well as the cost required to keep the dam operational	No	
10/21/2021 15:59	Pinellas		No	Yes			1 time	Boating	Remove the dam and restore the natural flow of the river.	The dam is falling apart and there is no funds or reason to put millions into it.	The dam may accidentally break and damage life and property down stream.	No	
10/21/2021 16:04	Putnam		No	Yes		1 time	2-5 times	Boating Wildlife viewing	I would like the Rodman Reservoir and the Kirkpatrick Dam removed and the Ocklawaha river restored to its natural flow.	The positive results of drawdown. Restoration of the natural springs along the Ocklawaha will improve Manatee habitat.	I live across from the mouth of the Ocklawaha River. If the dam fails, my residence will be flooded and destroyed.	Yes, the dam's original purpose, the cross Florida canal, was never realized. Wildlife habitat, Fishing, and flood control will improve with the dam's removal.	Opening of the waters from the St. Johns to Silver Springs will enhance tourism.
10/21/2021 16:04	Wakulla		No	Yes			1 time	Wildlife viewing	Damn removal and restoration of the Ocklawaha	The pope environmental condition at the Rodman Reservoir and its lack of utility to the river system	Continued degradation of the reservoir and river	No	
10/21/2021 16:05	Marion		No	Yes			1 time	Canoeing / kayaking	Remove the dam, restore the natural flow	Dam is a disaster waiting to happen. Being a native Floridian I've seen many significant rainfalls even without a hurricane that could easily top the dam	Flooding danger. Continuing degradation to our environment	No	Tax revenues are tight, why continue to spend our $'s on a fools errand that began half a century ago. Nixon got it right by mixing the canal, let's follow through and begin to heal our errors from the bad decisions of the past
10/21/2021 16:05	St Johns		No	Yes			More than 5 times	Fishing (shoreline/structure)	Free the Ocklawaha River to its natural state	We need to restore the wetlands to its natural state. The damn has so many different negative impact on the St. Johns River also.	We need to restore the wetlands to its natural state. The damn has so many different negative impact on the St. Johns River also.	No	
10/21/2021 16:05	Alachua						1 time	Canoeing / kayaking Wildlife viewing	Remove the dam. Restore free flow open the river and adjacent land to healthy wild state.	Dam is not serving any valid purpose. Cost of repair is high and unnecessary. Restoring flow to both rivers will improve environment for both animal and humab	Dam failure could do serious dammage.	Not really. The dam is pointless and poses a threat to downstream environment	Springs and rivers are essential to healthy environment and provide substantial tourist revenue.
10/21/2021 16:08	Duval		No	Yes			1 time		Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam to reunite the natural connection of Silver Springs, the Ocklawaha and the St. Johns River.	The science supports restoration. Studies by federal and state agencies have clearly demonstrated that restoration of a free-flowing, connected system is cost-effective and will provide significant ecological benefits to the St. Johns, Ocklawaha and Silver Rivers as well as Silver Springs.	We miss a historic opportunity to stop the ongoing ecological degradation caused by the dam and finally reunite the natural flow of these rivers. Breaching the dam would restore the natural flow of 150 mgd of fresh water, improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. A free flowing Ocklawaha will reestablish 15,000 acres of forested wetlands and fortify downstream submerged grasses from Welaka to Jacksonville in the St. Johns River that are critical to river health and fish habitat.	No. Breaching the dam and restoring the Ocklawaha are 50+ years overdue. Dam safety issues and improved water quality, wildlife habitat, and recreational opportunities can't be ignored or delayed any longer.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/21/2021 16:09	Alachua		No	No						Removed	Returning the waterways to natural state		
10/21/2021 16:09	Pinellas		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	100s of manatees gain essential warm water winter springs habitat.	Hundreds of manatees lose the opportunity to access essential warm water winter habitat.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/21/2021 16:10	Duval		No	Yes			1 time		I would like to see the Kirkpatrick Dam destroyed.	The time has come to finally free the Ocklawaha River and reconnect the Ocklawaha, Silver and St. Johns Rivers. Breaching this dam will re-establish access to essential habitat for manatees, bring back migratory fish, reconnect three river ecosystems, historic Silver Springs, and restore a lost riverway for anglers and paddlers from the Ocklawaha to the Atlantic. From the St. John's Riverkeeper - Benefits to the St. Johns River from the restoration of the Ocklawaha include: RESTORATION OF CRITICAL FRESHWATER FORESTED WETLANDS 8,000 acres of forested wetlands are currently stressed in the lower Ocklawaha River due to restricted flow. 7,500 acres of forested wetlands are currently submerged in the Rodman Pool. WATER QUALITY IMPROVEMENTS Restoration of over 15,000 acres of forested wetlands will greatly enhance bio-filtration and improve the ecological function of the St. Johns River Ecosystem. DILUTION OF INCREASED SALINITY Restoring the natural flow of more than 300 million gallons of freshwater flow per day from the Ocklawaha River to the St. Johns River will offset a portion of the increased tidal force from the dredging that will push the saltwater wedge further upstream. HABITAT RESTORATION FOR FISHERIES AND ENDANGERED SPECIES Restoration would restore natural migration patterns by allowing eel and migratory fish, like shad, striped bass, channel catfish and mullet, to access the upper parts of the river and Silver Springs. Wildlife, such as black bears and the endangered manatee, would benefit by restoring land and water connectivity and providing additional habitat. EXPANSION OF RECREATIONAL OPPORTUNITIES In addition, the Ocklawaha River Restoration will benefit Silver Springs which is currently impaired from nutrient pollution and a severe reduction in flow.			
10/21/2021 16:14	Alachua		No	Yes		1 time	More than 5 times	Fishing (shoreline/structure) Wildlife viewing	Completely removed and drawn down	water quality in the river, habitat quality in the floodplain, restoration of freshwater springs, economic opportunity for residents of the area, recreational opportunity for all	continued denigration of ecosystem health and stagnation of local economies	Probably but it's hard to imagine partial removal of the dam and incompletе or temporary drawdown that could result in the restoration of floodplain forests	
10/21/2021 16:16	Orange		No	No					I would like it to be removed.	The opportunity to restore this riverway for wildlife	The obstacles that it will reopresent for migrating marine life	No	
10/21/2021 16:24	Marion		No	No					DEMOLISH THEM SET THE WATER FREE	Manatees and other natives species, animal and plant are dying because of lousy water flow that the obsolete unused dams prevent.	DROUGHT AND DESTRUCTION OF OUR LOVELY RIVERS	none	Time for the iglwmd people to work for the PEOPLE not nestle and save our waterways, in my opinion.
10/21/2021 16:25	Pinellas		No	Yes		1 time		Canoeing / kayaking	Whatever is ecologically friendly				
10/21/2021 16:31	Collier		No	Yes		2-5 times		Fishing (shoreline/structure) Wildlife viewing	Removal of the dam, why after 60 years can't someone say the original decision was flawed?	The lost of natural habitat, increased chemical runoff pollution which leads to severe red-tide pressures now is the time to end it	We lose the Everglades	Only the gov't would shoot for less than optimum. Proof that this is a complete political budget expense to keep your brother in law employed and a truck. Let the River decide	
10/21/2021 16:37	Miami-Dade		No	No					Restore the Ocklawaha River by BREACHING the Rodman/Kirkpatrick Dam!	The Rodman Dam impacts 3 natural rivers, more than 50 springs, and over 15,000 acres of forest wetlands. It prevents the natural migration of our State's native fish & PROHIBITS HUNDREDS OF MANATEES FROM OBTAINING REFUGE & FORAGE IN COLD WINTER MONTHS. The latter is a critical point, as we have had the worst year so far in manatee deaths in years, and they should be placed back on the federally endangered list. BREACHING the dam will restore freshwater flow, uncover "drowned springs" in the Silver Springs ecosystem, which are essential manatee habitat, & provide thousands of acres within the Florida Wildlife corridor for birds, bears, panthers, and other native wildlife. Restoration will provide 150+ million gallons of natural freshwater flow daily to the Lower Ocklawaha & St Johns Rivers, making them more resilient to saltwater intrusion and improving downstream water quality. The dam is over 50 years old, has surpassed its life expectancy without EVER being used for its intended purpose. With restoration, estimated 4 to 14 million dollars in dam repairs will be saved from taxpayer's pockets! As a native Floridian, restoration of these 3 rivers and breach of the un-natural dam would create recreation, jobs, and economic wins for the surrounding communities.	If this action is not taken, Florida will miss the best opportunity to provide essential warm water & forage habitat for our manatees, WHO ARE DYING AN AN ALARMING RATE. breaching the dam will allow manatees to pass safely for the first time in over 50 years, and native fish species will thrive as well with free passage.	NO THERE IS NO OTHER OPTION! Breaching the dam is 50 years overdue. Improved safety, water quality and native wildlife cannot wait.	As a native Floridian who cherishes our wild rivers and native species, I urge you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a brighter future for our state's people and wildlife. Most critically, it may be the manatee's only hope if their numbers are to recover to a level to continue the species.
10/21/2021 16:38	Alachua		No	Yes	1 time	2-5 times	2-5 times	Canoeing / kayaking Wildlife viewing	I would like the dam removed sufficiently to restore the Ocklawaha River to a free flowing river.	Manatees have been killed by presence of the dam and its locks, and are prevented from using habitat up river that used to be an important resource for their survival. Restoring the free flowing river would greatly benefit manatees.	Not restoring the river would be bad for manatees and other wildlife, would continue to damage the St. Johns River, and would be a waste of tax payers dollars.	No.	Please restore the Ocklawaha River. It is time!
10/21/2021 16:42	Marion		No	No					return to natural state. It serves no purpose for most people.	I used to be able to boat down the ocklawaha river. Fish and catch bass and not have to worry about getting through all of the downed trees.	The water flow from the area springs will continue to deteriorate, and the ocklawaha river will fall to very low levels of water possible to the point where it won't be navigable by any water vessel.	No, because mother nature is so complex that we don't know all of the consequences of doing anything short of converting it back to its natural state.	
10/21/2021 16:45	Pinellas		No	Yes	2-5 times	More than 5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	The wildlife left intact	The spring and wildlife	That the spring is available to us and the wildlife is left intact		
10/21/2021 16:46	Marion		No	Yes			1 time	Canoeing / kayaking	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored and 20 lost springs and Silver Springs ecosystem are restored	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This exciting restoration will improve water quality and flow by generating an additional 150 million gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
10/21/2021 16:48	Orange		No	No					I would like to see funds allocated to the permanent opening of the dam.	The overwhelming data from countless studies have shown daming rivers in the state of Florida has egregious environmental consequences.	The continued accumulation of pollution and dwindling of water level for Ocklawaha.	Reallocating funding for the dams repairs to a redirection into the river's original path.	
10/21/2021 16:52	Lake		No	Yes		2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	I would like to see the Ocklawaha River restored by breaching the dam in order t bring back a free flowing river.	The 100-mile St Johns Estuary from Welaha to Palatka is healthier and better for residents and wildlife.	Continued use of tax payers money spent to repair and maintain a dam that is deteriorating and does not provide	No. The existing dam is going to fail sooner than later. We should take the opportunity to use available State and Federal funding to breach the dam.	
10/21/2021 16:52	Alachua		No	No					I would like to breach the Rodman Dam and restore the Ocklawaha River as it was.	The dam is past its life expectancy, breaching the dam saves millions of dollars in dam repairs and upkeep. Taxpayers should not continue to repair and maintain a dam that is actively harming an ecosystem.	Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No, this is long overdue at this point! Restore the river.	It is our responsibility to make these changes for our environment and all our future generations of Floridians. This is urgent and needs to happen. There are so many other important things we need to spend our tax dollars on!
10/21/2021 16:55	Duval		No	No					Remove the dam to restore the flow of the Ocklawaha River.	Articles by the St. Johns Riverkeeper and Quinten White, executive director of Jacksonville University's Marine Science Research Institute. They describe the destruction of forested floodplains and submersion of 20 natural springs. The dam itself is aging and may be subject to failure, threatening nearby properties. Among other benefits, restoring the Ocklawaha will provide more fresh water flowing to the St. Johns River, helping to reduce pollution and salinity.	Continued deterioration of the health of our rivers and wetlands, springs and wildlife.	No. Fully restore the natural flow of the Ocklawaha River.	
10/21/2021 16:58	Pinellas		No	No					restoration of flow of Ocklawaha River through removal of the Kirkpatrick Damn	I cannot think of the most important. my research was done through the organization River be Dammed , which explained he history of the situation and the current environmental impacts. Also The Florida Springs Council supports the removal of the damn and restoring the flow of the Ocklawaha River.	not sure	not sure	
10/21/2021 16:58	Marion		No	Yes		1 time		Fishing					
10/21/2021 17:00	St Johns		No	Yes		1 time		Other	Rinash the dam to restore more water to flow into the St hohns	More fresh water is needed to combat salt water intrusion due to dredging of the St Johns in Jax	Missing an opportunity to restore the Ockawaha to its natural state	No	
10/21/2021 17:04	Indian River		No	Yes			1 time	Boating	Drain the reservoir and restore the river.	Impact on water quality and wildlife	More of the same	no	
10/21/2021 17:05	Duval		No	Yes			2-5 times	Wildlife viewing Other: Hiking in the Ocala National Forest and areas adjacent to the Dam/lake.	Restoration of the natural flow of the Ocklawaha River by taking down the Rodman Dam and connecting the Silver and St Johns Rivers, and Silver Springs.	Federal and state studies have shown significant environmental and economic benefits to taking down the Rodman Dam and allowing the natural flow of the river. These include reducing the increasing salinity in the St Johns River (SJR) , which is killing the grasses on which manatees as well as fish depend, by increasing the flow of fresh water to the SJR. A greater diversity of fish and wildlife, and access to the forested floodplain will bring new visitors and uses to this area benefitting local business. This would also be significantly less expensive than the costly repairs needed on the Rodman Dam and the draw down of the lake every few years.	Continuing degradation of the area around the Rodman Dam and of the St Johns River; poorer water quality, fewer fish and other aquatic creatures, and an ever growing cost to maintain the Dam. Federal and state dollars are available now and there is significant public support right now to make this happen, the opportunity should not be squandered.	No. The growing salinity of the SJR is of increasing concern as is the safety of the Rodman Dam. There is no halfway solution to breaching the dam and restoring the river and more than 50 springs.	Thank you for this opportunity. I am a hiker and birder and spend a lot of time outside in nature - one very good reason to live in Florida! But we must work hard to preserve what we have. Breaching the Rodman Dam and restoring the natural flow of the Ocklawaha River will accomplish many things of utmost importance to the local environment; a significantly greater flow of fresh water, over 150 million gallons per day, into the SJR from the tributaries and springs; improved environment for grasses to grow in the river to support manatees, a marine mammal special to Florida, as well as a greater diversity of fish, and which will improve the entire river ecosystem. 2021 is already proving a deadly year for manatees; we need to do everything we can to reverse this trend. It will also add 15,000 acres of forested wetlands to be explored by hikers and birders for which there is a ready market. Thank you for asking for my opinion through this survey and I look forward to learning of a positive result in your decision-making.
10/21/2021 17:05	Duval		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing	Please leave it alone	The eco system is thriving and should not be mecsed with.	Killing of all of the plants and animals	No	
10/21/2021 17:06	Duval		No	No					Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam to reunite the natural connection of Silver Springs, the Ocklawaha and the St. Johns River.	The science supports restoration. Studies by federal and state agencies have clearly demonstrated that restoration of a free-flowing, connected system is cost-effective and will provide significant ecological benefits to the St. Johns, Ocklawaha and Silver Rivers as well as Silver Springs.	The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam and restoring the Ocklawaha are 50+ years overdue. Dam safety issues and improved water quality, wildlife habitat, and recreational opportunities can't be ignored or delayed any longer.	This exciting restoration will improve water quality and flow by generating an additional 150 million gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
10/21/2021 17:07	Jackson		No	Yes		2-5 times		Fishing Canoeing / kayaking Boating	Get rid of the dam and save the springs	Research			
10/21/2021 17:08	Citrus		No	Yes		2-5 times		Other: Visual inspection to develope perspective on the State's water management function.	Remove the dam and return the river to its original state. The dam was built to support the Cross Florida Barge Canal project which was terminated nearly 50 years ago.	State of Silver River/Springs and St. Johns river.	What will residents in northeast Florida do to access clean water and water based recreation.	Not certain, open to discussion on that.	I have witnessed the near complete destruction of the state's waters in my life. It is a sad legacy to pass to future generation. There was a time when our waters were clear and abundant, as were fish and other wildlife. We are better than that and have the means to restore these systems. There is nothing in the state constitution that guarantees that Florida must be cheap and mediocre.
10/21/2021 17:09	Alachua		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Thank you for your considerations. Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.
10/21/2021 17:10	Outside of state / other	North Carolina	No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Tear the dam down. It's a vestige of a long-ended canal project that never should have been constructed. Restoration of the Ocklawaha will improve the ecosystem -- a river that could easily generate ecotourism given its old grandeur.	For all the talk of bass fishing, fish size has been in decline for decades. The river is fed by lakes further south and the lack of flow in and out of the watershed causes nutrient buildup.	Continued decline of the ecosystem health.	Not being a resident, I'll support any final decision, but as a native Floridian and lover of North Central Florida's natural resources I would love to see a solution that aids in the restoration of the river's original flow and a return to a more managed habitat. The dam should never have been built, and it doesn't generate much of an "economy." Fort White and neighboring communities have been in decline for years.	
10/21/2021 17:10	Hillsborough		No	No					I would like to NOT see the Rodman Reservoir. Please take down the dam	Manatee habitat and dam maintenance costs. When the state can increase one while lowering the other, it seems like an easy choice.	That we will continue to spend money that could be put to far better use for any number of generative and/or sustainable infrastructure projects to simply maintain a lovely fishing spot	I don't see a way to balance the environmental and economic impacts of the 2 opposing sides. But if you found a way to cut the ridiculous maintenance costs and still keep the some form of reservoir (and continue to address the fertilization run off issue) while allowing for better manatee access and improve upstream migration, I would be all for it.	
10/21/2021 17:11	Marion		No	Yes				Other: Fished on it one time back in the 80's	Restore the Ocklawaha, get rid of the dam	Clearing up Silver Srings & Silver River so the fish can come back, especially the algae eaters.	Silver Springs will be a dying spring & the river too.	No	I remember the river back before the dam was built. The Springs had such clear water and lots of fish. I was shocked when I went back in the late 70s & 80's & saw what had happened. I realize there may be some other factors that made the water awful but I believe the restoration will greatly improve the Springs.
10/21/2021 17:13	Seminole		No	Yes			1 time	Other: hiking shoreline	Dam removed and river returned to pre-dam condition	our aquafer is declining rapidly, the fishing is no longer locally profitable, passive recreation is the best use	Loss of an extremely beautiful and fragile piece of the puzzle of our Florida Corridor	no	Follow science.
10/21/2021 17:15	Duval		No	Yes			2-5 times	Boating Wildlife viewing	I would like to see the dam removed.	The removal of the dam should improve the health of the St. John's River by allowing the springs to flow again. It would help with the salinity issue in the river.	The river will continue to struggle.	No	
10/21/2021 17:16	Alachua		No	Yes			1 time	Wildlife viewing	Remove the dam and restore free flow to the river.	loss of access to various fish species through the reservoir and habitat destruction caused by polluted water	Continued habitat destruction and the impact on marine and other wildlife		
10/21/2021 17:17	Gadsden		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	I support breaching the Kirkpatrick Dam to restore the Ocklawaha River and Springs with eventual removal of the Dam.	At a stroke, taxpayers could be relieved of the burden of financing the upkeep of a dam that is actively harming an ecosystem and is past its life expectancy while also restoring 20 springs currently drowned by the Rodman Reservoir.	The dam is currently unsafe and we should take advantage of available funding immediately that won't be accessible if we wait.	If the level of the Rodman Reservoir could be reduced to the point that the drowned springs are restored and that other ecological issues are addressed- manatees provided access to warm water winter habitat, historic routes for migratory fish restored, algal bloom events reduced.	Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs, one of the largest artesian springs in the world.

10/21/2021 17:18	Monroe		No	Yes		1 time	2-5 times	Fishing Canoeing / kayaking Wildlife viewing	I would like the proposed breach to become reality so the St John's River can be restored.	I think you should ask yourself the same question. This state has been used. I think that's a fair term. The Springs, The St John's River, Central and NE FL have been developed to no end. In school, we read a book it showed black and white photos of the Everglades in the late 1800s before the Army Corp of Engineers destroyed it. It showed massive live oaks and beautiful Orchids, huge Cypress trees and then modern day pictures as the infrastructure was built to modern day. When looking at this picture I immediately thought of Central Florida and my mind was baffled when I realized what I was actually looking at. I've traveled this entire state and most of the Country. The Springs in Florida have always been and will always be my favorite place. There is an undeniable magic to the color of the water, the big beautiful trees and amazing wildlife. Sadly most people only know of Disney or Miami. When you bring up the Springs only a select few know and have been and can truly appreciate how special they are. My journey started as a young boy reading about the Springs in NatGeo. No one in my family gave a damn and therefore I didn't make it to the Springs until the day I got my driver's license in Lantana FL. I went took the exam, passed and 4 hours later I was sitting on the Sante Fe River looking down the Devils Eye. It forever altered my course in life. I am a Master Naturalist and trained in Washington DC at the Audobon Naturalist Society and vested a lot of my time working with the Potomoac Watershed. The area near Anacostia is immensely beautiful but is so pollsted that swemming is prohibited. I wondered how could our Nation's capital with a big beautiful river be so polluted that you can't swim or eat fish from it. Shouldn't that be the one place that we set the best example? The streams that run through Rock Creek are all designated red. Some of the brightest minds in the world all conclude its not fixable. There is too much concrete and traffic and so much erosion the streams simply have no way of being restored. It's called the whooshing effect. It's what happens when water runs off a road and into a river or stream. always thought back to the book I read with the pictures of the Everglades and my sanction the beautiful springs in Florida. We have taken advantage of the situation, plain and simple. If not for the water, what do we have? If you don't make the difference why will the next guy? Don't let this become the Anacostia.	My biggest concern is we keep passing the buck and it's blatant greed. We only have one life to live so make a difference. Be the person who starts giving a damn. No pun intended. If we have the opportunity to restore things to how they were before and it does so many things for the right reasons. How dare we not. Shall we wait for our kids to do it? What kind of example are we setting? When they have to do and every one of us is dead and gone will that money we made be worth anything? The only outcome is the right outcome. Breach the Dam. Do it because it's the right thing to do and we have done the wrong things for far too long.	None, this is a bullshit question. It's like serving oysters with no hot sauce. Let the river run wild and take pride in our back yard because no one else will.	When you were a kid what made you happy? I can't believe it took something so old as dam a river and swimming. When you come to South Florida and ride the Turnpike and see nothing but development and man-made canals does it inspire joy or happiness? It's been destroyed. You know it, I know it and so does anyone else that takes a moment to think about it. We could have done better, we should have done better and we did jack-shit. There is still hope for North FL. It's an opportunity to do the right thing so your backyard doesn't look like a Miami suburb. I for one always thought Florida would have been far more beautiful if everything wasn't built in a straight line. Imagine a Florida with windy roads and beautiful views nice clean water that supports our wildlife and I don't know people that are happy? Not working 80 hours a week to feed your family and a landscape that looks like a clown ass raped it. Do yourself a favor, fly over the Bahamas and look down. You'll see what it once looked like. All of these developers create jobs, JOBS JOBS. What good does that do an eco-system that is quite literally destroyed. It's undeniable. I take a ride over to Ft. Pierce and look at the Indian River Lagoon. I am 37 years old. As a kid and teenager I could swim with a Snorkel in the lagoon. Good luck with that today. This is what makes me so angry. It used to be us hearing these stories from generations. This is in my lifetime. I can tell you square in the face it's changed and changed significantly. Maybe there is no hope, I have yet to make that call but unfortunately I lean towards it. Just let the whole damn thing go. It's going anyway. Maybe that should be your approach. Continue the self-indulgence and build more shit. Who cares. I CARE.
10/21/2021 17:18	Alachua		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	remove the dam, bring back boat rides from Palatka to Silver Springs	St Johns riverkeeper info	20 springs would still be hidden	must get rid of dam	
10/21/2021 17:19	Outside of state / other	Maine	No	No									
10/21/2021 17:23	Marion		No	No					Complete deconstruction	Environmental conservation and economic growth factor.	Destruction of Florida's ecosystems and species endangerment	Creating a bypass water way around the dam	
10/21/2021 17:24	Pinellas		No	No					I would like to see the Dam removed.	In Florida our environment is our economy. Our Florida Springs need our protection. At one point we didn't think we could damage the waters around and through Florida. Our water system was too vast. Now we know differently. Now we know how precious our water and our water systems are in Florida.	Ecosystem from the St. Johns River to Silver Springs and beyond have been disrupted. Boats cannot navigate the river systems due to the dams. This will continue further disrupting eco businesses and fishing.	To me no there is not.	
10/21/2021 17:26	Alachua		No	No					Changes to make the river free-flowing allowing for more natural flow downstream including the restoration of hidden springs.	The river is healthier with more wildlife, including game fish, without the dam.	The river's health will decline and the safety of the dam and downstream are at risk	I don't see a midpoint between keeping and removing the dam.	With the removal of the dam, the area needs to supported with grown infrastructure and eco-tourism funds that will increase support of local businesses.
10/21/2021 17:28	Duval		No	No					I'd like to see the waters reconnected the way God intended.	The fish need to swim freely and naturally through the system.	The waters are just going to become more yucky.	No	
10/21/2021 17:30	Marion		No	Yes			1 time		The dam to has to come down to save the very fragile and important part of the florida waterway.	The current state of the river and the acceleration of the demise of water quality, vegetation and animals is a direct result of the existence of the dam.	The death of a huge ecosystem for the sake of a fishing lake . And I do fish!	I doubt it.	
10/21/2021 17:31	Miami-Dade		No	Yes		1 time		Wildlife viewing Other: Paddleboarding	Restoration of the natural habitats	The current configuration has harmed wildlife for 50+ years. It must be reversed.	Continued destruction of natural wildlife (land and water) habitats.	My desired outcome doesn't take much to enact, thus nothing less is acceptable.	The ecology of the area has been devastated directly from man-made constructs and environmental reconfiguration. The surrounding area should become a state park and protected.
10/21/2021 17:42	Marion		No	No					Get rid of the dam! Restore the Ocklawaha.	Manatees need access to habitats now more than ever. Silver Springs and many other springs would benefit from getting rid of the dam.	The dam is old and in disrepair. It will give way and it was created for a project that never existed!		
10/21/2021 17:43	Alachua		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	We would like to see it removed.	Wildlife preservation	Loss of habitat.	No.	
10/21/2021 17:45	Alachua		No	Yes		1 time	2-5 times	Canoeing / kayaking Wildlife viewing	I would like to see the dam removed and the waters returned into a free flowing river instead of a stagnant reservoir.	The cost of maintaining the dam and reservoir are unnecessary expenses to our state budget.	The environment needs to be returned to its original state, so the water can go downstream unimpeded and manatees can swim upstream again.	Rodman dam and reservoir are blemishes on nature that need to be removed.	I am 65 years old, and a second-generation Florida native. There are many fishing and boating opportunities in the state. Returning the Oklawaha River area to less intensive use is what I wish to leave for my children and grandchildren.
10/21/2021 17:45	Collier		No	Yes			1 time	Canoeing / kayaking	Please remove the Rodman Reservoir...it has been planned for years and is much needed to correct past damage to our beautiful rivers.	My family canoes the Silver River and the Ocklawaha River ....we travel from southern Florida to canoe these rivers because of the remaining wilderness and the beauty . Removing the dam will restore the flow and beauty of these rivers.	It will be a failure to not correct our past errors. The Ocklawaha River has been impacted by engineering, primarily for the ill-fated Cross Florida Barge Canal .....an ill conceived project. The Rodman Dam is a remanent of that project. The dam stops the Ocklawaha journey and creates a large backwater.	No.	
10/21/2021 17:46	Lake		No	Yes			1 time	Boating Wildlife viewing	Breach the dam and restore the Oklawauha river back to it's original state.	It would bring fish back to the Harris chain of lakes that no longer are in your chain. I believe it would improve the eco system on the Harris chain of lakes	Further erosion of the Harris chain of lakes.	The least that should be done is breaching the dam.	This dam was built for a 50 year life span, we have reached its life span. Eliminate the dam.
10/21/2021 17:46	Alachua		No	Yes			1 time		Open it	What is best for the wild life		Not sure	
10/21/2021 17:51	Gilchrist		No	Yes			2-5 times	Other	Remove the Kirkpatrick Dam	This would allow fish and manatee passage, restore the flow from the springs. Restore the natural environment.	Loss of beneficial habitat at a time when the state has seen record number of manatee deaths due to human destruction of their environment.	NO. This dam should never have been placed.	Please consider this at a time when funds are available to complete this work. Any cost impacts are offset by the environmental benefits and reduction of long term maintainance costs.
10/21/2021 17:57	Duval		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Canoeing / kayaking Boating Hunting Wildlife viewing	save it for our future	love to go there ,fishing ,wildlife habitat	happy	no	
10/21/2021 17:59	Gilchrist		No	Yes			2-5 times	Boating Other: Performed spring discharge measurements and WQ monitoring services for the SJRWMD (as their contractor).	Complete dam removal and restoration of the Ocklawaha River channel and bottomland forests.	I had the unique opportunity to both observe and measure several of the now-submerged springs during both full pool and drawdown conditions, and the difference was dramatic. Discharge from them was severely repressed when the reservoir is full, and we were then able to see these springs 'jump to life' during drawdown, although even then still under the influence of extant reservoir level. These springs must be restored to what they were before reservoir creation. I also observed how the reservoir levels create the conditions that cause floating water vegetation to block the river upstream, making it impossible to navigate.	The Rodman will continue to senesce into the mud and sediment filled stump-farm slop hole that it has already become. As a taxpayer, I consider it absolute insanity to use any public funds to repair/maintain the dam, gates and locks when such funds could be used for removal and restoration.	NO!	I have also worked extensively (for the SJRWMD) on the Silver Springs Group and River and I look forward to that day when the Silver Springs/River ecosystems will have it's connection to the St. Johns River re-opened and restored, and the fish and manatee populations that will be positively affected by that.
10/21/2021 17:59	Martin		No	Yes		2-5 times		Fishing Fishing (shoreline/structure) Boating Wildlife viewing Other: Camping	Keep it as is!	Rodman is an awesome water body that persists with minimal overhead. It's a tremendous fishery, rookery and is home to all sorts of wildlife. It also is a major source of positive economic impact to the surrounding communities.	The citizens of Florida would loose a beautiful asset. Additionally, the total short and long term restoration cost would be tremendous.	No	
10/21/2021 18:00	Hillsborough		No	Yes			2-5 times	Wildlife viewing	I would like to see the Ocklawaha River reunited with the St. Johns and Silver Rivers.	This would greatly benefit fish, manatee and other wildlife, and restore historic Silver Springs.	The riverine ecosystem continuing to be compromised, poor water quality, declining fish populations, and the manatees cannot get to warmer water.	No. This should be an unobstructed waterway.	We should be doing everything possible to prevent the dying off of the manatee.
10/21/2021 18:01	Alachua		No	Yes			2-5 times	Boating Wildlife viewing	Back to nature	The dam was built for the obsolete barge canal, not for other usages	Loss of natural Florida	No	This dam would never have been built but for the totally out moded idea of water transportation.. this is not Panama or Suez
10/21/2021 18:02	Brevard		No	Yes		1 time		Fishing	Remove it	Restore thalt nids natural flow of water	Loss of habig	No	
10/21/2021 18:03	Marion		No	Yes		More than 5 times		Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Hunting Wildlife viewing	Restore all to their original state	WATER QUALITY! Loss of natural habitat, both on land in fresh and brackish water. Silver Springs native fish count is 1/2 of what it used to be. Invasive weeds throughout Ocklawaha river.	Continued destruction of natural habitats	Possibly	
10/21/2021 18:08	Alachua		No	No					Remove the dam and allow the reservoir to drain and restore the natural flow of the Ocklawaha River.	The deterioration of the dam itself could/will cause even more harm if/when it fails.	The state will be spending more resources trying to save a lost cause, further destroying more natural features--just making a bad situation worse for years to come.	Not really, it seems to be a binary situation--reservoir or naturally, freely flowing river.	Dams are generally built to store water (usually for consumption and/or agg use), generate power, control and protect downstream flood plains, etc.--all noble causes. This one was built for a totally different and long debunked purpose. Unlike the other great cross-land waterways (e.g., the Panama and Suez) this canal sliced through whole environmentally sensitive areas of a tropical land. This last vestige of that mistake defies logic--trading disruption of many natural features for a good fishing hole.
10/21/2021 18:11	St Johns		No	No					Do everything necessary to remove the Kirkpatrick Dam in an environmentally appropriate manner. This is long overdue and it's time to begin recovering from the years of environmental and ecological damage this dam has caused.	The Kirkpatrick Dam has disrupted the natural flow of one of Florida's most valuable natural resources - water - and with that, the natural ecosystem of three of Florida's most important tributaries of the St. Johns River. Flora and fauna have been negatively impacted for the past 50 years.	Failure to eliminate the Kirkpatrick Dam at this time could cause permanent and irreparable harm to the flora and fauna within and around the watershed for the Silver, Ocklawaha and St. John's Rivers.	No. The Kirkpatrick dam should have been eliminated years ago when it was determined the cross-Florida River Barge project was halted.	The state of Florida's needs to have the Kirkpatrick Dam removed. I realize this is a courageous decision our leaders are faced with at this time, but I feel strongly that the decision itself is an easy one to make. Eliminate the Kirkpatrick Dam.
10/21/2021 18:12	Alachua		No	No					The Kirkpatrick Dam removed along with the Rodman Reservoir	Press the St. John, the Oklawaha, and numerous springs	the degradation of the rivers and springs	no	
10/21/2021 18:13	Broward		No	Yes		1 time		Fishing Boating Wildlife viewing	leave it exactly how it is	the wildlife habitat is incredible . the fishing is next to none . It supports not only a very diverse wildlife but it also provides for tourism and supports many family businesses . to drain this lake would be a tragedy and a colossal mistake . I can not believe someone would even entertain such a foolish thing . my time spent there was one I will never forget and I have sense told many people about my adventure . There is an old saying , if it ain't broke , don't fix it . please leave this lake alone . Thank you	That you would have destroyed a beautiful thing and it will be gone forever . this would be a shameful and sinful thing .	NO	
10/21/2021 18:14	Outside of state / other	nt currently stationed in New Orlean	No	Yes				Fishing Other: Fished Rodman as a kid	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St Johns Rivers, and 50 springs are restored	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	I have traveled the globe during my nearly 29 years on active duty, and the beauty of the Ocklawaha River is hard to beat. It is time to restore the Ocklawaha that was needlessly disrupted for the folly that was the Cross-Florida Barge Canal. Restore her to her natural state!
10/21/2021 18:16	Seminole		No	Yes	More than 5 times	More than 5 times		Fishing	Maintained as is	Ecosystem	Overdevelopment	No	
10/21/2021 18:16	Seminole		No	Yes		2-5 times		Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick dam. Every day that the dam is in place harm to the economy, water quality and wildlife is inflicted throughout the Great Florida Riverway.	15,000 acres of the Florida Wildlife Corridor will be restored or enhanced for wildlife.	Thousands of acres of forest are not restored that could greatly improve wildlife habitat.	No. Breaching the dam is 50 years overdue and the wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife I am asking you to restore the Ocklawaha River to ensure a bright future for this state's people and wildlife. Restoration will restore the many springs that have stopped flowing. Restoring the springs is the only way to improve the water flow that is essential to wetland habitat for birds and other aquatic creatures, clean spring tp'per at use water for manatees and forests for other wildlife like the Florida Panther who's success depend on the Florida Wildlife Corridor. Thank you for your consideration.
10/21/2021 18:19	Alachua		No	Yes			2-5 times	Wildlife viewing	I would like to see the Dam breached to restore the Oklawaha river. The dam only harms the economy, water quality, and wildlife in the area.	20 lost springs and Silver Springs ecosystem are restored. As someone who regularly sees the vast amounts of income gained by springs in Gilchrist County this is a no brainer on many levels from economic to ecologic. $4-14 Million in dam repairs saved on a dam past its life expectancy. Again. Stupid use of taxpayer dollars. Get rid of a dam that is no longer useful. 100s of manatees gain essential warm water winter springs habitat, and all the other animals and plants that need that water way.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	No. The dam had a potential purpose at one time, a bad one, but a potential one. That time has passed and the dam should be removed.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.
10/21/2021 18:21	Broward		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	Remove the dam and restore the Ocklawaha to its natural flow.	Flooding & pollution issues downstream.	Alluvial Ecocide	More frequent releases of water	
10/21/2021 18:22	Putnam		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Leave it the way it is.	If Rodman was taken down then most of the wildlife that call it home will have to relocate because there waters will be less than a third of what they have now ! Then they would have to rely on the already vegetation stricken St John's river thanks to the FWC and their spray communist that have all but destroyed that river as far south and north as it runs . You would never have a free flowing river when the headwaters is a man made dam that is controlled by Marion county . if we encounter another drought Marion county will shut the gates and starve the ocklawaha from the water it would need to sustain the manatees and other wildlife that need Rodman at full pool . You would have to destroy a whole chain of lakes to make the ocklawaha a true free flowing river .	The manatees and wildlife that call Rodman home will have to rely on a dead river to feed themselves	Nothing but leaving it as is	
10/21/2021 18:27	Pasco		No	No									
10/21/2021 18:29	Alachua		No	Yes	1 time	More than 5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Breach the Rodman and Kirkpatrick Dam.	Breaching would benefit all the drowned springs and the wildlife that depend on them and the access the dam prevents	It's a missed opportunity, spending money on repairing my would be wasteful as breaching is much more beneficial and cost effective.	No, breaching the dam is essential and long overdue.	
10/21/2021 18:31	Marion		No	No			2-5 times	Canoeing / kayaking Wildlife viewing Other: landscape photography	Breach the dam. Allow the overcrowded manatees of the St. John's population room to survive. Bring economic development to Marion and Putnam County.	The Four Alternatives Study by the SJRWMD. Economic impact from fishing is low and fishing will be better without the dam.	Lack of warm water refugia for overcrowded manatee population. Willfully ignoring Economic development opportunities.	no.	Please go back to the studies that have been done instead of allowing them to be hidden for political reasons. Factor in the current ongoing and future costs of the dam in the decision making process. There is an opportunity to do what is right and a strong leader will be recognized for leading.
10/21/2021 18:31	Gilchrist		No	No					Breach and restore the river	God designed the water flow and the springs need to return to natural flow	Survival of manatees	Nope	N/A
10/21/2021 18:31	Alachua		No	No					Have the dam removed/dismantled do the Oklawaha River can follow is natural course.	Water stagnation and manatee deaths.	Another ruined FL waterway.	Enough breaching of the dam to allow sufficient water flow to restore the health of the river.	
10/21/2021 18:31	Alachua		No	No					Remove the dam!	Our springs are dying for lack of natural water flow	Springs will degrade further and further	Not really.	
10/21/2021 18:37	Marion		No	Yes			1 time	Wildlife viewing	Breach the Rodman/Kirkpatrick Dam	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No. Breaching the dam is 50 years overdue.	2021 is the deadliest year on record for manatees, unless their natural habitat is restored, we can expect more die-offs in the future. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
10/21/2021 18:37	Marion		No	Yes		1 time	2-5 times	Wildlife viewing	Breach the Rodman/Kirkpatrick Dam which will restore the Ocklawaha River to its natural flow to the St. Johns River and increase the natural functions of the Ocklawaha and surrounding ecosystems.	Studies conclude that breaching the dam will add significant value to functions of the Ocklawaha and surrounding ecosystems.	That opportunities to improve the ecosystems, create more recreational options, and increase economic activity will be lost.	NONE! How can you shortly achieve desired outcomes?	When natural conditions are interrupted significantly you get an Indian River Lagoon. Is that what we want for the Ocklawaha and its feeders such as the Silver River?
10/21/2021 18:38	Marion		No	Yes		2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Wildlife viewing	restore the Ocklawaha River so that it freely flows	hundreds of water reports	bad water, too much money spent on ineffective waterworks repairs	no. restore the river, take out the dams and broken erworkswat	thank you
10/21/2021 18:40	Citrus		No	Yes	2-5 times			Fishing Boating Wildlife viewing	Keep the dam, I moved to Florida here recently. I was beyond excited to visit this place. I absolutely love the lake. It would hurt the region drastically in the economic standpoint from bass tournaments if the lake was destroyed.				
10/21/2021 18:40	Orange		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	I would like to see the restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam negatively impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+million gallons a day of natural freshwater flow to the Lower Ocklawaha and St Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. If the Dam is not breached the 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow that is necessary to improve water quality, restore fish and wildlife habitat and reduce saltwater intrusion. Declining water quality is fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic loss.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide critical warm water discharges for manatees and to allow free passage of aquatic wildlife allowing for native fish and manatee populations to rebound as well as improving water quality for all life. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. The Dam requires millions in taxpayers' money to repair and does not and will not provide flood protection, power, water supply or any other broad public benefit. Conversely, removal of the dam means that the economies of Putnam County and Silver Springs have an opportunity for economic growth from increased visitations, and recreational opportunities.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait!	I am extremely concerned with Florida's water quality, environment and the destruction of wildlife habitat. We cannot allow an opportunity to restore our rivers and springs and natural habitats pass us by. Please restore the Ocklawaha River, the heart of the Great Florida Riverway. Action must be taken for the benefit of manatees of all wildlife ,for ourselves, our communities, our economies and our ecosystems that we are all connected too. Thank You!
10/21/2021 18:40	Nassau		No	Yes		2-5 times		Fishing Boating Wildlife viewing	See the damn removed and let the water flow back to its natural state.	Many years ago we made a lot of poor decisions with water flow in Florida. Restoration back to the original flow will provide healthier environments.	The rivers become more unhealthy a fail to support wildlife.	No.	
10/21/2021 18:45	Duval		No	No					Take them down.	Articles in the newspaper	Continued pollution of the St Johns	Maybe partial drawdowns	
10/21/2021 18:56	Outside of state / other	VA	No	Yes			2-5 times	Boating Wildlife viewing	I would like to see the dam and reservoir preserved AS IT IS with legislative protections in place to prevent any future environmental threats to the wildlife.	The environmental studies compiled by Dr. Canfield and nutrient tracking by Lake Watch confirmed that the reservoir is a healthy ecosystem supporting a large variety of wildlife and providing an essential fresh water source for the state of Florida. I have yet to see any similar studies done in as much detail or covering as much time that show restoration of the original river would provide a greater benefit to wildlife.	The size and diversity of the reservoir zones enables it to support many types of large aquatic animals and waterfowl. (A system that can support LARGE animals is a healthy system.) The Ocala National Forest provides a unique boundary which makes Rodman a safer haven for migratory birds than other Florida lakes which are becoming increasingly urban. I would be greatly concerned to see these habitats lost. Even after many years of recovery, a "restored" river would not be able to support aquatic wildlife in the same quantity and diversity.	Nothing that would lower the water level or diminish the size of the reservoir.	I was born in Florida in the 1960's. I've seen large portions of the state go from orchards and crops to completely developed urban areas. Whenever I come back to Rodman area, it is a relief to see that the forest and reservoir are still largely untouched. Maybe Florida just has so much water that it takes it for granted, but those of us from out-of-state can see clearly that Rodman is a unique and healthy resource. This year we experienced the "east coast bird die-off" in Virginia; one of many examples of how wildlife is becoming increasingly vulnerable. We should be doing everything we can to preserve healthy, stable eco-systems, and the research shows that Rodman Reservoir IS one of those systems. In an era of data-driven decision making, it makes no sense to destroy the reservoir. What WOULD make sense would be to protect it as rigorously as the Ocala National Forest and preserve it for the wildlife and our future generations.
10/21/2021 18:59	Martin		No	No					Leave it alone!	Not sure,i fish on bows of Kissimmee all the time and have seen what interference does			
10/21/2021 19:00	Duval		No	No					I would like to see the Rodman Reservoir and Kirkpatrick Dam be removed to allow the Ocklawaha River to once again freely flow into the St Johns River.	Scientific reporting supports removal of the Kirkpatrick Dam for many reasons;; the dam is aging and will soon require significant repair (the move would be cost effective); 20 lost springs and Silver Springs ecosystems will be restored; 15,000 acres of forested wetlands will be restored for the benefit of wildlife and potentially cleaner water overall. Most importantly to me at this time, is that this will restore essential manatee habitat at a time when they face an existential threat due to pollution and resulting loss of habitat.	The increased threat to manatees and water filtration, flood protection and wildlife habitats would be further threatened in our state, which right now, is facing incredible challenges now and for our children and grandchildren.	No, the dam is no longer safe and should be removed in a well-planned manner. This is a historic time when funding from Federal and State sources is available to improve our water quality and wildlife habitats.	Please act on this for our children and grandchildren. We seem to be losing ground for the manatees and for our own health and welfare.
10/21/2021 19:01	Collier		No	Yes		1 time			I would like to see the dam removed and the area restored	The dam serves no purpose and obstructs the natural flow of the the rivers in the area. The dam needs to be either replaced or removed, the money should be spent on removal and restoration to the surrounding habitat.	We made another stupid mistake	No	Please remove the dam, there has been so much destruction over the years to our beautiful land and waterways. This is an excellent opportunity to correct a past mistake
10/21/2021 19:02	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Canoeing / kayaking Boating Wildlife viewing Other: Access to Putnam Regional Medical Center, physicians and shopping.	Leave it alone.	Although it may have been a mistake in the beginning, the entire area has transformed itself into an exceptional ecological breeding area.	Destruction of the established environment and wildlife.	No	You don't make a problem where there is no problem. How many reservoirs in Florida do we have? Do we really want to destroy a patient source of water? Putnam County is one of the poorest counties in Florida and on any given day minorities make up the largest percentage of fisherman. They fish for sustenance as much as pleasure.
10/21/2021 19:04	Orange		No	No					Restore the Ocklawaha River by breaching the dam.	Restoring the river will give more habitat for manatees, which died at a very high rate this year.	Millions of dollars will have to be spent to repair the dam, but by letting the dam be breached there will be multiple benefits, like reducing salt water intrusion, the return of manatees and native fish, and job opportunities that will develop from these returns.	No.	Please consider this to save money and save the manatees. This will give them more warm water habitat locations not dependent on power plants. Thank you.
10/21/2021 19:04	Duval		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing	Keep it the same				

10/21/2021 19:09	Outside of state / other	Pennsylvania	No	Yes		More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Hunting Wildlife viewing	NOTHING!	Manatees/fish/birds/turtles have a sanctuary in that place. Im from PA, and I've watched the rural areas get depleted and the effect on wildlife is not able to be achieved again in our generation. Once you interfere with it, it will be negatively affected and you'll never get it back.	You are taking for granted the self sustainable nature of the place, and when you mess with it, it will be gone forever, taken in small pieces till its so far depleted that it will be too late to regenerate itself. Just the free water purifying effects should be reason alone	No, any interference will damage the ecosystem beyond anything humans will be able to repair	Please don't take the beautiful sanctuary for granted!
10/21/2021 19:10	Franklin		No	No					Use it for humans and animals and nature!	I believe in climate change. I believe in protecting nature! 🐢	Lost opportunity!	I am Reebie!	Get information from experts and locals.
10/21/2021 19:10	Outside of state / other	Texas	No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	Negative impacts to water quality.	No.	
10/21/2021 19:11	Outside of state / other	Arkansas	No	Yes		2-5 times		Fishing Wildlife viewing	Leave it alone. Its a beautiful reservoir and should be left as is. I love all of the wildlife, especially the manatee!	Leave a thriving ecosystem alone!	Affecting wildlife	No	
10/21/2021 19:12	Lake		Yes	Yes	1 time	2-5 times	More than 5 times	Fishing	Leave Rodman as is. It's one of the best places in Florida to fish.	Leave it for fishermen to enjoy.	It would just turn into the Ocklawaha River again which is not near of a draw for the state as Rodman is.	No. Leave Rodman as is.	Our business relies on fisheries and eliminating good fisheries is not good as most of Florida is nothing near as good as it used to be with the exception of Rodman.
10/21/2021 19:13	Levy		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Would like to see the river return to be wild.	If coming north from Moss Bluff can not complete the river paddle without portaging	Will have to do as always have done: leave the river and drive to next entrance.		
10/21/2021 19:13	Citrus		No	Yes			1 time	Other: I don't because it's hurting our environment	To breach it and let the river resume its natural flow.	The health of our ecosystems.	That Florida turned its back on the welfare of its citizens.	No	
10/21/2021 19:14	Alachua		No	Yes		1 time		Fishing Boating Wildlife viewing	Remove the damn	It restores what it should be	The ecosystem gets worse	No	
10/21/2021 19:15	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Canoeing / kayaking Boating Wildlife viewing	The dam should be breached & let nature take over. It is obvious during the drawdown that it won't take long. More eco tourism dollars will be made for everyone.	Look to other river restorations for the benefits. The St John's river will benefit form returning the natural flow.	The Ocklawaha & all the beautiful springs are dying already. Increased spraying of poison to control the weeds, which grow because there isn't enough FLOW, is killing everything.	Probably not. Restore the river	
10/21/2021 19:15	Outside of state / other	North Carolina	No	Yes			1 time	Fishing Boating Wildlife viewing	Leave as is	Support of wildlife	Loss of habitat and food supply for wildlife	No	
10/21/2021 19:18	Lake		No	No					Breach	Silver Springs	the demise of Silver Springs	no	
10/21/2021 19:19	Marion		No	Yes	1 time	2-5 times	More than 5 times	Wildlife viewing Other	Remove and restore the natural flow. Remove any canals etc that were part of the Cross Florida Barge Canal.	Restoring habitat of natural Florida- of all kinds- birds, fish , vegetation, trees. My one fear is that the areas along the restored river would be open to development!	Continued degradation of our water resources and general environment! Question-would the Moss Bluff dam also be removed as part of the restoration and how would the Lakes below be affected-LakeHarris, Lake Griffin, LakeApopka?- is our current water table sufficient now and coupled with the uncontrolled development going to maintain those lake levels?? I have many questions??	Somehow prevent development from draining Florida's aquifer-perhaps requiring developers to include desalination facilities and impact fees to any new residents to our state. Our Florida is being destroyed!	Please continue to listen to us concerned and native Floridians who remember the way it was and want to hold on to some of it! Seventh Generation Floridian
10/21/2021 19:25	Suwannee		No	Yes	1 time	2-5 times	More than 5 times	Fishing	Keep it as is.	It has been an important revenue generator for surrounding hotels, stores.	More economic issues for the area, along with environmental issues.	Nope	Why would anyone not want to keep this valuable fishery?
10/21/2021 19:25	Duval		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored.	The lower St. Johns, Ocklawaha, and Silver Rivers, 30 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	We must think of Florida's wildlife, especially manatees. Our fragile natural resources attract many people to our state, so we must do the right thing and protect them.
10/21/2021 19:26	Alachua		No	Yes			1 time	Canoeing / kayaking	The dam should be removed to enable the Oklawaha and St. Johns to reunite.	The major support for keeping the reservoir is for fishing, but fishing would be just a robust and wildlife and protection of the springs would be better without it	That the reservoir would become another develop site and further denigrate the environmental conditions. I	I am not sure there is way to undo the blockage for migrating fish and other environmental improvements without doing a complete removal	
10/21/2021 19:27	St Johns		No	Yes		1 time		Boating	Take it down	springs are restored. manatees have a place to live. millions of gallons a day are restored to the rivers.	water quality declines. lost of springs. St. Johns River deprived of natural water flow	50 years overdue.	
10/21/2021 19:29	Marion		No	Yes			1 time	Canoeing / kayaking	Remove the dam, restore the natural flow	Dam is a disaster waiting to happen. Being a native Floridian I've seen many significant rainfalls even without a hurricane that could easily top the dam	Flooding danger. Continuing degradation to our environment	No	I'ae revenues are tight, why continue to spend our $'s on a fools errand that began half a century ago. Nixon got it right by mixing the canal, let's follow through and begin to heal our errors from the bad decisions of the past
10/21/2021 19:30	Alachua		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.
10/21/2021 19:34	Outside of state / other	Tennessee	No	Yes			2-5 times	Fishing Boating	Leave it alone!!	Thriving ecosystem that provides habitats for many ani Animals	Depletion of ecosystems	As long as area is protected	
10/21/2021 19:34	Alachua		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This exciting restoration will improve water quality and flow by generating an additional 150 million gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
10/21/2021 19:36	Marion		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing	Leave it alone, big beautiful bass live in rodman	No reason to be in marion County	Property just off the lake r purchase just for fishing rodman would be useless art of no value to me	No	
10/21/2021 19:37	Orange		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to $37 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/21/2021 19:38	Columbia		No	Yes			1 time	Wildlife viewing	Get rid of the damn and let the water flow	Lars Anderson	Same o same o		
10/21/2021 19:38	Duval		No	Yes		More than 5 times		Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Leave it just the way it is now.	Rodman Dam supports lots of wild animals , manatees and lots of bald eagles... Where would all the wildlife go if the dam is removed?	Pollution and over developing	No not really. Removing the dam would destroy the animals habitat.....and destroy one of the best fisheries in the United States.. Just leave it just the way it is.	
10/21/2021 19:38	St Johns		No	No					Get rid of the dam	It's blocking migration for manatee. And the manatee are dying off	The loss of the Amazon manatee	Partially removing the dam	
10/21/2021 19:39	Outside of state / other	Ohio	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to $37 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	Please save these gentle giants who can't fight for themselves! As humans, we need to do whatever we can to give them access to the food they need!
10/21/2021 19:40	Alachua		No	Yes			1 time	Canoeing / kayaking	Take out the dam and restore the river to its natural state	How the dam was proposed and established to cater to hunting and fishing interests - not those who wished to preserve nature as it has existed of thousands of years	limited access to Ocklawaha River in it's natural state	Yes. Any improvement would be we	
10/21/2021 19:41	Outside of state / other	Los Angeles County, CA	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefiting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As someone who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("S2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me and will greatly benefit Florida's people, environment and wildlife.
10/21/2021 19:42	Outside of state / other	Kentucky Resident	No	Yes			More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Leave it alone	Sentimentally my family has a history of memories in the outdoors on that Reservoir from fishing, boating and watching the wonders of Florida nature. Realistically it's a safe haven for countless species of wildlife. They depend on that reservoir for safety, food and water. LEAVE RODMAN RESERVOIR AND KIRKPATRICK DAM ALONE!	Loss of wildlife and the habitat the reservoir and dam support. It changes the economics of that area, it changes a rich history...and we would lose it all.	NO! LEAVE IT ALONE	
10/21/2021 19:42	Duval		No	No					Breached	Natural flow of water to support wildlife			
10/21/2021 19:42	Outside of state / other	Minnesota	No	Yes			2-5 times	Fishing	The Rodman needs to be preserved it's an amazing fishery and manatee sanctuary and disruptions to the reservoir will impact wildlife and the people who enjoy it.		The loss of habitat and wildlife conservation	No it needs to be protected	
10/21/2021 19:42	Wakulla		No	No					The dam should be dismantled and the reservoir forever drained.	Twenty drowned springs and the lost ecology and habitats.	Continuing ecological losses and water degradation.	None come to mind	You already know all of the cogent reasons the dam needs to be breached. Please make it so.
10/21/2021 19:42	Volusia		No	No					1. Restore springs 2. Save money 3. Restore overall balance of nature, water quality, forests.	The large number of credible, thoughtful, citizen and science-infused oganizations that have studied this.	Waste of money- why invest millions of taxpayer dollars in repairing and continuing to operate a dam with no purpose- AND: Continued environmental degradation.	No.	I retired to Ft. 18 years ago and have come to love the springs, the rivers, the "old" forests—for many reasons. Marjorie Kinnon Rawlings book about her canoe trip inspired me.
10/21/2021 19:43	Alachua		No	Yes			1 time		Remove the dam that the river and springs can be restored.	Seeing the benefit of other dams being removed and how the ecosystems are restored to their prior functioning.	Long term effects on wildlife, water quality and the aquifer as well as water supplies downstream - water will be a long term issue in the future.	I haven't really heard of any but I'm open to suggestions. If it's just a bandaid, then no I'm not interested in that.	I feel that time's running out
10/21/2021 19:44	Marion		No	Yes			1 time	Canoeing / kayaking Wildlife viewing Other: Enjoying natural Florida.	Remove it	Unnatural water flow	The usual manipulation of nature to satisfy financial goals.	Undecided.	
10/21/2021 19:46	Lake		No	Yes		More than 5 times		Canoeing / kayaking Boating Wildlife viewing Other: Hiking & Cycling	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	100s of manatees gain essential warm water winter springs habitat	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/21/2021 19:46	Outside of state / other	Maryland	No	Yes			2-5 times	Wildlife viewing Other	Removed	The amount of springs that are affected by the dam	The health of the rivets will continue or worsen	No	
10/21/2021 19:47	Lake		No	Yes		More than 5 times		Canoeing / kayaking Boating Wildlife viewing Other: Hiking & Cycling	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored	The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/21/2021 19:48	Putnam		No	Yes	More than 5 times			Fishing Boating Wildlife viewing	Pave the road to the kenwood boat ramp and leave the dam in place	The whole eco system that is already in place	Economic downfall	No	Why would anyone want to change an eco system that has been in place for as long as it has
10/21/2021 19:50	Outside of state / other	Ionia, Michigan	No	Yes		2-5 times		Fishing					
10/21/2021 19:52	Alachua		No	No					Dams are not natural, except those made by beavers and nature. Daming rivers is an intervention that has unseen consequences that can harm ecosystems and wildlife. It is time to remove man-made barriers and to try to restore Florida habitat and waters.	According to Emma Marris, author of the book Wild Souls (Bloomsbury Publishing): "We need to do a better job sharing with non-human animals." (1) We cannot continue to squeeze animal and nature into tiny spaces. They have the right to freedom of movement. They deserve to flourish without our constraints and of their own free will. "Autonomy is part of their flourishing." (2) People worldwide love nature and want nature to live and survive. Humans are causing creatures and life to vanish. Let us do in Florida what we can to restore this beautiful environment. 1. Marris, Emma. Wild Souls (p. 247). Bloomsbury Publishing. Kindle Edition. 2. Marris, Emma. Wild Souls (p. 250). Bloomsbury Publishing. Kindle Edition.	Continued devastation of our environment, slowly, creeping, and all suffering at the hands of greed, a true mental disease of men.	We don't need it. Once it is gone we as a community will find other ways to compensate. Like going on a diet and exercise regimen, but thinking about TV and cake. Let's get off the damn dam, and challenge ourselves with being a bit uncomfortable.	
10/21/2021 19:56	Lee		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas.	NO !!!	Florida is the most unique of all states. Every effort needs to be taken to protect the environment and it's species from destruction due to careless management of the ecosystem.
10/21/2021 19:57	Lake		No	No					Removoil of the Dam's. Restore the Ocklawaha to it's natural flow.	Publications from American Rivers.	The death of the River System!	NO!	Once we lose the opportunity to connect the River to it's natural flow, it will be gone!

10/21/2021 19:57	Duval		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Hunting Wildlife viewing Other: Showing my kids what it's like to still have a waterway that has a full ecosystem	Leave it as it is. Such a great reservoir to do so many different outdoor events with family and friends	Personal experience. My son has caught 3 of his 5 largest bass at Rodman.	What purpose does it have to eliminate such a prime resource. So many of our lakes are drying up or polluted and you have this natural body of water that is managed by a dam that keeps water levels accurate	NO	
10/21/2021 19:58	Citrus		No	No					Keep	Keep it, it is the new ecosystem.	Nutrient load in st johns		
10/21/2021 19:59	Putnam		No	Yes	1 time			Other	Open the Ocklawaha	That the lost Ocklawaha is there to be opened up and brought back to life.	The St. John's River is dying. The water that evaporated off the post daily would be strong healing for the river.	No	Please do what is best for the river. Don't believe the small group in support of saving the "reservoir".
10/21/2021 20:01	Marion		Yes	Yes	2-5 times			Fishing	Leave it alone	Undamming it would cause another shift for wildlife there is no danger to it now so why change anything? Getting rid of the dam can only cause problems. They are trying to fix something not broken which only brings the possibility of it breaking	Wildlife, how people make money , mass destruction of lake and properties	Absolutely not, not even close	I'm sure this is all about money or politics but leave it the fuck alone
10/21/2021 20:01	Outside of state / other	Michigan	No	Yes		1 time	2-5 times	Fishing Fishing (shoreline/structure) Wildlife viewing	Leave it as is. Gets me to travel from out of state to come fish.	I'd expect the local area appreciates the tourism. It already exists. Can't see benefit in changing it now.	What would happen to the wildlife that now call it home? I will not visit the local area.	Don't understand what middle ground is possible	
10/21/2021 20:02	Duval		No	No					No dam. Get rid of it and let the River flow like it is supposed to!!! Quit messing up our resources!!! Let our flora and fauna grow and leave it alone so the animals can live!!!!!!!	Look at what's happened since the dam was added!! Duh!!!!	As usual. Raping the land.	None	
10/21/2021 20:04	Alachua		No	Yes		1 time	More than 5 times	Wildlife viewing	Leave it the way it is!!!!!. Destruction of land,wildlife habitats, fishing,etc.,is not desirable!!!	Years of observation!!	You can't return the River,to it's original condition, by destroying Rodman!!	NO	This argument, and lack of concern for fishing, boating,and wildlife, has been going on for too many years!!! Needs to be stopped!!!!
10/21/2021 20:06	Levy		No	No					It should be breached to restore Silver Springs	20 missing springs!	Once more Florida would lose part of our beautiful ecosystem, this time forever.	No	Having lived "down south" many years in Lee County and within smell shot of the red tide, I know that we need to act promptly on all issues that impact our wilderness, wildlife, and the quality of life that have always made Florida one of the world's most unique places.
10/21/2021 20:12	Leon		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/21/2021 20:13	Alachua		No	Yes		2-5 times		Fishing Boating	Eliminate the dam	Let Mother Nature do it's thing. Without man dictating it's natural beauty	The natural flow of its rivers	No	Mankind has put its stamp long enough on Rodman's dam. It's time to fix and eliminate the dam
10/21/2021 20:13	Volusia		No	Yes		2-5 times		Canoeing / kayaking	Don't spend more money on it take out the damn it will improve water quality overall.		Lots of wildlife habitat decrease in Manatee numbers poor water quality	No	
10/21/2021 20:13	Seminole		No	No					I believe the partial opening of the dam would best serve the people of Florida.	Several pieces of information inform my position including: 1. 7,500 acres of the lower Ocklawaha's historic forested floodplain, 20 freshwater springs, and many miles of natural river channel that were drowned as a result of dam construction would be restored. 2. Thousands of acres of submerged aquatic plant communities would be able to regenerate in the restored river channel, and in the re-emerged spring-run streams that drained into the Ocklawaha historically. 3. 8,000 acres of stressed floodplain wetland located downstream of the dam would be enhanced. Imperiled plant species like the endangered Star Anise and threatened Hartwrightia, which are native to the banks of this region's spring run streams, could expand their range into the restored spring systems. 4. Draining the Rodman Reservoir would remove the single-greatest barrier to plant and animal movement along the Ocala to Osceola (O2O) Wildlife Corridor by replacing the open water expanse of the S. Reservoir with a restored floodplain forest, to the benefit of many listed plant species native to the region including the Federally-listed Clasping Warea and Scrub Buckwheat. 6. Three river systems - the Ocklawaha, Silver, and St. Johns - would experience significant environmental improvement from the restoration.	An opportunity to enhance Florida's environment and the possible break of the dam. Also, the waste of money to restore the dam.	I'm not sure, I would have to see what would be proposed.	
10/21/2021 20:14	Polk		No	Yes	1 time			Fishing Boating	Keep the dam	Personal loss of a great fishing location	Loss of fisheries	No	
10/21/2021 20:16	Lake		No	No					Let the river to back to it's natural form.	Would be better for the manatees and other wildlife, including fishing. More springs will be available to enjoy.	The cost of repairs to the dam.	No	
10/21/2021 20:16	Putnam		No	Yes	2-5 times			Fishing Canoeing / kayaking Wildlife viewing	I would like for it to be kept intact to support the wildlife that depends on the dam and lake	The vast influx of manatees into the lake to feed	The destruction of habitat	None	
10/21/2021 20:16	Hernando		Yes	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Hunting Wildlife viewing	leave our lake alone and leave Rodman Dam just as it is!	worried about displacing all that wild life	wild life and fishing will be destroyed	no compromise	
10/21/2021 20:18	Alachua		No	Yes		1 time		Canoeing / kayaking	I would like to see the Kirkpatrick Dam removed and the Ocklawaha River returned to its original state, as it was before the attempt at the Cross Florida Barge Canal.	More jobs, tourism (eg. Silver Springs), and especially more diverse recreation opportunities are created by restoration.	I would be greatly concerned by the further decline in the water quality, with the attendant invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss, things that I already read about in the newspaper. Let's end the damage asap.	No. The problem of the water quality, the loss of springs, and the harm to our wildlife (manatees!!) needs to be addressed now.	
10/21/2021 20:18	Seminole		No	Yes		1 time		Canoeing / kayaking Wildlife viewing	Removed	Health of the Silver and Okalawaha Rivers and waste of tax money to maintain a senseless dam	Wasting taxpayer money to maintain a useless dam. Allowing the river to return to it's natural flow allows fish to travel and spawn as they once did on the Oklawaha. The natural environment and wildlife corridor would be improved and the Silver and Ocklawaha would be healthier.	The dam is serving no useful purpose, but is inhibiting the river to flow naturally. I want it returned to the way it was before the dam.	Please do away with the dam.
10/21/2021 20:21	Duval		No	Yes	1 time	1 time	More than 5 times	Fishing	Removed	Clearing the water up throughout the St. John's	Continued ruined water quality	No	
10/21/2021 20:22	Alachua		Yes	Yes	1 time	1 time	More than 5 times	Canoeing / kayaking Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	20 lost springs and Silver Springs ecosystem are restored Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat - with the food shortage this is CRITICAL	increased population loss of the manatee, which was so much work has gone into to get from endangered to threatened The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. (characters: 521)
10/21/2021 20:23	Outside of state / other	New Jersey	No	Yes		More than 5 times		Fishing Fishing (shoreline/structure)	Leave it alone	It is a lush ecosystem that supports the best fishing in the country and many manatees	That the ecosystem would be destroyed	No	Please leave this place alone.... I have fished all over the country and there is no other place like this on earth!
10/21/2021 20:24	Duval		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers $4-14 Million in dam repairs saved on a dam past its life expectancy Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. $57 million in potential flood damages avoided to downstream property owners	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. A storm event triggers a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	This exciting restoration will improve water quality and flow by generating an additional 150 millions gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration
10/21/2021 20:25	Marion		No	Yes		1 time	Wildlife viewing		I would like to see the dam removed and the flooded forest be re-established naturally.	The dam has had devastating ecological effects. It's way past time to set it right.	Continuing the path of ecological deterioration.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait	
10/21/2021 20:25	Nassau		No	Yes	1 time	2-5 times	More than 5 times	Fishing	That it remain a viable fishing location for everyone to enjoy.	My own experience.	That we will lose one of the top fisheries in North Florida.	No	
10/21/2021 20:26	Clay		No	No					I would like to see it partially or fully removed	Removing the dam would restore the riverway for people and animals and improve downstream water quality	Poor downstream water quality	Partial removal of the dam	
10/21/2021 20:29	Duval		No	Yes	2-5 times	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	I would like the dam dismantled and the river restored to its original course! George Kirkpatrick was a friend, but maybe we can remember his service to Florida in another way.	Just take a look at the toll this I'll fated waterway has taken on the natural habitat.	Rodman will become a big retention pond catching pollution instead of renewing itself in normal cycles.	Maybe 10 years ago I held out hope for Rodman. But each year that goes by diminishes any likelihood of a good outcome.	We need to bite the bullet and do the right thing. Restore the river.
10/21/2021 20:31	Hillsborough		No	No					Remove the dam, allow the river to flow.	Past precedent.	The river can't revive.	No	
10/21/2021 20:33	Pinellas		No	Yes		2-5 times		Fishing Canoeing / kayaking Wildlife viewing	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam	It is old and has gone beyond its life expectancy without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	I feel this is a pivotal time for Florida. essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	
10/21/2021 20:34	Alachua		No	Yes		2-5 times		Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers and numerous springs are dependent on this water flow, including the Silver River and Silver Springs.	We miss the opportunity to use federal and state funding to make this happen.	No. The dam needs to come down now. Saving our wildlife cannot wait	Save our native Florida before it is too late.
10/21/2021 20:36	Putnam		No	No					Breach it	Environmental damage	Environmental damage	No	
10/21/2021 20:36	Duval		No	No					Remove the dams and return the river to its former state.	The need to preserve natural areas in Florida as development continues.	The loss of natural habitat.	It's pretty much all or nothing. There's a dam and a reservoir or there's a flowing river.	
10/21/2021 20:36	Outside of state / other	Texas	No	Yes		1 time		Fishing	I would like to see the dam remain in place and the lake preserved.	The lake provides an important ecosystem to fish, wildlife, birds, and manatees while providing a well-known destination to recreation it's and anglers.	If the dam is removed a historic angling resource will be lost. The central Florida hydrological resources are already impacted by manmade infrastructure and policies. Restoring this one portion of river is going to do little to impact the environment on a regional scale.	Flow agreements, river habitat improvement projects, invasive species management, and other conservation efforts can mitigate the problems that the dam and improve the ecosystem above and below the dam.	I fished this reservoir and river below many years ago and have treasured memories of the area. I know the local anglers and residents want to keep the system the same. I would like to return someday. If the reservoir is destroyed that won't happen. Please consider the economic and historical importance of this beautiful resource.
10/21/2021 20:38	Clay		No	Yes	1 time	2-5 times	More than 5 times	Fishing Boating	The reservoir is a great fishing destination leave it as is	why change ?	Fish kill	possibly	
10/21/2021 20:40	Alachua		No	Yes	1 time	More than 5 times	More than 5 times		The dam needs to be released	Ecological evidence.	This dam never should have been constructed.	No.	Please rectify the ecological error that has taken place and restore the river to its natural state.
10/21/2021 20:41	Seminole		No	No					I would like to se it destroyed and the Ocklawaha river returned to its natural state.	100s of manatees gain essential warm water winter springs habitat	The 20 springs will be gone forever	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/21/2021 20:41	Marion		Yes	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing Other	As was done with the other parts of the Cross Florida Barge Canal, I believe the dam should be dismantled to permit improved wildlife management, eco-tourism, better and more natural water flow and eliminate the risk that the aging and structurally suspect dam would bring about if (more likely when) it fails.	The dam has been in place for more than 50 years. No structure can be expected to last forever without periodic maintenance which tends to get more expensive with older facilities. Additionally, in Ocala, Marion County, the use of the former Cross Florida Barge Canal property has produced, in my opinion, a natural cycling facility that attracts enthusiasts from many parts of the U.S. Also, around the country, more dams are failing or requiring significant sums of money to keep them safe. As a taxpayer, I don't want my tax dollars being used for this purpose when the alternative (restoring a free flowing river) would allow new and different types of jobs for this area, not just limited to a smaller area confined to one type and location for fishing. Finally, in the current climate, Florida could likely get substantial federal economic assistance to restore the natural flow of the Ocklawaha River.	Although I am concerned about the detrimental effect on fish, manatees and other water wildlife if the dam continues to exist, as well as the loss of new jobs in areas up and down the Ocklawaha, St. John's and other waterways in the area that would surely arise if the river is restored, my biggest concern is the stain on Governor DeSantis's public standing if (or when) the dam either requires a substantial cash infusion to fix it or, worse yet, if a sudden and catastrophic breach of the dam causes significant loss of life, property or economic loss to those affected by such a predictable occurrence.	No - especially when Florida has such a golden opportunity to create new jobs, restore the natural flow of waters that God created for this state before most current residents and their ancestors set foot on this state, assist the quality of water in the northern part of the state, and help aid the fish, manatees and other wildlife that would benefit from a continuous free flow of waterways from Central Florida to the Jacksonville area in the Northeast part of the state.	By supporting continued money to be spent on an older and in need of repairing dam, the State would essentially be supporting government support of one group of citizens over the rest of the populace, a step that Gov. DeSantis (and other governors like Gov. Bush) have repeatedly said is NOT the proper function of government. Thank you for considering these views of a taxpaying citizen.
10/21/2021 20:41	St Johns		No	No					Remove the dam to allow a natural flow. The current fluddied area that would drain should be protected conservation land.		Healthy natural ecosystem.	An boat launch fee that actually pays for the removal of the clogging vegetation.	
10/21/2021 20:44	Lake		No	No					Breach the Rodman Reservoir/Kirkpatrick Dam	20 drowned springs would re restored by this single project making this the most cost-effective and beneficial Florida spring protection project.	Declining water quality, fueling further invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue and will provide essential warm water habitat for hundreds of manatees in the Ocklawaha "drowned springs". 2021 was the deadliest year on record for manatees. It's unsustainable for 60% of them that rely on power plant outfall to keep warm.	Breaching the dam is so cost-effective and beneficial for Florida's springs, which should be treasured and cared for as they provide innumerable benefits for the ecosystem - it would be something to be proud of and keep Florida's natural wildlife thriving. A beautiful project with beautiful outcomes for Florida
10/21/2021 20:45	Seminole		No	No					Let nature be free. Free the river.	Because a free river= is healthier for the environment	We keep making the Same mistake.	Compromise is essential to democracy so of course	None
10/21/2021 20:46	Palm Beach		No	No					Restore it back to what is naturally was.	St. John's river water quality- I lived in Jacksonville beach for almost 4 years. A lot of the water in the area more towards the city I was too scared to keep fish from because of water quality issues.	Detrimental impact to the natural flow of water sustaining the marsh's.		
10/21/2021 20:47	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Remove the dam	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife $4-14 Million in dam repairs saved on a dam past its life expectancy	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	
10/21/2021 20:48	St Johns		No	No					Removed to restore water flow to St. John's river	The balance of life the way the good lord intended	Those after me will see a St. John's river that will be worse than what it is now. And the healing property of the great outdoors and recreation will be reduced, causing detrimental effects emotionally, personally etc	We need to do what's right. And that's to restore it how the good lord designed it.	
10/21/2021 20:50	Marion		No	Yes				Other	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick dam. Every day tgat the damage is in place, harm to the economy, water quality and wildlife is inflicted throughout the great Florida riverway.	The 20 hidden springs and Silver springs need that water for the ecosystem and wildlife restoration.	That the lower St John's, Ocklawaha and Silver Rivers, 20 lost springs of the Ocklawaha and one of Floridas largest artesian springs, Silver Springs are not restored.	No, breaching the dam is 50 yrs overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka. Is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will nourish these rivers and benefit communities, economies, and ecosystems all along the Riverway.
10/21/2021 20:50	Putnam		No	Yes			More than 5 times	Fishing (shoreline/structure) Canoeing / kayaking	Get rid of the dam.	Reservoir also puts immense pressure on the aquifer below it,	The buildup of massive amounts of invasive plants, which require repeated applications of massive amounts of herbicides to make the water accessible to boats.	no	
10/21/2021 20:53	Marion		No	Yes			2-5 times	Wildlife viewing	Past time to remove the last vestige of the Cross FL Barge Canal by breaching the Rodman dam, draining the reservoir & restoring the natural flow of the Ocklawaha River and it's 20 "lost springs." Return the Ocklawaha River to its natural flow.	The future of the Ocklawaha River		No	
10/21/2021 20:53	Pinellas		No	No					I would like the dam to be removed so that spirints can be supported.	The restoration of drowned springs will help to restore fish populations and manatees.	The dam and reservoir are unnecessary, and restoring them would cost millions of dollars. Removing the dam and reservoir would have measurable ecological and economic benefits (from ecotourism).	No.	Florida's springs are part of its aquifer shedsood. They are a tourism draw for the state, but also necessary for fish and other marine life. We need the springs to be restored.
10/21/2021 20:54	Alachua		No	Yes	1 time	1 time	2-5 times	Wildlife viewing	I would like to see the dam removed and restoration of a free-flowing Ocklawaha River.	I rely on a large body of scientific information, and the best science indicates that the dam and reservoir have substantial negative ecological impacts. These include acting as a barrier to migratory species and those that utilize free-flowing riverine habitats during parts of their life cycle, including many fishes, manatees, etc. The dam is unique in the country in that it was constructed for the ill-fated Cross-Florida Barge Canal, but that project was deauthorized by the U.S. Congress. There is no reason for the dam to remain in place since the basis for its original intent will never be realized. Many agencies and organizations in the United States recognize the folly of many dam constructions and the country is now in an era of dam removals for those that fail to serve important functions for which they were originally perceived to have, and such dam removals are now restoring important ecosystems. The Kirkpatrick Dam/Rodman Reservoir fails in this category, and a free-flowing Ocklawaha River will not only restore ecological communities, but it will also benefit the citizens of Florida and visitors with immeasurable recreation and ecotourism opportunities, and associated economic benefits.	A failure of government to listen to the concerns of its citizens and voting constituents who overwhelmingly favor restoration of a free-flowing Ocklawaha River. Moreover, the financial burden of continued maintenance and repairs to the dam are borne largely by Florida taxpayers, which is inequitable. Furthermore, there are additional costs and ecological consequences associated with maintaining the dam and reservoir, such as mitigating for invasive plant management. Both water quality and water availability are serious issues facing Floridians, and restoration of the system will help to alleviate these problems by protecting our aquifer, natural resources, and, ultimately, human health.	Not likely. I am not aware of any discussions about fish or manatee passage structures that might allow movement of species into critical upriver habitats, but this is something that should be considered should the eventual outcome fail to remove the dam and restore the free-flowing river.	My bottom line is that the dam, now more than 50 years past its construction and intended use, fails to provide any benefit other than, primarily, fishing for anglers with fancy boats—it does not provide flood control, hydroelectric, water supply (although interests elsewhere in Florida would like to tap into this), and other functions for which many dams in the U.S. were constructed. There is simply, in my opinion, no justifiable reason to continue to maintain the dam and reservoir, and Florida could provide an exemplary role by removing this structure and showing leadership in environmental protection and restoration.
10/21/2021 20:55	Marion		No	Yes		1 time	2-5 times	Canoeing / kayaking	I would like to see the free flow of the ocklawaha river run freely to the st johns river - remove the dam	the dam/reservior was for the barge canal which was never completed. No barge canal, no need to keep the river blocked.	the river will never be allowed to regain it's original natural splendor, resulting in a huge loss of tourism / economic opportunities.	I don't know all of the options. Seems like Dam or no dam is the real question. No Dam is the correct answer.	Look to the future - the expense of keeping the dam greatly outweighs the positive environmental and societal impacts of restoring the river to a state closer to it's original flow. Your grandkids will thank you for setting the river free and allowing the vast floodplain to reforest. Wildlife will return and the banks of this storied river will once again be a thing of beauty to behold.
10/21/2021 20:57	Alachua		No	No					Breach	Manatees need to gain access to this habitat to bounce back from the deadliest year on record! e	More and more manatees dying, an increase in toxic algae/decrease in water quality, and a ton of wasted money to keep up the dam.	Nope. Breach it or bust.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. We also need to do a much better job at protecting our springs in general, and breaching the dam will help that!
10/21/2021 20:57	Alachua		No	No		1 time	Other: Do not use...never have and never will... it makes me way too sad and mad that it's even there		DOWN DOWN DOWN with the dam!!!!! RESTORE the NATURAL water systems of three IMPORTANT rivers. IMMEDIATELY!!! POST HASTE!!!!!	Clean water is the most essential and important part of our being/existence on this earth. totally vital to the whole natural world, especially in Florida.	Dramatic continued degradation of the quality of life in Florida.... for both humans and wildlife... all due to THOUGHTLESS and SELFISH HUMAN ACTIONS , political and otherwise...	NO! we're way beyond that possibility now	I truly believe that restoring the Ocklawaha is essential to the long-term viability of the state of Florida, and that removing that blasted dam mess would revitalize exponentially the area with increased recreational opportunities along with revitalizing our wildlife habitats PLUS CLEANER WATER FOR EVERYONE and EVERYTHING!!!!!!!!
10/21/2021 20:59	Marion		No	No					Dam should be breeched		Lost of a beautiful natural waterway system.		
10/21/2021 21:00	Duval		No	Yes	1 time	2-5 times	More than 5 times	Wildlife viewing	Restore the river to its natural state	improve the health of the St John's River.	Spoiling a good fishing spot.	Not really.	I have lived in Florida most of my life and never dreamed that we would have clean water problems. Thank God for the River Keeper, Sierra Club and other environmental groups!
10/21/2021 21:00	Leon		No	Yes					Remove the dam, drain the reservoir, let the Ocklawaha River reclaim its natural floodplain, and let the floodplain forest re-establish itself.	50 years of effort on the part of numerous enalligent people that collectively have demonstrated the folly of this ill-conceived project and the continued damage to the Ocklawaha River system.	Continued loss of riverine and floodplain forest habitat.	no	
10/21/2021 21:01	Duval		No	Yes		1 time	1 time	Hunting	I would like to see the Dam breached so we can restore water flow	The fact that our river is suffering throughout	Habitat snd natural fishery destruction	A constant breach in the structure	
10/21/2021 21:02	Clay		No	Yes		2-5 times		Fishing Canoeing / kayaking Wildlife viewing	Leave it as it is. It is an amazing wildlife refuge for manatees. The amazing vegetation has been sustaining hundreds of manatees.	There have been nearly 1,000 manatee deaths this year. The Rodman Reservoir does not have any algae blooms. The is a critical ecosystem for these endagered species.	The manatee population would suffer greatly and a beautiful and amazing fishery would be lost forever.	No	

10/21/2021 21:03	Lake		No	Yes	2-5 times	More than 5 times	More than 5 times	Wildlife viewing	Remove the Dam. It has far out lived the reason and use it was originated for.	Ecological and environmental studies over now decades indicate restoring the Oklawaha wood support return and balance of multiple fish and plant species and is critical in spring the imperilled Manatee population.	This is the NOW opportunity. How long are we going to ignore environmental science? Nixon put the final stop to the cross barge canal in the early 70s. Why are we here FIFTY YEARS later? How can bureaucracy have impeded the return of the natural state of this river for 5 decades?	No. We've already waited far too long for this to be rectified.	Please do not capitulate to the political pressures of hunters/fishers etc with an agenda. The only agenda that should be attended to is the health if the river and all of the life it supports.
10/21/2021 21:08	Alachua		No	Yes		1 time	Other: DO NOT USE---NEVER HAVE AND NEVER WILL!! IT'S AN ABOMINATION!!!! DUE TO HUMAN SELFISHNESS	DOWN !!!!! DOWN!!!! DOWN!!!	CLEAN ABUNDANT WATER ESSENTIAL TO OUR EXISTENCE!!! TOTALLY VITAL TO THE NATURAL WORLD	DRAMATIC AND CONTINUED DEGRADATION OF THE QUALITY OF LIFE IN FLORIDA, FOR BOTH HUMANS AND WILDLIFE...ALL DUE TO SELFISH AND THOUGHTLESS HUMAN ACTIONS, POLITICAL AND OTHERWISE	NO!!!!!!!!!!! WE'RE WAY BEYOND THAT POSSIBILITY NOW..........	I TRULY BELIEVE THAT RESTORING THE OCKLAWAHA IS ESSENTIAL TO THE LONG-TERM VIABILITY OF THE STATE OF FLORIDA, AND THAT REMOVING THAT HORRENDOUS DAM MESS WOULD REVITALIZE EXPONENTIALLY THE AREA WITH CLEANER MORE ABUNDANT WATER, PLUS INCREASED RECREATIONAL OPPORTUNITIES AND RESTORATION OF IMPORTANT WILDLIFE HABITATS.
10/21/2021 21:09	De Soto		No	Yes		1 time		Wildlife viewing	I'd like to see it Dammed	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	Hundreds of manatees loose access to essential warm water winter habitat	Absolutely not. This is well overdue!	SAVE THE MANATEES!
10/21/2021 21:10	Duval		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing Canoeing / kayaking Wildlife viewing	Stay the same	Im a fisherman and photographer. I spend at lot of time there and at orange lake in that area.			
10/21/2021 21:10	Orange		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	Breach the dam to restore the Oklawaha	The St Johns, Oklawaha and Silver rivers are brought back to an ecological healthy state and 50 springs are restored.	We miss a timely opportunity to get rid of a boondoggle, quit wasting money and improve these rivers.	No. Stop wasting time money and environmental health. Get rid of the dam now!	Stop pandering to a selfish few and do the greater good for the natural resources of this state. Breach the dam now!
10/21/2021 21:12	Alachua		No	Yes	2-5 times	2-5 times	More than 5 times	Other: Showing people what a disaster it is. Usually 1st timers in the Ocala National Forest.	Restore the Ocklawaha River by removing the Rodman Dam. The dam harms water quality and wildlife. The local economy would be much better with the activities of a free flowing river.	Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs.	Continued expenditures of $4 Million to $14 Million to keep the dam.	Drawdown of the reservoir to protect those downstream from imminent dam failure.	I protested against this dam as a child. I, and my parents were correct then and I'm correct now. Remove the Dam!
10/21/2021 21:13	Marion		No	No				Fishing	Breach it	improve fish and wildlife, water quality, and springs, and increase recreation opportunities	Further destruction of fish and wildlife and poor water quality		
10/21/2021 21:14	Suwannee		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	Breach the dam this year!	Stop wasting money	Money is wasted	No!	Wildlife and ecosystems are degrading as you continue wasting time and money. Breach this dam.
10/21/2021 21:14	Alachua		No	Yes	2-5 times	More than 5 times		Fishing Boating Wildlife viewing	Maintain and improve fisher.	I am an avid fisherman and sportsman. My wife and family members enjoy the impoundment also.	Loss of a tremendous fisher.	No, not really. I would have to make due with the outcome.	
10/21/2021 21:15	Alachua		No	No					Restoration of the ocklawaha river by breaching the rh dam.	Restoration of rivers and springs in FL	Opportunities for state and federal funds to meet environmental issues.	Not really. It needs to be done now.	So important for the environment and wildlife and Florida
10/21/2021 21:15	Nassau		No	Yes		2-5 times		Fishing Wildlife viewing	Leave it as is, a wonderful place for fish and wildlife.	The abundance of record fish is unique.	One of the most amazing fisheries and manatee refuges could be destroyed if drained.	No	Do not drain Rodman.
10/21/2021 21:16	Orange		No	Yes		1 time	2-5 times	Canoeing / kayaking Wildlife viewing	The dam removed and the river returned to natural flow.	The current water quality is poor, and the area does not offer the wildlife habitat a restored river would.	The water quality will continue to diminish and the opportunity to restore the river will be lost.	No, the dam must be removed and the river restored.	
10/21/2021 21:17	Marion		Yes	Yes	2-5 times	2-5 times		Fishing	Keep doing what you been doing	it's great for fishing. it's good for the environment. Destroying it is just stupid	There is nothing to be gained by destroying it	No	Leave it alone . Stop listening to the environmental wack jobs
10/21/2021 21:18	Hillsborough		No	Yes		1 time		Fishing Fishing (shoreline/structure) Boating Hunting Wildlife viewing	Breach the dam	Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs.	Hundreds of manatees loose access to essential warm water winter habitat.	No. Breaching the dam is 50 years overdue	Save the manatees and preserve their environment!
10/21/2021 21:18	Flagler		No	Yes			1 time	Canoeing / kayaking	Breach the Rodman/Kirkpatrick Dam	Preservation of ecosystem and natural amenity	Damaged ecosystem and dwindling resources.	No	Thank you
10/21/2021 21:18	Alachua		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing	Keep it as it is today's.	The fish and wildlife habitat the reservoir creates.	Loss of fish and wildlife habitat.	No - keep Rodman Reservoir as it is!!	Keep Rodman as it is today!
10/21/2021 21:21	Leon		No	No					1.What would you like to see happen with the Rodman Reservoir and Kirkpatrick Dam moving forward? Breach the Rodman/Kirkpatrick Dam. Breach the dam. There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam.	Dear Patricia, We need you to take action in the next 24 hours. One question I am often asked is, "What's the single most important project we can do today for Florida's springs?" To me the answer is simple: Breach the Rodman Dam and restore the Ocklawaha River. And until 5pm Friday, you have the opportunity to tell the St. Johns River Water Management District, the Governor, and the Florida Department of Environmental Protection to finally breach the dam. We need your voice to make it clear that Floridians support a free-flowing Ocklawaha. Please take a few moments to submit comments on the St Johns River Water Management District's comment form, and let's make it clear that Floridians want a free-flowing Ocklawaha River. Submit your comments now Hurry, this comment form closes at 5pm Friday! If you need a little help answering the questions, here are the questions you will see on the form, and suggestions on how you might answer them 1.What would you like to see happen with the Rodman Reservoir and Kirkpatrick Dam moving forward? Breach the Rodman/Kirkpatrick Dam. 2. What is the most important piece of information that supports your position? Possible answers could include: There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	None that would work. Please don't waste this opportunity, our fragile resources, and our money.	Thank you for carefully considering our answers. We are stewards of this creation, please do all that you can to make this change. Please breach this dam.
10/21/2021 21:23	Alachua		No	Yes			More than 5 times	Wildlife viewing	Open it up	Help wildlife and manatee	Dead water dead fish dead manatee	I don't know	
10/21/2021 21:25	Brevard		No	Yes			2-5 times	Canoeing / kayaking	remove the dam and restore the original river flow	the animal diversity is negatively impacted by the dam and reservoir	the continued loss of the natural habitat	breach the dam or route the river around the dam	
10/21/2021 21:26	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Hunting Wildlife viewing	Continue to keep it up to standards.	Community standards	Rodman is a very nice location and great for viewing and fishing. It would be awful.		
10/21/2021 21:31	Alachua		No	No					Breach the Kirkpatrick Dam	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years.	No, breach the dam	This is so important!
10/21/2021 21:34	Duval		No	Yes		1 time		Wildlife viewing	Take it down	The devastating effects on the springs	The springs will continue to deteriorate, and the cleansing flow will remain diminished resulting in increasing pollution.	No	
10/21/2021 21:35	Marion		No	Yes	More than 5 times	More than 5 times	More than 5 times	Boating Fishing Wildlife viewing Other	I'd like the dam removed or opened. The water cabbage and sprayring is never ending. Trees are falling/fallen over due to soil being washed away. I don't have money for an airboat and I can't use my jon boat because the plants are so thick at my ramp. The only time my family can enjoy the river rightfully is during a drawdown. I enjoy taking the grandkids to the springs along the river, but they already don't even remember them from the last draw down. The dam is a waste of tax payer money and its hurting my river. The fish are not the same I grew up with.	Science and first hand knowledge living on the greenway . I've read a lot of the studies that make it crystal clear that the dam has been a disaster. It's also not safe anymore. I have friends upstream who's homes I'm worried about. If this dam breaks, we are in a mess of trouble.	I am most concerned about the future of Florid a. The spraying that's done to kill the invasive plants is going into my well. The money you're "maintaining" the dam with is clearly not enough. In business, there needs to be. Check and balance, and if this dam is not rendered defeated after all the evidence has been read, then I feel truly sad for my homeland. It's just not Christian.	The dam has to go. Take down the gates.its a waste of reasources.	
10/21/2021 21:35	Palm Beach		No	Yes			1 time	Other: See the damage to the River myself	Please remove the Dam and restore the flow of the Ok river	Cost: We are wasting huge sums of money on a dam built for a failed concept.	It damages the community's livelihood, cost a ton of money and effects our state's water quality for the benefit of very few.	If the current users want to keep the lake, they should pay the full maintenance cost plus an additional tax to be refunded to local county for the economic effect,	Please tear down this dam.
10/21/2021 21:36	Putnam		No	Yes		2-5 times		Wildlife viewing Other: camping	Removed and the river restored to free flowing.	The improvement to the health of the St Johns River system and ecosystem, including the springs.	Continued decline in health of the St Johns River system and ecosystem.	No.	Yes, there will be tradeoffs (loss of the reservoir for fishing), but the benefits (both environmental and economic) of dam removal far outweigh the benefits of keeping the dam.
10/21/2021 21:43	Sumter		No	Yes		1 time		Other	Stop messing with mother nature.				
10/21/2021 21:43	Gilchrist		No	No					For it to be released	Environment	Environment	No	
10/21/2021 21:43	Duval		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Maintain it to keep it as a premier fishing destination and wildlife viewing area. Facilities and navigation markers to be improved. Expanded lock hours to increase usage.	It is a key economic draw for Putnam county. Anyone who wants it destroyed has never been there. It should have never been built, but it can never be restored. Two wrongs don't make a right. Those who want the river still have the areas above and below, but those areas are hardly used compared to Rodman. It also serves to filter the water coming from the Harris chain before it reaches the St. John's. Anyone who things the St John's has algae now, just remove that filter.	If the Dam is removed the St John's water quality will rapidly decline with an increased nutrient load.	Clean up he nutrient load from the Harris Chain first before any other actions could be considered.	What real benefits come from removing it other than making a few crazy environmentalist happy.
10/21/2021 21:56	St Johns		No	Yes			1 time	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Historic fish and manatees return as breach opens creating a free-flowing river	Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	This exciting restoration will improve water quality and flow by generating an additional 150 million gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
10/21/2021 21:58	Duval		No	No					Remove the dam.	It should be returned to its natural state.	Continuing the discussion of what to do with the dam.	No.	
10/21/2021 22:01	Marion		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	Restoration of the Oklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Restoring the Ocklawaha, Silver and St. Johns Rivers will also restore 50 springs and dramatically improve the Silver Springs ecosystem, allowing fish and manatees to return.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	I have kayaked the Ocklawaha as far as the Rodman Reservoir and seen what it could be if the river was returned to its natural course. There are simply too many benefits that can't be denied. Not only would this be an environmental win, it would be a huge economic win for the region.
10/21/2021 22:02	Outside of state / other	Tennessee	No	Yes			More than 5 times	Fishing Canoeing / kayaking Boating Wildlife viewing	I believe that for the safety of the manatee population and several reasons the dam must be maintained	The dam system helps contain blooming algae and other runoff from entering the main river system	Cost to the taxpayers to clean up the site, detrimental effects on wildlife. Especially manatee w	No	
10/21/2021 22:03	Alachua		No	No					I would like to see the dam removed and the flow of the oklawaha returned.	The health and well being of the river ecosystems depend on this restored flow. Fresh water reserves for Floridians	The continued degradation of the connecting rivers without the flow that is required for the health of the system.	No	
10/21/2021 22:04	St Johns		No	Yes			1 time	Boating	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an undisturbed blueway.	This exciting restoration will improve water quality and flow by generating an additional 150 million gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration
10/21/2021 22:06	Outside of state / other	Moultrie, Ga	No	Yes			1 time	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	20 lost springs and Silver Springs ecosystem are restored, $4-14 Million in dam repairs saved on a dam past its life expectancy, wildlife that has been excluded can return home	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe.	No. Getting rid of this dam is way past due.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/21/2021 22:06	Miami-Dade		No	No					the dam should be removed to restore the natural florida wetlands. our rivers and springs are suffering and the state of the water and fisheries in florida are declining in OUR lifetime.	the fact that the dam has smothered 20 natural springs that fed into ocala national forest. which has stopped the migration of manatees and other aquatic wildlife.	that florida's water quality will deteriorate to the point that nothing can survive. we will have no more fisheries, no more coral reefs, loose a lot of what makes florida, florida.	no. the city, county, state, country, needs to do something about this. we cannot keep altering natural habitats.	
10/21/2021 22:07	Volusia		No	No					Breaching the dam- its is an unnatural and selfish barrier imposed on wildlife and a blockage to free flowing water.	Over 15,000 acres of the wild life corridor are restored by breaching said dam- positively affecting us and the environment.	Manatees losing access to warm water in winter time. manatees are already losing their habitats, this dam is yet another obstruction to their lives.	Drawing the reservoir down to 11/12 feet for a time- this would avoid dam failure and properly damage whilst allowing for recreational activities, however, wildlife will not benefit.	It is an absolute shame that youth have to speak up due to the irresponsible actions of the few. I would hate to see my area die out as the global environment plummets. I would want to be on the right side of history.
10/21/2021 22:08	St Johns		No	Yes			1 time	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	20 lost springs and Silver Springs ecosystem are restored	Hundreds of manatees loose access to essential warm water winter habitat.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/21/2021 22:08	Miami-Dade		No	No					Free the flow!!	Free the flow!!	Free the flow!!	Free the flow!!	FREE THE FLOW
10/21/2021 22:08	Alachua		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	$57 million in potential flood damages avoided to downstream property owners And wildlife restoration	A storm event triggers a dam failure or overstopping resulting in potential damages to $37 property owners and up to $57 million in damages	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	This restoration will improve water quality and flow; support coastal resiliency; and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.
10/21/2021 22:11	Nassau		No	Yes			2-5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Nothing. Leave it alone. Everywhere government or man get involved in "fixing" things chaos follows. This is a beautiful place with lots of wildlife. Leave it alone	Just look at all the places where the government or man gets involved in " clean-up or restoration" it does not work. Leave it alone.	You idiots will try to drain this beautiful haven again in the middle of the night in name of some sort of "just" cause.	No, again leave it alone. Don't drain it.	This reservoir has came about due to the construction of a cross state barge canal that never saw completion. One benefit of this project was Rodman Reservoir which is and has been a beautiful haven for wildlife and fisherman alike . Don't drain it.
10/21/2021 22:11	Alachua		No	Yes		2-5 times		Wildlife viewing	Removed or dam breached	Ecology and science based info - spring and river restoration	More of the same - special interests outweighs the Will and voice of the majority of stakeholders	Not really	
10/21/2021 22:14	Alachua		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	Remove it!!!!	Restore natural habitat	Continued degradation of natural habitat	NO	This is critical to Florida's natural habitat!!!
10/21/2021 22:16	Manatee		No	No					?	Manatee welfare and future habitat	?	?	I am soon to retire and am a skilled Veterinarian with 40 years experience with both surgery and internal medicine, emergency care, and recovery of horses, pets, exotic pets, and Zoo animals during my career. I am interested in the plight and future of the Manatees in Florida on the gulf coast and am interested in applying for a position with the Manatee rescue organization upon completing the sale of my two veterinary hospitals and completing my full retirement in Ohio. Please pass this on to whomever may find it valuable and good luck with expanding the local habitat! James Underwood DVM
10/21/2021 22:23	Volusia		No	Yes	1 time	More than 5 times	More than 5 times	Fishing	Leave it like it is it is a great place to fish	Fishing	It would destroy the habitat for the fish	It would destroy the habitat for the fish	
10/21/2021 22:23	Orange		No	Yes		2-5 times	2-5 times		Remove it to restore natural flow	St John's river and water quality issues	Our states future		
10/21/2021 22:23	Duval		No	No					Get rid of the dam. It makes no sense breaking up 3 rivers and ruining so many springs. This is bad for the environment and our clean water.	Much information supports this. What bothers me most is that our water quality is hurt by this dam and as time goes on, we will be needing more and more water. I don't like the negative effects on the environment including wildlife.	We are ignoring the negative impact on the environment. We continue to trash our environment. This is irresponsible and shortsighted. I want the healthiest environment possible in Florida. No reason for keeping this dam is more important. The money is available from fed and state govt. Get rid of this dam now. My biggest concern is that if we don't do it now, we may never do it.	No. Just plain no. Get rid of the dam now. If it's the right thing to do, which it is, then just do it.	We have 3 rivers split up and 50 springs messed up. Florida can have healthy waterways. Our environment depends on the health of our waterways. Please, please, please get rid of this dam, let our waters flow freely and let our waterways recover.
10/21/2021 22:24	Volusia		No	No									
10/21/2021 22:28	Okaloosa		No	Yes		1 time	More than 5 times	Fishing Boating Wildlife viewing	Leave them alone	The ecosystem that has been created is extremely diverse and healthy	The lost of an amazing ecosystem and the destruction of a fabulous fishery.	Any scenario where the dams are undisturbed	
10/21/2021 22:35	Hillsborough		No	No					uncertain	that it does not harm the environment	not sure at this time		
10/21/2021 22:36	Alachua		No	Yes		1 time	1 time	Fishing (shoreline/structure) Wildlife viewing	Remove the sam	The springs should be restored The fish will be helped The manatees need access	It's well past time to breach the dam and restore the river to its natural state. Keeping it is expensive and bad for the environment	No	We have lost enough manatees. Breaching the dam makes environmental and focal sense
10/21/2021 22:39	Leon		No	No					Based on what I've seen and heard, I understand the best option is to breach the dam.	Breaching the dam would restore the 20 or so springs that were drowned as a result of building the dam, as well as reopen access to the Ocklawaha River and Silver Springs for migratory fish and manatees .	That lots of funding would go into restoring the dam, even though the dam hurts rather than protects the ecosystem.	I cannot think of anything more important, beneficial and timely than breaching the dam.	appreciate this call for feedback.
10/21/2021 22:44	Marion		No	Yes		2-5 times		Wildlife viewing	At least breach the dam. Removal would be fine also.	To restore the natural flow of three rivers and 20+ springs and ecosystems which would provide increased wildlife and habitats, manatees, native fish and additional recreational activities.	That it would remain as it is...an old, decaying dam which really does not provide any public benefit such as flood control, power, water supply and we are left with algae-covered waters, dead trees etc instead of fixing a wrong by restoring/ reuniting the rivers improving water quality, expanding recreational opportunities such as canoeing and kayaking.	No.	I was born and raised in Ocala, Florida and love and care about Florida's environment and wildlife. Please , please breach the dam and restore the Ocklawaha River. Restoration will unite three rivers and improve water quality and flow and strengthen a vital wildlife corridor. It would provide many recreational opportunities and benefit communities and economies. We love kayaking on the Silver River and would to have the rivers reunited and be able to enjoy the 20 miles of the Great Florida Riverway. It's imperative to restore this beautiful asset of the state of Florida. The dam is just a lingering piece of a mistake made decades ago to cut Florida in half for a barge canal. Restore the rivers to correct the mistake, bring manatees back to the Springs, bring native, migratory fish back, restore the 20+ springs that are currently flooded and let Floridians enjoy this unique ecosystem. Don't waste money repairing the dam. It is now time to take action that will improve Florida's rivers and ecosystems now and for our future generations. Thank you for your consideration.
10/21/2021 22:45	Alachua		No	No					The cross-Florida barge canal for which the dam was built has never existed. The dam and its so-called "reservoir" were kept intact by powerful legislators like Sen. George Kirkpatrick and his buddies, who wanted to go bass-fishing.	From what I hear, there are few bass left in the "reservoir", and what there are, are not worth catching.	The ecosystem of Florida is in poor condition already; getting rid of a man-made lake might help to restore it.	How can there be another solution? We either keep the dam or we don't, there's no in-between.	This fiasco has been going on for more than fifty years. For heaven's sake, get rid of the thing and restore the Ocklawaha to its natural state.
10/21/2021 22:45	Outside of state / other	Meigs, TN	No	Yes			1 time	Fishing	Keep it the way it is, the experience of this amazing place is just amazing seeing manatee and other things you can't see in my state made it a wonderful experience for myself and my kids.		I wouldn't visit the state of Florida again!		
10/21/2021 22:48	Duval		No	No					Take down the Dam and let the Oklawaha run free	submerged streams, dead trees,	increased algae	no	
10/21/2021 22:59	Alachua		No	Yes	1 time			Canoeing / kayaking	See the river become a free flowing water body again.	Will provide a greater economic impact to the community (eco-tourism) and will help to restore the river and its surrounds to a more pristine condition.	Believing that the dam provides more positive impact than the negative impact that it currently offers.	I think the dam vs the river without the dam is the question.	Please be open to new ideas and not just the old narrative.

10/21/2021 23:01	Lee		No	No					To restore the Ocklawaha River by breaching the dam and draining the reservoir.	Breaching the dam would be less expensive than removing it. Allowing the river to flow in it's pre-dam area still provides recreation opportunities and vast environment improvements.	The dam repair is very expensive and not necessary any longer.	Not that I can think of.	
10/21/2021 23:04	Volusia		No	No					Not to move forward with the dam: stop wasting taxpayers dollars	More open waters for our manatees to come to in warmer waters during the winter months	Very disappointing that money means more than protecting our eco system 😡😡	No ! Not really!!stop throwing $$ away .we have had hundreds of manatees starve to death due to starvation this past year.	Let's help our eco system: let's protect the fish, & the wildlife: the manatees, blue springs: let the water run more freely!!
10/21/2021 23:09	Marion		No	No					Breach the dam to allow free flow of ocklawaha river	Public safety and increase in water quality, increase in fish and manatees to Putnam and Marion counties and increase in tourism	Homes and businesses destroyed and potential lives lost if the dam fails due to age and lack of restoration	No	
10/21/2021 23:11	Outside of state / other	Massachusetts	No	Yes			2-5 times	Fishing Wildlife viewing	Keep viable. The manatees are wonderful and otters.	I saw them. Did fishing as well.	Never go back to area.	Need more info.	
10/21/2021 23:14	St Johns		No	No					I would like to see the dam removed in order for the water to flow more freely as nature intended. I have been on boats from Welaka and traveling on the Ocklawaha. I was astonished by the beauty of the waterway and would have loved being able to go further along the Ocklawaha, rather than having to return to the St. Johns River because of the dam	20 lost springs and Silver Springs ecosystem are restored in addition to supporting the three rivers that naturally flow together in a more natural way. I remember going to Silver Springs when I was young and returned from Europe with my children to ride the glass bottomed boat there. I would like my grandchildren to also have that opportunity to visit a healthy Silver Springs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. (characters: 571)
10/21/2021 23:16	Collier		No	Yes			1 time	Wildlife viewing	Restore habitat for manatees and other wildlife	Declining populations of wildlife	Less biodiversity	At least equal priority for manatees in management decisions.	Please make the protection and restoration of wildlife habitat your main priority!
10/21/2021 23:25	Alachua		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing Other: Trans personal indeginous ritual	Comprehensive ecological planning development with full natural services inventory.... immediate removal followed by implementation of ecological rehabilitation and sustainable management	Long-term historical degradation of water resources and ecological sustainability which threaten traditional land viability and sacred disregard.	Ecological and economic catastrophy to local and bioregional communities	NO...immediate removal and complete system rehabilitation only	I appreciate this opportunity to comment and encourage your favorable response to these proposition for a positive future for florida water protections
10/21/2021 23:32	Miami-Dade		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers	The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	
10/21/2021 23:39	Duval		No	Yes	1 time	1 time		Wildlife viewing Other: Environmental Education	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. The health of the lower St. Johns River is better served by breaching the dam and reuniting the Ocklawaha, St. Johns and Silver Rivers, which will only strengthen the environmental sustainability and resiliency of the surrounding ecosystems.	Among numerous benefits to local ecosystems, wildlife and tourism, reintroducing approximately 150+ million gallons of natural flow to the lower Ocklawaha and St. Johns River would greatly help mitigate some of the more damaging impacts of dredging for JAXPORT, such as increased salinity levels encroaching further up the St. Johns River.	The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait. We must not miss the best opportunity to do this in a long time -- State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	As a resident living along the lower St. Johns, I have become increasingly concerned about the overall health and sustainability of the river and its surrounding ecosystems. Restoring the natural flow of the Ocklawaha River seems like the simplest, most elegant and most cost effective solution to a myriad of problems affecting the lower St. Johns as it flows thru Jacksonville to the Atlantic Ocean. It appears to be the closest thing to a "win-win" scenario for which one could hope.
10/21/2021 23:39	Seminole		No	Yes	1 time			Other: See the state of things there	Free the Ocklawaha by breaching the dam.	The Rodman Dam prevents the natural, important migration of native fish and has cut off access for manatees. Breaching the dam would restore the freshwater flow and allow for needed habitat.	If this issue is not acted on, Florida misses a great opportunity to provide warm water for manatees when they are dying at an alarming rate because they're losing their habitat. The dam needs to be breached to provide uninhibited manatee and fish passage.	No, dam safety, better water quality and wildlife cannot wait.	Restoration is needed and I hope to see a bright future for the Ocklawaha River restored. Thanks for your time.
10/21/2021 23:53	Miami-Dade		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Historic fish and manatees return as breach opens creating a free-flowing river	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	This exciting restoration will improve water quality and flow by generating an additional 150 millions gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration.
10/21/2021 23:58	Duval		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Canoeing / kayaking Hunting Wildlife viewing	Tear it down Open the Oklawaha.	The dam is killing the Oklawaha, the land around it, & the St Johns.	Destruction of the St Johns.	No.	Destroy the dam now!
10/22/2021 0:13	Outside of state / other	CANADA	No	No									
10/22/2021 0:17	Outside of state / other	Wisconsin	No	Yes			2-5 times	Fishing Boating Wildlife viewing	I'd like to see it maintained. I was amazed at the exceptional fishing, the variety of wildlife including alligator and manatee, as well as a huge array of birds.	My own personal experience and the opinion of those who rely on this for their livelihood. These are people I respect, visitors from all over use the waters which helps support the local economy	The loss of the habitat that has been used by so many species in addition to humans. This ecosystem has been established for many years now	Can not comment as I do not know exactly what those proposals are.	
10/22/2021 0:18	Seminole		No	Yes			1 time	Canoeing / kayaking Other: In Eureka, FL at canoe outpost	I would like to see the restoration of a free-flowing Ocklawaha River by breaching the Rodman Reservoir and Kirkpatrick Dam. Every day it remains in place is not good, especially since the dam is in need of repair and can cost more than $57 million in flood damage.	The dam is more than 50 years old and has surpassed its life expectancy and was never used for its intended purpose. Restoring the river will save millions in taxpayer money. Restoring the river boosts the local economy because it also creates more recreational opportunities for outdoor loving people and this pandemic has brought them out of the woodwork. There will be an increase in visits and more jobs will ensue.	Economic benefits to the surrounding local communities, Putnam County and Silver Springs, will be lost because the enhanced recreational opportunities wouldn't happen. It's estimated that $47 million could be realized in the next 10 years following dam removal. Why spend taxpayer money to repair a dam that does not provide a broad public benefit?	No, thanks for asking. The economic benefits of restoration of the river outweigh repairing the dam.	I appreciate your time and consideration. As a stakeholder, not only do I care about the economics of this issue, but also the environmental impacts. Restoration of the river means that natural water flow will lead to improved water quality (big also for our state), restoring native fish and wildlife habitat and a reduction in saltwater intrusion. Thank you.
10/22/2021 0:20	Pasco		No	Yes			1 time	Fishing Wildlife viewing	Removal of the damn, so that the original and natural flow of water can continue.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored	The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway.
10/22/2021 0:24	Duval		No	No						It's useless and a waste of money	The state just wastes more of our money	None	Do the right thing and help make Florida's future brighter and smarter
10/22/2021 0:24	Orange		No	No					Breach the dam	The dam prevents the springs from flowing naturally and provide habitat for fish, manatee, and other animals	Cost of maintaining a dam that is bad for our environment and animal life	No	Thanks The cost and negative impact to our natural lands is incentive enough to breach the dam and eliminate this headache
10/22/2021 0:28	St Johns		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing Other: Visiting springs	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored	The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. The restoration is long overdue. The time is now.	As a Florida native and resident who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. The restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.
10/22/2021 0:29	Santa Rosa		No	No					I would like to see Kirkpatrick Dam breached so that the Ocklawaha River can once again flow free.	The dam would no longer need to be maintained or repaired at a cost of millions of dollars. It is quite old and never actually served the purpose for which it was built. It will free up the river for manatees and various species of migrating fish. The water supply to the St. Johns River will be increased. Thousands of acres of forested floodplain could be restored, including habitat for several native plant species.	Water quality in the area would continue to decline and residents and businesses downstream of the dam would continue to be threatened by the future of an aging dam.	No. Breaching the dam is the only solution that will yield the desired environmental and financial outcomes.	
10/22/2021 0:48	St Johns		No	No					Breach the dam and restore the natural river.	It would help save manatees.	The ecology of the area needs to be returned to nature.	No.	Please follow the recommendations of the St. Johns River Keeper organization for the betterment of the area.
10/22/2021 0:58	Clay		No	Yes			1 time	Wildlife viewing	Removal of the dam	springs restoration	Continued decline & eventual ruination of springs	No	
10/22/2021 1:12	Marion		No	Yes			1 time	Fishing	Remove the dam and return the river to it's natural state.	The fishermen can still fish and it will still be multi-purpose. It was not originally built for recreation only.	We did not do the right thing.	No	
10/22/2021 2:34	Hillsborough		No	Yes		1 time		Fishing (shoreline/structure)	take it down! it is hurting the environment!	there are several springs that have been drowned because of the dam		no	
10/22/2021 3:06	Alachua		No	No					Breach the Rodman/Kirkpatrick Dam!	The dam is past its life expectancy and hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	Water quality declines further, possibly beyond hope of repair.	No please breach the dam.	Someone has to do the right thing and show up for Florida wildlife and the future of our water. Manatees are dying. Please do the right thing.
10/22/2021 3:22	Outside of state / other	Illinois	No	No						seen it	a lot more manatees will die needlessly	i don't know	save the manatees
10/22/2021 4:06	Orange		No	No					Removal of the dam and reservoir.	The reservoir covers several natural springs, the dam has no practical use, the river is not open to recreational travel.	Continued restriction of the natural flow of the river.	No	
10/22/2021 4:50	Orange		No	Yes		More than 5 times		Fishing Boating Wildlife viewing	I would strongly oppose any changes to the Rodman Reservoir and Kirkpatrick Dam. The Reservoir and surrounding habitat is a valuable resource for Central Florida and the rich vegetation and foliage provides a great food source and protection for a vast number of wildlife species (especially the growing number of Manatees that have migrated to the Reservoir as their other food sources and habitat has slowly been destroyed). Changes made to the Reservoir and Dam would more than likely create a situation similar to what's been experienced in the Mosquito Lagoon on the East Coast!	visit the area and witness the vast amount of wildlife supported by the Ecosystem and DNR has documented the increases in Manatee population migrating to the area and there is no shortage of documentation of the quantity of fish population and other wildlife in and around the Reservoir.	Our Community would loose a natural resource that cannot be replaced!	No - the natural environment around Rodman Res. The Dam is PRICELESS and for the sake of the residents of the State of Florida, the area should be left alone.	
10/22/2021 4:51	Alachua		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Canoeing / kayaking Boating	Remove Dam.	Restore the River.	River will suffer.	Chocolate Ice Cream	Why
10/22/2021 5:03	Duval		No	Yes			1 time	Fishing Fishing (shoreline/structure) Wildlife viewing	I would like to see it stay the way it is.	People have jobs depending on Rodman. Lots of wildlife. Creates a buffer from development.	Loss of jobs. Development overtaking area. Manatees that have taken up home there will starve if Dam is removed. Wildlife using this area will be forced out.	No. Save the dam.	Thank you for the opportunity to comment.
10/22/2021 5:33	Manatee		No	No					What is best to save the Manatees	Manatees	Less manatees	Saving the Manatees	
10/22/2021 5:33	Putnam		Yes	Yes	1 time	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing Other	Keep it just like it is				
10/22/2021 5:16	Marion		No	Yes	More than 5 times			Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Kept the way it is.	Man has created the dam for the purpose of doing exactly what it's doing now. Helping wildlife. And to do away with it so many years later is awful.	The habitat of all animals that rely on specific areas be done away with.	Anything reasonable. This is not it	May the good lord be in control . God Bless America us
10/22/2021 5:39	Lake		No	No					I've never fished Rodman, but know it's a superb bass habitat. It would seem logical that removing/opening the dam would result in a significant loss of habitat & the loss of the filtering capabilities of that reservoir.	I'm not aware of the studies that must have been done to consider this radical change. Where do I access this information?	The overall effect on all water bodies upstream from the dam.	I can't think of anything.	How does this proposal compare with the effects of water control on the Caloosahatchee , Kissimmee & St. Lucie River systems?
10/22/2021 5:41	Clay		No	Yes		2-5 times	More than 5 times	Fishing Canoeing / kayaking Boating	Remove the dam.		Water quality will not improve but continue to decline.		
10/22/2021 5:47	Outside of state / other	I visit my uncle in Ocala and visit Rod	No	Yes			More than 5 times	Fishing Wildlife viewing	Left alone	Wildlife. The ecosystem is tremendous also	Manatee, fish, wildlife in general would suffer.	No	
10/22/2021 5:49	Alachua		No	No					REUNITE OCKLAWAHA AND ST JOHNS RIVERS.	ENVIRONMENTAL AND ECONOMIC IMPACT FOR NORTH CENTRAL FLORIDACONTINUE	CONTINUED ENVIRONMENTAL AND WILDLIFE DECLINE	YES	
10/22/2021 5:50	Levy		No	Yes		2-5 times		Fishing Wildlife viewing	Repair it. So it lasts another 100 years	The wildlife and businesses that live because of the dam	Rodman will be gone. Right along with the wildlife	Leave it the way it is	
10/22/2021 5:52	Pinellas		No	Yes		2-5 times	More than 5 times	Canoeing / kayaking	I would like it removed	The mulk that builds up in the river.			
10/22/2021 5:53	Lake		No	Yes	2-5 times	2-5 times		Fishing Canoeing / kayaking Boating Wildlife viewing	Stays open	Wildlife	Not sure	No	None
10/22/2021 5:54	Lake		No	Yes	1 time	2-5 times	More than 5 times	Boating Wildlife viewing	Have it torn down	The dam is no longer needed and the river should be restored to its natural state	Continue to be outspoken	No short cut, it either stays or goes	
10/22/2021 6:02	Alachua		No	Yes			2-5 times	Canoeing / kayaking	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/22/2021 6:06	Orange		No	No					Breach the Rodmon/Kirkpatrick Dam	The dam is past its life expectancy, breaching the dam saves millions of dollars in dam repairs and upkeep. Taxpayers should not continue to repair and maintain a dam that is actively harming an ecosystem.	Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
10/22/2021 6:07	Alachua		No	No					Destroy the dam to free the Ocklawaha River	Three rivers and 50 springs will be restored if the dame comes down	Three manatee deaths and further environmental degradation	No	This will bring tourism dollars to the area. People love springs!
10/22/2021 6:08	Columbia		No	Yes			1 time	Canoeing / kayaking Boating Wildlife viewing	Please remove the unnatural dam to restore habitat and flows to a natural system.	Manatee and fish passage and SAV restoration.	Animals and SAV will not thrive.	No	
10/22/2021 6:18	Orange		No	Yes			2-5 times	Boating Wildlife viewing Other: We boat on the Ocklawaha and Silver Rivers and would go farther north if there was no dam	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place it costs the state money, there is danger of an accident, water quality continues to decline, and wildlife continues to have more limited natural habitat.	$4-14 Million state money in dam repairs for a dam past its life expectancy could be utilized for more productive water quality and wildlife habitat improvements	A storm event triggers a dam failure or overtopping resulting in damages to property owners and millions paid out by the state, money wasted when it could be used productively elsewhere.	No. Breaching the dam is 50 years overdue for reasons of dam safety, water quality and wildlife.	The Ocklawaha River is the heart of the Great Florida Riverway, a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Breaching the Rodman/Kirkpatrick Dam, to restore the Ocklawaha River and reunite the Ocklawaha, Silver and St. Johns Rivers, is the most beneficial and cost-effective springs protection project in Florida right now. The project is key to restoring Silver Springs, one of the largest artesian springs in the world providing approximately 66% of the flow to the Ocklawaha River. With the uncovering of 20 springs submerged by the waters of the dam, hundreds of manatees would have essential warm water winter habitat. The estimated 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River. This is an important environmental effort that I, as a boater and lover of Florida's wildlife, respectfully request that you budget for and begin implementation in the coming year.
10/22/2021 6:22	Palm Beach		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/22/2021 6:38	Outside of state / other	Cook County, Illinois	No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	100s of manatees gain essential warm water winter springs habitat	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. 10/22/2021 6:40	Leon		No	No					Please remove the dam	I have kayaked this area and I would like to see the natural flow of water	Lack of natural process. To restore natural streams and springs	Not at this time	
10/22/2021 6:42	Seminole		No	Yes					The dam should be removed to restore the natural flow of water.	Man made dams are an environmental nightmare. They hurt local plants and animals, especially aquatics. Dams also create a danger for humans downriver when they fail.	The environment around the dam will continue to deteriorate as will the dam. It is a looming disaster that could easily be averted if we just cared about the environment and humans as much as we care about money.	No.	Water flow is vital to the health of Florida's waterways. When we stop or impede that flow, bad things happen. Our state should be a tourist destination, not just because of the theme parks, but because of the natural beauty and health of our environment.
10/22/2021 6:42	Clay		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Boating	Keep it as it is now .	The wild life . and money that it brings to Florida.	The enjoyment that Rodman provides for my family .if there is a watershortage in Florida why would we do away with the lake .	What about the wildlife that has adapted to the lake all these years . and the manitee s .	
10/22/2021 6:43	Palm Beach		No	Yes			2-5 times	Fishing					
10/22/2021 6:44	Outside of state / other	North Carolina	No	Yes		2-5 times		Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Keep it alive	The wildlife habitat and how it supports tge community	Less visitors for the community		
10/22/2021 6:45	Suwannee		No	Yes		2-5 times		Fishing Boating Wildlife viewing	Economic and invironmental impact		Loss of use of the water shed.		
10/22/2021 6:47	Union		No	Yes		More than 5 times		Fishing Boating Wildlife viewing	Nothing		Losing a lot of fishery		
10/22/2021 6:58	Duval		No	No					Remove the dam	Captains for clean water	That the resource will not be around for future generations	No	Remove the dam please
10/22/2021 7:00	Hillsborough		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	I'd like to see it left alone	If it is removed we would lose rodman reservoir which is one of the best fisheries in the country not just florida.	The wildlife that uses rodman reservoir would be effected.	No just leave it alone	

10/22/2021 7:03	Volusia		No	Yes	1 time	2-5 times		Canoeing / kayaking	Breach the dam!	Springs buried, fish populations r. Decline	Degradation of waterways nearby, decline of marine life	No	
10/22/2021 7:05	Marion		No	Yes			2-5 times	Canoeing / kayaking	The Dam should be removed or breached and the natural flow of the Ocklawaha and the many springs it is home to should be restored.	I kayak the silver and Ocklawaha Rivers and over the years have seen many changes. I'm involved in several environmental advocate organisations that provide the results of scientific studies. The personal observations of those who have spent years on the rivers contribute to my knowledge and fact-based opinion. The flow of 20 springs, the natural migration of fish and Manatees and the continued erosion of the land and forests in the area are hard sights to miss. The natural balance must be restored. The unintended consequences of the dam must be remediated.	Continued environmental degradation and imbalance. Restoring the balance of the natural world is more essential than ever.	If the dam remains in place, the decline of the environment will continue and intensify. this affects aquatic vegetation, fish, forests, wildlife and water quality in the three rivers involved. The Silver, Ocklawaha and Saint Johns rivers. I don't think that we have a choice. We're probably in the "too little too late" stage as it is.	I love kayaking on the Silver & Ocklawaha rivers; seeing the birds, fish, Manatees and the vegetation and trees. I have noticed that there are fewer and the river water less clear each time . Sad.
10/22/2021 7:05	Martin		No	No					The dam needs to be breached.	The dam is past its life expectancy, breaching the dam saves millions of dollars in dam repairs and upkeep. Taxpayers should not continue to repair and maintain a dam that is actively harming an ecosystem. There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years.	No. Breaching the dam is 50 years overdue.	Please keep our environment natural, as intended when it was created. As the world continues to head toward destruction we will need the resources these clean, fresh water springs provide.
10/22/2021 7:07	Putnam		Yes	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing Other: Food source	Maintain the Kirkpatrick Dam and Lake Oklawaha at it's current state.	There are several studies that are available to SJRWMD that you hold. Save Rodman Reservoir organization also references many studies that support the maintaining of the reservoir.	Nutrient loads to the St. Johns river will increase and toxic algae blooms will greatly increase, the reservoir as we know it will be reduced to a ditch that will not be accessible without spending millions on top of millions of dollars to create access, all of the endangered and threatened wildlife will be displaced and the threatened manatees that are living in the reservoir will be threatened once again. The entire ecosystem will be turned upside down again after it has been repaired by nature from the Cross Florida Barge Canal debacle.	Unfortunately no. The dishonesty and underhanded behavior that has been exhibited by the Riverkeeper and the FDEP for years and even asking people to "cheat" on this very survey can not be trusted to come to the table with any viable agreement short of leaving Lake Oklawaha as it is today.	If you have the opportunity, you should visit Jenny Carr's (President of FDEP) Facebook page where she is asking people to use several email addresses to submit responses to this survey, basically calling on everyone to cheat the system. If you cannot find it, reach out and I will send you a screenshot. In my opinion, that is grounds to dismiss this entire process which I am sure will be challenged in court if Lake Oklawaha is threatened in any way. Hopefully it will not come to that as taxpayers do not need the extra expense.
10/22/2021 7:09	Putnam		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing Other	I would like to see it keep up and operated like it has for years. Not only is this a great recreational area but it has a thriving eco-system.	The wildlife that lives in this area.	The economic impact it will have on the area.	The only scenario I could and would support is for the state to leave it alone and give it back to the army Corp of engineers and let them run it like they did for many years.	
10/22/2021 7:12	Osceola		No	Yes			More than 5 times	Fishing Boating Wildlife viewing	Stay	My experience	Ruining of an excellent wildlife, nature and fishing area	No	If you remove the damn, you will ruin what is a beautiful source of nature and wildlife that is accustomed to what it is today.
10/22/2021 7:15	Marion		No	No					Remove/return river to what it was.	Article I read and a video about how the damm destroyed the natural flow of the river.	Wildlife and the amount of tax $$$ needed to maintain the damm		
10/22/2021 7:18	Marion		No	No					I would like to see the dam removed so the river flows freely	Allowing the manatees to travel freely up the river for food and refuge	Extinction of the manatee's		
10/22/2021 7:19	Brevard		No	Yes			1 time		I would like to see the dam removed. That is the only way to restore the wetland functions in that area.	Reconnecting the Ocklawaha, Silver, and St. John's River would restore springs and wetlands that have been lost from the dam. As we know, springs and wetlands provide opportunities for recreation, wildlife viewing, and the rivers can still provide fishing and sport opportunities.	Our environment and economy are linked and we are at a critical point. My biggest concern is that the dam has contributed and will continue to contribute to environmental and economic decline.	No. Now is the time to remove the dam; it would be much more cost effective to remove it than to repair it.	
10/22/2021 7:20	Alachua		No	No					Breach the Rodman / Kirkpatrick dam	There are 20 drowned springs that would be restored by this single project, making breaching the Dam the most beneficial and cost-effective springs protection project in florida not to mention the manatees that would then gain access to much needed habitat during a time where they are rapidly declining. Also breaching the Dam would save millions of dollars on future repairs due to it being past it's life expectancy.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/22/2021 7:20	Duval		No	Yes			1 time	Fishing Wildlife viewing	Remove the dam let nature restore the floodplain	The dam was put there for a barge canal that never was completed. It is blocking access to the beautiful river for both wildlife and humans	Dam failure	No	We live the Florida springs and want them to be accessible again. This dam serves no purpose
10/22/2021 7:20	Marion		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Hunting Wildlife viewing	Remain as is it's a beautiful lake that provides for all	What it does for habitat	How it would affect so many lives including wild life	No	
10/22/2021 7:20	Marion		No	Yes			1 time		We would like to see the dam breached to allow the River and springs to return.	The advice of experts that have studied the ecological and economic benefits for breaching the dam.	The ecological damage to the river, springs and surrounding areas.	No	Please breach the dam to provide economic opportunities for ecotourism.
10/22/2021 7:21	Duval		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	I would love to be able to keep fishing the reservoir but if they tear down the dam and the state sells the land to developers to build along that stretch of the river what will that accomplish as it is now the reservoir supports a lot of wildlife , leave it bee	I am 55 years old about the same age as the reservoir. My dad took me fishing there I've taken my kids fishing there and grand kids if they remove the dam now it will never return to what it was before the impoundment was built.	The stat would sell the land along the river to developers and will never return to the state it was before It was built	Yes leave it alone it at it current state it supports more wildlife now than it would take another 50 to 100 years to return to the state it was before the reservoir was built	
10/22/2021 7:25	Marion		No	Yes		More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Wildlife viewing	Take the dam down so the river can be free'd up and the springs can be enjoyed other than when the reservoir is drawn down	Paddled and fished the river when the draw down has occured	Nothing would change	No.	It's infrastructure that no longer serves a purpose.
10/22/2021 7:26	Volusia		No	No					Restoration of the Ocklawaha River by broaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers $4-14 Million in dam repairs saved on a dam past its life expectancy Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. $57 million in potential flood damages avoided to downstream property owners	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/22/2021 7:27	Marion		Yes	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking	Please leave it o	and many businesses depend on this wildlife ecosystem year round. This provides approximately 60 percent of my businesses.	I'll end up closing my 14 year old Sports and bait store in Salt Springs.	No	Rodman dam and it's ecosystem provides a large array of wildlife habitat. The economic impact to this area will be devastating to tourists, campgrounds, business and will take years for overcome if ever.
10/22/2021 7:30	Marion		No	Yes	1 time			Fishing Boating Wildlife viewing	To be left alone				
10/22/2021 7:31	Alachua		No	Yes			1 time		Remove it and restore the natural movement of the water.			no	
10/22/2021 7:32	Pasco		No	No					Breach the Rodman/Kirkpatrick Dam.	* Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs.	* Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No. Breaching the dam is 50 years overdue	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/22/2021 7:32	Lake		No	Yes			1 time	Canoeing / kayaking	Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/22/2021 7:37	Seminole		No	Yes			1 time	2-5 times	Other: viewing but once it is breached I will use it quite a bit	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Right now it harms the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	ENVIRONMENTAL SENSE! The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. **** ECONOMIC SENSE! Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	NO. It is time. It makes environmental and economic sense.	Breaching the dam will improve water quality and flow by generating an additional 150 million+ gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
10/22/2021 7:38	Alachua		No	Yes				Other: Haven't been for over 5 years. Went to see it and took a boat out	I would like to see the Kirkpatrick Dam taken down to restore the Ocklawaha River	After the dam is removed, there are 20 springs that will be utilized by visitors, bringing in a large tourist economy. Many more visitors will be able to enjoy wildlife, including manatees, and many more diverse activities will be available to visitors.	That the ecosystem will continue to degrade, the opportunity to restore the river and 20 springs will be lost, and the dam will require many dollars of tax payer money for maintenance	No, Either the dam is removed to restore the Ocklawaha, Silver and St Johns, or it is not.	I have not been inspired to go to the reservoir as I find it depressing but I would definitely visit the area once the springs are restored and bring out-of-state visitors there. This dam has been left in place way too long. Remove it.
10/22/2021 7:38	Outside of state / other	Gilroy, California	No	Yes			1 time	Fishing Boating Wildlife viewing	Preservation of the Dam and Reservoir, with necessary maintenance; protected status as a Wildlife Refuge	Over the past 53 years, Rodman Reservoir has evolved into 9500 acres of idyllic wildlife habitat. Mother Nature has done her best work here, calling in a reported 115 species of birds, giant large-mouth bass, manatees with calves, and countless other species, and supported them with an abundance of food and space. Rodman offers the breadth and depth and diversity to withstand, better than a narrow river, the rising temperatures, droughts, inland flooding, and hurricanes resulting from climate change. (Florida set a heat record for the first 6 months of 2021.) Florida has lost 20% of its birds in the last 50 years. Rodman supports nearly 3 times the number of bird species as the Oklawaha River. What's more, it is here and now-habitat-established, successful, a known quantity. Draining away the water, it's life source, would add to the catastrophic loss of species, flora and fauna, that is being experienced now worldwide-experienced in Florida. Intentionally subtracting this 9500 acres of extraordinary wildlife habitat, in this time of unparalleled pressure on species from climate change would be incredibly ill advised...unspeakable. From a human perspective-Rodman Reservoir is "the jewel of Putnam County", a claim to fame for this, one of the poorest counties in Florida. It's awe-inspiring fishing, boating, and wildlife experience is a destination for sports fishermen and nature lovers from across the nation and world-bringing millions of dollars into its economy. Generations within families have grown up fishing and boating its waters; there is significance and legacy here; Rodman is beloved...it truly matters. That Jacksonville city officials and businessmen, far removed/detached from Putnam County life should determine the fate of the reservoir, based on their own political and financial desires, and with total disregard for the "pulse" of the Putnam community...it's an abomination...again, unspeakable.	Preservation of the Dam and Reservoir, with necessary maintenance; protected status as a Wildlife Refuge The devastating loss of 9500 acres of habitat, and the death and destruction of animal life that would ensue; the accelerated disappearance of birds and other species from the landscape	No. This is not a time to compromise, given the existential threat, to all species, of global warming. It's a time to preserve existing, proven habitat, to hold onto the bald eagle, the manatee, the large-mouth bass, and all others, in this place they have chosen, and are thriving-in Rodman Reservoir. The Oklawaha River is not a lake.	Rodman Reservoir is an experience, with its large, dramatic expanses of water, it's inhabiting wildlife, the thrill of catching big fish and seeing an eagle...such excitement can inspire young people, and help them understand /know what is worth preserving...so important, as they will be stewards of the environment in years to come. Rodman teaches and inspires.
10/22/2021 7:39	Union		No	Yes			More than 5 times	Fishing	It should be kept as it is.	To remove the dam would destroy animal habitat such as eagle nests and osprey neit.	My concern is that basically an entire way of life would be destroyed for many types of wildlife.	No, leave the dam, there's plenty of water flow. Don't destroy animals homes and their way of feeding themselves. Not to mention how awesome it is to be able to go on the water and see these animals up close, like the eagle. Don't take that away.	
10/22/2021 7:40	Putnam		No	Yes			More than 5 times	Canoeing / kayaking Wildlife viewing	The dam should be removed and the Oklawaha be returned as much as possible to its natural state.	While the Dam created a NEW area for recreation 50 years ago, it ruined other parts of the ecosystem, including springs, and also disadvantaged OTHER areas and locations as opportunities for fishing and recreation, including where we live in South Putnam.	Ecological damage continuing to the rest of the Oklawaha and surrounding springs, and the state continuing to spend money for another 50 years that could be better spent elsewhere to better environmental and economic effect	Not really. I heard recently someone suggesting that a portion of the dam could be retained to create a WhiteWater rafting location, but really I think we should NOT spend money altering our natural ecosystem to be something it is not intended to be.	My family has been in Putnam County since 1939 and enjoyed the natural beauty of Putnam for many years. We were unhappy to see the dam go in, and to see the issue become a political football. For decades, it has seemed to me that SOME portion of what has been used to repair the dam should be used to ASSIST those few business owners or property owners who would be adversely affected by removing the dam, that they've benefited from all these years, to help them transition, " so that so MANY more in our area and beyond, can have the benefit of the natural river. Moneys should be allocation to alleviate economic hardship in a MEANINGFUL manner, not a "lick and a promise." Problem solved.
10/22/2021 7:44	Marion		No	Yes		More than 5 times	More than 5 times	Canoeing / kayaking Boating Wildlife viewing Other: my mother-in-law lived 100 yards from Ocklawaha River , we used to visit every week.	Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs and restore the biodiversity of the Ocklawaha and Silver Rivers. The dam removal is long overdue as the entire project has been deauthorized for decades.	We would continue to maintain a dam that wastes taxpayer dollars all for an impoundment which is seeing fewer and fewer visitors just to have an occasional fishing tournament.	No, the removal of this dam and restoration is the only scenario that I could support.	the Ocklawaha used to be beautiful; it can be again.
10/22/2021 7:45	Marion		No	Yes	2-5 times			Fishing Boating Wildlife viewing	Leave it as is	Manatee population is thriving in these waters.	Manatee will disappear completely.		
10/22/2021 7:47	Marion		No	Yes		1 time		Canoeing / kayaking Wildlife viewing	Open it up and let it go back to its original purpose.	Healthy eco system/manatee access			
10/22/2021 7:48	Duval		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing Other	Leave it as is!	What happens to the wildlife of it goes away? The fish, manatees, eagles, gators??	What to do with the stinking swamp hole if the water is gone?	No	
10/22/2021 7:49	Alachua		No	No					breach the Rodman Dam	There are 20 drowned springs that would be restored by this project, making breaching the Rodman Dam the most beneficial and cost effective springs protection in Florida.	we miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental interest is high, environmental needs are critical, dam is unsafe.	No. Breaching the dam is 50 years overdue.	Breaching the Dodman dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. the project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
10/22/2021 7:51	Duval		No	Yes		2-5 times	2-5 times	Canoeing / kayaking	To breach the dam and allow the Ocklawaha to flow freely.	To restore the wetlands and flood plains. In addition to keep the salt water from pushing up the St Johns River.	The death of the fragile ecosystem of microorganisms, fish and vegetation.	I am not aware of any other scenario that would help. Unfortunately people will not stop using chemicals that are polluting our waterways.	For this project to be halted should tell us all something. If the sad impact from this dam wasn't noticed the project would have continues.
10/22/2021 7:53	Putnam		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Remove the dam	Springs that were flooded and manatees cannot travel through the dam area.	health of springs and wildlife		
10/22/2021 7:54	Outside of state / other	Greenville, NC	No	Yes					Restore the Oklawa River	silty yank barrel project in the first place and continues to be an environmental disaster.	An unacceptable oughtnaye	No	
10/22/2021 7:54	Alachua		No	No					Restoration of river flow	River restoration could recover a natural Florida River system and eliminate costs for future maintenance of dam	Florida's rivers are threatened by development and increased population. The dam is unnecessary and is preventing river flow and ecosystems from functioning. Maintenance of the dam is a forever budget item.		
10/22/2021 7:56	Osceloa		No	No					Breach the dam to restore the Ocklawaha River.	The fact that the Ocklawaha, St. Johns, and Silver Rivers and many springs will be restored to their free-flowing and natural states, enabling use and improving conditions for fish and wildlife as well as all other users of those rivers.	Continued degradation of Ocklawaha and related water systems.	No, breaching the dam is essential.	Don't waste any more time in reversing the mistake created by this dam. Breaching this dam is long overdue and must be done as soon as possible to begin to restore our natural river systems and all the benefits associated with those systems.
10/22/2021 7:57	Duval		No	No					Restore the water way to the pre dam era, to protect our ST John River and there ecology that will occur		Worried what our wet lands and River health will deteriorate.	No	
10/22/2021 7:58	Volusia		No	Yes			2-5 times	Fishing Canoeing / kayaking Wildlife viewing	I would like to see the dam removed completely, opening up the waterways and restoring the river to what it was before man got involved with a failed never finished project.	The project that brought about the dam was never fulfilled, so it just needs to be gone and allow the river to be natural.	The river, the wildlife, the forest. They all need each other to live. The dam causes problems for all of them.	Removing the dam is the only way to achieve a natural river system again.	
10/22/2021 7:59	Brevard		No	No					Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	Let's work to restore Florida's waterways. MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
10/22/2021 7:59	Marion		No	Yes			2-5 times	Fishing Wildlife viewing	Breach the Dam	Lost springs	Continue the Loss natural fish and springs	No	
10/22/2021 7:59	Putnam		No	No					Full restoration, removal of dam infrastructure	Restore natural flow of river			
10/22/2021 8:01	Duval		No	Yes			1 time	Fishing	Restore to original flow without dam	Quality of water and health of St. John's river	At John's river gets worse	No	
10/22/2021 8:01	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	I would like to see the dam stay up.				
10/22/2021 8:01	Putnam		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Leave it alone.	Rodman will never be the same. Would take 100's of years to take it back to the original state it was.	Leave it alone.	Leave it alone.	

10/22/2021 8:02	Marion		No	Yes	More than 5 times			Fishing Boating Wildlife viewing					
10/22/2021 8:03	Alachua		No	No					Restored as nature intended.	Experience	Continue as is which is not best for the environment.	Not really?	
10/22/2021 8:04	Duval		No	Yes		1 time	2-5 times		Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers	The 300-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality and water flow.	This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a 550 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha.
10/22/2021 8:06	Marion		No	Yes			More than 5 times	Other: I don't use the dam. It needs to go away. Silver springs, silver River need to flow	Remove all traces	River and water qualities	That piece of crap dam will continue to choke the natural flow and the government will WASTE money on repairs. It NEEDS to be removed	Any legislator that doesn't support removal should quit and go into septic tank work.	
10/22/2021 8:09	Outside of state / other	Louisville, KY	No	Yes	2-5 times	2-5 times		Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Keep it the same	The reserve is thriving on its own	Lack of access and destruction of fishing habitat		Please don't ruin Rodman. It is a paradise of aquatic life, vibrant and strong.
10/22/2021 8:11	Alachua		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Please make the decision that demonstrates reverence for life!
10/22/2021 8:11	Outside of state / other		No	Yes			2-5 times	Fishing	Leave it alone	Manatee and fishing	Manatee population decline	It's working now	
10/22/2021 8:14	Alachua		No	Yes			2-5 times	Fishing Canoeing / kayaking	I would like to see the dam removed and the natural flow of the Ocklawaha river	Restoring the surrounding springs!	I have seen area lakes, ponds and springs start to dry up, and restoring the river should help this.	No.	I know that people love to fish there, but they can fish on the river too, and tourism in the area should "increase" with a fully restored river.
10/22/2021 8:14	Putnam		No	Yes		1 time		Wildlife viewing	leave it as is	beautiful ecosystem clean water supply	the cost to fix something thats NOT broken	can't think of how you could do anything that wouldn't affect the current ecosystem Leave it as it is please	
10/22/2021 8:18	Marion		No	No					Would prefer if it was no longer in use. And allow the Ocklawaha to flow free.	Now to the free the Ocklawaha movement so don't know any hard facts off the top of my head and not going to andend I do			
10/22/2021 8:19	St Johns		No	No					I would like to see Adam breached and the original river restored.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers $4-14 Million in dam repairs saved on a dam past its life expectancy Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. $57 million in potential flood damages avoided to downstream property owners	Millions of dollars wasted on dam repairs and maintenance. Missed chance to increase habitat for manatees. Missed opportunity to restore beautiful wild habitat to Florida, making tourism more attractive.	Temporary drawdown of water level to allow natural water flow, restoring lost habitat. For the long term the long only solution is to remove the dam.	Removing the dam will save money on maintenance and restore beauty, making the waterway healthier. It will be a showcase for other states and bring more tourist dollars to the state.
10/22/2021 8:20	Marion		No	Yes	1 time	2-5 times	More than 5 times	Fishing Canoeing / kayaking Wildlife viewing	Remove the Dam and let the river take a natural course	20 drowned springs, the fish population in the Silver, manatees habitat, Savings of Millions of tax dollars	Million in taxpayer money spent unnecessarily, Manatees loose access to winter habitat, Water quality further decline	NO, breach the dam	Free the 20 springs, restore the Ocklawaha River
10/22/2021 8:21	Lake		No	Yes			1 time	Other	Remove the Dam	Its man made and florida should be put back to its natural way.	Continued decline for wildlife.	None	
10/22/2021 8:24	Alachua		No	No					Dam should be removed	Natural flow is the healthiest for the region	Waste of $$ to maintain dam and lack of water flow below the dam harms natural systems.	Not sure	
10/22/2021 8:26	Putnam		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	Restoration of 100 miles St Johns River Estuary from Welaka to Palatka to Jacksonville	Habitat restoration. Springs return. Does not provide flood protection or power water supply. Would provide essential warm water for manatees in winter.	Breaching dam is 50 years too late.	Drawdowns	
10/22/2021 8:27	Clay		No	Yes			2-5 times	Fishing Fishing (shoreline/structure) Wildlife viewing Other	Maintain the Rodman Dam . Do not remove it. Fully fund its functions as it is	Personal observation of working ecologically balanced natural system, healthy family experiences and provides economic benefits to the region	That by removing dam, the environmental impact would be detrimental for species habitats and destroy a working ecology	No	I question the strategies of those wanting dam removal. Heard they're initiatives are personal, for future profit and are intended for financial gain. I believe that their motives are skewed towards recreational and political purpose. Not as presented. Motivation is financially skewed for personal benefits, ignoring impacts on natural systems working fine.
10/22/2021 8:30	Orange		No	Yes			1 time	Wildlife viewing	id like to see it removed so the river is returned to its natural state.	A degree in natural resource conservation with a focus on wildlife. If a dam ever restricts the migration of fish, most gov agencies require a fish ladder or similar. What about a previously list endangered marine mammal? No such manatee ladders exist.	The invasive species breeding ground this has become, and the money poured into attempting to control that. The wildlife migration hinderance, and the continued degradation of the river and its ecosystems.	I suppose. If you can't/wont remove the dam, just bust it open and leave it. It'll be good enough for the river to return to its natural state, and that's good enough for us wildlife professionals.	
10/22/2021 8:34	Marion		No	Yes		1 time	2-5 times	Canoeing / kayaking	I would like to see the Ocklawaha river restored to its original state	So many reasons... restoring ~15,000 acres of natural habitats, avoiding cost of repairing the dam, lost springs recovered. This area is relknown for its springs and natural beauty. Lets keep it.	Millions of dollars of tax money used to repair something that does not bring flood protection, power, or serve any real public benefit.... An opportunity lost to help Florida wildlife thrive.	No. This is an overdue project. Safety, Wildlife, and water quality is too important	
10/22/2021 8:34	Leon		No	No					Let the water go into the river!				
10/22/2021 8:34	Marion		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Canoeing / kayaking Boating Wildlife viewing	For it to stay as it has been for all the previous year and for you not to destroy what has been built many many years ago!!!!	It will kill everything that has been built my whole life, why go in now like so other things and tear down for " nature lovers " who only visit	We loose our flows going as it is, i'm sorry I have a brain injury so it's not going to come out the way it needs to but I do believe that things need to stay directly like they are.		
10/22/2021 8:34	Alachua		No	No					Take down the dam and restore the natural flow of the river !	Numerous studies have concluded the overall benefits of restoration .	Loss of historic wetlands and wildlife habitats !	I am aware of no good alternative ... to restoration !	
10/22/2021 8:35	Marion		No	No					Complete removal of the dam.	There is no longer a reason for the dam and lake to exist.	Continued environmental damage	No	
10/22/2021 8:35	Leon		No	No					Let the dam be breached so the Ocklawaha River can be restored and help the animals that depend upon it.		Loss of wildlife in the area.	Not sure what the alternatives would be.	
10/22/2021 8:37	Putnam		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Boating	Love to see the dam repaired and left in place.	Great fishing	Loss of the Bass Masters fishing tournaments.	No.	
10/22/2021 8:38	Clay		No	Yes			1 time	Wildlife viewing	remove the dam and release the water to free the river to its original flow pattern.	We natural flow will help with the need for animals to have water all along the river. Damming the river to provide a place for only fishermen and boaters to use is not the right answer for this state.	drought along the remaining areas of the river	I don't believe we should dam rivers to make boating lakes. Florida has numerous natural lakes that boaters can use. Restore the river for the wildlife and all those that the river impacts along its trail.	
10/22/2021 8:39	Seminole		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing	Stay as it is	Great Bass Fishing			
10/22/2021 8:41	Orange		Yes	Yes		More than 5 times		Fishing Canoeing / kayaking Boating Wildlife viewing	I would absolutely love to see the Dam & Reservoir stay as is and remain there forever.	Removing the dam would cause more harm and detrement to the ecosystem than good. The birds would have nearly no food to eat, many fish would die (in the long term,due to forage reduction) and the Reservoir bed would be just a dry waste land with enormous amounts of weed growth!	Seeing many of the birds and fish perish due to the lack of food.	No! The Reservoir and dam need to remain as is, in tact.	The only change I'd like to see are, more frequent drawdowns. Which will help control invasive plant growth and then in turn reduce the amount of herbicide spray throughout the system. Thank you for giving us this opportunity to voice our opinions! Capt. Tony Summers.
10/22/2021 8:46	St Lucie		No	No					I'd like to see it continue to help the manatees.		That we would lose more manatees this year and into the future.		
10/22/2021 8:48	Marion		No	Yes			2-5 times	Wildlife viewing	move to hydroelectric power. have the best of both worlds. Controlled flow and electric power.	Environmental and economic positives for hydroelectric power	the country has a power shortage and it will only become more critical for every citizen.	the state must move forward in every instance where hydroelectric power can be developed. No doing so is denying every Floridian of a renewable resource for electricity.	
10/22/2021 8:49	Marion		No	Yes	More than 5 times			Fishing Canoeing / kayaking Boating Wildlife viewing Other: Looking out over Rodman Reservoir is mental health therapy. The beauty is awe-inspiring.	Having the dam/reservoir preserved forever. More amenities added, such as opening the Kenwood Campground. Also need a hydroelectric plant to help with funding for the dam/reservoir. Improve the Hog Valley Boat Ramp.	Research has shown that water flowing through the reservoir is cleaned before flowing into the St. Johns. There are so many studies showing that the reservoir is habitat for endangered, threatened wildlife. The manatees are thriving in our beautiful lake. Rodman is a RESERVOIR holding potable water which countries all over Florida are talking about BUILDING. And here is a beautiful reservoir already in place with the ability to provide water to Marion and Putnam counties.	The St. Johns River would become even more flooded with nutrients that create the deadly algae blooms. Wells and lakes in the area would be damaged. An ugly mud flat would be left. Wildlife would be greatly endangered.	NO NO NO NO It would be a travesty to harm this beautiful, thriving lake that is home to birds, fish, people, etc. No No No No	Unfortunately thousands of people connected to the FOE, Audubon, etc. have NEVER BEEN to our beautiful lake. They are simply copying the information they have been given. THIS LAKE CANNOT BE DRAINED!!! This is also a valuable resource for potable water which Florida desperately needs.
10/22/2021 8:51	St Johns		No	No					A return to nature in its natural state (no dam)	Human hubris that we can bend nature to our will	Continual development in FL		
10/22/2021 8:52	Lee		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. 44's, 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife.	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	No, breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/22/2021 8:52	Outside of state / other	albany, ny	No	Yes			2-5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	I would like to keep Rodman/Kirkpatrick as it currently is. It has created an amazing unique ecosystem that has world class fishing, incredible wildlife and beauty to name just a few . I have traveled from upstate NY to Rodman Reservoir a few times just for that experience and have invited friends from the mid west as well specifically for the fishing . One friend from Minnesota had such an amazing experience he came back again with his wife a few months later	The unique wildlife/ecosystem and world class fishing Rodman Reservoir offers	The immeasurable negative impact draining Rodman would have on wildlife including bald eagles and manatees. Also destroying a world class fishing and wildlife viewing ecosystem,	I think Rodman and Kirkpatrick should be left as is. They have created an amazing and unique ecosystem and countless people enjoy and a flora/fauna have thrived in,	
10/22/2021 8:53	Lee		No	Yes		1 time	1 time	Wildlife viewing	Restore the natural river flow	My business ultimately relies on a healthy and thriving Manatee population. I am always looking at new options to expand my business. Possibly to that region.	Lost recreation opportunity and inaccessible habitat for Manatee.	Yes. I always try to keep an open mind and consider all the variables.	
10/22/2021 8:54	Alachua		No	Yes		1 time	1 time	Wildlife viewing	Remove the dam, restore natural flow to river	Wildlife diversity and ecosystem stability	continued degradation of the St Johns drainage ecosystem	No	This has been going on way too long! Remove the dam now.
10/22/2021 8:54	Volusia		No	Yes	1 time	2-5 times	More than 5 times	Fishing Wildlife viewing	Stay the way it is. If dams went away, manatees would die	Over 800 manatee have come into Rodman this year looking for food AND found it.	Manatee safety and eco system in place	No	
10/22/2021 8:55	Lee		No	Yes	1 time	1 time	1 time	Canoeing / kayaking	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Historic fish and manatees return as breach opens creating a free-flowing river	Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/22/2021 8:55	Suwannee		No	Yes		1 time		Wildlife viewing	Breach the dam	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Declining fish populations in Silver Springs The dam is past its life expectancy.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Important habitat not restored	No	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/22/2021 8:56	Brevard		No	No					Breach the Rodman/Kirkpatrick Dam.	Breaching the dam would restore natural springs and help fish populations in the Silver Springs. It would also add habitat for manatees. Over 900 manatees have died this year, and restoring more of their habitat is an important step in their recovery. Rather than spending money on repairing the dam in the future, restoring the natural flow of water would help the ecosystem and wildlife, and thus help protect what really makes Florida a beautiful place.	Manatees and other wildlife may continue to suffer and experience loss of habitat and population decline. Florida would also miss out on opportunities for tourism and hospitality, photography and art, and other areas of growth to support local business. Keeping Florida's natural areas protected and well managed is the best thing we can do for the wildlife and for the residents and future generations of the state.	No, breaching the dam is necessary and vital, and nothing less will do.	Each of the springs I have visited in Florida have been important spots for local business, tourism, and wildlife. Restoring the 20 lost springs in the area would make me want to visit!
10/22/2021 8:56	St Johns		No	Yes	2-5 times			Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Mowing besides upkeep and maintenance		The gate of the wildlife in rodman and the economic toll on the surrounding area		
10/22/2021 8:57	Alachua		No	Yes	More than 5 times			Fishing Canoeing / kayaking Wildlife viewing	Return the river to it's natural state		Loss of true nature, a massive fish kill resulting in total degredation of the river.	None. The idea was a disaster from the onset.	
10/22/2021 8:58	St Johns		No	Yes			1 time		I would like to see the Kirkpatrick Dam breached and the reservoir drained per the long-standing 'partial restoration' plan envisioned in the 2001 EIS from the US Forest Service.	The totality of benefits to water, wildlife, and the future recreation-driven economy of communities along the riverways impacted by the damming of the Ocklawaha. The dam and reservoir are unneeded remnants of a project that failed due to its overwhelming environmental impacts. Correcting these problems is long overdue.	The damage from the Cross Florida Barge Canal would be made permanent, and options for restoration and improved recreation would be lost. The reservoir builds up organic materials (creating a legacy of water quality problems) and requires heavy herbicide use. Frequent management is required to ameliorate these conditions that would not be needed in a restored system.	No. The dam must be breached and the reservoir drained in order to restore the many diverse ecological values of the Ocklawaha River and connected ecosystems from Central Florida to the mouth of the St. Johns River.	The State of Florida should consider all systems and communities impacted by the dam as they make their decision. Restoration will benefit many areas upstream and downstream from the dam. Tourism drives Florida's economy, and the current system is losing visitation. You asked if people visit the dam and reservoir, but you should ask how often people visit during drawdowns. There are several data sources you can consult to see many more people use this area during drawdowns compared to the filled reservoir. A restored system with more diverse recreational opportunities will provide important economic revitalization. Also, it is important to remember this issue has had support from both sides of the aisle and all federal and state agencies that have been involved in creating restoration plans over 20 years ago. There are many opportunities for incredible bass fishing in Florida's lakes; restoration would provide many unique environmental and recreational features to the landscape that are much needed. Plus, the project helps move forward all 5 of the key environmental priorities identified by the legislature this year (water resource improvement, flood protection and resiliency, manatee habitat improvement, benefits to the Florida Wildlife Corridor, and Springs restoration).
10/22/2021 9:02	St Johns		No	No					Breach the Rodman/Kirkpatrick Dam to reunite the natural connection of Silver Springs, the Ocklawaha and the St. Johns River.	Science. Restoration of a free flowing, connected system is cost-effective and will provide significant ecological benefits to the St. Johns, Ocklawaha and Silver Rivers.	Continued degradation of the St. Johns and other connected rivers.	No. This has been delayed for too long!	Let's get this done...it is time.
10/22/2021 9:02	Putnam		No	Yes	2-5 times	More than 5 times	More than 5 times	Canoeing / kayaking Boating Wildlife viewing Other: I only go kayaking and wildlife viewing during draw downs. I enjoy seeing the springs during the draw downs.	I would like to see the river restored back to its natural beauty. I would like to see the reservoir removed So the river can flow freely. Remove the part of the dam that is blocking the river.	I grew up going to the river. I've seen the changes and I don't like it. I can't use the river in the reservoir because it's always blocked or I hit a stump. My own experience is all the information I need.	The muck is building up and the fish can't spawn in it. They use to much herbicide to keep the ramps and canals open. When they do that there is an awful smell from dying plants. I am also concerned about the safety of that old dams condition.	No! Restore the river and let the people, manatees, and fish use the river like they use to. Thousands of acres for wildlife will come back to.	I know there's a lot more people that go out there during the drawdown enjoying the wildlife, fishing, and going to the springs. I see a lot more bank fishing during the draw downs. During the draw downs tree seedlings come up everywhere then when the water comes up they all die. It's stupid!!!
10/22/2021 9:03	Santa Rosa		No	Yes			2-5 times	Fishing Boating Wildlife viewing	Left alone	My son in laws business	Killing wildlife	No	
10/22/2021 9:08	Hernando		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing	Continue the draining once every 3 years. Leave the dam in place.	The Rodman reservoir is an important piece of the St. John's river, not just for the fishermen but for the protection and quality of the water in the St. John's. Rodman filters water with all the vegetation that it carries inside of it. Hurricanes and spraying ruined the grass in the river. Rodman is one of the last Major filters the st John's has.	The St. John's river will turn into a mudhole and become an invaluable resource to the community. Thousands of people travel from out of state to come fish the river. It would take away income for the surrounding towns and city's.		
10/22/2021 9:08	Outside of state / other	Louisville,Ky	No	No									As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/22/2021 9:08	Duval		No	Yes			1 time	Wildlife viewing	I would like to see the Kirkpatrick Dam breached to restore the flow to the Oklawaha River and avoid the millions of dollars it would take to repair and refurbish the dam and restore the natural ecosystem	The dam is past its life expectancy, breaching the dam saves millions of dollars in dam repairs and upkeep. Taxpayers should not continue to repair and maintain a dam that is actively harming an ecosystem.	Continued harming of the ecosystem/water quality issues, increased algae blooms, loss of much-needed protection of manatees.	No. Breaching this useless and outdated dam is the right thing to do. It is the most cost-effective and most environmentally responsible action to take.	Please breach the dam and restore the flow to the Oklawaha River. The natural springs and their ecosystems as well as the Oklawaha/Silver Springs buried under Rodman Reservoir are a vital asset to our state and its environment. The smart economic move is also the correct move for our priceless environmental treasures.
10/22/2021 9:08	Duval		No	Yes	1 time	2-5 times	More than 5 times	Fishing	Restoration of the Ocklawaha River by breaching the dam.	Breaching the dam would restore the three connected rivers; the Ocklawaha, Silver and St Johns and uncover several covered springs.	The water quality in the Ocklawaha and Silver rivers would continue to deteriorate and the lost fish populations will not recover.	No. A drawdown will not restore the fish numbers to what I regularly saw growing up in Ocala and working at Silver Springs in the 1960s. There are hardly any fish in the springs and river now.	
10/22/2021 9:09	Marion		No	Yes	More than 5 times			Fishing Fishing (shoreline/structure) Boating Wildlife viewing					
10/22/2021 9:09	Duval		No	No					remove it	more fresh water for the St Johns River	The river will continue to deteriorate.No	No	The reason for the dam is no longer viable.
10/22/2021 9:10	Alachua		No	Yes			More than 5 times	Fishing Canoeing / kayaking Wildlife viewing	This is the most significant opportunity we have had in two decades to convince leaders its time to reunite the Ocklawaha and St. Johns Rivers and Silver Springs for fish, manatee, and other wildlife. It creates a huge economic and environmental impact to northeast Florida.				

10/22/2021 9:10	Sumter		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	Mankind should be the protectors of our wildlife and the environment necessary to maintain it. 2021 is the deadliest year on record for manatees, unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/22/2021 9:11	Duval		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam	The economic benefits it provides to the neighboring communities.	Future conservation and restoration attempts may also be denied.		
10/22/2021 9:12	Sarasota		No	Yes			1 time	Wildlife viewing	Please open the dam to restore the natural flow of water.	The obvious benefit to wild life. The increased area available for aquafer recharge and the financial benefits are undeniable.	Wasteful spending for repairs and invasive control need to be avoided and if this is not done now florida will lose the opportunity	None I can imagine	Generally speaking, we have learned that our interventions to improve Florida have untoward consequences. Draining the everglades straitening rivers and the like have proved to be major errors. This a chance to put one more "error" right and save money for more important purposes.
10/22/2021 9:12	Lee		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	100s of manatees gain essential warm water winter springs habitat.	Hundreds of manatees lose the opportunity to access essential warm water winter habitats.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/22/2021 9:13	Clay		No	No					I would like to see the Rodman dam removed.	Hopefully, the Oklawaha river would be restored to the way it was.			
10/22/2021 9:16	Orange		No	No					Restored to original status. No dam				
10/22/2021 9:16	Lake		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing	Leave it alone	Florida is killing all the lakes with overspray of roundup killing fish and manatees leave this pristine one alone	Probably move out of state	No	
10/22/2021 9:19	St Johns		No	No					Removal of the dam and a return to natural flows along the Ocklawaha River	Environmental group newsletters and updates	Continued decline in environmental quality along the river	I am not sure if it is possible to lower the depth of retention in the lake or if studies have been made showing results of this	
10/22/2021 9:20	Hillsborough		No	Yes		2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Wildlife viewing	Nothing	It's pretty	I wouldn't visit it anymore		
10/22/2021 9:20	Putnam		No	Yes		2-5 times	More than 5 times	Fishing Fishing (shoreline/structure)	Free the Oklawaha! Have natural flow	Recreational benefit. Create a more natural ecosystem	Continued unnatural shifts to the ecosystem. Loss of recreational opportunity	Keeping the dam fully open	
10/22/2021 9:22	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Canoeing / kayaking Boating Hunting					
10/22/2021 9:24	Alachua		No	Yes		1 time	1 time	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored and 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	A storm event triggers a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	This exciting restoration will improve water quality and flow by generating an additional 150 millions gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
10/22/2021 9:24	Marion		No	Yes		More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Wildlife viewing	Leave it alone	I am concerned about the homes and the water levels	The water level to our home and how it's affects our wells	Every time you drop the water it seems to effect the wells in our area	
10/22/2021 9:24	Pinellas		No	No					Breach it	The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	We lose an opportunity to restore our precious rivers and springs	no	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
10/22/2021 9:25	Marion		No	Yes		2-5 times		Wildlife viewing	Continue to maintain as they are	Manatee refuge	Where would the Manatees and other wildlife go?	No	
10/22/2021 9:25	Marion		No	Yes		2-5 times		Fishing	Leave it as is.	Beautiful lake which supports hundreds of wildlife species.			
10/22/2021 9:25	Marion		No	Yes	2-5 times			Fishing Fishing (shoreline/structure) Canoeing / kayaking					
10/22/2021 9:27	Clay		No	Yes		1 time	2-5 times	Fishing Boating Wildlife viewing	Keep it natural, open to the public, support wildlife conservation.		That we lose more natural habitat and wildlife	No.	Unfortunately money seems to be more important than conservation. I hope this will not be the case with the Rodman.
10/22/2021 9:28	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Wildlife viewing	Stay the same				
10/22/2021 9:30	Pinellas		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam to reunite the rivers and restore our ecological features and provide new recreation and economic opportunities.	Protecting and improving water quality is a priority for our state and Governor DeSantis. This project will restore three rivers: Ocklawaha, Silver and St. Johns Rivers, as well as 20 lost springs and Silver Springs ecosystem. There are few restoration projects that can match that in terms of ecological benefits.	Putnam County and Silver Springs economies lose the opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	This is a phenomenal opportunity for our state to restore a treasured ecosystem and improve water quality. Restoration will generate an additional 150 million gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Please review this restoration as a pragmatic, cost-effective, and mutually beneficial project that Florida can be proud of!
10/22/2021 9:32	Leon		No	Yes				Other: Before retirement, I was a state biologist who dealt with many Rodman Reservoir and Oklawaha River issues over the years.	Breach or remove the dam and let the river restore itself.	Free-flowing rivers should not be dammed or left dammed without a good reason.	Restoration is inevitable at some point because it is the obvious choice. Delay now will just anger people more and more.	No.	This issue has gone on for far too long because of the resistance of a very few, but politically influential, local individuals. It is one of Florida's biggest embarrassments, as well as being ecologically harmful. Now is the time to finally end the indefensible delay.
10/22/2021 9:33	Polk		No	No					I would like to see the dam removed so that the natural flow of the Oklawaha River can be restored.	The Kirpatrick Dam and Rodman Reservoir are choking the natural flow of the Oklawaha river, which is critical to the St. Johns River. This leads to a lack of freshwater feeding into the St. Johns, suffocates a handful of natural springs and restricts the natural movements of dozens of marine species in the area. It was constructed as a part of a failed project decades ago, and it serves no natural purpose. Let the Oklawaha flow naturally again and restore some balance back to the St. Johns river, which is desperately lacking in freshwater flows and already struggling with saltwater intrusion from river mouth dredging.	Continued habitat loss throughout the St. Johns, which will lead to compounding effects that will ultimately damage the economy of the St. Johns and surrounding area.	No, the dam just needs to be removed. It's not natural and it serves no purpose.	
10/22/2021 9:34	Putnam		Yes	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Hunting Wildlife viewing Other: Getting food for my family	Continue to maintain it as it is today to support the great ecosystem that has been created and continues to filter the water before it flows into the St. John's river	There are many studies out there, however the 2 that I will note is; *The Hendrickson Report (SJ2016-1) *Springshed Nutrient Loading, Transport & Transformations by Mathew Cohen University of Florida school of forest resources & Conservation at HTTPS://www.researchgate.net/publication/255649623_springshed_nutrient_loading_transport_and_transformations	My business will fail to survive, monies that are generated by the thousands of people that travel here from all over the country to visit Lake Oklawaha will be lost when Putnam County already struggles from revenue as it remains one of the poorest counties in the state, manatees will die from starvation as they are currently seeking refuge in Lake Oklawaha due to their food source being decimated in the St. John's river, all of the wildlife that now reside in Lake Oklawaha will be displaced and may not survive that transition, Bald Eagles will be displaced and harmed among other atrocities that would be caused by the destruction of such a great and diverse ecosystem that has been created over the last 50 years.	Unfortunately there is no compromise that I would agree with as the main "leaders" that want to destroy this great ecosystem for their own personal gain St. John's Riverkeeper and Jenny Carr are some of the most dishonest people that I have ever seen. Their lies, cover ups, misleading information, false statements are mind blowing at best and in my opinion borderline illegal.	Please take the time to visit Jenny Carr on Facebook and see for yourself her direction to her followers to cheat on this "survey" that was requested by her and FOSP. It is truly a shame that they cannot even have a legitimate survey completed and immediately asks her followers to use many different email addresses to respond multiple times even though it represents one person.
10/22/2021 9:35	Duval		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Canoeing / kayaking Boating Hunting Wildlife viewing	Correction of water flow	Steady decline in fish and wildlife	Loss of habitat	No	
10/22/2021 9:36	St Johns		No	No					Take down the dam and free the Oklawaha.	150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers.	Continuation of unnatural reservoir.	No. Breaching the dam is long overdue. Dam safety, improved water quality and wildlife can't wait.	I remember when George Kirkpatrick spent $1 million of taxpayer money for a study which recommended tearing down the Rodman Dam and freeing the Oklawaha River, then did the opposite. Such bull-headed and stubborn wrongness! It's past time to tear down the dam and free the river to its natural state!
10/22/2021 9:36	Duval		No	Yes		More than 5 times		Fishing Fishing (shoreline/structure) Boating Wildlife viewing	No changes	The amount of diverse wildlife that utilizes the lake. The lake has a healthy ego system while other parts of the St. John's River is suffering	That a world class bass fishery would be destroyed and all the wildlife that depends on the lake will be lost.	No	Do not let this Great Lake be destroyed by someone's political ideology when they choose to ignore the facts of what a great wildlife sanctuary this is. The manatee is thriving here when they are dying in other rivers and lagoons across our great state.
10/22/2021 9:36	Marion		No	No		1 time		Other: No	Breached	Demise of the rivers	Further damage to the waters of the rivers	Do not know of any agenda	
10/22/2021 9:37	Outside of state / other	Boise, Idaho	No	Yes			More than 5 times	Fishing Fishing (shoreline/structure)	Removal	Conservation of rare endemic fish species	None	Removal of the dam to allow for a return to natural flows of the Ocklawaha River	
10/22/2021 9:37	St Johns		No	Yes		2-5 times		Fishing Boating	I would like to see the dam removed in order to return the reservoir and river to its natural state.	I have lived here my whole life. I have directly seen the effect of the dam restricting the fresh water flow into the St. Johns. With the constant dredging in Mayport, and the reduction in fresh water flow from the Ocklawaha, this allows the salinity to increase further south into the St Johns. This has in turn assisted in killing off all of the eel grass in the river, the fishery has declined tremendously over the years.	My concern is the further degradation of a once incredible fishery and surrounding environment.	No.	Please understand I have personally witnessed the change in this fishery and ecosystem myself over the last 20 years. A gradual decline in this important ecosystem negatively effects the whole state of Florida, economically and environmentally. We need the fresh water flow re introduced to the St Johns in order to combat saltwater intrusion into this fragile ecosystem.
10/22/2021 9:38	Alachua		No	No					Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. And hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	We miss the best opportunity to do this. State and federal funds are available, the public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs.
10/22/2021 9:38	Hillsborough		No	No					I want to see the dam (that is already at risk of failure) breached and natural flow to be restored to the Ocklawaha River. I would also like to see the funds that would have been needed to restore a structure that will never be able to do what it was initially designed to do used to restore the ecosystem that its construction destroyed.	Purely from an economic stand point, breaching the dam and reaping the benefits of the eco-tourism spending that will result makes sense. Add in the restoration of a large area next to a huge state park is priceless. The 20 fresh water springs that have been drowned by the reservoir would be reachable to many more people again. The environmental benefits are so immense I don't even know how to put it into words.	WASTING FUNDS to maintain a system that has huge negative affects on the environment. WASTING a huge environmental to the entire state and local economic benefit to satisfy the needs of the handful of folks that use the reservoir for fishing.	No. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration.	
10/22/2021 9:39	Outside of state / other	Massachusettes	No	Yes			More than 5 times	Wildlife viewing Other	I would like the damn to come down and the rivers to be reunited	the damn prevents natural migration patterns- my largest concern is for wildlife and restoring an important indigenous landmark	My concern is for a suffering ecosystem that struggles to thrive in a human- made world	No	
10/22/2021 9:39	Outside of state / other	Wisconsin	No	Yes			More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating	Left as is.	Our family has been coming here for the past 5 years. It's one of the best bass fishing places in the entire country and not by a little but by a huge margin. Even with in the state it is considered one of the best bass fishing locations. It would be devastating to know our family would have to look for another place to go for our vacation when coming to Florida.	We will no longer visit here when we come to Florida for vacation.	No	
10/22/2021 9:40	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing	Keep it like it has been for the last twenty years. Wildlife NEEDS this beautiful refuge . Save the manatees.		I would be worried wildlife would diminish.	Yes get with locals environmentis and fishing guides and ask what they see on the daily and most in the middle.	
10/22/2021 9:40	Broward		No	No									
10/22/2021 9:41	Orange		No	Yes	1 time	1 time	1 time	Canoeing / kayaking Wildlife viewing Other: Relaxing on the river!	Gone to allow the natural flow.	I have read information from various conservation groups and at various springs that supports this.	The wildlife and health of our springs.	I am willing to hear options but it seems like there's only one way to fix this.	
10/22/2021 9:41	Levy		No	No					Removed to allow restoration of the Ocklawaha River.	The continuing environmental damage to the Ocklawaha River system.	That the state and federal government will continue to spend funds to maintain a mistake that causes environmental damage.	Not aware of what halfway measures there might be.	There is also the unfortunate damage to Silver Springs which, when I was a child enjoying the glass bottom boats, was full of fish that had gotten there by way of the Ocklawaha. That wonderful Florida experience is denied to my children and grandchildren.
10/22/2021 9:44	Sarasota		No	Yes		1 time	2-5 times	Canoeing / kayaking Wildlife viewing	Removal to restore historic flow of the ocklawaha.	The cost of repair and restoration of the dam would be a greater burden on taxpayers of the state than removal. Additionally, in a year with historic manatee death rates, a free flowing ocklawaha would provide surviving populations with an additional refuge.	Cost of repair of the dam, long term maintenance, all for a dam that does not serve any purpose beyond recreation.	I am not aware of a compromise scenario that would come close to achieving the goals of full removal of the dam and reservoir.	A healthy river system would provide superior recreational fishing compared to a dam reservoir system. Additionally, maintenance costs would be very small compared to having to draw down the reservoir every few years. Removal of the dam would benefit everyone in the watershed and everyone that travels the distance to visit (like myself).
10/22/2021 9:44	St Johns		No	No					removing or breaching the dam and allowing the waters to follow their natural course	deteriorating water quality on the St. Johns River and tributaries	continued degradation of water quality	breaching the dam instead of removing it entirely.	
10/22/2021 9:45	Clay		No	Yes			1 time	Other	I would like to see it gone and bring more fresh water into the St. John River.	The lack of grass and algae blooms in Dis. Lake		I would have to see alternate plans.	
10/22/2021 9:46	Orange		No	No					I would like to see the river wholly or partially returned to the state is was before the dam. Environmentally it would be better for people and the water ecosystem for this restoration to move forward. We have done enough damage the water ecosystems in the state. We will pay a price if we do not start corrected.	The history of the dam project.	More damage to our water resources. We are in trouble when it comes to effectively managing this resource.	NO	
10/22/2021 9:47	Outside of state / other	Indiana	No	No									
10/22/2021 9:47	Lake		No	No					I would like to see the Dam breached.	Restoration of our springs. Repopulation of our fish in the Silver Springs area. Also, to stop unnecessary spending on damn repairs.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No. Breaching the dam is overdue. It is what's best for our environment and our taxpayers.	
10/22/2021 9:48	Alachua		Yes	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing Other: Drinking water	LEAVE IT ALONE!!!	Why destroy a thriving ecosystem to line the pockets of crooked politicians with money?	Lack of water storage in north central Florida	NO	
10/22/2021 9:48	Outside of state / other	Alliance, Ohio	No	Yes			2-5 times	Fishing	Have the government leave the reservoir alone and finally scrap all plans to remove the dam. It provides a fantastic fishery and habitat for wildlife, let alone the dollars it generates into the local economy.	I do not have access to research that shows the economic impact of Rodman Reservoir. But, logic illustrates the habitat provided for wife life and my experience fishing Rodman shows what a fantastic fishery it is.	I would no longer be able to fish Rodman Reservoir and thus have no reason to continue to visit Florida.	Nine	It is past time to put to rest the efforts to destroy Rodman Reservoir. This issue rears it's ugly head every few years. One might debate whether or not Rodman dam should ever have been built. But, the reality is that it was built, it created a unique ecosystem for wildlife and provides a valuable economic resource for local business. Leave Rodman dam the hell alone!
10/22/2021 9:48	Pinellas		No	No					The damn removed and the river flow restored.	The damn impedes the natural flow and negatively effects the fishery, wildlife migration and water levels.	Good money is thrown after bad to keep up a damn that doesn't have a purpose. It's quite old and it's time for it to come down.	Form what I understand it's either maintain the damn or remove it. A middle position might be to keep some of the Damn stricture in place as a fishing platform?	I have paddled the river but haven't been to the damn itself. I grew up in the Jacksonville area and love the St Johns. I think a restored river would be an amazing attraction and a boon to the Palatka economy.
10/22/2021 9:49	Duval		No	Yes		1 time		Canoeing / kayaking	Knock it down				
10/22/2021 9:49	Duval		No	No					Return it to its natural configuration.	There is a reason nature made it that way. Let it go back to what it was.	Destroying the natural environment.	If you can't return it entirely to it's original flow, do whatever is possible to make it as close as possible.	I appreciate you allowing the public to weigh in on this. Thank you.
10/22/2021 9:50	Duval		No	No					Breach the dam.	General unhealthiness of St. Johns River, saltwater intrusion, toxic runoff etc.	Further damage to the St. Johns, including harm to flora and fauna.	unknone	
10/22/2021 9:50	Duval		No	Yes			1 time	Other: N/a	Open them up, remove them	St John's river keeper	Same old same shit, not listening to the experts	Open to debate	N/a
10/22/2021 9:50	Duval		No	Yes		1 time		Fishing (shoreline/structure) Boating Wildlife viewing	Allow for a natural flow up the St. John's.	Captains for Clean Water	Diminished ecosystem of the Jacksonville marshes.	Any improvements on the nature flow of fresh water.	
10/22/2021 9:51	Duval		No	Yes			2-5 times	Wildlife viewing	It should be removed and the area restored to Pre Kirkpatrick Dam condition	It was built for a project that will not be completed . Please restore to its original state	That as a state we can not right our wrongs . We just leave it because someone thought it was a good idea . Lets look at it with todays information vs outdated info	no, Restore to original	Thanks for asking
10/22/2021 9:52	Marion		No	Yes		2-5 times	2-5 times		Breach the Rodman/Kirkpatrick Dam, it never should have been there to begin with and this is our opportunity to DO BETTER.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves millions of dollars in dam repairs and upkeep. Taxpayers should not continue to repair and maintain a dam that is actively harming an ecosystem.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue. Do the right thing now.	My family and my therapy clients depend on this natural ecosystem for healing, recreation, and connection. MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs.
10/22/2021 9:52	Broward		No	Yes		More than 5 times		Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing Other: swimming	Maintain the Reservoir and Dam as is! They are both wonderful assets for Florida, the local community and visitors. My family has owned property there for over 40 years. We've enjoyed every aspect of this wonderful wildlife and nature resource and hope to for years to come. Also a great buffer and water source in the event of forest fires. Keep up the good work there!	There are numerous facts and figures accumulated over the past 25 plus years to support and save Rodman ReservSuch! But I'm on the road now and don't have access to the data. It's in the Save Rodman Newsletter from very technical and knowledgeable sources.	that it would become a mosquito ridden mud flat for years to come and cost a ton of taxpayers money to make it such!	Not really	

10/22/2021 9:52	Leon		No	Yes		1 time			Based on the scientific data presented by reputable organizations and agencies, I would like the dam to be removed so that there is increased hydrologic connection between the waterbodies that will facilitate healthy outcomes for wildlife including manatees, and the springs that depend on the river's flow.	Most of our infrastructure in the US is very old, pre-dating many environmental regulations. We spend millions in tax payer dollars each year to remediate environmental issues humans create. By keeping the dam we are going to have to invest public funds to fortify the dam and remediate the environmental damage caused by it and other anthropogenic activities, in a time when spring flows are declining and manatees are dying in record numbers, it seems like a no-brainer to adopt a lower-cost alternative that can benefit our environment and save tax dollars.	Water quality and supply (and therefore wildlife habitat and outcomes) will continue to decline, and we will waste tax payer dollars trying to remediate a fixable problem.	No, not really.	There is widespread public support for this right now, as well as available state and federal funding to assist. The time is right to breach the dam and not punt it off for the next generation to deal with.
10/22/2021 9:53	Putnam		No	Yes		1 time			Remove	Need to protect water resources and downstream property	Continuing degradation of silver springs	No	
10/22/2021 9:54	St Johns		No	Yes		More than 5 times	More than 5 times	Fishing Canoeing / kayaking Boating Wildlife viewing	Restore the Rivers to their Natural condition and flows	This would benefit the ecosystem and create more recreational resources.	The deterioration of Florida's natural resources and be kept in check and possibly reversed only if the State and Local authorities are proactively working towards preservation	No	Florida's natural resources have been under assault by developers and government needs to do its job to regulate the out of control sprawl that has been decimating wildlife and depleting wildlife habitats. Returning these rivers to their natural state would go a long way towards buffering the ongoing damage being inflicted upon the environment and residents alike. It's time to turn the tide of natural resource exploitation by big monied interests. Government needs to act on behalf of the people and the environment so we can live sustainably and preserve the fragile heritage of Florida's ecosystem.
10/22/2021 9:54	Columbia		Yes	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Take down that dam!	This is a beautiful river where wildlife lives. Migrating animals used to move up and down this river but cannot do so now because of the dam.	That Ocklawaha River would remain impaired	No	The time to restore this beautiful and important natural feature of Florida has long passed. Please stop spending our tax money to keep this dam in place. It's only used for fishing. The recto of us want a healthy, flowing river, that would also have great fishing!
10/22/2021 9:54	Leon		No	No					I would like to see the Rodman and Kirkpatrick Dam removed.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/22/2021 9:54	Duval		No	Yes		2-5 times	More than 5 times	Fishing Hunting	I would like to see the restoration of the natural flow	Failing water quality of the St Johns and Oklawaha rivers	Further deterioration of both rivers. Further the reservoir is not self sustaining and must bend rained periodically	I don't see much middle ground. Perhaps some Temporary assistance for negatively impacted business's	Mother Nature usually has it right and then mankind perverts the process with unforeseen consequences
10/22/2021 9:57	Nassau		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing	Maintain it the way it is				
10/22/2021 9:57	Alachua		No	No					Remove the damn and restore the area to as natural a state as possible.	The damn was built as a failed cross Florida canal project and serves no purpose at this point. Never should have been built.	The natural environment which was wrongly modified will continue to suffer for the benefit of private business interests.	No - the removal of the dam is a all or nothing solution.	
10/22/2021 9:59	Alachua		No	Yes	1 time	1 time	2-5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Wildlife viewing	Remove the dam	Many scientific studies	Fractured river habitat, poor water quality	No	
10/22/2021 10:00	Duval		No	Yes					Destroy the dam and restore the Ocklawaha River.	Urgent need for clean, fresh drinking water.	Continuing poisoning of the river(s) downstream.	Not really.	Putnam County receives minimal financial benefit from the reservoir and the sport fishing. The need for clean River water is a much higher priority for NE Florida.
10/22/2021 10:01	Alachua		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers $4-14 Million in dam repairs saved on a dam past its life expectancy Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. $57 million in potential flood damages avoided to downstream property owners	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. A storm-event triggers a dam failure or overtopping resulting in potential damages to $37 property owners and up to $57 million in damages. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, only a drawdown alone will not provide significant environmental benefits for fish, manatees, water quality, water flow and all the public benefits that are the priority.	There is no justification for waiting. Be bold. Take the needed action now.
10/22/2021 10:01	Alachua		No	Yes		1 time	Wildlife viewing		Remove the dam.	Environmental restoration.	Continued environmental degradation at great taxpayer cost.	No.	
10/22/2021 10:01	Duval		No	No					I would like to see the free-flowing Ocklawaha River restored. This means dismantling the Kirkpatrick Dam.	20 lost springs and Silver Springs ecosystem would be restored.	Water quality would decline, further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is the only way to restore the Ocklawaha River.	
10/22/2021 10:01	Alachua		No	Yes		2-5 times	Canoeing / kayaking		Remove the dam	Restoration of rivers and springs, return of aquatic corridors for manatees and fish.	Further decline of water quality and potential failure of dam	No	
10/22/2021 10:01	Orange		No	Yes		1 time	Other: I was hoping to go kayaking out on the Ocklawha but realized very quickly that it was not a place to go out on a kayak. The weeds that the Rodman dam has created is a blight and makes any of the River unusable		I would like the dam removed. It does not provide any good resources to the local community and for those that are trying to visit. Not including all of the negative environmental impacts.	There is countless UF/IFAS studies that show the benefits of removing the Rodman Dam. I am sure those studies will be referenced by others but I am trying to quickly fill this survey out as I did not know about it until the last day.	Environmental and human health impacts. Local economy isn't great and won't get any better if you keep the status quo. Additionally the amount of herbicides that have to be sprayed in the water to keep the weeds under control is a major concern for the water quality, local ecosystems and human health.	Breaching or completely getting rid of the dam.	Please get rid of this dam. There are only a few but loud citizens that want to keep this. I understand they want to but we just can't anymore. Water quality is a rising issue in Florida and so is the health of our ecosystems. It's time just to do the right thing and not let a few people make such a big decision that impacts so many more people than just themselves.
10/22/2021 10:02	Lake		No	Yes		1 time	Boating		BREACH THE DAM take it down!!!	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves millions of dollars in dam repairs and upkeep. Taxpayers should not continue to repair and maintain a dam that is actively harming an ecosystem	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world
10/22/2021 10:03	Sarasota		No	No					I support the restoration of the Ocklawaha River by breaching the existing dam and draining the Rodman Reservoir.	Restoration of the river has been supported by multiple scientific assessments, economic studies, agency recommendations, environmental impact statements and conservation organizations.	Impact on natural resources.	Partial restoration	
10/22/2021 10:03	Marion		Yes	Yes	More than 5 times			Canoeing / kayaking Boating Hunting Other: Historical guided trips	Remove the dam I have lived in Marion County since 1972 been to Washington state seen the results of dam removal. We will gain more than we loose	I know people on both sides of the controversy have gone to the meetings see me information both present from my experiences I believe that going back did the original course of the river will benefit more than leaving it as it is	Conditions will only worsen between Rodman and Silver Springs	I I wish there was but I don't believe so	
10/22/2021 10:04	Orange		No	Yes		1 time	Other: I was hoping to go kayaking out on the Ocklawha but realized very quickly that it was not a place to go out on a kayak. The weeds that the Rodman dam has created is a blight and makes any of the River unusable		I would like the dam removed. It does not provide any good resources to the local community and for those that are trying to visit. Not including all of the negative environmental impacts.	There is countless UF/IFAS studies that show the benefits of removing the Rodman Dam. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
10/22/2021 10:08	Seminole		No	No					I think that it is time to remove or breach the dam, restoring the river to its natural state.	Several springs will be restored by removal of the dam, taxpayer money to otherwise makes needed repairs to the dam will be saved, and natural manatee habitat will be restored.	The manatee population decline will be exacerbated without the dam removal and moinies that could be used for other environmental projects wil be wasted repairing the existing dam	Not really. I don't see an alternative that will achieve similar goals.	
10/22/2021 10:03	Citrus		No	Yes		2-5 times		Fishing Boating	Keep it				
10/22/2021 10:09	Marion		No	Yes		2-5 times		Fishing Fishing (shoreline/structure) Wildlife viewing					
10/22/2021 10:09	Lake		No	Yes		More than 5 times	More than 5 times		I would like to see the dam removed	The numerous environmental surveys that show how damaging the dam to the river system.	We continue to choke off the Oklawaha	Not unless you can achieve a free flowing unincumbered river system.	
10/22/2021 10:09	Alachua		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway.
10/22/2021 10:09	Martin		No	No					I support the position taken by the Florida Native Plant Society regarding the restoration of this Reservoir and Dam. Sally Brodie				
10/22/2021 10:09	Volusia		No	Yes		More than 5 times		Fishing Fishing (shoreline/structure) Wildlife viewing	Keep it the way it is		Loss of outdoor activities		
10/22/2021 10:10	Clay		No	Yes		1 time	Canoeing / kayaking		Take it down.	Don't try to change nature.	Manatees perish	Anything that would start the restoration of the Ocklawhaw	
10/22/2021 10:11	Marion		No	Yes		2-5 times		Other: Waiting for it to go away	Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. 10/22/2021 10:11	Outside of state / other	Dallas, WV	No	Yes				2-5 times	Fishing Boating	I would love Rodman to stay open to fisherman. Last time I went (this past March), it was clean, secluded, and a very good time	That it needs to stay clean and people need to respect the wildlife and continue catching and release fishing	It would it be open to fisherman		I went fishing at Rodman this past March and caught a 9lb 2oz bass with Captain Sean. Living in WV, the biggest fish I ever caught was probably 2-3 lbs. It was amazing pulling that bass out of the water. The way I fished at Rodman and the way I fish at home are 2 completely different things. Rodman has taught me new things to bring back home and teach others.
10/22/2021 10:12	Alachua		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	Remove the dam, restore the free-flowing river	Most every scientist, hydrologist and ecologist that I have read, supports this decision. Restoring the surrounding wetlands will be a tremendous benefit to local wildlife. More people will kayak/canoe the river and view the wildlife than fish the reservoir.	Dam will require endless expenditures to sustain the status quo.	No	
10/22/2021 10:14	Charlotte		No	Yes		1 time		Canoeing / kayaking	TO restore the river .				
10/22/2021 10:15	Marion		No	Yes		1 time		Canoeing / kayaking Boating	Remove the locks and dam to save taxpayer money! Fishermen can still fish the Ocklawaha and St. Johns Rivers, and Lake George.	The locks and dam serve no purpose other than maintaining a fishing area for small group. Using tax money to maintain and eventually replace the aged structure is not use of funds.	Wasted money on a recurring annual basis.	No. The dam and locks need to be removed. The benefit to a small group does not justify the expenditure of public funds.	When the dam and locks are removed, there will still be plenty of fishing areas. Please do not allow the argument that the Rodman Reservoir is necessary to support the local economy to determine a logical outcome. A restored Ocklawaha will be just as "fishy" as the current reservoir and local businesses will not be impacted (i.e. fishermen will still buy bait and tackle to fish the river that same as they do the reservoir). Maintaining a fishing area for a small group does not justify the ongoing long-term expenditure if tax payer funds. Thank you.
10/22/2021 10:15	Alachua		No	Yes		2-5 times		Canoeing / kayaking	The birkpatrick dam to be removed	The environmental degradation that has occurred to the Ocklewaha.	The river to continue to be degraded		
10/22/2021 10:16	Duval		No	No									
10/22/2021 10:17	Seminole		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Wildlife viewing Other	Get rid of it.	The research from my book :An Ocklewaha River Odyssey	That the Ocklewaha is permanently damaged.	I guess a passageway, but the dam really needs to go.	Free the Ocklawaha.
10/22/2021 10:18	Volusia		No	Yes			1 time	Other: Camping	Dam removed immediately	It obstructs the natural flow of the river, creates a dead reservoir, obstructs the movement of manatees to Blue Springs.	That the status quo will continue That the dam will continue to deteriorate and cause flooding along the St John It's another factor in the extreme dangor of manatee extinction	Permanently drawing down the reservoir and allowing the dam to deteriorate on its own	There are still lots of options for recreation along the wild and beautiful river! I remember some UF research a few years back concluding that bass below the dam are larger. I would love to see these degradations to our ecosystem removed and see Florida restored to its natural and beautiful state.
10/22/2021 10:18	Nassau		No	No					It should be breached. The original purpose-the Cross Florida Barge Canal- is obsolete and the Ocklawaha River should be re-established.	This is a win-win for the State. The funds are available. Much needed water will be restored to the St. Johns River. The access and opportunities for public use will be enhanced, along with wildlife habitat.	The death of the St. Johns River. And of the eco system it supports.	No	I sincerely hope this dam breach project will be achieved while the opportunity exists.
10/22/2021 10:19	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing	It's my opinion		Would hurt the manatees and kill the fishing	No	
10/22/2021 10:20	Volusia		No	Yes			2-5 times		Free the river.	Knowledge of the circumstance of the dam	Not being heard.		Free the Oklahawa I have been saying to the state and District, since 2004.
10/22/2021 10:20	Duval		No	No					I support the restoration of the Ocklawaha River by breaching the existing dam and draining the Rodman Reservoir for the broad range of environmental and economic benefits that restoration would provide.	Improved flow to the St. Johns River.	More algal blooms and pollution in the St. Johns River.	No.	
10/22/2021 10:20	Duval		No	Yes		2-5 times	2-5 times	Canoeing / kayaking Wildlife viewing	Waterway restored to how it was by breaching the dam	The dam caused natural springs to be lost, wetlands to be changed and needs costly repairs which would be money wasted.	Money wasted, natural water flows continue to be lost, Lost opportunities for both human and animals to enjoy and live in a natural environment.	No, breach the dam and be done with it. It should gave never been built in the first place.	lets make right what was done wrong and give back to Florida a natural waterway.
10/22/2021 10:24	Brevard		No	Yes		2-5 times		Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Maintained it's a great fishery! One of the bests in florida	FWC stats of Trophy bass caught from Rodman	Impact to local businesses such as lodging, fishing guides and tackle shops among a few. This great fishery supports a lot of local businesses. Without it I wouldn't make the trip out and spend my money within the community.	Support Rodman reservoir and preserve it the way it has been.	N/a
10/22/2021 10:24	Outside of state / other	Wisconson	No	Yes		1 time			Keep this reservoir!	Excellent fisheries. Wild wetland, home to abundant wildlife.	Where does the wildlife go?		This world needs less concrete and more wildlife.
10/22/2021 10:25	Outside of state / other	North Carolina	No	Yes				Fishing	Other: just to look at the devastation and soggy mess	Take out the dam and get rid of the reservoir. River to flow free	That the Florida taxpayers continue to be billed for a total boondoggle with no environmental value	Don't know	
10/22/2021 10:25	Alachua		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	I would like to see the dam removed and the springs restored.	Restoration of natural migration patterns for wildlife, fish and manatee is of special importance. This is very special spring area that is completely undermined by the reservoir. The dam should have never been built and spending financial resources for its upkeep is abominable.	At a time when Florida manatee are starving to death in parts of Florida, healthy habitat and access is imperative wherever it can be provided. I do not want my tax dollars going towards preserving the dam and reservoir as an affront to clean water and important wildlife habitat.	No there is not, the draw downs are not enough. Spending funds to upkeep the reservoir is not acceptable. This dam should not exist.	The existence of the dam and reservoir for 50 years is an affront to these very special natural systems. Our manatees need access to the winter habitat upstream. Stop studying and stalling and free the Ocklawaha.
10/22/2021 10:25	Alachua		Yes	Yes	2-5 times			Fishing Fishing (shoreline/structure) Boating Wildlife viewing	I hope it stays for the wild life sake	When I finish my captain license I'll be guiding on rodman	The wildlife will suffer	I really hope rodman stays	

10/22/2021 10:26	Outside of state / other	Ashland, WI	No	No					The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/22/2021 10:28	Seminole		No	Yes			2-5 times	Wildlife viewing Other: Camping	I'd like to see the channel moving freely again.	The current state of the channel.	The continued decline of that chain of lakes.	
10/22/2021 10:28	Monroe		No	Yes	1 time	2-5 times	More than 5 times	Wildlife viewing	I'd like to see the damn removed to restore the flow of the river	Research that shows the improved health of the waterway end species which rely on it.	Continued destruction of Florida waterways and natural beauty and resources which is what brings us to Florida in the first place.	No
10/22/2021 10:28	St Johns		No	Yes	1 time		2-5 times	Fishing Canoeing / kayaking Wildlife viewing	the Kirkpatrick Dam should be breached and the flow of the river should be restored. The Reservoir will be diminished over time.	2002 -USFS completed an EIS in 2002 that called for restoring the Ocklawaha and partially removing the Rodman dam to connect the river. They gave the state of Florida a special use permit to temporarily retain the Rodman dam and pool on USFS land based on the state's commitment to complete the river restoration. The permit has lapsed, and the state of Florida is operating structures on USFS lands without a permit.	Wasting tax payer dollars to maintain a structure which serves a small minority of vocal bass fisherman while preventing the natural springs and flow of water which would yield far better habitat for wildlife and more valuable game fish. The evidence shows that breaching the dam is the best thing for the eco-system and fish and wildlife. We shouldn't waste this opportunity.	Partial restoration is the preferred alternative for river restoration that has been supported by almost all scientific assessments of the Ocklawaha Restoration Project, all agency recommendations, two environmental impact statements and conservation organizations across the state. This plan restores the river flows and levels, as well as floodplain function, to pre-dam construction conditions by breaching the dam at the natural river channel, west of the main Rodman Dam structure. This plan requires limited removal of/or alteration of structures or the land. Rodman Park fishing docks and ramps would still be maintained.	The benefits of restoring the Ocklawaha river are obvious to anyone who has paddled down the nearly stagnant body of water, and seen the flooded forest which could be so awesome if the river were to be restored.
10/22/2021 10:29	Orange		No	No					I'd like to see the dam removed.	State fisheries biologists studied the Dead Lakes for several years after the dam was torn out. Without the dam, they found the lakes were healthier.	Continued degradation of Florida's environment.	no
10/22/2021 10:30	Wakulla		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Breach it.	There are manatees starving to death and they need access to this area to survive. This is the deadliest year that I know of for them. This dam is hurting our fish population and wildlife.	State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No.	We should do all that we can to protect wildlife. We are ruining our planet. Please don't be part of the problem and make things worse.
10/22/2021 10:31	Lake		No	No					I support the restoration of the Ocklawaha River by breaching the existing dam and draining the Rodman Reservoir for the broad range of environmental and economic benefits that restoration would provide.				
10/22/2021 10:35	Volusia		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing Other: Photography	Remain intact	True environmental impact	Removing Rodman reservoir would be an environmental catastrophe. The reservoir acts as a giant wetland buffer for the surrounding drainage basin. The reservoir supports a much larger, more diverse ecosystem than what the river could support alone, in terms of fish, bird life, alligators, invertebrates and manatees.	Not that I can think of	I'm an environmentalist, in support of many measures to help Florida's troubled waterways. However, draining Rodman reservoir will not help the Ocklawaha River - in fact, it will likely harm the basin. Rodman acts as a giant filter for that portion of the system. The environmental arguments against Rodman are incorrect. Topics like wetland buffers, sequestered carbon and biodiversity are never discussed. The latest claim - that Rodman is the reason for increased exotic species like tilapia, armored catfish, etc. - is ridiculous. These species are increasing to huge numbers all along the St. John's system - including far upstream of the dam. The loss of eelgrass or seagrass is not a factor of Rodman. Lake George, and the continued absence of eelgrass there is a perfect example (again, upstream of the dam). The loss of grasses is a great concern - and is likely due to generations of herbicide use and nutrient loading from area septic and fertilization run-off. These are the facts. Rodman reservoir is protecting the resource many are hoping to renew. The real fight - the one that is best for the river - includes point-source pollution, herbicide and fertilizer run-off, aquifer depletion from urbanization, and seagrass die-off as a result of a number of factors. What we are dealing with here is another example of a mis-informed public, anxious to jump on the bandwagon for an environmental problem that can be blamed on urbanization and run-off. Mark my word, the wetlands of Rodman are helping the river. A true scientific study of this area would result in overwhelming support of this fact. Florida actually needs more places like Rodman.
10/22/2021 10:35	Lake		No	Yes		More than 5 times	More than 5 times	Canoeing / kayaking	Removed permanently	Free movement of the Ocklawaha to reestablish the natural river flow for dis manatees and all other aquatic life.			
10/22/2021 10:36	Marion		No	Yes		More than 5 times	More than 5 times	Fishing Wildlife viewing	Nothing I think it's beautiful the way it is	I live in hog valley the river wouldn't be the same if they took the damn down	They will tear it down and the beauty that we love and enjoy would be gone	No I would really hate to see it torn down	
10/22/2021 10:37	Leon		No	Yes					I support the restoration of a free-flowing Ocklawaha River by breaching the existing dam and draining the Rodman Reservoir to accomplish the many environmental and economic benefits that restoration would provide. This partial restoration will restore the natural river channel, water flows and levels and floodplain functions to conditions before the dam construction.	Those areas drowned by the dammed water would be restored. 30 freshwater natural springs, 7500 acres of what was historically forest floodplain in the lower Ocklawaha and many miles of river channel. Thousands of acres of aquatic plant communities that are now submerged would be able to regenerate. Also, barriers within the Ocala to Osceola Wildlife Corridor would be removed.	The water quality in the Rodman reservoir and lower Ocklawaha would continue to decline. The many environmental benefits to flora, fauna and wildlife would not be realized. Taxpayers would continually be responsible to repair and maintain the dam. Those dollars could be better used for the economic and environmental benefits of restoration.	No. Breaching this dam is long overdue. Restoration by far provides the most bang for the buck.	From 1986-1990 I lived in Gainesville and remember the many reasons voiced then to Free the Ocklawaha. That is when I visited the dam and surrounding area. Since 1990 I live in Tallahassee and look forward to seeing the environmental plans, wildlife and cleaner water benefits that restoration would accomplish along with the results of increased ecotourism through enhanced recreational opportunities.
10/22/2021 10:40	Outside of state / other	Bella Vista, AR. Benton county	No	Yes			2-5 times	Fishing Fishing (shoreline/structure) Boating	Keep it as it is. If you destroy this reservoir you are no better off than a bunch of twitpasted bovines.	It acts as a filter for the St. John's River. If you destroy Rodman then you will destroy the St. John's as well. The environmental impact would be immense and you would be responsible and would have no way of hiding the fact that you were responsible.	BAd, that means reread the statement above	NO	Please disregard whatever lobbying group that is advocating the destruction of Rodman for their personal gain regardless of what they promise you personally if you were to destroy Rodman.
10/22/2021 10:40	Outside of state / other	Cadiz,ky	No	Yes			2-5 times	Fishing Wildlife viewing	Keep the rodman as it is. I grew up in manatee county. My father lives in citrus county now.	The time that I have personally spent on the lake	Nutrient run off	No	
10/22/2021 10:42	Palm Beach		No	Yes			1 time	Canoeing / kayaking Wildlife viewing Other	Removal of the dam and river restoration.	Successful restoration of Kissimmee River and its benefits to all stakeholders shows what can be accomplished.	Loss of habitat for many species.	If done correctly, the planning process would include input from all stakeholders so compromises will be part of the process	Do the next right thing for the environment in our beautiful and unique state.
10/22/2021 10:43	Putnam		No	Yes			1 time	Other: To see it.	We want it removed.	We are a fish camp on the St. John's River Not to far from the Ocklawaha River, and we would like the rivers to be restored to their original flow for fish & wildlife.	Higher salinity in the St. John's and its environmental impact>	Quit removing water from the rivers and their sources!	
10/22/2021 10:43	Pinellas		No	Yes	1 time			Canoeing / kayaking	Restore the flow, remove the dam!	Bruce Kasler's study shows that the dam is high risk of falling apart it's far past it's due 50 years and it's original construction as well as the fact that it is keeping Springs from flowing and interfering with necessary Manatee habitats.	This desired outcome is best for the interest of all of the state of Florida. The peoples lives and property surrounding the watershed where the damn could fail not to mention the Manatee habitats. It's absurd that this is gone on this long they should've been fixed so long ago	The damn is a threat to human life & property as well as endangered species … there is no other desired outcome.	Save our springs and restore the flow. Won't be able to cover this up again as the public is now fully aware of the dangers and costs to environment.
10/22/2021 10:43	Marion		No	Yes		2-5 times		Wildlife viewing	Remove the dam. It serves no purpose. It stops migratory fish from accessing the headspring of the Silver River.	Surveys	Continued clogging of vegetation and no access for the fish and manatees	Just open the spillway	
10/22/2021 10:43	Alachua		No	Yes			2-5 times	Wildlife viewing	I want to see it removed to restore the ecosystem .	Maintenance of the dam costs taxpayers millions of dollars on a fruitless investment. The dam negatively impacts revenue for the state and destroys wildlife habitat	That fish, manatee, and birds are dying off without habitat while we throw more money away on a useless piece of infrastructure.	A finite phaseout plan to restore the area.	
10/22/2021 10:46	Duval		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Boating	Keep the Dam and remove the floating logs in the barge canal. Pave the road to Kenwood ramp and the parking lot. More lighting at the ramp.	The eco-system and bass fishing are excellent at Rodman.	It would be devastating to the local economy and to bass fishing.	Leave Rodman and the dam as is.	The biggest mistake would be to destroy the dam and everything that has been in place since the building of the lock system and the barge canal.
10/22/2021 10:47	Hillsborough		No	No					The dam should be opened up to allow free flow of the oklawaha River.	It would increase Manatee habitat and movement, which is desperately needed after this last deadly year.	Continued reduction in the manatee population.	I can't think of any other scenario that would support manatees.	Florida springs and the animals who rely on them are unique and precious. As a native Floridian whose children and grandchildren live in Florida I feel we must do everything we can to preserve these treasures.
10/22/2021 10:48	Dixie		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing Other	I would like to see the Rodman Reservoir and Kirkpatrick Dam removed.	This never should have been built and just like with the Kissimmee River we should put it back to the way nature intended.	That this wrong will never be righted therefore all the wildlife will not benefit.	No	
10/22/2021 10:48	Volusia		No	Yes		1 time	2-5 times	Wildlife viewing	Removal of the dam	Water quality data, EIS	Further deterioration of a potentially pristine river	No	The removal of the dam has been found to be the only good remedy for more than a decade and the State of Florida has not moved ahead.
10/22/2021 10:48	Seminole		No	Yes			1 time	Other: I visited the dam and reservoir several times working as a hydrologist for the USGS.	As a licensed professional geologist in the State of Florida, I think the reservoir needs to be drained and the dam breached to allow the Ocklawaha River to return to its natural flow regime. I was able to tour the river and see the drowned forest and springs during one of the drawdowns in the late 1990s. The Cross Florida Barge Canal would have been an environmental and hydrologist disaster. The dam never should have been built.	Loss of habitat with the dam. Loss of natural channel flow.	Eventually, reservoirs fill in with sediment and muck. In addition to the loss of habitat, the reservoir will become increasingly expensive to maintain with the sedimentation and control of invasive species.	ideally, the dam should be completely removed. Otherwise, breaching the dam and draining the reservoir would serve the same goal.	
10/22/2021 10:50	Putnam		No	Yes		2-5 times	More than 5 times	Boating Wildlife viewing	I think the dam should be removed. Restoration of submerged springs is better benefit than Rodman Dma.	I believe the scientific data supporting removal is overwhelming. Cost- benefit to retain the dam is not there.	Continued degradation of the St. John's River.	I would support a scenario that restores Ocklawaha flow.	Why is this decision taking so long.
10/22/2021 10:50	Orange		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Restoration of 20 lost springs to support wildlife and ecosystems, including manatees and Silver Springs. $4-14 Million in dam repairs saved on a dam past its life expectancy.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. A storm event triggers a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	Absolutely not, we have waited long enough to see this area be restored. It is time to set a new standard for water management and set a new example of how Florida views its most precious resource. I refuse to see this area wait another 50 years for this chance.	Many family has lived in Florida for many, many years. It is heartbreaking to see the loss of wildlife and their habitat over the years.
10/22/2021 10:53	Alachua		No	Yes		More than 5 times		Canoeing / kayaking Wildlife viewing Other: Photography	decades of research supporting restoration		Continued maintenance costs to taxpayers	breach the spillway	Now is the time to Restore the River
10/22/2021 10:55	Duval		No	Yes			2-5 times		Remove the dam and restore the Ocklawaha.	Vast amount of science	Continued degradation of the dam and cost of repair, along with the lost opportunity to help restorem the Ocklawaha and improve water quality of the SJR.	No	Its time. Restoration makes both economic and environmental sense.
10/22/2021 10:55	Outside of state / other	Charleston SC	No	No					For it to be removed. Dam's inhibit watersheds from sustaining biodiversity and harm ecosystem services. The negative impacts of keeping the damn far outweigh the positive as local extirpations will continue to occur and gain intensity.	Common sense and observation. Multiple groups I am a member of including the Florida Native Plant society highly desire that the dam in question be removed and allow water to flow as normal. I trust their judgment as their methodologies are in line with mine.	That the voice of the people…the general public is not heard and that short term thinking and profits are being placed above the quality of life for most living beings. Also, for the sake of a harmonious Florida aquifer.	Allowing the water to flow as close to natural even if the dam is not removed.	
10/22/2021 10:56	Lake		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	My family has lived in Florida for many, many years. It is heartbreaking to see the loss of wildlife and their habitat over the years.
10/22/2021 10:57	Putnam		No	Yes	1 time	2-5 times	2-5 times	Fishing Wildlife viewing	Remove the dam and reconnect the rivers.	The information that supports the removal and the full restoration of the river system is extensive and it all points to that whole ecosystem recovering if it is successfully removed.	That we would never see the beautiful rivers restored to their natural state.	No, remove the dam. It serves no purpose besides hurting the natural waterways in Florida.	It seems that the only people that want to see the dam remain are the bass fisherman and they hardly fish the reservoir. What a waste.
10/22/2021 10:57	Marion		No	Yes		2-5 times	2-5 times	Boating	I would like to see the dam breached so that the natural flow of the Ocklawaha is restored.	Reduced migration of manatees to the springs has impacted their ability to survive cold temperatures. Impairment of fish migrations has severely reduced their numbers such as striped bass, catfish and mullet for example. Excessive growth of vegetation has hampered boating activity and therefore economic growth. Silver Springs is greatly impacted by the decrease in the fish biomass.	Manatees would continue to die off because of loss of winter habitat. There would be no restoration of native fish migration and invasive species would continue to increase. Weed killer used to kill off the excessive vegetation would continue to pollute the water. There would continue to be fish die-offs. Pollutants would continue to build up in the reservoir. Opportunity for economic development would be lost.	No.	The dam is deteriorating and money is better spent on restoring the Ocklawaha than repairs and maintenance of the dam.
10/22/2021 10:58	Marion		No	Yes	1 time	2-5 times	2-5 times	Fishing Wildlife viewing	Restore the river to its' natural existence.	Wildlife moving freely and naturally Springs flowing freely.	Loss of wildlife, continued loss of the natural rivers and springs	No.	
10/22/2021 10:59	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Wildlife viewing	Nothing, maintain it as it is.	The Reservoir as well as the Ocklawaha River will be unusable by motor boats and the fishing opportunities will suffer.	The loss of quality outdoor recreational opportunities and the loss of revenue to the area county businesses.	No, the only option I can support is to maintain the Damn and Reservoir as it is.	The loss of the habitat would lead to the loss of life to a great number of fish, reptiles, birds and animals that now call Rodman home.
10/22/2021 10:59	Union		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing					
10/22/2021 11:00	Marion		No	Yes		2-5 times		Fishing Canoeing / kayaking Boating Wildlife viewing	Just maintained	Preserve nature	Killing nature	Leave it alone and just maintain it	
10/22/2021 11:01	St Johns		No	Yes			1 time	Other: To see the reservoir	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	The fact that the fishery resources would benefit tremendously. Some examples of the extensive benefits of restoration via breaching the Rodman Dam are: Sought-after species such as Striped Bass, Redbreast Sunfish, Spotted Sunfish, Channel Catfish, White Catfish, and Brown Bullhead would increase upstream of the dam resulting in enhanced fishing for these species throughout the middle and upper river. Abundance of Striped Bass and hybrid Striped Bass upstream of the dam in the Ocklawaha River to Silver Springs would increase and be maintained year-round. Fish species diversity throughout the Ocklawaha River upstream of Rodman/Kirkpatrick Dam would increase following restoration of the river. Although American Shad and Atlantic or Shortnose Sturgeon may remain a rarity, other rare and threatened species may return in noteworthy numbers such as the Southern Tessellated Darter and Bluenose Shiner. Marine and fish species that survive in fresh or saltwater habitats are likely to access the upper reaches of the Ocklawaha River including Silver Springs. Examples include Hogchoker, White and Striped Mullet, Southern Flounder and potentially Grey Snapper and Tarpon. Breaching of the dam would allow significant populations of fishes such as Striped Mullet and Channel Catfish that were historically observed in great numbers in Silver Springs renewed access to the springs and upper reaches of the river. Expansion of native fish populations will help counteract the increased populations of exotic fish such as Tilapia. Fish will be distributed up and down the Ocklawaha and St. Johns Rivers and Silver Springs. Open water fishing on the large managed pool will not exist, but the natural river fishing experience will provide opportunities to fish the edges, creeks, outs, and newly opened springs along the river. The need to apply herbicide treatments to invasive aquatic weeds will be reduced.	The fact that the significant fisheries benefits under the restoration scenario would not be realized and the overwhelming amount of data and research supporting restoration would be wasted. Below is a selected compilation of pertinent documents and reports. •Bartelds, M. J. and Uttermark, P.D. 1971. Problem Lakes in the United States. University of Wisconsin Water Resources Center Technical Report 16010 HER, Madison, WI. •Livingston, R. J. 1990. The Ocklawaha River Pages 86-95 in R. J. Livingston, editor. The Rivers of Florida. Proceedings of the Annual Conference of the Southeastern Association of Fish and Wildlife Agencies 48(1994):512-523.	This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million-dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.
10/22/2021 11:03	Marion		Yes	Yes		2-5 times		Fishing	Maintained and kept the way it is now.	The fishing at Rodman allows people to visit our small town and bring revenue to our local businesses.	Our small businesses will suffer and the tradition of fishing at Rodman will be erased.	No	
10/22/2021 11:03	Duval		No	No				Fishing (shoreline/structure)	I'd like to see the dam opened to allow the water to go back to its original flow patterns.	The St. Johns river needs the input from all its tributaries to improve its health. I also understand that Silver Springs would be improved by opening the dam. It was built as part of the cross Florida barge canal and since that never got completed. It doesn't make sense to keep this part of it.	Continued deterioration of the St. Johns and Silver Springs. Also, are we maintaining the dam properly if we are not going to remove it?	Is there a middle ground between removing the dam and keeping it?	I love our river and anything to improve its quality of flow I support!
10/22/2021 11:04	St Johns		No	Yes	1 time	2-5 times		Fishing Boating Wildlife viewing	Breach the damn or a partial draw down to original levels from 50 years ago.	Returning to original flow will allow wildlife (birds, fish, manatee and forests) to return and prosper. 50 springs will be allowed to flow with out the weight of the damned water holding them back. The free flow of spring water will create a healthier St Johns river system. Tax payers will not be liable for 50 million in potential damage if a storm breaches the reservoir damn	We would lose an opportunity to return spring water flow and subsequently a healthier river system which would provide for a more vibrant (the originally was) environmentally conscious ecosystem. This includes 1000's of acres of forest, fish, aquatic life and grass that feeds the system. We would lose the opportunity to correct a failed and ill conceived barge canal project. We would lose the chance to enhance the unique, north flowing St river system all the way to the ocean and the quality of wildlife that millions on citizens in North Florida enjoy.	A partial draw down would be acceptable as long as the original flow volume is achieved.	We must do this. Palatka activists, local fishing clubs and some small businesses think this will hurt their business. They are wrong. This will increase tourism opportunities and new businesses that will follow the rebirth of out door activity. The fishing will be better. water quality will be better. Particularly better than the stagnant pent up reservoir water. The big picture SJ river system upgrade in quality will be enjoyed by millions of boaters and fishermen alike. Do this now
10/22/2021 11:04	Duval		No	No					Removal of the dam	St. Johns River needs an additional source of water	Continued worsening of the St. Johns River water quality	Not really	
10/22/2021 11:05	Sumter		No	Yes		1 time	2-5 times	Canoeing / kayaking Wildlife viewing Other: Guided eco tours to teach about the "real Florida"	I would like to see the dam removed and the rivers and the waters restored to their natural flow.	The dam serves no function and it is destructive to the environment, the natural springs, the economy and the residents who reside in the area. The dam has had a negative impact on water quality and wildlife in the area as well.	The dam has already negatively impacted the quality of fishing in the area and the number of fish species that could and would be found when the rivers are restored. The area of the dam continues to be harmful to manatees that are deprived a place to winter in the springs that are flooded by the dam. Forests are impacted and cannot be restored unless the dam is removed.	No…breaching the dam is long overdue. The dam serves no useful purpose and is a destructive force in the ecosystem of the OCK, the Silver and the St. Johns.	As an avid kayaker who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the springs and reuniting these waterways will save countless manatees from starvation and death. It will also reconnect them with the springs that are now flooded in the area of the dam providing a safe place to winter. Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. Restoration will also improve water quality and flow by generating an additional 150 million+ gallons per day of fresh water into the St. Johns River and Estuary. It will also revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.

10/22/2021 11:05	Alachua		No	No				Restoration of the Ocklawaha River by broaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	$57 million in potential flood damages avoided to downstream property owners	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed riverway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.
10/22/2021 11:06	Miami-Dade		No	No				Removal of the dam	Ecological/science	Adverse environmental impacts		
10/22/2021 11:10	Broward		No	No				Removed to restore the springs above it and restore the ecosystem	Environmentalist and their studies	Failed ecosystem	Take it down	
10/22/2021 11:10	St Johns		No	Yes		1 time	2-5 times	Canoeing / kayaking Other: tours of the Ocklawaha River	Restoration of the Ocklawaha River by broaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	The fact that the significant water quality and water quantity (flow) benefits under the restoration scenario would not be realized and that the overwhelming amount of data and research supporting restoration would be wasted. Dam safety, improved water quality and wildlife can't wait.	This exciting restoration will improve water quality and flow by generating an additional 150 millions gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
10/22/2021 11:10	Seminole		No	Yes		1 time	2-5 times	Wildlife viewing	Removed	Empirical studies.	Continued deterioration of waterways, springs, aquifer	No	
10/22/2021 11:11	Alachua		No	Yes	1 time	1 time	2-5 times	Canoeing / kayaking Boating Wildlife viewing Other: I typically visit during the drawdowns.	Restoration of the Ocklawaha River by broaching the Rodman/Kirkpatrick Dam.	The fact that Silver Springs and the twenty "lost springs" (such as Cannon and Marion Blue) could be restored and recovered, respectively. The ecological and increased recreational/economic benefits would be exceptional. Data collected and reviewed by the Florida Springs Institute documents the importance of the free-flowing springs of the Ocklawaha for supporting healthy fish and wildlife populations. Previous data and anecdotal information indicated that sport fishing in the natural river channel above the Rodman Pool is as good as or better than the sport fishery in the Pool (Lewis 2015). The UF economic study of the 2017 drawdown found that recreational uses during Rodman drawdown had twice the economic benefits as uses during periods when the Rodman Pool is full (Borisova et al. 2017). Opening the river to unrestricted migration of fish, manatees, and human recreational boaters will ultimately help restore the 20 Lost Springs of the Ocklawaha and contribute to the eventual restoration of Silver Springs and the Silver River. Returning the Ocklawaha River to its natural free-flowing condition by partial removal of the Rodman Dam will ultimately maximize environmental and economic benefits for humans and wildlife.	that the overwhelming amount of data and research supporting restoration would be waited. Limnology: Lake and River Ecosystems. 3rd Ed. Academic Press, San Diego, CA.	No. Construction of this lock and dam was a mistake over 50 years ago and it is long overdue to rectify the situation. Not to mention that the economic benefits or restoration will far exceed the status quo.	The case for restoration has become ever more compelling over the five decades since the Cross Florida Barge Canal project was stopped due to overwhelmingly adverse environmental impacts. It is well past time to remove the last vestige of this longstanding mistake by breaching the Rodman dam, draining the reservoir and restoring the natural flow of the Ocklawaha River and its 20 lost springs. It is now time to pursue the new and very positive effort led by the Free the Ocklawaha River Coalition - for Everyone (FORCE). This fresh, multi-faceted approach relies on the latest science and socioeconomic data to forge what can be a much improved environmental and economic future for the entire affected region - termed the Great Florida Riverway - by reuniting Silver Springs and River with the Ocklawaha and St. Johns rivers all the way to the Atlantic Ocean. Environmentally, this restoration effort will: 1) help restore the ecology of Silver Springs; 2) greatly improve the populations of numerous migratory fish species such as striped bass, American shad, Atlantic sturgeon and striped mullet; 3) provide warm water winter habitat for hundreds of manatees; 4) uncover and rejuvenate 20 springs; 5) reestablish a critical link in the Florida Wildlife Corridor and 6) improve the water quality, habitat and fisheries of the lower St. Johns River estuary. Economic and recreational benefits of this approach include: 1) a $50 million net economic benefit over 10 years; 2) increased regional visitor traffic to the Ocklawaha River by 28%; 3) elimination of $57 million in risk to downstream properties from potential collapse of the Rodman dam that is beyond its 50-year life expectancy and 4) significantly increased Silver Springs tourist visits as abundant manatee populations appear. It would be best for all involved to embrace a well-thought-out alternative approach that will yield exceptional ecological benefits along the entire Great Florida Riverway and provide renewed economic returns to spring and river communities from Ocala to Palatka to Jacksonville.
10/22/2021 11:11	Seminole		No	Yes		1 time		Wildlife viewing Other: a road to get to hiking trails	Year it down	It will restore the river	The river will suffer	no	It's the right thing to do
10/22/2021 11:13	Marion		No	No					DEMOLISH THE DAMS THEY ARE RUINING THE WATER FLOW AND ENCOURAGING INVASIVE NON NATIVE SPECIES	OVER 1000 Manatees are DEAD since they have nothing to eat.	DROUGHT AND MAYHEM	no	Time for SJRWMD to work for the constituents of FLORIDA not special interests and NESTLE
10/22/2021 11:13	Clay		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing	I would like for it to stay the same	If you go in and change the way the ecosystem is now you will be killing so many fish,eagles, and other wildlife that relies on rist mes	That the wildlife that is their will be run out of somewhere they have lived for many many years. You would also be taking away revenue from the surrounding towns because their are people that travel to these locations just to fish outmen	No	
10/22/2021 11:14	Marion		No	No					Remove the dam and free the Ocklawaha.	The dam blocks the natural river route for manatees and fish. The St Johns is hurt due to receiving less clear fresh water. The health of Silver Springs which cannot be restored without a free flowing Ocklawaha.	The death of more manatees and the further decay of Silver Springs. A potential dam failure could cause significant damage.	In order to reduce the possibility of dam failure and improve the water quality elsewhere, the dam could be partially breached.	Don't make the political. Do the right thing.
10/22/2021 11:18	St Johns		No	No					Restore environment to a natural state	It's pretty simple - a healthy environment is better for both the earth and for us long term. Florida's ecological riches are its #1 asset, we are short-sighted when we don't take care of them.	salt water intrusion	no	The St Johns river is and has been a mess. I rented an apartment downtown for some of last year, walking on the riverwalk, I'd see plastic bottles, construction debris, the occasional mattress, and other gunk in the river regularly. Improving water flow into the St Johns is one step toward improving the natural resource that the city of Jax supposedly sees as its pride and joy.
10/22/2021 11:20	Marion		No	Yes	2-5 times			Canoeing / kayaking Other: Sight seeing	Restoration of the Ocklawaha to its natural state.	Three rivers and fifty springs will be restored and manatee habitats will be reestablished.	We would miss the best opportunity to do this when state and federal funds are available.	NO!!!	Science supports restoration.
10/22/2021 11:22	Leon		No	No					I would like the dam removed and the Ocklawaha River restored.	Studies conducted by the SJRWMD documenting that the water quality of the Ocklawaha will improve if the Kirkpatrick Dam is removed.	Continued degradation of the Ocklawaha/Silver Springs system.	Cannot answer without description of specific alternatives.	The natural and recreational resources of the Ocklawaha River/St. Johns are important to all Floridians and not just the residents of Putnam County.
10/22/2021 11:23	Lee		No	No					Breach the dam	The manatee population and fish population are in serious decline. This would give them an opportunity to regroup.	Continued loss of natural resources we cannot afford to lose	No	
10/22/2021 11:23	Orange		No	Yes			More than 5 times	Other	I would like to see the Kirkpatrick Dam removed, the reservoir emptied, and a free-flowing Ocklawaha River restored.	The dam has reached the end of its useful life and is in danger of failing. Failure of the dam would jeopardize people in the floodplain and would cause an enormous problem for state agencies that had not acted on information about the dam. The state is paying every year to maintain the Rodman Pool in its unnatural state, spreading weed killers in an attempt to control the weeds. It doesn't work. Science and economics both support a free-flowing river. Bass fishing will be better, other recreational activities will increase, fish will be able to migrate naturally, and a natural corridor will be restored.	We will continue to waste money trying to maintain an unnatural ecosystem and adding poisons to the environment. Catastrophic failure of the dam.	No.	The people of Florida deserve to enjoy a free-flowing Ocklawaha River, which was once one of the most beautiful rivers in Florida. We lose so much each year to development; this is an opportunity to reclaim some of Florida's natural beauty.
10/22/2021 11:23	Indian River		No	Yes		1 time		Canoeing / kayaking Wildlife viewing	Breach it	Livelihoods of the springs and fish life	Degradation of the springs already in turmoil.	Not really. Not worth continuing to throw $ at it	Please revive FL natural springs and wildlife!
10/22/2021 11:23	Putnam		No	Yes		2-5 times		Fishing Boating Wildlife viewing	Leave it alone	The amazing ecosystem that has evolved over the years	Loss of wildlife habitat, loss of an amazing recreational waterway, lack of filtration causing more pollution draining into the St John's river.	No	
10/22/2021 11:24	Duval		No	Yes		More than 5 times		Fishing Boating Wildlife viewing	It should stay the way that it is providing great recreational activities for many people to enjoy	The wildlife that lives and relies on the lake to survive			
10/22/2021 11:24	Marion		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Boating Hunting Wildlife viewing	Save the dam for the animals and fishing that is one of the most productive and popular fishing destinations around for the area, and find all kinds of birds that live in the area for nesting and living!!!	You will devastate all of the habits of different species of animals that live in the area!!!	The change of the area would devastating for the habitat lives here!!!!	Just more research in control of flotilla grass without spraying!!!	If you take the dam out, you will be creating an bigger problem for wildlife and the eco system that has already fixed what the government has done!!!
10/22/2021 11:26	Pinellas		No	No									
10/22/2021 11:26	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing	Restored back to the way nature intends it to be. Never seen it before the damn, but have heard the stories from the old timers. The most beautiful place I have even been. I have traveled all over the United States and have never seen a more beautiful place. I can only Imagine the beauty on it, the nature intended it to be. Clear springs that you can no longer see, the water is not very clear and the springs are no longer visible, but maybe in my life i may get the opportunity to see it in it's natural form, for i am 66 years old now and don't have a lot of years left to see this happen, but maybe in my life time. Miricles happen every day.	The springs that were visable before the damn. I believe nature is better the God wanted it to be.	What will be the outcome of this damn, when my great grandkids are my age?	Yes, I will be there enjoying that beautiful river the last days of my life.	God does preform miracles and maybe that is what it will take to restore it back to the way he created it.
10/22/2021 11:26	Alachua		No	Yes		1 time	More than 5 times	Wildlife viewing	I would like to see the Kirkpatrick Dam removed or at least entirely breached and the restoration of the Ocklawaha River by restoring the historic river channel and flow and eliminating the Rodman Reservoir impoundment.	Removal of the dam would help restore the Oklawaha, the St Johns and the Silver River ecosystems, many springs, increase habitat and refugia for manatees and fish, reestablish the free flowing river systems, and enhance recreational and economic opportunities.	The continued decline of the three river systems, decrease in water quantity for the river systems, the death of the associated springs, loss of manatee habitat and massive waste of public dollars repairing an aging and ecologically damaging dam	No, removal of the Kirkpatrick dam is decades overdue. The dam needs to be removed now and river systems need to be restored now.	Florida Rivers and and springs are suffering throughout the state. Removal of the Kirkpatrick dam will enhance the restoration of three rivers and more than 20 springs with one major action. It is time to restore these systems.
10/22/2021 11:27	St Johns		No	No					Remove the dam and allow the area to return to its natural course.	Hundreds of miles of wildlife habitat restored. Millions of dollars in dam repairs saved. Improved water flow and springs returned allowing manatees to return and fish populations to rebound.	Continued damage and degradation of the ecosystem. Lower water quality. Fish populations decline. Costly repairs for dam.	Slow down draw to avoid flooding property. Other than that, no. It's needs to be done. Long overdue.	
10/22/2021 11:30	Hillsborough		No	No					A free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam	Three river systems - the Ocklawaha, Silver and St. Johns - would experience significant environmental improvement from restoration. Preserving, conserving and restoring the native plants and native plant communities of Florida. Manatees would regain open access to the warm water habitats of the Ocklawaha and Silver Springs. Migratory fish including the Striped Bass, American shad, American eel, and the critically Endangered Atlantic Sturgeon and Shortnose Sturgeon would once again have open access to the Ocklawaha system if the dam is breached. An estimated $14 Million in dam repairs, measured in 2006 dollars, would be saved by avoiding repairs to a dam that has exceeded its life expectancy and never fulfilled the purpose for its construction. The large expenditures required for herbicide treatments to control the growth of invasive aquatic weeds and to conduct other ongoing maintenance needs, including periodic drawdowns, in a futile attempt to maintain water quality and recreational access in the stagnant waters of the Reservoir, would become unnecessary.	Taxpayers will perpetually be on the hook for repair and maintenance of the dam and Reservoir, and continue to be liable for any loss of life or property damage that would result from a dam failure. Residents and business owners in areas immediately downstream of the dam would continue to be under threat in the event of failure of a dam that has never, and will never, satisfy the purpose of its construction. Imperilled plant species like the endangered Star Anise and threatened Hartwrightia, which are native to the banks of this region's spring run streams, would be unable to expand their range into the unrestored spring systems.	NO. I have been a supporter of the Cross Florida Greenway and Florida Forever projects and worked diligently for the passing of Florida Water and Land Conservation Initiative, Amendment 1. When will Florida officials follow the will of the people for the health of our State, Nation, and Planet? Now! no alternatives!	I have been a supporter of the Cross Florida Greenway and Florida Forever projects and worked diligently for the passing of Florida Water and Land Conservation Initiative, Amendment 1. When will Florida officials follow the will of the people for the health of our State, Nation, and Planet? Now! no alternatives!
10/22/2021 11:31	Brevard		No	No					The Kirkpatrick Dam is past its life expectancy and should be removed and it costs too much to maintain. Our tax dollars would be better used elsewhere.	Rodman Dam is not a healthy ecosystem and causes exotic vegetation to grow from lack of water flow. Herbicides used to kill the vegetation causes unhealthy water that in part of the Florida aquifer that flows all the way south into the Everglades. We need clean water.	Poor water conditions and more fish kills and more tax dollars required to maintain the dam & the reservoir.	No, Florida needs it's land restored for the preservation of wildlife and ecology. Clean water is more important. Water is life.	Greater economic opportunities would be available from restoring the natural springs that are submerged under the reservoir and fishing would become measurably better. A benefit to everyone and especially to the State of Florida.
10/22/2021 11:32	Marion		No	Yes			1 time	Wildlife viewing					
10/22/2021 11:32	Duval		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	I would like to see breaching of the Rodman/Kirkpatrick Dam, to restore the free-flowing Ocklawaha and the restoration of this natural system.	I support the Free the Ocklawaha Coalition mission to increase the significant ecological and economic benefits of a free-flowing Ocklawaha. The Coalition is supported by over 60 conservation organizations.	If the Rodman dam is left as is currently, our natural resources and ecosystems will suffer destruction and dwindling wildlife populations. Floridians and visitors love to spend time in nature and we must make decisions to support it's better health and sustainable future.	No.	Free the Ocklawaha!!!!!
10/22/2021 11:32	Outside of state / other	Bell county Kentucky	No	Yes			1 time	Fishing Wildlife viewing	Kept present beauty	Love of beauty	Other state areas	Love of all Florida's wildlife	
10/22/2021 11:35	Alachua		No	Yes			1 time	Other: Nature trail	Remove the Dam, restore the Ocklawaha river	Science ad ecological benefits. More than $50 million gallons of natural water flow to the lower Ocklawaha river & St. Johns river.	We miss an opportunity to correct the wrongs of past decades.	No, dam goes and we restore the river. Fishing will be back, we will have healthier water quality.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/22/2021 11:36	Duval		No	Yes			1 time	Fishing	Remove it	Lowford conservation	The eco system will continue to be negatively impacted	Not really	
10/22/2021 11:36	Marion		No	Yes		1 time		Wildlife viewing Other: walking	reunite the rivers	quality & quantity of water...health of fish & wildlife...restored wetlands...restored springs	loss of the above	?	
10/22/2021 11:36	Sumter		No	Yes			1 time	Wildlife viewing	Restore the river by removing the dam.	Dams are ecologically detrimental, even though they also create lake habitat, for example, snail kites have been seen at Rodman Reservoir.	More ecological damage.	Yes, restoration of native plant communities within the project.	
10/22/2021 11:37	Marion		No	Yes			1 time	Boating Wildlife viewing	Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. And if not full restoration of the river, a partial removal of the dam.	Draining the Rodman Reservoir would remove the single greatest barrier to plant and animal movement along the Ocala to Osceola (O2O) Wildlife Corridor by replacing the open water expanse of the Reservoir with a restored floodplain forest, to the benefit of many listed plant species native to the region including the Federally listed Clasping Warea and Scrub Buckwheat. Three river systems - the Ocklawaha, Silver and St. Johns - would experience significant environmental improvement from restoration. Manatees would regain open access to the warm water habitats of the Ocklawaha and Silver Springs. Migratory fish including the Striped Bass, American shad, American eel, and the critically Endangered Atlantic Sturgeon and Shortnose Sturgeon would once again have open access to the Ocklawaha system if the dam is breached. Recreational sport fishing would be enhanced by allowing the Florida strain of the Striped Bass to reclaim what used to be its primary spawning habitat - the Ocklawaha. At least 150 million gallons a day of additional natural flow, and potentially much more, would be restored to the Lower St. Johns River, improving water quality and increasing resiliency of the entire St Johns/Ocklawaha River system by impeding the salt water intrusion resulting from sea level rise. An estimated $14 Million in dam repairs, measured in 2006 dollars, would be saved by avoiding repairs to a dam that has exceeded its life expectancy and never fulfilled the purpose for its construction. The large expenditures required for herbicide treatments to control the growth of invasive aquatic weeds and to conduct other ongoing maintenance needs, including periodic drawdowns, in a futile attempt to maintain water quality and recreational access in the stagnant waters of the Reservoir, would become unnecessary. $57 million in potential flood damages to downstream areas around the community of Welaka would be avoided in the event of a dam failure.	Continued negative environmental and financial impacts to Floridians. The broad array of environmental benefits to native flora and fauna, including many imperiled species, that would result from restoration would not be possible. Water quality in the Rodman Reservoir and Lower Ocklawaha/St Johns River system would continue to decline. The economic benefits that would result from increased and enhanced recreational usage would be denied to the surrounding local communities. Residents and business owners in areas immediately downstream of the dam would continue to be under threat in the event of failure of a dam that has never, and will never, satisfy the purpose of its construction. Thousands of acres of submerged aquatic plant communities would be unable to regenerate in a restored river channel and in the re-emerged spring run streams, and 7,500 acres of floodplain forest would not be restored. The Reservoir would continue to be a barrier to movement by native wildlife and plant life along the length of the O2O Corridor, and compromise the value of Florida's investments in conserving lands like the Etonah Creek State Forest, and approved Florida Forever projects. Taxpayers will perpetually be on the hook for repair and maintenance of the dam and Reservoir, and continue to be liable for any loss of life or property damage that would result from a dam failure. Imperilled plant species like the endangered Star Anise and threatened Hartwrightia, which are native to the banks of this region's spring run streams, would be unable to expand their range into the unrestored spring systems.	Partial removal of the dam.	Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration.
10/22/2021 11:37	Orange		No	No					breach the dam and restore the Ocklawaha River	Restore the drowned springs. Enable to return of migratory birds and allow access for manatees.	There will no longer be funding for the removal of the reservoir and dam	No	
10/22/2021 11:40	Outside of state / other	Georgia	No	Yes	1 time	2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing Other: Peace and relaxation	No changes	I like it just the way it is	Death of many species of wildlife	No	
10/22/2021 11:40	Bradford		No	Yes		2-5 times		Fishing Boating Other	Remove the dam and let the Ocklawaha run free!!!	District studies	Continued degradation of the Oclawha and Silver rivers.	No. Remove the dam.	

10/22/2021 11:41	Brevard		No	No					Breach the Rodman/Kirkpatrick Dam.	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	Manatee populations decreasing.	It has yet to be seen.	
10/22/2021 11:44	Brevard		No	No					Implementation of all action items specified by the Free the Ocklawaha Coalition. Permanently breach the dam and begin the process of restoration of the areas that was destroyed 53 years ago when it was built.	Healthy, flowing rivers and the habitats that they support are essential to Florida's environmental quality.	Poor and degrading environmental quality. Wasteful public resources on projects that do not promote environmental quality.		I fully support the restoration of the Ocklawaha River by breaching the existing dam and draining the Rodman Reservoir for the broad range of environmental and economic benefits that restoration would provide. I support the recommendations of Free the Ocklawaha Coalition.
10/22/2021 11:48	Marion		No	Yes			1 time	Fishing					
10/22/2021 11:49	Duval		No	No					It should be removed because it's damaging the overall environmental impact. I understand this will inconvenience a small number of people but the greater good has to be accounted for.	The fact that our freshwater is in danger requires that this be moved to top of the priority list. Plenty of data shows that removal of the dam will benefit Florida water supply.	Future of the environment and of freshwater in the state of florida. And the area immediately surrounding the St Johns river.	Perhaps a delay and dismantling?	
10/22/2021 11:49	Broward		No	No					Restoration of the river flow to benefit wildlife, water quality, and environmental conservation.	15,000 + acres of the Florida wildlife corridor will be restored.	It is urgent that the river is restored or it will continue to have negative environmental impacts. The biggest concern is that florida residents will experience problems with water quality, algae blooms, and many more negative impacts.	No. This is 50 years over due. Reuniting the rivers will provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. The environment and wildlife must be protected because once it is gone, there is no bringing it back.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.
10/22/2021 11:50	Alachua		No	Yes		More than 5 times		Canoeing / kayaking Wildlife viewing	Remove it - such an unnecessary structure. I would much rather enjoy a free-flowing river, more springs and lots of forest than a big reservoir.	The dam is completely unnecessary and a waste of money.	More money wasted for a worthless project - restoring the river is a win in multiple ways.	People have been campaigning for the removal of this dam for decades.	
10/22/2021 11:50	St Johns		No	Yes			2-5 times	Fishing (shoreline/structure) Boating Wildlife viewing	Breach the dam and restore natural flow.	The science supports restoration. Studies by federal and state agencies have clearly demonstrated that restoration of a free-flowing, connected system is cost-effective and will provide significant ecological benefits to the St. Johns, Ocklawaha and Silver Rivers as well as Silver Springs.	We miss a historic opportunity to stop the ongoing ecological degradation caused by the dam and finally reunite the natural flow of these rivers. Breaching the dam would restore the natural flow of 150 mgd of fresh water, improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. A free-flowing Ocklawaha will reestablish 15,000 acres of forested wetlands and fortify downstream submerged grasses from Welaka to Jacksonville in the St. Johns River that are critical to river health and fish habitat.	We miss a historic opportunity to stop the ongoing ecological degradation caused by the dam and finally reunite the natural flow of these rivers. Breaching the dam would restore the natural flow of 150 mgd of fresh water, improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. A free-flowing Ocklawaha will reestablish 15,000 acres of forested wetlands and fortify downstream submerged grasses from Welaka to Jacksonville in the St. Johns River that are critical to river health and fish habitat.	Breech the dam! Florida strong
10/22/2021 11:52	Marion		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Remove the dam and restore the Oklawaha River.	The importance of continuing to ensure water quality in the central Florida area.	Continued degradation of the dam and surrounding area along with diminishes water quality in the surrounding watersheds.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/22/2021 11:52	Clay		No	Yes			2-5 times	Fishing Canoeing / kayaking Boating	Remove the dam	Facts provided by fishing captains to make the st john better. It time to make a change	Environmental issues to waterways	No do the right thing and remove the dam	
10/22/2021 11:53	Pinellas		No	Yes			1 time	Wildlife viewing	Bring it down and restore the river	Rivers need to be wild	A continued decline in the ecosystem health	No	
10/22/2021 11:55	Outside of state / other	Arkansas	No	Yes		2-5 times		Fishing Wildlife viewing	Leave it alone. Its a beautiful reservoir and should be left as is. I love all of the wildlife, especially the manatees!	Leave a thriving ecosystem alone!	Affecting wildlife	No	
10/22/2021 11:56	Orange		No	No					Demolish and allow river to return to natural flow.	Deterioration of the environment, including fishing.			
10/22/2021 11:57	Collier		No	Yes			2-5 times	Wildlife viewing	Remove the dam and restore Ocklawaha River	Removing the dam held restore 50 springs, plus three rivers. Restoration of natural water low as wekwa saving millions of dollars.	Loss of habitat and loss of significant economic benefits.	No. Removal of the dam is well over due. My 2 brothers live in Putnam County and hunt and fish there. This will benefit the county ecologically and economically .	
10/22/2021 11:57	Leon		No	Yes			1 time	Canoeing / Kayaking	I was in law school in 1979-81 at UF. I recall a canoe trip sponsored by the environmental law group. The trip began not far below the dam. My first job after law school was with the Senate Natural Resources Comm., during which time & met the infamous Sen. Kirkpatrick. He was abrasive, to say the least, in his support for the dam. It would warm my heart for the damn to be removed.		Continued smothering of that stretch of river, springs, etc.	Permanent draining of reservoir by leaving floodgates (?) open.	See above.
10/22/2021 11:58	Duval		No	No					Removal	Articles and interviews with PhDs.	Environmental impact on multiple waterways (animal and fish life, water availability, etc).	I'm always willing to consider ideas. The removal would be economically difficult but would it also create new jobs and preserve our ecological future?	Sorry, both hands and arms are casted. Expressing myself is difficult.
10/22/2021 11:59	Marion		No	Yes		2-5 times	2-5 times	Wildlife viewing Other	I am not sure. I would like to see the river returned to its natural state, but I am not educated on all of the possible impacts.				
10/22/2021 12:02	Brevard		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/22/2021 12:02	St Johns		No	Yes	1 time	1 time	2-5 times	Other: Enjoy nature	Remove the dam and let the river flow naturally!	The build-up of unwanted vegetation that would not be there in the flowing waters	Permanent loss of one of Florida's natural treasures. Loss of wildlife habitat needed for wading and migrating birds, native fish, access for manatees, natural wildlife that once lived there freely.	Unknown option	I just drove over the Ocklawaha River twice last week, feeling sadness for its shrinking beauty and natural flow of the river.
10/22/2021 12:03	Outside of state / other	Nj	No	No					I would like it fully functional	It is needed to help animals	If it's not animals won't survive	No	Please make sure it's completely fixed
10/22/2021 12:04	Palm Beach		No	No					remove the dam! thanks!	natural habitat!	choking up the rivers, not good!	no	
10/22/2021 12:05	Alachua		No	No					It should be removed.	The dam stops the proper flow of the water.	It would continue to disrupt and damage the natural environment and life of the fish.	None.	
10/22/2021 12:05	Duval		No	No					The removal of the Rodman/Kirkpatrick Dam would reopen the natural water system the northeast Florida and bring back the natural features that have so many benefits for humans, fish, and wildlife. NOTE: I HAD SHOULDER SURGERY LAST WEEK, SO I AM TYPING WITH ONE HAND. I HAVE VERY STRONG FEELINGS ABOUT THIS AND WOULD BE SAYING MUCH MORE, BUT IT IS PAINFUL TO TYPE AT THIS EARLY STAGE OF MY RECOVERY. NEVERTHELESS, I WANTED TO LET YOU KNOW MY OPINION.	Scientific studies have shown the ecological benefits of re-connecting the Ocklawaha, Silver, and St. Johns, and 50 springs.	It is criminal what humans have done to our natural habitat. We have an opportunity right now to make amends that will greatly improve our habitat that is dependent on clean, free-flowing water. This is a good time to bring together public support and available state and federal funds for the health of our water resources and our ecosystem.	We must not put this off any longer. It makes no sense to encourage the further disintegration of our significant natural resources.	I was born at Old St. Luke's Hospital, and I grew up during the 1940s and 1950s in Jacksonville, Green Cove Springs, Lakeland, Lake Wales, Tampa, and Englewood. Our family traveled all over the state enjoying the natural wonders of Florida. Silver Springs was a favorite destination. We drove from the Everglades throughout Florida. My dad and brother were dedicated fisherman, and I learned to clean and cook the catch. My children and grandchildren are outdoors people, hiking all the state and national parks wherever they go, especially here in their home state. Four years ago I visited Blue Springs and saw the manatees up close. It causes me such joy to see such amazing creatures, and I want my children and grandchildren and future generations to know and understand what treasures we have here in Florida.
10/22/2021 12:06	Lake		No	Yes		More than 5 times		Boating Other: The Oklawaha River. It would be too shallow without the dam	Clean the water plants out so you can use the West end. The water now flows thru it, so leave it alone on depth!	It has been there for 50 years and a lot of wildlife depend on it. LEAVE IT ALONE.	What will happen to the wildlife living in or near it. Also more mantee getting into the chain of lakes,	NO!	Spend your time and money on the lagoon.
10/22/2021 12:11	Marion		No	Yes		2-5 times		Other	I would like to see waterways returned to natural state. The dam should be removed.	Environmentalist	Wildlife and flower and fauna issues	no	
10/22/2021 12:12	Duval		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	The fact that the water resources would benefit tremendously. Restoration benefits to be achieved by breaching Rodman Dam are as follows: Provides over 150 million gallons a day of additional natural water flow for the lower Ocklawaha River and St. Johns River estuary. This water flow increases due to uncovering 20 freshwater springs suppressed by the water's behind the dam and elimination of substantial evaporation from the warm, exposed reservoir. Creates a much cooler, clearer, free-flowing Ocklawaha River that will promote healthy, native submerged aquatic vegetation growth essential for fish and wildlife in the restored river channel and in the St. Johns River by increasing water clarity and available light. Lessens the likelihood of toxic blue-green algal blooms in the lower St. Johns River - a most significant water quality and human health problem. Restoring the natural balance between nitrogen and phosphorus would favor a more beneficial algal community. Helps balance salt and freshwater in the lower St. Johns River estuary to protect its sportfishing and shellfish industries and associated vital habitat, while assuring coastal resiliency and reduction of saltwater intrusion.	The fact that our Ocklawaha River is not functioning as it should be. The ecosystem is out of balance. Wildlife and flower and fauna issues The fact that the algal blue-green algae quality and water quantity issues cannot be resolved when Rodman Reservoir is not drained. Restoration benefits can be realized and that the overwhelming amount of data and research supporting restoration would be wasted. Below is a selected compilation of such documents and reports. Abbott, E. F., 1971, Twenty Springs of the Ocklawaha, An Occasional Paper prepared for Florida Defenders of the Environment, Department of Geology, University of Florida, Gainesville, FL. • Fabre, A. 1988. Experimental studies on some factors influencing phosphorus solubilization in connection with the drawdown of a reservoir. Hydrobiologia 159: 153-158. • Florida Silver Springs Conservation Plan, Howard T. Odum Florida Springs Institute, 2018, Principal Authors include Robert Knight, ED of the Institute and Heather Vick, professional hydrogeologist with Washington Dept. of Ecology • Ocklawaha River Synoptic Study, Howard T. Odum Florida Springs Institute, 2020. • Hendrickson, J., 2016, Effects on Lower St. Johns River Nutrient Supply and TMDL Target Compliance from the Restoration of a Free-Flowing Ocklawaha River; St. Johns River Water Management District, Palatka, FL • Hendrickson, J.C., K. Park and P. Suczy. 2015. Rodman Reservoir Management Drawdown Water Quality Impacts Assessment. DRAFT Technical Memoranda, St. Johns River Water Management District, Palatka, FL. • Munch, D.A., D.J. Toth, C. Huang, J.B. Davis, C.M. Fortich. W.L. Osburn, E.J. Philips, E.L. Quinlan, M.S. Allen, M.J. Woods, P. Cooney, R.L. Knight, R.A Clarke, and S.L. Knight. 2006. Trophic Structure and Productivity of Silver Springs, Florida. Ecological Monographs. Volume 27 (1): 55-112. • Reed, W.W., J.L. Hayes and M.S. Robles. 2006. Relationships between nutrient conditions and phytoplankton	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	This exciting restoration will improve water quality and flow by generating an additional 150 million gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
10/22/2021 12:12	St Johns		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing Other: Picnics, Pot Luck outings at Kenwood.	Leave it alone! Continue drawdowns every 3 years to keep the vegetation down.	Rodman is a nationally known Bass fishery. Many businesses in the Palatka area benefit from fishing tournaments on Rodman. Gasoline, dining, some overnights in area motels.	Death of many Manatees, Alligators and many fish.	Keep Rodman!	
10/22/2021 12:14	Wakulla		No	No					Remove the dam and restore the Ocklawaha River.	Restoring the natural flow of the Ocklawaha River, its springs and surrounding ecosystem for greater habitat improvement.	the dam itself creates ecological damage and have very limited benefits, much of which have gone unobtained. Restore the Ocklawaha just as the state restored the Kissimmee	it's pretty simple. remove the dam, allow natural conditions to return and restore that ecosystem	Florida continues to rapidly lose natural habitat needed for healthy ecosystems and abundant wildlife. There's an opportunity to restore a once healthy ecosystem, which in turn should generate millions in economic development through eco-tourism.
10/22/2021 12:14	Leon		No	Yes		1 time	1 time	Wildlife viewing	The dam must be breached and the river and spring system restored.	The function of the Ocklawaha river and the springs associated with it has been destroyed over these decades of the Rodman dam. The removal or breeching of the dam will result in the restoration of the river(s) and springs, the floodplain with multiple benefits for fish, wildlife and people.	That the damage to this beautiful river system, to manatees, fish, and people will continue even longer.	No.	I was a DEP biologist that was part of a team assessing the Rodman Dam situation in the late 1980s. Even though I was a new biologist at the time it was abundantly clear that the dam should be breached/removed and the Ocklawaha River should be restored and that is what I recommended then. Unfortunately over 30 years later it still hasn't been restored, but this is the time to finally do what has needed to be done for many decades. Breach the Rodman dam and restore the Ocklawaha at last - NOW is the time.
10/22/2021 12:14	Putnam		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure)	Retain the dam and reservoir. Reauthorize the canal.	The reservoir helps replenish the aquifer. The ecology has adapted to the reservoir and destroying it will the habitat of many species.	A loss of drinking water from the aquifer and the loss of wildlife.	No	
10/22/2021 12:15	Duval		No	Yes			1 time	Fishing	Open the Dam! I lived on the river in Duval county and have witnessed a significant decline in wildlife over the last decade.	Restoration of the natural flow of water and natural habitat	Continued saltwater intrusion	No	
10/22/2021 12:15	Alachua		No	No					I would like to see the dam taken down and the river to be restored to the way nature intended her to flow.	Uncovering a number of springs and opening the river to the manatees as key habitat.	The manatees are suffering and need more habitat for feeding and the entire ecosystem of the Oklawaha is in peril.	I support freeing the river.	
10/22/2021 12:15	Seminole		No	Yes			1 time	Wildlife viewing	Restore to natural	Environmental science	Loss of wildlife, fish line the Sturgeon	No	
10/22/2021 12:15	Alachua		No	Yes			2-5 times	Canoeing / kayaking Boating Wildlife viewing	I would like to see the Kirkpatrick Dam removed and the Ocklawaha River restored to its natural flow. This dam has buried 20+ springs beneath it's waters and does not allow for the natural migration of wildlife. The Kirkpatrick Dam should be removed as soon as possible.	$4-14 Million in dam repairs saved on a dam past its life expectancy	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe.	No, there is nothing short of removing this dam that would satisfy restoration of the Ocklawaha, Silver and St. Johns Rivers.	
10/22/2021 12:16	Seminole		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.
10/22/2021 12:16	Leon		No	Yes			2-5 times	Canoeing / kayaking Boating Wildlife viewing Other: Hiking on the Florida National Scenic Trail	Rodman Dam should be removed to restore a free flowing Ocklawaha River.	Restoration of the over 15,000 floodplain and 20 miles of the Ocklawaha River by removing Rodman Dam is the most immediate and impactful habitat restoration project in the state to help save the collapse of the manatee population in the past year. It will provide essential warm water winter habitat for hundreds of manatees and is essential to restoring and enhancing the Florida Wildlife Corridor benefitting Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	The dammed (damned actually) Ocklawaha Reservoir has destroyed 7,500 acres of forested wetlands and will continue to steal necessary habitat and block wildlife movement corridors for animals such as the manatee Florida panthers, Florida black bears, bobcats, and white-tailed deer. Keeping the Ocklawaha dammed (damned) deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	I formerly lived in Ocala and have paddled my canoe several times on the Ocklawaha and Silver Rivers and boated to drowned springs during the last drawdown. The dam has destroyed the river, wildlife habitat and the natural ecosystem of the river's floodplain. As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("OSO") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for manatees, Florida panthers and black bears.
10/22/2021 12:16	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Hunting Wildlife viewing	Keep it as is!	The eco system has adapted well over the last 50 years. The wildlife would be adversely impacted.	The environment & loss of jobs!	No	
10/22/2021 12:16	Miami-Dade		No	Yes	1 time		1 time		Remove dam	Restoration of natural flow to a beautiful river		No	I canoed the Ocklawaha from upstream of Silver Springs to the reservoir. Should be restored and protected as wild river
10/22/2021 12:18	Duval		No	No					Breach the dam to allow restoration of three rivers and 50 springs, to provide winter habitat for manatees, strengthen the wildlife corridor and expand recreational opportunities to surrounding communities	The dam is well past its life expectancy and at risk of failure. Restoring the natural systems surrounding it by breaching the dam will allow these ecosystems to heal and we will be better protected for climate events moving forward.	Further destruction of surrounding communities and natural ecosystems	No There is no reason for this outdated practice and unnecessary delay to continue	
10/22/2021 12:18	Duval		No	No					I would like to see it breached so that the St. John's River can reduce it's salinity and wetlands can be restored so that flooding can be reduced here in Duval County.	The health of the St. John's River	Increased flooding, and reduction in river grasses that support manatees and river health.	There has been nothing but talk about this issue, it is time for action, and that is the only option that seems viable to me.	
10/22/2021 12:19	Brevard		No	No					Breach the Rodman Dam and restore the Ocklawaha River.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves millions of dollars in dam repairs and upkeep. Taxpayers should not continue to repair and maintain a dam that is actively harming an ecosystem	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Also, 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs.

10/22/2021 12:20	Volusia		No	No					Now that I'm retired and can enjoy the great parks and fishing within a short distance from where I live...I would like to see the Reservoir and Dam remain intact.	I worked for TVA at two of their nuclear plants, both near dams on the Tennessee River. TVA controlled the water level at the dam and below on the river. It fluctuated from Summer to Winter to support the recreation offered and of course to prevent flooding in the Tennessee Valley. It works.... the river still flows after the dam and doesn't know it just went through a beautiful lake.	We go through cycles of rain and drought in Florida. But we are in the Tropics and rain is inevitable. This dam helps control the level of water on both sides of the dam and is crucial for the wildlife that it helps support.	Sure, make the dam better if need be.	Some people have no clue what our water supply and cycles are here. The aquifer that feeds our springs goes all the way up to South Caroline. Manatee do not depend on the per gallon flow of our springs, the water level in our springs depends on the level of the river. The springs feed our rivers and the dam is a crucial part of its survival.
10/22/2021 12:21	Marion		No	Yes	2-5 times			Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Leave it alone.	It's one of the best bass habits in the country	It would ruin the fishing on the entire river.	No	
10/22/2021 12:23	Duval		No	No					The dam should be removed!	Damage to the aquifer and St. Johns River	That the conditions affecting the St Johns and the surrounding habitats will worsen.	a breach in the dam allowing a lowering of the Rodman Reservoir.	I've been against this change to the River ever they announced the construction of the "cross Florida canal". It should have been apparent to any one who had good sense that it wasn't a viable project based on the ecology of Florida. But they kept on until they found it was not longer feasible to continue. The River as the surrounding land was in the mess that you are trying to somehow correct.
10/22/2021 12:23	Duval		No	Yes		1 time	Canoeing / Kayaking		I would like to see the natural flow of water restored to the St. Johns River to help the health of the animal and plant life in and around the river.	Breaching the Rodman Dam will free all the submerged springs to their natural flow. This will add millions of gallons of fresh water to the natural flow of the St. Johns which will help overcome the salt water intrusion from the recent dredging. Money will be saved on needed dam repairs and maintenance.	My biggest concern if the dam is not breached is further degradation of the St. Johns River by salt water intrusion and the algal blooms we experience each summer.	No. The time is right for the dam to be removed. This issue has been discussed for many years and I believe the public is now ready to comprehend the need for the restoration of the natural flow of the springs and rivers. As we look for ways to create resiliency and undo some of the misguided decisions made in the past, the breach of this dam looks like a win-win action.	
10/22/2021 12:24	Leon		No	No					Remove and restore.	This removal is long overdue.	Loss of a treasured opportunity.	No	
10/22/2021 12:24	Marion		No	No					I would like the dam to be removed so the natural springs and wildlife can freely move again.	I've spoken to researchers that have been watching the number and variety of fish and wildlife continually decline due to the dam.	I consider the devastating impact on wildlife to be unacceptable. I am also concerned with the potential for a failure of the dam and costs related to repair and maintenance.	No. I support removal of the dam.	
10/22/2021 12:25	Volusia		No	No					Breach the dam, allow water to flow.	SOps dam needs millions to restore. A waste of my taxpayer money. A bigger benefit is breaching it allowing fresh water to flow to Siskins river.	Manatee deaths and wasted money	No. Breach it	Thank you for listening to my position
10/22/2021 12:25	Duval		No	No					Remove the dam- restore free flow of water.	Habitat and environmental restoration benefits seen in other areas where dams have been removed.	Continued degradation of St Johnsriver water quality…salinity, turbidity, loss of wildlife, decreased wetlands.	No	It is time to do this. The long term enhancement of water quality, spring restoration, historic fish populations, manatee movements etc underline the need to take the dam down.
10/22/2021 12:26	Putnam		No	Yes	1 time	2-5 times	More than 5 times	Fishing Canoeing / Kayaking Boating Wildlife viewing	remove dam	removing the dam would free fish and other wildlife to migrate the length of the river. Removing the dam would save the money that would be spent in weed control and other measures to maintain the reservoir.	maintenance of the reservoir	probably	
10/22/2021 12:29	Sumter		No	Yes		1 time		Canoeing / Kayaking		Restore drowned springs. Restore fish populations, give access to the manatees	Wasting taxpayer dollars repairing the dam	No	
10/22/2021 12:31	Hillsborough		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklewaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/22/2021 12:32	Putnam		No	Yes		1 time		Wildlife viewing	Take the dam down and restore	Again manatees mullet and striped bass and crabs	We will have to keep trying	No	
10/22/2021 12:33	Marion		No	No					Remove it and restore the rivers to their previous state	The many reports by scientists of the damage being done to wildlife and aquatic life since the dam was built	That we will continue to lose our natural resources in Florida, which are our greatest attributes.	Some kind of major revisions to the dam that would at least partially restore it to the prior state.	
10/22/2021 12:33	Sumter		No	Yes			2-5 times	Canoeing / Kayaking Wildlife viewing	Breach the dam. It should have been removed when the cross fla project was abandoned.		Everything dies behind dams. Travel around the US and see the consequences that damming rivers has brought. Already the number of fish have deceased in silver river. The dam has flooded a forest, remember trees help us breathe.		
10/22/2021 12:35	Marion		Yes	Yes	2-5 times			Boating Other	Leave it standing	Living on the river	Property value declined & wildlife declines	Leave it alone for the economic increase to the area & keeping the wildlife safe on the greenway!	
10/22/2021 12:35	Orange		No	Yes			1 time	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million-dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.
10/22/2021 12:35	Duval		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Canoeing / Kayaking Wildlife viewing	Leave as is. Don't remove the dam	It is a beautiful and healthy reservoir. That is full of wildlife and fish. I have been there and seen so much. Flocks of ducks and geese. I have been through the lock multiple times and every time there is manatees going through. Why it's because Rodman is full of vegetation for them to eat. If you remove you are taking there food. Where most places bottom grass is dying off, it's healthy in Rodman	Removing a huge food source for manatees	No	
10/22/2021 12:38	Duval		No	Yes			1 time	Wildlife viewing	I would like to see the Oklawaha River returned to it's natural state by removing the dam. There are economic benefits for doing this, not to mention the good for health of the St. Johns river and the various springs and flood plains.	By allowing more dredging near the mouth of the river we have created an influx of salt water upstream. This is harmful to the submerged grasses that support the ecosystem. Recreational opportunities will be enhanced. The St. Johns will have more fresh water flow mitigating the damage done by dredging.	Continued degradation of the St Johns River.	Why would we not want to do this? Palatka will still have the recreational economic opportunities it enjoys now.	i visit Ft Caroline almost daily. I see what the dredging has done. Water clarity is not what it was before the dredging started.
10/22/2021 12:39	Alachua		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Feels like a no brainer.
10/22/2021 12:39	Putnam		No	Yes	2-5 times			Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Leave it as it is...!!	It is filtering toxins and algae out of the St. Johns River. Not to mention, it's a great place to spend the day with your family and see all the different wildlife that are drawn to the area.	Loosing the serenity and habitat for all the wildlife and the cost.	Leave it alone... keep draining for a few months every few years, if need be, but do not remove the dam entirely.	It's been this way for all these years and hasn't hurt a thing! Why can't people just leave a good thing alone!
10/22/2021 12:42	Citrus		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / Kayaking	Unblock the dam & let the water flow naturally	Environmental articles	Environmental impactnet at this time	Not at this time	
10/22/2021 12:42	Nassau		No	Yes			1 time		Remove entirely and restore the river and all natural functions.	Restoration of all natural functions	Huge waste of tax money to maintain an unnatural structure	No	Take this rare opportunity to restore a piece of natural Florida and minimize tax payer impacts
10/22/2021 12:46	St Johns		No	No					Return it back to natural state	It's good for the Saint Johns river	Water flow is important	Not really	
10/22/2021 12:47	Marion		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / Kayaking Wildlife viewing	I would like to see the restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. The dam is a detriment to our community. It harms our economy, water quality, and wildlife in the region.	The fact that the water resources would benefit significantly. Restoration benefits to be achieved by breaching Rodman Dam are as follows: Provides over 150 million gallons a day of additional natural water flow for the lower Ocklawaha River and St. Johns River estuary. This water flow increases due to uncovering 20 freshwater springs suppressed by the waters behind the dam and elimination of substantial evaporation from the warm, exposed reservoir. Creates a much cooler, clearer, free-flowing Ocklawaha River that will promote healthy, native submerged aquatic vegetation growth essential for fish and wildlife in the restored river channel and in the St. Johns River by increasing water clarity and available light. Lessens the likelihood of toxic blue-green algal blooms in the lower St. Johns River - a most significant water quality and human health problem. Restoring the natural balance between nitrogen and phosphorus would favor a more beneficial algal community. Helps balance salt and freshwater in the lower St. Johns River estuary to protect its sportfishing and shellfish industries and associated vital habitat, while assuring coastal resiliency and reduction of saltwater intrusion.	The fact that substantial water quality and water quantity (flow) benefits under the restoration scenario would not be realized and that the overwhelming amount of data and research supporting restoration would go to waste. Additionally, the lost economic benefits of restoring the Ocklawaha.	No. The dam must be breached. It is 5 decades overdue. Dam safety, improved water quality and wildlife can't wait. Do you want another Piney Point or Surfside on your hands?	This is an incredible opportunity. Let's not miss it. Restoration will improve water quality and flow by generating an additional 150 million+ gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Thank you for your attention and consideration of this matter.
10/22/2021 12:48	Seminole		No	No					Breach the Rodman Kirkpatrick dam	The dam is past its prime and breaching it would save millions of tax payer money, not to mention restore some of Florida's springs and fish population	Quality of water declining, and nautical habitats for Florida's native animals being destroyed further	No, the damn is outdated and need to be breached	Breaching this dam would help restore a multitude of Florida springs, making this project not only beneficial for taxpayers but also wildlife
10/22/2021 12:50	Alachua		No	Yes		1 time		Wildlife viewing	Please remove the dam.	I moved to Ocala in the 60s and saw what the river was like and now see how it has changed for the worse.	continued environmental and wildlife damage.	no	the SJRWMD has allowed damage to occur for way too long.
10/22/2021 12:53	Marion		No	Yes			1 time	Fishing	Open the dam.	The lake is dying.	Destroyed environmental issues.	no	Return the Oklawaha to nature.
10/22/2021 12:54	Lake		No	Yes		2-5 times		Fishing Fishing (shoreline/structure) Canoeing / Kayaking Wildlife viewing	Keep it	It is a great place to take family.	The local ecological result would NOT benefit florida		
10/22/2021 12:54	Lee		No	No					Restore the river to it's natural flow. Help wildlife species by giving them the habitat they need.	Habitat loss and especially loss of wetland habitats has caused declines in wildlife populations. Natural areas are a must to restore threatened and endangered species.	Continued loss of biodiversity.		
10/22/2021 12:55	Marion		No	Yes	1 time	2-5 times		Canoeing / Kayaking Wildlife viewing	Remove the dam and restore the Ocklawaha to its natural course	Newspapers and lectures re: the ecological, recreational, and wildlife benefits to restoration of the Ocklawaha. 20 lost springs	Dam failure, harm to wildlife , particularly manatees, and poor water quality	No.	This is best opportunity to do this with federal and state funds. Critically important.
10/22/2021 12:56	Marion		No	Yes			More than 5 times	Fishing Wildlife viewing	I'd like to see the Dam full of wildlife and families enjoying the nature.				
10/22/2021 12:58	Putnam		No	Yes	2-5 times	More than 5 times	More than 5 times	Other: Walking our dogs and looking at the birds.	Keep the hydra at bay and the boats out.	It keeps our water well higher than they naturally would be and so our small lakes ~ which I live on.	Water levels fall. Wildlife suffers. Area has more variation in dry/damp. Less stable environment. People LEAVE!!!! Less water activities. More fires. No dead manatees caught in the damn dam. Stupid dam ~ should produce electricity. Poor design. Am MS Enviro Engineer from Tennessee. Florida loves water messes!	More enviro controls in the Ocala National Forest. More patrolling. Take poaching serious!!!! Kill the 4 wheelers!!!!!	
10/22/2021 12:59	Outside of state / other	Morgan County Indiana	No	Yes			2-5 times	Fishing Wildlife viewing	Left alone.	Control of pollution and sediment, support wildlife, keep St. John cleaner, support manatees.	A degrading of the St. Johns river, manatees, and wildlife.	No. Florida has a terrible track record when it comes to nature, changing water flows, and controlling pollution. Leave it alone. Its a tremendous fishing/wildlife/nature area	
10/22/2021 12:59	St Johns		No	Yes		2-5 times		Fishing Boating Wildlife viewing	I (we) need the dam and reservoir to stay and continue to provide habit and resources for the wonderfully diverse ecosystems that are teeming with wildlife.	Population numbers for fish and bird species.	I can't imagine losing such a beautiful and special place like the Rodman. The destruction of habitat and cruel loss of wildlife is will be devastating.	The Rodman is a delicately balanced area and any intrusion could have devastating effects.	We love catch and release fishing at Rodman and are always overwhelmed by its beauty. I don't know of another place like it. It is a treasure we should support and take care of and not destroy.
10/22/2021 12:59	Brevard		No	Yes			1 time		I would like to see it removed to restore natural flow to river.	Landscapes that have dams removed quickly recover to a more balanced ecosystem that benefits water quality downstream and should improve wildlife corridors all the way to the everglades.	A lost opportunity to restore an ecosystem that is rapidly disappearing across our state. We have many lakes and developments in florida and very few river systems that are intact.	Not really…this is an all or none kind of thing. Maybe restoring seasonal flooding and lowering the lake level would help a bit.	
10/22/2021 13:02	Alachua		No	Yes			1 time	Wildlife viewing	Open it	What is best for the wild life		Not sure	
10/22/2021 13:03	Duval		No	No					I want to have this dam breached.f	Breaching the dam would help clean up the St Johns river and its tributaries.f	The health of the St Johns river and tributaries will continue to be threatened.r	I know of any other options.	We must protect the environment of these rivers for ourselves and future generations.
10/22/2021 13:03	Sarasota		No	Yes			1 time		demolish the dam and let the reservoir return to a natural condition	my belief it was never anything but a political boondoggle	that some other local politician (read "fool") might use it as a misbegotten example of need for his district	possibly, but I don't know what it might be	i am a retired environmental news reporter (retired from the NY Times newspaper group re Gainesville Sun, Ocala Star-Banner and Sarasota Herald-Tribune) after 30 years of work; my minor in college was Environmental Engineering. major was print (newspaper-primarily) journalism. I have a BS in agriculture from UF, 1969.
10/22/2021 13:05	Marion		No	No					Free flowing and bring back all the springs that rely on that flow	The fish the manatees.....so much loss from our interference	Loss of our beautiful springs and the life it supports	No	
10/22/2021 13:07	Alachua		No	Yes			2-5 times	Canoeing / Kayaking Wildlife viewing	have them removed	The descriptions of the oOcklawaha river and its tributary springs prior to damming.	That a beautiful part of Florida is lost forever	No	
10/22/2021 13:08	Clay		No	Yes		More than 5 times		Canoeing / Kayaking	The dam need to be removed so that the river can flow freely.	This Dam is an obstacle for wild life and is deteriorating the environment.	I have visited the area while I drawdown season and have seen what a beautiful place this area can be. The dam is collecting trash and it just a disaster area.	Allowing the River to flow is tge only outcome I would support	
10/22/2021 13:08	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing					
10/22/2021 13:09	Marion		No	Yes			More than 5 times	Fishing Fishing (shoreline/structure)	take the dam out	environment is not good for fish, birds, etc	all the fish dying	get rid of the dam	
10/22/2021 13:11	Manion		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing	NOTHING AT ALL!	PRESERVE IT'S BEAUTY, NEEDS TO REMAIN UNTOUCHED.	DEMOCRATS	NO	
10/22/2021 13:11	Sarasota		No	No					Environmental impact considered, wildlife protected.		Continued ignorance over the protection of our waterways and ecosystems.		
10/22/2021 13:16	Osceloa		No	Yes			More than 5 times		I would like to see the Rodman/Kirkpatrick Dam breached so that restoration of the Ocklawaha River can occur. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers to aid in enhancement and restoration of these waterways.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million-dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.
10/22/2021 13:16	Marion		No	Yes		2-5 times		Fishing Canoeing / Kayaking Other: Camping	I would like to see the dam breached.	The restoration of the Oklawaha and the free flowing of springs, fish and manatees.	Spending millions more of taxpayers dollars on this boondoggle.	No	Let the rivers run naturally and free!
10/22/2021 13:16	Leon		No	No					I would like to see it removed.	It is blocking 20 FL springs that are important for ecotourism and many other reasons.	The springs	No	
10/22/2021 13:18	Marion		No	No					Let the Rodman dam go. Fifty years of environmental destruction is enough. Politics and money are the only things keeping this deadly dam in place.	FORCE information about the dam and the choices for the Ocklawaha's future. I have read the proposals from both groups involved in the Rodman dam project. The "Free the River" facts are much more honest, believable and scientific than the "Keep the Dam" arguments. Various articles, editorials and other sources of history and facts about the river and the dam have educated me about the terrible situation we are in today.	More environmental degradation accompanied by loss of wildlife.	Not sure. Would have to see what other solutions are presented.	The privilege of fishing for bass is far outweighed by the needs of ALL Florida's residents and our fauna, flora and waterways. Rodman dam was a disaster from Day 1. I am glad that I wasn't around to see it happen. It must have been beyond depressing. Restoration of the Ocklawaha River is essential. The many benefits laid out by environmental, business and recreational thinkers are amazing. I want to be on site to whoop and holler as the river starts to flow free. I may even jump in for a swim! Please release the Ocklawaha. Florida needs this river. Fifty years is a long time - too long. The destruction of the river has cost us much more than money. Please open the dam and let the Ocklewaha be a healthy, sustaining river once more. Thank you.
10/22/2021 13:21	Marion		No	Yes	1 time	2-5 times	2-5 times	Canoeing / Kayaking Wildlife viewing	Please eliminate the dam and let the reservoir drain down to allow the Ocklawaha River to flow naturally again	The fact the dam is of no use other than to create a reservoir that has no purpose other than as an artificial body of water that needs to be artificially seeded and stocked with fish. Allowing the water to run naturally would create far more natural wildlife habitat for fisherman, hunters, birders, photographers, Paddlers, and naturalists.	Continued deterioration of water, wildlife, and other natural resources needed to return the entire Ocklawaha River basin a natural wildlife habitat.	Remove the blockage of the refuse and the flood control gates at the dam to allow a natural flow and artificial nutrient cleaning of the water.	The dam has long since lost its value to act as a viable flood control especially considering what its annual maintenance cost is. Removal of the dam or at the least the removal of the flow blockage and the flood control gates to allow the Ocklawaha River to flow naturally again would be a far better investment of the funds that are presently used to supposedly maintain the dam and reservoir.
10/22/2021 13:22	Marion		No	No					I would love to see them both gone and the river run free again.	MONEY, EXPENSIVE TO KEEP!, Dead manatees over the years. Migrating fish that have been stopped from migrating for decades.	The expense…decades more!	NO!	As a young girl my father fished the Ocklawaha and St. John's River and caught huge fish and brought them home for us to see. Giant cat fish, mullet, bass just amazing fish. I personally watch Silver Springs fish decline over the decades and the water quality there getting worse every year. Letting our rivers run FREE will heal them and the Earth around the.!
10/22/2021 13:23	Washington		No	Yes		2-5 times		Wildlife viewing	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklewaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/22/2021 13:24	Duval		No	Yes			1 time	Wildlife viewing	Removal of obstruction. Restore flow	This will open habitat for marine life and improve water quality	Stagnation	Bringing down the level will help temporarily	Protect our water and way of life!
10/22/2021 13:24	Lee		No	Yes	1 time	1 time		Canoeing / Kayaking Wildlife viewing	Tear it down to free the river	the effect on wildlife would be beneficial with the dam being breached. Also, the springs would benefit.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No, the dam needs to be breached	This dam does not provide any good to humans or wildlife.

10/22/2021 13:25	St Lucie		No	Yes		2-5 times		Wildlife viewing	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. 10/22/2021 13:25	St Johns		No	Yes		2-5 times		Fishing Boating Wildlife viewing	I would like to see it left completely alone! This is a unique and beautiful area in Florida that supports countless wildlife, fishes, birds, manatees... We travel to Rodman for fishing and to enjoy its lush vegetation and unique beauty! It should not be disturbed in any way! Can't imagine destroying such a vital ecosystem that provides habit and resources for so much wildlife!	The numbers of manatees (700) that have been saved by coming into the Rodman to feed the on the rich vegetation. The Rodman is a delicately balanced ecosystem and what is being proposed will destroy it and the vast numbers of wildlife that depend on it!	Destruction of a unique and beautiful ecosystem and the loss of vast numbers of wildlife. Rodman is a true treasure that Florida needs to be actively preserving.	Absolutely not! Ecosystems like the Rodman have a very delicate balance and any intrusion like what is being discussed would be disastrous!	We love to come to the Rodman for catch and release fishing and it's sheer beauty. I don't know of any place like it. There are fewer and fewer places to see Florida's truly natural beauty.
10/22/2021 13:26	Duval		No	Yes		1 time		Fishing	Restore flow	Marine life habitat	Stagnation	Lower level can help temporarily	Protect our water
10/22/2021 13:26	Alachua		No	Yes	1 time	More than 5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Remove the dam to reconnect the rivers.	Restore the springs, Restore fish and manatee migration, use less herbicides	Not being able to use the springs and see manatees	reconnect the rivers	Free this river and bring back the fish animals and people. Must of the time the boat ramps at Kenwood and Orange Springs are not usable.
10/22/2021 13:27	Seminole		No	Yes		1 time		Wildlife viewing Other: Once the springs are freed up my family will use it.	I would like to see the water be able to flow freely. I use the St johns a lot and I love to fish and we had toxic algae blooms this year. I think even the St Johns will benefit from this.	A lot of the FI Wildlife Cooridor will be freed up and regenerated or people and wildlife A lot of the water will be able to have natural flow restored to the Lower Ocklawaha and St. Johns Rivers	I have a few. I love to fish and the fish fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. I have seen these invasive species start to expand in number. With me if I had to choose one it would be the water quality declining further and having more toxic algae blooms and fish kills and the manatees would be negatively effected.	Well at least draw the reservoir down for the health of rivers and wildlifeswhile we try to figure out how to do more to help.	I am concerned about some false statements made by the opposing group. Looking at research will show their comments are not true. I want everyone to care about the river and rivers for the right reason. Please look at these honest scientific resources to see: Water Resources Scientific Paper with References Water-Quality-Quantity-Fact-Sheet.pdf (freetheocklawaha.com) Fish Scientific Paper with References FishImplicationswithaRestoredOcklawahaRiver.pdf (freetheocklawaha.com) Manatee Fact Sheet with References Manatee-Fact-Sheet.pdf (freetheocklawaha.com) Economics Fact Sheet EconomicBriefingPieceFinalUpdated9.8.21.pdf (freetheocklawaha.com)
10/22/2021 13:28	Alachua		No	Yes		More than 5 times		Canoeing / kayaking Wildlife viewing Other	Continued conservation and ensuring the waters are clean and accessible		Then our natural area will become much like South Florida polluted over populated abused and neglected		
10/22/2021 13:29	Alachua		No	No					I would like the dam to be removed and natural water channels restored	The ecological problems caused by the dam along with the cost to repair the dam	Further deterioration of our environment	No	
10/22/2021 13:31	Alachua		No	No					Freeing the Oklawaha	Sierra Club information	Degradation of the river	Don't know	
10/22/2021 13:31	Bay		No	Yes				Other: scoped it out for possible kayaking, wildlife viewing.	get rid of the dam. Restore the natural ecosystem	Restore the natural flow saving 5millions of repairs and continued upkeep and taxpayer money on a dam that should never have been built in the first place. Restoring the system will allow all of Florida's citizens to gain the benefits - economic, water storage, filtration. flood protection. wildlife habitat....	continued degradation of natural ecosystem and loss of benefits for "all" of Florida's citizens and wildlife.	no	
10/22/2021 13:32	Alachua		Yes	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing	Improve access to the lake and river above and below the dam. Enhance existing access areas to include larger ramps with handicap support, increase lighting for safety, and add or increase campground facilities.	Removing the dam would be catastrophic to resident, transient and migratory wildlife dependent on Rodman Reservoir. Birds, mammals and fish would all suffer, putting unsustainable pressure on adjacent habitat.	Rodman Reservoir is critical to the survival of countless families and businesses dependent on that fishery as a source of income, from multiple counties and townships in the area. Removing the dam would not only displace the wildlife, it would displace the families and business reliant on the lake.	A fish ladder to aid in the migration of fish below and above the lock and dam would be a fair compromise to those concerned with fish migration. I would support funding such project, not one that would compromise the water table of the lake.	it's clear that Governor DisantIs (whom I voted for) is more interested in increasing the amount of port traffic in Jacksonville than he is about the welfare of the families or businesses dependent on the survival Rodman Reservoir. The St. Johns Riverkeepers and Free the Ocklawaha supporters are all in bed together ... each with its won agenda, which borders on corruption. Drain the pool and those factions will have a much larger legal battle on their hands. Do what's right. Save Rodman!
10/22/2021 13:33	St Johns		Yes	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	Remove the dam and restore the springs.	The water quality issues on the St. Johns River and manatee mortality rates.	Wasting money on a useless dam and continuing to degrade the water quality in the St. Johns River.	No.	The dam is an environmental travesty and the time has come to remove it.....let the waters run free.
10/22/2021 13:34	Marion		No	Yes		1 time		Boating	Restored to original state	Environmental studies	Dam to break on its on due to age	Idk	
10/22/2021 13:37	Collier		No	Yes	1 time	2-5 times	More than 5 times	Fishing Boating	Remove the dam	Rectifying a mistake and restoring the natural state as much as possible	The continuing and increasing negative effects on other water bodies connected to the dammed river.	I'm not aware of any proposed alternatives which would substantially lessen the negative impacts of the dam on the impacted waterways and acquifers	Mother Nature knows best as history has proven; for example look at the Kissimmee River and Lake "O".
10/22/2021 13:38	Hernando		No	No									
10/22/2021 13:40	Alachua		No	Yes		2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	I would like to see restoration of the river by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted.	20 lost springs and Silver Springs ecosystems are restored, hundreds of manatees would gain essential warm water winter springs habitat, over 150 million gallons of natural flow per day would be restored to the Lower Ocklawaha and St. Johns rivers, millions of dollars could be saved from repairs required to upkeep a dam that is past its life expectancy, and $7 million dollars in potential flood damages could be avoided by downstream property owners.	millions of taxpayer dollars would be used in upkeep for an expired dam that decreases water quality, harms ecosystems, and does not provide flood protection, power, water supply, or any other broad public benefit.	No. Breaching the dam is 50 years overdue. I feel this is a necessary action for the sake of Dam safety, improved water quality, and our beautiful North Florida wildlife.	This dam has already harmed our river and spring ecosystems, which in turn hurts Florida economy. a huge portion of the Florida tourism industry relies on its wildlife and natural resources. 2021 is the deadliest year on record for manatees thus far. if we don't make efforts to restore their natural habitat, the number of deaths of not only manatees, but other essential and beloved Florida wildlife, will increase in years to come. The greatest long term threat of the manatee is loss of natural warm winter habitat.
10/22/2021 13:42	Nassau		No	Yes		More than 5 times		Fishing Boating Wildlife viewing	Stop the use of harmful chemicals stop killing off vegetation	Wanting to protect the species and vegetation	That the wildlife and fish and vegetation will deteriorate due to the use of harmful chemicals	I support better water quality	Listen to the people that spend the most time in these waters listen to what the anglers have to say and the captains they know the waters and what's going on and what can be done to help
10/22/2021 13:42	Hillsborough		No	No					Remove the dam, restore the flow.	All of it	None.	No.	
10/22/2021 13:44	Outside of state / other	Illinois	No	No					Breach the dam	This should be the default position, since there's no compelling need for the reservoir. It will have enormous environmental benefits.	The state will have to spend a large amount of money replacing a pointless dam	No	
10/22/2021 13:45	Marion		No	Yes		More than 5 times		Wildlife viewing	Get rid of the dam!	Return the oklawaha to its natural beauty. Uncover the springs	Loss of wildlife, overpopulation of invasive species, money wasted to drain (drain down) and do upkeep on the dam.	No	Please return this beautiful, wild river to its natural beauty
10/22/2021 13:45	Pinellas		No	Yes		2-5 times		Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	>5,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	This decision is vitally important to the residents and wildlife who call this area home. Please consider breaching the dam to restore and improve the habitat in these areas.
10/22/2021 13:46	Alachua		No	No					Free the River.				
10/22/2021 13:46	Seminole		No	Yes		More than 5 times		Canoeing / kayaking	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife.	he 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/22/2021 13:46	Citrus		No	Yes		2-5 times		Fishing Canoeing / kayaking Boating	Remove the Dam.	It needs to return to its natural state to support fish, Manatees and all other wildlife.	It will remain as an unnatural blockage of the river.	No	I have personally seen dozens of Manatees floundering below the dam in the Fall, unable to swim upstream to the Springs. Sad to watch.
10/22/2021 13:50	Alachua		No	Yes		2-5 times		Boating Wildlife viewing Other: viewing exposed springs during drawdown	Breach the Kirkpatrick Dam and restore the free-flowing Ocklawaha River	Draining the reservoir and allowing back a free-flowing river will result in the restoration of 20 lost springs and historic fish and manatee populations to the Silver Springs ecosystem. Economic analyses have demonstrated that these effects will result in greater visitation and more local jobs.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. In fact, the dam does more harm than good to fish and wildlife habitat.	No, breaching the dam is way overdue. It can be done in a manner, e.g. during a temporary drawdown, that will not be detrimental to downstream property.	I have been involved in this issue since the mid-1990's and have reviewed many of the related studies, both ecological and economic, all of which point to the need to remove the dam. There is no good reason to keep it except as a playground for some fishermen, who catch bass (mainly in the river channel) at the expense of all taxpayers.
10/22/2021 13:51	Duval		No	Yes		1 time		Canoeing / kayaking Boating	Remove the dam and restore the Oklawaha to its natural state.	increased flow from the Oklawaha into the St. Johns would improve the health of the St. Johns by flushing N and P pollution and by staving off salt water intrusion.	1) Degradation of the water quality and ecology of the St. Johns. 2) Cost of maintaining the dam and the reservoir.	Not that I'm aware of. Keeping the Rodman reservoir loses water volume due to evaporation and suppressing the flow from springs that are flooded. Keeping the dam (in addition to the cost of maintenance) blocks migration of fish and manatees into the Oklawaha.	Removal of other old dams in the NE US has been shown to have surprising rapid restoration of migratory fish populations. I think allowing manatees to migrate up the Oklawaha and feed in that watershed will help the population of manatees by providing increase foraging area and access to springs during cold weather.
10/22/2021 13:52	Sarasota		No	No					Breach the Rodman/Kirkpatrick Dam.	The dam is past its life expectancy. Breaching the dam saves millions of dollars dam repairs and upkeep. We taxpayers should not continue to repair and maintain a dam that is actively harming fish, manatees and the entire ecosystem.	Missing the best opportunity to help fish, manatees, springs, and our Florida economy. State and federal funds are available! Public interest is high, environmental needs are critical (water quality, wildlife habitat) and the dam is unsafe.	No. We should have breached the dam 50 years ago.	
10/22/2021 13:53	Hillsborough		No	No					Removal	Restoration of submerged and damaged natural 'communities'	Continued degradation of natural plant communitied that support native animals, clean water, recreation and beauty of Florida.	Nope, we've waited for decades.	
10/22/2021 13:56	Outside of state / other	45233	No	No						Helping manatees			
10/22/2021 13:57	Duval		No	No					Please remove the dam and restore the river.	The dam is not the natural state and prevents a healthy St. Johns River. We need the water to flow and restore the ecosystem.			
10/22/2021 13:57	Putnam					2-5 times	More than 5 times	Wildlife viewing Other: I stop at Rodman Res. for wildlife viewing but know that wildlife viewing would be enhanced by breaching the dam. I also put in at the dam to paddle, but only downstream into the lower Ocklawaha.	I would like to see the Kirkpatrick Dam be breached to restore the original flow of the Ocklawaha River. I would like this outcome for the migration of Striped Bass and other fish, the springs on the Ocklawaha which are currently submerged by Rodman Reservoir to be restored and accessible to the public, better opportunity for endangered Manatees to access Silver Springs (and the other currently submerged springs which would be accessible for their use), and the opportunity for paddlers and boaters to be able to boat/paddle between Silver Springs and the St. Johns without going through Buckman Lock. In support of the final point, I would note the statistic from the FDEP Office of Greenways and Trails that visitation at Rodman Reservoir access points increased by 81% during the November 2019-February 2019 drawdown by 81% compared to the same 4 month period in 2017-18 and 2018-19. Furthermore, annual use of the reservoir recreation sites has trended downward since 2010 declining by an average of 3,627 visitor parties per year between 2010 & 2017 whereas annual use of river sites has increased overall by an average of 508 visitor parties per year during that same period, thus indicating that a free-flowing Ocklawaha would boost recreational use and thus the local economy.	Breaching Kirkpatrick Dam would result in the 20 springs submerged under Rodman Reservoir being accessible to endangered manatees (which have had high mortality in recent years in other areas of the State) and the public, would result in more manatees also being able to access Silver Springs (the use of which is currently limited by the need for manatees to go through Buckman Lock to access the springs), would result in the restoration of habitat for striped bass and other migratory fish species which have been lost to the Ocklawaha/Silver Rivers, all of which would result also in more diverse recreational opportunities with an open-water corridor from Silver Springs to the St. Johns (enhancing the value for paddlers/boaters/springs visitors/ecotourism) with many more springs and more wildlife viewing opportunities and even enhanced fishing (when striped bass/shad are figured in), which would be in the public interest and bring additional tourism dollars to the area.	If the dam is not breached, my biggest concern is the continued decline of the reservoir is that the opportunity for a low cost habitat restoration for manatees/striped bass/other migratory species (and I should note when I refer to "low cost" that is also figuring in that there is a cost to continued maintenance of the 50 year-old dam which would be avoided; also I am comparing to other restoration projects such as Everglades restoration which are orders of magnitude higher), the 20 submerged springs will be lost and will continue to be inaccessible to the public and to wildlife, the area will continue to see tourism dollars lost. Furthermore, the impoundment of the River would continue to result in nutrients accumulating in Rodman Reservoir due to the increased water temperatures which result from the impoundment and lack of aeration which a free-flowing river would provide, leading to many of the boat ramps at Rodman continuing to be clogged with vegetation and the natural ecosystem continuing to be impaired, and the St. Johns estuary will be deprived of the greater flow of freshwater that would result from a free-flowing Ocklawaha.	No. The public and wildlife have been deprived of the benefits that the free-flowing Ocklawaha provided for 50 years. Drawing down the reservoir without breaching the dam would result in enhanced recreation opportunities (insofar as access to springs) just as draw-downs do, but would not provide any benefit to striped bass or manatees and would not result in an open-water corridor for paddlers and boaters, so this would be better than spending millions of dollars to restore the dam and maintain status quo, but it would not provide the majority of the benefits that completely breaching the dam would provide.	Kirkpatrick dam has no benefits except the perceived benefits to largemouth bass anglers. Unlike many dams which provide benefits such electrical power or flood control, Kirkpatrick Dam provides no such benefits. In fact, the dam in its current state creates a flood risk, in that a recent study shows that "catastrophic failure" of the dam could result in $57 million in property damage - while millions of dollars could be spent restoring the dam, it is questionable what the public interest would be in making such expenditures rather than putting them towards breaching the dam and restoring the free-flowing Ocklawaha. Oftentimes advocates of the dam speak about the wildlife that uses Rodman Reservoir, and I cannot deny that wildlife does use it - I have seen bald eagles there and even a bear near the shoreline and of course the few manatees that make it through Buckman Locks must go through Rodman Reservoir to reach Silver Springs for winter habitat. However, science and logic establishes that striped bass and other migratory fish species cannot get through a dam (or locks in any number), and that while some manatees might make it through a lock, many more would use a free flowing river without any impediments. Furthermore, my own personal observations (which I would discount as compared to the science) from having been to Rodman Reservoir many times as well as having paddles the natural portions of the Ocklawaha many times, are that while Rodman Reservoir does attract wildlife, the natural portions of the River attract much more. Personal observations have been the same as to the use of the natural portions of the River by paddlers - few are seen on Rodman Reservoir, but many use the natural portions of the River. The statistics from FDEP Office of Trails and Greenways re. recreational users during "drawdowns" versus normal years and the natural river versus the Reservoir are once again, much better data which establish the same. I hope for the sake of wildlife/the ecosystem, water quality, myself and other local residents who would greatly welcome the recreational opportunities provided by a free-flowing Ocklawaha and access to 20 springs which we are deprived of., property owners who risk flood damage, and the local economy which would benefit from increased tourist dollars, that the choice will finally be made to breach the Kirkpatrick Dam, restoring a free-flowing Ocklawaha.
10/22/2021 14:02	Union		No	Yes		More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating	Leave it as is.	The ecosystem there is tremendous and making changes will destroy it.	The reservoir would become a mud hole and ecosystems would be totally destroyed that could not be replaced.	No.	
10/22/2021 14:02	Sarasota		No	Yes		1 time		Canoeing / kayaking Boating Wildlife viewing	The Ocklawaha River Valley should be restored as near to its pre-Cross Florida Barge Canal condition as possible. The Reservoir should be drained and the Dam should be removed.	Harm being caused to federally listed species, etc. - Manatee deaths continue to be caused by flood gates/canal locks, most recently on 01/10/2021. (See FFWCC, https://myfwc.com/media/25428/preliminary.pdf) - It is possible that the restoration of the Ocklawaha River could potentially provide additional spawning habitat for the endangered shortnose sturgeon. (USFS, FEIS for the Occupancy and Use of National Forest Lands and Ocklawaha River Restoration at App. J-6 (2001).)	Ongoing violations of section 9 of the Federal Endangered Species Act.	1. Removal of the Reservoir with partial removal of the Dam to restore functionality to the Ocklawaha River ecosystem. 2. Lowering water levels in the Reservoir so it is confined as close to the natural river banks as possible . Only portions of the dam within the footprint of the banks of the River prior to construction would be removed.	Thanks!
10/22/2021 14:06	Indian River		No	No					Drain the reservoir	Restore natural ecosystem	Further loss of habitat, native species and water flow dynamics	No	
10/22/2021 14:08	Outside of state / other	Luling, La.	No	Yes		2-5 times		Fishing Canoeing / kayaking Boating	It is a beautiful area, with rich wildlife and fish. Leave this area as is!	A lot would be lost if it went back to just the river. Both natural and economical.	I would fish someone else for sure.	Leave as is!	Truly beautiful area now.
10/22/2021 14:09	Levy		No	Yes		2-5 times		Fishing Boating Wildlife viewing	State park				
10/22/2021 14:10	Putnam		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing Other: Photography	I would love to see Rodman Reservoir and the Kirkpatrick Dam stay here FOREVER! Four (4) generations of my family have been coming to Rodman, for 50 years. We have been Blessed to watch this ecosytem get more beautiful every year! My favorite about Rodman is watching all the birds and wildlife and photographing them. It is so relaxing and only 10 miles from Palatka, where I live. I can go there anytime after work or on the weekends and instantly have PEACE! There are endangered and threatened bird species that depend on Rodman. Rodman is home to many species of wildlife....such as eagles, ospreys, herons, limpkins, egrets, ibis, ducks, black bears, turkeys, turtles, alligators, manatees and a healthy diverse fish population. Birds are important indicators of our Nation's Environmental Health! Nearly one-quarter of all U.S. birds rely on freshwater wetlands. Wetland bird populations are well below historic levels but management and conservation measures have contributed to increases of many wetland birds including: American White Pelican, Double-Crested Cormorant, Herons, Egrets, Osprey, Sandhill Cranes, Gulls & Kingfishers. A majority of Colonial-nesting wading birds, such as Egrets, Herons and White Ibis continue to recover from populations devastated by the plume trade and market hunting in the early 20th century. Today, the greatest threat to these birds on Rodman is the loss and degradation of habitat due to development or disturbance. Please DO NOT let them destroy their habitat! I am speaking for those who can not speak.... the wildlife on Rodman Reservoir! The Rodman Reservoir complex includes the old Ocklawaha River and associated flood-plain forest, a transitional wetland system and an open-water pool totaling almost 8,000 acres of a truly diverse and valuable ecosystem. Wetlands are rapidly disappearing and must be protected. If Rodman Dam is destroyed, Florida would lose more than 7,000 acres of healthy wetland habitat. These wetlands support an amazingly large and varied group of plants and animals, which would mostly disappear with the destruction of the reservoir. Because of the abundant food supply and its protection from development by the greenway corridor, Rodman has thousands of wading birds that live and reproduce there. BUZZARDS are a sign of a COMPLETE ECOSYSTEM and there are many on Rodman. They help clean up the environment by eating the flesh off dead animals before it rots and causes disease!	Florida's Endangered and Threatened bird species that have protected and thrived on Rodman Reservoir - The Imperiled Species Management plan was approved by the Florida Fish and Wildlife Conservation Commission in November 2016. It is designed to conserve 21 bird species over the next 10 years (through 2026). Wood Stork - Federally-designated Threatened (FT) - June 2015 Wood Stork - Protected by the Migratory Bird Treaty Act Brown Pelican - Removed from Florida's Endangered & Threatened Species List - 1-11-17 Imperiled Species Management Plan Brown Pelican - Protected by the Migratory Bird Treaty Act Snowy Egret - Removed from Florida's Endangered & Threatened Species List - 1-11-17 Imperiled Species Management Plan Snowy Egret - Protected by the Migratory Bird Treaty Act Little Blue Heron - State-designated Threatened (ST) - May 2017 Imperiled Species Management Plan Little Blue Heron - Protected by the Migratory Bird Treaty Act Tricolored Heron - State-designated Threatened (ST) - May 2017 Imperiled Species Management Plan Tricolored Heron - Protected by the Migratory Bird Treaty Act White Ibis - Removed from Florida's Endangered & Threatened Species List - 1-11-17 Imperiled Species Management Plan White Ibis - Protected by the Migratory Bird Treaty Act Osprey - Removed from Florida's Endangered & Threatened Species List - 2018 Imperiled Species Management Plan	ALL THE WILDLIFE WILL LOOSE THEIR HABITAT! NO HABITAT, FOOD OR WARM WATER FOR THE MANATEES! We should protect this unique environment and the ecosystem that has evolved around it. Manatees are traveling in and out of Rodman and they love the seagrass. There are NO ALGAE BLOOMS in Rodman Reservoir so the plants are plentiful. The following data was taken by the Buckman Lock Tenders/Florida DEP and the Clearwater Marine Aquarium. This is a six year count: 2016 - 456 Manatees Observed 2017 - 392 Manatees Observed 2018 - 437 Manatees Observed 2019 - 641 Manatees Observed 2020 - 498 Manatees Observed 2021 - 709 Manatees Observed thru Sept. 27, 2021 2021 LARGE PODS OBSERVED January 13 February 8 March 108 6, 8, 12+, 10, 13 April 139 11, 12, 15+, 10+, 12 May 82 June 81 July 91 6, 8, 8, 6 August 85 8+, 6 September 102 8+, 6+, 6, 8+, 8, 7, 10 TOTAL 709 Florida Manatees are one of the highest mortality rates in years. The Florida Fish and Wildlife Conservation	NO. NO removal of the dam and NO partial restoration!	In 2020 Bassmaster named Rodman Reservoir as one of the Best Southeastern Bass Lakes of the DECADE! RODMAN RESERVOIR WAS #1! https://www.bassmaster.com/slideshow/best-southeastern-bass-lakes-decade?fbclid=IwAR0jYlROwrrNmhnamqsJRVjWLrZLIRTIbuhokrSmy-b_vzRiZAuuBhOuDxbhm4#slide1 Bassmasters has named Rodman Reservoir as one of the top 100 Bass lakes SIX (6) TIMES! https://m.bassmaster.com/conservation-news/bass-asks-members-help-save-rodman-reservoir *WHERE are Florida HOF (Hall of Fame - 13+ lbs) bass caught? Anglers have submitted HOF bass from all over Florida. Roughly one-third of Florida's counties can claim at least one HOF bass. However, Clay and Putnam Counties top the list, accounting for 30% of all HOF catches. Alachua, Marion, Lake, Polk and Highlands account for another 35% of HOF bass. Rodman Reservoir continues to hover near the top of the TrophyCatch water body list, now with over 880 approved catches! People are coming from all over the country to fish on Rodman Reservoir, not just Florida! Imagine how much money that brings into our economy. Our entire family fishes! Men, women and children! My grandfather taught his son and my father taught us kids and we taught our kids! Rodman is ONLY 10 miles from Palatka. There is so much crime in this city and I would hate to see Rodman destroyed because fishing is a great sport for young people as well as old. I would love to see a program for young people where their mentors take them to the lake. The only trouble you can get in out on Rodman is getting your line caught up in a tree. We should be empowering and inspiring our young people through fishing. It would be great to see a boardwalk around Rodman for fishing and wildlife viewing. There are SO MANY REASONS to SAVE RODMAN RESERVOIR! One is just as good as another. What about water for the future? Thank you for putting this survey out for everyone to respond!
10/22/2021 14:11	Marion		No	Yes		More than 5 times		Fishing Boating	Keep as it is.	Fishing and boating	be very un happy	no	
10/22/2021 14:11	Sarasota		No	Yes		2-5 times		Fishing Boating	Keep it as it was years ago	It was a important tournament and tourism site w large bass	the lake dies		
10/22/2021 14:11	Clay		No	Yes	1 time	More than 5 times	More than 5 times	Fishing	Leave as it is		Provides people a place to go fish, tecreation		

10/22/2021 14:12	Volusia		No	Yes	1 time	2-5 times	More than 5 times	Wildlife viewing Other	River restored				
10/22/2021 14:13	Bay		No	Yes		More than 5 times		Fishing Canoeing / kayaking Boating Wildlife viewing	Maintain the dam as is	It's a wonderfull fishery and supports a large variety of birds.	What would happen to the fish and other wildlife that depend on the reservoir.		
10/22/2021 14:16	Monroe		No	Yes			1 time	Other: I don't use it but I did see it once when I paddled the Ocklawaha	Since this dam was built as part of the Cross Florida Barge Canal which was halted due to being a bad idea and not fiscally sound, removing it makes a lot of sense. Restoring the natural flow of any river improves things for wildlife and some recreational uses (paddling for one). I think the reasons for removing it far outweigh the reasons for keeping it! Thank you for registering my comments.	According to St Johns Riverkeeper, removing the dam will keep the St Johns River from getting too salty. But also, it's fiscally responsible to stop paying for a piece of infrastructure that isn't serving a purpose AND could bring new business to the counties along its course - more paddling, fishing and ecotourism.	I would love to see the springs that are now buried underwater (I've missed the drawdowns) and would love to witness the return of a free flowing river, something I've never seen!	None that I can think of...	I live in south Florida where we are constantly fighting for the Everglades so I think this is equally important to northern Florida. And A LOT easier!
10/22/2021 14:16	Flagler		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Hunting	Leave it like it is. It has become its own environment that is self sustaining and causes no harmful side effects.	Economic impact on Putnam and surrounding counties	It will be a mud hole that will be abused by truck and atv enthusiasts	There is no other scenario that would work. If there is it has never been presented considering I was born in Palatka in 1966 and have seen the entire place take on a life of its own. It should be managed accordingly because it is a viable resource for both the economy of the area and environmentally.	Every election cycle Rodman is mentioned for restoration why? It has a life of its own and is managed at a minimal cost to the tax payer. If you want to go after a recreational group go after the side by sides and atv that run all over the Ferried.
10/22/2021 14:18	Putnam		No	Yes		More than 5 times		Canoeing / kayaking Wildlife viewing	I think Dams are unnatural and think it should be taken down	The manatees dying	It will cause more harm than good	No	
10/22/2021 14:21	Pinellas		No	Yes		1 time	1 time	Fishing	I would like to see the dam removed and the ocklawaha river restored to it's nature state	Numerous studies have shown the importance of free flowing ocklawaha and the natural springs it will restore as well as striped bass populations	Low striped bass populations where they once thrived naturally, algae blooms, loss of natural springs and resources	No	free the ocklawaha
10/22/2021 14:21	Alachua		No	Yes			1 time	Wildlife viewing	I would like to see restoration of the Ocklawaha River by breaching the Rodman/Kirkman Dam	Three rivers, the St Johns, Silver, and Ocklawaha and 50 springs will be restored.	The 300 mile St Johns Estuary will continue to be deprived of natural water flow to improve water quality, restore fish and wildlife habitat and reduce saltwater intrusion.	No, breaching the dam is long overdue and necessary for dam safety, water quality and improved wildlife habitat.	I was born in Jacksonville, have lived in Silver Springs and now in Alachua County. all three of these rivers have been an integral part of my life and their health and restoration are important to me on a personal level. Seeing the broader picture, as I have already mentioned, this is good for the health of our ecosystems, economy and quality of life, for all inhabitants, both animal and human. Thank you for your time and attention to this important decision.
10/22/2021 14:23	Duval		No	Yes			1 time	Wildlife viewing	eliminate the dam and restore the river to its original flow.	improve the quality of the St Johns river and improve fishing for the whole river systems.	The 50 year mistake lives on to benefit the few. The St Johns river continues to suffer. The voice of science is once again ignored.	no	
10/22/2021 14:23	Outside of state / other	I lived in Jacksonville/Duval County f	No	Yes		1 time	More than 5 times	Canoeing / kayaking	I'd like to see the Ocklawaha River return to its natural glory, mostly to keep wildlife habitats intact. When we continue to allow Florida's natural waterways and lands to remain as natural as possible, the state is better able to resist climate change and detrimental effects such as flooding, deterioration of land, and uncontrollable fires. The draw of Florida really comes down to it's natural beauty. This is the chance to allow for more complete restoration of this property.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	My biggest concern is: if not now, when? Tomorrow or generations from now, it might be too late to reverse the effects of poor past planning.	Honestly, anything that allows restoration of our natural lands in any way, is something I'd support.	Thanks for the opportunity to comment on this issue. As you can see, I no longer live in Florida but visit frequently. Florida is my Home, and the natural beauty of our waterways and lands are what make Florida so amazing. It's up to us to preserve and protect the state's natural resources as much as possible.
10/22/2021 14:23	Leon		No	No					Remove the dam and let the river (and springs) run free again.	The dam needs to be removed, and has been voted to be removed for decades. Still nothing has been done to complete removal. Springs are backed up just for fishermen and "lakefront" property owners? Manatees blocked from going upstream? It is way past time to remove the stoppage.	The springs continue to be clogged/potluted by river water encroachment. The dam has funding alocated to repair it instead of remove it as promised and voted on more than once. Manatees continue to perish from lack of food / area to forage.	Such as what? Keeping a decrepit dam until it collapses? Uh, no thanks.	
10/22/2021 14:24	Broward		No	Yes	1 time	1 time	1 time	Canoeing / kayaking Wildlife viewing		We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Appopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/22/2021 14:25	Marion		No	No					Dismantled.	Cost to maintain vs cost benefits to have it removed.	Both economic and environmental.	No, it sees black and white. Either its there or it isn't.	
10/22/2021 14:26	Marion		No	Yes		2-5 times	More than 5 times	Fishing Boating Other	No change	The ecosystem is severely dependent on the dam	Many species of aquatic and land animals are going to perish and have to find new areas to thrive.	No	
10/22/2021 14:28	Marion		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Restore the wildlife habitat.	it serves no purpose whatsoever		No	
10/22/2021 14:29	Putnam		No	Yes	1 time	2-5 times	More than 5 times	Boating Wildlife viewing Other: I don't use the dam or reservoir Photography.	The dam breached and the Ocklawaha River restored allowing the River to return to its original channel,the health of 3 Rivers will be positively affected, the floodplain forest will grow back and support native wildlife habitat, will continue to connect the wildlife corridor, 20 lost springs can be enjoyed again and their waters will return to their natural depth and flow, this wi native based tourism and run free	This subject is important to our neighborhood and city because we could be very positively affected by the River's restoration and could help with our City's revitalization. Palatka is probably the second oldest city in Florida. Once an native Indian village, Palatka sits on the bank of the St Johns River. It's unique position on the River made it an ideal stopping point for boats traveling north or south on the River. The St Johns and it's main tributary, the Ocklawaha River, served as a highway for boats to carry goods and some people to Silver Springs, the interior of Florida. Paddlewheel Boats were used to navigate the strong currents of the narrow, winding Ocklawaha River. Over time, these round trip Paddlewheel Boat excursions from Palatka, up the wild Ocklawaha River to Silver Springs made the City of Palatka a world famous tourist destination in the 1800's and early 1900's. I would like for Palatka to be a bustling, nature based, Tourist Destination again. With the dam breached and the Ocklawaha River running freely in its historic riverbed, it is possible. This restoration can help bring money into Palatka, Putnam County and Florida. It's the right thing to do.	All of the money that will continue to be wasted on repairing the dam and spillway. The loss of opportunities for so many more people to enjoy the River. All of the lost opportunities for a higher quality of life for so many people. Everything would stay status quo. Putnam County would continue to have one of the very lowest incomes per capita in the state.	I cannot see one. Slowly take the water level down 11 feet or so to let native plants and seedlings reestablish themselves. Then take the water on down to its historic levels. The River will heal itself with just a little help.	The removal of Rodman dam and the restoration of the Ocklawaha River will be a catalyst to bring about a bustling economy for the City of Palatka and Putnam County. Palatka will be listed as a "Tourist Destination". A restored Ocklawaha River will allow paddlewheel boats to once again make the historic trip "paddling" tourists from Palatka to Silver Springs by way of the "wild and winding " Ocklawaha River. Tourists are good for business; they pay for food to eat and places to sleep and are charged an extra tourist tax. They enjoy different forms of entertainment and are patrons of the performing and visual arts. The restored healthy Ocklawaha River will also improve the health of the St Johns River and the Silver River. Acres of permanently flooded floodplain forests will return to healthy functioning animal habitat. Fish and manatee will be able to swim all the way from the ocean to any of the 50 springs that follow the course of the River. 20 of those 50 springs are "lost" springs currently weighted down by the flooded River. They will flow freely again. Once the River is restored, money will no longer be wasted on drawdowns or repairs on the 50 year old failing dam which serves no purpose. Many new jobs will be created such as building new historically accurate paddlewheel boats, working on the River restoration itself and building and/or repairing landings. Professionals will monitor the healing of the rivers and recovery of the plants and trees to document the process and the progress of restoration.
10/22/2021 14:31	Palm Beach		No	No					Breach the Kirkpatrick dam	The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs. I do not want my tax dollars to go to repairing a dam that harms wildlife and does nothing to benefit Floridians.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit and directly harms native wildlife and water quality.	No, this project was a mistake and we need to cut our losses, stop wasting money, and allow wildlife to have their natural migratory patterns back.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/22/2021 14:32	Orange		No	No					Breach the damn to restore streams, springs and lands for a wildlife corridor	$4-14 million saved in continual damn restoration projects; provides hundreds of manatees additional safer wintering areas	Continued taxpayer investment in a dam that reduces downstream water quality, loss of wintering manatee habitat, lost springs and lost wildlife corridors.	Breaching the damn would be the only responsible option to all Florida taxpayers and the wildlife of the state of Florida	
10/22/2021 14:35	Sarasota		No	No					The natural flow be restored and the damn be removed.	Much research has been done on the damn and it all agrees that the wildlife (fish, manatees),environmental health, water quality, AND ecotourism from improved water quality would be increased in the area if the damn was removed and the natural flow of water was restored.	Why would we knowingly destroy essential habitats and wildlife when we know the solution? Everyone wins if the flow is restored by removing the damn.	No.	
10/22/2021 14:36	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Canoeing / kayaking Boating Wildlife viewing Other: Educational tours	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam paves way for economic development package for Putnam County and priority recreation amenities for Putnam and Marion Counties. This would create a successful economic and environmental transition to a restored Ocklawaha River reconnecting the St. Johns and Ocklawaha Rivers and Silver Springs. This saves millions on unnecessary repairs and maintenance dollars for a dam past its life expectancy. Free the Ocklawaha River Coalition for Everyone - Five Step Plan for the Great Florida Riverway 1. Obtain financial support from the Florida legislature and other federal and private partners leading up to and during the 2022 legislative session. 2. Complete Partial Restoration of the Ocklawaha River as outlined in the 2001 USDA Environmental Impact Statement and concurrent with recreation improvements. aRemove 2667 linear feet (750ft each) from berm of the Rodman Dam where the natural river channel exists bRetain the boat ramp and restroom facilities at the Rodman Recreation Area cDraw the Rodman Reservoir down to the natural Ocklawaha River channel dRestore fish and manatee natural migration paths and the historic blueway for boaters eRestore 7500 acres of wetland forest fUncover 20 lost springs of the Ocklawaha River 3. Provide an economic development package for Putnam County during the four years of restoration. 4. Develop regional master recreation plan Putnam and Marion Counties aCreate a 10-year regional recreation plan involving Marion and Putnam Counties, Palatka, Welaka, and other appropriate municipalities bConduct joint planning for multi-purpose trails cSubmit shared grant applications to federal, state, and regional agencies and private foundations dCo-market the area as a destination for outdoor adventure and water sports 5. Identify and develop recreation infrastructure for Putnam and Marion Counties in collaboration with two counties.	Eight Reasons a Free-Flowing Ocklawaha River Makes Economic Sense - April 2021 Alan Hodges, PhD, UF Economics Professor Emeritus, Stephen Holland, PhD, UF Tourism Professor Emeritus, Quinton White, PhD, Director, Marine Science Research Institute, Jacksonville University (EconomicBriefingPiecesFinalUpdated8.8.21.pdf (freetheocklawaha.com) 1. The projected ten-year return on investment (ROI) for Ocklawaha restoration is 7.6% or a $1.76 return for every dollar invested. Economic benefits of Ocklawaha River restoration, Alan Hodges, June 2020. 2. Regional visitation is estimated to increase by 18% due to diversifying the outdoor recreation offerings and improving the overall state of the river including habitat, water quality, and wildlife. Annual use of the Rodman Reservoir recreation sites has been on a downward trend since 2010, declining by an average of 1,627 visitor parties per year," explains UF Economics Professor Emeritus Alan Hodges. "During the drawdown from November 2019 through February 2020, the Ocklawaha River's recreational opportunities closely resembled the situation after dam breaching, with visitation at Rodman reservoir access points increasing by 81 percent compared to the same four-month period in 2017-18 and 2018-19," Hodges added. FDEP Office of Greenways and Trails. Economic importance and public preferences for water resource management on the Ocklawaha River, by Tatiana Borisova, Xiang Bi, Alan Hodges, and Steve Holland. UF, Food and Resource Economics Department, Gainesville, FL, Nov. 2017. 3. Two manatee viewing areas at uncovered Ocklawaha River springs could result in 30,000 new visitors a year and $3 million in annual economic impact. Fla. State Parks Foundation, Stephen Holland, PhD. 4. Silver Springs State Park could become one of the top inland manatee viewing areas in the Florida. 5. Valuable commercial finfishing and shellfishing in the lower St. Johns River estuary is projected to be more sustainable. The 2018 State of the River Report stated commercial crab harvest was 978,288 lbs. Commercial finfish harvesting weighed in at 630,696 lbs. 6. With transformational recreational facilities, Putnam County can continue its fishing heritage with a restored Ocklawaha River. 7. Breaching the dam eliminates the risk of more than $57 million in property damages from an unplanned dam failure. Emergency Action Plan, Kirkpatrick Dam, 2007. 8. $4-14 million+ in repairs needed to the Dam and Buckman Lock avoided.	Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs due to restoration and an estimated $47 million in economic benefits over 10 years. There are high economic and environmental costs of not moving forward with Ocklawaha River restoration. 1. Lost Opportunity for Economic Growth in North Central Florida: The region is an area with chronic underinvestment, low income, and high poverty. Putnam County is one of the poorest counties in the state. The area around Silver Springs has been deemed a blighted community redevelopment area. 2. Loss of Tourists and Reduced Resident Use: The timing is right to capitalize on the rapidly growing ecotourism market in Florida and the U.S., and to invest in enhanced outdoor recreation opportunities supporting human health and well-being. Overall, use of the natural sections of the Ocklawaha River is going up and use of the impounded portions of the river is going down. Annual use of the reservoir recreation sites has been on a downward trend since 2010, declining by an average of 1,627 visitor parties per year. Annual use of the river sites has increased overall by an average of 508 visitor parties per year from 2010 to 2017. Diverse outdoor recreational opportunities provided by a restored river will increase visitation according to retired UF Economist Alan Hodges. 3. Decline of Significant Fish, Shellfish and Aquatic Habitat: The 100-mile St. Johns River Estuary supports a diverse community of finfish and shellfish that have significant recreational and commercial economic value. Unfortunately, saltwater intrusion due to sea level rise, harbor dredging, hurricanes, drought, and overuse of the Floridan Aquifer are contributing to the loss of aquatic vegetation (SAVs.) This loss of essential habitat is reducing estuary biological productivity like the adverse impacts in Apalachicola Bay. Loss of SAVs also decreases the St. Johns' ability to filter out nutrients increasing the risk of blue green algae outbreaks. Restoration of the Ocklawaha will increase freshwater flow into the St. Johns Estuary improving flow timing and delivery that are crucial to biological productivity, increased habitat, improved water quality and resiliency.	The restoration commitment has support via partial restoration since 2001 during the development of the Environmental Impact Statement. This was a compromise from the full restoration that many had hoped for over the years. Over the past two years, the Coalition added to our platform the funding of an economic package for Putnum County and priority, environmentally appropriate recreation infrastructure to create a successful transition from the Rodman Reservoir to a restored Ocklawaha River. The previous agreement on partial restoration and the addition of support for an economic package and recreation amenities is a significant shift and compromise for many. The recreational package for Putnam and Marion County should be based in the desires and priorities of those counties. Some of the items that have been discussed include: aDevelopment of new ramps and a tournament center at the east end of the Barge Canal with access to the St Johns River. This can meet some of the tournament needs now being met by the Kenwood Boat Ramp. It could be done in collaboration with a private partner. bAdded bank fishing facilities including additional fishing platforms, potable water, restrooms, and road access at Rodman Dam southwest park, Kenwood, Orange Springs, and Paynes Landing. cUpgraded Rodman Recreation Area facilities and boat ramp dEstablishment of two Ocklawaha manatee/springs refuge and viewing areas that could bring in a projected $3 million annually and 30,000 visitors. eAddress manatee refuge and viewing needs at Silver Springs that could boost park attendance and revitalize the blighted surrounding community fCreation of a multi-county paddling trail. The economic package for Putnam County should also be driven by the local leaders and citizens. Water and wastewater infrastructure projects that were part of the county, city and Chamber of Commerce requests to the Putnam legislative delegation included: aPutnam County - NE Drainage Improvement Project - Water Quality Improvement/Resiliency - $4 million bPutnam County - South Putnam Drainage Improvement Project - Water Quality Improvement/Resiliency - $440,000	
10/22/2021 14:37	Manatee		No	No					I would like to see the Ocklawaha restored as much as possible	This project, while so worthwhile in its own right, will actually save money in the long run. Win Win.	The loss of a tremendous opportunity to accomplish so many environmental benefits.	No. Let's do this right the first time.	
10/22/2021 14:37	Putnam		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	I would like to see the Kirkpatrick Dam completely removed.	I know the study by John Hendrickson, a respected scientist, supports this position. As an environmental specialist, i also know the benefits of restoration of natural places. So, in short, the most important piece of information is the SCIENCE!	Soooo many dangerous chemicals are getting on to our aquifer which is devastating. Also the impact of the water quality to the wildlife is very concerning. I also believe that the tourism aspect of a dam-less river would be very beneficial to the county, both economically, and ecologically. Also, the County and State are wasting a tremendous amount of money by maintaining the dam. That is a horrendous thing - that money could be used for really important things!	NO.	Thank you for the attention to my comments.
10/22/2021 14:41	Duval		No	Yes			1 time	Fishing Canoeing / kayaking Wildlife viewing	Removal of the dam to restore natural water flow.	I want the springs there restored.	The dam is not good for the environment and serves only a handful of people.	No	Thanks for your time.
10/22/2021 14:43	Citrus		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing					
10/22/2021 14:44	Osceola		No	Yes			1 time	Fishing Boating Wildlife viewing	Leave it alone!	One of the best Bass fishing lakes in the state! I sell Bass Fishing maps to fisherman who come from all over the country. No lake, no sales!	Another fantastic Florida Bass fishing lake bites the dust. I sell maps of Rodman to fisherman all over the country. No more sales if no more lake.	Absolutely not! No lake, no fishing, no sales!	
10/22/2021 14:46	Broward		No	Yes		1 time	2-5 times	Fishing Fishing (shoreline/structure) Boating Other	Save the reservoir and maintain all the wildlife that depend on that water	wildlife , birds fish etc etc	the destruction of valuable habitat	no	
10/22/2021 14:46	Putnam		No	Yes		1 time	1 time	Other: Scenic viewing	Remove the dam to restore natural river flow	ecotourism supporting the natural river system.	lost opportunity to boost local economy and also to save that annual maintenance costs.	no. It seems there are no half measures.	
10/22/2021 14:46	Putnam		No	Yes			2-5 times	Fishing	Maintain it current habits and allow fishing, I grew up learning how to fish at Rodman it is a beautiful place for families and visitors to come and relax.	I'm a veteran and want to be able to take my family and friends to the place where it all started for me as a young child spending time on the water with my dad learning how to fish and enjoy God's natural resources.	Not being able to enjoy my above comments	Nope	
10/22/2021 14:47	Putnam		No	Yes	More than 5 times	More than 5 times	More than 5 times	Canoeing / kayaking Boating Wildlife viewing Other: I run sightseeing tours in the area. I am very busy during the drawdowns but sightseers don't want to go out there when the reservoir is flooded by the dam. There's nothing to see. The wild life is incredible and a few springs are visible during drawdowns.	I would like the current FDEP plan to be implemented to restore the hydrology of the Ocklawaha River. Breach the dam and let the river flow naturally and let the 9500 acres of wetland forest regrow instead of having a drawdown every 3 or 4 years, letting the tree seedlings sprout the drowning them again and again. Ecotourism is much higher during drawdowns with people fishing, sightseeing and kayaking. I've been watching this system for 30 years.	I have read many studies and seen the inspection report from 2015 that shows the damage caused by aging. The Canfield report suggested all agencies should complete studies and if those agencies found the river should be restored then it should happen. All of the agency reports I have read including those by the SJRWMD say restoration should happen. I've been told by SJRWMD staff, a winding river cleans water better than channelized systems. Bring the bends and the wetland forests back.	I cannot see any loss.	No. Leaving the dam in place blocks boats, fish and manatees and is filling in with muck. You can see it during drawdowns. Fish can't bed in that mucky drowned forest. It's a bad idea to keep draining it letting the trees sprout then drown them again. It's repeating the same mistake over and over.	A LIF economist found an 81% increase of visitors during the last drawdown compared to the previous 2 years before when the water was up. The economist used data he got from Mickey Thomason the Greenway Manager. Putnam and Marion counties are losing tourism money by keeping the dam in place. I have spent hundreds of hours there. I am speaking from experience.
10/22/2021 14:52	Duval		No	Yes			1 time	Wildlife viewing	Return to natural state..... jeordam.	Hydrology to support the St. Johns River (SJR)	Adverse impact on SJR	Probably not but would listen to proposal.	
10/22/2021 14:54	Hillsborough		No	Yes			1 time	Fishing Boating Wildlife viewing Other	I want the water in the Rodman Reservoir released by breaching the Kirkpatrick Dam so the Ocklawaha may follow the path it did before the Dam was built.	Nature never meant for the Reservoir and Dam to exist. A failed project created the Dam. Now the public is burdened with excessive cost to maintain the dam, flooded forests, drowned springs, barriers to wildlife movement, lack of manatee access to warm waters, plus other harmful environmental issues. Many supporters of Save Rodman Reservoir realize it was a bad idea to create the Reservoir.	Cost. The Dam is old and needs repair. Florida is struggling to pay bills now for education, unemployment, etc. If we breach the Dam that will be one less bill coming due.	No. It is time to right the wrong that was done over 50 years ago when this canal project started and the Dam and Reservoir were constructed.	Save Florida money...breach the Kirkpatrick Dam!
10/22/2021 14:56	Nassau		No	Yes		1 time	2-5 times	Wildlife viewing	Take it down.	U.S.A. Corps of Engineers recommends removal for dredging mitigation.	Saltwater intrusion in St. Johns River and aquifer.	no	Recreational opportunities will be improved and restored with free flowing river. Wetlands, springs, and forest restored.
10/22/2021 14:57	Marion		No	Yes			2-5 times	Other: traveling	Removal. Removal would expand the recreational potential far beyond the immediate area. The Dam creates a potential flooding problem between itself, and the areas bordering the St John River, perhaps another replay storm flood surge that happened during Hurricane Katrina.	Water. Hurricanes. Storm surge. Sea Level rising. Facts.	Will the state or federal government compensate those who lose their property as a result of storm surge damage? Should current property owners be excluded from the Federal Flood insurance program, would seem an appropriate response if removal does not happen.	The outcome of full removal seems like a win win. Storm surge problem reduced. Economic benefits from increased fiverr activities - eco tourism, hiking, film making potential - not to mention wildlife such as manatees and others.	Why is the focus so limited to the Dam itself? The greatest impact is on the areas upriver, areas most affected negatively by the status quo.
10/22/2021 14:59	Lake		No	No					Removal of the Kirkpatrick dam and restoration of natural hydrology to the Ocklawaha River.	The dam is a relic of a failed project and serves no purpose.			

10/22/2021 15:00	Orange		No	Yes	1 time	2-5 times	More than 5 times	Boating Wildlife viewing Other: Hiking near the Reservoir and Dam. Additionally, I enjoy boating on the Ocklawaha River, which the dam impounds.	I would like to see that a free-flowing Ocklawaha River is restored by breaching the Kirkpatrick Dam. This is very important to me, as I am a Central Floridian who has visited and recreated in and near the Ocala National Forest, Palatka, and Putnam and Marion Counties for over 25 years, as well as a professional in the environment/natural resources space. Florida's environment and wildlife are at a critical crossroads, and we are facing severe degradation due to population growth, development, climate change, and other stressors. Restoring a free-flowing Ocklawaha River is essential to ensuring that our state is placed on a path that will preserve our Floridian quality of life and environment for future generations. The benefits that this restoration would bring to Florida's environment, economy, wildlife, and water quality are well studied and established. Indeed, in the face of various ecological crises including the ongoing manatee mortality event that has rendered 2021 the deadliest year for manatees on record, as well as water quality issues including increasing incidences of harmful algal blooms in the St. Johns River - it is urgently necessary that this restoration be undertaken. In particular, restoration of this river system must include necessary protections for wildlife, such as designated areas for manatees to rest and feed in the Ocklawaha's springs during the winter months, as well as wildlife crossings and other protections for long-ranging species to effectively utilize a restored wildlife corridor. These protections will be essential to maximizing the benefits of restoration for Florida's wildlife and people. Furthermore, I would like to see that environmentally appropriate recreational opportunities, such as increased public bank fishing access and access for paddling and hiking, are implemented and enhanced in conjunction with restoration in order to support the region's longstanding heritage of outdoor, nature-based recreation and to ensure an equitable, prosperous future for the residents of Putnam and Marion counties.	The Ocklawaha River is the most impactful manatee habitat restoration opportunity in the state and will provide essential warm water winter habitat for hundreds of manatees in many of the 20 "drowned" springs of the Ocklawaha and by improving access to Silver River and Silver Springs. Currently, 102 unique manatees use the Ocklawaha River system, despite it being impounded by the dam and lock system. Many of these manatees utilize the Buckman Lock, at which 437 manatee sightings were recorded in 2018 (the most recent available verified statistic). (Sightings do not equate individual, unique manatees, as many of sightings are of the same manatees using the lock system repeatedly.) A restored river will allow manatees to access the Ocklawaha's warm springs. Florida's springs maintain a temperature of 72°F, even in the winter. In contrast, impounded water bodies such as the Rodman Reservoir tend to be colder in the winter than natural rivers. Average water temperatures in the Rodman have been recorded in the 50 -56°F degree range in the winters of 2018 -2019, 2019 -2020, and 2020 - 2021, sometimes dropping as low as 45°F - too cold for manatees. In waters below 68°F, manatees can develop a condition called cold stress, which can be fatal. Sources: Jennings, Dawn; Adimey, Nicole; Kreo, Carol; Smith, Kent. 2008. "Survey of Rodman Reservoir and middle-Ocklawaha River springs during spring 2008 draw-down conditions: FWC and FWS." Laist DW, Taylor C, Reynolds JE III. 2013. Winter Habitat Preferences for Florida Manatees and Vulnerability to Cold. PLoS ONE 8(3): e58978. https://doi.org/10.1371/journal.pone.0058978 Lake Monstars. n.d. "Manatee Use of Ocklawaha and St. Johns Rivers." Sea to Shore Alliance, conserving our coastal environments. Smith, Kent. 1997. "The Effects of Proposed Restoration of the Ocklawaha River in the Vicinity of the Rodman Basin on Manatees and Manatee Habitat." Florida Department of Environmental Protection. https://www.yumpu.com/en/document/read/17457247/the-effects-of-proposed-restoration-of-the-ocklawaha-river-in Taylor, Cynthia. 2006. "A Survey of Florida Springs to Determine Accessibility to Florida Manatees (Trichechus manatus latirostris): Developing a Sustainable Thermal Network." Wildlife Trust.	Keeping the Ocklawaha dammed will deprive hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. As corroborated by the Warm Water Action Plan released by the Florida Fish and Wildlife Conservation Commission and the US Fish and Wildlife Service in 2020, the greatest long-term threat to manatees is loss and degradation of natural habitat that manatees need to keep warm and survive the winter. As natural habitat sources such as rivers and springs have been lost and degraded, 60% of Florida's manatees have come to rely on power plant outfalls to keep warm and survive the winter - this is a highly precarious and unsustainable situation. It would be extremely unfortunate if this extremely high-benefit habitat restoration project were to be missed, and more taxpayer money poured into maintaining a useless and aging dam, due to obstructionist politics. Additionally, the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to negatively impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No; however, I believe that it is essential to ensure a prosperous and sustainable future for this region that angler and other stakeholder needs be taken into consideration and that restoration be undertaken in conjunction with implementation of recreational and other beneficial amenities for the local residents of Putnam and Marion Counties. So, put another way: restoration is the only way to realize these benefits and is desperately needed, but it should be undertaken in a "restoration + recreation" framework. Additionally, the "partial restoration" alternative recommended in the 2001 US Forest Service Environmental Impact Statement is already a compromise position from full restoration. As the EIS notes, "partial retention" would not avail the region of the benefits of restoration and would perpetuate the water quality and environmental problems, as well as the intensive management needed (e.g. drawdowns and intensive herbicide application) to prevent acute crises in the Rodman Reservoir.	In sum, as a stakeholder who is deeply invested in Florida's environment and wildlife, I am asking you to restore the Ocklawaha River. The Ocklawaha is the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("OSO") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife. I really appreciate the SJRWMD undertaking this public input process and am hopeful that, for the benefit of Florida's wildlife and people, restoration of the Ocklawaha River can begin soon.
10/22/2021 15:02	Hillsborough		No	Yes	1 time			Wildlife viewing					
10/22/2021 15:02	Duval		No	Yes			More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Wildlife viewing	Remove the dam. It's an unnecessary financial burden on the public and destructive to wildlife and other systems threat rely on freshwater flows further down the St Johns River.	Scientific studies and public sentiment.	Complete removal of all man made items that if partially left in place would become a source of pollution and detriment to the environment long term.	Restoring the flow is of primary importance. Complete removal of man made materials is secondary. There may be a compromise that accomplishes at least the first objective.	
10/22/2021 15:04	Seminole		No	Yes	1 time	2-5 times		Fishing	Nothing, leave it alone	Personal belief	Loss of habitat for many native species	Doubt it	
10/22/2021 15:07	Alachua		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Breach the dam and restore the flow of the Oklawaha River.	Three Rivers are restored, wildlife, especially manatees, enjoy enhanced habitat, and the Florida Wildlife Corridor is restored and enhanced for wildlife and people to enjoy.	We miss the opportunity to fix this. Money would be saved, and an unsafe dam would be removed to create a better habitat if we go ahead and breach the dam.	No	As a long time Florida resident whose relatives settled in the area in 1845, I feel this opportunity to restore the Oklawaha River should be above dispute. The dam was a mistake in the first place, and it is long overdue to correct this problem. No more money should be spent on an outdated dam. The benefits of restoring the river to wildlife, especially manatees, are clear. We owe it to future generations to restore the Oklawaha River now. It's long overdue.
10/22/2021 15:08	Alachua		No	No					Breach the Rodman/Kirkpatrick Dam and restore the Ocklawaha river	Water quality in the lower St. Johns, Ocklawaha and Silver River will continue to deteriorate leading to further loss of Florida's native manatees and historical fish.	That we will lose this once in 50 years opportunity to put no further government money into maintenance of Kirkpatrick Dam, and instead change directions 180 degrees to use our time, efforts, and tax money to restore the natural river systems in central and northeastern Florida so that the native species of animals, plants, and fresh water fish can repopulate this area .	No, not any scenario I have heard.	
10/22/2021 15:09	Polk		No	Yes		1 time		Canoeing / kayaking Wildlife viewing	It would be nice to see these old dams removed. Listen to the science and restore the flow of water for a cleaner river downstream.	Science has shown that there will be better wildlife habitat and cleaners waters if the river was flowing again	Eventually too much damage will be done to repair (at a cost that could be budgeted for)	I am uncertain at this time.	
10/22/2021 15:10	St Johns		No	No					I think we need to remove the dam in order to restore the St John's, various springs, rivers and all areas to their natural state. The breaching the Rodman/Kirkpatrick Dam to reunite the natural connection of Silver Springs, the Ocklawaha and the St. Johns River is vital to restoring the area.	Having lived in the area for 8 years I have read about the issues for a long time. In my opinion, the science clearly supports this decision. As we continue to see increased algae, deaths of manatees because of habitat loss, and the deterioration of other natural species. The free flow of the rivers and springs need to happen now and we just need to hope and pray it is not irreversible.	The condition of our beautiful St Johns River and its surrounding environment will continue to decline.	No. As citizens of this beautiful state it is our moral obligation to do all that we can for future generations.	
10/22/2021 15:11	Hillsborough		No	Yes		1 time		Wildlife viewing	I would like it preserved to prevent further decline in our native wildlife populations.		Failure to preserve Florida's precious little wilderness.		
10/22/2021 15:13	Alachua		No	No			More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	There are so many species of wildlife that depend on this dame, let's leave it alone as is, win one for the animals....	Visit it and you will see !!	The loss of an echo system that seems to ne inline with Mother Nature.	None	
10/22/2021 15:14	Putnam		No	Yes	2-5 times			Fishing		What was done is done. Nature has evolved. Dam more rivers up!!	Lack of recreational fishing opportunities in our area.	No	
10/22/2021 15:14	Alachua		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	KEEP the dam and Rodman. I would like to see the dam removed so that the natural flow of the Ocklawaha River can be restored, to help return the River's floodplain and springs to their natural condition. This will help the ecology of the entire river ecosystem and provide better wildlife viewing.	Studies by biologists, hydrologists, ecologists, and springs experts.	If the dam is not removed, the entire Ocklawaha River ecosystem would continue to degrade over time, diminishing the entire area as wild and natural place for people to enjoy.	I don't care if the dam is actually physically removed fully or not, so long as it is breached so that water can flow naturally again without being impounded in the reservoir.	
10/22/2021 15:16	Leon		No	No					Breach the dam and restore the free-flowing Ocklawaha	Florida's springs systems are imperiled and this will help restore their natural functions.	Further decline of springs systems through the area and continued immersion of viable springs in the Rodman Reservoir.	Breach the dam.	
10/22/2021 15:16	Duval		No	No					Free the oklawaha	Environmental	Algae blooms	No	
10/22/2021 15:18	Sumter		No	Yes	1 time	More than 5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Please remove the dam.	we need to restore the springs and Silver Springs ecosystem. This would provide much needed habitat for many species, including the manatees.	that manatees and other endangered species become extinct	No. Please don't spend tax payer dollars to repair the dam, and continued maintenance. Remove the dam!	
10/22/2021 15:18	Putnam		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing (shoreline/structure) Wildlife viewing Other: Picnics					
10/22/2021 15:19	Duval		No	Yes		2-5 times		Fishing Canoeing / kayaking	Returned to the best bass fishing river in the world as it was prior to the dam	The fact that the reservoir has to be drained periodically to remediate unnatural conditions is all I need to know. Why have a brown river toilette bowl when you can have a free flowing river?	My biggest concern is that over time there will be a requirement to recapitalize a dam/reservoir that will be an extraordinary waste of tax payer dollars and will provide a continuing unnatural water body instead of a natural flowing water body that is a key peice to the overall watershed.	The dam could be breached in such a way as to allow the river to flow parallel against the existing dam structure from one end to the other so fisherman could fish could access flowing productive water along the entire structure.	Think of the reservoir as a giant toilette bowl versus a natural flowing river with ~ 20 beautiful clear springs feeding what should otherwise be a hartage river.
10/22/2021 15:21	Nassau		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Canoeing / kayaking Boating Wildlife viewing	I would like to see the dam removed and the river restored to its natural state	There is more economic activity when the reservoir is drawn down and the is more access to fishing for everyone.	Continued degradation of the Silver River and the St Johns river	Leave the dam but keep it open all the time	I have enjoyed Silver Springs and the Ocklawaha since I was a child. Rodman Pool has gotten to the point that it is virtually unusable by the public unless there is a drawdown. I also believe it would benefit the health of the Silver River and the St Johns River.
10/22/2021 15:23	Leon		No	Yes				Other: I'm a retired fisheries biologist from FWC/GFC. I worked in the Central Regional office from 1978-1980. We conducted fisheries surveys on the Silver River and Ocklawaha during that time.	I fully support totally removing/breaching this structure so that the river systems can begin recovery and allow for fish and mammals to migrate the way they did historically.	I have been project manager for several dam removals on rivers in north florida. In all cases, a positive response by the fish and wildlife has been achieved.	Droughts will slow the healing process, and the rate of restoration is usually slower than the public would like. A long lasting public outreach education component is critical to ensure the public acceptance.	No, humans are incapable of "managing" a river system by opening/closing an existing dam. The entire dam must be removed, so that considerable expense would be require to put one back in, after public outcry insists that the dam removal didn't work (and they will). Patience is the key!	Remove the damn dam. . please
10/22/2021 15:23	St Johns		No	Yes		2-5 times		Wildlife viewing	I think it's time to restore the springs to their natural state.	Viewing the water at certain times of the year.	That we will continue to see declining water quality and loss of precious eco system.	No.	Thanks for your consideration.
10/22/2021 15:24	Bradford		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing	Improve Kenwood Landing and road. Make a State Park out of the reservoir and protect it.	The thousands of people that use the reservoir.	That my grandson would not be able to continue to enjoy the reservoir.	Leave it as it is and protect it.	I am a bass fisherman. Rodman Reservoir is used by thousands of fishermen and women. It is something that is useful now. Brings income to the counties around it. Leave it for the ones that use it.
10/22/2021 15:26	Alachua		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	Remove the dam and restore the river's flow.	What was natural before human needs and desires altered it.	Continued degradation of the Ocklawaha River and adjacent springs	Remove the damn and let nature heal itself	
10/22/2021 15:26	St Johns		No	No					I want the Ocklawaha River to flow freely as nature intended.	Follow the news on the health of the river and Florida's springs.	Our water quality continues to decline.	I defer to the recommendations of the Riverkeeper.	I hope that the dam is removed and the rivers improve.
10/22/2021 15:26	Marion		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Hunting Wildlife viewing Other	Nothing leave it alone just clean the logs floating	History			
10/22/2021 15:27	Marion		No	Yes		2-5 times		Canoeing / kayaking					
10/22/2021 15:27	Lee		No	Yes		1 time		Canoeing / kayaking Wildlife viewing Other: Spring Hunting	Restore to natural state		Springs are covered		
10/22/2021 15:29	Volusia		No	Yes	More than 5 times	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	complete the canal project	destroying the canal project opens all its land for private development after it can never be built again	protesters will continue the fallacy that the water must be free, until government restores to original - this has worked thus far and will never end until the post ww2 scam succeeds has it as been doing ever since. This is the biggest real estate fraud ever perpetuated on the state of Florida and NO ONE CARES.	Understand the 1930s Santos runs demonstrate a "sea-level" canal was never intended, just as an excuse for the Summit Reach which was so wrong the project was never completed. As proved by barges taking space rockets for launch at the cape, completing the 1939 s canal was a scam to end in its destruction for an inside job for the perpetuators to make a fortune while ending any chance of any future waterway.	PLEASE CONSULT WITH THE ARMY CORPS OF ENGINEERS TO VERIFY THE ABOVE AND COMPLETE THE PROJECT. No one can be prosecuted as all original conniver s have by now died of old age.
10/22/2021 15:31	Marion		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored.	The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway.
10/22/2021 15:33	St Johns		No	Yes			1 time		Remove dam and restore natural flow of river.	Need to protect quality of the ecosystem and the economy that is derived from a healthy natural environment.	The continued degradation of the St Johns River	If the dam is not fully removed, I could support better water management	
10/22/2021 15:33	Leon		No	Yes		2-5 times	More than 5 times	Fishing Boating Wildlife viewing	Leave it alone		Loss of habitat and continued overcrowding of fisherman and boaters on our waterways that are available		
10/22/2021 15:33	Clay		No	Yes			1 time	Wildlife viewing	Open the dam and bring back the original Oklawaha River flow	Cost of maintaining the dam which inhibits river flow (natural)	Build up of algae and undesirable silt and hindering of natural fish reproduction	No	The sooner the better!
10/22/2021 15:36	Orange		No	No					The restoration of the Ocklawaha River by breaching the Rodman (Kirkpatrick) Dam. Allowing the dam to remain as it is will just harm not only the environment but also the economy as millions of dollars have been spent attempting to repair it, and water quality would worsen by the day.	Manatees will have more access to warm waters; there have been multiple springs and rivers already restored, the environment is already collapsing so everything we can do to help will ensure the survival of the human race.	Millions of taxpayer dollars are spent fixing this dam every year, which are unnecessary when the dam should have been taken down 50 years ago, and the dam doesn't protect against floods happening in the area, so we should do it while we have the perfect opportunity to do so.	No, allowing it to remain in place would just create more issues that don't need to occur. Wildlife would be endangered too.	Florida has one of the most biodiverse ecosystems in the US, as a citizen of this state, I can't in good conscience not support the removal of this dam when it would allow for endangered species to gain essential habitats for their survival, plants and wildlife would flourish, residents of the area would have less of a chance of experiancing flooding, especially during hurricane season. This restoration would allow The Great Florida Riverway to be reunited, improving water quality for animals living in the river, residents and tourists visiting there, and would help with revitalizing the economy still recovering from covid.
10/22/2021 15:36	Marion		No	No					sinblock the dam	manatees death and to save the land/earth	more killing of the manatees.		
10/22/2021 15:36	Duval		No	Yes			2-5 times	Other: Driving to a work site on SR 19.	Please restore the Ocklawaha River by removing the Rodman/Kirkpatrick dam.	Please restore the Three rivers, Ocklawaha, Silver and St. Johns Rivers including 50 springs and 20 lost springs and the Silver Springs ecosystem.	We are stewards for our environment, which gives us life. We need the water we drink and the trees / vegetation that gives us oxygen. We're not managing our environment well. I am concerned about the Water quality declining further, about blue green algae harming fish and water borne vegetation.	We should be concerned with improved Water Quality, and overall Dam safety. WATER is a valuable resource our state possesses and in the years to come will dwindle as our population continues to increase. Only one percent of the water on Earth is Fresh water and we take it for granted.	No.
10/22/2021 15:37	Nassau		No	No						Remove it	Restore the health of the ecosystem by restoring free flow of the waterway	Continuing degradation of the ecosystem and specifically effects on birds and wildlife	
10/22/2021 15:38	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Hunting Wildlife viewing	Continue to keep it up to standards.	Community standards	Rodman is a very nice location and great for viewing and fishing. It would be awful.		
10/22/2021 15:40	St Johns		No	Yes	2-5 times			Canoeing / kayaking Wildlife viewing	I would like to see breaching the Rodman Dam will re-establish access to essential habitat for Manatees, bring back migratory fish, reunite three river ecosystems, rejuvenate historic Silver Springs, and restore a lost river for anglers and paddlers.	The Rodman Dam was constructed in 1968, and it flooded over 7,500 acres of forested wetlands, 20 springs, and 16 miles of the Ocklawaha River. Dam construction has led to a decline of water quality, spring flow, wetland forests, fish, wildlife system that reaches all the way to the Atlantic Ocean via the Ocklawaha.	With the Rodman Dam still remaining in place, the Ocklawaha River will continuously be in drastic decline.	No. The only answer is to breech the Rodman Dam for the health of the area's ecosystem. This has been going on far too long, from 1968.	
10/22/2021 15:40	Broward		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	I would like to see it breached to restore a free-flowing river	the huge loss of functioning free-flowing river and river floodplain and wetlands values for fish, wildlife , including manatees, and recreational fishermen and canoers	That one of the most important rivers in Florida will have its proper ecosystem functions devastated permanently	No; the time has come to undo the damage, and get back the economic, ecologic and way of life benefits of a natural river	
10/22/2021 15:40	Marion		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Boating Hunting Wildlife viewing	Breach the Kirkpatrick dam. Drain the Rodman reservoir. Restore the Ocklawaha river to its original state.	SJRWMD Former Supervising Environmental Scientist John Hendrickson's statement.	Continued degradation of the Ocklawaha river basin. Decline of water quality and flow. Destruction of fish and wildlife habitat. Gradual silting up of the Rodman reservoir.	NO!	I have seen the destruction of the Ocklawaha river basin during a drawdown of the Rodman reservoir. This destruction should never have been allowed to occur. There is no reason to allow this destruction to continue. Please destroy the Kirkpatrick dam and drain Rodman reservoir.
10/22/2021 15:41	Sumter		No	Yes	1 time	2-5 times	2-5 times	Fishing Canoeing / kayaking	Removed		Repair of the current dam to a safe condition		
10/22/2021 15:42	Lake		No	No					I would like to see the dam breached and the Ocklawaha River free-flowing again.	The science supports a free-flowing Ocklawaha because this will lead to restoration of 3 rivers and some 50 springs, improving habitat for fish and the manatee.	Continued degradation of our waterways and springs.	No. 50 years of the current situation has told us all we need to know.	
10/22/2021 15:43	Lake		No	No					Restore the river.	Public opinion	Decline in habitat for manatees	I am always open to compromise as long as it is reciprocal from both sides.	
10/22/2021 15:43	Seminole		No	Yes			1 time	Wildlife viewing	Restore the River back to the way it was.	The environmental impact	Working to restore the river and watershed to its most original state.		
10/22/2021 15:44	St Johns		No	Yes		2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	100s of manatees gain essential warm water winter springs habitat	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway.
10/22/2021 15:44	Outside of state / other	PA	No	Yes			1 time	Fishing Boating	Keep as is	aquatic/wildlife habitat	why do we need to constantly destroy history		
10/22/2021 15:46	Outside of state / other	FI	No	No					Protect the whales	idk	Not sure yet	I will I'm time	Streets
10/22/2021 15:46	Alachua		No	Yes			More than 5 times	Canoeing / kayaking Wildlife viewing	I would like to see natural water flow and water levels resumed, like during the draw downs every 3 years. Ideally, the dam would be removed, but if that is not feasible for cost reasons, restoring natural flow would be enough.	Restoring the river would allow for the original fish species to inhabit the entire river, including the portion upriver from the reservoir. The restored stretch of the river would provide more opportunities for canoeing and kayaking.		A compromise position would reduce the size of the reservoir to allow some shallow-lake habitat to remain, while allowing more of the river to exist in a more natural state. Ideally some provision would allow for fish to go upstream around the reservoir if it remains.	
10/22/2021 15:47	St Johns		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Historic fish and manatees return as breach opens creating a free-flowing river and 100s of manatees gain essential warm water winter springs habitat.	Hundreds of manatees lose the opportunity to access essential warm water winter habitat.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a resident who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/22/2021 15:51	Duval		No	No					Take down the dam, and let the water run up to the St. Johns and out, clearing out the Silver Springs area	we can have better natural water supplies	artificaly damming up the area has made the rest of the area worse off		
10/22/2021 15:53	Seminole		No	No									
10/22/2021 15:54	Hillsborough		No	Yes		2-5 times		Canoeing / kayaking	I would like to see the rivers restored to their original routes and purpose. The dam should be breached	There is no need for the dam anymore and it costs more to maintain it than it's worth.	We'd be spending taxpayer's money on a project not worth saving.	Not really...we're talking about three choices 1. do nothing and let it fail on its own in an unpredictable time and manner. 2. Continue to spend lots of $$ to maintain what we have 3. Breach the dam during low water conditions and let Mother Nature take over again My vote is option 3	
10/22/2021 15:55	Volusia		No	Yes			2-5 times	Fishing Canoeing / kayaking Boating Wildlife viewing	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	Save the manatees!
10/22/2021 15:57	Leon		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns River will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Florida's natural places and watersheds are threatened by increasing populations and land use. Restoring existing areas such as the Rodman Reservoir and Kirkpatrick Dam is an immediate win for conservation.
10/22/2021 15:57	Polk		No	No					serious consideration given to removing the dam	restoring Florida's natural ecology to the extent possible; in doing so support wildlife migrations and springs flow	reduction in available habitat for manatee	it si difficult since the issue is dam or no dam; unfortunatley, not sure if there is a middle ground	economic analysis of new revenue streams if dam were to be removed would be interesting (springs tours, manatee viewing, extended paddling, etc.)
10/22/2021 15:57	Putnam		No	Yes	1 time			Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Leave it as is and continue as is	What's established is what it needs to stay as...what's been done cannot be reversed....it will never be the same as it was!!! It would be money wasted!!!	All the wildlife will be displaced or due!!! And The economic impact on Putnam county!	No	
10/22/2021 15:59	Outside of state / other	USVI	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is will provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No	
10/22/2021 15:59	Orange		No	No					Cleaned up and protected	Saving the manatees.	The manatees and wildlife	Saving the manatees.	
10/22/2021 16:00	Clay		No	No					Removal of Kirkpatrick Dam	Restoration of 15,000 acres of wetland.	Negative impact on fish and manatee	Not at this time.	As one who moved to Florida, I was unaware of he Dam. However, I am concerned about our environment everywhere, particularly wildlife and water issues. This is a 'no brainer' for me. Thank you for the opportunity to express my concerns.

10/22/2021 16:01	Marion		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Boating Hunting	Nothing...keep the reservoir and dam how they currently sit.	It's been this way for the last 50 years where fis can come and enjoy one of the most beautiful places in Florida. Why ruin it?	Loss of bird, animal, and fish habitat.	None whatsoever	
10/22/2021 16:01	Marion		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Wildlife viewing	Leave it alone. We enjoy the fishing and wildlife		Destroying the environment		
10/22/2021 16:01	Pasco		No	No					It's time to reunite the Ocklawaha and St. Johns Rivers and Silver Springs. Removing key portions of this dam, which is past its life expectancy, will re-establish traditional access to essential habitat for manatees, bring back migratory fish, and restore a lost riverway for anglers and paddlers.	Information provided by the SAve the Manatees organization	loss of natural habitats causing environmental harm	dont know	
10/22/2021 16:04	Hillsborough		No	No					Remove the Dam and return the Ocklawaha to its historic flow.	The Dam was part of a failed Cross Florida Canal project and costs too much money.	More money wasted on an unneeded Dam and Reservoir.	No, I want the Dam breached.	Do what should have been done many years ago, get rid of the dam.
10/22/2021 16:05	Marion		No	Yes			2-5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Make it a great eco friendly preserve with camping, trails, ramp to river.	it's least harmful and we need to preserve the natural areas we have. That river is magnificent and deserves to be protected	The natural flow not being freed for the wildlife and aquatic creatures to do what they do where they need to do it has already done more than I can imagine	None known	
10/22/2021 16:05	Orange		No	No					Remove all the manmade dam and barriers and let the Oklawaha River flow. Undo the Army Corps of Engineers monster	Cleaner water, natural environment	A political muck hole will continue to grow	No	
10/22/2021 16:06	Leon		No	Yes			2-5 times	Other: I look at the lake and remember the great Marjorie Carr, who devoted many years to stopping the Cross Florida Barge Canal.	I would like to see the dam removed, the lake drained, and the Ocklawaha and Silver restored.	Free-flowing rivers are much healthier for native fish and wildlife and for water quality.	The ecological health of the Ocklawaha and Silver rivers will continue to degrade.	Perhaps if the dam's gates were left fully open year-round, the lake could drain and the river could recover, at least partially.	Thank you for considering this issue and for asking for public comments.
10/22/2021 16:09	Alachua		No	Yes		1 time	2-5 times	Canoeing / kayaking Wildlife viewing	I would like to see the Kirkpatrick Dam removed and the free flow of the Ocklawaha River restored.	The origin of the dam's construction and its original purpose no longer being viable. The minimal economic benefits are far outweighed by the significant environmental impacts.	The impact to wildlife and water quality downstream from the reservoir.	No.	
10/22/2021 16:09	Volusia		No	Yes			2-5 times	Fishing Wildlife viewing Other: Hiking	No more dam!!	water flow	springs not being sustainable	no	
10/22/2021 16:10	Seminole		No	No									
10/22/2021 16:10	Seminole		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers $4-$14 Million in dam repairs saved on a dam past its life expectancy Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. $57 million in potential flood damages avoided to downstream property owners	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.
10/22/2021 16:11	Sumter		No	No						Silver springs and silver river have an abundance of fish and manatees that attracts tourists from all over the world. Why upset the current balance. Are you really solving problems or wishing for a nice to have improvement?	Changes to the current balance of nature and river quality.	Possibly text increased flows but only if it wouldn't affect water levels much.	
10/22/2021 16:11	Lake		No	Yes			2-5 times	More than 5 times	Removal of outdated, dangerous lock and dam and restoration of a free flowing Oklawaha River, which will have a huge economic impact through increased visitors to the area for birding, fishing, hiking, boating, swimming in the 50+ lost springs as well as impact in improving water quality. Many counties in the Oklawaha River water shed area will also experience cleaner lakes as a result as well as increased tourism. Our area of the world is extremely unique and valuable, no other area in the world has as many springs as this area and Florida in general, and we need clean water for all.	Fishing (shoreline/structure) Wildlife viewing Other: Enjoying unique aspects of FL	The growing body of scientific research that shows the environmental and direct economic benefits of restoration of the Ocklawaha River combined with the fact that the dam itself is antiquated, and badly in need of repair that would cost more than removal and restoration of the lock and dam	Water pollution increases throughout the entire Oklawaha River shed, many more species of fish, wildlife, manatees are endangered and should dam suddenly fail then many people's lives and property would be jeopardized.	If restoration of the complete Oklawaha River does not occur, then remove existing deteriorating lock and dam and restoration of the lower Oklawaha.	For my Masters in Urban and Regional Planning (FSU, 1989) my Studio Design was a study of "Land Use Alternatives of the Cross-Florida Barge Canal Corridor" by Andreas L. Burr. After interviewing representatives of all local governments along or close to the Cross Florida Barge Canal corridor it was evident that by far the majority of local governments desired a recreational corridor across the state to include the restoration of a free flowing Oklawaha River. The dam is outdated, dangerous and poses risk to human, animal, and fish populations as well as property if left as is.
10/22/2021 16:13	Outside of state / other	South Carolina	Yes	Yes			1 time	Fishing Fishing (shoreline/structure)	Definitely not draining it. I would like to see continuous monitoring and improvement of the ecosystem.	The constantly growing fishing community and fishing industry.	The decline in access to high quality fishing locations.	No.	
10/22/2021 16:13	Alachua		No	Yes			1 time		I would like to see the dams breaches in order to restore the Ocklawaha River	Research stating the tourism, environmental and freshwater benefits of removing the damn.	The continued obstruction of manatees and other wildlife moving upriver and the continued submersion of springs.	No, the damn must be removed	
10/22/2021 16:14	Marion		No	Yes			2-5 times	Canoeing / kayaking	remove the dam restore the natural flow	common sense	potential catastrophic failure of the dam	at least breech the dam	
10/22/2021 16:16	St Johns		No	Yes		2-5 times		Fishing (shoreline/structure) Wildlife viewing	Remove the dam and we will be able to traverse into the St. John's. Remove it.	Been there and know Mother Nature expects it. Kayaking. Fishing healthy.	Only the dam is usable.	Cut the vegetation for manatees a bd boaters can use the lake.	Looks like the canal. Failed efforts.
10/22/2021 16:18	Duval		No	Yes	1 time	1 time	2-5 times	Wildlife viewing	I would like to see the restoration of the Ocklawaha River. I think that any time you can return nature to its own natural state, it is best. The freeing of the river also alleviates pressure of the springs that feed the Ocklawaha, again allowing nature to exist in its natural state.	The most important part of this issue is the restoration of the ecosystem. Nature has a way of correcting itself. We have seen that with the Everglades. And I firmly believe that after the ecosystem has the opportunity to recalibrate itself, those that appreciate the benefits of the fishing and recreation will be happy with the outcome as well. It is a matter of trusting nature and the process.	Funding and the natural flow of habitat and ecosystems are equally important, in my opinion. The funds that are used to maintain the artificial dam that serves no purpose. While there is a fishing that takes place there, restoration of the river would bring about the opportunity for wildlife to genuinely flourish. I believe that once the dam has been taken down, nature will restore itself to an even more amazing place for fishing and recreation.	No, Spending tax payer dollars to maintain something that is artificial and unnecessary does not make good fiscal sense to me.	
10/22/2021 16:19	Putnam		No	Yes			2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	The dam was a boondoggle to start and has now reached an age where either more money has to be spent to maintain an unnecessary structure or, just restore the natural flow of the river.	The loss of the environmental lift that would occur if thousands of acres of forests are restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	Not really.	
10/22/2021 16:20	Seminole		No	Yes			2-5 times		Wildlife viewing	I would like to see the dam breached for the good of wildlife and the springs.	Breaching the Rodman/Kirkpatrick will be crucial to springs restoration--once the Ocklawaha can flow freely again, all the springs that are currently drowned by the reservoir will be allowed to re-emerge, and this will also greatly benefit fish, manatees, and other wildlife. Manatees are having an absolutely deadly gestation fire of a year and returning access to them to Silver Springs and other warm water habitats would be so important to their conservation. Also I feel strongly that taxpayers of the state of FL should not have to continue to pay for costly upkeep and repair of a dam/reservoir that are actively harming our ecosystem and wildlife in our state. It's time for the dam to go.	I feel that if we don't take the chance to do this now, when funds are available and there's a clear public interest in breaching the dam, we might never have a better opportunity. This is an incredible chance to improve water quality, the health and habitat of so much wildlife, and to increase eco and springs based tourism in several counties that are affected by the current state of/presence of the Rodman Kirkpatrick. It's a waste of taxpayer money and actively contributing to habitat loss and water issues, and it's well past time for it to be breached. It seems like this chance is the best one we've had in years and I would be greatly pleased to see the action that so many of us are asking for.	No. Breach the dam thing--it's way past the time when this should have already happened, and no solutions short of returning the natural river flows will be satisfactory. Too often the state of Florida has the potential to do good things for our springs and water ways and falls short in the end by doing something halfway or less, and I'm super hopeful that this time the outcome is better.	I cannot fathom why anyone would argue against helping manatees, helping our springs, restoring SILVER SPRINGS (one of the most famous springs in the world and certainly the most revered in our state--we talk about it with such pride, so why are we then standing by and letting it suffer and decline when there's something so obvious we can do to help it?) and doing something that's long overdue and will have so many benefits for the people, wildlife, and waterways of Florida. I'm very proud to be a Floridian and am glad to call this my home, but it's endlessly frustrating to me when a solution presents itself and we don't take it. Here it is, so let's do it already. Breach the Rodman/Kirkpatrick and let those rivers go back to where they're supposed to be. Let's stop with the hubris of trying to control water and just take care of it, already!
10/22/2021 16:21	Pasco		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Remove the dam and restore the Oklawaha	research	the future	???	
10/22/2021 16:22	Sumter		No	Yes			2-5 times	Canoeing / kayaking	Removal of the dam and the return to the river's free flowing state.	The restoration of he free flowing state will enhance recreational activities and improve the health of the rivers.	The age and condition of the dam will require significant public expenditures and over time may increase the chance of the failure of the dam.	No.	
10/22/2021 16:22	Alachua		No	Yes			1 time	Boating Wildlife viewing Other: We took a unique boat tour for 4 1/2 hours to visit the Hidden Springs, alligators, Ospreys, giant Cypress trees, Herons, Egrets, etc. during the February 2020 drawdown.	I would like to see the Kirkpatrick Dam breached (in a planned way rather than an unexpected, but very possible break), so that the Ocklawaha River is allowed to flow freely again, and that the beautiful drowned habitats can be restored.	The Rodman/Kirkpatrick Dam blocked the interconnected flow of three rivers, not just the Ocklawaha, while sadly drowning and killing huge swathes of the surrounding natural habitat. Restoring the flow and freeing the 20+ now drowned/hidden springs would provide the much needed benefit of providing warmer winter water for our manatees, who have suffered the largest die off recently. Providing the rivers to connect again would greatly increase this benefit, providing safer access to an even greater number of springs and habitat for our manatees. Restoration would open the area to a much larger number of visitors, who could enjoy the benefits in addition to fishing, but also snorkeling in the beautiful springs (such as Cannon), canoeing, and kayaking, much better than just during the drawdowns every 3-4 years.	Sadly, huge amounts of money (have read varying forecasts) would be required to repair & maintain the 1968 structure. The Bass fishing has been in decline, with fewer numbers of anglers using it as a dammed up lake. Tourism in that area could benefit with the resumption of tours up to the St. John's River, through the Ocklawaha, and from the Silver River and Silver Springs basin area. Now that the State operates Silver Springs, this could be a beautiful way to enjoy natural Florida again.	No, the time is way overdue. I was fortunate enough to grow up here, enjoying the beauty of Florida's Springs, and special resources. My father worked with the Model Water Code that was adopted into our initial Water Laws that also set up the Water Management Districts. I hope we can appreciate our unique blessings in Florida again, and allow the natural habitats, and animals dependent on them, to have the opportunity to resume, so Florida can once again be proud of our natural diversity.	Thank you for reaching out to the Public and Florida residents (stakeholders) in what has been a sad, and divisive issue since the Cross State Barge Canal construction/destruction was initiated. I appreciate the opportunity you have provided for our input, regarding this important issue. I hope you will recommend breaching the dam, and restoring the Ocklawaha and the three rivers!
10/22/2021 16:24	Putnam		Yes	Yes			2-5 times		Canoeing / kayaking Wildlife viewing Other: Bicycle trails through the Blueways and Greenways. I am part of the Bartram Trails committee and Putnam Blueways.	Breach the dam and bring back the springs.	We want the natural ecosystems and watershed of Florida back healthier. Bring ethical ecotourism and educational programs so people can appreciate the wildlife and waterways.	Urban sprawl, continuous pollution, extinction of native wildlife. Disruption of ecosystems.	Ethical ecotourism with the Rivers, clean blue waterways.	We wrote a song "Dam of the Ocklawaha" in 1980's. We need to bring awareness on how the dams are not sustainable nor supportive for the native Wild Florida wildlife and land.
10/22/2021 16:25	Putnam		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	I would like to see the dam breached.	I am a springs and wildlife advocate, and breaching the dam (long overdue, by the way) would restore 20+ lost springs on the Ocklawaha and have a great positive affect on migratory fish, birds, manatees, and other wildlife. It'll also benefit the people of Putnam county, Silver Springs, and other residents in the areas where the dam being breached will result in boosts of tourism and more dollars flowing into our economies. The dam should have been breached forever ago so now is our chance.	Continued loss of wildlife habitat/migration routes, continued wasted taxpayer money paying for upkeep of a dam that's past its prime, water quality and springs health issues getting worse.	Absolutely not. Breaching the RX dam is the only viable solution to the many issues it causes.	Manatees have had one of the deadliest years on record, water quality is getting worse and worse, springs flows are reducing, Silver Springs is dying. We don't deserve to call ourselves Floridians and brag about our wildlife, outstanding waterways, and feature animals like manatees on our license plates as points of pride if we're not going to do what needs to be done in breaching the dam and returning the rivers to their rightful places if we don't take this chance when we have it. It's time and this is what the public wants--let's do it.
10/22/2021 16:27	Marion		No	Yes			2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Historic fish and manatees return as breach opens creating a free-flowing river	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/22/2021 16:29	Palm Beach		No	No						Restored	Nature		
10/22/2021 16:29	Marion		No	Yes	1 time	2-5 times	More than 5 times	Fishing	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 Million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to $37 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 30 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter – an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/22/2021 16:30	Orange		No	Yes		More than 5 times	More than 5 times	Canoeing / kayaking	I would be very happy to see the Rodman Kirkpatrick breached for the health of the springs, rivers, and animals.	I love visiting during the drawdowns and it's super important to me that breaching the damn happen (finally) to allow the lost springs to emerge for good and to help fish, birds, alligators, and other wildlife, ESPECIALLY the manatees.	More die-offs of manatees, wildlife and water suffering, wasted taxpayer dollars going toward a dam that nobody wants anymore	No. Breaching the dam is the only solution I will be pleased with.	Public demand for the breaching of the dam feels like its at an all time high, and there is no downside to breaching it, or at least not one that would appear to outweigh the benefits of doing this. I'm tired of raising my voice and having nothing happen and its time for the dam to be breached. Floridians are counting on you to do the right thing--finally!
10/22/2021 16:30	Outside of state / other		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	the fish, manatees and other wildlife return once the breach opens create a free flowing river. We need to help the manatees!	Manatees would suffer, they need their warm water access during the winter! And the lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	This restoration would help animals AND improve water quality.
10/22/2021 16:33	Alachua		No	Yes	1 time	2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Wildlife viewing	removing the dam restoring the natural river flows and unobstructed navigation	Manatees will be able to return to the Silver river and won't have to contend with the aging lock that can potentially hang them up and drown them. Striped bass could swim freely up and down the Ocklawaha to the St Johns. All of the "lost springs" on the Ocklawaha would be flowing again, adding additional water flows to the St Johns River, and no more landfallers will be wasted for the dam and lock system that is past its lifespan and would require a significant investment to fix.	Millions of tax payers dollars would be wasted on a dam that provides no power, flood control, or really any public value and creates a water quality problem that requires a draw down every few years. The fishing will not improve to Lake Ocklawaha without another taxpayer investment in restocking which would be wasted due to poor water quality. Manatees will not have access to the Silver river at a time when warm water refugia and food for them is dwindling. Natural fish migrations will not occur, the stories my uncle told me of striped bass fishing will never return and exotic fish like Tilapia will takeover.	No breaching the dam is the only way forward for conservation, water quality, and long term sustainable habitat management. Drawing down the lake would be a short term solution but would not be cost effective use of taxpayers money or sustainable in the long term.	As a life-long Floridian that spent my earlier days on the banks of the Ocklawaha, the removal of the dam and restoration of the river has been a story my father, uncle, and older outdoorsmen told us kids through their stories and recollections of times on the river. I've watched as water quality and water flows have decreased and vegetation and exotic fish have increased. Moving to south Florida the reefs distracted me but the Ocklawaha was never far from my mind. As I returned to the area to go to college, I always took any opportunity to get down there, especially during the drawdown and remember my uncle's stories of catching striped bass and a cleaner more productive fishery. I don't think there will be a better time to remove the dam, the science supports it as well as a majority of the public. I don't want anymore of my tax dollars wasted on something that kills what I love, could potentially kill manatees, and doesn't really serve a purpose anymore.
10/22/2021 16:36	Orange		No	No					More natural approach that helps wildlife and outdoor sustainable recreation.	Sea grass is declining and more animals are dying. And the dam is past its useful and safe life span	More loss of wildlife	No	Please act to restore natural places to Florida. We owe it to our children.
10/22/2021 16:36	Putnam		No	Yes		1 time		Fishing Wildlife viewing	Restoration of a free flowing river by breaching the damn. Currently the dam area smells of stagnant water/black mold. A free flow NEEDS to be restored.	significant ecological benefits especially for the Ocklawaha & its connecting arteries to the St. Johns & Silver spring's where 20 bubbling spring's lie beneath & are currently strangled out by stagnant water & over-growth hydrilla.	Continued devastation & depopulation of Florida's iconic & protected Manatees & other fish species who can't thrive to their original potential's.	Not sure, but always open to suggestions.	The TIME is NOW, to correct a HORRIBLE WRONG done to a beautiful important ecosystem. PLEASE, FREE THE OCKLAWAHA. Thank you
10/22/2021 16:37	Alachua		No	Yes			More than 5 times	Other: crossing the dam to access the river	breach the dam and drain the pool	Millions to remedy the flood threat vs millions in economic benefit from riverine recreation	continued loss of fish and wildlife habitat due to impoundment	No	Put the St Johns River Water Management District in charge of implementing the partial restoration and get it done.
10/22/2021 16:37	Nassau		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	Let the natural flow of water take back its land. Open the dam.	Water quality. Conservation of land. Restoration to the river.	Continued demise of the river, the creeks and the surrounding areas	No	
10/22/2021 16:38	Seminole		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/22/2021 16:39	Orange		No	No									
10/22/2021 16:42	St Johns		No	Yes			More than 5 times		Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating	Leave it alone	The river is still flowing freely through the dam. Taking it down won't help the water quality in the lower St. John's. Something else is going on. The eel grass in the saint johns was not blown away by a hurricane. We have hurricanes for centuries and eel grass in the river until recently.	Loss of a thriving ecosystem where thousands of native Florida species are thriving.	Research the water issues in the saint johns river that's not allowing the eel grass to go back. The eel grass is a vital aquatic vegetation that can help with water quality immensely	
10/22/2021 16:42	Seminole		No	Yes			1 time	Wildlife viewing	While dams initially sounded like a good idea, our understandings of ecology show that they severely disrupt ecosystems. I would like the dam to be removed to restore and protect Florida wildlife, which enhances Florida's sense of uniqueness and environmental health.	The dam's removal would restore the iconic endangered manatee's habitat, and it would considerably lessen potential flood damages.	Water quality could be severely degraded if the dam is not removed. Algal blooms can continue to lower oxygen levels in the water, which are likely already low from the water's current low velocity.	The dam's safety is an urgent matter, so the unblocking of the waterway would be ideal.	As a Florida resident who lives in a neighborhood prone to flooding, as it is near the Wekiva River, I would want other people and species to not experience the same risk of harm to one's home/habitat. Thank you for your consideration.
10/22/2021 16:43	Putnam		No	Yes			1 time	2-5 times	Fishing Boating Wildlife viewing	I'd like to see the waterway returned to its natural state as God intended.	It would restore the entire waterway and springs. Silver Springs has lost so much magic. It would return the manatees.	If not now when? We have the money. We have the support. It improves the waterway and supports wildlife and property	I don't know what scenario that would be. It is so PAST time to improve the River and Florida.
10/22/2021 16:43	Duval		No	Yes	2-5 times	More than 5 times	More than 5 times		Canoeing / kayaking Boating Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, it harms water quality and wildlife. It is time to reunite Silver Springs, the Ocklawaha and the St. Johns River. Very rarely is there an opportunity to restore a natural system that will provide a significant ecological lift to four connected, but unique ecosystems. This restoration will fortify the St. Johns River which is in severe need of your help. Numerous pollution problems and threats continue to degrade the health of the St. Johns River. Just recently, we have experienced toxic algae blooms throughout the watershed, the result of too much nitrogen and phosphorous in the river from fertilizers, failing septic tanks, industrial and municipal wastewater, and sewage sludge. Sea level rise is disrupting ecosystems by causing saltwater to push further upstream. The submerged aquatic grasses and wetlands that provide critical habitat for fish and wildlife and help filter our water are disappearing due to over-development, pollution, and increased salinity.	Restoring Silver Springs, the Ocklawaha and the St. Johns River is critical to the overall health of these watersheds due to the following: 1. Creates a much cooler, clearer, free-flowing Ocklawaha River reducing the need for repetitive herbicide spraying of invasive aquatic plants to avoid frequent boat ramp and river blockages. Discontinuation, or significant decrease, of long-term herbicide application would improve water quality and habitat. 2. Promotes submerged aquatic vegetation growth in the St. Johns River essential for fish and wildlife by increasing water clarity and available light. 3. Enhances the entire Lower St. Johns River by reestablishing natural water flow and minimizing negative blue-green algal impacts. Toxic blue-green algal blooms represent the most significant water quality problem for the Lower St. Johns River. Restoring a better balance between nitrogen and phosphorus would favor a more beneficial algal community and enhance the aquatic food chain. 4. Reduces impacts to the Lower Ocklawaha and St. Johns Rivers from periodic drawdowns that occur every three to four years. Drawdowns, although helpful in managing aquatic weeds and increasing fish productivity, can impact the lower Ocklawaha and St. Johns Rivers by 1) repeated discharge of slugs of nitrogen and phosphorus downstream and 2) altering the estuary salinity balance. 5. Restores over 15,000 acres of forested wetlands - 7,500 near the dam and reservoir and more than 8,000 acres of stressed floodplain forest upstream and downstream of the dam. Regrown forests will provide natural water filtering reducing the threat of toxic blue-green algae and removing other pollutants while providing natural flood protection and a cooling tree canopy. The original tree destruction removed the natural filtering of contaminants, and, therefore, the water in the reservoir and below the dam is especially high in contaminants and nutrients. 6. Helps restore Silver Springs, a premier Florida State Park. Restoring the Silver Springs ecosystem cannot fully occur without a free-flowing Ocklawaha. For example, allowing the return of schools of algae-eating mullet, now blocked by the dam, will naturally reduce the brown algae [illegible]	The fact that the significant water quality and water quantity (flow) benefits under the restoration scenario would not be realized and that the overwhelming amount of data and research supporting restoration would be wasted. Dam safety, improved water quality and wildlife can't wait. Every day the dam is in place it is causing harm to the St. Johns River, the springs, wildlife and the Ocklawaha. In addition, the routine drawdowns to artificially manage the pool cause significant harm that is well documented by SJRWMD. Instead of allowing the ongoing degradation, it is critical that FDEP and SJRWMD invest in this large-scale restoration effort that is affordable, and highly effective simply by restorint the natural connection between the St. Johns and its largest tributary, the Ocklawaha.	The time has come to finally restore the largest tributary of our St. Johns River, to restore Silver Springs and the 20 springs lost beneath the pool, restore nearly 15,000 acres of forested wetlands, fortify the fisheries and the 100-mile St. Johns River Estuary and breach the Rodman Dam for a free-flowing Ocklawaha. We hope we can count on you to right this 50-year-old wrong.
10/22/2021 16:47	Marion		No	Yes			2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored.	Hundreds of manatees lose the opportunity to access essential warm water winter habitat.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/22/2021 16:47	Manatee		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier.	Hundreds of manatees lose the opportunity to access essential warm water winter habitat.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	I'm sure you are already aware of the large number of manatee deaths this year due to loss of habitat. We need to to do everything possible to correct this situation.
10/22/2021 16:47	Marion		No	Yes			2-5 times	Fishing	I would like to see it returned to its original state	Because that's how it was and we need to continue with letting nature being the course that says our path	We need a free flowing river as nature intended	The dam must come down. Thank you for letting me express my humble opinion	
10/22/2021 16:48	Alachua		No	Yes			1 time	Boating	restoration of the Oklawaha River

10/22/2021 16:50	Marion		No	Yes	1 time		More than 5 times	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	$4-14 Million in dam repairs saved on a dam past its life expectancy	The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	Temporarily drawning the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	
10/22/2021 16:51	St Johns		Yes	Yes	1 time	2-5 times	More than 5 times	Canoeing / Kayaking Boating Wildlife viewing Other: Forest Bathing/ Forest Therapy. Ethical ecotourism.	Please remove the Dam and educate people of the ethical environmental education about the Riverway. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha.
10/22/2021 16:51	Pasco		No	No					I would like to see restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The most important piece of information to support my position is that three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs will be restored, including the animals and ecosystems that count on these rivers and springs.	My biggest concern if restoration doesn't occur is that we miss the best opportunity to take this action. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe.	Temporarily drawning the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	Please consider restoration of these springs and rivers as the only possible outcome. Our future generations of humans and wildlife depends on these habitats to be restored to their natural state.
10/22/2021 16:51	St Johns		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing	Plant grass for larger bass. Not like it used to be	Fishing	hope a valuable asset	No	Save Rodman!
10/22/2021 16:51	Duval		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	The fact that the water resources would benefit tremendously. Restoration benefits to be achieved by breaching Rodman Dam are as follows: Provides over 150 million gallons a day of additional natural water flow for the lower Ocklawaha River and St. Johns River estuary. This water flow increases due to uncovering 20 freshwater springs suppressed by the waters behind the dam and elimination of substantial evaporation from the warm, exposed reservoir. Creates a much cooler, clearer, free-flowing Ocklawaha River that will promote healthy, native submerged aquatic vegetation growth essential for fish and wildlife in the restored river channel and in the St. Johns River by increasing water clarity and available light. Lessens the likelihood of toxic blue-green algal blooms in the lower St. Johns River - a most significant water quality and human health problem. Restoring the natural balance between nitrogen and phosphorus would favor a more beneficial algal community. Helps balance salt and freshwater in the lower St. Johns River estuary to protect its sportfishing and shellfish industries and associated vital habitat, while assuring coastal resiliency and reduction of saltwater intrusion.	The fact that the significant water quality and water quantity (flow) benefits under the restoration scenario would not be realized and that the overwhelming amount of data and research supporting restoration would be wasted. Below is a selected compilation of such documents and reports. Abbott, E. F., 1971, Twenty Springs of the Ocklawaha, An Occasional Paper prepared for Florida Defenders of the Environment; Department of Geology, University of Florida; Gainesville, FL. • Fabra, A. 1988. Experimental studies on some factors influencing phosphorus solubilization in connection with the drawdown of a reservoir. Hydrobiology 159: 153-158. • Florida Silver Springs Conservation Plan, Howard T. Odum Florida Springs Institute, 2018, Principal Authors include Robert Knight, ED of the Institute and Heather Vick, professional hydrogeologist with Washington Dept. of Ecology • Ocklawaha River Synoptic Study, Howard T. Odum Florida Springs Institute, 2020. • Hendrickson, J., 2016, Effects on Lower St. Johns River Nutrient Supply and TMDL Target Compliance from the Restoration of a Free-Flowing Ocklawaha River, St. Johns River Water Management District, Palatka, FL • Hendrickson, J.C., K. Trophic Structure and Productivity of Silver Springs, Florida. Ecological Monographs. Volume 27 (1): 55-112. • Reed, M.W., J. Hendrickson and K.E. Parkin. 2005. Relationships between nutrient conditions and phytoplankton	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	This exciting restoration will improve water quality and flow by generating an additional 150 millionn gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
10/22/2021 16:52	St Johns		No	Yes	1 time	2-5 times	2-5 times	Fishing Boating	Open the dam	The national stand is that the dam is unnecessary and that the waterways have changed dramatically over the years	Decreased fish and wild life to the rivers	No	
10/22/2021 16:55	Orange		No	Yes			1 time	Other: I use the Rodman pool and Kirkpatrick Dam to imagine the dam gone, the pool drained, and a fully restored Ocklawaha River.	I would like to see the dam removed, the pool drained, and a free flowing Ocklawaha fully restored. With this accomplished, the flood plain forest will recover. Fish, wild life, and the people of Florida will benefit.	The creation of the dam and the impoundment behind it plus the active destruction of the flood plain forest caused profound damage to a unique Florida river. It was not just a mistake. It was a crime against nature. The Ocklawaha River was a unique spring fed river that flowed freely from central Florida to the confluence with the St Johns River. It provided a migratory pathway from the St Johns River for fish and manatees. Now, the migratory pathway is blocked, and the former river ends in a weed choked pool that is maintained a public expense. Florida has expended considerable public funds to partially restore the upper portions of the Ocklawaha river through the purchase of muck farms and expensive restoration projects. This has been a public good, and the restoration of the Ocklawaha River will remain incomplete until the dam is removed, and the free flow of the river is restored. The good news is that removal of the dam will cost far less than our previous upper basin restoration efforts, and it will end the expense of maintaining the dam and pool.	We will miss the opportunity to restore the river. We will miss the opportunity to restore habitat for the migratory species that used to pass from the Atlantic through the St Johns River and up the Ocklawaha to Silver Springs and to other springs that have been drowned by the damning of the river. Florida will remain poorer if the river is not restored. We live in a time when rural and natural Florida are under continued destruction from unrestricted development. This is an opportunity for a rare win for natural Florida.	No.	I'm a fourth generation Floridian. I remember when Silver Springs was crystal clear, and the flow from Silver Springs was directly connected to the Silver River, the Ocklawaha, the St Johns, and the Atlantic. This is our opportunity to reclaim that heritage.
10/22/2021 16:55	Volusia		No	No					For it to be removed.	I possess a Master of Science degree in ecology from the University of Georgia, and everything in my training suggests that the free flow of water is critical for the support of numerous riverine species.	The continued stagnation of the areas downstream	No.	
10/22/2021 16:55	Orange		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 150 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees.
10/22/2021 16:56	Hillsborough		No	Yes			1 time	Wildlife viewing	I want the water in the Rodman Reservoir to be released into the Ocklawaha by breaching the Kirkpatrick Dam.	1) Financial savings. The dam wouldn't need money to be maintained or rebuilt. 2) Manatees would have more access to warm water. 3) Wildlife corridors would be increased. 4) Water quality improved by more water flow	Further cost to Florida when money is tight. More environmental degradation because of man trying to fool Mother Nature into having a reservoir.	No, breach the dam. Restore the Ocklawaha. I wrote an editorial 30 years ago in the Duval Audubon Newsletter asking for Ocklawaha restoration. It's time to get off the pot and flush the water. Thank You!	Please breach the dam. Let nature return to the Ocklawaha and St. Johns.
10/22/2021 16:57	Putnam		No	No					Breach it and restore the natural flow of Oklawaha River.	How beautiful and healthy spe River was for pmany years before the dam.	Pollution of the St John's and points north.	Almost anything is better than the way it is now.	
10/22/2021 16:58	Pinellas		No	Yes		1 time		Canoeing / Kayaking Wildlife viewing Other: Paddleboarding, relaxing, enjoying nature	Take it down.	By removing the dam many of the Florida springs will be restored helping the ecosystem here in FL. We owe it to all the living creatures that would benefit.	The wildlife that rely on the free flow of water will continue to be harmed.	No. This needs to be fixed and short term solutions just delay and cause more harm.	
10/22/2021 16:59	Duval		No	No					Removed and the waterways restored.	Natural laws, connection with Mother Earth, understanding of cause and effect.	Continued interference with nature's waterways leading to extinction and suffering of animals and habitats.	No. We humans need to stop tampering with the nature order of things.	
10/22/2021 17:00	Leon		No	Yes			1 time	Wildlife viewing	Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 30 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.
