9/26/2021 15:58	Alachua		No	Yes		1 time	1 time	Boating Wildlife viewing	I would like to see the outdated, non-functional dam removed so that the natural flow of the river can be restored.	Upon seeing the thousand and thousand dead trees sticking up from the still lake, I was horrified to learn that this use to be a beautiful river swamp prior to the construction of the unnatural dam.	Continued loss of a vital wildlife corridor for imperiled species like the Florida manatee and the Atlantic sturgeon and continued water quality concerns.	No. The time to restore the dam is long overdue.	Restoring the Ocklawaha River would be an environmental win for north central Florida as we face the challenges of overdevelopment and climate change.
9/26/2021 15:59	Outside of state / other	Westerly, RI	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 Million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide unimbibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a former resident of Florida, it breaks my heart to know that so much wildlife is being lost. This is a chance to heal the environment and I beg of you to take action before it's too late.
9/26/2021 19:07	Flagler		No	No					Clean up the waterways to provide a healthy environment for all living creatures.	Save the Manatee updates.	Extinction of various species.	Not at this time.	Please keep up the good fight
9/26/2021 16:08	Outside of state / other	Edinburgh, Scotland	No	No					Restore the Great Florida Riverway	Better for manatees.	Reduced manatee population	No	
9/26/2021 16:12	Outside of state / other	TN	No	No					Restoration	Habitat for marine life	Detrimental to marine life		
9/26/2021 16:13	Outside of state / other	Edinburgh Scotland U.K.	No	No					Restoring the great florida river way.	Manatees need all the help they can get.	Many manatees will perish		
9/26/2021 16:20	Dade		No	No							Extinction of species.		
9/26/2021 16:28	Orange		No	No					The dam should be removed to allow what once was a natural flow of the river.	From what I have read it was a fiasco from the get go and should have been reversed once funding was no longer supported.	The continued biological alteration of that environment.	No. It should become a thing of the past. It serves no purpose.	Thank you for the opportunity to voice my opinion.
9/26/2021 16:34	Lee		No	Yes			1 time	Fishing (shoreline/structure) Canoeing / kayaking Wildlife viewing	Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs	Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration
9/26/2021 16:36	Outside of state / other	Watertown, Wisconsin	No	No					Dam removed	The natural flow of the waters will restore more natural wildlife.	The blocking of nature.	No	Thank you for the opportunity to voice my opinion.
9/26/2021 16:38	Dade		No	No					Anything that will protect the manatees	It's our last chance to save the precious manatees	People don't understand how important the environment is to our survival and the living things on our planet.	None	Be kind to each others and mother nature . Respect and protect the environment.
9/26/2021 16:41	Hardee		No	No					The Ocklawaha River MUST by restored only by breaching the Kirkpatrick Dam.	The Manatees survival long-term. This is the most impactful manatee habitat restoration project in the state and will provide essential warm water for hundreds of manatees. Also 15,000+ acres of FL Wildlife Corridor will be restored or enhanced, benefiting FL panther, brown bears, bobcats, white deer and Bald Eagles.	If it stays dammed, all of this vital life is in danger of forever disappearing. Besides the Manatees needing warm water, the land animals need to be able to easily travel in this section of FL Wildlife Corridor. If it remains dammed, it will keep 7500 acres of forested wetlands flooded by the Rodman Reservoir.	Nothing else is acceptable to save precious Florida and its wildlife. It is 50 overdue, and we can't wait any longer.	We have done enough damage to FL wetlands and these animals; ... and need to think of the future and how we can better protect beautiful Florida.
9/26/2021 16:41	Columbia		No	Yes			1 time	Other	Remove it.	Scientific Studies showing the need for wildlife and ecosystems that would benefit from the removal of the dam.	The list of the springs covered by the flooded land.	No	None
9/26/2021 16:42	Citrus		No	No									
9/26/2021 16:42	Hillsborough		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	100s of manatees gain essential warm water winter springs habitat	Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 Million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/26/2021 18:20	Sarasota		No	No					Restore	The Manatee			
9/26/2021 18:21	Marion		No	No					Save the manatees please how could you not save the manatees.	I received my information from the wildlife activist	The manatee population innocent manatees dying painfully diminishing in population	No help please	Save this structure please
9/26/2021 18:24	Lee		No	Yes		1 time	Canoeing / kayaking Wildlife viewing	I'd like to see it taken down and the natural water flow restored.	That Spring Wacklawaha has been obstructed from its natural flow	That the waters here in FL will never be returned to their natural state. That ecosystems will continue to be damaged.	No	Our waters need to be protected snd respected
9/26/2021 18:24	Outside of state / other	PHILADELPHIA PA	No	No					RESTORE THE OKLAWAHA RIVER TO PRESERVE WILDLIFE	Sample questions and answers to help you fill out the St. Johns River Water Management District Survey. Note: You can copy and paste these answers into the survey. Demographics information 1) County- provide your county or choose out of state/other Survey 1.What would you like to see happen with the Rodman Reservoir and Kirkpatrick Dam moving forward? The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and wildlife The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 Million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities. Thank you for your consideration (The manatees would thank you if they could!)
9/26/2021 18:46	Outside of state / other	MD	No	No					The Ocklawaha River needs to be restored by breaching the Kirkpatrick Dam	15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like manatees, Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/26/2021 18:48	Lake		No	Yes		More than 5 times		Fishing Boating Wildlife viewing	No change. It's a wonderful wildlife wonderland with manatees and nesting bald eagles . Endangered species live there The Buckman lock master counted over 500 manatees going they the lock last year because of Rodmen's bush vegetation.	Personal observation and data from F w c. Rodman is the 3 rd best bass lake in the state.	Rodman is a filter for the dirty water moving they the Harris chain flowing into the St. John's. The enonomic impact on the local economy is substantial.hee visit Rodman 5 to 7 times a year, purchasing lodging, food , guide service and wept. Thousands visit Rodman each year and the local economy depends on it.	No. Leave Rodman alone. it's one of the last places you can go and see "old Florida" it's a manatee refuge, wildlife sanctuary and it needs to be preserved for my grandkids	Leave this wonderful place alone. You can't find another like it.
9/26/2021 18:59	Flagler		No	Yes			1 time	Wildlife viewing	Would like to see it breached so that the springs are restored and nature as it was intended begins to thrive again.	The number of fish has plummeted in Silver River with the Rodman project. Having kayaked, SUPd, & explored many of the springs and rivers in florida, we know this is not working.	That the fish in Silver River continue to die off, & that manatee and other wildlife die off as their eelgrass diet is also dying off. This dam doesn't belong there & is ruining the ecosystem.	No.	
9/26/2021 18:59	Outside of state / other	Chicago	No	No					Have responsible policies regarding the environment	Climate change/ endangered manatees	Concern for the environment	No	
9/26/2021 19:12	Brevard		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 Million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. 9/26/2021 19:32	Palm Beach		No	No					Preserve and repair these areas.	It an obligation and responsibility for the St. Johns River Water Management District to safeguard waterways and wildlife. Restore manatee habitats in fresh, clean waterways with lots of seagrass, plants, weeds and leaves.	Manatees will starve to death or be hit by motorboats. It has been reported on the news that this year alone we lost 500 manatees mainly due to these causes. Manatees need to be put back on the 'endangered' species list and they need plants that grow in fresh and saltwater environments. How can we watch these gentle, loving, peaceful creatures die of starvation?? And what might be the long-term health effects on starving manatees who survived or were saved by caring manatee organizations looking out for these beloved creatures.	Organizations need to respect manatee habitats where these beloved creatures gather. God created manatees some 60 million years ago and we need to help them survive now. It's essential that they receive fresh greens, plants and weeds daily. And sweet potatoes on special occasions.	Please Florida, take care of these precious, remarkable and smart aquatic mammals so they can EAT, play, swim, do somersaults, stand on their heads, cuddle and sleep without stress. WE NEED TO HONOR ALL OF GOD'S CREATURES, WATERWAYS, OCEANS AND SEAS. And GOD bless the organizations that do that.
9/26/2021 19:39	Lee		No	No					Restoration	Continuing lack of concern for our environment	The potential loss of endangered wildlife.

9/26/2021 20:02	Alachua		No	Yes		1 time	2-5 times	Canoeing / kayaking Wildlife viewing	Remove and eventually return river to historic flow levels and channel	Data on surgeon, manatee and other wildlife movement	Continue loss of springs access and wildlife migration options	Lowering of water levels on a continuous basis to allow recovery of river basic and springs access	
9/26/2021 20:04	Bradford		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure)	More manatee zones with manatees coming in more often due to increased vegetation	Seeing over 3 manatees everytime i visit each month in the past year at rodman reservoir	Keeping manatees safe in rodman from boat collisions		
9/26/2021 20:06	Lee		No	Yes		1 time		Wildlife viewing	Safer for manatees	Manatee populations by Florida Game & Fish	Your political future	No. Manatees need your protection.	

9/26/2021 20:07	Sarasota		No	No									
9/26/2021 20:08	Outside of state / other	CA	No	No					Restore the Ocklawaha River for Florida's wildlife, especially to save your manatees!	Manatees are still struggling with starvation from seagrass loss, the greatest long-term threat to these animals is the loss of warm water habitat that manatees need to survive the winter. Right now, 60% of Florida's manatees depend on power plant outfalls to keep warm and survive the winter - an unsustainable and unnatural situation.	More loss of these precious animals. They belong to God, not people, and certainly not the state of Florida.	Of course not. They're either dead or not, and it depends entirely on you.	Thanks for doing the right thing.
9/26/2021 20:14	Outside of state / other	Arizona	No	No					Please protect wildlife.	Altering environments causes harm to wildlife.	Wildlife would be disrupted and/or killed.		
9/26/2021 20:15	Outside of state / other	Massachusetts	No	No									
9/26/2021 20:20	Seminole		No	No					We messed up the Kissimmee river and then spent millions Free flowing rivers are what we should have. Florida is a beautiful state- help restore back to nature.	Ocklawaha could be restored as a free-flowing river system.			
9/26/2021 20:21	Hillsborough		No	Yes		1 time		Wildlife viewing	Restoration.	It is needed for conservation purposes o	Danger to wildlife	No	
9/26/2021 20:23	Clay		No	Yes	2-5 times	More than 5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	This is so important. I would like restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dams to reunite the natural connection of Silver Springs, the Ocklawaha and the St. Johns River.	The science supports restoration. Studies by federal and state agencies have clearly demonstrated that restoration of a free-flowing, connected system is cost-effective and will provide significant ecological benefits to the St. Johns, Ocklawaha and Silver Rivers as well as Silver Springs.	We miss a historic opportunity to stop the ongoing ecological degradation caused by the dam and finally reunite the natural flow of these rivers. Breaching the dam would restore the natural flow of 150 mgd of fresh water, improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. A free flowing Ocklawaha will reestablish 15,000 acres of forested wetlands and fortify downstream submerged grasses from Welaka to Jacksonville in the St. Johns River that are critical to river health and fish habitat.	No. Breaching the dam and restoring the Ocklawaha are 50+ years overdue. Dam safety issues and improved water quality, wildlife habitat, and recreational opportunities can't be ignored or delayed any longer.	This exciting restoration will improve water quality and flow by generating an additional 150 millions gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
9/26/2021 20:23	Lake		No	No					Restore the Ocklawaha River by eliminating the Rodman/Kirkpatrick Dam.	Rodman Dam affects three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 Million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If the state of Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide unrinhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/26/2021 20:26	Dade		No	No					Lower the levels of water behind the dam and then remove it.	Connecting the needs of wildlife (Manatees and fish) with a greater resource.	The state continues to degrade the entire watershed.	No	
9/26/2021 20:28	Pinellas		No	Yes			More than 5 times	Canoeing / kayaking Boating Wildlife viewing	Restoration	Help wildlife	Loss of sea grass, wildlife, manatees	No	
9/26/2021 20:30	Outside of state / other	New Jersey	No	No					I want to have Manatee habitat protected to ensure survival/	My parents have a condo in Naples and I love to visit the Jim Darling habitat to see these beautiful creatures. I know that their numbers are diminished and they are threatened with extinction. I love the wildlife in Florida. We also visit the Everglades. I am not a beach person, but love the wildlife.	Another very big threat to Manatee survival	Planning to minimize impact on Manatee habitat. I am sure the engineers(with input from wildlife specialists) can figure this out	
9/26/2021 20:36	Outside of state / other	Spruce Michigan	No	No									
9/26/2021 20:38	Outside of state / other	Kankakee IL	No	No									
9/26/2021 20:40	Outside of state / other	MN	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. $5,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm-water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/26/2021 20:40	Marion		No	Yes	1 time	1 time	1 time	Boating Wildlife viewing	Remove it, let the river flow free	The lack of fish in Silver Springs, and only a few manatees that make it there	The health of the Springs and Manatees	No, the natural Balance has been interfered with the dam	
9/26/2021 20:45	Volusia		No	No					I would like to see it removed. Removal will restore vital water that will increase fish and wildlife habitats. In turn recreational fishing and tourist opportunities will flourish. Let it return to what it used to be! Quit wasting money on an outdated dam that cut off vital water flow to aquatic habitats. Thank you.	Studies by federal and state agencies show a free-flowing river system will improve fish habitats and allow the St.John's /Silver/ Oklawaha river system to return to a healthy level.	Fish and manatees would be deprived of rejuvenating water flow. More kayaking and fishing opportunities would be snuffed out.	No. Why spend more money to prolong a decades old mistake?	I respectfully request that you allow the St.Johns/Silver/ Oklawaha river system to return to its former flow by eliminating the dam.
9/26/2021 20:55	Outside of state / other	North Carolina	No	No					Keep it safe for the manatees & wildlife		Avoid govt officials that don't support the environment		
9/26/2021 20:57	Outside of state / other	Massachusetts	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 Million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide unimbibted passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. 9/26/2021 21:52	Alachua		No	No					I would like to see the river return to its natural way. Dams are very bad for our environment. Florida has enough issue with red tide already.	Conservatives	Effect on the environment		
9/26/2021 21:54	Outside of state / other	NYS - former Floridian	No	No					Restoration of the former Riverway	It was historic and it worked for endless years. This manmade system is failing	an ecological collapse of a challenged system	The more natural the better	
9/26/2021 21:56	Outside of state / other	New Jersey	No	No									
9/26/2021 21:59	Alachua		Yes	No					I think that it needs to be taken out. I farm for a living and anything that can restore our waterways is a step in the right direction.	Restoring the natural hydrology will improve the fragile ecosystem around the dam and downstream.	Florida is being bombarded by development and I'm concerned that we won't have enough property funtioning greenspace to support the wildlife and ecosystem services that are being wiped with such rapid change.	Drawing down the dam - but really this is the best opportunity to remove the dam.	Thank you so much for taking public comment on the matter.
9/26/2021 22:08	Washington		No	No									
9/26/2021 22:26	Outside of state / other	Virginia	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife.	we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas	no	60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/26/2021 22:26	St Johns		No	No					Restore the Ocklawaha river by breaching the dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 Million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood-damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economics have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/26/2021 22:30	Clay		No	Yes	1 time	Wildlife viewing			Breach the Dam. Restore the river.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs would be restored.	Thousands of acres are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	This is a fantastic opportunity to do something positive environmentally. We should not waste it.
9/26/2021 22:30	Outside of state / other	San Diego, California	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. 9/26/2021 22:37	Seminole		No	No					Let the rivers flow as before the dam placement.	Scientific studies of the Florida ecosystems and land surveys	More loss of wildlife and continual loss of wetlands.	No	
9/26/2021 22:41	Alachua		No	Yes	1 time	2-5 times	Wildlife viewing		I would like to see the dam removed so 7,500 acres of the lower forested floodplain with 20 freshwater springs would be restored. The dam is currently a barrier to plant and animal movement, especially the manatees. Our manatees are great promoters for tourism in Florida. It is believed that fishing opportunities would be enhanced when there is open access to the Ocklawaha system.	Restoring a natural environment for the benefit of animals, plant and humans while saving a ton of money not having in dam maintenance and repairs.	The benefits of removing the dam would not be achieved. The expense of maintaining dam would continue. That would be money that could have useful benefits for further protecting our important environmental resources	I can not imagine a scenario of a partially removed dam. So I support removing it, to achieve benefits outlined in question 1.	I have been aware of this issue for over 20 years, realizing it has gone on longer. I have read that our State and Federal environmental agencies have approved the removal, but political forces in our State Legislature have been unable to agree to fund it. Instead there has been wasteful funding on maintenance.
9/26/2021 22:46	Outside of state / other	Santa Rosa, CA	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway. It's a symbiotic ecosystem: all or none.	Tampa Bay's harbor, red tide from the Gulf to the East Coast, polluted estuaries and inner waterways are all a travesty that impact us all in ways that we are only beginning to understand. The unprecedented starvation and deaths of iconic manatees is a travesty and a tragedy of human making, made exponentially worse by DeSantis on a daily basis in all shortsightedness for personal gain. Time is running out to turn around.
9/26/2021 23:03	Outside of state / other	State College, PA 16801	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	i) Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. ii) 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	i) Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. ii) Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a Florida visitor who cares about your state's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for your state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("S2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a biologist and will greatly benefit Florida's people, environment and wildlife.
9/26/2021 23:10	Palm Beach		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The age of the dam at older than 50 years puts it at risk for an unanticipated breech with the potential to result in many millions of dollars in flood damage. Without the dam millions of dollars in dam repairs could be saved.	Millions of dollars will be needed for maintenance and repairs to the dam at the cost to taxpayers.	No.	Removing the dam will benefit taxpayers, the environment, manatees and fish.
9/26/2021 23:16	Polk		No	No									
9/26/2021 23:25	Outside of state / other	Flagstaff	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. 9/27/2021 0:01	Outside of state / other	Bay Area California	No	No					Restoring the Ocklawaha River for wildlife, especially manatees	manatees are still struggling with starvation from seagrass loss and the greatest long-term threat to these animals is the loss of warm water habitat that manatees need to survive the winter.	extinction	anything to save the manatees	
9/27/2021 0:26	Duval		No	Yes	1 time				Gone	The overwhelming success of States that have taken this action. Maine for instance.	That Florida will remain a bastion for corporate reign regardless of environmental consequences and as typical, ignoring what is right and obviously best for most in order to serve the will of politicians who serve the will of contractors, corporations and themselves as the HISTORY of Florida demonstrates	No	
9/27/2021 0:52	Marion		No	Yes			More than 5 times	Fishing Boating	Completely restored to original river bed .... Blow down all the dams & locks ...	It's was the natural order of nature long before man Detoured that nature for $$ savings that now only cost state and taxpayers more money to maintain ...	Long term health of the fishery and original water shed ...	No but I will still fish it either way	Maintain property or tear it all down & restore it ...then make a public park nearby it ...

9/27/2021 0:55	Outside of state / other	ngeles, CA - formerly Seminole Count	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 Million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide unimbibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/27/2021 1:13	Outside of state / other		No	No										
9/27/2021 1:21	Outside of state / other	Little Elm, Texas in Denton County	No	No										I want manatees safe and multiplying. Make the rivers and lakes and inlets safe for them.
9/27/2021 2:00	Outside of state / other	Palo Alto California	No	No					I would like to see the dam breached so that the manatees have access to more warm winter water.	2021 has been a terrible year for manatees. By breaching the dam, threatened manatees will have access to more warm winter water.		I'm worried that 2022 will beca year with even more manatee deaths.	Please provide enough warm winter water for the suffering manatees.	Thank you for any decision that will help the Florida manatee.
9/27/2021 3:01	Duval		No	No					Breach the Rodman/Kirkpatrick Dam	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/27/2021 5:38	Duval		No	No					Breach it and restore the springs	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No	Please, it seems like the logical choice.	
9/27/2021 5:53	Clay		No	Yes			2-5 times	Other						
9/27/2021 6:05	Marion		No	Yes	1 time	More than 5 times	More than 5 times	Canoeing / kayaking	Remove the dam	Declining fish diversity		Stagnant Ocklawaha		
9/27/2021 6:07	Marion		No	Yes			More than 5 times	Fishing Canoeing / kayaking Boating Wildlife viewing	Remove that outdated illegal dam and restore the natural river	Studies show a great benefit to fish, water quality, economy, and environment.		algae blooms, toxic dead river, probable dam failure, ugly environment.	NO, there is no other option. The dam must go!	Damn the Dam
9/27/2021 6:35	Highlands		No	No										
9/27/2021 6:40	Palm Beach		No	No										
9/27/2021 6:42	Wakulla		No	No					removal	human created monstrosity that altered the ecosystem we need back		increased loss of habitat	no	
9/27/2021 6:51	Putnam		Yes	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Boating Hunting Wildlife viewing	Keep the dam as it is now.					
9/27/2021 6:59	Marion		No	Yes	1 time	2-5 times	More than 5 times	Wildlife viewing Other: To show friends who have never seen the dam. Wildlife photography.	Remove the dam and allow the Ocklawaha River to return to its natural state of flow.	That is the way it was originally before the flow was obstructed by the dam. It will open the water corridor for aquatic species that historically swam up and down stream and allow the river to purge itself more efficiently. Will allow the various springs located along the river to flow naturally.		The dam will continue to block the natural flow of water downstream and prevent aquatic species from traversing the river up and down stream.	During the next drawdown, let Rodman Reservoir completely drain back to the rivers original flow and see what it looks like after a period of time. You can always close the dam and refill the reservoir.	
9/27/2021 7:03	Putnam		No	Yes		2-5 times		Wildlife viewing	The dam should be removed and the area restored.	My personal inspection of the area. research on the history of the dam. and the costs of maintaining the dam.	Money will be wasted on maintaining the obsolete and useless dam structure.	Doubtful but I am open to hearing about alternatives and the rationale behind any that exist.	No sound ecological or economic reason exists for maintaining the dam. It should be removed and the river restored.	
9/27/2021 7:04	Volusia		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife.
9/27/2021 7:04	Duval		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing	Leave it like it is, and keep doing what we're doing with draw downs every 4 to 5 years.	I didn't know rodman before the dam but you can't return it to the way it was. The eco system on and around the dam and I resovoire is perfect. Changing it would damage it.		The eagles, bears, deer, otters, fish, etc....	Yes keep the dam and repair the locks as needed.	
9/27/2021 7:21	Okaloosa		No	No						Damage done to Florida springs and the Ocklawaha River.	Continued degradation of above.	No		
9/27/2021 7:31	Martin		No	No					I would like the dam opened to restore the waterway to its natural condition.	It is impeding the manatee's ability to follow their natural waterways.	The reservoir and Lake Ocklawaha will become even more polluted without their natural flow	No.		
9/27/2021 7:45	Putnam		No	Yes		2-5 times	More than 5 times	Fishing Wildlife viewing	I want to see the Rodman ecosystem left the way it is currently.	The wildlife that utilizes the are is spectacular! The fishing is the best in Florida.		It would take a 100 years for it to restore.	No	
9/27/2021 7:45	Putnam		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Boating Hunting Wildlife viewing Other: Photography	I would like to see the Rodman Dam & Reservoir maintained and kept in its present state.	I drive in and out of Ocala National Forrest on a weekly and monthly bases. There is never a time, unless extremely late in the morning hours that there and not people using this wonderful attraction.		Not really ---- our family fought and objected it's creation from beginning. However, we dealt with it creation and have come to love appreciate it for what it is. Leave it alone and maintain this mistake.	Please leave Rodman Dam & Rodman Reservoir in it's present condition and setting.	
9/27/2021 7:46	Volusia		No	Yes		1 time		Canoeing / kayaking Wildlife viewing	Removal of the dam	Restoration of natural rivers and habitat.		Loss of manatee's.	No	
9/27/2021 7:49	Clay		No	No					Restoring the Ocklawaha river to its natural state by removing the dam which will allow free flowing water systems and subsequently improve water quality, allow the return of natural habitats which are quickly being destroyed, while improving the economy by not spending millions of dollars repairing and maintaining the dam.	Over 100 million gallons of water/day will be restored to the Ocklawaha river and Saint Johns River water systems which will restore 15,000+ acres of Florida habitats and wildlife while saving millions of dollars that otherwise would have been spent on the dam restoration and continued repairs.		Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit while continuing to reduce natural flow and deprive free flowing water which causes harmful algae and weeds to form further harming wildlife as well restricting natural critical biodiversity into the water system that helps improve not just water quality but also Florida's natural habitats.	No, allowing the dam to continue wastes tax payers money and continues to harm Florida's natural habitats and wildlife. With many of our habitats and wildlife in critical danger as is, it's reckless to pursue a long drawn out process rather than a decisive decision to breach the dam.	I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Furthermore, restoring the river will improve water quality and flow by generating an additional 150 million+ gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
9/27/2021 7:59	Hillsborough		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. 9/27/2021 8:18	Collier		No	No					Rivers should be allowed to flow in their intended and natural state. Restore the river to it's natural state.	Information I have read regarding current water quality and overall aquatic health indicates that a free flowing river would be a healthier river.		Further declines in water quality and loss of valuable aquatic habitat for Florida's wildlife.	I don't see any reason to maintain the dam. Let nature takes it's course, as they say....Mother knows best. In this instance. Mother Nature.	
9/27/2021 8:19	Putnam		No	Yes			More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Remain untouched	Devastation to the current ecosystems. Loss of use. Environmental disruption.		Devastation to the current ecosystems	Unlikely	
9/27/2021 8:22	Alachua		No	Yes			1 time	Wildlife viewing	Breach rodman damn	our springs are dying		we will lose our springs and ruin our water quality	no	21 of our springs are dying. Do something before it it too late. the funds for this project are already available.
9/27/2021 8:31	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Hunting	Leave the reservoir in place. It is an awesome piece of Florida.	recreational fishing for all.		that a great reservoir will be gone including great fishing and the livelihood for so many.	No.	
9/27/2021 8:37	Clay		No	Yes			2-5 times	Canoeing / kayaking	take it down go back to natural flow	natural flow		the springs that are in the natural flow area	open it on a regular basis for natural flow	
9/27/2021 8:37	Seminole		No	No					Restore the Great Florida Riverway and re-establish habitats for manatees, fish and aquatic birds.	The dam is more than 50 years old and has never been used for the intended purpose. Breaching the dam would restore freshwater flow and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife.	A missed opportunity to restore Florida's environment and support our diverse wildlife and in the process benefit communities, economies and ecosystems all along the Riverway.	No, it is the only way to insure significant environmental benefits for wildlife and improve water quality, water flow and an unobstructed blue way.		
9/27/2021 8:53	Outside of state / other	Michigan	No	No					Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	Even while manatees are still struggling with starvation from seagrass loss, the greatest long-term threat to these animals is the loss of warm water habitat that manatees need to survive the winter. Right now, 60% of Florida's manatees depend on power plant outfalls to keep warm and survive the winter - an unsustainable and unnatural situation.	We need to make sure we use every tool to help save manatees and other wildlife from habitat destruction and pollution. The recovery of manatees has been a conservation success story until now - we can't let this progress backside on our watch.	No.		
9/27/2021 8:53	Hillsborough		No	No					I would like to see key portions of the dam removed in order to re-establish traditional access to essential habitat for manatees, bring back migratory fish, connect three river ecosystems and historic Silver Springs, and restore a lost riverway for anglers and paddlers from Ocklawaha's Harris Chain of Lakes to the Atlantic.	Manatees need all the help they can get after the devastating loss of manatees we suffered this past year.	I am most concerned about survival of manatees.	No.		
9/27/2021 8:55	St Johns		No	No					I would like the ocklawaha to be restored					
9/27/2021 9:00	Alachua		No	No					Blow it up	The attempt to re-de nature in Florida is wrecking the state. Nature (invera) have a right to exist in their natural form.	Same as always - nature will continue to suffer	Remower 1/2 of the dam		
9/27/2021 9:03	Putnam		No	Yes	1 time	1 time	2-5 times	Other: Come up the Ocklawaha and "run into" it	Remove it and let the river return to its natural state	Why spend more and more money on repairs and maintenance to keep something obsolete and unnatural when removing it would make a healthier river?	Disappointment and continued mistrust of government and deep pockets	Not really. It was a doomed initiative from the start.	Free the Ocklawaha!	
9/27/2021 9:04	Orange		No	No					Remove it	Restore habitat				

9/27/2021 9:05	Broward		No	No					Restore the damage done in the past. Let us learn by our mistakes.	Adopted manatee Lucile since the 1980' when Save the Manatee Club was part of the Avalon Society and have witnessed the dramatic changes to the manatee environment.	Heart breaking concern	Do what you are able to do. Don't just stand there and do nothing.	Manatee food supplies are dying from pollution which in turn Manatees are dying from lack of food.
9/27/2021 9:06	Santa Rosa		No	Yes		2-5 times		Fishing	Keep this resource in its present state. Rodman draws visitors 365 days a year. It provides income to countless people and businesses.		Loss of jobs/income for the local area	No	My family and I have enjoyed visiting the area for the past 10 years. Looking forward to our trip in January
9/27/2021 9:09	Pinellas		No	No		1 time		Canoeing / kayaking	It needs to be removed. Let the rivers flow as they were meant to. Open it up so we can enjoy the springs along this river and see Manatees again.	This project was never finished so what it was intended for was not needed so the river should be restored to what it was as nature intended it.	Continual loss of habitat for the migration of species that need it.	Mot unless it frees the river.	This damned waterway only benefits a few while restoring it to it's natural state would benefit so many more people and animals that used it when it was free flowing.
9/27/2021 9:11	Volusia		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide unimbibed passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	
9/27/2021 9:12	Lee		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	The dam's purpose is unclear and ill-defined, it has negative impacts on endangered species of wildlife and habitat types, and it costs taxpayers money to maintain each year.	Continued poor aquatic habitat health, decline of natural food sources for the Florida manatee, and further starvation and population decline. The resources spent on the dam's maintenance could have been repurposed towards education or environmental action to restore manatee food sources and a thriving ecosystem for everyone to enjoy.	The dam is the problem; partial removal and allowance of some water flow to breach the dam with plans to completely remove it in future could be considered.	
9/27/2021 9:14	Outside of state / other	WI	No	No							Destruction of wildlife.		Manatees and all wildlife must be protected. This will also benefit humans.
9/27/2021 9:28	Marion		No	Yes		1 time		Fishing Boating Wildlife viewing	I would like to see the dam and reservoir preserved and maintained.	I know that an environmental system has developed and is flourishing at Rodman. It doesn't matter that the original ecological system was disrupted when the dam was built. That was a long time ago. Now we have a working wildlife environment that is healthy and thriving, and serves as a safe refuge for wildlife including manatees. To remove the dam would be to create the same kind of disruption that happened before. Why repeat it? Rodman has become one of the greatest fishing lakes in the state, contributing many entries in the Florida Lunker program. Rodman is also nationally recognized as one of the best bass fishing lakes in the country, and fishermen from all over visit, making a significant contribution to the local economy, and fishing license fees to the state coffers, which would be lost if the dam was removed. There is nothing that will take the place of this economic loss if the dam is removed. Those who favor removing the dam are idealistic dreamers who envision pristine nature, but do not care about the economic impact since they don't even live in the area (!), and contribute nothing to its economy. Kayakers contribute little to the economy either.	Loss of wildlife habitat, loss of land use when the river is flooded, loss of economic benefit to the area, loss of a great bass fishing resource that attracts many visitors who spend real money.	I don't know of any middle ground here. To my understanding, the dam stays or it goes. I cannot support removing the dam. If there is some kind of compromise scenario possible, I haven't heard of it.	Please carefully consider the tangible realities of removing the dam. Please do not decide based on an idyllic dream of restoring the river back to nature, just because. I say the everybody who is motivated by restoring it back to nature should demolish their houses, replant all the native vegetation on it, and give it back to nature. They're all in support of ruining other people's livelihoods and properties, but not their own. Hypocrisy. Please don't cave in to it.
9/27/2021 9:32	Alachua		No	No					Please remove the dam, it is much needed for our springs and nature habitats. It also has no practical use to keep the dam up.	It will be very beneficial to wildlife	preservation of springs and manatee populations	No	
9/27/2021 9:33	Brevard		No	No					I would like to see the dam removed, and have the Ocklawaha River returned to its original state. We have been how cutting off wetlands in the 60's destroys critical habitat for fish and other wildlife. The damn should be breached. It is most important that we do this to save (i.e., recreate) habitat for manatee and improve the quality of Florida rivers.	It is important to bring back covered springs and improve freshwater flow in our rivers. I believe money is better spent preventively breaching the dam (rather than waiting for it to break). Breaching the dam will also open up lots of new recreational opportunities for Florida residents that have been "covered over" since the 60's.	The continuing degradation of Florida waterways due to algae blooms and severe flooding (uncontrolled) if the dam fails. This dam never should have been built and serves no valid economic purpose, and it hurts the greater public good. We need to start making good decisions to save our most precious resources.	No, because a partial solution (a draw-down) only solves the flooding part of the problem. It does not actually help in anyway with the wildlife problem (i.e., manatee habitat, water quality, etc.).	
9/27/2021 9:35	Clay		No	Yes		1 time	Other: I don't use it at all.		I would like this dam to be removed and let the natural flow of the river restored.	I would like the health of the St. John's River to be improved. I would like Silver Springs to have a chance at renewed vitality. I would like all of the springs impacted by this dam to flow free again.	My biggest concern if the dam is not removed is that we are at a precipice where the natural beauty of Florida may not be able to be recovered. Removal of this artificial dam would be a great beginning to improve the health of our springs and rivers.	No, it's time for this failed experiment of an artificial dam, to be removed. The health of our rivers and springs benefits millions of human beings in Florida. The dam only benefits an extremely small number of people.	I strongly feel that when this dam is removed we will see an influx of eco-tourism that will positively impact this entire region.
9/27/2021 9:38	Outside of state / other	Indiana	No										
9/27/2021 9:40	Lake		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	20 lost springs and Silver Springs ecosystem are restored	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
9/27/2021 9:43	Outside of state / other	MI, USA	No	No									
9/27/2021 9:43	Lee		No	No					Restored natural water flow	Red tides	Cleaner waterways	Not none	
9/27/2021 9:48	Flagler		No	No					destroyed; opened	manatees, fish migration, recreation.	habitat loss	no	
9/27/2021 9:52	Gilchrist		No	Yes		More than 5 times		Fishing Fishing (shoreline/structure) Boating	Maintain the structure and its features..	The positive ecological benefits provided by the reservoir. The amount of wildlife utilizing the reservoir and surrounding areas is amazing. As we look to provide wild spaces and buffer zones for wildlife...well, here is an existing one.	The loss of habitat for wildlife would be shameful.	My desire is to maintain the structure and features. The last 10 years has seen a decline in areas such as maintenance of lighting at and around the dam, road maintenance to parking areas close to the dam and maintenance to clear the channel in the reservoir. I've accepted these conditions as a concession to keeping the reservoir as a sanctuary for wildlife. So yes, I already have accepted a scenario short of optimum.	In making your decisions, please keep in mind that the voices that are on either side of this debate, are just that. Voices. The lives that are at stake, the true stakeholders, the wildlife, are unable to speak for themselves.
9/27/2021 9:56	Marion		No	Yes		1 time		Wildlife viewing	I would like to see the dam removed.	The dam was created for a purpose that no longer exists, and it is now an anachronism that is harming the environment and providing no flood control purpose.	Continued deterioration of the Ocklawaha river and upstream environment, including the crown jewel Silver Springs.	Bypassing the dam in order to create a natural flow of the Ocklawaha and allowing wildlife (including manatees and fish) natural access to the upper Ocklawaha and Silver Springs.	In a State brimming with natural water bodies, including innumerable lakes, there is no need for man made impoundments. Therefore, there is no need to "save" the Rodman reservoir at the expense of killing the Ocklawaha and Silver River. We must reverse the ecological damage caused by the scrapped Cross Florida Barge Canal while the ecosystem is still able to recover.
9/27/2021 9:56	Lake		No	Yes		2-5 times	More than 5 times	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St Johns Rivers, and many springs are restored.	The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.
9/27/2021 9:58	Alachua		No	No					Remove the dam and restore the river	The Rodman Dam is an impediment for the waterway's natural systems.	Reduced water quality and wildlife	Future generations will hold us accountable for any less than this	No
9/27/2021 10:03	Outside of state / other	Moravian Falls, NC	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 Million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities	The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/27/2021 10:07	Volusia		No	Yes		2-5 times		Wildlife viewing					
9/27/2021 10:11	Duval		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	Please get rid of the Kirkpatrick Dam and restore the free flow of the Oklawaha.	We need to restore the free flow of the river for ecological reasons--better for all wildlife and the health of the river.	That we continue to support something that is not needed and is ecologically destructive.	No. we have been fighting for the removal of this dam for so many years-it truly is time to get rid of something that has no use.	
9/27/2021 10:13	Hernando		No	No					Restoration of the waterway		Loss of manatees and fish along with the ecology of the area	no	
9/27/2021 10:15	Outside of state / other		No	Yes		2-5 times		Fishing Boating Wildlife viewing	Leave as is	Great fishing	Lousy fishing	No	
9/27/2021 10:17	Outside of state / other	Maryland	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. Also, 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	
9/27/2021 10:19	Duval		No	No					removed	Environmental damage caused by the lack of natural and free flow of the Oklawaha River.	Continued environmental dampe	no	
9/27/2021 10:24	Putnam		No	No					As I live on the St. John's river, I would like to see the Rodman Reservoir and Kirkpatrick Dam removed to allow the water way to return to it's native state.	I believe that the natural flow into the St. John's river was disrupted with the establishment of the dam and reservoir. Since the construction of the dam and reservoir were part of the Cross Florida Barge Canal project, which has been abandoned, the infrastructure supporting the canal should also be abandoned.	The water quality of the St. John's river will remain stagnant.	No.	The only apparent purpose in retaining the dam and reservoir in its current state revolves around fishing for bass. Bass fishing along the St. Johns river existed before the establishment of the dam and reservoir, and will exist on the river after the dam and reservoir are gone, and may even improve along the river.
9/27/2021 10:25	Outside of state / other	Danton, TX	No	No					Restore the river way!	We (humans) screwed it up for a project that never got done and then just left it - time to fix it.	Continued damage to the ecosystem.	No	
9/27/2021 10:27	Outside of state / other	Boulder Colorado	No	No									
9/27/2021 10:29	Citrus		No	Yes		1 time		Canoeing / kayaking Wildlife viewing	Protect manatee population	negative environmental impact becoming so prevalent these days	loss of the manatee and loss of important recreational treasure		
9/27/2021 10:31	Lee		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 Million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide unimbibed passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/27/2021 10:56	Volusia		No	No					It dismantled	No longer a good idea	Killing aquatic life including manatees	More protection and byways for aquatic life	I would like to see this dam removed and the area returned to its natural layout.
9/27/2021 11:02	Volusia		No	Yes		1 time		Wildlife viewing	Get rid of the dam and let the river return to its natural flows.	Scientific studies by state and federal teams have shown that restoring the river will have many ecological and economic benefits. As it is now, the dammed river only benefits bass fishers who like to fish in still water -- kind of like catching fish in a barrel. A restored river would provide a better wildlife corridor and increased recreational opportunities for bird watchers, boaters and fishers who like flowing water -- and there would still be pools for those who want quiet water fishing. Many more people and animals will benefit from a restored river. Florida has a rich opportunity here to expand its tourist interest as a natural attraction added to our beaches, not just amusement parks.	This is too good a chance to miss. Money is available, and with increased concern about climate change lots of people support doing things that enhance our natural systems' abilities to stay healthy. The natural world is changing at an abnormally fast rate, and our river needs all the help we can give it to deal with these changes.	NO! This dam should have been removed long ago. Even President Nixon supported it. Let's finally get this done.	
9/27/2021 11:05	Outside of state / other	Unionville, IN	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. 9/27/2021 11:08	Lake		No	No									
9/27/2021 11:08	Martin		No	No					Please protect for the manatees.	manatee protection is imperative	manatees and other precious wildlife will perish when we could have avoided!		Please help the manatees, animals and keep the water clean for everyone thank you
9/27/2021 11:13	Marion		No	Yes	1 time	2-5 times	More than 5 times	Fishing Canoeing / kayaking Boating Wildlife viewing	Continue to maintain this valuable resource.	A well-established ecosystem supporting several endangered species.	Misguided "Environmentalists" might destroy this system by draining the lake claiming they want to "restore" the Ocklawaha when they have no plans for "restoration", just destroying the lake and creating a vast mud hole full of unwanted trash plants.	No	
9/27/2021 11:13	Dade		No	No					Destroy the dam and return the river and land to its original condition.	Returning the river to its original condition will support the ecosystem that allows for more support for native plants and animals as well as providing recreational opportunities.	Loss of habitat for native species of plants and animals.	Allowing an increase in water flow in the rivers and a decrease in reservoir level.	
9/27/2021 11:14	Citrus		No	No						Manatees have already reached a record number of deaths this year - and if we don't restore additional areas of their natural habitat, we could lose even more manatees in the future.	Losing more manatees.	I would have to read the other options.	
9/27/2021 11:15	Palm Beach		No	No						News	Polution		
9/27/2021 11:17	Dade		No	Yes		1 time		Wildlife viewing Other		YES.	PRESERVING WILDLIFE! AND ALL LIFE! WATER IS LIFE!	WE PERISH FROM DEATH OF ECO SYSTEMS I AM TRUSTING THE WONDERFUL GOVERNMENT IN FLORIDA TO PROTECT FLORIDA AND IT'S LIFE SYSTEMS FOR EVERYONE	
9/27/2021 11:19	Orange		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide unimbibed passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway	We live in a world that allows animal species to vanish at an alarming rate. The manatee is an amazing, animal that has lived in these rivers well before humans started messing up its habitat. It is almost unique to Florida and attracts visitors (just to see Manatees (it's not always Mickey Mouse). These gentle animals need our help now. Tomorrow will be too late.
9/27/2021 11:23	Marion		No	Yes		2-5 times		Other	I want it gone. And the cypress forests and springs restored..	I have seen several reports that support the re-zeal of thd dam.	Tir dirings and the cypress forest will not be there for my grandchildren.	No	We kayak for exercise. The springs are our favorite. I missed seeing them at the last drawdown.
9/27/2021 11:24	Dade		Yes	Yes		1 time		Wildlife viewing Other: Bike ride	preserve the original natural WILDLIFE	Preserving the natural WILDLIFE and ecosystems	that we all die. if the longest living mammals on earth perish (manatees) ...we all perish	WATER IS LIFE WITHOUT CLEAN NATURAL WATER WE ALL DIE	
9/27/2021 11:24	Lake		No	No					I would like the dam removed and the historic natural flow of the Ocklawaha restored.	The River should have been left free to begin with as nature intended. No real good reason for dam to begin with.	Continued ecological impairment for the area.	NA	
9/27/2021 11:29	St Johns		No	Yes	1 time	2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Wildlife viewing Other: Camping, Photography	Kirkpatrick Dam should be breached, the impoundment called Rodman Reservoir should be drained to historic river levels and the currently-inundated wetlands should be allowed to regrow. Recreational access to the river should be improved along with facilities encouraging shoreline fishing, hiking and water use. The currently-flooded springs such as Blue Springs and Tobacco Patch should be restored.	The plans for restoration previously approved by the state of Florida, the expectation of restoration implied in the permit to occupy federal national forest lands, the studies regarding recreational use done by the University of Florida, and the studies showing the need for restoration conducted around endangered and threatened wildlife.	Continued loss of habitat for vulnerable species, inaccessibility to public areas, abandonment of recreational use due to failing conditions of ecosystem, inability of the state and its agencies to competently manage the river and wetlands.	Disbanding the SJRWMD	
9/27/2021 11:29	Duval		No	Yes		1 time		Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	$57 million in potential flood damages avoided to downstream property owners	A storm event triggers a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	We cannot wait to act on this, and it is critical that we breach the Rodman/Kirkpatrick Dam. History has shown that failure to act on this will lead to climate disaster. Climate disaster does not only affect wildlife, like the fish and the manatees that deserve clean and safe habitats, but also for humans. Residents deserve peace of mind that their homes are safe from flooding or from unsafe drinking water. Our abundant wildlife and diverse ecosystems are what makes Florida so special, and there is too much to lose if we do not do what we can to save it.
9/27/2021 11:34	Duval		No	No					Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam to reunite the natural connection of Silver Springs, the Ocklawaha and the St. Johns River.	15,000+ acres of forested floodplain wetlands within the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.
9/27/2021 11:38	Outside of state / other		No	No					restore natural habitat -- remove the dams	restore natural habitat for all citizens to enjoy nature	extinction	no	

9/27/2021 11:39	Duval		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Wildlife viewing	Keep the dam and reservoir in place , with better management practices for the health of the waterway .	My 40 years of fishing experience on Rodman - The misinformation being put out by various groups about how the dam restricts the flow of water to the St. John's river , which is a complete fallacy . The same amount of fresh water still flows down the ocklawaha river . even more water is released into the st John's river every time the locks are operated . Why is that amount of water never included in any of the water flow estimates ? Rodman would be used even more than it is if the department of greenways and trails would actually clear the channels of stumps like it used to. The last drawdown was completely unnecessary. All it served to do was kill all of the native vegetation that was flourishing at the time , which has yet to recover . I feel Rodman has been intentionally mismanaged in an attempt to reduce usage and help further the proponents of the dam's removal agenda .	Loss of habitat for numerous species of wildlife that flourish in the present environment.	The lock system could be disabled to reduce long term costs	
9/27/2021 11:41	Outside of state / other		No	No					The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 Million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide unimbibed passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills, and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/27/2021 11:41	Marion		Yes	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing	Keep it like it is. I love rodman.	Rodman value to homeowners.	My property value would drop.		
9/27/2021 11:58	Gulf		No	No					I would like to see a change in manatees.	My status.	My happiness.	No	
9/27/2021 11:59	Alachua		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.
9/27/2021 12:00	Outside of state / other	Colorado	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Not addressing this problem would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. The greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife.
9/27/2021 12:11	Marion		No	Yes	1 time	1 time	2-5 times	Wildlife viewing	I would like to see it breached because it is not sound engineering wise. It would cost too much to fix and for what? When studies have shown that the biggest fish are caught outside the dam, what use is it? Dams destroy eco-systems and the Rodman has already shown by the decreasing # of species at Silver Springs that it is causing havoc downstream and upstream.	The latest study by the Florida Silver Springs Institute that shows that Silver Springs, which used to have a rich environment of all kinds of fish, is now dominated by Tilapia, an invader species which compete with our native Mullets in the food chain. fish populations have decreased by 78% at Silver Springs. Shame on us, for ruining an eco-system that was working right well before we messed with Mother Nature!	The ruination of Silver Springs, one of the major wonders of the world. The Springs need to have water flowing through it and cleaning it out in order to stop the pollution which is causing invader species to come to Marion County. I might add also that the Rodman keep manatees from being able to find safety and sea grass to eat in the cold winter months. Destroying the Rodman would bring major tourism back to Silver Springs by bringing the beloved Manatees. They are doomed if they are not allowed inland by a dam.	No, the dam must be removed.	Of course, at the same time that the dam is busted, we need to stop allowing more and more pumping of water out of the system. Also, we need to not allow any more septic tanks, plus replace the ones we have with anaerobic toilets (the kind they use in Scandinavia). This can be done by a law made by politicians, but highly recommended by the Water Board. Do you have the courage to just "Say NO" to developers, ranchers, and homeowners?? If not, we should abolish the Water Board system, which is antiquated anyway and not progressive enough to deal with the sensitive balance between the present and the future.
9/27/2021 12:14	Marion		No	Yes	1 time	2-5 times	More than 5 times	Fishing Boating Wildlife viewing	Preserve the dam and reservoir to allow pristine wildlife viewing and outstanding fishing	Observation of beautiful wildlife in the reservoir would be eliminated if dam was removed	Loss of open nature preserve and loss of outstanding fishing. The negative economic impact on this remote and poor area.	Not at this time. Either the dam goes or stays and thus the reservoir .	White I would have been against the dam in the first place, it doesn't make sense to spend lots of taxpayer money to take it down. It is a beautiful nature preserve open to lots of local people and tourists. It benefits the local economy, one of poorest communities in Florida. Save Rodman reservoir.

Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills, and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	NO. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/27/2021 13:05	Brevard		No	Yes			More than 5 times	Fishing Canoeing / kayaking Wildlife viewing	Draw down, removal	Common sense	Altering natural water flow has long term environmental consequences that sometimes cannot be seen for a long time. We have seen them here but putting a strangle on a living system eventually causes it to die off.	Removal	
9/27/2021 13:10	Clay		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. This will improve water quality, and wildlife habitat throughout the Great Florida Riverway.	Restoration creates more diverse no only provide better wildlife habitat for native birds ans fish, but it will also increase recreation opportunities, which increases visitation and adds supporting jobs.	The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. This is our best chance to act on this crime against Nature. Dam safety, improved water quality and wildlife can't wait.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 6% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River. (characters: 514)
9/27/2021 13:14	Putnam		No	Yes	More than 5 times			Fishing Other					
9/27/2021 13:18	Duval		No	Yes			2-5 times	Wildlife viewing	Breach the dam and restore natural water flow to the Ocklawaha.	Florida's environment is ecologically fragile and needs to be protected.			
9/27/2021 13:20	Outside of state / other	Orange Beach Alabama	No	Yes			1 time	Fishing Boating Wildlife viewing	Breach the dam and restore the FL waterways	Manatee extinction....highest rate of loss this year	Complete Loss of the Manatee	Something that preserves the wildlife and eco systems	
9/27/2021 13:21	Outside of state / other	North Carolina	No	Yes			1 time	Wildlife viewing	restore the river	research shows it's the best way to provide manatee habitat restoration	the loss of another species	Not that I'm aware of. Many dams have been successfully removed across the United States to the benefit of all (to the chagrin of doubters). Benefits range from improved water quality, revitalized wetlands, better floodwater control, groundwater replenishment, lower maintenance costs, and wildlife enhancements.	Thank you for soliciting input.
9/27/2021 13:28	Jackson		No	No					I would like to see the management take local ecosystem preservation into account when making decisions.	The drought has affected the survival of native species of plants and wildlife.	The affects of the wildfire-drought cycle will cause a permanent impact due to climate change	I'm not sure, but would support small steps that are designed to achieve my desired outcome	
9/27/2021 13:43	Marion		No	Yes		1 time	2-5 times	Fishing Boating	I think it should be preserved as it is a jewel of a destination for Central Florida	There is no good reason to drain the reservoir		no	
9/27/2021 13:44	Leon		No	No					Breach the dam to restore the Ocklawaha River	E beautiful rivers and numerous springs will be restored. Manatees will be able to access the warm spring water.	Money will be wasted on repairing the dam, water quality will get worse with more blue green algae and fish kills. More aquatic vegetation will be harmed.	No. We need to protect water quality and wildlife	Breaching the dam and restoring water flow in the river will benefit water quality, wetlands, fish and wildlife. It is so important for this region. Thank you for your consideration.
9/27/2021 13:44	St Johns		No	Yes			2-5 times	Wildlife viewing	I'd like to see the dam removed.	Removal of the dam would help the Ocklawaha River recover from its damaged state.	Continued deterioration of the Ocklawaha River.	No.	
9/27/2021 13:46	Marion		No	Yes		2-5 times	More than 5 times	Canoeing / kayaking	Breach the dam to free the Ocklawaha River	The hugely negative impact the dam has had on the Silver Springs & River & Ocklawaha. This includes loss of fish & species from blocked migration, and flooding of many Ocklawaha springs.	The continued negative impact to Silver & Ocklawaha Rivers if the dam is not breached.	No. The dam must be breached	As a lifelong resident of Ocala/Marion County since 1949, I swam at Silver Springs during the 1950's and early 1960's, and have seen the great decline in Silver Springs since the dam was built. Silver Springs was once a fantastic fish bowl that the dam has mostly destroyed.
9/27/2021 13:48	Marion		No	Yes			More than 5 times	Fishing Boating Wildlife viewing	Leave them alone!	It has become a natural habitat and should be preserved.	Loss of local economy, loss of fishing, loss of wildlife.	No	My family has been in the area since 1948 and Rodman is a part of our life here. Please respect what has been done and do not try to undo it. If it should not have been here, you should have thought about that when you (government) created it in the first place.
9/27/2021 13:50	Duval		No	Yes		1 time		Canoeing / kayaking	Remove the dam	Restoration of flood plain Forrest, recovery of springs and migratory routes	Diminished health of St. John's river	The dam needs to be removed	Maintains this dam is costly and ecologically negligent. Please restore the river as nature intended

9/27/2021 13:54	Orange		No	Yes			2-5 times	Fishing (shoreline/structure) Wildlife viewing	I would like very much like to see it dismantled and let the natural flow of the Ocklawaha be restored. The dam is at the end of its useful life and the lake is filling with sediment and invasive species. I believe this will improve the overall health of Florida's waterways which have been severely damaged due to overbuilding and development in the state.	The continuing degradation of the water quality in both Lake Rodman and the Ocklawaha.	That Florida's natural waterways will continue to degrade to the point where they can't be revived in the future.	Unfortunately not. I really want to see the dam removed.	Really hoping the dam is removed. Florida's waterways deserve a second chance.
9/27/2021 13:56	Outside of state / other	WA	No	No					I would like the dam to be removed and the river to be restored for the sake of restoring habitat for the animals that make this place home, and to help alleviate flooding during weather events.	Communications from Save the Manatees, an organization in which I am a member.	The survival of animals that make this place home, and the survival of endangered manatees, in particular.	Take steps to protect animals that make this area home and that are dependent on it for their food and life cycle.	Thank you for your consideration on this matter. I have vacationed in Florida and the wildlife and animals that inhabit the state of Florida are the primary draw for me.
9/27/2021 14:04	Clay		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	no, this is long overdue	
9/27/2021 14:05	St Johns		No	Yes			1 time		Remove it.	Remove the impediment to fish and manatee.	Continued declining water quality.	No	
9/27/2021 14:07	Volusia		No	No					restore the Florida Riverways by removing key parts of the dam.		flooding of surrounding forests		
9/27/2021 14:12	Orange		No	No					Remove the dam	Caused flooding and now manatees do not have access	More manatees will die as they are having a difficult time finding food sources	Partially removing the dam just so manatees have access to the river	Thank you.
9/27/2021 14:21	Putnam		No	Yes			2-5 times	Other: I visit when there is a drawdown to see springs that are normally flooded by the dam.	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs.	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration. (characters: 527)
9/27/2021 14:28	Outside of state / other		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a
9/27/2021 14:29	Outside of state / other		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam. 9/27/2021 14:46	Alachua		No	Yes			1 time	Other: I don't use it. I looked at it. It was a mud hole.	The Dam needs to be removed and the Rodman pool drained so the Ocklawaha River can flow freely for its full length.	The millions of gallons of flow that will be restored so people and wildlife can all enjoy the river and its ecosystem not just fishermen.	That the state continues to waste my taxpayer dollars on a dam that should have been torn down years ago. Shame on you.		Tourists come to Florida to see our manatees, and our beautiful springs. Restoring the flow of the Great Florida Riverway will provide thousands of acres and miles of river for these tourists and Floridians to enjoy.It will greatly help improve our water supply. Please do the right thing and let the water flow!!!
9/27/2021 14:54	St Johns		No	Yes		1 time	2-5 times	Boating Wildlife viewing	I would like to see the dam breached so the Ocklawaha's flow and habitat is restored	The huge costs of repairing the dam plus the drawdown that is necessitated is environmentally harmful, economically wasteful, and damaging to the fisheries, habitat and natural springs. We have an obligation to restore the beauty and bounty of this very special and unique habitat. Freeing the Ocklawaha will also benefit the health of the St. Johns River.	Fisheries and animal habitat will continue to be threatened. The health of the St. Johns River will continue to deteriorate. We'll also lose a huge economic boost to the economy that is enjoyed by people who love to canoe, kayak and see the springs in the river.	I am not asking for the removal of the dam, just a breach. The benefits of this far outweigh all other alternatives.	Freeing the Ocklawaha is good environmental and economic policy. It is supported by the majority of Floridians. DO IT!
9/27/2021 14:56	Alachua		No	Yes	1 time	1 time	2-5 times	Canoeing / kayaking Wildlife viewing	Restore the natural flow of the Ocklawaha River. Breach the dam at the natural river channel, west of the main Rodman Dam structure and maintain the Rodman Park fishing docks and ramps.	Improve the entire food web in Silver, Ocklawaha and Lower St. Johns River	Loss of habitat and migratory routes for fish and manatee.		
9/27/2021 15:00	Pinellas		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 Million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide unimbibed passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to 557 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 30 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills, and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/27/2021 15:01	Alachua		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Boating Wildlife viewing Other	Follow the approved latest plan and partially breach the Rodman Dam. That is, breach 2,000 feet of the 7,200-foot dam to restore the free-flowing Ocklawaha River. Currently, the dam is past its life expectancy and creates a serious flooding danger. Additionally, the dam and locks require $4-14 million in repairs. Instead, put this money toward restoration.	Two things: ecology and economics. 1) Ecologically, breaching the dam would provide for restoration of migration routes for several species of fish, including striped bass, plus manatees--currently blocked by the dam. The dam and locks effectively prevent these migrations. Additionally, 20 drowned springs would be allowed to flow, and the surrounding mud flats would recover to the previous floodplain forest. 2) Economically, breaching the dam would eliminate annual maintenance costs. The restored river would provide a greater economic benefit than the current stagnant reservoir.	My tax dollars would be wasted on perpetual maintenance of an artificial ecosystem that is declining in productivity. And we would miss the opportunity to see an interconnected restored three-river system--the Silver River, the Ocklawaha River, and the St. Johns River estuary. Even the near-shore Atlantic would be benefited.	No. All the parts fit together to provide an interconnected natural system which formerly provided one of the biggest tourist destinations in the United States and is a major part of the reason that Palatka exists.	Rather than "wasting" the water in the reservoir (but it's not really a reservoir), as some claim, the increased flow of at least 150 million gallons per day of cool clear water would help the recovery of eelgrass beds (submersed aquatic vegetation) in the St. Johns River, whose biomass has declined about 99% (my personal monitoring and experiments). I say this from a background of 45 years experience working on seagrass ecology, including 20 years at the District and living on the St. Johns River for 30 years. And I'm still active in seagrass research.
9/27/2021 15:02	Marion		No	Yes			1 time		Other: we were just out and about	Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs.	Flooding, continued damage to wildlife and water quality	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	We need to get out of natures way. The risk of flooding vs. the economic opportunity and restoration of the eco system seem to make sense and is the only viable option.
9/27/2021 15:02	St Johns		No	Yes			2-5 times	Wildlife viewing		Removed			
9/27/2021 15:06	Volusia		No	No					Restore the river (Ocklawaha) by doing away with the dam.	They dam impacts rivers, streams and wetlands. It prohibits manatees from obtaining refuge in the winter. It is an old, old dam that was never used for its intended use. It is an unnecessary expense to maintain for no benefit. Restoring the river will provide better water flow and making the rivers less resilient to saltwater intrusion. Wildlife support improvement.	Taxpayers on the hook for repair and maintenance. Water flow impeeded to the detriment of wildlife, requiring additional expense to clear blockages.	No. Improved water quality in our state is imperative for quality of life and quality of wildlife. No alternatives once our natural resources are destroyed. Impacting economic growth, tourism, etc.	As a long term Florida resident, I care about Florida's environment and wildlife, waterways and springs. Restore this waterway. Protect our manatees and provide them an opportunity to continue to live and thrive.

9/27/2021 15:11	Hernando		No	Yes			1 time	Wildlife viewing	I fervently support restoration of a free-flowing Ocklawaha River by breaching the Kirkpatrick Dam and draining the Rodman Reservoir. I have supported restoration since before the dam was renamed the Kirkpatrick Dam. Every year restoration has been delayed has been one more year of additional, widespread environmental degradation	Trading 15,000 acres of healthy, productive and life-sustaining floodplain forest for a stagnant, artificial waterbody that could produce large numbers of one sportfish species (largemouth bass) for a limited lifespan, and only through massive management inputs, was a loosing proposition from the start. The Cross Florida Barge Canal was a horrible idea from its inception, and the worst component in terms of the negative impacts to natural resources was the damming of the Ocklawaha. It is a bitter irony that the worst component is the one we completed and retained. Florida is also preparing to invest $300 million to protect important lands within the Florida Wildlife Corridor, and perhaps the most important stretch of corridor that needs to be protected to accommodate the north-south movement of native flora and fauna is the Ocala to Osceola Corridor, i.e., the COO. The single greatest impediment to wildlife movement along the entire 100-mile length of the COO is the barrier posed by the Rodman Reservoir. Protecting the remaining gaps in the COO, like the remaining parcels of the Etonah Creek Florida Forever Project, is essential, and yet the value of investing in protection of those lands is severely compromised by continued existence of the reservoir. The impacts on use and enjoyment by native flora and fauna are paralleled by the impacts on use and enjoyment by human recreational users. It is not surprising that recreational use of the area INCREASES during the periodic drawdowns. Peddlers, birders and other wildlife observers has so much more to see and enjoy during those periods. Imagine how much greater, and more frequent, would be their enjoyment is if the historic floodplain forest was still present, and if such enjoyment was available year-round rather than only during drawdowns! It is wasteful, and more than a little insulting, that the dam and reservoir have remained in place for 53 years solely to satisfy a very narrow constituency! I have experienced everything the dam and reservoir have to offer, and that is why I haven't visited the area in years. If I want to visit the Ocklawaha, I stop long before reaching the reservoir. It is time to respect your responsibility to the people of Florida, and to protection of the resources under your management, by finally pursuing the partial restoration alternative. Breach the dam and drain the reservoir.	Failure to move forward with partial restoration will require a wasteful, counter-productive investment in repairing or replacing the obsolete dam given the threat it represents to downstream residents and landowners. Inaction is simply not an option. It is time to take the long view and recognize that any further investments to simply maintain the status quo are a waste, versus a restoration that will pay dividends far into the future. Such dividends include: 1) 15,000 acres of restored and/or revitalized floodplain forest. 2) Greatly increased flows to the lower St. Johns River, which is already suffering from salt water intrusion. 3) Restored habitat for anadromous fish, many with recreational value to sport fisherman. 4) Restored access for manatees to openly move from the St Johns to the Ocklawaha and the warm water refugium of Silver Springs, and the other springs that would re-emerge with draining of the reservoir. 5) Increased recreational access and usage, and the resulting spinoff benefits to the local economy. 6) Enhanced ability for flora and fauna to make use of the COO Corridor. 7) Negation of the need to invest in expensive and damaging treatments to manage the growth of aquatic weeds. And finally - the Marjorie Harris Carr Cross Florida Greenway is an environmental, recreational and economic gem. It reflects what the drowned section of the Ocklawaha River COULD be with restoration. While the cost to restore could be more than the cost to repair and maintain the dam OVER THE SHORT TERM, the long list of environmental and economic benefits that would result from restoration would quickly offset and exceed any "savings" under the status quo alternative. It is sometimes stated that government would be more effective and efficient if it was run more like a business. While that is a gross oversimplification of reality since government's success can't be measured in the simple "bottom line" way of a private business, it is a fact that "return on investment" should still count in public sector projects. The science and several economic analyses have shown the return on investment for restoration, versus maintaining the status quo, is far greater. I can't conceive of a public infrastructure project that is a greater "no-brainer" than the choice we face here between restoration or maintenance of a destructive and counter-productive status quo.	No. The only viable alternative is restoration. Common sense, fiscal responsibility, and cost-benefit considerations support it. There is no compromise or half-measure that can be supported as cost-effective or fiscally responsible. Breach the dam, drain the reservoir, and invest in public access and expanded nature-based recreational opportunities.	I mentioned fiscal responsibility among my previous comments. There are other elements of fiscal responsibility that apply here! It would be foolish to leave money on the table. There are federal funds available to support dam removal through recent infrastructure legislation passed by Congress. As one of the most endangered rivers in the United States, so designated by American Rivers, the Ocklawaha would be a good candidate for such funding to help defray the costs of restoration to the state. Likewise, the Florida Wildlife Corridor Act passed by the Florida Legislature during the 2021 session provides a funding source that could be applied to complete the protection of approved Florida Forever projects in the COO Corridor. Choosing the restoration alternative would increase the value of investing in protection of those lands, and thereby increase the attractiveness of this region for nature-based recreation and ecotourism. I fear the State of Florida will lose the opportunity to essentially "cost share" some expenses by failing to finally move forward with restoration NOW.
9/27/2021 15:12	Pinellas		No	No				Wildlife viewing	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 Million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 30 years.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a native Floridian, I retain vivid memories of fishing with my dad on the Ocklawaha River in my youth during the 1940s. It would be wonderful if restoration could recreate some semblance of the magical place that I saw then.
9/27/2021 15:16	Duval		No	No					I would like the dam to be removed.	A free-flowing Oklawaha would aid the health of the St Johns River.	the expense of dam restoration, when the dam is not in our best interest.	No. The dam needs to be removed, period.	
9/27/2021 15:20	Volusia		No	Yes		2-5 times		Canoeing / Kayaking Wildlife viewing Other: prefer viewing exploring more naturalized areas	Partial restoration at a minimum, would prefer that the SJWMD did an extensive restoration of the full river/floodplain of the largest tributary of the St. Johns river , water quality and quantity have been impaired for too long. The dam structure needs to be removed completely and the original river channels restored. Free the fowling springs and the river !	American Rivers ranked the Ocklawaha as the 9th most endangered river in 2020. The Cross Florida Canal was a mistake from it's earliest conception in the 1930s all the way to present 2021. It's past time to do the right thing and attempt restoration of an ailing ecosystem created by the folly of man.	The continued abuse of the Floridian Aquifer and water degradation due to overdrive of available potable water to feed what has become a growth explosion that currently makes Florida the 3rd largest population in the United States and still growing !	Any effort is needed but it needs a serious dedicated and funded restoration program to address a seriously ignored situation. Floridians need to address and act on corrective measures to at a minimum prevent further decline of a valuable resource - clean healthy WATER is important for all of Florida.	
9/27/2021 15:20	Putnam		Yes	Yes		2-5 times		Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier	The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most impactful and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 65% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.
9/27/2021 15:28	Alachua		No	No					I would like to see the Ocklawaha River restored in my lifetime. The Rodman Dam no longer serves a viable purpose and has become an environmental threat to the rest of the river.	The current state of the dam is a real example of neglect and it is rife with trash and debris.	My biggest concern is that more invasive species thrive in the waterways involved because of the destruction caused by the dam.	I don't think so. The Rodman Dam was a bad decision to begin with and it remains so. Manatees used to be able to swim all the way to Silver Springs. Now they are dying.	Your agency has never impressed me as one that works for the environment but is peopled by many development interests and caters to the like.
9/27/2021 15:31	Hillsborough		No	No					Use the plan to breach the Kirkpatrick dam to restore the flow of the Ocklerahta.	I believe this would improve the environmental conditions of the Ocklawaha, Silver and Saint Johns rivers environs which word be beneficial for native plants and animals, as well as benefiting local residents.	We will continue to lose the beauty of our Florida natural resources and the ongoing effort to maintain the dam and reservoir will require increasing public funding for maintenance which could be better used for our citizens.	Not that I can think of currently. If there are other options presented I would be happy to entertain them. If so, I would hope there would be a comment period.	All the maps I've seen predicting the future growth in Florida seem to have no concerned about replacing our natural resources with building and development. Many people enjoy the outdoors in Florida specifically because of these beautiful resources. I believe it is necessary for us to show concern for, and preserve these natural resources, before developers and politicians become enamored with the growth. Please help us maintain our quality of life in Florida.
9/27/2021 15:34	Volusia		No	Yes		More than 5 times		Wildlife viewing	Use the marijuana plant to get rid of red tide and other chemical mess killing our wild life stop being such a jerk about what is right	Use the marijuana plant to clean up our water	Stupidity of the Floridas fish and wildlife and other idiots who want the status quote	Start doing what's right and stop being puppets.	Stop being the status quo. Scientists have fallen into the political trap. Stop it. Be bold
9/27/2021 15:37	Orange		No	Yes		1 time		Wildlife viewing Other: Relaxing and enjoying the view	Returned to its natural state before the dam was added.	It's an nature intended and allows for the Wildlife Corridor to be functional and complete	Disconnection off the Wildlife Corridor and native plant species and animals negatively impacted.	Not really	
9/27/2021 15:42	Madison		No	Yes			1 time	Fishing	Leave the reservoir and dam in place.	The reservoir is an amazing wildlife refuge and a world class fishing destination.	Loss of revenue for the counties surrounding the reservoir and loss of a great recreation resource. None that I	None that I am aware of.	
9/27/2021 15:46	Duval		No	Yes			1 time	Wildlife viewing	remove it	restoration of the environment	continual environment damage	no	
9/27/2021 15:46	Pasco		No	Yes		2-5 times		Wildlife viewing	Would like to see it removed and the natural flow of the river restored. Frankly the water quickly of the system does not appear that great.	Compare to other Florida river system every time I see the Okalawah water my first thought is it doesn't look healthy.	The river will just become a dead drainage canal.	Not really. Removing the control structures is the only solution. Otherwise you might as well leave it as is.	
9/27/2021 15:53	Seminole		No	No									As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("COO") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/27/2021 15:55	Duval		No	No					Removal of the dams to let the Ocklawaha River return to its original state. Many issues with the health of the river and South Florida's bays have occurred because of these dams.	Scientists have proved for years that the dams have caused issues with the river. Private interests and voting threats have been used to stop the restoration of the river	Florida's rivers and bays would co tinge to deteriorate.	Not really. So much of South Florida has been damaged already. Restoration needs to happed before it's too late.	
9/27/2021 16:00	Dade		No	Yes		2-5 times		Wildlife viewing	Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	We are nothing without Earth and its wildlife. We are nothing if future generations can't continue onward.
9/27/2021 16:01	Broward		No	Yes			1 time	Wildlife viewing	Removed	The number of dead manatees found in 2021, which is 1/10 of the total population.	Extinction of this species.	Reduction in fertilizer and sediment entering into the system to promote seagrass growth.	I work in S. Florida as a Manatee observer and the grasses are in serious decline.
9/27/2021 16:14	Manatee		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. 9/27/2021 16:41	Alachua		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	Dam removed, Buckman lock closed	Degraded water quality of St. John's River	Oh, it'll be achieved! Hopefully in next couple years.	Permanent drawdown.	Exorbitant expense, be cheaper to reimburse businesses that "rely" on reservoir for income than to continue maintenance.
9/27/2021 16:44	Dade		No	No					Breach the dam and let the river flow.	Draining the Rodman Reservoir would remove the single greatest barrier to plant and animal movement along the Ocala to Osceola (COO) Wildlife Corridor by replacing the open water expanse of the Reservoir with a restored floodplain forest, to the benefit of many listed plant species native to the region including the Federally listed Clasping Warea and Scrub Buckwheat.	The Reservoir would continue to be a barrier to movement by native wildlife and plant life along the length of the COO Corridor, and compromise the value of Florida's investments in conserving lands like the Etonah Creek State Forest, and approved Florida Forever projects.	No compromise!	
9/27/2021 16:54	Outside of state / other	North Carolina	No	Yes		1 time	2-5 times	Wildlife viewing	Preservation	Clean water	Wildlife loss	None	
9/27/2021 16:55	Outside of state / other	Texas	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Environmental concerns	That further action would be taken towards building the dam	Maybe.	It's time to put environmental concerns over profit.
9/27/2021 16:58	Duval		No	Yes		1 time	2-5 times	Canoeing / kayaking Wildlife viewing	The Kirkpatrick Dam must be removed, in order to restore proper flow to the Atlantic Ocean from the LSJR. This has been demonstrated and modeled sufficiently by involved parties.	Each annual report of the LSJR contains data regarding degradative effects to date on freshwater flow and supply since the Dam was built.	I have been conducting research on Florida manatees since 1993. We all know well the multifold destruction of this beautiful waterway in past decades. Humans, animals, and plants require a safe, continuous hydrologic cycle of freshwater. If this dam is not removed, continued breaching of the Floridan aquifer is guaranteed.	Nope.	Our children's children, as well as Ded Florida, are watching the decisions we make and allow. We know what is correct.
9/27/2021 16:58	Alachua		No	Yes			1 time	Wildlife viewing	Restore the oklawaha	$50 million approximate income to the area and wilderness restoration	Chiefer	No	
9/27/2021 16:59	Outside of state / other	toned in New Smyrna Beach/Bethune	No	No					I would like to see it breached so the river can flow freely. We have seen the area of St. John's River gradually decline over time. The water looks terrible - sometimes green, brown. And, what was once a wonderful area to fish now has just a fraction of the fish there used to be. The entire area seems to be dying off.	Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier.	The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No	
9/27/2021 16:59	Volusia		No	Yes		1 time	2-5 times	Boating Wildlife viewing Other: Enjoying the outdoors	Removal	It is important to the health of the St. Johns River Basin and the health of the environment to let the river flow free.	Some other group might decide it is a good idea to try something like that again.	Not really.	My years of serving on SJRWMD Governing Board taught me how much to appreciate our natural environment and how many mistakes we have made, the Kirkpatrick Dam was a big one. Saundra H. Gray(I have already answered this once, maybe I should't send another)
9/27/2021 17:04	St Johns		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	This is a fiscally responsible decision that protects residents' homes and results in improved water quality, adds a boost to Florida's economy and affords more access to recreation that my family enjoys, namely birding, kayaking, and visiting Florida springs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe. It is a rare opportunity indeed when environmental, economic, and public safety interests all win! Let's not miss it!	No. Dam safety, improved water quality, economic benefits of recreation opportunities, and wildlife can't wait. Repairing the dam is fiscally irresponsible.	
9/27/2021 17:08	Marion		No	Yes	1 time	2-5 times	More than 5 times	Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing	Please remove the dam. I would like to see a free flowing Ocklawaha river. I would also like to see the flooded springs that were lost.	The purpose behind building the dam was obsolete shortly after the dam was complete. It is a waste of money to continually maintain the dam and lake. The dam does not provide any material benefits to the locals, county or state. The fishing would be even better if the river was free flowing. It would help make the Ocklawaha a premiere fishing destination. Seeing all the herbicides used to keep Rodman Reservoir navigable and free of weeds is awful.	Continued waste of taxpayer monies to benefit a small subset of a small community. An obsolete and expensive to maintain piece of infrastructure should be removed.	Yes. If the Ocklawaha river could be restored to a free flowing state and the lost springs allowed to flow again I could support a compromise.	

9/27/2021 17:11	Duval		No	Yes		2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing Other: We have hiked there and kayaked	I would like that dam breached and allow the river to flow freely. The Ocklawaha was once a beautiful river and it's time to remedy the mess that was started years ago. Breaching this dam would help so many species both plant and animal and it would allow the 7500 acres that are currently submerged to be available again as forest and help with flooding too. This should have happened years ago.	The fact that 7500 acres of land would be allowed to revert to its original state while allowing migratory fish and manatees the ability to move freely once again. The springs would be opened up and so many species of plants and animals could be revived. Water quality would be improved as well, not to mention that the cost of maintaining that stupid dam would be gone.	Water quality will continue to decline, flooding at along the river will continue be there is nowhere for the water to go currently. All the wonderful species that will not be able to migrate and continue to disappear due to the mess that is called Rodman Dam and reservoir. The economic benefits from breaching this dam will be wonderful due to the many people coming there to hike and kayak in the beautiful river that can be again.	NO! This dam must be breached and NOW! We have toadied up to the few bass fishermen that like it the way it is but there are too many people all along this river's route that must finally be listened to. We here in Jax know that flooding up here will occur again and again unless we allow the land to revert back as a flood plain. You must do this now!	
9/27/2021 17:13	St Johns		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing Other: Exploring the Springs during draw down	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway. The economic impact to bring the dam to current standards is not one that the tax payers of Florida should take on to benefit a small special interest group of bass fishermen.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier $5,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife $50+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers $4-14 Million in dam repairs saved on a dam past its life expectancy Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. $57 million in potential flood damages avoided to downstream property owners	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical—manatee, water quality, wildlife habitat, and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. A storm event triggers a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait	Now is the time to finally make meaningful environmental wins for the long term prosperity fo Florida. The outdoors and environment are just one of the many reasons people visit and move to Florida. Aside from the benefit to bass fishermen the Rodman Dam has shown no other purpose in being maintained. We have continued to vote to show that the environment is a non partisan issue and recreational use of our resources is a benefit to all citizens of the state.
9/27/2021 17:20	Sarasota		No	Yes		2-5 times		Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality and wildlife is inflicted throughout the great Florida River Way.	Three Rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored.	We miss the best opportunity to do this! State and Federal funds are available , public interest is high, environmental needs are critical—manatee, water quality, wildlife habitat—and the dam is unsafe.	No! Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait!	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway.
9/27/2021 17:22	Marion		No	Yes		1 time		Other: do not use but use the silver river	gone	the health of the ocklawaha and silver rivers	the death or destruction of the silver as we have known it.	no	
9/27/2021 17:22	Lake		No	Yes		1 time		Wildlife viewing	Remove the dam to allow the natural water flow!	The wildlife would benefit from this action!	Wildlife decline!	I don't think so!	Thank you for allowing my input! Please consider it for the animals sake!
9/27/2021 17:28	Marion		No	No									
9/27/2021 17:28	Alachua		No	No					Remove the dam. Allow free flowing water for manatees. Restore to natural form.	Manatees need access to clean, warm, healthy water in order to survive.	More manatee deaths		
9/27/2021 17:34	Lake		No	Yes		2-5 times		Other	Taken down	Take it down	What's the plan next	Probably	
9/27/2021 17:47	Duval		No	Yes	1 time			Fishing (shoreline/structure) Wildlife viewing	Remove the dam and restore the natural flow of the river.	There is loss of natural water flow and habitat balance by damming the river. It smells unclean and actually like a sewer to me on a recent visit. I was really disappointed in the poor appearance of this area.	Continued disruption of natural waterflowl and essential balance of wetlands and shoreline. Lack of restoroation of cleanliness, habitat, and reclamation of natural replenishing water flow. Further deterioration of the health of this area.	No. It is either a natural flowing river or a mess of human interference. The river must be restored. You can see right now, in some aspects, what is happening with drought in the areas of dams in the west.	Florida has a unique ecology. Much of this precious environment depends on our water, whether fresh or salt, river or spring. The reason the dam was built is no longer existent. We have a very short-lived chance to replace what has been lost. This issue has been debated for years and it is because it is the right thing to do. Now is the time. We have nothing to lose by restoration of the river.
9/27/2021 17:49	Pinellas		No	No					Partial breach of the dam	The death of manatees aided by the loss of seagrass. Any river flow we can restore will help.	Continues loss of life of Florida's endangered species	No	
9/27/2021 17:51	Outside of state / other	Albany County	No	No					I would like the Ocklawaha River restored to something like its original state by removing certain portions of the Kirkpatrick Dam, so that wildlife such as manatees would be able to use it. As I understand it, the objective of the dam was originally to construct a canal; but this was not done.	A letter from the Save-The-Manatee Club.		Considering that much of the Everglades was drained for various reasons (and these reasons were sometimes perfectly legitimate), I'm not sure the Rodman Reservoir is needed.	I'd have to see what scenario someone has in mind and think about it.
9/27/2021 17:56	Pinellas		No	No					Please remove the dam and let the Ocklawaha River flow, allowing fresh water and ecosystems to be restored.	Www.freetheocklawaha.com is the best summary of the research that supports my position	Environmental impacts that are not only financially disastrous, but continue the ruin of FL resources for ourselves and the following generations.	I have not yet heard of a logical, reasonable alternative	
9/27/2021 18:11	Alachua		No	Yes		2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	7,500 acres of the lower Ocklawaha's historic forested floodplain, 20 freshwater springs, and many miles of natural river channel that were drowned as a result of dam construction would be restored. Thousands of acres of submerged aquatic plant communities would be able to regenerate in the restored river channel, and in the re-emerged spring run streams that drained into the Ocklawaha historically. 8,000 acres of crossed floodplain wetland located downstream of the dam would be enhanced. Imperiled plant species like the endangered Star Anise and threatened Hartwrightia, which are native to the banks of this region's spring run streams, could expand their range into the restored spring systems. Draining the Rodman Reservoir would remove the single greatest barrier to plant and animal movement along the Ocala to Osceola (OZO) Wildlife Corridor by replacing the open water expanse of the Reservoir with a restored floodplain forest, to the benefit of many listed plant species native to the region including the Federally listed Clasping Warea and Scrub Buckwheat. Three river systems - the Ocklawaha, Silver and St. Johns - would experience significant environmental improvement from restoration. Manatees would regain open access to the warm water habitats of the Ocklawaha and Silver Springs. Migratory fish including the Striped Bass, American shad, American eel, and the critically Endangered Atlantic Sturgeon and Shortnose Sturgeon would once again have open access to the Ocklawaha system if the dam is breached. Recreational sport fishing would be enhanced by allowing the Florida strain of the Striped Bass to reclaim what used to be its primary spawning habitat - the Ocklawaha. The broad array of environmental benefits to native flora and fauna, including many imperiled species, that would result from restoration would not be possible. Water quality in the Rodman Reservoir and Lower Ocklawaha/St Johns River system would continue to decline. The economic benefits that would result from increased and enhanced recreational usage would be denied to the surrounding local communities. Residents and business owners in areas immediately downstream of the dam would continue to be under threat in the event of failure of a dam that has never, and will never, satisfy the purpose of its construction. Thousands of acres of submerged aquatic plant communities would be unable to regenerate in a restored river channel and in the re-emerged spring run streams, and 7,500 acres of floodplain forest would not be restored. The Reservoir would continue to be a barrier to movement by native wildlife and plant life along the length of the OZO Corridor, and compromise the value of Florida's investments in conserving lands like the Etoniah Creek State Forest, and approved Florida Forever projects. Taxpayers will perpetually be on the hook for repair and maintenance of the dam and Reservoir, and continue to be liable for any loss of life or property damage that would result from a dam failure. Imperiled plant species like the endangered Star Anise and threatened Hartwrightia, which are native to the banks of this region's spring run streams, would be unable to expand their range into the unrestored spring systems.	No. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration.	Thank you for your hard work!
9/27/2021 18:12	Outside of state / other	Illinois	No	No					Restore the Ocklawaha River by breaching the Rodman-Kirkpatrick dam.	The damage prevents natural migration of native fish and Manatees from obtaining refuge and foraging during the cold months. By breaching the dam it would restore the flow of freshwater and improve the overall ecosystem for Florida's wildlife.	Loosing the precious Manatee. They are dying at an alarming rate!	No, the time to act is NOW.	I do not live in Florida. Nothing brings me greater joy than visiting your beautiful state. You are so fortunate to have such a beautiful ecosystem. The health of your waterways is of extreme importance. Please realize how fortunate you are and take care of all of your magnificent species, especially your Manatee's.
9/27/2021 18:15	St Johns		No	Yes		1 time		Fishing Boating	Retain the lake and dam. Operate it to maximize fishing and wildlife which should be consistent with each other.	Rodman acts similarly to wet detention systems to trap nutrients keep them out of the river. Essentially the same amount of water flows out on an annual basis as flows in. .	Sudden influx of accumulated nutrients and sediments into the Ocklawaha below existing dam and on to the St. John's River . Also a degraded mucky bottom land taking many decades to evolve into a bottom land forest. Cattails over 8,000 acres or more. Zero benefit.	Maybe but I have not heard any proposal from anyone.	What is up with Stick Marsh/Farm 13/Yellowmere Reservoir/Water retention areas being built south of Okeechobee? Why have they been built? Also, eagles, wading birds, fish of all species, alligators, turtles, wetland mammals do not know when made from natural. The environmental crusade against Rodman is partly based on subjective taste and partly on the egotistical desire to win. The idea of " mitigating " the St. John's dredging by destroying Rodman is insultingly stupid. Like no one knows how a bathtub or reservoir works. I don't fish Rodman much as I prefer the St. John's River but I know why people like it and I respect that and it does serve a water quality purpose and it does have management benefits.
9/27/2021 18:17	Hillsborough		No	Yes		2-5 times		Wildlife viewing	Let it flow naturally	It was a failed plan many years ago. Don't waste tax payers dollars on it. Let nature be so generations can enjoy it.	Money wasted	No.	
9/27/2021 18:20	Alachua		No	Yes		2-5 times	More than 5 times	Wildlife viewing Other: looking for freshwater mussels shells and bird watching	Drain the reservoir and remove the dam. After removal the floodplains that were inundated should be maintained in public ownership (County/State??) as recreational lands for hunting, fishing, hiking, boating, canoeing, kayaking, birding, and camping activities. Access to the springs would be an important component for the riverine ecosystem going forward. After draining the reservoir the area should undergo active restoration towards maximizing the public use activities. This should offset any lost revenue from reservoir based recreation.	I am a research aquatic biologist (retired USGS and FWC - but still writing and publishing) and understand the importance of having an open, unobstructed, free flowing river to maintain native fish populations especially those species that make spawning runs such as sturgeon (both Shortnose and Atlantic) and shads (genus Alosa). There are also other fishes that would would make seasonal runs up the river that are currently blocked by the dam. With the deepening of the Port of Jacksonville plus sea-level rise it is going to be critical for fishes to have more access to tributary rivers as the lower St Johns becomes more saline.	The continued loss of the riverine and terrestrial wildlife habitat. The continued funding required for the lock and dam O&M (operation and maintenance) is money down the drain. As the lock and dam ages the funding for O&M will only increase. Its ridiculous to continue to fund the O&M of a big fish joint that has to be drained every 3-5 years. The presence of lake (reservoir like) resources in the area (e.g. Lake George, Little Lake George) are plentiful vs riverine systems.	No. You either have a dam and reservoir unless you take it out and then you have a river	Please take out the Rodman lock and Dam
9/27/2021 18:24	Duval		No	Yes			More than 5 times	Fishing (shoreline/structure) Boating	Remove dam and return to natural environment	The Ocklawa is one of Florida's most precious treasures	More degradation of Florida's natural beauty by greedy profiteers	No	It is high time this injustice to our beautiful state and it's citizens by profiteers is corrected. Return it to the way God gave it to us.
9/27/2021 18:26	Putnam		No	Yes	2-5 times			Fishing Fishing (shoreline/structure)	Preserve it!	The reservoir has created a fantastic eco system over 50 years	I'm 70 years old and fished the reservoir since it was created, also fished the oklawaha river before that, it will be centuries before it could recover to its original state	No !!!	These people who would like to destroy the reservoir are very misguided, most of these people are not from the counties the barge canal runs through, most are from miami/ Dade, if they got their wish the economics will very much hurt these counties, you can throw a rock across the original river at any given point, lucky for two boats to pass by each other, that's my assessment of it, from someone who has been there before the canal and after
9/27/2021 18:27	Brevard		No	No						The cost to repair the dam is $14 million while removing it would bring money into Florida by restoration by the river	Homes will be destroyed and costs will increase if the dam breaks	No	The river needs to be restored
9/27/2021 18:28	Putnam		Yes	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Manage the water for water sports and nature watching. Leave the dam in place and the reservoir , as is.	Personal knowledge and a recreational and professional fisherman / guide. It supports great wildlife and environmental pluses.	Lose of my favorite activity area and my livelihood. I rely on the Reservoir for my guiding job / career. It is known worldwide for its outstanding bass fishing.	No. Any scenario other than the one I support, would cause catastrophic harm to the Reservior and eliminate the Reservior all together.	Keep Rodman Reservior as is. It's is a totally unique ecosystem and an economic boost for the areas, it flows through.
9/27/2021 18:32	Alachua		No	No					I would like to see the durn dam torn down completely.	The challenge to our springs and the manatees and the loss of fish such as bass.	I am most concerned about the wildlife and the water in the rivers and springs.	Not really. I see no purpose for this dam. It was put up to aid a now non existent barge canal. I think it should be removed and allow nature to return to natural!	
9/27/2021 18:40	Marion		No	No					Breach the dam and restore the river	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife.	Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	
9/27/2021 18:48	Putnam		No	Yes	1 time	2-5 times	More than 5 times	Fishing Boating Wildlife viewing	Leave it as it is. Do not deroxy it.	It is interesting to learn about it and why it was built. Good fishing. Water supply if needed in future.	We may not have a water supply when needed in the future.		
9/27/2021 18:50	Bradford		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Wildlife viewing	I want it to be left as it is....	The fact that it filters the water before it goes to the river. Also the amount of recreation the lake provides to locals as well as tourists.	If we lose this body of water, I believe the St.Johns river pollution will suffer.	Nope	
9/27/2021 18:51	Putnam		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing	Leave it as is.	It is a unique ecosystem and supports an abundance of wildlife.	It would ruin the ecosystem and would have no positive effect for this area of Florida. Also it would have a negative effect on the watershed in this area.	NO	
9/27/2021 18:55	Duval		No	No					Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every additional day the dam and reservoir remain in place results in additional environmental degradation.	7,500 acres of the lower Ocklawaha's historic forested floodplain, 20 freshwater springs, and many miles of natural river channel that were drowned as a result of dam construction would be restored. Thousands of acres of submerged aquatic plant communities would be able to regenerate in the restored river channel, and in the re-emerged spring run streams that drained into the Ocklawaha historically. 8,000 acres of crossed floodplain wetland located downstream of the dam would be enhanced. Imperiled plant species like the endangered Star Anise and threatened Hartwrightia, which are native to the banks of this region's spring run streams, could expand their range into the restored spring systems. Draining the Rodman Reservoir would remove the single greatest barrier to plant and animal movement along the Ocala to Osceola (OZO) Wildlife Corridor by replacing the open water expanse of the Reservoir with a restored floodplain forest, to the benefit of many listed plant species native to the region including the Federally listed Clasping Warea and Scrub Buckwheat. Three river systems - the Ocklawaha, Silver and St. Johns - would experience significant environmental improvement from restoration. Manatees would regain open access to the warm water habitats of the Ocklawaha and Silver Springs. Migratory fish including the Striped Bass, American shad, American eel, and the critically Endangered Atlantic Sturgeon and Shortnose Sturgeon would once again have open access to the Ocklawaha system if the dam is breached. Recreational sport fishing would be enhanced by allowing the Florida strain of the Striped Bass to reclaim what used to be its primary spawning habitat - the Ocklawaha.	The broad array of environmental benefits to native flora and fauna, including many imperiled species, that would result from restoration would not be possible. Water quality in the Rodman Reservoir and Lower Ocklawaha/St Johns River system would continue to decline.	No	
9/27/2021 18:57	Jackson		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 Million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway. .	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/27/2021 18:58	Palm Beach		No	Yes			1 time		Remove dam and restore frae flowing stream.	Wildlife corridor and the fact that the dam was part of a project that was never completed and is not needed.	Maintenance dollars spent on this unneeded dam and continued impediment to fish movement, manatees, etc.	Gradual lowering of reservoir to eventually result in elimination.	
9/27/2021 18:59	Outside of state / other	Escondido, California	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 Million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	We have to act quickly. So far we have done a really bad job of "managing" this planet and its creatures. We need to step up and be Good Stewards not destroyers.
9/27/2021 19:01	Putnam		No	Yes		2-5 times		Fishing Wildlife viewing	Leave it like it is.	Would take years and years to go back to it's original form .Just leave it be.	Would destroy the impact of wildlife in the area, not to say that it would also have a big impact on our economy that brings a lot of fishermen into Putnam County.	No, other than just leaving it alone.	SAVE RODMAN……
9/27/2021 19:03	Alachua		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing	Leave as is.	This is now an existing ecosystem that supports abundant wildlife of all kinds. It may have been a bad decision to build the dam in the first place but to remove it now would be another bad decision.	If the dam is removed, it would take many years for this area to reestablish as a viable habitat for wildlife and to be enjoyed by the public.	None that I am aware of.	

9/27/2021 19:04	Marion		No	Yes	2-5 times			Wildlife viewing	Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economics lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/27/2021 19:08	Outside of state / other	The Woodlands, TX	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	20 lost springs and Silver Springs ecosystem are restored	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling camps, and recreation benefits.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
9/27/2021 19:28	Duval		No	Yes	2-5 times	More than 5 times		Fishing	Nothing!! Maintain present status!! Manage water lettuce and continue drawdowns every 3-4 years!!	Personal observation and my professional training.	There is a much larger diversity of wildlife and eco systems than before the reservoir was created so there is no reason to destroy it.	No	
9/27/2021 19:30	Alachua		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Boating	Keep it the way it is. Great fishing	Having the chance to catch a bass of a life time. Only place in Florida. Not to leave out the great crappie and bream fishing	Would lose without question, one of best lakes in the US	No, KEEP RODMAN RESERVOIR	
9/27/2021 19:34	Marion		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Hunting Wildlife viewing Other: Property butts up to river	Keep everything as it is now, wild life and habitats preserved. It is controlled river, from flooding, manatees are able to use it. Commercial guides make a living, fishing and hunting licenses $ for state improvements.	Families and all others visit and use dam and lake.	Big failure to the ego destabilized, always the bad decisions to harm our environment.	Do not tear down dam, it's taken years to make it this prospert.	
9/27/2021 19:34	Clay		No	Yes	1 time	More than 5 times		Fishing	Keep the damn.	It's one of the best fisheries in the state	Environmental impact on the already stable ecosystem.	Closing the locks.	I believe there are so many positive sides to keeping Robin reservoir intact that they're too numerous to list here. From a freshwater holding tank that will pay dividends in the future to the economic impact that has for the surrounding counties..
9/27/2021 19:36	Alachua		No	Yes	1 time			Wildlife viewing	Remove the dam and restore the Ocklawaha River to its historic banks.	Removing the dam and returning the Ocklawaha River and its springs to pre 1968 conditions will allow restoration of habitat of "natural Florida" plants and animals.	If the dam remains, there is a huge loss of the potential ecotourism that would be generated by the return of the naturally flowing river and its springs.	no	I sail and kayak. There are already plenty of water bodies in north Florida for sailing, but paddlers like me would appreciate the return of the Ocklawaha and its springs.
9/27/2021 19:56	Outside of state / other		No	No									
9/27/2021 20:00	Marion		No	Yes			1 time	Fishing Fishing (shoreline/structure)	I would like to see it removed to restore the natural flow it once had without the dams obstruction. Variety of fish population deems the removal as necessary to reestablish what once was flourishing numbers of different species.	The most recent fish counts of the silver springs area.	The failure of the dam based on age as well as losing certain fish species due to over population of the invasive types.	I support the removal completely.	
9/27/2021 20:03	Outside of state / other	CA	No	No					restore manatee habitat		manatee extinction		
9/27/2021 20:12	Outside of state / other	NY	No	No					I would like to see the Ocklawaha River restored as it is the heart of the Great Florida Riverway. Once restored it could provide essential warm water habitat for hundreds of manatees in the winter. Manatees habitat is being threatened and deaths of manatees has been on the rise.	Manatees are struggling with starvation from seagrass loss and the greatest long term threat to these animals is the loss of warm water habitat that manatees need to survive the winter. Right now, 60% of Florida's manatees depend on power plant outfalls to keep warm and survive the winter which is an unsustainable and unnatural situation. Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	A greater loss of the manatee population. This would be devastating to our environment.	Unfortunately I do not know of any other scenario.	Everything we can do to help save manatees and other wildlife from habitat destruction and pollution is essential for our environment. Please help the conservation of manatees and other wildlife. Thank you.
9/27/2021 20:20	Marion		No	Yes			1 time	Wildlife viewing Other: to see it in operation and the surroundings	Open the Rodman Reservoir and Kirkpatrick Dam to flow naturally.	There is a desperate need to restore the lost springs, wildlife habitats, increase water flowing to Lower Ocklawaha and St Johns Rivers and avoid future potential flood damage to property owners.	The State of Florida will pay $$$$ to continue to repair it and this area will be destroyed through diminished habitats, recreational use, and ultimately catastrophic to the environment.	No. We need action now.	This area of Florida has much more water compared to south Florida. It is critical that we be the best stewards of water releases from the breaching of the Dam so that we continue to maintain water for public use and maintain habitats for fish and wildlife. Large you to consider the future carefully.
9/27/2021 20:35	Volusia		No	Yes			2-5 times	Canoeing / kayaking	Remove the Dan and free the Oklawaha river		Destruction of Florida's largest natural water supply	Possiby modifications	
9/27/2021 20:44	Putnam		No	Yes	1 time	2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Removed to allow the river to run free again.	The dam is aging so instead of repairing it at great expense why not dismantle it and allow the Ocklawaha to return to its natural flow.	Money spent on a dam that serves no purpose.	Have not thought about this option.	
9/27/2021 20:45	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Wildlife viewing Other: Relaxing area to watch wild life . Tranquility	Leave it alone for wild life esp manatee, birds, deer, bears and fish! Don't destroy this great place!	I fish! I go to the damn to enjoy the nature and be in tune with it!	Very upset that you would destroy what nature needs to survive! Is it for your need? There are manatee in the river , go look!	You all must go and see the wild life needs! Do not destroy it. The water level is fine.	The cabbage growth is an issue but the bass love to hide under it! We enjoy boating and swimming there! Family events together!!
9/27/2021 20:55	Alachua		No	Yes			1 time	Wildlife viewing	Fill the tie see the dam removed and the reservoir restored to floodplain forest				
9/27/2021 21:00	Outside of state / other	CO	No	No					Provide ecological health		Ecology	Sadness	?
9/27/2021 21:04	Alachua		No	No					Breach the dam so that the reservoir will no longer exist.	The inability of the historic naturally functioning river to exist meaning, among other things, that manatees cannot reach their historic wintering area of Silver Springs.	That the river would not be returned to its natural functioning characteristics as was the case before the dam was built.	Not really. The plan resulting in the deletion of the dam still allows for much of the local area benefit that results from recreation activities possible today to continue.	
9/27/2021 21:05	Outside of state / other	Upland, California	No	No					As a biologist, I believe it would be best for the dam to be breached to allow for all organisms, including humans, to be able to move freely in the waterway. It would benefit everything from manatees to fish and aquatic plants.	Articles in the Florida Phoenix and the Gainesville Sun.	First, that the dam would not be safe. It seems like the repairs necessary are substantial to maintain it as is and that it would probably need to be repaired again in the near future. Second, this is an opportunity to potentially save money and restore habitat. It seems like a win-win.	If they could come up with a way to release more water downstream slowly while maintaining the dam, I would be for it.	
9/27/2021 21:08	Marion		No	No					Tear down the dam to restore the natural, origins, river	FL faces future flooding if the unusable dam is breached in hurricanes or other storms. We could save a potential 57 million dollars by avoiding this flood damage. Manatees are dying,...new the springs and warm waters restored so they won't congregate where there is ot enough food.	An unnatural Florida taken over by exotic species and dying from poor water flow and water quality	No. The dam has not been used for its purpose and should have been eliminated 50 years ago.	So much of Florida has already been ruined and lost to us. This is the time to do restoration before the opportunity and federal funding is lost.
9/27/2021 21:25	Pinellas		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	The fact that numerous studies have shown the Dam is not serving a purpose that outweighs the benefits of restoring the river.	Continued decline in water quality & continued, unnecessary impediments to wildlife and marine mammals' access to springs.	No.	
9/27/2021 21:28	Levy		No	No					Restore the River!	The condition of the dam/reservoir	Much more money required to maintain the dam!	A commitment to gradually remove the dam and restore the river	Haven't we at last learned the futility of trying to control nature?
9/27/2021 21:33	Alachua		No	Yes	1 time	2-5 times	More than 5 times	Wildlife viewing Other: Research/monitoring work	I would like to see the reservoir drained and the dam removed permanently to allow the river to flow naturally again.	• 7,500 acres of the lower Ocklawaha's historic forested floodplain, 20 freshwater springs, and many miles of natural river channel that were drowned as a result of dam construction would be restored. • Thousands of acres of submerged aquatic plant communities would be able to regenerate in the restored river channel, and in the re-emerged spring run streams that drained into the Ocklawaha historically. • 8,000 acres of unused floodplain wetland located downstream of the dam would be enhanced. • Imperiled plant species like the endangered Star Anise and threatened Hartwrightia, which are native to the banks of this region's spring run streams, could expand their range into the restored spring systems. • Draining the Rodman Reservoir would remove the single greatest barrier to plant and animal movement along the Ocala to Osceola (OZO) Wildlife Corridor by replacing the open water expanse of the Reservoir with a restored floodplain forest, to the benefit of many listed plant species native to the region including the Federally listed Clasping Warea and Scrub Buckwheat. Three river systems - the Ocklawaha, Silver and St. Johns - would experience significant environmental improvement from restoration. • Manatees would regain open access to the warm water habitats of the Ocklawaha and Silver Springs. • Migratory fish including the Striped Bass, American shad, American eel, and the critically Endangered Atlantic Sturgeon and Shortnose Sturgeon would once again have open access to the Ocklawaha system if the dam is breached. • Recreational sport fishing would be enhanced by allowing the Florida strain of the Striped Bass to reclaim what used to be its primary spawning habitat - the Ocklawaha. • At least 150 million gallons a day of additional natural flow, and potentially much more, would be restored to the Lower St. Johns River, improving water quality and increasing resiliency of the entire St Johns/Ocklawaha River system by impeding the salt water intrusion resulting from sea level rise. • An estimated $14 Million in dam repairs, measured in 2006 dollars, would be saved by avoiding repairs to a dam that has exceeded its life expectancy and never fulfilled the purpose for its construction.	• • • • • The broad array of environmental benefits to native flora and fauna, including many imperiled species, that would result from restoration would not be possible. Water quality in the Rodman Reservoir and Lower Ocklawaha/St Johns River system would continue to decline. The economic benefits that would result from increased and enhanced recreational usage be denied to the surrounding local communities would ñ Residents and business owners in areas immediately downstream of the dam would continue to be under threat in the event of failure of a dam that has never, and will never, satisfy the purpose of its constru ction. Thousands of acres of submerged aquatic plant communities would be restored river channel and in the reemerged spring run streams un able to regenerate in , and 7,500 acres of floodplain forest would not be restored. The Reservoir would continue to be a barrier to movement by native wildlife and plant life along the length of the OZO Corridor, and compromise the value of Florida's investments in conserving lands like the Etoniah Creek State Forest, and approved Florida Forever projects. • Taxpayers will perpetually be on the hook for repair and maintenance of the dam and Reservoir, and continue to be liable for any loss of life or property damage that would result from a dam failure. • Imperiled plant species like the endangered Star Anise and threatened Hartwrightia, which are native to the banks of this region's spring run streams, would be unable to expand their range into the unrestored spring systems.	No. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration.
9/27/2021 21:46	Alachua		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	I would like to see the dam removed and the Ocklawaha restored to a functioning river.	It would mean that 20 lost springs and the Silver Springs ecosystem are restored, and the St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
9/27/2021 22:03	Outside of state / other	Atlanta, GA	No	No					Breach the Kirkpatrick Dam in order to restore the Ocklawaha River	Manatees are dying at an alarming rate. We need to preserve this species - and Florida's fragile ecosystems.	More ecological destruction and loss of habitat for threatened and endangered animals, including the Florida Panther	No - the Kirkpatrick Dam has got to go!	
9/27/2021 22:09	Marion		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing Other: I love the natural beauty of a manmade reservoir with the added benefit of being a huge storage for fresh water.	Maintain "as is" as a tremendous asset to all of the citizens of North Central Florida. Rodman is an absolutely fabulous resource for outdoor activity and fishing particularly for giant Largemouth Bass, which my friends and I pursue using "catch and release" in-order support that population.	My personal and ongoing experience through the use of this valuable asset on a constant basis.	A complete loss of the resource would be inexcusable in my view and likely the view of many other outdoor enthusiasts.	No, this asset should be maintained.	Please DO NOT destroy Rodman and Kirkman!
9/27/2021 22:15	Outside of state / other	Hutchinson, KS	No	No									
9/27/2021 22:18	Alachua		No	Yes			1 time	Wildlife viewing	Removal of the dam to allow the Ocklawaha River to return to a somewhat natural state	Three river systems - the Ocklawaha, Silver and St. Johns - would experience significant environmental improvement from restoration	Water quality in the Rodman Reservoir and Lower Ocklawaha/St Johns River system would continue to decline.	No. There are no other solutions that would accomplish all of the benefits of removing the dam.	This debate has gone on for a very long time and it is clear to me that all the evidence for economic and ecological benefits point to removal of the dam.
9/27/2021 22:18	Suwannee		No	Yes		More than 5 times	More than 5 times	Fishing Wildlife viewing	I want it to remain as is. I would like to see improvements made to Kenwood road and ramp area so that more people could take advantage of this beautiful place.	Rodman is truly a remarkable place not only as a fishing destination but also host the most diverse bird population I have ever seen in one place. Its the only lake I know of that can be lowered to control invasive weeds without using harmful chemicals. I've been going to Rodman since 1979 and considering the limited access it has always amazed me how many people use it. Even during weekday trips I can never remember going and not seeing other people fishing. The vast majority of those fishermen will know nothing about and will not have the opportunity to give their opinion on this survey.	We will be left with an ugly and unusable mud hole displacing and certainly killing numerous animals that rely on it for their home.	No	If we could go back in time I wouldn't have supported the project but no amount of time or money will take us back to that point in time. Instead of wasting all this time and money trying to destroy something so unique and beautiful why not enhance and promote it so that people from all over our country can enjoy it also.
9/27/2021 22:21	Leon		No	No						Stop the use of taxpayer money repairing and changing what God gave her naturally!! Restore the rivers and Florida's springs. Ehelps wildlife including fish and Manatee Restore the springs Creates future recreation Stops potential flooding It's the right thing to do! I moved to Florida or years ago I've been on many of the rivers and two at least 10 to 15 Springs... Stop leading companies still Florida's number one asset... Water take away any bottling company that don't get back to Florida residence... Water should be free in Florida bottles on my cost like $.10 Restore glory to Florida	Let out as as much water as you can Restore 20+ Springs	Doing everything we can to make things right again	
9/27/2021 22:23	Pinellas		No	No					Restoring the riverway would be beneficial for manatees, other wildlife, and people.	Allowing wildlife to travel freely throughout all riverways has been proven over and over again throughout the country.	The inability of manatees and other wildlife to traverse waterways is crucial for the health of fauna and flora alike. Preventing this would harm the waterways and wildlife.	No	
9/27/2021 22:25	Alachua		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Remove the dam	Would like to see manatees return as well as native fish including sturgeon	lost opportunity to restore native Florida. Expense to maintain a dam that was only justified by a canal system that was never completed and is archaic technology	No, only removal of the dam would achieve my interests	
9/27/2021 22:25	Clay		No	Yes	1 time	2-5 times	More than 5 times	Fishing Boating Wildlife viewing	Remain in place and improvements made.	Fishing reports	Loss of the improved eco system that has developed along with loss of system for removing pollutants from needed water source.	No	None

9/27/2021 22:44	Outside of state / other	Delran New Jersey	No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Preserved for the wildlife and environment	Overdevelopment of natural resources	Extinction of wildlife and loss or damage of more water which is one of our most precious resources	Not if it effects wildlife or natural reasources	
9/27/2021 22:50	Lake		No	No					I would like it removed and out of the way off the real Oklawaha river.	The history of the dam and how it was before it.	That we are keeping a boring artifical lake in the place of a beautiful, wild, and natural river.	No	It's about time we get the real Florida back. There are plenty of places to fish but there is only one Oklawaha river in our state.
9/27/2021 22:53	Pinellas		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers will foster new opportunities for recreation, nature and restoration of the earth.	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait, and neither can humans who all will benefit from environmental regeneration that will take place when we allow land to be restored to more natural manner of functioning, as nature intended.	WATER QUALITY: This exciting restoration will improve water quality and flow by generating an additional 150 millionm gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
9/27/2021 23:01	Alachua		No	Yes	1 time	2-5 times	More than 5 times	Fishing Canoeing / kayaking Boating Wildlife viewing	Breach the dam and allow the natural river to restore itself.	Absence of aquatic life that occurred historically before the dam, and should occur above the dam, e.g. large numbers of manatees, migratory fish including sturgeon (2 species), striped bass, large catfish, and other species.	Continued loss of natural resources, excessive cost to maintain an ecologically destructive dam that no longer serves a legitimate purpose.	No.	The economic argument alone clearly favors breaching the Rodman dam. The reservoir is an unattractive, weed infested, stump-laden, foul watered eyesore only useful for a few bass fisherman who can easily go to nearby, world class bass lakes such as Lochloosa or Orange. Restoring the river will allow huge numbers of manatees moving from the dead Indian River Lagoon to winter in Silver Springs and the other submerged springs, and repopulate this river system, creating a huge tourist attraction. Additionally, striped bass, sturgeon, and giant catfish will repopulate the river, creating a better fishing experience for all. Those two facts alone will create huge economic benefits with no annual costs, unlike the the massive costs of rebuilding and maintaining in perpetuity a dam that no longer has a purpose.
9/27/2021 23:07	Duval		No	No					Remove dam to restore the environment	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers $4-14 Million in dam repairs saved on a dam past its life expectancy Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. $57 million in potential flood damages avoided to downstream property owners	More destruction & loss that can never be recovered: Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. A storm event triggers a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait. As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. This exciting restoration will improve water quality and flow by generating an additional 150 millionn gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most benef	(Con't) Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.
9/27/2021 23:18	Orange		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Allow the river to return to a natural free flow state by breaching the dam. The dam interferes with the natural ecosystem in that area.	Thousands of acres of submerged aquatic plant communities would be able to regenerate in the restored river channel, and in the re-emerged spring run streams that drained into the Ocklawaha historically. Imperiled plant species like the Star Anise and threatened Hartwrightia, which are native to the banks of this region's spring run streams, could expand their range into the restored spring systems. And restoring the endangered plants and natural habitat will help the local economy.	The loss of wildlife, endangered plant species, and the lack of a natural floodplain area when string storms comes through.	No. Breaching the dam is necessary and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration.	
9/27/2021 23:39	Outside of state / other	Sacramento, CA	No	No					Breach the dam to provide more habitat to manatees	The critically low number of manatees	High rate of manatee deaths will continue	Other manatee habitat can be restored	
9/27/2021 23:58	Pinellas		No	No					The Kirkpatrick Dam must be removed and the associated Rodman Reservoir should be permanently drawn down to the natural water level of the river as a result.	This dam and reservoir system does not maintain nearly as much usefulness as a restored floodplain would, while keeping the dam as it is is only increasing costs (repair costs, environmental mitigation, etc..) and risks including flood risks. Keeping the dam as it is is resulting in fewer and fewer of the already few benefits it had. At this point, a free-flowing Ocklawaha is better for not only bass fishing, but for the sustainability of the economy (especially ecotourism) and ecology of the St. John's River basin as a whole.	If removal of the Rodman reservoir and breaching/removing of the Kirkpatrick Dam is not achieved, then this opportunity for the restoration of the largest tributary of the St. Johns River would be lost for the foreseeable future.	There is no alternative which would restore this section of the Ocklawaha River nearly as well as the removal of the Kirkpatrick Dam and the Rodman reservoir.	The restoration of the Ocklawaha via the breaching/removal of the Kirkpatrick Dam would help with global climate effects as well as a restored floodplain forest would make an excellent carbon sink (not to mention the possibility of making now habitat for rare and Florida endemic species) and would allow more water down the St. Johns River to push back saltwater intrusion by reducing evaporation from a reservoir which, at present, is the equivalent to a fifth of the area of Lake George, the widest area on the St. John's River and the second largest lake in Florida.
9/27/2021 23:59	Marion		No	Yes	1 time	2-5 times	More than 5 times	Fishing Boating	help provide manatee food & habitat	manatees are perishing in other areas	poisoned waters in other areas		protect our beautiful lake from idiots who don't love what a valuable treasure we share
9/28/2021 0:02	Outside of state / other	Georgia	No	Yes		More than 5 times		Fishing Fishing (shoreline/structure) Boating	Leave it in place	Conservation of the diverse wildlife present there	Harm to the diverse ecosystem		
9/28/2021 0:04	Levy		No	Yes			1 time	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	20 lost springs and Silver Springs ecosystem are restored	The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
9/28/2021 0:27	Outside of state / other	9221 Pioneer Place, Aromas, CA 9500	No	Yes			1 time	Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor.
9/28/2021 0:53	Duval		No	Yes			1 time	Other: Visiting	I would like to see the dam dismantled and the waters resume their natural course.	It would help reduce the current challenges facing Florida wildlife (such as manatees) and waterways (submerged springs and rivers). FL is going to have to deal with this sooner than later. The faster FL allows itself to get back to its natural environment, the better. This will help preserve wildlife, protect our drinking water, food sources, and curb flooding.	The negative impact in both the near future and in the long term. The interference with the state's waters has created a myriad of problems: flooding for days after hurricanes leave, sinkholes, compromised foundations in buildings, severe flooding, drinking water disputes, high death of manatees, red tide, harm to the fishing/shrimping industries, high insurance costs, destruction of our natural beauty.	No	So much of Florida has been tampered with and it is now clear that it cannot be maintained. Even with constant repair and funds, its unnatural infrastructure cannot constantly be maintained properly for decades. The negative impacts outweigh the benefits. Florida must go back to its natural state as soon as possible. There is no way to avoid this fact and it is better if it is done overtime, when situations such as this arise. Take advantage of this opportunity to take a step towards getting Florida back to how it is suppose to be.
9/28/2021 0:55	Palm Beach		No	No									
9/28/2021 1:47	Outside of state / other	TX	No	No					Reverse the process by opening the river as it used to be	Manatee survival is of utmost importance . Restoring the river will warm the waters leading to acceptable habitat for them.	Wildlife demise, further destruction of habitat for other species	Not at this point	
9/28/2021 2:45	Outside of state / other	Elsa	No	No									
9/28/2021 3:30	Outside of state / other	American in Germany	No	No					I believe that the Ocklawaha River needs to be restored and that breaching the Kirkpatrick Dam is necessary for this to happen. I appreciate that I'm not a resident affected by this, but I am a strong supporter of wildlife. Whenever we do something that benefits wildlife, it actually does benefit humanity as well, even though sometimes we are reluctant to see it because instead of seeing the practical benefits, we see only a loss of recreation or something else superficial.	Manatees, who are on the brink of extinction, would greatly benefit by the restoration of the Ocklawaha River. It is the most impactful manatee restoration project in Florida and will give them warm water they need for survival while also positively impacting other wildlife. A healthier environment that helps other species, also does help the public.	The hastening of the extinction of manatees and the domino effect that will follow.	Because of the urgency of the situation, there is nothing short of doing everything possible to protect the manatees remaining by breaching the Dam and restoring the Ocklawaha River. The longer the situation is left as is, the more damage is done and eventually becomes irreversible.	Our ancestors and past generations didn't realize the negative, harmful impact they had on the world around them so ignorance is a factor in how we came to be in the current situation we are now. But we have known for at the very least a couple decades that we are driving species to extinction, harming our environment and manipulating nature to make things more convenient for ourselves regardless of the impact it has on future generations. I don't think that should sit well with anyone and I hope that anyone with any power to make changes in the attempt to reverse and minimize the damage will do so. Thank you for the opportunity to comment.
9/28/2021 3:40	Washington		No	No									
9/28/2021 4:37	Duval		No	Yes	1 time	1 time	More than 5 times	Fishing Wildlife viewing	Maintain it as is.	It is a wonderful resource and could provide water in a disaster or shortage. It is critical to that locality's economy. I want to add that my absence in the last 2 years is a result of failed surgery that prevents me from using a boat easily.	The loss of this great resource and the effect this loss would have on the area's economy, Also the loss of this potential as a water resource if needed.	NO !	I have been ussing that facility since it was opened to the public and testified as an expert fisherman on it in the first U.S District Court trial held to try to destroy it. Yup i am old - 85 .
9/28/2021 4:38	Broward		No	Yes	1 time	1 time	1 time		Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. Also, $57 million in potential flood damages avoided to downstream property owners	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/28/2021 5:08	Monroe		No	No					Manatees be made a priority over everything else	species endangerment	loss of species	?	
9/28/2021 5:13	Outside of state / other	Las Vegas	No	No									I lived in Casselberry. If most of my life. I would enjoy seeing the manatees in our Florida waters. I wish that there's a way both of us can live in harmony. Thank you
9/28/2021 5:50	Marion		No	Yes			1 time	Other	Get rid of it.	Nature in our waterways being out of balance.	Continued decline of native fish, invasive species taking over.	Open to any ideas that help the environment.	
9/28/2021 6:00	Outside of state / other	Ann Arbor	No	No			1 time	Wildlife viewing	Get rid of the dam and restore the natural flow of the Ocklawaha	Restoring the natural flow would allow manatees to come and go freely as well as improving the overall health of the river, and better fishing. It would reduce the costs and negative impacts of spraying herbicides because if the river flowed freely less aquatic plants would be clogging up the waterways. It would also reveal the beautiful and wonderful natural springs such as Canon Springs and several others. The dam is not necessary and needs to be removed!			
9/28/2021 6:11	Alachua		No	Yes			1 time	Other: I do not USE it. I wanted to see it, so I took a boat ride there.	I want it removed. I want a free flowing River and springs.	It is long overdue. It is costly to maintain the dam and it is not natural. Let the Ocklawaha flow.	Years of more degradation to the environment and unnecessary expense.	No.	I took a debate class in college 40 years ago and I debated not having the cross Florida barge canal. This has been going on far too long.
9/28/2021 6:19	Putnam		No	Yes			1 time	Fishing Boating	I would like to see the dam and reservoir maintained exactly as it is currently.	Although its not the same as before the dam, the area has become a new ecosystem complete with a diversity of nature and wildlife.	Removing the dam and draining the reservoir would create an inaccessible are of mud and debris that would take a very long time to recover during which some wildlife and fauna my be lost forever.	If the Buckman Lock is too large to support financially, I would accept a renovating the lock to a smaller, lest costly operation.	Removing the dam and reservoir to restore the area to its original state is unnecessary. The area has developed into a vibrant and diverse ecosystem. Draining the reservoir would be expensive. The area would be a disaster taking a long time to recover as well as opening the area to potential development.
9/28/2021 6:21	Brevard		No	No					Decommission the dam and return the rivers to their natural flow.		The continued degradation of our environment and species extinction.	We are at the tipping point of ecosystem collapse and all efforts MUST be made to reverse the damage humans have done.	
9/28/2021 7:04	Marion		No	Yes			More than 5 times	Fishing Canoeing / kayaking Wildlife viewing	Remain as is	Magnificent fishing and wildlife habitat now. It would take hundreds of years to achieve total restoration.	Impact on existing wildlife, property values would plummet, fishing industry would be hard hit.	I would have to hear what it is first.	
9/28/2021 7:16	Duval		No	Yes			1 time	More than 5 times	The reservoir provides a great wetland for many animals - birds, reptiles, fish. Habitat for wildlife is shrinking everywhere. This should remain as is to provide that much needed habitat.	The habitat loss for wildlife that is occurring all over Florida and a lightning pace. It would be a huge loss for the wildlife if the reservoir was not there. So many birds, reptiles, bears, deer, the list goes on. The area is a conservation success, how does it make sense to remove habitat?	Again, the much loss of habitat for wildlife.	I cannot see how taking away wildlife habitat, in any amount, is a win for wildlife, or a win for conservation.	There is an economic value for those that have shops and have jobs related to the outdoor industries. I have also read somewhere, the water in the reservoir is very clean in comparison to the St. John river.
9/28/2021 7:40	Outside of state / other	Ohio	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 Million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/28/2021 7:46	Alachua		No	Yes		1 time	2-5 times	Other: I have driven in the area.	Breach it and let the Ocklawaha flow freely.	We have destroyed native habitat for no good purpose.	We would continue to have an environmental disaster, and unnecessary expenses to maintain a dam.	No	Make the decision, restore the river, and be done with it.
9/28/2021 7:48	Flagler		No	No					Open it up again	Restoring anything back to the way it is meant to be makes sense. For the fish and animals. For the environment			
9/28/2021 8:04	Leon		No	No					Breach the dam and restore the rivers, especially the Oklawaha River.		The river and the wildlife it supports will die out.	Nope, unless you want to just drain down the dam a bit to see if that helps SHORT TERM.	
9/28/2021 8:20	Putnam		No	Yes			1 time	Boating	Do away with it,all,restore the river back to the way it was	The facts	Wildlife displaced	None	Get rid of the damn dam
9/28/2021 8:35	Alachua		No	Yes		1 time	1 time	Other: I just look at it and the damage it has done to the wetlands that were flooded.	I would like the dam removed to restore the Oclawaha River. The fishermen could fish in the restored river. The businesses could modify their business plans to adapt to the changes.	The water quality of the Oklawaha and St Johns River would improve and they would both be more productive systems. Plus, I do not want taxpayer dollars used to maintain the dam.	Continued poor water quality in the St. John's River, blocked access to the Oklawaha for manatees and fish, eels, and other wildlife. Continued use of taxpayer dollars to support and environmentally poor system.	No. The dam must be removed.	
9/28/2021 8:40	Ocoilea		No	Yes	1 time			Wildlife viewing	Restoration by breaching the dam	20 springs and miles of natural river would be restored	The economic benefits that would result from the increased recreational usage	No	
9/28/2021 8:46	Outside of state / other	Richmond Hill, GA	No	No					I would love to see the dam breached and the Great Florida Riverway restored.	The overwhelming and positive environmental impact of that outcome is what matters to me (i.e., increased habitat for manatees, re-establishing the population of migratory fish, and giving increased access to amazing waterways for recreation). Though I live in Georgia, my family LOVES traveling to Florida for kayaking trips.	Continued increased manatee deaths (they are currently dying at an alarming rate due to circumstances that are entirely related to human actions). My understanding is also that the current dam is unsafe, and the cost associated with fixing it is substantial - especially considering that it provides so little benefit to the surrounding community.	No. Let's breach it.	I think reuniting and restoring the Great Florida Riverway will benefit communities, economies and ecosystems alike. Florida has so many beautiful natural resources and is home to so many amazing creatures; let's take care of these waterways and improve them in ways that make sense. Thank you for the opportunity to be heard.
9/28/2021 8:56	Alachua		Yes	Yes	1 time	More than 5 times	More than 5 times	Fishing Canoeing / kayaking Wildlife viewing	Keep it. As an ecologist, I probably wouldn't have voted for the river to be dammed up in the 60s. However, its been done and destroying the new habitat(s) that has developed to go "back" to a preservationist way of thinking is short sited and ignores the fact that humans are part of ecology (sometimes at a greater level than others). Continue to enhance efforts at making it a world class fishing destination. For example, improve ramps and facilities.	I have a Masters degree in ecology from the University of Florida. I have recently started a fishing guide and ecotour service in the area.	Fewer places near my county catch trophy bass. Reduced potential income.	Keeping it and not managing it well is a scenario that in the short term achieves the desired outcome. But long term will actually cost more.	
9/28/2021 8:57	Alachua		No	Yes			2-5 times	Wildlife viewing Other: camping in area	natural systems function better than artificial ones	removal/restoration	continued costs of maintenance and negative impacts to natural systems	no	
9/28/2021 8:58	Alachua		No	Yes		2-5 times		Fishing Boating Wildlife viewing	nothing	University of Florida wrote " to Be or Not to Be the Rodman Reservoir Controversy". Issues discuss are still those advanced today. Scientifically there is no reason to destroy the ecosystem that has developed.	The way Rodman is managed it is now one of the most consistent and best fisheries in the State of Florida. Anything related to restoration would also be rewarding hardcore environmentalist for telling lies and half truths over the years	none	This is a bias survey that does not fully address the issues and should not be used to support change. There are also legal issues that will have to be addressed.
9/28/2021 8:59	Marion		No	Yes			More than 5 times	Fishing Canoeing / kayaking Boating Wildlife viewing	Maintain in present condition forever.		Loss of use; and a river basin wasteland.	No	
9/28/2021 8:59	Citrus		No	No					Remove the dam and let the river flow normally.	Free flowing rivers remove a lot of the overgrown plants; allows fish to grow normally. Allow the manatees into warmer waters in the winter with better feeding grounds.	Stagnant water overgrown invasive plant species and possibility of disease in our fish populations.	No, absolutely not .	
9/28/2021 9:02	Alachua		Yes	Yes		1 time			breaching the dam	its affecting our aquifers and destroying the flow of water	What a waste of money! $14 Million! come on!	it must be gone!	
9/28/2021 9:12	Alachua		No	No					Remove the dam in whatever way is not a shock to the system that has learned to evolve to live with it .	Dams throughout history have had severe negative impacts on wildlife by blocking migration and effectively reducing the genetic diversity. In a time when we are facing so many environmental issues it seems to be so obvious to take any measures that we have to restore balance to the natural world.	A continued loss of biodiversity and a loss of faith in Florida's environmental leadership.	Conducting partial breaches over time that would slowly reintroduce the water without causing another rapid unbalance that may shock the existing landscape.	Spend time in nature and you will become aware of nature, become aware and you will begin to care, when you care and you will want to protect it.
9/28/2021 9:13	Indian River		No	No						more improvement on cleaning	save animals	cleaning	
9/28/2021 9:14	Alachua		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing	Keep the reservoir! Install a hydroelectric plant at the dam.	The reservoir is a wildlife paradise and a huge reservoir of fresh water.	Florida could lose a wonderful manmade natural resource.	No, the entire property running from west to east seems to be well managed and beneficial to all Floridians and out of state visitors.	
9/28/2021 9:17	Duval		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Would like to see it removed	It has been there long enough with no real benefits it's time to restore the natural flow and the springs on the Ocklawaha.	Another 50 years of unnatural flow	I don't think so there's really no need for the damn anymore	Thank you for your consideration. The reservoir is wonderful!
9/28/2021 9:22	Duval		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. 9/28/2021 9:23	Suwannee		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Wildlife viewing	I would like to see Rodman Reservoir and Kirkpatrick Dam remain in place. Rodman Reservoir has served as a place of recreation and enjoyment since childhood and many memories have been made on Rodman. I enjoy fishing and viewing the wildlife that inhabits the reservoir.	Rodman discharges a clean and abundant water supply to the St. John's river. There isn't anything to gain by draining Rodman Reservoir. A habitat has been created since the inception of Rodman and many wildlife depend on this habitat. Ecosystems will be destroyed that has taken many years to develop. With an increase in human population, environments such as Rodman become more important as a place of recreation and enjoyment. Our resources are only continuing to diminish with an increase in population, so why destroy this one?	My concern is that my children will not have the same opportunities as i had during my childhood and adult life. It would be a shame to lose this resource, the ecosystem and the many benefits of Rodman. The local communities also depend on Rodman to generate revenue.	No, Rodman should be left alone, as is.	
9/28/2021 9:31	Pinellas		No	Yes			More than 5 times	Wildlife viewing						
9/28/2021 9:34	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Wildlife viewing	To see the area returned to its natural state.	What benefit does it provide, other than to each individual angler? Revenue? Environmental? I see no revenue stream, other than the campground & a nearby shiner salesman. There's no "boomtown" in the vicinity relying on the lake's continued existence. As for the environment, the animals came, & they'll also leave. Drain the lake at a slow enough pace so that the animals have time to migrate away as the excessive water habitat recedes.	The continued dumping of state money into an unnecessary system of structures.	Convert Rodman Dam into a hydroelectric plant.	I fish Rodman nearly every week. If I'm not on Lake Ocklawaha, then I'm somewhere on the Ocklawaha River. I enjoy my time on the untouched riverine areas far more than on the open lake, but the bigger fish are in the lake. No matter what any Dam supporter tells you, they want the lake because of the quantity & quality of the fish.
9/28/2021 9:47	Marion		No	No					I would like for the Rodman Reservoir to be taken down and water to freely flow.	It's my understanding that the Dam will need a great deal of repair in the upcoming years. This is a cost I do not believe is justified. I am also saddened by the loss of fish and manatees in the Marion County waterways that some research indicates is due to this man made Dam. There are also springs that are being impacted by continuing to keep the Dam as it is today.	I would feel that the conditions that residents of Marion County have to endure, due to this Dam, were less important to those that utilize the Reservoir. I wouldn't think it would be a good use of funds to continue the cost associated with repairs and maintenance.		
9/28/2021 9:49	Pasco		No	Yes	1 time			Fishing Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	20 lost springs and Silver Springs ecosystem are restored	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	This exciting restoration will improve water quality and flow by generating an additional 150 million+ gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
9/28/2021 9:50	St Johns		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Wildlife viewing	maintain the dam and the current vibrant ecology	My 40+ years of fishing, camping and nature watching at the reservoir	much less people would be able to use the area because of the water level and accessibility and one of the nations greatest fishing areas would be destroyed.	NO	There are dozens of current developments planned and under way that are destroying Florida's ecosystem. Lets concentrate on stopping them and leave Rodman as it is.
9/28/2021 9:52	Palm Beach		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Breach the dam, and restore the free flows of the the great Florida Riverway
9/28/2021 9:55	Lake		No	No						Open the flow! Restore the springs!	Bring back nature so animals have better places to live and prosper; just like humans enjoy, but in their natural habitats.	Once natural nature is destroyed it will never be natural again. Now is the right time to take action and begin the progress of returning nature back to itself.	No.	
9/28/2021 9:58	Clay		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing	Maintained and utilized as the wildlife sanctuary it's become	Any person can tour this reservoir and see, Bald Eagles, Ospreys, Manatees, Bears, Deer and a myriad of waterfowl and wild birds. It is a destination for fishermen of all types "recreational and professional" and has made the top 50 largemouth bass lakes in the United States per BASS magazine. The economic impact on an already poor Putnam County must be considered also.	We lose a true sanctuary for wildlife and fishes, the aquifer and lake levels in surrounding lakes may be affected. It would take centuries for it to restore to it's natural state if it ever could be.	I don't believe there is any other scenario that won't destroy the pristine state it is in.	
9/28/2021 10:25	Outside of state / other	Nanuet, NY	No	No					Please restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 Million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases vicitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a frequent visitor and future homeowner in Florida who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/28/2021 10:29	Nassau		No	Yes		1 time		Fishing Boating Wildlife viewing	Keep it!	Valuable resource for Bass fishing	Sad day for fishermen!	N/A	None
9/28/2021 10:30	Lake		No	Yes			1 time		The Rodman/ Kirkman dam is demolished and the area opened up to restoration of wildlife, improved water quality, and economic and recreational opportunities for people and animals in the area.	The Dam is in danger of collapsing and causing deaths and property damage. Any plan to prevent this happening should not be a short-term solution that ignores the the long term health and quality of life of people and wildlife in the area. There never was such a plan. Let's not repeat mistakes of the past.	That water quality in the area , which is already compromised is not restored; that the ecological and economic decline of this area is worsened, and that opportunities for restoring a healthy waterway and wilderness area is missed.	No- The danger to people and property is imminent, and decisions must be made. The investment of money in restoring the waterways will bring health and economic benefits to the area whereas restoration of the damn dam will cost millions of dollars and benefit few.	I really like the idea of enlisting University students in making plans for the restoration of the riverway. Not only are the young people enthusiastic and they have the creativity and energy to see it through.
9/28/2021 10:39	Orange		No	Yes					Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every additional day the dam and reservoir remain in place results in additional environmental degradation.	impacted plant species like the endangered Star Anise and threatened Hartwrightia, which are native to the banks of this region's spring run streams, could expand their range into the restored spring systems. Manatees would regain open access to the warm water habitats of the Ocklawaha and Silver Springs. Migratory fish including the Striped Bass, American shad, American eel, and the critically Endangered Atlantic Sturgeon and Shortnose Sturgeon would once again have open access to the Ocklawaha system if the dam is breached. At least 150 million gallons a day of additional natural flow, and potentially much more, would be restored to the Lower St. Johns River, improving water quality and increasing resiliency of the entire St Johns/Ocklawaha River system by impeding the salt water intrusion resulting from sea level rise. 7,500 acres of the lower Ocklawaha's historic forested floodplain, 20 freshwater springs, and many miles of natural river channel that were degraded as a result of dam construction would be restored. Thousands of acres of submerged aquatic plant communities would be able to regenerate in the restored river channel, and in the re-emerged spring run streams that drained into the Ocklawaha historically.Draining the Rodman Reservoir would remove the single greatest barrier to plant and animal movement along the Ocala to Osceola (O2O) Wildlife Corridor by replacing the open water expanse of the Reservoir with a restored floodplain forest, to the benefit of many listed plant species native to the region including the Federally listed Clasping Warea and Scrub Buckwheat.Three river systems - the Ocklawaha, Silver and St. Johns - would experience significant environmental improvement from restoration. Recreational sport fishing would be enhanced by allowing the Florida strain of the Striped Bass to reclaim what used to be its primary spawning habitat - the Ocklawaha. A restored river provides greater economic opportunities. There are at least 20 natural springs now submerged under the reservoir, one of which is a second magnitude spring that could be a major tourist draw. Restoring the river will restore these springs and the potential for numerous nature-based tourism ventures, including better fishing and river access. Save taxpayer dollars. Currently, between $300,000 to $500,000 is spent each year to maintain the Buckman Lock, Kirkpatrick Dam, and Rodman Reservoir.	Water quality in the Rodman Reservoir and Lower Ocklawaha/St Johns River system would continue to decline. Taxpayers will perpetually be on the hook for repair and maintenance of the dam and Reservoir, and continue to be liable for any loss of life or property damage that would result from a dam failure. Impacted plant species like the endangered Star Anise and threatened Hartwrightia, which are native to the banks of this region's spring run streams, would be unable to expand their range into the unrestored spring systems. Residents and business owners in areas immediately downstream of the dam would continue to be under threat in the event of failure of a dam that has never, and will never, satisfy the purpose of its construction. The economic benefits that would result from increased and enhanced recreational usage would be denied to the surrounding local communities. The broad array of environmental benefits to native flora and fauna, including many imperiled species, that would result from restoration would not be possible.	No. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration.	
9/28/2021 10:41	Manatee		No	Yes		2-5 times		Wildlife viewing	I would like to see complete restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	Draining the Rodman Reservoir would remove the single greatest barrier to plant and animal movement along the Ocala to Osceola (O2O) Wildlife Corridor by replacing the open water expanse of the Reservoir with a restored floodplain forest, to the benefit of many listed plant species native to the region including the Federally listed Clasping Warea and Scrub Buckwheat, and manatees regaining open access to the warm water habitats of the Ocklawaha and Silver Springs. Also, three river systems - the Ocklawaha, Silver and St. Johns A 4˚C would experience significant environmental improvement from restoration.	The Reservoir would continue to be a barrier to movement by native wildlife and plant life along the length of the O2O Corridor, and compromise the value of Florida's investments in conserving lands like the Etonian Creek State Forest, and approved Florida Forever projects.	No.	Please take this opportunity to undo the damage done in years past when we thought we knew better than nature.
9/28/2021 10:53	Alachua		No	Yes		2-5 times		Wildlife viewing Other: Research site	Remove the dam! Turn the entire area into a National Wildlife Refuge or state park.	A host of scientific studies going back years to the USFWS Cross Florida Barge Canal research.	Continued degradation of the river/spring ecosystem.	No. Remove the dam and restore the river ecosystem.	Tired of hack politicians (well paid, of course) destroying the environment. Tired of special interests overcoming science in the name of commercial gain. All you get from Florida government is "blah, blah, blah" platitudes. Enough is enough.
9/28/2021 10:54	Outside of state / other	asant Hill, Ca CONTRA COSTA COUN	No	No					I would like the all decisions be guided by the goal of saving the environment and the animals that live there.	The ongoing destruction of the environment, and the negative impact of the wildlife.	No answer at this time.	If my goal cannot the completely achieved, anything that can lessen the impact on the environment and the living species in that environment, would be appreciated.	None at this time.
9/28/2021 10:55	Alachua		No	Yes			1 time	Wildlife viewing		Breach the Rodman Reservoir/Kirkpatrick Dam	Wildlife relies on the spring waters. This project alone would free nearly 2 dozen spring habitats.	Florida relies on hundreds of millions of tourist dollars and the resulting springs would encourage tourism. State visitors are interested in Florida wildlife and the resource cost is low relative to benefit.	No - now is the time to do this for current and future generations.	This year has seen record loss of endangered manatee populations. The added springs habitats could provide a foothold for population stabilization and growth.
9/28/2021 10:58	Putnam		No	Yes		2-5 times		Fishing Boating Wildlife viewing	Keep it forever. It is a beautiful and vital area to our state and county.	Wildlife preservation and water balance.	Destruction of natural habitat for all wildlife. Aquifer and local lake areas negatively affected.	None that anyone have offered to date.	
9/28/2021 11:09	Alachua		No	Yes		2-5 times		Fishing Canoeing / kayaking Wildlife viewing	Remove the dam and restore the Ocklawaha River.	The benefits to native wildlife and the restoration of a wild and scenic river and associated springs.		No.	There are countless freshwater fishing opportunities in north Florida, but only one Ocklawaha River and it should be restored to its natural course of flow. Fishing opportunities will persist.
9/28/2021 11:10	Outside of state / other	CA	No	No					Restore the Great Florida Riverway for manatees and other wildlife dependent on this habitat	Wildlife are currently threatened	Destroyed habitat for wildlife	Any action to preserve this habitat is desired	This habitat must be restored for manatees and other wildlife dependent on this habitat
9/28/2021 11:15	Outside of state / other		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/28/2021 11:24	St Johns		No	Yes		2-5 times	More than 5 times	Fishing Canoeing / kayaking Boating Other: Birding, wildlife viewing	I recommend removing the dam and letting nature recover which includes improving the quality of the St. Johns River and the other water sources which flow into it.	I have lived on the St. Johns River for over 65 years and to my dismay watched it become more polluted by various human activities including the damming at Rodman, drawing of millions of gallons from the headwaters and dredging near Mayport to name just a few. I now catch various salt water fish near my home on Old Bull Bay which was uncommon years ago, We haven't had eli grass beds which support the habitat of numerous species of fish, crabs and wildlife. The river is not healthy. It requires improved management to survive. This should include the removal of the dam.	Unfortunately if we do not act to improve the overall management of the rivers, including removal of the dam, we will lose one of the most environmentally and economically important natural resoures/assets we have.	I can support any and all improvements that can be made to reduce the negative impacts we have made to the rivers that feed the St. Johns, including those made by the St. Johns River Keepers.	Please do the right thing for future generations that deserve the opportunity to enjoy the sustainable natural resources of our state, including the St. Jons River and it tributaries.
9/28/2021 11:31	Outside of state / other	Christiansted, USVI 00820	No	No					protect the manatees living environment				
9/28/2021 11:31	Alachua		No	No					End the damming of the Ocklawaha River by the Rodman/Kirkpatrick Dam, which has disrupted the ecosystem and the wildlife of the Great Florida Riverway and thus negatively impacts the humans who depend on this system by also disrupting the economy and water quality of the area.	The dam disrupts a critical and delicate ecosystem that humans depend now and in the future, whether it is obvious or not. For example, restoring the river will prevent $57 million in potential flood damages to downstream property owners	There are many big concerns, not just one: --We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. --The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. --Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. --A storm event triggers a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages. --Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. --Hundreds of manatees lose the opportunity to access essential warm water winter habitat. --Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. --Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. --Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. --The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No.	It is time to restore, preserve, and protect the environment because ultimately we humans are totally dependent on the environment and we are learning how delicate ecosystems can be and how expensive it is to correct problems compared with preventing them.
9/28/2021 11:34	Pinellas		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 9/28/2021 11:45	Clay		No	Yes		2-5 times	More than 5 times	Fishing	I would leave it as is..	it is a fantastic outdoors destination	running something that is now good that was bad at the beginning		

9/28/2021 11:46	Putnam		Yes	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing	I would like the dam to remain and more kayak/ canoe ramps be installed. I would like a clear channel, well marked with ADS to Navigation though the lake from the lock.	Our family and guests love boating on the local waterways. The lake provides a wonderful experience.	We would only use kayak and canoes, our power boat would not be used.	Keeping the current program in place for managing the lake	Fishing is something we do while enjoying the Rodman, some of our biggest fish are caught in the reservoir, we live on the river and find this body of water to be a unique change. If everyone took a tour of this outstanding environment no one would want it changed, only enhanced.
9/28/2021 11:50	Marion		No	Yes		1 time		Canoeing / kayaking Wildlife viewing	I would like to see the dam breached.	By removing the dam the eco systems of three rivers (Ocklawaha, Silver and St. johns) would be restored. Many springs would be rejuvenated. It would revitalized the natural wildlife and plant life in a wide area of north Central Florida.	That we miss the opportunity to use available state and federal funds and thus fail to restore the eco- systems of the St. Johns, Ocklawaha, and Silver Rivers. That we allow the great Silver Springs to continue to deteriorate.	No	As a person who is passionate about the environment, I urge that you restore the Ocklawaha River to ensure a healthy future for our children and for all of the wildlife in this area of Florida.
9/28/2021 11:54	Outside of state / other	Athens, Georgia	No	Yes	2-5 times	More than 5 times		Fishing Fishing (shoreline/structure) Canoeing / kayaking Wildlife viewing Other:	Manage the existing body of water and damn structure as it is for the best possible wildlife (mammal, fish, bird, insect and other) habitat. Encourage humans to visit, observe, participate and enjoy. Above all, do not remove the damn. The original construction was an ecological mistake. Removing it now would be a economic and asset mistake that no animal or insect would understand or appreciate. I would cause hardship on humans that simply is not required to continue to have a world class habitat with the lake and damn as they are currently configured.	My personal experience on the lake and on the river above the lake and below the damn. My son and I have made semiannual trips almost every year since 1982. one arrives expecting serenity and departs having bathed in it. I calculate I spent over $20,000 in the local economy.	Please look around the SJRWMD and make sure there isn't a better place to invest the funds that would be required to to remove the Kirkpatrick Dam. Surely there is better good to be done somewhere.	No. I cannot support removing the damn. Other than that lets manage the entire ecosystem for the richest possible ongoing habitat.	
9/28/2021 12:00	Volusia		No	Yes	1 time	2-5 times		Canoeing / kayaking Other: Kayaked to see the springs when the lake was drained.	Not the way it was intended to be. Lacrosse Florida barge canal was a total boondoggle in this should've been dismantled when that was abandoned				
9/28/2021 12:01	St Johns		No	No					Destroy the dam and let nature be natural	I think the impact on plants animals and nature has been too great and we can try to do the right thing now	A damaged dam is causes damage to animals and makes the area unsafe	Not sure but I am open to ideas	
9/28/2021 12:05	Marion		No	Yes	2-5 times	2-5 times		Wildlife viewing Other: Hiking on "Turtle Island" (just West of the Dam)	Removal of the Dam and Restoration of the Ocklawaha River to it's original source.	There are 3. 1) The engineering firm's studyconfirming the Dam's infrastructure is in serious state of repair, and has obviously been neglected. 2) The unnecessary loss of life and property if the Dam were to breach 3) Restoring the Ocklawaha would grant return of the manatee and fish migration upriver, with the natural flow of the river.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. And now it's a safety concern. I live near the reservoir in a neighboring town; there is no way to get a warning to evacuate people or livestock if the Dam were to breach. That's very scary.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	There is great environmental and financial potential in returning the Ocklawaha River to it's natural state...it would open up 20 springs that are currently under water. The area would see an increase of recreational visitors, tourists that visit the Florida Greenways & Trails. The water quality itself would improve, a variety of wildlife would have normal access of the river. Restoring the river would create more opportunity for more people to enjoy besides a select few who currently use the reservoir for a powerboat racing with no regard to polluting the waters with petroleum products. Also, there is no control or limit regarding the 'noise pollution' of the Airboats that frequent the reservoir. The Air Boats run 24/7...with no regard of day or night or for the people living in the area; not to mention the gas pollution in the water. The river should be off limit to gas powered boats, it harms the environment and the pollutes the water that sustains the fish, manatees....and us humans! Let's Restore the River and Keep it Clean.
9/28/2021 12:14	Marion		No	Yes		2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating	Preserve this unique environment as is	Rodman is the only hope for saving the manatee population in mid-Florida, and provides a tremendous economic boost to mid-Florida by drawing in fishermen and tourists to the area and provides local providers with a key source of livelihood.	Loss of an irreplaceable ecosystem and ruination of many peoples lives	No	
9/28/2021 12:16	Duval		No	Yes	More than 5 times			Fishing Fishing (shoreline/structure)	Leave it in its current state	I have fished Rodman since I was 22 years old, I am now 73. I have seen and continue to see folks make their living guiding as well as producing dollars for the economy of Putnam County and the surrounding business establishments thru food gas etc. It is one of the most beautiful places to take your children and Grandchildren fishing and to view all the habitant in just about anywhere you go in there. The camping facilities are great and managed very well	We would lose one of our most enjoyed bodies of water we have in the state. noted for its fishing and all because a group of people that have exactly no concern whatsoever of what the Sportsman and visitors care about.	NO	If it is a money issue I would support an additional increase in license cost, even being exempt from having to buy a license I would pay in whatever form deemed necessary to protect this beautiful place.
9/28/2021 12:19	Lake		No	No					I would like to see the dam breached to restore of a free-flowing Ocklawaha River, thus connecting Silver Springs, the Ocklawaha and the St. Johns River.	The ecological benefits to the St. Johns, Ocklawaha and Silver Rivers as studied.	This is an opportunity to restore the natural flow of fresh water, to improve water quality, to restore fish and wildlife habitat, and to reduce saltwater intrusion. If the dam is repaired, this opportunity will be lost. Dam safety issues and improved water quality, wildlife habitat, and recreational opportunities should not be ignored or delayed.	NO	
9/28/2021 12:19	Palm Beach		No	Yes		1 time		Canoeing / kayaking Wildlife viewing	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 Million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/28/2021 12:22	Outside of state / other	Colorado	No	No					Whatever is best for the wildlife.	Wildlife - Land / Water protection	the ecosystem is ruined // damaged // killed animals... yet another example of not working with the environment.		Would love more information. As an outsider who is donating and supporting from a land-locked state. I am unaware of the "boots-on-the-ground" news // approach. I would love to study and learn more -- send literature to grantiwordon@gmail.com.
9/28/2021 12:25	Alachua		No	Yes		1 time		Wildlife viewing	Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every additional day the dam and reservoir remain in place results in additional environmental degradation.	7,500 acres of the lower Ocklawaha's historic forested floodplain, 20 freshwater springs, and many miles of natural river channel that were drowned as a result of dam construction would be restored.	The broad array of environmental benefits to native flora and fauna, including many imperiled species, that would result from restoration would not be possible	No. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration.	Plese, seriously consider the cost to maintain the dam and the continuing damage of it's existence is causing costly environmental damage to water quality and plant and animal life. It is an economic and environmental disaster to keep it open for it's current limited purpose!
9/28/2021 12:26	Outside of state / other	Mesquite, NV	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. $5,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha River in its current state is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	
9/28/2021 12:33	Putnam		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing	The reservoir be managed for bass fishing (through drawdowns and possibly plannings) for the economic benefit of all the surrounding counties	The reservoir is a huge source of fresh water that may be needed in the near future & provides a fitter for the St John's River.	Instead of being a large recreational area and financial boom, the reservoir would become a muck/mud hole and cause damage to the St Johns River system	Maintain the reservoir as it currently is.	As outdoor recreational opportunities dwindle in today's society let's maintain the gem that we have here.
9/28/2021 12:39	Duval		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Boating	I would like to see the Army Corp of engineers and the State of Florida work together to continue to make this our premier fishery in Northeast Florida. They should manage Rodman the way they have managed central Florida fisheries like Stick Marsh, Garcia, and others	There is nothing like this reservoir for fishing in Northeast Florida. The St Johns river is no where near Rodman as a consistent fishery.	Nowhere else in an hour of Jacksonville like it. The central and southern reaches of the state have all kinds of lakes and management areas (aka Headwaters, Stick Marsh, Garcia, ...), but nothing compares up here.	Just leave it as is and control the vegetation when it gets out of control.	Thanks for asking us about this.
9/28/2021 12:40	Alachua		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	I'd like to see the dam removed and flows restored to the Ocklawaha River. The appx 10,000 acres of terrestrial habitat uncovered by removing the dam should sky in public ownership and the area should be devoting the area to outdoor recreation (hiking, mountain biking, hunting, fishing, etc).	Reservoirs disrupt natural ecosystems and cost tax-payers. Restoring flow would reduce regulatory burden and restore the native ecosystem, which is importance to migrating fish such as sturgeon and shad and the freshwater mussels and other organisms that provide important ecological services free of charge to tax-payers.	More regulatory burden (example: more endangered species) and costs to tax-payers;	Not really, the dam needs to be removed.	
9/28/2021 12:42	Marion		No	Yes		1 time	More than 5 times	Fishing Canoeing / kayaking Boating Wildlife viewing Other: Swimming	Return to natural state	Science ecology	Damage to silver springs		
9/28/2021 12:44	Outside of state / other	Michigan	No	No					Protect, provide for and defend manatees environment and waters.	Science	Collapse of manatee population	Not that I can think of.	
9/28/2021 12:47	Flagler		No	Yes	2-5 times			Fishing Boating	Keep it viable for fishing boating recreation.	enjoy the outdoor and rodman for having a place to enjoy the outdoors as well as i run a fishing club that likes to go to rodman	Not being able to use this great fishing destination	Na	
9/28/2021 12:56	Alachua		No	No					It needs to be removed. It serves no public purpose and the public would be better served with a more natural flow of the river	Data on spring flow issues, wildlife access especially manatees	Ultimate destruction of a beautiful natural are	No. You cannot partially fix this	
9/28/2021 12:58	Duval		No	Yes				Fishing	stay as is	good fishingt of lake	loss of lake	no	none
9/28/2021 13:12	Nassau		No	Yes		More than 5 times		Canoeing / kayaking Boating Wildlife viewing Other: Mountain biking	Rodman Reservoir should be eliminated, and unimpeded, free flow and normal floodplain function restored to the lower Ocklawaha River by breaching Kirkpatrick Dam at the location of the historic river channel, as described under the partial restoration alternative. If funding permits, recreational enhancements should be considered under this restoration to promote the unique cultural and environmental amenities currently submerged under the reservoir.	The documented reduction or elimination of numerous rare or threatened fish and mammals in the upstream reaches due to the blockage of migratory passage. The reservoir eliminates a large area of potential thermal refuge and food supply for manatees, and spawning and habitat for estuary-dependent fish. As many as 20 artesian springs are submerged under the reservoir, inundating iconic and uniquely Florida resources, and the multi-faceted recreational opportunities they create.	I would be concerned about the precedent that is established when the State's management of a major Florida waterway, theoretically belonging to all of its citizens, and with such a profound ecological impact to the ecology of downstream waters, is perpetuated in an ecosystem services-limiting condition, a condition which from a wildlife and recreational perspective largely replicated in the nearby St. Johns and numerous other Florida waterbodies, to please a strident but relatively small local advocacy group.	No. The partial restoration alternative represents the most conservative, cost-effective scenario which provides the necessary unimpeded flow, natural floodplain interaction and connection to downstream waters upon which all genuine ecosystem benefits depend. I cannot envision any managed scenario, intermittent or partial impoundment that could achieve equivalent benefits.	The breaching of Rodman Dam and the restoration of the natural flow by all objective, rational, cost-benefit analysis appears to be an economic, ecological, and potentially recreational bonus for the Ocklawaha River, for the downstream Lower St. Johns River, and overall for the citizens of Florida. Elsewhere in the nation numerous reconnections of aging impoundments are demonstrating the environmental benefits and liability reduction of this practice, further adding justification for this decision.
9/28/2021 13:21	Alachua		No	Yes		1 time		Canoeing / kayaking	Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	Three river systems - the Ocklawaha, Silver and St. Johns - would experience significant environmental improvement from restoration.	Taxpayers will perpetually be on the hook for repair and maintenance of the dam and Reservoir, and continue to be liable for any loss of life or property damage that would result from a dam failure.	No	No
9/28/2021 13:22	Lee		No	Yes		2-5 times	2-5 times	Canoeing / kayaking Wildlife viewing	Breach the Rodman/Kirkpatrick Dam	Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Also, the dam is past its life expectancy and breaching the dam will save $4-14 Million in dam repairs.	Millions in taxpayers money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the da is 50 years overdue.	Allowing the 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, to run freely again will allow the natural cleansing and scouring of the waterways to return and maintain a healthy and vibrant ecosystem.
9/28/2021 13:25	Duval		No	Yes		2-5 times		Fishing Canoeing / kayaking Wildlife viewing Other: Camping	Open the dam and let the river take its course.	Dam removal in other states.	The unnaturalness continues.	Leave the dam but remove the spillway lille at the sill on the Suwannee in the okefenokee.	
9/28/2021 13:28	Marion		No	Yes	1 time	2-5 times	More than 5 times	Wildlife viewing Other: I'm a soil and water scientist retired from UF/IFAS, with a keen interest in the lands and waters and springs that feed the St. Johns River.	The dam and reservoir need to be eliminated: let the natural aquatic and terrestrial ecosystems recover. They'll do so all by themselves beginning immediately as soon as the dam is removed.	The breadth and depth of information on the ecology of the springs and rivers of the area, especially the ongoing work and information provided by Bob Knight and associates.	Continued deterioration of the river and springs.		
9/28/2021 13:32	Marion		No	Yes		1 time		Wildlife viewing	Take the dam down, and let the river flow naturally, as it once did.	Most dams, wherever they are, totally change the natural environment and habitat of the area, which affects wildlife, plants, etc..	Degradation of the natural habitat. Water flow.	Drain most of the reservoir, restoring most of the water flow, and leave a very small lake or pond.	
9/28/2021 13:34	St Johns		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Boating	Never ever remove the dam...keep Rodman Reservoir forever	A wonderful ecosystem and future potential source of potable water was created from a boondoggle of a failed project.	One of the most diverse biological ecosystems will disappear forever to the detriment of all the animal species that depend on Rodman.	Only 1....keep the dam in place forever and stop using the lock system for access from the river.	
9/28/2021 13:36	Palm Beach		No	No					Breach the dam	Hundreds of manatees would gain access to much-needed habits at a time when manatees are experiencing the deadliest year on record.	We miss the opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is UNSAFE.	No. Reaching the damn is 50 years overdue.	2021 is the deadliest year on record for manatees unless their natural habitat is restored, we can expect more die-off in the future. While this years crisis will cost in large part by starvation from loss of seagrass, the greatest long-term threat to the Manatee is loss of natural warm water winter habitat. 60% of Florida manatees depend on power plan out for to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/28/2021 13:44	Orange		No	Yes	More than 5 times		More than 5 times	Canoeing / kayaking Other: hiking	Free the Ocklawaha! If it's possible to keep the Rodman Dam as at least a wetland area, let's do it but take down the Rodman Dam.	I was in Jr. high and high school with the Marjory Carr children. Since the age of 12, I have advocated against the cross-state barge canal and later for the return of the Ocklawaha . That's been 60 years. Let's do it already.	I've had years to think about this. The answer is no.		
9/28/2021 13:49	Marion		No	Yes			More than 5 times	Boating	Remove Rodman Dam	Ocklawaha and Silver Rivers are declining and need to be restored.	That they will decline further thereby damaging our locals ecosystem which we depend on for survival.	Leave the Dam open permanently.	
9/28/2021 13:50	Alachua		No	Yes		2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	I'm on the fence regarding keeping or removing the dam. Sure, installing the dam and canal was not a great idea with respect to existing environmental concerns, but I don't think the arguments for removing the dam are realistic nor accurate regarding the positive environmental impacts that removal would create. There is a massive ecosystem that has adapted to the dam and reservoir.	The dam has been there now for over fifty years. I've been living in the area for 16 years and visiting the reservoir since before 2005.	The disruption to the area's environment and ecosystem (again) would probably be as catachymic as the original installation. Talk of returning species ignores the changes that have occurred everywhere.	The cost of removing the dam seems very high. My question is: how about we just open the dam for a few years and test the impact of that change? Why does the dam have to be dynamited and removed? The economic boom to resident businesses is a hopeful fantasy.	For the past five decades, generations of fish, birds, turtles, plants – thousands of species of wildlife have thrived in the environment. Will the change to revert back to what the Ocklawaha River was in the 1940's help them or disrupt them?
9/28/2021 13:55	Outside of state / other	Chicago, IL	No	No					100% increase on anything that benefits manatees. Zero of anything that harms manatees.	It's all about the manatees.	The manatees are always my biggest concern.	As long as it still helps support, nourish, and care for the manatees.	Manatees are awesome.
9/28/2021 13:57	Outside of state / other	Chicago, IL	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 Million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/28/2021 13:58	St Johns		No	No					Manatees need to be protected and their habitats need to be restored.	Manatees are dying here in Florida. They are innocent, voiceless victims of mankind's greed.	Manatees will suffer, starve, and go extinct.	If people would start trying to achieve their financial goals while still caring about marine animals and taking their habitats into consideration, that would help.	
9/28/2021 14:01	St Johns		No	No					Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	Manatees need help with their survival and are innocent and voiceless and can't speak up for their needs.	the greatest long-term threat to these animals is the loss of warm water habitat that manatees need to survive the winter.	They need a warm place to spend winter, so however that is achieved is good.	
9/28/2021 14:04	Marion		No	Yes	More than 5 times			Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing					
9/28/2021 14:04	Outside of state / other	Louisville, Kentucky	No	Yes		2-5 times	More than 5 times	Fishing	Maintain its current status.	Bio diversity and outstanding fishing	Loss of a beautiful reservoir and spectacular fishing spot -- over the last 30 years it has only gotten better and better.		
9/28/2021 14:06	Alachua		No	Yes		1 time		Wildlife viewing	Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	7,500 acres of the lower Ocklawaha's historic forested floodplain, 20 freshwater springs, and many miles of natural river channel that were drowned as a result of dam construction would be restored.	Thousands of acres of submerged aquatic plant communities would be unable to regenerate in a restored river channel and in the re-emerged spring run streams, and 7,500 acres of floodplain forest would not be restored.	No.	
9/28/2021 14:08	Outside of state / other	Virginia	No	No					Please remove Rodman/Kirkpatrick Dam.	The dams are impacting the ecology of the river. The dam flooded over 7,500 acres of forested wetlands, 20 springs, and 16 miles of the Ocklawaha River. The Rodman Dam is now past its 50-year life expectancy. It will only continue to deteriorate and cause a threat to downstream communities.	Water quality, spring flow, wetland forests, fish and wildlife populations in the Ocklawaha River will continue to decline. The environmental toll has reduced recreational use and negatively impacted the economy of Putnam and Marion Counties. These declines have also threatened the environmental and economic resiliency of downstream counties, including Duval County.	Any resolution must restore the health of the river, wetlands, and be protective of safety of downstream communities.	
9/28/2021 14:15	St Johns		No	No					Remove	Removing the dam would free the wildlife corridor for fish spawning and manatee travel, the uncovering of springs, and making for a healthier river.	Status quo. Continuing drawdowns.	What could that possibly be?	My second home is in Welaka across from the Ocklawaha confluence with the St. John's. I believe that taking down the dam will mean a healthier ecosystem.
9/28/2021 14:25	Walton		No	Yes			2-5 times	Canoeing / kayaking Boating Wildlife viewing	Breach the Dam.	Restoring the 20-drowned springs.	Taxpayer dollars unnecessarily spent to repair the Dam that does not provide any type of flood protection or necessary power & water supply.	No, breaching of the Dam is long overdue.	
9/28/2021 14:36	Outside of state / other	Dennisville, NJ 08214	No	Yes		2-5 times	More than 5 times	Fishing	Leave it alone.	Large mouthbass	Beyond my control, and very depressing to think anyone would alter this impoundment.	No.	
9/28/2021 14:40	Marion		No	Yes	1 time	1 time		Canoeing / kayaking	Tear it down.	Restore the natural flow of the river.	Politics as usual, promises not kept.	No.	Politicians talk like they want to do the right thing by tearing it down however it still there.

9/28/2021 14:42	Orange		No	No				Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every additional day the dam and reservoir remain in place results in additional environmental degradation.	At the estimated 2/4 million in dam repairs, measured in 2020 dollars, would be called by removing repairs to a dam that has exceeded its life expectancy and never fulfilled the purpose for its construction. • The large expenditures required for herbicide treatments to control the growth of invasive aquatic weeds and to conduct other ongoing maintenance needs, including periodic drawdowns, in a futile attempt to maintain water quality and recreational access in the stagnant waters of the Reservoir, would become unnecessary. • $57 million in potential flood damages to downstream areas around the community of Welaka would be avoided in the event of a dam failure. • Economic analyses conducted by researchers at the University of Florida demonstrate the economic impact from eco-tourists who use the natural portions of the Ocklawaha River is twice that of the anglers and boaters using the Rodman Reservoir, and annual use of the Reservoir's recreation sites has been on a downward trend since records began in 2004 as water quality and fish production have continued to decline year after year. • When accounting for revenues generated by increased recreational usage, a cost-benefit analysis determined restoration would produce a cumulative net benefit of $47.2 million over the first 10 years, versus a cumulative loss of $5.3 million with repair and maintenance of the dam. • The recreational development component included in the restoration plan would benefit nearby residents and expand eco-tourism, and more than compensate for loss of the Reservoir. Three river systems - the Ocklawaha, Silver and St. Johns - would experience significant environmental improvement from restoration. • Manatees would regain open access to the warm water habitats of the Ocklawaha and Silver Springs. • Migratory fish including the Striped Bass, American shad, American eel, and the critically Endangered Atlantic Sturgeon and Shortnose Sturgeon would once again have open access to the Ocklawaha system if the dam is breached. • Recreational sport fishing would be enhanced by allowing the Florida strain of the Striped Bass	Residents and business owners in areas immediately downstream of the dam would continue to be under threat in the event of failure of a dam that has never, and will never, satisfy the purpose of its construction.	No. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration.	Florida is the front lines of a battle ground between development and the environment. It need not be that way. The places where this battle ground is being fought are not smart development being inhibited by do-gooder hippies. It's some of the most wasteful, inefficient, and even unprofitable development in the country, paving over natural resources that captivated generations of people. They thought the fountain of youth was here - this place was so beautiful it was said to be magic. Humans are part of the environment, any talk that civilization is "cancer" or that "the earth will be fine if people all die" is silly. People need to shape their environment just like any other organism. Just like a beaver builds a dam, or an alligator digs tidal pools, humans build and design and change the land. The difference is that our skill, and our knowledge lets us cheat what our observations and senses tell us. We know this dam needs to come down. We know that the canal was a bad idea, and that it won't ever be realized. We know this is the right, and indeed, the most economically viable thing to do. The thinking behind the decision is done. The answer is clear. The dam, that serves no function, must go. We must be more intelligent about acting on our observations, and building in ways that truly benefit people, not our most short sighted ambitions. The restoration of our watersheds will build wealth for generations, and will help Florida sure itself against the ravages that are to come as sea levels rise and storms become more ferocious and more frequent. Do the right thing - there's really nothing more to be discussed.
9/28/2021 14:54	St Johns		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure)	Nothing, leave it alone	Quality fishing	I would probably stop fishing there.	None	
9/28/2021 14:54	Jefferson		No	No				I would like to see the end of the dam and the restoration of free flowing waters	Restoring the Ocklawaha River would benefit multiple species for needed habitat, especially warm water winter habitat for manatees and a wildlife corridor for black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer	The short and especially the long term impact on wildlife whose habitat is shrinking drastically. Water quality.	No. Thousands of acres need to be restored to natural ecosystems.	Breaching the dam will not only benefit wildlife but also the restoration of these rivers will benefit communities and economies through ecotourism.
9/28/2021 14:59	Marion		No	Yes	More than 5 times			Fishing Fishing (shoreline/structure) Boating Wildlife viewing Other: I bought land here in 1968 and lived overlooking the reservoir full time since 1975	The present management seems to be working very well with drawdowns whenever the aquatic plant life becomes excessive. It would be nice if an official management plan was passed by the legislature so home owners would know how they could legally could use the waterfront. Many now have built piers without permission.	For around 40 years I have watched Rodman and it's changes. For 17 of those years I collected water samples for Lake Watch. I saw the increase in nutrients in these samples as Silver Springs, Orange Creek and Deep Creek dumped more nitrogen and phosphorous into the reservoir and all the while the plant life in Rodman managed to reduce the concentration of nutrients prior to the water being sent to the St. Johns River. Fishing has changed a little during this time. but it is still good and lakes that are bad do not produce ten pound bass adn Rodman does.	First I would be concerned for the landowners loosing property values. Early in the 1900 the DEP contracted an appraiser (I think his name was Paul Hawker) to evaluate the property around the reservoir. Paul sent me a copy of his final evaluation. He said basically the highly developed property around the reservoir would have little or no value without Rodman. My second concern would be for the loss of a fresh water reservoir. With the coming salt water intrusions during the next decades, we would lose a good source of fresh water. Thirdly, I would not like to see the aquatic wildlife removed. Glenn Lao told me whenever he wanted to film any central Florida aquatic wildlife he came to Rodman because of its diverse habitat zones.	Absolutely nothing that would lower the water level. Any lower water level would make reservoir management almost impossible.	Early in the 1900's when Governor Chiles was trying to destroy Rodman for the self named "environmentalists" - Senator Kirkpatric asked Dr. Canfield at IFAS at the University of Florida to look into the available data on Rodman so that the legislators could make decisions on what ob do about the reservoir. The result was a document called "To Be or Not To Be - The Rodman Reservoir Controversy" Copies of this document were distributed to the legislators and the result was that Governor Chiles was unable to breach the dam and further environmental and economic studies were funded by the legislature. Dr. Canfield's study found that there was little wrong with Rodman and a lot of good. It also proved that a lot the "environmentalists" were saying was untrue. This is still the case.
9/28/2021 15:20	Alachua		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	I'd like to see the dam removed and the Ocklawaha river returned to it's natural flow and hydrologic processes	The current state of the ecosystem in that area is detrimental to wildlife, ecology, natural resources and water conservation that all Floridians share, not just people who like to fish	Continued cost of the dam and loss of an amazing eco-tourism draw	I can't think of any	
9/28/2021 15:20	Duval		No	No					I am a Florida citizen, tax payer and voter and I want to see restoration of a free-flowing Ocklawaha River as nature intended by breaching the Rodman/Kirkpatrick Dam. This would reunite the natural connection of Silver Springs, the Ocklawaha and St. Johns Rivers.	Silence supports restoration. Studies by federal and state agencies clearly demonstrate restoration of a free-flowing totally connected system benefit the eco-system and save state dollars. It will help the manatees and natural springs plus increase native fish populations.	We will miss the opportunity to stop on-going ecological damage caused by a useless dam and miss the chance to restore 150 mgd of fresh water . This will improve water quality , restore fish populations and wild habitat. It will help the quality of the water way from Welaka to Jacksonville.	No, breaching the dam and restoring the Ocklawaka are 50+ years over due. There are also from what I understand dam issues which can not be ignored any longer	My family has lived in north Florida since 1845 and I have seen so many harmful things done as far as the environment which have not only hurt humans, but the wildlife. This is a chance to make some changes and help everyone including the wonderful wildlife found in our state.
9/28/2021 15:22	Alachua		No	Yes		1 time		Other	Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	- No. Breaching the dam is 50 years overdue.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
9/28/2021 15:26	Putnam		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Other: Camping at Rodman Campground	More frequent drawdowns to kill off the hydrilla, etc. Refurbish the dam itself.	The dam is old, and like any structure, does need maintenances to keep it in good shape. Proven fact the drawdowns help kill the weeds.	Obviously the dam would fail if not maintained. The weeds would choke out marine life if not kept under control.	No	Leave the dam in place. Doesn't make good sense to revert back to the river as it was 30 years ago. A whole new ecosystem is in place now, if the dam were breached, it would take many, many years to revert to what it was. I doubt very seriously it would go back to what it was anyway.
9/28/2021 15:27	Alachua		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	Help restore the St. John's river	That removal will help restore wildlife and revive the river.	Water quality	No	Nobe
9/28/2021 15:31	St Johns		No	Yes		1 time		Canoeing / kayaking Wildlife viewing	The dam needs to be moved. It will cause problems on the St Johns rive with invasive species from what's behind the dam. But it will clear up quickly.	The river needs flow freely to free the springs so the river can recover and be allowed to clear itself.	That we will loose species, and that some of the springs will be lost forever because of the debri in them	A timed release over 3 years	
9/28/2021 15:33	Putnam		No	Yes		2-5 times	More than 5 times	Other: I don't use the dam. I use the Ocklawaha River below and above the dam for kayaking.	I would love to see the dam removed so that the Ocklawaha River can flow as it used to before the dam was put up.	It is my understanding that there has to be a lot of maintenance, i.e. money, needed to preserve the dam and the water it is holding back. I also know that the original purpose of the dam was for the Cross Florida Barge Canal. That project was never completed and now we are stuck with a white elephant.	The wildlife that used to be able to migrate up the river would never be able to do so again.	Dropping the water level to as least half of what it is now.	- also believe that the St Johns River is suffering. Before the dam, there was more water flowing into the St Johns River from the Ocklawaha. The water that is trapped behind the dam has a huge surface area that allows for a lot of evaporation thus loss of flowing water. The St Johns River needs the flushing that the extra water would provide.
9/28/2021 15:34	Duval		No	No					I want to see the dam torn down and the river restored!!!!	The river and lake aren't healthy	The state needs the river.	I don't have enough information to answer.	
9/28/2021 15:35	Duval		No	Yes		1 time	2-5 times	Fishing Wildlife viewing	Leave as is but send all the water thru the dam. No need to keep operating the locks	A great freshwater impoundment. No cheap water left that is easily accessible	The lack of concern in how precious our water sources are used. So much freshwater goes to the ocean and Rodman is our way of preserving some of it	Don't know what the other options are	Rodman is a great freshwater sanctuary for birds and fish. It did replace a beautiful River system. Our needs have changed as well with water sources should be at the top of the list to protect. Rodman should still stand as an impoundment.
9/28/2021 15:39	Orange		No	Yes		1 time		Boating	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.
9/28/2021 15:45	Outside of state / other	Ann Arbor Michigan	No	No					I'd like to see portions of the dam removed to restore the Great Florida Waterway.	Restore healthy habitat for wildlife and river ecosystems for all.	Continued loss of wetlands and river habitat	At least listening to and taking into consideration citizens' concerns.	
9/28/2021 15:46	St Johns		No	Yes			More than 5 times	Fishing (shoreline/structure)	I would like to see the dam removed.	I believe the rivers should be restored to the way they were before the dam was built.	I think the wildlife will do continue to suffer from the existing conditions.	No.	
9/28/2021 15:53	Duval		No	Yes		2-5 times		Canoeing / kayaking	Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam to reunite the natural connection of Silver Springs, the Ocklawaha and the St. Johns River.	he science supports restoration. Studies by federal and state agencies have clearly demonstrated that restoration of a free-flowing, connected system is cost-effective and will provide significant ecological benefits to the St. Johns, Ocklawaha and Silver Rivers as well as Silver Springs. More information to consider: Three rivers, Ocklawaha, Silver and St. Johns, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish migration patterns and essential manatee habitat are reestablished 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of forested floodplain wetlands within the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Historic fish populations are not regained in the Ocklawaha River and Silver Springs, and invasive fish like the Blue Tilapia increase. Water quality declines, further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam and restoring the Ocklawaha are 50+ years overdue. Dam safety issues and improved water quality, wildlife habitat, and recreational opportunities can't be ignored or delayed any longer.	This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million-dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.
9/28/2021 16:12	Volusia		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing Other: Nature photography	Breach the Rodman/Kirkpatrick Dam to restore the Ocklawaha River to its natural free-flowing path between Silver SPrings and the St. Johns River	The improvement of 7500 no-longer flooded land upstream of the dam and 8000 acres of wetlands below the dam, and the resulting benefits to the wildlife and ecosystems in the area.	The continued ecological degradation of the area in and around the reservoir plus the danger to lives and property below the dam from a possible failure.	No	
9/28/2021 16:12	Hillsborough		No	Yes		1 time		Other: I came to Rodman Dam simply to see it in a native context.	I believe that these dams should be retired or torn down so the Florida Taxpayers can return the Oklawaha River to the natural riverine system that it was before the Cross-Florida Barge Canal was built. Similar to the 19th Century mindset to "drain the Everglades" the restoration of the Oklawaha River could be a huge boon to Natural Florida and its citizens from over-development. Suburban and commercial development has already caused much, pollution and other environmental degradations to our rivers and springs.	The fact that twenty, maybe more, Springs along the Oklawaha River are drowned from these two Dams.	That a huge opportunity to recreate a natural treasure like the Oklawaha River is lost and future generations will never know how beautiful and unique Florida's environment was.	Not really. The damage is already done. Wildlife, particularly biodiversity has been diminished and twenty Springs are presently lost. Only removing these Dams can fix that.	
9/28/2021 16:29	Lake		No	No					Restoration of the Oklawaha River by breaching the Rodman/Kirkpatrick Dam.	Three rivers-- the Oklawaha, Silver, and St. John's Rivers and 50 springs are restored.	We miss the best opportunity to do this. Stats and federal funds are available, public interest is high, manatees will be saved, and ---the dam is unsafe.	No. Breaching the damn is 50 years overdue. Dam safety, improved water quality, and wildlife cannot wait	Please protect our precious wildlife and our water
9/28/2021 16:31	Lake		No	No					Restoration of the Ocklawaha River by breaching the dam.	Restoration of the Ocklawaha, Silver, and St. Johns Rivers along with 50 springs. This would improve water flow, quality and restore lost ecosystems.	Water quality declines further fueling invasive events. Thousand of acres of forest are not restored and taxpayers' money is unnecessarily spent to repair a dam that does not provide broad public benefit	NO this is the best opportunity to address critical environmental needs, water flow and quality, dam safety and wildlife habitat. State and Federal funds are available and taking action is long overdue	Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by increasing regional visitor traffic and removing dam safety risk. The project would uncover 20 springs submerged by the waters of the dam. There are so many compelling reasons for going forward with the breaching of the dam. I sincerely hope it inspires your decision. Thank you for your time and attention.
9/28/2021 16:37	Outside of state / other	Harris County, TX	No	No					I'd love to see the Ocklawaha River restored by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs, and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 Million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we all miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide unimbibed passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system, and there is an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Furthermore, a dam failure or overtopping could result in potential damages to $37 property owners and up to $57 million in damages. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality, and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow, and an unobstructed blueway.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you so much for your consideration.
9/28/2021 16:46	Marion		No	Yes			2-5 times	Other: hiking	remove them	environmental damage to springs and Ocklawaha River	Continued environmental damage to springs and Ocklawaha River	no	
9/28/2021 16:54	Alachua		No	Yes		1 time			Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every additional day the dam and reservoir remain in place results in additional environmental degradation.	Thousands of acres of submerged aquatic plant communities would be able to regenerate in the restored river channel, and in the re-emerged spring run streams that drained into the Ocklawaha historically. 8,000 acres of stressed floodplain wetland located downstream of the dam would be enhanced.	Thousands of acres of submerged aquatic plant communities would be unable to regenerate in a restored river channel and in the re-emerged spring run streams, and 7,500 acres of floodplain forest would not be restored.	no	I took a course on the Oklawaha River and the Rodman Dam and visited it. I was saddened to see the damage to the ecosystem and wildlife in the area, because of a human mistake. We now have the chance to restore the natural beauty and function of the river. Let's not miss it up AGAIN.
9/28/2021 17:02	Seminole		No	No					remove the dam	Provide significant ecological benefits to the St. Johns, Ocklawaha and Silver Rivers as well as Silver Springs	We will miss a historic opportunity to stop the ongoing ecological degradation caused by the dam	NO! Breaching the dam and restoring the Ocklawaha are 50+ years overdue	
9/28/2021 17:03	Bay		No	No									
9/28/2021 17:03	Alachua		No	No					Remove the dam and restore the Ocklawaha River	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	
9/28/2021 17:03	Brevard		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	I have family in FL. The failed Cross Florida Barge Canal Project left environmental destruction and burdensome infrastructure in its wake. The damming of the Ocklawaha River and creation of the Rodman Reservoir has smothered 20 springs, blocked manatee and fish migration, and destroyed thousands of acres of floodplain forest. We hate watching the destruction of critical eco systems.
9/28/2021 17:18	Alachua		No	Yes	1 time			Fishing Canoeing / kayaking Wildlife viewing	Eliminate the impoundment and restore the river.	Decades of science.			
9/28/2021 17:18	Seminole		No	No									
9/28/2021 17:18	Volusia		No	Yes			1 time	Wildlife viewing	I would prefer to see the dam removed and the normal riverine flows restored.	The dam was a political decision to support a badly flawed idea to build the Cross-Florida Barge Canal. Thankfully, the canal wasn't built.. This can should be removed and the area restored.	That the damage caused by creating the dam and the subsequent wildlife and habitat losses will continue.	Why? Why would we continue to pay to maintain a bad idea??	Please remove the dam and restore the habitat.
9/28/2021 17:18	Marion		No	Yes			2-5 times	Other: Birding	Remove the dam and restore Ocklawaha River!	Removing the dam will restore many springs, including Ocklawaha, Silver and St John's rivers.	If the dam remains, water quality will decline, causing invasive weeds, contributing to blue-green algae, kills fish, and aquatic vegetation loss.	No, breaching the dam is overdue. Improved water quality and Wildlife can't wait.	
9/28/2021 17:19	Duval		No	No					I would like to see Dam removed and the area restored to it's natural ecosystem. We are in critical need of preserving more natural settings in FL since so much of the state is under great decline because of overdevelopment and resource destruction.	Visible evidence of the destruction of critical habitat that is irreplaceable is the greatest concern. We need to have natural areas restored so that our state has healthy habitat.	An increased loss of vital habitat that is irreplaceable is the greatest concern. We need to have natural areas restored so that our state has healthy habitat.	I think the return to a functioning natural ecosystem is essential. I do not know of alternative proposals that would be as beneficial for the area.	
9/28/2021 17:19	Volusia		No	No					The Rodman Dam should be removed in order to restore the Ocklawaha River.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Hundreds of manatees will lose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is long overdue .	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your time.
9/28/2021 17:20	Alachua		No	Yes			2-5 times	Canoeing / kayaking Boating Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	The dam harms the wildlife through the consistent herbicide spraying and causes the flooding of the beautiful springs.	Continued decay of the river , which looks like a tree cemetery in some areas.	Its a necessary action to breach the dam, that is eroding over time. When this happens, the local economy will surge. This will be a piece of paradise that many will wish to visit.	
9/28/2021 17:21	Clay		Yes	Yes	1 time	2-5 times	More than 5 times	Wildlife viewing	Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	wildlife and nature matters.
9/28/2021 17:21	Manatee		No	No					Remove the Dam	Restoration of natural flora and fauna			
9/28/2021 17:23	Palm Beach		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	
9/28/2021 17:23	Palm Beach		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	
9/28/2021 17:24	Hillsborough		No	Yes			1 time	Fishing Canoeing / kayaking Wildlife viewing	The ecosystems have been damaged by altering water flow to meet needs that can now be attained without dams. Let nature take its course.	Science supports dam free water flows.	Native species continue to suffer.		
9/28/2021 17:24	Charlotte		No	Yes		1 time		Wildlife viewing	Remove it.	$4-14 million will be saved on a dam that is past its life expectancy.	Wasting taxpayer dollars on repairing a dam that serves no purpose other than the destruction of natural habitat for many species of Florida wildlife.	No.	
9/28/2021 17:24	Palm Beach		No	No					Remove it	Disaster for the wildlife and environment	Continued disaster for the wildlife and environment	No	Don't build another dam
9/28/2021 17:24	Collier		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam will help to restore many springs as well as the Ocklawaha, Silver, and St. John Rivers	Lost opportunity for forest restoration, which will improve water quality, provide flood protection and wildlife habitat.	NO	I'm a paddler. why would I visit there now? get rid of the dam and I'll go up!
9/28/2021 17:26	Brevard		No	Yes					Remove the dam and restore the Ocklawaha River.	loss of rivers and interference with bird life and fish migration	Loss of wild life	Not roarfa	
9/28/2021 17:26	Brevard		No	Yes			1 time	Wildlife viewing	Removed completely!		We lose a great and beautiful river		
9/28/2021 17:26	Broward		No	No					Restore area to natural				
9/28/2021 17:26	Sarasota		No	No					Remove the Kirkpatrick Dam instead of costly repairs.	Environmental, reuniting the Ocklawaha, St. Johns, and Silver Rivers supporting natural habitats and native fish and manatee migrations.	irreversible damage to the already threatened species and expensive dam repairs every 10-15 years using taxpayer money.		
9/28/2021 17:27	Charlotte		No	No					I would like to see the Dam removed	All of the waterways and areas that would benefit from having fresh flowing water restored - also a big win for wildlife and waterfowl.	Eventually all the rivers and waterways will start drying up - the dam was a "man made" mistake - nature knows best and the water flow needs to be restored to what it was before the dam was built.	No - the dam needs to be dismantled	We need to STOP MESSING WITH NATURE
9/28/2021 17:28	Palm Beach		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	Restore the natural Florida environment.
9/28/2021 17:28	Marion		No	Yes			2-5 times	Fishing Boating	remove the dam and restore the river	Restore 50+ springs and restore the natural flow of the river	If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is over due	
9/28/2021 17:29	Dade		No	No					remove it for ecological and economic reasons	ongoing pollution	continued ruin of Fls natural ecology	no	
9/28/2021 17:29	Manatee		No	Yes	1 time				Remove the dam				
9/28/2021 17:29	Alachua		No	Yes			1 time	Canoeing / kayaking	Remove damn and restore the river				
9/28/2021 17:30	Broward		No	Yes			1 time	Other: Relaxing	I would like to see the dam go away	Restoring natural water flow and the springs	Stupidity remains and water quality and wildlife habitat deteriorates	No	It takes boldness to see a mistake and break the status quo. That is what is needed now.
9/28/2021 17:30	Orange		No	Yes			1 time	Canoeing / kayaking	To have it restored.	the conditions	it would be a night mare	I hope it works for all of us	The Gov. should keep us posted on the progress.
9/28/2021 17:30	Columbia		No	Yes			1 time	Boating					
9/28/2021 17:30	Collier		No	No					Remove it and restore the natural flow of water.	We have messed up the natural habitats for animals.	A waste of money to do needed repairs.		
9/28/2021 17:30	Outside of state / other	South Africa	No	No					Remove the dam and restore the Oklawaha River				
9/28/2021 17:30	Volusia		No	No					Since it has no purpose, the dam should be removed.				
9/28/2021 17:31	Martin		No	No					Preserve it.	Wildlife habitat.	Lost wilderness.		
9/28/2021 17:33	Alachua		No	No					Remove the dam and restore the Oklawaha river.	Removing the damn helps restore the Oklawaha, Silver & St. John's river as well as 50 springs. Per the Audubon, between 4-14 Million dollars will be saved on a dam that is past its life expectancy.		No. Bfeaching the dam is 50 years overdue. Dam safety, water tower quality, and wildlife cannot wait any longer.	
9/28/2021 17:33	Outside of state / other	California	No	No					Remove Dam		Environmental conservation		
9/28/2021 17:33	Hernando		No	Yes		1 time		Wildlife viewing	Save it saved	Water quality	Loss of water quality	No	
9/28/2021 17:34	Marion		No	Yes	1 time	2-5 times	2-5 times	Canoeing / kayaking	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 300-mile St. Johns Estuary from Welaka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 Million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 300-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/28/2021 17:34	Dade		No	No					I would like to see nature run its natural course. Too much human interference in our environment has led to irreversible damage.	Studies that show how dams adversely affect the natural flow of water, draining areas that are critical for animal welfare and contributing to habitat destruction.	Another man-made natural disaster...	Some kind of mitigation efforts to allow nature to exist before man-made structures like dams disrupted their balance.	
9/28/2021 17:35	Indian River		No	Yes			1 time	Wildlife viewing	Remove the the damn dam and restore the Ocklawaha River.	Impact on the ecosystem	Continued environmental destruction	No	
9/28/2021 17:36	Lee		No	No					Remove the dam and reunite the rivers.	The dam has horrendous damage to the trees and fish that live in that area.	The animals and humans suffer in that area.	I don't think so.	It will cost taxpayers huge amounts to restore the dam for no good reason.
9/28/2021 17:37	Broward		No	Yes			1 time	Other: I don't use it	Breach the dam let natural flow	Destroyed springs & forests	Water quality	No	
9/28/2021 17:37	Collier		No	No					Please remove the dam.	The dam serves no significant purpose and is an ecological problem	Continued maintenance costs and deleterious environmental impacts	No	
9/28/2021 17:37	Leon		No	Yes				Wildlife viewing	The Dam should be removed and the Reservior allowed to revert to its natural state.	The social and ecological expectations of citizens and tourists that exist today would bring greater economic benefit to the surrounding area if the restoration was accomplished. Numerous recreational opportunities would result and the improved habitat could support many ecological benefits including manatees, fishing, ecotourism and greater water flow to the St. John's River. Restored forests would sequester carbon and potentially provide forestry related jobs.	Continuing to spend millions of dollars on a facility that is not providing significant economic benefit is a waste of taxpayer dollars. Negative changes in the watershed have taken place over the years that could be mitigated by the removal and restoration.	not at this time	
9/28/2021 17:38	Hillsborough		No	Yes			1 time	Wildlife viewing	Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy. Hillsborough County has a similar issue with the 100+ year old dam of the Hillsborough River. Salt water intrusion from Tampa Bay now requires routing water from Blue Spring to the river to reduce salinity. An expensive solution to a 100 year old problem.	If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more. There is no reason to justify this dam.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	

9/28/2021 17:38	Dade		No	Yes	2-5 times	1 time	2-5 times	Wildlife viewing					Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.
9/28/2021 17:39	Lake		No	Yes		2-5 times	More than 5 times	Fishing Boating Wildlife viewing Other: bicycling	I would like to see the Dam breached and the Ocklawaha River restored to its original condition prior to the creation of the Reservoir.	As a retired research fishery biologist, I am most interested in the restoration of natural migratory fish populations to the waters cut off to them by the Dam. These include, but are not limited to, Striped Bass, American and Hickory Shads, and American Eel. Restoration of these populations would provide new fishing opportunities in the upper Ocklawaha River and possibly the Harris Chain of Lakes, while maintaining viable Largemouth Bass, Crappie, and sunfish populations in the free flowing River.	The St. Johns/Ocklawaha/Silver River ecosystem will continue to be disrupted, water quality threatened, food webs limited, recreational activities curtailed, water management strategies impeded, and tax payers money dissipated in a misguided effort to maintain an ill-advised status quo.	No. The Dam and Reservoir have been an environmental disaster for the riverine ecosystem they've disrupted, and breaching the Dam will result in numerous benefits for the State of Florida and its citizens.	
9/28/2021 17:40	Collier		No	Yes		1 time		Wildlife viewing	Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 92 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The dam is unnecessary, unnatural and expensive to restore.	Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. The dam should go - for our water quality and the health of our environment and its animals.	
9/28/2021 17:41	Lee		No	No					REMOVE IT!	The health of Florida's water flow	That all the detrimental affects of the dam will continue	NO...the dam should've been removed many years ago...it's WAY overdue	The white man has screwed up natural water systems all over the U.S. by damming rivers...a majority of them should never have been built...the consequences are evident all over the country.
9/28/2021 17:41	Alachua		No	Yes		1 time			Remove the dam. The benefits to follow are really important.	You are aware of the science.	We will have continued decline of our waterways.	No. Get with the program.	
9/28/2021 17:41	Pinellas		No	Yes		1 time	1 time	Wildlife viewing	Get rid of it. Restore it to a natural state.	That all of Florida is on board with restoring the water flow to the Everglades and it's time to unite this project with that goal.	Reduced water flow and a degraded natural environment.	This really is a no brainer. The environment is how this state makes money. People come here for it.	
9/28/2021 17:42	Leon		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	Natural Florida is fast disappearing. We need to have more respect for the natural environment.
9/28/2021 17:42	Broward		No	Yes				Wildlife viewing	I would like the dam to be dammed.....to restore a dam which has done nothing but damage the ecosystem is more than a further waste of money. It is a major disruption to the river system and the fish and wildlife that the natural water system once sustained. Reuniting the rivers would help to protect what is left of the birds and other species that once were abundant in Florida	The dam has been a failure from its inception. Natural resources need protection and destroying the dam will be a positive step in reclamation of the waterways.	Once again Florida will have lost an opportunity to protect what is left of its amazing natural resources. I consider wildlife, plant life a d our waters to be invaluable.	There is no alternative short of getting those rivers back together if we care at all about nature.	Every place you look the environment looses. I am tired of seeing every governmental agency I read about failing to protect the land. Development always seems to win, and hang the consequences.
9/28/2021 17:43	Okaloosa		Yes	Yes		1 time		Wildlife viewing	The dam should be removed and to allow the natural flow of water and wildlife. •Remove the dam and restore the Ocklawaha River	•Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	•If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	
9/28/2021 17:43	Clay		No	No					I would like to see it removed.	The way the dam it has affected and prevented the natural order of things in the environment and the life it supports.	Much more wetlands and natural wildlife will disappear forever.	The water needs to flow naturally as it did before the dam was built, as to allow the natural order of things to return to the environment.	Humans need to realize that interfering with nature, is already creating many problems for our planet and all living things it supports. Man is the only one destroying the balance and natural order of things...At some point people have to make a real effort to allow nature to heal itself, if not, humans will not survive themselves in the future.
9/28/2021 17:44	Hillsborough		No	No					We should remove the dam and restore the Ocklawaha River.	Removing the dam will help to restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	
9/28/2021 17:44	Palm Beach		No	No						Restoration and protection for all wildlife			
9/28/2021 17:44	Lake		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	Take down the Kirkpatrick Dam to open and free the natural water flow to the Oklawaha River and springs.	50 years of blocking flow of the Oklawaha River needs to be corrected.	Limited opportunity to restore nature flow of water. Also possible habitat and food supply to endangered manatees and other wild animals. Recreational opportunities for Florida's growing population.	No.	This a opportunity that Water Mgt and concern citizen need to follow through. Also the cost of upgrading the dam is a waste of state funding. 50 years is to long to interfere with the Oklawaha river systems is to long.
9/28/2021 17:44	St Johns		No	No					I would like to see the dam removed so the natural course of the rivers is restored.	savings to the municipalities aside, the most important priority for me is nature and wildlife, which will greatly benefit from returning the water flow to its pre-dam state. This dam has done a lot of ecological damage over the years of its existence.	to the environment in and around the dam for a radius of many miles. For one, the forest stands to benefit by receiving the water it needs and it got before the dam came about. Also the native flora and fauna will benefit from the original pre-dam water state.	i think it really needs to go, and now. Wildlife, nature, and the environment cannot be placed on the back burner. We need to protect and restore so it is here for a long time to come, and this also helps counter the affects of global warming when we realize efforts such as this combined with other efforts globally sum up to help the planet.	i have witnessed roughly similar efforts in the Florida Everglades, where restoration of a natural water course helped the environment, wildlife, and prevented flooding that was made worse by modifications to the original, natural water flow. I think we as a state need to do more of this so that we are supporters of nature.
9/28/2021 17:44	Marion		No	Yes	1 time	1 time	2-5 times	Canoeing / kayaking Wildlife viewing	Take it down	It prevents springs flowing and is unnecessary and unnatural	Further environmental impact	No	Has been needed a long time
9/28/2021 17:45	Leon		No	No					I believe the dam should be removed and the Ocklawaha River allowed to return to its natural state and function.	The fact that removal will restore 50 springs!!	Degradation of water quality, loss of forests that could be restored, increase in invasive weeds, loss of wildlife habitat, loss many losses to count!!!!	No!!!	Florida needs to take advantage of every opportunity to protect and restore our natural resources. Now!!!!
9/28/2021 17:45	Collier		No	No					Remove the dam and restore natural channels	There is no reason for spending any more money on this useless structure	State resources wasted on a useless dam could be used to care for Florida's environment	Not a meaningful question. A dam comes down or it doesn't.	
9/28/2021 17:46	Lee		No	No					Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	
9/28/2021 17:48	Orange		No	Yes		1 time		Fishing (shoreline/structure) Wildlife viewing	Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	We treasure Florida's natural places. Land management practices have changed in the last 50 years. By removing this dam, we can begin to repair some of the damage we've created, decrease foul water and toxic bloom, and bring tourists back.
9/28/2021 17:48	St Johns		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	Let's help restore FI to its natural ecosystem
9/28/2021 17:48	Osceloa		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	The Rodman/Kirkpatrick Dam that blocks the Ocklawaha River is in decline and in need of repair. Instead of investing millions of taxpayer dollars in repairing and continuing to operate a dam with no purpose, remove it, finally reuniting the Ocklawaha, St. Johns, and Silver Rivers.
9/28/2021 17:48	Escambia		No	No					Removal of the dam	The dam serves no purpose, but causes environmental problems	Continued negative environmental impacts.	No other option	
9/28/2021 17:48	Brevard		No	Yes	1 time	2-5 times	2-5 times	Wildlife viewing	Remove the dam and restore the Ocklawaha River.	The removal of the dam would help to restore 50 springs and the Ocklawaha River, Silver River, and St. Johns River. The Lower Ocklawaha and St. Johns Rivers will receive more than 150 million gallons a day of restored natural flow. The dam is past it's life expectancy. Removing it will save $4-14 million	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No, there is not. It's past time to do the right thing. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	If concern for Florida wildlife habitat is not enough to over ride the special interests that have refused to remove this dam, then maybe the fact that wildlife viewing is a $5.8 billion dollar industry in Florida will cause decision makers to pay attention. Black bears, Florida panthers, white-tailed deer, and other large terrestrial wildlife are not likely to cross the 9,500 acre Rodman Reservoir. The dam blocks fish and aquatic wildlife from access to their historic migratory routes. These all create barriers to movement of animals through the Florida Wildlife Corridor. They sever the northern route leading to the Rice Creek Conservation Area and Wetland Preserve. Breaching the dam will remove these barriers to north/south movement and even strengthen an east/west wildlife corridor. Removing the dam will help animals thrive and survive, reduce habitat fragmentation, and decrease human-animal conflicts.
9/28/2021 17:49	Palm Beach		No	No					Remove it.	As a child way back in the 1940s my brother and I fished the river and learned how to run a small outboard motor. Oh that every kid could have that opportunity.	Habitat loss.	Doubt it	
9/28/2021 17:49	Duval		No	No					remove the dam	The negative impact it has on florida rivers interrupting the normal flow and path for multiple species including the manatee	The environmental degradation already in place will continue worsening	nothing different to the desruction of the dam	
9/28/2021 17:49	Sarasota		No	No					Having read the arguments pro and con, and having seen the benefits of restoration of comparable riverine environments around the country, I believe the dam should be dismantled, and the river restored to the extent possible to its original, pristine condition.	The enormous success of similar projects in the Northeast and Northwest, e.g. the Connecticut River, the Kennebec, et al.	Continuing degradation of the environment in Florida; we've had a great opportunity to learn from our mistakes, and there's no time like the present to correct those that can be fixed.	I think this is an either/or decision. You remove the dam or you don't ; so things could get better, or if we go for status quo, they'll remain the same.	I'm an old man and a devoted fisherman. I love bass fishing as much as anybody, and I for sure won't be around to use either the renewed river or the old artificial lake. But my children and grandchildren will, and I wish for them a better, cleaner, more beautiful and more prosperous state.
9/28/2021 17:50	Outside of state / other	sf	No	No									
9/28/2021 17:51	Lake		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	
9/28/2021 17:51	Leon		No	Yes		2-5 times		Boating	Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	
9/28/2021 17:52	Brevard		No	No					I would like to see the river restored to it's natural condition.	Removing dams improves habitat for aquatic fauna and helps migratory fish species.	I'm concerned that the river will continue to be of diminished value to wildlife.	I'd have to know more about potential scenarios.	
9/28/2021 17:52	Charlotte		No	No					Remove the dam and restore the Ocklawaha	Let nature flow freely	More waste of taxpayer money	No	
9/28/2021 17:53	Volusia		No	Yes			1 time	Other: I was there to observe the draw down.	The Ocklawaha River is the largest tributary of the St. Johns River and should freely flow to its confluence. The dam should come down. Across the country land managers and users have come to the same conclusion and many such dams have been demolished. The purpose for construction of the dam has been deauthorized. There will never be a Cross Florida Barge Canal.	The lock and dam system prevents free flow of migratory fish and manatees from the St. Johns River to upriver springs. The current system creates a closed system with significant increases in nutrients. Fish populations have suffering and manatees have lost a significant historic habitat and winter refuge.	The reservoir and the Ocklawaha could become an eutrophic system with increased nutrients with no way to realistically exchange with downstream waters.	No. The dam needs to come down. Restoration is the preferred outcome.	The reservoir and lock system are the last vestiges of a boondoggle that was de-authorized 50 years ago! It is a scourge on the intrinsic beauty of the Ocklawaha. We have a real chance to restore this ecosystem and should take the opportunity to do so.
9/28/2021 17:53	Hillsborough		No	No					I would like to see the dam removed.	The current situation exists because of the Cross Florida Barge Canal, which I have always believed was a bad idea environmentally. With all of that gone the rivers would be returned to their former activity, removing the water downstream, together with nutrients and aquatic species that would be allowed to move and bring greater genetic diversity to the ecosystem. Eliminate the dam, save millions for a rebuild and get an enhanced environment.	That things would continue as they are but taxpayers would have a big bill to rebuild a dam that we would be better off without.	Not really. We either decide to dismantle the dam and reap the environmental benefits, or we spend a lot of money to keep a not-so-good situation.	
9/28/2021 17:53	Alachua		No	No					Removed	Improve water quality, drainage, environmental stewardship	Quality of water will continue to diminish	no	
9/28/2021 17:54	Orange		No	No					Any activities that support conservation of resources, land restoration, preservation of wildlife, and the protecting the environment are of interest to me.	Observations and articles about the state of Florida's environment, including the negative impacts that mankind have-some impacts that cannot be reversed	Loss of wildlife habitat, destruction r negative impacts to the environment	I'd have to see a set of proposals and an evaluation of each proposal to answer this question	
9/28/2021 17:54	Lake		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	The incredible views along with mesmerizing wildlife make our home here in Florida a special place. Both here locally and nationally we need to protect our environment that we cherish on a daily basis. Continuing to ignore the decline of our natural habitat is not an option. There is no more critical time for change than now.
9/28/2021 17:54	Orange		No	No					Breach the dam. Restore Oklawaha	environmental and historical	wildlife	protection of all wildlife	
9/28/2021 17:55	Orange		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Removal and restoration of the natural flow of water.	The purpose of the dam was never realized and the cost to taxpayers in keeping it (both environmentally and fiscally) is far greater than the cost of removal/restoration.	Continuing to degrade the connecting rivers and spend money on a dam/reservoir that has no purpose other than recreational fishing, when it isn't even that good at that.	No. Removal of the dam would require some restoration and remediation to repair the long term damage the dam has caused.	After seeing what damage has been done locally as well as downstream, removal of the dam is long overdue. Many other locations nationally have removed outdated dams with amazing success for the environment as well as local economies.
9/28/2021 17:56	Orange		No	Yes				Other: Never. Paddled the Ocklawaha several times.	Please, please, please restore the River.	I think the burial of the many springs, the destruction of the wetland forest, and the blockage of migration of manatees and fishes were a terrible attack on the environment and beauty of that river.	My biggest concern would be if the dam were repaired and remained.	Partial removal of the dam? so that wildlife and canoes could use it again.	
9/28/2021 17:56	Clay		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing	Maintained as a Reservoir for fishing	Rodman is one of the finest bass fishing destinations in the country. Guide Captain Sean Rush has helped his clients land over 60 ten pound bass from Rodman this past year. People travel from far and wide to have the opportunity to catch the fish of a lifetime in Rodman. My personal best bass (10 lbs 2 oz) came from Rodman. The fishery supports a very diverse and healthy wildlife population beyond just the excellent bass fishing.	The loss of the best bass fishing destination in Northeast Florida. There is nothing like it in this area. It would have a devastating economic impact on Putnam County, one of the poorest counties in our state.	No	
9/28/2021 17:56	Escambia		No	No					Breach the dam and reopen the river	The effect on Florida wildlife	Continued destruction of wildlife	Just re-open the river.	Thank you.
9/28/2021 17:56	Pinellas		No	No					Open it up save the springs	It's the right thing to do. Brings tourist	We need our springs for wildlife .		
9/28/2021 17:57	Hillsborough		No	No						To follow my sons legacy "Save the Manatees"			
9/28/2021 17:58	Charlotte		No	No					Restore things so wildlife can return and not be blocked in their paths.		Animals being impacted.	I would support an outcome that unblocks paths for manatee and other wildlife	
9/28/2021 17:58	Hillsborough		No	Yes			2-5 times	Wildlife viewing	Please remove this useless dam and restore the rivers. Just look at how well restoring the river in central Florida benefited all our native plants and wildlife. Removing this useless dam will restore the natural ecosystem and thus bring in tourist dollars.	Ecosystem restoration equals economic benefits thru tourism dollars	Death of the river system	No	
9/28/2021 17:58	Sarasota		No	No					Please breach the dam	Water quality and economic disasters	Loss of environment and all that entails	No	It's overdue
9/28/2021 17:59	Lee		No	No					Down with the dam.	Water quality	Continued dissipation of springs and water quality	No	
9/28/2021 17:59	Orange		No	Yes		2-5 times		Wildlife viewing	I would like to see it returned to it's natural state.	To do what's right for the environment and it's amazing animals.	That it will be too late for the environment and it's animals to thrive.		
9/28/2021 17:59	Dade		No	No					I would like to see the Kirkpatrick Dam removed and the Ocklawaha River restored.	$4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	It only makes sense to tear down the dam. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.
9/28/2021 18:00	Manatee		No	Yes		1 time		Wildlife viewing					
9/28/2021 18:01	Volusia		No	Yes		2-5 times		Wildlife viewing Other: boating	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	Breaching the dam restores the Ocklawaha, Silver and St. Johns Rivers, and 50 springs to their original configuration. The breach allows fish and manatees to use the free-flowing river as it was created.	This is probably the last/best opportunity to restore the river to its original conformation. If the dam is not removed now, tax payers will pay an enormous amount of money to restore an unneeded and unnecessary structure.	No. Breaching the dam is 50 years overdue. Habitat restoration and improved water quality can't wait.	
9/28/2021 18:01	Sumter		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Remove the dam and restore the Ocklawaha River	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	no	Thank you!
9/28/2021 18:02	Manatee		No	No					Breach it and restore the river	Cost ofrepair and ecological damage if it remains	Waste of money and loss of revenue to affected counties	None	
9/28/2021 18:02	Flagler		No	No					Pls restore the river ton original pathway	Audobon society			
9/28/2021 18:03	Duval		No	Yes					I would like the dam to be removed and restored to it's original natural state. It is well past time to fix what was damaged so long ago. There are plenty of place to fish in Florida.	I'm an avid kayaker and have seen the springs damaged over the years. I love Silver Springs in particular and we need the natural water flow to restore it. The economic benefits are around $50 million dollars, can't imagine why this would not happen for the beauty of FL and the economy.	The springs will continue to be degraded and full of weeds and that horrible algae that is deadly. As a kayaker I've encountered that algae and it's horrible. The Silver Springs area is beautiful and this would encourage more visitors to come and spend money in the area and enjoy the springs.	Absolutely not!!!! This should've been done years ago and is long overdue. Please fix this now so that Floridians and tourists can better enjoy our amazing springs and natural habitat.	I have been kayaking Silver Springs since 2007 and have seen how the river and springs are degrading. The beautiful underwater grasses now have algae and growth on them and it breaks my heart to see this. Silver River is a gem of Florida and needs to be preserved and helped by removing this dam.
9/28/2021 18:04	Orange		No	Yes		2-5 times		Wildlife viewing	Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	
9/28/2021 18:08	Collier		No	Yes			2-5 times	Boating Wildlife viewing	Make the river free! Like it was before we ruined it!!!		One planet and we keep ruining it!	Let the rivers run free	This wrong on so many ways. People think they know better than nature. All we do is follow greed and rape and pillage the environment to make some people rich!
9/28/2021 18:08	Brevard		No	Yes			2-5 times	Wildlife viewing	Blow the damn, restore the river but move the turtles first			no	
9/28/2021 18:09	Highlands		No	No					Complete restoration of the Ocklawaha River to its natural state! I am a 6th generation Central Floridian and remember well the natural beauty that was destroyed when that dam was forced on us!	More than ever, Florida's dwindling natural resources must be preserved.	Final replacement of old Florida with condos and cheesy shopping plazas.	No.	
9/28/2021 18:10	Pasco		No	Yes		2-5 times		Wildlife viewing	Please remove the Dam!	The eco- system there needs to thrive and cannot if Environmental issues are not resolved. Wildlife inhabitants need to be able to thrive in order to sustain themselves and this will not be able to continue without the River becoming free-flowing.	That area will undoubtedly force the wildlife there to relocate elsewhere.	No	
9/28/2021 18:14	Hillsborough		No	No					Whatever is required to help restore the area's ecosystem	Science.	Further neglect to the fauna and flora that the rivers support.	No.	None.
9/28/2021 18:16	Collier		No	No									
9/28/2021 18:17	Manatee		No	No					The damn be removed not repaired	The damage the damn has already done	Continued damage to the environment	No	
9/28/2021 18:17	Orange		No	No					I believe that the dam should be breached and restore the rivers.	Environmentally it has been a disaster on many levels and was a huge mistake to have been built.	We still could not enjoy some beautiful rivers in Florida; there is not much natural land left.	no	I have spent time on different segments of the Ocklawaha, Silver and St. Johns Rivers and wish that all of the rivers could be reconnected as they were. The benefit to the citizens to enjoy and use special natural land far outweighs the interests of a few businesses and owners that benefited financially from the environmental catastrophe the dam created.
9/28/2021 18:17	Jefferson		No	No					Get rid of it.	All the information you provided in your email.	Disappointment.	Whatever Audubon feels would be acceptable.	
9/28/2021 18:18	Lee		No	Yes			1 time	Other: Boat trip w naturalist. stands of Cypress trees dead from damming. Springs blocked from damming. Very little bird life variety. Read dr. Steven noll's book and invited him to our historical society to lecture. So compelling we left next day to see for ourselves the damage to this once beautiful, life giving part of florida.	Do not rebuild Dam. Let this part of Florida return to its natural beauty.	100 photos i took while floating through area.	Continued deterioration of important piece of history.		
9/28/2021 18:18	Walton		No	No					To see the dam removed and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	The irreparable loss of a precious ecosystem. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No.	

9/28/2021 18:18	Alachua		No	Yes		2-5 times		Other	I would like to see the Ocklawaha River restored, and that ugly dam removed! Before the Dam flooded everything and kill trees and ruined the natural state of that area, my husband and children and I spent weekends fishing, boating, photographing, eating out, shopping at least once a month. It's time to rectify the loss of the natural flow and refresh the lost springs and wildlife.	Make it the outstanding river for recreation and beauty that people once enjoyed instead of the mess (at the dam itself) it is today!that so few people go out of their way to travel to.	I understand that so many of us in North Central Florida are ready and anxious for the restoration, and funds are available. This is the time to get the job done and lift the spirits of those that love the outdoors and traveling to springs and enjoying the beauty of nature. I don't want to more taxpayers money put into keeping up the Rodman Dam. I caught fresh water fish every time we fished, saw wildlife, (especially manatees) instead of what is there now dead stumps, exotic fish, weeds, and junk on one side of the dam. Who wants to buy local gas or eat out or spend the weekend locally to see that?	No! It's time to make the water flow again, now!	Water quality should improve, manatees should come back and money should flow into the surrounding communities as well!
9/28/2021 18:19	Duval		No	No				Restoration of the Ocklawaha River to help bring balance back to the FL ecosystem	I've lived in FL my entire life- from the Gulf Coast where I grew up, here to the NE corner pocket where I still am now. I've seen far too many natural waterways destroyed & die off; red tides, river damage and pollution as well as the devastating losses of our Manatees this year. My watching this damage over my lifetime, happening at the hands of terrible political choices being made, is where my position stems from. How dare we not protect our state better, for our future generations.	Loss of revenue that WOULD come back to more waterway areas were they enjoyable again, how many thousands of acers of forests would be restored with water reservoirs in a more healthy sate, is there truly any other proper choice here? A loss of this initiative will negatively impact our state in the pocket and be an environmental hit, another one we do not need and can prevent.	No. This is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	
9/28/2021 18:20	Manatee		No	No				Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	Removing the dam is necessary and this is our one chance to do the right thing for the environment.
9/28/2021 18:21	Alachua		No	Yes				Remove the dam and restore the river and forests.		The damage to our ecosystem will continue.	No	
9/28/2021 18:21	Pinellas		No	No								
9/28/2021 18:21	Alachua		No	No				Taken down	Restore natural historical flow	Continued mismanagement no	No	
9/28/2021 18:22	Alachua		No	Yes			Canoeing / Kayaking Wildlife viewing	Remove the dam	Saving manatees	More deaths and fewer springs	I think the damage needs to be removed	The springs need to be free. The river needs restoring to help with fish and help for Silver Springs
9/28/2021 18:24	Broward		No	Yes		1 time	Wildlife viewing Other: Birding	Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	I treasure all aspects of natural Florida, especially clean, clear water in rivers and springs.
9/28/2021 18:25	Pinellas		No	No				Open the dam back up instead of repairing it-the benefits will be amazing	Springs have been destroyed, manatees and fish cannot migrate here, and acres upon acres of floodplain forest have been destroyed!! This hopefully can be turned around.	Losing more critical habitat for wildlife and further destroying an ecosystem that has already sustained so much destruction will further destroy this area. It is WIN; to turn this around.	Not sure at this point.	Please make a decision based upon rightning a wrong that can once again help this area be a shining example of " fobering to nature"
9/28/2021 18:25	St Johns		No	Yes				Improve				
9/28/2021 18:26	Sarasota		No	No				Do not damage the natural environment		Increase pollution and loss of wildlife		
9/28/2021 18:26	Broward		No	No				return the waters to nature	money wasted	money wasted and native animals become exist	no	NA
9/28/2021 18:27	Outside of state / other	Phoenix, AZ	No	No				To restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 300-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier.	The 300-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an undobstructed blueway.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide natural warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/28/2021 18:29	Broward		No	Yes		1 time	Wildlife viewing	Remove the dam	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	protecting nature is the only way to help everyone survive. it's the only way we can progress and prosper.
9/28/2021 18:35	Hendry		No	No								
9/28/2021 18:39	Brevard		No	No				I want to see the destruction of natural habitats preserved or restored. The entire ecosystem relies on a healthy environment, from fairy shrimp to humans.	If humans want to continue to enjoy natural beauty as well as continue to make money from that environment, it is imperative we protect it.	The death of ecosystems will proliferate		
9/28/2021 18:39	Marion		No	No				I want the Ocklawaha River restored.	It is part of our state's environmental system.	1 fear further damage to our delicate eco-system.		
9/28/2021 18:41	Clay		No	Yes		More than 5 times	Fishing Boating	Remain as is!	Preservation!	Florida's freshwater big game fish decline!	Not preserving the Reservoir!	
9/28/2021 18:41	Marion		No	No				Remove the dam and restore the Ocklawaha River	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive150-millions gallons /day of restore natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam C. And. Silver Springs will lose out on $47 million in economince benefits ver 10 yrs. restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remails, water quality will cont. to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for water storage, and filtration for downstream communities, flood protection wildlife habitat, recreation, and more.	No. Breaching the dam is 50 yrs. overdue. Dam Safety, improved water quality, and wildlife cannot wait	
9/28/2021 18:41	St Lucie		No	No				Return the area back to original state	The information that was sent to me in this communication.	All the ultimate damage that will Occur in the future.	No	
9/28/2021 18:42	Sarasota		No	No								Look
9/28/2021 18:45	Hillsborough		No	No				I canoed in the Oklawaha over 30 years ago and it was such a pristine area - like living before civilization - surrrughted nature. I support keeping it th at way.	Keeping Florida as environmentally safe for native wildlife as possible.	Loss of native species.	I'm not really sure.	
9/28/2021 18:46	Leon		No	Yes		1 time	Canoeing / kayaking	I would like it removed	Environmental benefits of restoring the original river	Missed opportunity	May what is best for our environment win	Best Regards
9/28/2021 18:48	Duval		No	No				Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety improved water quality, and wildlife can't wait.	We need to preserve as much of natural Florida due to the massive number of people who are relocating to Florida. Removing the dam is a good way to do that.
9/28/2021 18:48	Lee		No	No								
9/28/2021 18:50	Outside of state / other	Greenwood, SC	No	Yes		More than 5 times	Fishing	To permanently maintain the dam and reservoir	Over 20 years of personal experience, staying in Palatka and Welaka, hiring local guides and independently fishing on Rodman. I've witnessed firsthand the economic value fisherman like myself have on the local economies. Hotels, restaurants, grocery stores, gas stations, tackle stores, convenience stores - all benefit from us. So also does the State and local municipalities in terms of various taxes we pay on purchases from the above entities. So also does the State in terms of licensing fees.	Severe economic impact to local businesses - large and small - and the individuals associated with these businesses from fishermen and fishermenwes who travel to Rodman from near and far.	No	Rodman Reservoir is unique among Florida's premier fishing destinations. It's beauty is unlike any other I've seen in the State. So too is the quality fishing experience. I do not foresee future trips to Florida if Rodman Reservoir is drained.
9/28/2021 18:50	Leon		No	No				Tear it down.	Return to as natura intended.	Continued Environmental degradation.	No	Too many people
9/28/2021 18:51	Brevard		No	Yes	2-5 times	More than 5 times	Wildlife viewing	Remove it	Return the basin to nature	If I common lands would still Bit be under water	None	
9/28/2021 18:54	Marion		Yes	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating	Keep it the way it is. It's a beautiful/amaing place	Just go look at the water and wildlife that thrive on it. That alone should show you how amazing that place is.	You will destroy that beautiful place	Keep the dam
9/28/2021 18:55	Hillsborough		No	No				I would like to see the dam removed	The negative environmental impacts of the dam			
9/28/2021 18:55	Alachua		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing	Thousands of anglers fish there every year. This lake is one of the best bass fishing lakes in the country.	The reservoir would not be available for the sport fishing anglers.	No.	
9/28/2021 18:56	St Johns		No	No								I want clean unpolluted water without interference from a dam.
9/28/2021 18:59	Washington		No	No				Let the dam go and restore the river to its former state.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss.	No. Getting rid of this dam is 50 years overdue and water quality and wildlife can't wait any longer.	
9/28/2021 19:00	Seminole		No	Yes		2-5 times	Canoeing / kayaking Wildlife viewing	Restore natural water flow. Reestablish native species, including manatees.	Nature knows better than the Corps of Engineers.	Unnatural flooding and constant money for maintenance. Keeping natural migrations of so many species at a standstill. The abundance of native species is hindered by this massive folly.	No	Lets try to fix some of the mistakes of the past and live with nature, not constantly trying to fight it and finding out we have made mistakes that make things worst.
9/28/2021 19:01	Outside of state / other	NJ	No	No				Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	
9/28/2021 19:03	Sarasota		No	No				Remove the dam/reservoir which were created to create the cross Florida canal, an environmental disaster.	I see no information that shows that NOT restoring the Oklawaha River system would benefit the environment. We need to stop the degradation of our underground water systems which feed surface waterways and drinking water.	We will see rapid pollution of our water ways. Let's not keep repeating our mistakes for the benefit of the vocal minority who have no interest in the future. They want to make money restoring the dam...period.	No comprising(,	
9/28/2021 19:03	Bay		No	No				Restoring rivers and wetlands is incredibly important and this is an opportunity that needs to be taken advantage of.				
9/28/2021 19:04	Leon		No	No				Remove the dam and allow nature to resume stewardship of the waters and land	Ecological concerns	Wasting money and destroying nature	no	
9/28/2021 19:05	Manatee		No	No				Remove the dam	Loads of data on free running rivers and streams benefiting wildlife and our environment	Same old same old in Florida		
9/28/2021 19:06	Broward		No	No				Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	
9/28/2021 19:07	Lee		No	No				Remove the dam and restore the Oklawaha River	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	
9/28/2021 19:07	Marion		No	Yes		1 time	Boating	I would like to see at least partial diversion of flow of water over the dam in order to restore the Oklawaha River to its former path.	Death of fish which cannot navigate the full course of the river.	Continued degradation of the normal activity of the original river.	No	
9/28/2021 19:07	Citrus		No	No				I would like to see the River returned to its original state. Break down the dam. Please	Our springs and waterways are what makes Florida flora and fauna so amazing. We have done so much to destroy it. It is time to replenish.	We may lose many species of plants and animals if the natural waterways are not restored. The water we depend on for drinking could be at risk if our springs and aquifer are not kept healthy with full flow		I was raised in the Ocala/ocklawaha area in the 70s. Silver river and silver springs were both so clear. Now there is so much muck and lyngba. Actually raised in Moss Bluff and remember the beautiful pristine ride up the ocklawaha river back then.
9/28/2021 19:09	Brevard		No	No				Remove the dam and restore the Ocklawaha River	Restore the natural water flow. The wildlife, including manatees, need the natural water flow which will improve the water quality.	The natural flow is the way it was meant to be. Water quality is declining. It would be money wasted to restore the dam	No.	
9/28/2021 19:11	Marion		No	Yes		2-5 times	Canoeing / kayaking Other: Hiking the FT; I last visited during a Forest Service Sawyer training	I would like to see the dam completely breached, the natural flow of the Ocklawaha/Orange watershed restored, and the reforestation of the existing reservoir's vast acreage. Put an elevated bridge where the spillway is now, and use some the fill to create a recreational/historical area where the locks are now. Put a wetland/channel where the canal is now, much like they did up around Eureka. Few years, some dredging equipment, should be easier than it was to put it in. Keep in mind the river can be controlled from Moss Bluff anyway.	Natural water flow is most important. Clean water is one of Florida's greatest challenges these days. Also, restoring forests and wetlands where there is nothing but muck and a reservoir for no reason would seem logical. Finally, spending all that money to maintain a structure that has no usefulness seems illogical. It's a dam with no purpose at all. There is no commercial traffic, it doesn't have any significance in flood control, all it does is impede natural water flow and wildlife transit.	We would continue to pay for a dam that does little else except degrade the environment when we could instead improve the situation and use the wasted maintenance money to pay people to fix the problem. There has already been considerable success restoring the river above the reservoir and converting the Barge Canal to a Greenway, it would be shame to not follow through with those efforts.	Although a semi permanent drawdown and partial breach are being considered, I would rather see the Ock back to the way that it was that I never got to see as I was born well into this boondoggle's start.	I was raised near here, but then I went to South Florida to spend a career protecting Florida's natural resources. I didn't know all that much about the Kirkpatrick Dam until I retired here a few years ago. I have a Biology degree. After 30 years watching the Everglades and Florida Bay die, I can say I am concerned about bad water management practices.I know a local Bass fishing guide who says there's no point in that lake anymore except it's a good muck pit to get Shiners to fish elsewhere for Bass.
9/28/2021 19:12	Alachua		No	No						Screw up environment	No	
9/28/2021 19:13	Hillsborough		No	Yes		1 time	Other: The Kirkpatrick Dam and Rodman reservoir are of no use to me.	I would like to see the dam torn down and the Oklawaha River restored.	I fondly remember childhood boat trips down the Oklawaha River before the dam was built. We could go from the St. John's all the way to Silver Springs. It was wild country and a beautiful, free-flowing river. Allowing the River to flow freely again, and draining the Rodman Reservoir would allow the forest to regrow again and the natural wildlife and fish to repopulate.	If the River is not restored algae blooms will continue. Putnam County and Silver Springs will loose millions of dollars due to lost tourist dollars and continued fish kills due to these toxic algae blooms. Plus, the government would continue to be responsible for thousands, possibly millions, of dollars in rebuilding the dam and its ongoing maintenance cost. When I visited the dam several years ago even the dam attendant expressed a desire to remove the dam and save the environment, rather than bowing to the demands of just a few fisherman.	No. The dam was built in anticipation of building the barge canal all the way across the state. That never happened. The dam is not needed, and, in effect, is causing great ecological and financial harm to the entire state. Funds that currently support the dam could be used for so many other, better, purposes.	
9/28/2021 19:14	St Johns		No	No				Approval by Florida House and Senate.	Manatees and wildlife cannot cross from the three rivers into any other river	Decline of wildlife habitat	No	
9/28/2021 19:15	St Lucie		No	No				Eliminate the dam and restore the natural flow	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy	If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	We must immediately do whatever it takes to improve the environment
9/28/2021 19:15	Duval		No	Yes		1 time	Other	Remove the dam	Recreate the natural flow of water	Continued misuse of the land and waterway	No	
9/28/2021 19:18	Palm Beach		No	No								
9/28/2021 19:20	Palm Beach		No	No				Clean it up to serve the people and wildlife	Ecology	Another ecological catastrophe	Pro-active legislation	Stop subsidizing the sugar industry
9/28/2021 19:20	Santa Rosa		No	No				I would like the dam to be removed, and restore the natural flow of the Ocklawaha River.	The natural flow of many springs and rivers will be restored to do the work naturally as Mother Nature intended.	That we will continue down the path of problems like red tide, manatee habitat freedoms, just common sense stuff. Why spend all that money repairing the dam when it is not necessary in the first place.	Please put it back the way it was intended, that took years and years to GRADUALLY become as it was, before humans come in with their bulldozers. TY	
9/28/2021 19:24	St Johns		No	Yes	2-5 times	More than 5 times	Canoeing / kayaking	Take it down!	History books	Destruction of the river	No	
9/28/2021 19:26	Sarasota		No	No				Remove the dam and restore the Ocklawaha River	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	
9/28/2021 19:28	Pinellas		No	Yes			Wildlife viewing	Please restore the Ocklawaha River.	Please restore the 50 springs as well as the Ocklawaha, Silver, and St Johns Rivers. The Lower Ocklawaha and St Johns Rivers will receive 150+ million gallons per day of restored natural flow. Also, $4-14 million will be saved on restoring this dam past its life expectancy. Now is not the time to waste excessive amounts of money.	If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests to be restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more. Restoration is necessay to bring increased visitation, construction, and hospitality jobs to the region.	No. Through the years, Floridians have repeatedly commented on this wreck. Breaching the dam is years long overdue. Please review dam safety, improved water quality, and our wildlife.	This mayhem was a mistake in the beginning and continues to be a mismanaged failure.
9/28/2021 19:31	Flagler		No	No				Take the dam out and bring back Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St.	Wildlife can be allowed to live. Everywhere you look all that seems to matter are building more and more. No concern for what this is doing to us all. Taking away natural resources takes away animals and birds. Our government doesn't seem concerned what this will do to our environment.	No. Take out the dam.	
9/28/2021 19:34	Lake		No	No								
9/28/2021 19:36	Dade		No	No								

9/28/2021 19:38	Outside of state / other	Austin, TX	No	No				I would like to see the river restored by breaching the dam.	Restoring the river will provide essential warm winter habitat for hundreds of manatees.	Keeping the river dammed harms the manatees' future chances of survival.	No, there is not another solution that will provide the desired result.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/28/2021 19:39	Putnam		No	Yes	2-5 times	More than 5 times	More than 5 times	Wildlife viewing Other: Relaxation	Leave the dams alone - two wrongs don't make it right again. Wildlife has adjusted to them over the years. Water is a premium, just look at California, Arizona, etc., even if it's not fit for drinking it's valuable. We need to have places for outdoor pleasures and relaxation. I beg you don't change things.	Water is a premium, just look at California, Arizona, etc., even if it's not fit for drinking it's valuable. Fire departments could use it for fighting forest fires.	People would no longer have a source to relax and enjoy nature. If we can't relax the stress could lead to more violence.	NO	
9/28/2021 19:40	Broward		No	No					Remove the dam	All of the research	Continued problems with the unconnected waterways	Not really	
9/28/2021 19:40	Volusia		No	Yes			1 time	Other	I would like to see the Oklawaha river restored to its natural state. The dam is not needed	Study by scientists	Deterioration of the river and harm to wildlife plus higher taxes	Not really...there is no reason to fix this aging dam	
9/28/2021 19:45	Putnam		No	Yes			1 time	Other: I don't use the dam area	Remove the dam	-have boated along the Ocklawaha River many times, both during the drawdown and when it's artificially flooded. During the drawdown the springs are exposed, the wildlife is abundant, the forest floor comes alive with plant and tree growth.	There are so many concerns. The health of the river and its dwindling inhabitants are of utmost concern.	Not really. It's a mistake and has been for over 50 years.	
9/28/2021 19:46	Manatee		No	No									
9/28/2021 19:47	Marion		No	Yes			2-5 times	Wildlife viewing	Remove the dam and restore the river	The dam has not been a successful project	Environmental and economic concerns	I don't believe so	
9/28/2021 19:47	Sarasota		No	Yes			1 time	Wildlife viewing	It's absolutely essential that the dam be removed so that one of Florida's most treasured waterways is restored. As a child in the 50's I canoed with my family several times from Silver Springs down the Oklawaha River. That trip became impossible after the disastrous cross Florida Barge Canal was dug, then the dam was built.	Florida's natural river systems must be restored wherever possible.		no	
9/28/2021 19:47	Seminole		No	Yes			1 time	Other					
9/28/2021 19:49	Volusia		No	No					Remove the dam and restore the Ocklawaha River	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait	We are in a race to preserve what is quickly dwindling of this unique ecosystem.
9/28/2021 20:15	Leon		No	No					The dam needs to be removed so the land can return to its original state	This was built as part of the ill-fated cross Florida barge canal and it no longer has a purpose.	Total waste of money to maintain it and a lost opportunity to regain natural land.	I can't think of anything worthwhile to come from leaving it in place.	Please do the righty bing . Florida Thanks you
9/28/2021 20:15	Pinellas		No	No									
9/28/2021 20:15	Martin		No	No					Destruction of the dam	Restoration of natural flow that helps our environment	Florida has been harming its environment due to ignorance and greed for generations.	I don't know if part of any plan could achieve any goal.	
9/28/2021 20:16	Charlotte		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	•Remove the dam. As far as I can tell, it no longer serves any justifiable need.	It was built to support a canal that has been obsolete for decades.	Further unnecessary destruction to the habitat of Florida wildlife.	None.	
9/28/2021 20:16	Outside of state / other	Missoula, MT	No	No					Remove Kirkpatrick Dam	Natural springs and water flow is essential to ecosystem health.	Continued decline of ecosystem health.	No	
9/28/2021 20:17	Lee		No	No					Remove the dam and reunite the water flow	Studies that show the harm being done to the environment	Cost of repairs and potential damage to the eco system.	No	
9/28/2021 20:18	Duval		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	The ecosystem in Florida is unique and very special. To interfere with natural habitat throws the ecosystem off balance and it takes many, many years to rectify- if at all.
9/28/2021 20:18	Hillsborough		No	Yes			1 time	Wildlife viewing	Remove the dam and restore the Ocklawaha River.	It saves the state money and restores the Florida water systems to a healthier flow of water.	Wasted money, a worse ecological system, long term loss of eco-tourism opportunity.	No, the dam should never have been built--it is overdue removal.	
9/28/2021 20:22	Clay		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Keep the reservoir open for our kids and grandchildren to enjoy the scenery , boating, camping and most of all the greatest memories of fishing 🎣	Saving the fish and wildlife ...	Loosing one of the best reservoirs in the state of Florida would be catastrophic. Loosing Rodman would kill thousands of fish and wildlife that rely on the reservoir.	I will only support keeping Rodman Reservoir open.	
9/28/2021 20:23	Alachua		No	No					Restore the Oklawaha river	Do not want to spend millions on the dam	Not a good use of funds	Don't know	
9/28/2021 20:23	Pinellas		No	Yes			2-5 times	Wildlife viewing	Breach it	restoring the natural flow and saving the state funds that are needed to repair it	none	no	
9/28/2021 20:24	Duval		No	Yes	2-5 times	2-5 times	More than 5 times	Fishing Boating	Leave it as it is...	The fishery is one of the best in the USA. It is a great habitat for an abundance of wildlife including Bald Eagles.. To try to restore Rodman to the origanal state woud be a failure and cost millions if not a billion dollars. It will ruin many businesses that rely on Rodman for their income. It is not possible for it to ever be as it was originally. Keep Rodman as it is.. To try to restore it is ridiculous and insane, a big waste of manpower and money.	It would not be as fishable, no place to launch, and I am afraid many wildlife including gators would be displaced just like wildlifes displace animals and destroys habitats, and nests..	Only leaving it as it is.. I would not support a compromise....	I have expressed my thoughts.... Thank you
9/28/2021 20:25	Outside of state / other	bogota, new jersey	No	No						environment			
9/28/2021 20:25	Palm Beach		No	No					I would wish it removed	The fact that we have lost so many springs.			
9/28/2021 20:28	Dade		No	No									
9/28/2021 20:30	Alachua		No	No					Breach the dam, let the water flow	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	Waste of tax payers money and loss of 20 springs	No	Please restore our springs and stop maintaining this useless dam
9/28/2021 20:30	Outside of state / other	Las Vegas, NV	No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	
9/28/2021 20:34	Broward		No	No					Remove the dam.	Restore the natura flow in order to revive the rivers below the dam as well as the associated springs.	Loss of recreation opportunities and increased pollution.	No.	
9/28/2021 20:34	Alachua		No	No					Remove the dam	Waste of tax payer dollars and loss of water flow for manatees	Manatees are dying and they deserve this addition of water way	No this is 50 years overdue please	This will help restore life in the springs and save money
9/28/2021 20:37	Pinellas		No	No					Restoration of the natural waterway.	Ecologically sound idea to restore the environment	Environmental disaster of human interference.	No	
9/28/2021 20:44	Outside of state / other	Pennsylvania	No	No					move dam out of florida	the florida ecosystem would benefit birds and wildlife a lot	same old dreary dam not useful	no	
9/28/2021 20:53	Marion		No	Yes		2-5 times		Wildlife viewing	Restore the natural river flowage	Better for wildlife in the long run	The natural ecosystem will continue to deteriorate	NO	
9/28/2021 20:55	Pinellas		No	No					Return land to its natural state	Newspaper coverage regarded to uselessness if the damage and the rerouting of natural water flow, covering numerous springs.	Further loss of habitat and missed opportunity to reclaim our natural beauty	No	
9/28/2021 20:55	Pinellas		No	No					Remove the dam and restore the Ocklawaha River!! Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy. If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait!!!				
9/28/2021 20:59	Lake		No	Yes		2-5 times		Boating Wildlife viewing	Natural water flow	The lakes need it	Health of the lakes		

9/28/2021 21:00	Alachua		No	No					I am excited that partial restoration of the water flow to the Oklawaha is under review, which is definitely what I would like to see happen. I have seen video footage of the wildlife that quickly reinhabits the waterway when the dam water is released. I have seen the reemergence of the 20 drowned springs. I have seen how the trees, once allowed air, regrow and replenish the surroundings. This is an exciting opportunity. I would like to see flora and fauna thrive in the natural waterway of the Oklawaha that was stifled 50 years ago. I would like to see recreation opportunities for many activities for young and old in the Oklawaha. I belong to a group of people who kayak around Florida. I am the only Florida resident. The rest of the group comes from around the country. We're doing Silver Springs and surroundings next month, the Panhandle next spring and we would love to paddle a restored Oklawaha. I would like to see local businesses, new and old, serving the recreational participants in a restored Oklawaha. I would like to see Florida NOT spend millions of dollars to prop up a dangerously aging dam that was a mistake when it was first erected. Too much state money has gone to building and maintaining a useless artifact of an idea gone bad decades ago. Fixing the mistake by partial restoration of the waterway is far less costly fiscally as well as environmentally. I would like to see the St John's River receive the water from a restored waterway to counteract salt water encroachment. I would like to see manatees once again swim to safety in the restored waterway, adding to tourist and local manatee viewing. Especially after the absolutely calamitous year we have had with manatee deaths by starvation from our pollution. Restoring the Oklawaha waterway is an opportunity to counteract bad behavior in other parts of Florida. I would like wo see this water management organization release the water of the Oklawaha, which would be such a huge benefit to current Florida residents and for generations to come.	The most important piece of information is the absolute devastation of fish migration, fish spawning, manatee habitat, bird habitat and plant habitat that is the result of the damming of the Oklawaha. That devastation is environmental and economic. Tourism is Florida's major economic engine. More and more people want to escape to natural surroundings. Leave the city behind, leave the noise and congestion behind, and bask in the beauty of the outdoors. Florida knows that. Our tourist promo advertises that. We citizens enjoy the natural beauty of our state. That's why many of us live here and plan to stay here. Releasing the Oklawaha makes economic and environmental sense.	My biggest concer is that a large, multi-tributary river system would be blocked. I haven't mentioned that rivers flowing through wetlands is how water is ridded of pollutants and chemicals. It is nature's cleansing system. As we continue to receive thousands of new residents every year, there are a couple things we can't do without. Water is one of them. We take clean water for granted until it's gone. California is a real time example. Florida needs to treat water with the utmost regard, because it is of the utmost importance. Keeping the Oklawaha dammed would continue a practice of degrading our water. That's not smart. Free the Oklawaha.	Absolutely not. The dam was a mistake. The cross Florida canal was a mistake. It would make absolutely no sense to prolong the error. For 50 years it has made no sense. A small group of people with a single-minded pastime of fishing has prevented a wide breadth of benefits that would be achieved by freeing the waterway. Lungs are not the source of intelligence or wisdom. The loudest voice is not the smartest voice. It's time to correct the error. Free the Oklawaha.	Thank you for collecting this information. I am so hopeful that this major waterway will be released and all the plant and animal species will rebound. As we suffer the consequences of climate change this is a project that can help remediate some of the damage. As rain and hurricane intensity increases, there will not be the risk of dam breakage and flooding of homes and towns downstream. As fish and other wildlife are hindered by rising temperatures, they will be supported by the Oklawaha waterway. I cannot imagine why we would not take this opportunity to partially restore the Oklawaha waterway. Repairing the dam would be expensive financially and would cost further damage to our ecosystem. There simply is no rational arguement for repairing the dam.
9/28/2021 21:01	Seminole		No	No					Tear down the dam and reunite the rivers.	The damming of the Ocklawaha River and creation of the Rodman Reservoir has smothered 20 springs, blocked manatee and fish migration, and destroyed thousands of acres of floodplain forest. Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	Continued environmental degradation, especially the loss of floodplain. This will only worsen flooding as climate change brings increasingly severe storms. Furthermore, if the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. This is long overdue and half measures are as bad as doing nothing.	Florida's quality of life, including economic vitality, depends on water quality. Without that, I'm moving out. And not too many folks will be moving in.
9/28/2021 21:02	Pinellas		No	No					Return to natural state.	Manatees starving	More wildlife will die	No	
9/28/2021 21:03	Duval		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	NO! No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	It's one thing when we, humanity, learn how to build dams with the intention of using intelligence for the good of 'progress', but it is unfathomable why we, humanity, would insist on managing the earth when we have more than enough evidence that we don't know how much our footprint damages the earth.
9/28/2021 21:04	Levy		Yes	Yes	1 time	More than 5 times	Canoeing / kayaking Wildlife viewing		REMOVE THE DAM! Restore the river.	The loss of fishery biodiversity in the Silver River... the need for safe manatee egress and egress for feeding...the loss of access to the 20 plus spring vents for tourism and recreation.... so called bass tournaments are not using the Reservoir... maintenance of the structures has lacked to the point of pending failure and resulting damage...	That Florida and its agencies that manipulate our water get away with not doing what is right for the environment. Continued spraying of chemicals to artificially alter/manipulate floating vegetation.	Yes, remove the dam. Permanent drawdown.	Stop playing games with the environment.
9/28/2021 21:11	Columbia		No	No					I would like the dam to be dismantled	The need to restore the natural flow of the river to help the health of the ecosystem, especially the forested wetlands area and the St. John's River habitat for birds, manatees and other wildlife, as well as greenery and trees.	The health of the waterways.	Not sure how anything less can establish the outcome that will lead to restoration	Thank you for doing this survey and asking what people care about when it comes to our beautiful state and its natural treasures. I hope the right choices are made to insure future generations will be able to enjoy the springs , rivers, forests and wildlife s as much as we are able to.
9/28/2021 21:15	Outside of state / other		No	Yes	More than 5 times			Fishing		If would really be a shame for the fish, manatees and wildlife in general!	The loss of life to the amazing creatures that live in this reservoir, the amount of animals that would lose their lives		
9/28/2021 21:15	Marion		No	Yes	1 time	2-5 times	Fishing Wildlife viewing		The dam should be removed to allow the Ocklawaha to flow freely again. The purpose for which it was created no longer exists and while the lake fishing is an attraction, that seems like an insufficient reason to maintain it. By restoring the natural flow, exposing the currently submerged springs, and providing an unimpeded connection to the St John's River, we would better serve the environment and also create new opportunities for recreation.	The current state of the dam, and the hope of seeing the region restored to something like its natural condition.	The state of silver springs, the possibility of a dam failure, and the continued disruption of the environment.	Compromise if possible is better than nothing.	Thanks for requesting feedback .
9/28/2021 21:17	Pinellas		No	No									
9/28/2021 21:18	Palm Beach		No	No									
9/28/2021 21:21	Monroe		No	No					Restore water flow prior to dam construction	the fact that the dam is a failure	continue degradation of natural water flow	no	
9/28/2021 21:21	Alachua		No	Yes	1 time		Canoeing / kayaking		I would like to see the Dam removed and the Ocklawaha River restored to a free flowing river.	there are many important reasons to remove the dam. I am an marine scientist, and I value natural systems. IN particular, many miles of natural river channel that were drowned as a result of dam construction would be restored. In particular, three river systems - the Ocklawaha, Silver and St. Johns - would experience significant environmental improvement from restoration.	The water quality in the Lower Ocklawaha/St Johns River system would continue to decline, as would the Rodman Reservoir. I love to kayak and canoe, and increased recreational usage would be denied to the surrounding local communities. These have clear economic benefits.	No. We are long overdue to remove the dam. No other measure aside from dam removal would achieve the benefits of restoration.	Restoring the Ocklawaha River to a free-flowing water body would be an exceptional milestone in the history of Florida. We would get remarkable press coverage, which would then lead to increased visits, and the economic and environmental benefits would be huge!
9/28/2021 21:21	Duval		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville would be healthier	The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This exciting restoration will improve water quality and flow by generating an additional 150 million gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
9/28/2021 21:22	Seminole		No	No					I would like the Dam removed and allow the River to flow freely.	That the Dam no longer serves a purpose and if it is removed the whole ecosystem from springs, waterways and wildlife can begin to thrive.	The the springs and rivers will continue to deteriorate further destroying the ecosystem.	No.	
9/28/2021 21:24	Alachua		Yes	Yes		More than 5 times	Canoeing / kayaking Wildlife viewing		Ocklawaha River restoration.	In 2016, our non-profit, Paddle Florida, Inc. held our first Ocklawaha Odyssey. 68 people paddled for 4 days and camped at night. If the Ocklawaha River was restored we could have gone another 15 miles across the St. Johns River to the town of Welaka. In my opinion, if the river is allowed to run free, there would be a huge economic impact in Putnam County in general and Welaka in particular. Those who want to keep the dam in place argue otherwise, but the data suggests the dam's removal would create an economic boon.	That the state would need to spend millions to repair and maintain the dam, when it would be better for all concerned if the Ocklawaha was restored.	I don't know of any.	
9/28/2021 21:24	Volusia		No	No					Remove or breach the Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No. Breaching the dam is 50 years overdue.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
9/28/2021 21:26	Dade		No	Yes		More than 5 times	Wildlife viewing		Breach the dam and bring back the river full strength!	Wildlife survival	Another disaster for mother nature and us!	I cannot see an alternative	
9/28/2021 21:29	Manatee		No	No									
9/28/2021 21:36	Sarasota		No	No					Open up the flow of water.	Dams are almost always counterproductive.	Our priceless wildlife and environment will be unnecessarily challenged, weakened.	Unsure.	
9/28/2021 21:38	Brevard		No	No					Restore Ocklawaha by removing dam to prevent natural passage of fish and manatees and provide habitat for migratory birds and black bears.	Increase in manatee deaths and the flooding of wetlands and springs causing decline of water quality	More manatee deaths	No	
9/28/2021 21:41	Marion		No	No					The dam should be breached.	Restoring 50 springs.	Thousands of acres of forest and natural habitat would be lost.	No.	
9/28/2021 21:44	Leon		No	Yes		1 time	Wildlife viewing		Remove the dam!	It's not natural.	Aquifer pollution.	Not likely	
9/28/2021 21:44	Brevard		No	No					Get rid of unnatural dams.	Help wildlife including manatees. Help Floridas poor water quality.	Manatee deaths will increase.	No	
9/28/2021 21:45	Martin		No	No					Destroy the dam or otherwise undo damage done to the environment by the dam.	That the dam was part of the failed cross-Florida barge canal and is destroying the environment.	Algae blooms and stagnant waters.	I can't envision such a scenario.	The Army Corps of Engineers is a corrupt organization that should be stopped from any construction projects in the future.
9/28/2021 21:45	Duval		No	No					I would like to see the Kirkpatrick Dam breached, removed. The Rodman Reservoir released to allow the restoration of the natural flow of the rivers, revealing our beautiful springs.	I followed the experience and pictures of environmental groups visiting the exposed springs during the recent drawdown of the reservoir. The springs were beautiful. In contrast, the graveyard of dead, drowned cypress trees was tragic.	We would never witness the return of the wildlife that used to inhabit this amazing area, or see the natural health of the Ocklawaha and Silver Rivers. We would continue to waste money on the upkeep of a useless dam.	No.	
9/28/2021 21:46	Palm Beach		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is at least 50 years overdue. Dam safety, improved water quality, and wildlife can't wait any longer.	
9/28/2021 21:49	Volusia		No	Yes		2-5 times	Wildlife viewing		Restore natural river flow	FDEP waiting on permits and funding	Impact to natural river system biota and water flow	Permanent draw down	
9/28/2021 21:50	Broward		No	Yes		2-5 times	Wildlife viewing		Remove it.	Knowing that its removal would be so environmentally beneficial.	Further environmental destruction.	I would support the most environmentally positive and friendly result that could be achieved.	
9/28/2021 21:56	Pinellas		No	No					Since the dam is in need of repair, I think we should take the area back to a more natural state. So remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	It was the natural vermin that attracted people to Florida in the first place. We need to maintain and restore as much of it as possible.
9/28/2021 21:57	St Lucie		No	No					Tear it down.	it's an environmental disaster. You people should know better.	A missed opportunity to repair Florida's environment!	Nope.	Do the right thing for the environment.
9/28/2021 21:57	Pinellas		No	No									
9/28/2021 21:58	Pinellas		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	Returning the natural world to its original state is the only way it and humans will ultimately survive
9/28/2021 21:59	Duval		No	Yes		2-5 times	Fishing Fishing (shoreline/structure) Hunting Wildlife viewing		Breach the dam	Return the area to nature	Loss of springs and all the ecosystems associated	Yes, return to nature.	
9/28/2021 22:01	Orange		No	No					Remove the dam and restore the Ocklawaha River.	Science. Studies comparing the past and now.	More failed waterways and pollution.		Thanks for your time and caring about the future of Florida.
9/28/2021 22:07	Clay		No	No					Restore the ecosystem to its original flow to help the environment	it will restore cypress groves, allow for manatees to find shelter, open the rivers to natural flow, help the economy of Palatka on the St Johns River	Loss of wildlife and clear water	Divert water around the dam so fish could swim and water fcould flow.	
9/28/2021 22:14	Outside of state / other	Saginaw, Michigan	No	No					The removal of the reservoir and dam so the natural flow of the water can return to what it was before.	Too many dams and other features are destroying the natural habitat for wildlife and waterfowl, affecting their survival and threatening extinction. With the removal of these obstacles, nature can return to normal and preservation of the land and especially to help protect endangered species.	That the environmental impact would be devastating for both the wildlife and waterfowl.	No, not really.	
9/28/2021 22:15	Marion		No	No					Remove the dam and restore the Ocklawaha River to its natural flow.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	Please do not waste more money to restore a dam that is so environmentally destructive and a significant contributor to Florida's water quality problems. Now is the time to do the right thing, restore the rivers and surrounding land and let nature work the way it is supposed to. We will all be better for it!
9/28/2021 22:17	Pinellas		No	No					it	it	it	it	it
9/28/2021 22:20	Duval		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Hunting	Keep it. Improve parking. Add boat ramps and pic nick areas.	It is a place where I can enjoy fishing by myself and with bass tournaments	I would have to change hobbies and fish salt water. I would have to find a different place to drive my side by side.	This is a great source of large mouth bass. I would not like it if that resource were taken away.	Please do not destroy the dam. There are many people who enjoy it 7 days a week.
9/28/2021 22:21	Seminole		No	Yes	1 time	1 time	Canoeing / kayaking		Remove the dam and restore the Ocklawaha River.				
9/28/2021 22:22	Volusia		No	No					It's important to remove the dam to enable the restoration of the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	
9/28/2021 22:22	Palm Beach		No	No					Open it up	it's no longer has any value and is in fact destructive	Ecological imbalance		
9/28/2021 22:24	Outside of state / other	Lebanon, Connecticut	No	No					Remove the dam and restore the Ocklawaha, St. Johns, and Silver Rivers	Removing the dam helps restore 50 springs as well as the aforementioned rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. In addition, $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; also, they would lose increased visitation, construction, and hospitality jobs restoration would to bring to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	In Florida, you have a priceless/y beautiful environment. PLEASE protect it by removing this useless, obstructive dam and restoring the natural environment. Thank you for listening to me, even though I'm not a Floridian
9/28/2021 22:24	Outside of state / other	California	No	Yes	1 time	2-5 times	Other: Trying to look at wildlife but can't because of needless, destructive dam.		Tear it down. Bring the Ocklawaha River back to its full glory, where it can support and sustain wildlife. The failed Cross Florida Barge Canal Project left environmental destruction and burdensome infrastructure in its wake. The damming of the Ocklawaha River and creation of the Rodman Reservoir has smothered 20 springs, blocked manatee and fish migration, and destroyed thousands of acres of floodplain forest.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	The increased, wasteful, needless destruction of the environment and wildlife that is the rodman reservoir and kirpatrick dam	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.
9/28/2021 22:26	Hillsborough		No	No					Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	restored natural flow of the river	surrounding the dam's environmental and economic impact	as long as the natural flow of the river is restored, I'd be happy	
9/28/2021 22:29	Outside of state / other	mexico (retiree)	No	No						nature of wildlife	endangered species have nowhere to go	loss of habitat	
9/28/2021 22:29	Duval		No	Yes		2-5 times	Wildlife viewing		Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	Please remove the dam and restore all the springs and habitats to wildlife
9/28/2021 22:30	Outside of state / other	Racine, WI is my location	No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	
9/28/2021 22:31	St Johns		No	No					The dam is in need of repair, has outlived its predicted lifespan, and should to be removed.	Removing the dam will save millions of dollars in repairs and will allow for flood protection following future storms. Maintaining the dam will likely result in future algal blooms, diminished water quality, and associated fish and wildlife kills.	If the dam is not removed, the negative effects described above could easily take place, such as future storm-related flooding and further fish kills.	No.	
9/28/2021 22:31	Orange		No	No					The Rodman/Kirkpatrick Dam should be breached to allow for a free flowing of the Ocklawaha River.This would prevent further environmental damage to this area.	The cascade of positive effects that would result from breaching the dam and draining the reservoir. These include better water flow all the way to the St Johns river , rebirth of flooded springs, restoration of floodplain forest, better connectivity in the OZO Wildlife corridor.	The terrible damage to the community and the environment that would be caused by the failure of the dam	No, the economic and environmental benefits are many and far outweigh the cost of fixing and maintaining the dam and mitigating its detriments to the environment.	
9/28/2021 22:34	Dade		No	Yes		1 time	Canoeing / kayaking Wildlife viewing		Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No the dam has got to go. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	Act now, no more dam.
9/28/2021 22:44	Broward		No	No					Restore natural flow to the Oklawaha River by removing the dam.	Flooding and devastating effect of this on the flora and fauna of the area.	Future of manatee populations and impact on Silver Springs	No	As a college student in the late 1960s, I did a report on the boondoggle called the "Cross Florida Barge Canal" which impacted the natural flow of the Oklawaha River. It has remained a disaster since that time. Get rid of the dam. Reuben Askew was the Governor of Florida who was opposed to this project.
9/28/2021 23:27	Pinellas		No	No					Remove the dam	Science	Continued decline of the St.John's estuary system	No	
9/28/2021 23:31	Alachua		No	No					Remove it. Save the springs.	Knowing that it will revive springs and knowing that manatee populations have dropped heavily since the dam was built	The dam can always be rebuilt. The springs cannot.	No	
9/28/2021 23:36	Dade		No	No									
9/28/2021 23:39	Santa Rosa		No	No					Removing this non productive damaging obstruction & returning the local environment to a productive beautiful ecosystem in which more inhabitants will thrive with free flowing springs & large manatees to smallest water inhabitantsand healthy thriving plant life.	How useless this dam is & how its presence alters so much of what is a healthy system for plant & animal life.	Continued degradation & loss of the usual plant & animal life to maintain clean, self filtering environment without disease.	I do nit know enough to comment intelligently, but removing the dam would be a start.	I look forward tomlearning more.
9/28/2021 23:50	Flagler		No	No					Remove it for the environment.	It has stopped migration of manatees and blocked off small streams.	This will continue to harm the environment.	No.	
9/28/2021 23:58	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Canoeing / Kayaking Boating Wildlife viewing	Leave it as is now. What a waste to want to mke changes to such a piece of unique habitat. Spend some time out there and you'll understand how it impacts so many lives in such a positive way		The loss of such a impact full place to so many people and the loss of fishery and wdlife habitat		
9/28/2021 23:59	Outside of state / other	WA	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Thank you for your attention to this important issue.
9/29/2021 0:09	Hillsborough		No	No									
9/29/2021 0:12	Broward		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklewaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/29/2021 0:14	Orange		No	No					It should be removed.	Removal of the dam will help to begin restoration of natural waterways and springs.	Further degradation of the ecosystem	No	
9/29/2021 0:18	Dade		No	No									
9/29/2021 0:23	Sarasota		No	No									
9/29/2021 0:27	Santa Rosa		No	No					get rid of the dam, don't repair it	it will aid in restoring this area back to the way it was	this environmental disaster would continue for NO good reason	no	
9/29/2021 0:28	Pasco		No	No					would like to keep informed				
9/29/2021 0:39	Lee		No	No					Removed as the cross Florida barge canal is dead.	The dam serves no good purpose.	That endangered species will continue to suffer.	No the dam must go.	
9/29/2021 0:46	Manatee		No	No									
9/29/2021 0:49	Leon		No	No					Remove it completely. Let the rivers go back to their natural state.	The fact that it serves no purpose - since the canal was never built. Thank God.	Spending a huge amount of the taxpayers money on fixing something we don't even want.	Let the dam die a natural death.	We have ruined this state enough. It's time to fix.
9/29/2021 1:04	Outside of state / other	California	No	No									
9/29/2021 1:26	Palm Beach		No	Yes			2-5 times	Wildlife viewing	Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/29/2021 2:33	Outside of state / other	San Francisco	No	No									
9/29/2021 4:39	Hillsborough		No	Yes			1 time	Wildlife viewing	I would like to see the dam removed. The river needs to be restored to its natural state.	It's not worth millions of dollars every year so some people can go fishing in an artificial lake that doesn't even have that many fish. If the 20 springs that are not accessible because of the reservoir became assessable many more tourist would visit that area. Have you ever been to a spring on a hot summer day they're packed.	That they're horrible abuse of nature would continue. This was a failed project from the beginning. There's no reason for the dam to be there.	No	
9/29/2021 4:46	Outside of state / other	ME	No	No					Restoring the Great Florida Riverway by removing key portions of this dam will re-establish traditional access to essential habitat for manatees, bring back migratory fish, connect three river ecosystems and historic Silver Springs, and restore a lost riverway for anglers and paddlers from Ocklawaha's Harris Chain of Lakes to the Atlantic.		we will loose more and more manatee's. They need a place to eat the sea grass and they are dying every day		
9/29/2021 5:13	Lee		No	Yes			1 time	Wildlife viewing	Removed	Audubon survey	Loss of potential wetlands	No	
9/29/2021 5:23	Flagler		No	No					Remove it!	Restoration of a vital natural area in our state that is being ruined by developers.	Our state would continue on a path of fouling springs and destroying our natural resources.	NO	Please protect our state from more and devastating development.
9/29/2021 5:41	Duval		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing	Emphasis on making it the cleanest and most productive fishery in NE Florida.	I have fished "The Pool" since I was a boy and have lasting memories of our favorite fishery survive battle after battle to be changed, adjusted or tampered with.	Ruining a legendary, nationally known fishery that brings enjoyment and family revenue to a growing communities in and around Putnam and surrounding counties.	Not at this time.	
9/29/2021 5:45	Indian River		No	Yes			1 time	Wildlife viewing	The removal of the dam, restoration of the river.	the restoration of about 50 springs, water flow to the rivers, cost savings of 4-14 million on rebuilding a dam that has outlived it's purpose and obstructed a healthy ecosystem.	If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and tourism.	NO.	
9/29/2021 5:46	Putnam		No	Yes		2-5 times		Wildlife viewing	I would like the dam to be removed so the Ocklawaha River can be restored to its natural state.	Removing the dam will save the taxpayer around $10 million, which is what it would cost to repair the dam. Removing the dam also helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow.	Environmental and more threats to our birdlife. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Our species are declining at a rapid rate and this is adding to the burden.	I love this area and would like the eco-system restored to its natural state.
9/29/2021 5:49	Seminole		No	Yes		1 time		Wildlife viewing	I would like to see the dam breached and the river returned to what it once was. Climate change is here and living with nature, not man made options, is the better route to take now. I support wildlife, nature, clean water and turning back the supposed progress. Following the rules of nature is progress!	Humans want all the land, water, and resources to support their view of life. Humans don't usually extend their views to include protection for other living beings and things. Humans have burnt out nature and if we don't balance our desires with the needs of other species none of us will live through climate change.	Anther knife in the heart of nature and more harm caused by climate change.	A healthy planet is paramount! Water is life! Of all the water on earth, less than one percent is drinkable. Rivers flow but humans interferer and damage occurs with human sprawl. We need to live with nature supporting species in their natural habitat. Living side by side with nature, more trees, and protections for eco systems. We need space but must also share and give space to wildlife, and wild animals. Together we can make a better world using less chemicals, plastic, fossil fuels, and toxins.	
9/29/2021 5:58	Seminole		No	No					Remove	Florida is slowly destroying its environment and natural beauty. Horrible impacts on manatees. If this helps in anyway to improve then do it	What is the true purpose of this dam. Does it contribute to anything necessary? I do not understand it need	Does this impact the environment or economics of the surrounding areas. Does the removal of the dam cause changes to the flood plain currently and/or down stream	
9/29/2021 6:18	Alachua		No	No					The Ocklawaha River must be restored by breaching the obsolete and environmentally harmful Rodman/Kirkpatrick Dam. Every day that the dam is in place, the ecosystem, water quality, and wildlife throughout the Great Florida Riverway are compromised and threatened.	Reviving the Ocklawaha river will help restore Florida's natural environment by reviving natural springs and enabling the free movement of fish, manatees, and other aquatic wildlife. It will also boost local economies by offering more recreational opportunities along the river and saving the cost of repairs to an obsolete dam.	The dam is obsolete and unsafe, and an unplanned failure could be catastrophic. Right now, federal and state funds are available for this, and missing this opportunity now means a much greater expense, not to mention environmental degradation, later.	No--there is no good reason to keep the poorly functioning dam in place.	
9/29/2021 6:19	Sarasota		No	No					Please remove it	It serves no purpose yet harms the environments he natural ecobilogy will never be restored	Same	No	
9/29/2021 6:24	Marion		No	Yes	1 time	2-5 times	Wildlife viewing		Remove the Dam	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.		No	
9/29/2021 6:25	Sarasota		No	No									
9/29/2021 6:31	Orange		No	No					Remove the dam and restore the Ocklawaha River.	I would like for the dam to be removed in order to help restore and revitalize the natural ecosystems of Florida including natural springs, manatee and fish migrations, and thousands of acres of floodplain forest and to reunite the Ocklawaha, St. Johns, and Silver Rivers.	If the dam is not removed, I am concerned that Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	Removing the dam to restore natural habitats for Florida's wildlife would be the greatest gift we could give to the wildlife of our beautiful state and to ourselves as Floridians who are proud of our natural environment overflowing with a unique and diverse population of plants, animals and ecosystems and for future generations who will be able to experience the wild and beautiful Florida we know and love because of decisions we make today.	
9/29/2021 6:37	Putnam		No	Yes			1 time	Canoeing / Kayaking Wildlife viewing	removal of the dam and restoration of floodplain	cost benefit analysis, economically and environmentally	continued lack of animal and plant access to Ocklawaha system (O2O corridor), continual degradation of dam infrastructure which will eventually lead to a breach	No.	The time has come for a recognition of the continuing liabilities this dam incurs. Why should taxpayers be on the hook for ongoing expenses of keeping this dam in place when it is not beneficial to the plants, animals or people of Florida?
9/29/2021 6:51	St Lucie		No	Yes				Wildlife viewing	I think the dam should be removed and the area restored		Money would be wasted on repairing a dam that is not needed and destroyed the previous ecosystems		
9/29/2021 6:53	Leon		No	Yes	2-5 times			Canoeing / Kayaking Wildlife viewing	Remove the dam.	Fellow kayakers want it gone.	Pollution increased from the natural flow blocked.	No.	Fix it before I die.
9/29/2021 6:54	Pasco		No	No					Remove it	Natural flow needed of the water	Throwing good money just to do repairs	Mowing good money just to repair it	Our environment needs a boost Two many people moving here without concern for preserving our wetlands and nature and disregarding others who seek to protect
9/29/2021 6:54	Broward		No	No					Environmentally protected	Preservation of life	Another destruction of nature by man	No	
9/29/2021 7:01	Volusia		No	No					Remove the dam.	I believe that one of the great features of Florida is the beauty of our natural landscape. We need to do what we can to correct environmental mistakes of the past. By doing so, we invest in keeping Florida's environment healthy and beautiful. I want to see the springs and the river's flow restored.	It has been recognized for decades that this dam is a mistake. With the population growth taking place in Florida a decision to remove the dam and restore the natural flow of the river will only become more difficult as people build along the lake shores and the demand for fresh water increases. This time, let's make a decision that reflects an enlightten understanding of man's place in the balance of nature.	No	
9/29/2021 7:04	Brevard		No	No					Dismantle it	The dam serves no purpose and does not support the ecosystem.	That wildlife will again be negatively impacted.		
9/29/2021 7:25	Lake		No	Yes			1 time	Wildlife viewing	Breach the dams and restore the river to their natural state		That natural Florida is dying		
9/29/2021 7:25	Palm Beach		No	No					Damn and restore the river	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	I think the river systems in Florida should be returned to their natural state to protect the wildlife and the people
9/29/2021 7:27	Orange		No	Yes			1 time	Other	Restore it naturally	Environment	Protection of wildlife and environment		
9/29/2021 7:28	Lake		No	Yes			1 time	2-5 times	Fishing	Remove Kirkpatrick dam, drain Rodman Reservior and allow the Ocklawaha River to return to a more natural state.	The area flooded by the dam and upstream areas limits the wildlife and vegetation to fewer species. The natural state of this area for decades has included periodic flooding and drought periods. This presents an environment suitable to a wide variety of Florida native plants and animals (both aquatic and terrestrial). The dam and reservoir lead to a much smaller diversity of wildlife and plants.	Continued degradation of the Ocklawaha River water shed and reduction of use by a wider variety of Floridians. The local economy does gain some small benefit from the fishing opportunities on the reservoir but these are outweighed by the wider public use of this waterway. Economic impact can be adjusted to take advantage of the more natural river system.	Anything that allows for a wider range of water flows and levels. The wider fluctuation is the key to plant and animal diversity.	Florida is lacking in natural ecosystems. Florida is NOT lacking in human intervention and compromised ecosystems. Allowing this ecosystem to return to a more normal state is a human, Floridian, and future resident supported, used, and enjoyed environment.
9/29/2021 7:34	Pinellas		No	No									
9/29/2021 7:36	Clay		No	Yes			1 time	Wildlife viewing	I would like to see it removed. Free the Oklawaha and restore it like it is during the drawdowns every 5 year's.				
9/29/2021 7:40	Pasco		No	No									
9/29/2021 7:43	Leon		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	What do you treasure about this ecosystem, or about natural Florida in general?
9/29/2021 7:43	Alachua		No	No					Consider the well being of nearby homeowners as well as the surrounding ecosystem. Let the damn dam go. If it's only purpose is to serve as a fishing spot is it truly worth it?	The infrastructure is over 50 years old, anticipate possible disaster and consider the costs and benefits of fixing it before doing so.	Residents being displaced.	Fixing the dam rather than breaching it.	
9/29/2021 7:44	Clay		No	Yes			1 time		GET RID OF IT!				
9/29/2021 7:44	Duval		No	No					Restore		Too many to note	Not really	
9/29/2021 7:45	Palm Beach		No	No					Breach the Rodman/Kirkpatrick Dam.	Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs.	The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	No. Breaching the dam is 50 years overdue.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/29/2021 7:45	Citrus		No	Yes			1 time	Fishing (shoreline/structure) Other: just visited it while contemplating a canoe trip.	I would like to see it breached.	Florida was actually compensated for damage done to the river by the canal project, but instead of restoring it we created a trail, we misappropriated federal money.	the springs are drowned, flow is restricted, water temp is raised, fish and wildlife diversity is restricted.	no, to recover the river the flow must first be restored	the northern ocklawaha river is historically important as the steamship route to silver springs. It is ecologically unique because it's long free shaded, spring fed route provided the only natural breeding place in fl for the highly desired striped bass. I want to canoe it's length , but have not because reports of impassable portions due to low levels and plant growth.
9/29/2021 7:47	Marion		No	Yes		More than 5 times		Canoeing / kayaking Other: Go over it driving in the Forest	I believe the dam should be taken down. I have read too many articles about how it has covered up springs and disrupted the fish breeding and habitat. It should never have been built.	The free flow of a natural waterway. The springs that are covered. The Rodman lake is a sad looking lake. there are tree stumps sticking up everywhere, a continual reminder of how an entire ecosystem was ravaged to build the dam.	That it stays there and they never make it right. They will eventually need to rebuild or continue to throw money at it to maintain it.	Not really. A dam is a dam. there's no half a dam.	Please convince people this was a natural ecosystem destroyed by a dam. Maybe they didn't know how bad it was then. But now we know so now we need to correct the mistakes of the past.

9/29/2021 7:48	Alachua		No	No					Open the dam	Natural cycle	Not sure	More frequent water releases	Not very knowledgeable about the issues, but know that the dam is hurting our natural environment
9/29/2021 7:49	Collier		No	Yes		1 time		Wildlife viewing	Remove the Dam and return the area to it's natural state	The environment and the wildlife of Florida	This is a chance to clean up one more environmental mess, the dam is in bad shape and should be removed, not repaired. This opportunity unity will not arise again if the dam is restored. It is and opportunity to correct a bad situation.	No	Remove the dam and restore the Ocklawaha, Silver and St. John's rivers and natural springs. The dam is in bad shape and needs to be removed and not restored
9/29/2021 7:56	Marion		No	No					Remove the dam and allow wildlife and the natural flow of water to be uninhibited.	The information I learned from Audubon Florida about how the dam impacts nature.	That by not removing the dam it would interfere with how wild waters are supposed to operate and the wildlife that lives within it not to mention what it would cost taxpayers to maintain the dam in the future.	Removing the dam sounds like the best outcome.	
9/29/2021 8:00	Indian River		No	No					Remove the dam and restore the Ocklawaha River.		If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 30 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	
9/29/2021 8:06	Hillsborough		No	No					Remove it	Restoration to: Many many springs and several rivers		No	QUIT SCREWING WITH NATURE
9/29/2021 8:08	Lee		No	Yes		1 time	1 time		Remove the dam and restore the natural flow of the River.	To help restore the 50 springs and 3 rivers as well as saving millions of dollars.	The area will lose out on the economic benefits and suffer more environmental damage/issues if the restoration does not happen.	No, the benefit to water quality and wildlife is long overdue.	This is a great opportunity to correct a past mistake and benefit the area both economically and environmentally. Thank You.
9/29/2021 8:08	Orange		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	get rid of the damn dam				
9/29/2021 8:11	Lake		No	No					Remove the dam.	Destruction of the ecosystem to keep the dam; restoration of the ecosystem by removing the dam.	Spending tax money to repair the dam and persistence of ecosystem impairment.	No	
9/29/2021 8:12	Madison		No	No									
9/29/2021 8:15	Manatee		No	No					It is time to remove the Dam and restore the Ocklawaha River.	There is a lot of talk about the deterioration of our springs. Now act.	The removal of the Dam and restoration of this region is a moral redress of past mistakes. It is an act of responsible stewardship and will stem the wasteful use of currency. If it is not achieved the deterioration of this system will continue, the faith in our state government will continue to erode and our citizens will bare witness to a lack of vision. Biodiversity is not a luxury, it is imperative.		Thank you for listening to my opinions! Frank
9/29/2021 8:16	Osceola		No	No					Restore this important ecosystem back	the ecosystem is being destroyed and animals, wildlife inhabitants of rivers and streams are dyeing because of this dam	Wildlife would die, or become extinct possibly. The loss of the natural flow of springs, rivers and streams would cause a build up of pollutants from chemicals from run off	no	lets work on saving the little bit of greenspace left for our wildlife, this damn has cost enough done enough damage already, return it to its natural state
9/29/2021 8:17	Brevard		No	Yes		1 time	More than 5 times	Canoeing / kayaking Wildlife viewing	remove the dam, restore nature's flow, allow the surrounding ecosystems to improve	I have watched the Silver and Ocklawaha Rivers degrade over the past 25 years. Removing the dam will let natural flows deal with at least some of the pollution.	Without removing the dam, ecotourism will decline, the rivers will continue to die, the surrounding areas become less and less able to control floods, pollution etc.	No, the dam needed to never be built. The removal corrects this wrong and allows nature and people (and the economy) to flourish.	The money spent doing the removal is a far better use and the future benefits will be great.
9/29/2021 8:23	Polk		No	Yes		2-5 times		Fishing Boating	Remove the dam and restore the river				
9/29/2021 8:26	Gadsden		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 30 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	
9/29/2021 8:30	Orange		No	Yes		2-5 times	2-5 times	Canoeing / kayaking Wildlife viewing	Restore the Ocklawaha River by removing the dam!	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	
9/29/2021 8:36	Gadsden		No	No					Get rid of the damn dam. Let the river flow as God intended it and in a way that is more natural to Florida.	The most important things to look at are the problems we already have in florida. We let the sugar growers ruin our beautiful River of Grass and thus the Everglades. Red tide and blue algae blooms are due to humans blocking up our natural cleansing elements of Florida. We had a paradise here in Florida and we let big Agriculture ruin it t fed our greed.	Florida's natural beauty and its fish and wildlife will all disappear.	Get sugar growers out of Florida. End construction projects that effect the Everglades and our coastal estuaries.	End fracking in florida too. We have a delicate aquifer system just under our feet and we can not afford to frack it away to satisfy our addiction to oil and greed.
9/29/2021 8:37	Sarasota		No	Yes	1 time	More than 5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Remove the dam.	I would like to see the springs restored to there natural flow.	The dam is not removed.	No. The project to remove the dam is long overdue.	
9/29/2021 8:37	Lake		No	No									
9/29/2021 8:40	Palm Beach		No	Yes			1 time	Wildlife viewing	It is past time to understand the ecosystem of the rivers and waters of Florida. We have destroyed enough, it is now given our understanding of the river and the damage we (man) created to undo this and allow it to function as it should. with that we restore and important part of Florida ecosystem to it's original being. Listen to the Earth... it will tell you what to do.	the damage inflicted on this water system, so critical to restoration of Florida wildlife, and water quality.	We continue to damage our water ecosystem, wildlife, and on day , that which made Florida beautiful and one of a kind, is no longer. And we have what we have with algo and it will contribute to the decline of our quality of life in Florida. This was wrong when it was installed , it is wrong now.	No, no logical reason to keep it.	
9/29/2021 8:42	Hernando		No	Yes			1 time	Wildlife viewing	I would like to see it removed so that nature can be restored.	Removing the dam will bring 150 MILLION gallons/day of natural flow.	I would be even more depressed and saddened that our government has no concern for the environment or the people of Florida. I served in Vietnam and am a victim of agent orange and agent blue. I know first hand the damage our government can inflict on people and the environment.	NO!	I am really tired that our own elected officials are so dumb and blind to the effects of their actions! What we need is an INDEPENDENT AGENCY reportable only to the people that has the sole authority to do what is required to preserve, protect and defend our environment. Similar to the Army Corps of engineers, but not under the control of any governmental body.
9/29/2021 8:44	Martin		No	No					Remove the dam and restore the Ocklawaha River.	Restore springs and natural flow to Lower Ocklawaha and St. Johns Rivers.	Loss of economic opportunity and continued degradation of precious natural environment.	No, emphatically no.	
9/29/2021 8:44	Orange		No	No									
9/29/2021 8:46	Monroe		No	Yes		1 time		Canoeing / kayaking	remove the dam	No return our springs back to normal and return our fish and manatee population in the Ocklawaha and/ Silver rivers	We loose the big beautiful springs and the river and all the fish, fowl, and animals that require it to live.		It is time to do it NOW!
9/29/2021 8:50	Dade		No	No					Remove the dam and restore the Ocklawaha River.				
9/29/2021 8:51	Hernando		No	No					The dam must be removed or water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	So many rivers and springs would be replenished and thrive once the obstruction of the dam is removed and the area is allowed to expend in a natural, healthy manner on its own.	The environment will continue to be impacted negatively and we have this one chance to make a change.	Other revisions to the environment would more likely be more cost prohibitive and it just make sense to take something detrimental away than attempting to keep it and spend money working around it.	
9/29/2021 8:51	Lake		No	No					Remove the damn dam.	Loss of 20 springs Cost to repair existing structure Loss of fish Loss of habitat for manatee already in danger	More corruption spreading to Florida State gov not listening to people Loss of more species and habitat Not listening to Mother Nature and suffering consequences	No	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/29/2021 8:55	Sarasota		No	No					Eliminate it.	restoration of right er flows and I think it is will not only save money in the long-term it will be a financial plus	degradation of the environment	no	dams over time cost a lot of money to maintain and eventually the reservoir becomes silted full resulting in loss of function at great unnecessary expense both monetarily and environmentally.
9/29/2021 8:55	Clay		No	Yes			1 time	Fishing (shoreline/structure) Wildlife viewing	The dam should be removed!	The dam artificially changes the ecosystem and results in the extirpation of native species.	An important piece of the original ecosystem would be gone forever.	No	
9/29/2021 8:56	St Johns		No	Yes			1 time	Fishing (shoreline/structure) Canoeing / kayaking	I would like to see it brought up to standards, regardless of the upfront cost. It's past its 50 year life expectancy. Resolving any infrastructure issues now will save the county and state millions of dollars, because should the dam collapse, it would be much more expensive than to preemptively fix the issues. We shouldn't wait for another disaster to act.	That the dam is past its life expectancy, and the recent tragedies of collapsed infrastructure in our great state.	That another man made disaster would potentially take more lives and destroy more homes, as well as our waterways fragile environments.	No. The issues really need to be fixed.	Please listen before something horrible happens.
9/29/2021 8:57	Alachua		No	Yes		1 time	2-5 times	Wildlife viewing	I would like to see the dam removed and the river restored.	Negative environmental consequences of maintaining the dam in place. Restoration of natural flow will improve conditions for dozens of springs, the Silver River, Lower Ocklawaha River, and St. Johns River. The financial and environmental costs of maintaining this relic of a failed idea, the Cross-Florida Barge Canal, are simply not worth it.	The environmental consequences of installing and maintaining this dam have been tragic. It's time to right past wrongs. Everyone talks about the economic benefit of fishing on the reservoir, but the economic losses to communities with the dam in place are just as great, if not greater. Weigh that against the environmental damage caused by the dam - declining water quality, invasive weeds that contribute to blue-green algae events, fish kills, loss of SAV - and the decision to remove the dam should have been a no-brainer years ago.	No. The dam should have been removed decades ago.	My personal observations when I've visited the reservoir and surrounding areas/facilities over the past 35 years is that the estimates of use on the reservoir by boating fishermen are overblown, and, therefore, the economic benefits of maintaining the dam are overstated. A non-scientific personal observation, but that's my impression, so I'd be interested in reviewing the details of those economic studies.
9/29/2021 8:57	Broward		No	No					Remove the dam and restore the Ocklawaha River.				
9/29/2021 8:59	Orange		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Wildlife viewing	Remove the dam	The quality of the water will improve and wildlife will be aided	Wildlife will be affected negatively.	no	Alot of taxpayer money has been wasted on this dam. Its time to do the right thing.
9/29/2021 9:04	Marion		Yes	Yes	1 time	2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing Other: Walking	As a local property holder and a frequent user who cares about Florida's environment and wildlife, I am asking you to increase the maintenance and improve access to the lake, update the boat ramps, add additional facilities, and expand park areas for public access. While public use is now tremendous these small improvements would steadily increase. The dam and adjacent parks alone are used by hundreds of people every month for fishing and recreation! A day NEVER goes by that people aren't there fishing!	Most importantly environmental needs are critical as the lake and adjacent area are homes to numerous manatee, bald eagles, black bear, and other wildlife that were rare prior to Rodman being constructed. Rodman and surrounding land have become a vibrant and vital ecosystem. It would be a sacrilege to destroy it and the fact a group who call themselves environmentalists is hard to believe.	I hear continued comments about protecting the manatees. Rodman is NOW their natural habitat and its existence has no effect on die-offs! The warm water from Ocklawaha's "drowned" springs is still there! Untold numbers of manatee habituate Rodman and access it every year to mate. Just ask the lock managers how often they open the locks to allow the manatee to gain access to rodman! I just recently watched from the bank for almost an hour more than half a dozen manatee mate. For the size of the area, it's amazing how often I get to see the manatees.	Rodman has become one of the leading fishing resources in the country and has increased historic fish populations for all species. Rodman contributes millions to the local economy every year and property values adjacent to the lake have increased over 50% just in the last five years. Putnam and Marion county economies would take a huge hit and future opportunity for economic growth in the area would be stifled if this resource was lost.	Natural Springs? Silver Springs is upriver from Rodman and is its major resource. The fact that Rodman supposedly encompasses a number of small springs has absolutely NO effect on the condition of Silver Springs. In the years prior to Rodman with few exceptions, likely none of these small springs had any visitors at all. The handful of visitors the uncovered springs would attract is laughable compared to the vast number of visitors the lake attracts.
9/29/2021 9:07	Duval		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Continue to keep lake in a fashion that will support all the above functions. I fish this lake many times each year! Started in 1971.	Fishermen, boaters, kayaking, bird viewing are all to be seen frequently. The number of the largest bass turned into state large bass program is found in Rodman.	That should be obvious! Would lose my favorite fishing place.	Leave as is, and with continued care the lake will be used into the future.	Does not seem the water level has been properly adjusted this year. That takes it hard for everyone. Don't know what it would be like without Rodman.
9/29/2021 9:07	Duval		No	No		2-5 times		Fishing Boating Hunting Wildlife viewing	Nothing. Save Rodman.	The local economy there as well as the wildlife.	The local economy would not survive and people who live there and work from the reservoir would have to move/seek jobs elsewhere.	No.	
9/29/2021 9:09	Putnam		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Boating	Leave it as is!!	FWC	Present wildlife would die.	No	Leave things as is.
9/29/2021 9:10	Pinellas		No	No					Remove the dam	Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs.	Fish and aquatic life continue to decline	No	
9/29/2021 9:13	Hernando		No	No					Please remove the Dam	The need to restore the river ecosystem as much as possible to it's original state.	Loss of more natural habitat that could be gained by breaching the Dam, which at present serves no useful purpose	No. There is no reason to repair this Dam, and keeping it in an a breached state would not be safe.	
9/29/2021 9:16	Lake		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 30 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	
9/29/2021 9:20	Hernando		No	No									
9/29/2021 9:20	Sumter		No	Yes	2-5 times			Fishing Other: The fishing is amazing in this reservoir. The fish are incredibly healthy.	I believe the Rodman Reservoir should be kept. The fishing in this body of water is one of the greatest in the state and should not be disturbed.	The fish are healthy and continues to draw anglers from all over the country. Some of the largest fish in the state come from Rodman.	It would be a tremendous loss to the state. This fishing is incredible and this can not be disputed.		Thank you for considering my comments. It is my hope that Rodman will not be disturbed. It is my belief that this body of water continues to be a tremendous asset to our state and has proved to be a tremendous draw for fisherman.
9/29/2021 9:21	Lee		No	No					Restore any needed changes to maintain a healthy eco system.	Concern for neglect of the environment for animals and people	Loss of endangered animals such as the manatee	Do what needs to be done to protect the supply and quality of water	
9/29/2021 9:23	Seminole		No	No					Restored!	The manatees and other wildlife habitats are constantly being encroached upon by recreational boaters and other human interference. Residential housing, roads and other development.	You don't have to look very hard to see injured manatees (mostly boat propeller injuries) to see that our current approach is not very effective.	Give an inch give a mile.	
9/29/2021 9:26	Clay		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	this is an amazing body of water and would hate to see it removed from the the face of the earth. I love fishing this place and seeing and enjoying all of the wild like. So I would love to see it stay the same as it is today.	I feel that it would be catastrophic to the ecosystem that in there today. and would kill and displace Hundreds if not thousand of water and woodland animals and supporting food chain habitat and species.	The death and displace of hundreds if not thousands of animal species and supporting species and habitat.	NO	I still never understand that once you create a sustainable ecosystem why you would go and destroy it and all of its inhabitants.
9/29/2021 9:27	Indian River		No	Yes		1 time	2-5 times	Canoeing / kayaking Wildlife viewing	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	Restore the natural springs.	Environmental degradation		
9/29/2021 9:28	Hillsborough		No	Yes	2-5 times			Fishing Canoeing / kayaking Boating Wildlife viewing	Left as is.	The wildlife that depend on the reservior.		no	
9/29/2021 9:29	Duval		No	No					Remove them.	It would restore the natural ecosystem.	Continued frustration of true restoration	No.	
9/29/2021 9:29	Putnam		No	Yes	More than 5 times			Fishing Fishing (shoreline/structure) Boating Wildlife viewing	I would like to see the water quality improved where a healthy amount of underwater vegetation can establish itself to overall improve the ecosystem as a whole.	No underwear vegetation able to establish it's self before it dies off or eaten by manatees.	Rapidly declining ecosystem	Any steps to help improve the reservoir and not destroy it I can get on board with.	Anyone who spends any amount of time on the beautiful reservoir will fall in love with it just as I did at a early age of 5 years old. We just want to see it properly taken care of.
9/29/2021 9:30	Dade		No	No					Breach the Rodman/Kirkpatrick Dam.	Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs.	Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/29/2021 9:31	Putnam		No	Yes		2-5 times		Fishing Fishing (shoreline/structure) Wildlife viewing	Let's repair the dam and remove any and all invasive plant life. Keep it going!	Great fishing, an real nature fulled attraction to the community, and the dam is a wonderful place to see for visitors.	We live on a canal in Putnam County and the water levels will go even higher than they all ready are. Many Folks will be in more danger when a tropical storm or hurricane comes through.	Continued great fishing, a true nature fulled attraction to the community, and the dam is a wonderful place to see for visitors.	Keep the Rodman Dam!
9/29/2021 9:36	Clay		No	Yes		More than 5 times		Fishing Boating Wildlife viewing Other: Bass Tournaments	Leave the dam alone, keep the barge canal cleared of obstructions, continued drawdowns as needed and continue to maintain Kenwood ramp and the Campground facilities.	I believe Rodman Reservoir is a well established, thriving eco system and fishery. In my opinion, an expensive "attempt" to restore an eco system system that existed ~ 50 years ago seems wasteful and risky. Out of the Top 25 southeastern lakes for 2021, Rodman Reservoir is listed as number 8. Source: https://www.bassmaster.com/best-bass-lakes/slideshow/best-southeastern-lakes-2021#slide5	Losing one of the finest fisheries in the United States. Nearly 100 Largemouth Bass over 8 pounds caught in 2021 alone. Source: https://myfwc.com/fishing/freshwater/sites-forecasts/rel-rodman-reservoir/	It's unclear to me what exactly those scenarios are....	I am grateful that SJRWMD is seeking input from consumers regarding Rodman Reservoir. I appreciate all your efforts in keeping our waterways healthy. Regards, Bill Abbertson Green Cove Springs, FL
9/29/2021 9:39	Marion		No	Yes		2-5 times		Fishing (shoreline/structure)	Remove the dam and free up the river.	Water quality studies and the recent manatee starvation deaths. Mr. Knight has stated the corrections needed to help restore this system.	Continued ruination of this waterway. Florida needs to restore and preserve our unique ecology.	No	
9/29/2021 9:42	Alachua		No	No					Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every additional day the dam and reservoir remain in place results in additional environmental degradation.	Draining the Rodman Reservoir would remove the single greatest barrier to plant and animal movement along the Ocala to Osceola (O2O) Wildlife Corridor by replacing the open water expanse of the Reservoir with a restored floodplain forest, to the benefit of many listed plant species native to the region including the federally listed Clasping Warea and Scrub Buckwheat. 8,000 acres of crossed floodplain wetland located downstream of the dam would be enhanced. Imperiled plant species like the endangered Star Anise and threatened Hartwrightia, which are native to the banks of this region's spring run streams, could expand their range into the restored spring systems.	The broad array of environmental benefits to native flora and fauna, including many imperiled species, that would result from restoration would not be possible.	No.	
9/29/2021 9:48	Citrus		No	Yes			1 time	Wildlife viewing	Return to natural state.	Loss of habitat and natural flow of river.	Permanent disregard for our environment.	No.	So much of natural Florida is gone. As a native Floridian I would love to see a little slice restored and never again destroyed.
9/29/2021 9:50	Brevard		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	
9/29/2021 9:53	Duval		No	Yes		2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Other: Camping	Leave it as it is, and continue to maintain it.	The money was spend ,why would you spend more to destroy it. You can not return it to the past before the dam.	Waste of tax payers dollars.	NO !!!!!!!!!!!!!!!!!!!!!!!!!!!!	
9/29/2021 9:54	Putnam		No	Yes		More than 5 times		Wildlife viewing	I would like to see the Ocklawaha River returned to its natural state.	I would like to have manatees returned to their natural environments unimpeded as well as sturgeon and giant catfish.	That the state would continue footing the costs of maintaining the dam and the reservoir.	Either the dam is there or it isn't. I don't know what a half measure would be.	Dams have always resulted in one technological fix after another. This one serves no real purpose such as hydro or irrigation so to me the choice is clear.
9/29/2021 9:59	Pinellas		No	No					Please get rid of it, BREACH IT	The amount of turmoil this Dam has done to the surrounding springs & wildlife.	It's going to keep going down hill	No, there's no other option	Please listen to us. Florida's been my home for ever. Let's take care of it :)
9/29/2021 10:00	Hillsborough		No	No					It is no longer needed and it is causing problems for the natural springs in Florida.	And the huge difference it can play in so many aspects of life with just this one correction. Springs of Florida should be protected	The damage that is being done by blocking the natural flow of the springs	No	It is time politicians in Florida stop ignoring the public. If we lose these springs we lose what makes our state special.

9/29/2021 10:05	Duval		No	No					Remove the dam and restore the Ocklawaha Rive	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	
9/29/2021 10:08	Marion		No	Yes	1 time		Wildlife viewing	Breach the dam	The health of Florida springs and rivers in addition to the fish/manatees that call these places home.	Loss of natural Florida springs and in turn the unique environmental tourism and recreation that each area could provide	No	Breach this dam and restore the natural flow!	
9/29/2021 10:09	Marion		No	Yes		1 time	Other: Just stopped by to see it when I was passing by.	I would like to see it opened up or torn down permanently so the water can flow freely as Mother Nature intended.	I paddleboard the Silver River frequently and have lived in Marion County over 40 years. Silver Springs and the Silver River look horrible. I believe tearing down the dam will help the eco system. That dam is man made and should never have been there to begin with.	That the Rivers are all going to continue to become more stagnant and ugly. I'm sure if the dam were torn down that eventually we would see far more wildlife and cleaner water.	Whatever they can do to let water flow freely as nature intended.	Please don't waste money repairing or fixing the dam. It has no purpose. Fixing it now just means fixing it later. Getting rid of the dam will cost money now but no repairs needed in the future. Let the water flow free!	
9/29/2021 10:10	Clay		No	Yes		1 time	Other: Just wanted to see it	Breach the Rodman/Kirkpatrick Dam	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. And potentially earning the state additional tourism dollars.	Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. In addition to other counties losing money due to manatee die offs.	No. Breaching the dam is 50 years overdue.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.	
9/29/2021 10:12	Citrus		No	No				Protect wild life	Process of elimination common sense says human activity effects wildlife	The death of wildlife	Yes let the water flow naturally		
9/29/2021 10:13	Pinellas		No	No				Breach the dam	Restoration of the river, wetlands and natural waterways for wildlife	Loss of millions of tax payer dollars used in restoring and maintaining a dam that has no use	No. The dam should have been breached 29 years ago	The breaching of the dam will help Florida overall increase tourism and make our state more wildlife friendly.	
9/29/2021 10:15	Pinellas		No	No				The Kirkpatrick dam taken away to Help out springs!	The water ways will be given back their natural systems and bring back manatee communities and fresh doing flow	That our spring systems will keep getting damaged and will be irreversible	Just take the dam away		
9/29/2021 10:15	Palm Beach		No	Yes		2-5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing	breach the dam	loss of habitat for wildlife	pollution of the environment	not really- dam is my main problem there		
9/29/2021 10:16	Alachua		No	Yes	2-5 times		Wildlife viewing	Breach the Rodman/Kirkpatrick Dam.	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	Hundreds of manatees loose access to essential warm water winter habitat.	No. Breaching the dam is 50 years overdue.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.	
9/29/2021 10:19	Marion		No	No				Please do what is best for our manatees and restore the free flowing rivers wikth spring access.	The staggering loss of manatees in just this last year!	Loss of this precious, endangers animal.			
9/29/2021 10:20	Lee		No	No				•Remove the dam and restore the Ocklawaha River.	•Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	•If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	•No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	
9/29/2021 10:23	Pinellas		No	No				Remove the dam and restore the natural ecology!	The dwindling populations of manatees and other important wildlife	The increased loss of biodiversity.	No		
9/29/2021 10:24	Outside of state / other	USA	No	No				Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	I enjoy the natural habitats for animals to survive without human interference and hopefully without invasive species. Dams are made for mankind, not for animals and nature. Most everything mankind does, harms animals and nature. It is way past time to reverse these actions to save our planet.
9/29/2021 10:24	Martin		No	No				Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	
9/29/2021 10:27	Suwannee		No	No				Breach the Rodman/Kirkpatrick Dam.	There are 200 drowned springs that would be restored by this single project making the breach the most cost efficient and beneficial springs project in Florida.	We miss the best opportunity to do this. State and federal funds available, public interest is high, environmental needs are critical, and the dam is unsafe.	No. Breaching the dam is 50 years overdue.	2021 is the deadliest year on record for manatees; unless their natural habitats are restored, we can expect for die-offs in the future.	
9/29/2021 10:29	Duval		No	No				remove the dam and restore the rivers to their natural state					
9/29/2021 10:29	Citrus		No	No				Remove the dam	Environmental, plants and animals.	The environment would continue to be degraded. The dam should not have ever been built.	no		
9/29/2021 10:30	Leon		No	Yes		2-5 times	Other: to photograph the monstrosity;	open it to the free flowing river.	Ecological restoration.	continued degradation and waste of money. A free flowing river is free.	more frequent and longer draw-downs.	thank you	
9/29/2021 10:36	Outside of state / other	Durham NC	No	No		1 time	Wildlife viewing	Remove the dam to restore the river to its more natural state.	I understand removing the dam will help restore multiple springs, as well as the three dependent rivers, restoring the natural flow of water to this area of the state.	Decline in water quality, decline in native plants and animals, eventual decline in the natural beauty that brings nature living visitors to Florida.	No. This is the most logical course of action.	I was born and raised in Florida, grew to love the diverse natural beauty of the state where my heart still lives. Whenever I return to visit family and friends, I'm saddened by the continuing disregard many seem to have towards sustaining Florida's unique environment. Please think to the future and don't be a part of that - please dismantle this irrelevant dam. Thanks.	
9/29/2021 10:37	Pasco		No	No				Breach the dam	That breaching the dam would allow water flow to restore many drowned springs, offer habitat to wildlife including wintering plaices for manatees.	That tax money goes to repairs to the dam that have no benefits for power production, flood retention ect.	No, breaching is overdue. Keeping our waterways as natural as possible is the only solution.	Keep our waterways as nature intends.	
9/29/2021 10:38	Sarasota		No	No				For the sake of Florida's environmental health, please remove the dam and restore the environment back to it's natural state.	It will help restore the rivers and springs that supported a healthy ecosystem. Plus it will save money on trying to keep an antiquated dam in good condition.	The continued loss of an important ecosystem, but economic opportunities and continued cost of upkeep for something that is not needed. Water quality is a buzzword in Florida right now and this would restore the health of the river systems.	No. Dam removal is needed to save money, improve water quality and increase economic vitality.		
9/29/2021 10:39	Orange		No	No				I would like to see the dam removed and the Ocklawaha River restored.	If the dam is removed then not only will the Ocklawaha River be restored but also the Silver River and the St. Johns River as well as 50 springs. The Lower Ocklawaha and St Johns River will receive over 150 million gallons of natural flow. Clean, useable water is such a precious resource to all of Florida.	If the dam remains water quality will continue to decline resulting in the loss of fish, other aquatic animal and plant life. Florida will lose out on economic benefit that would result from a free flowing river that will be enjoyed by tourists, bird watchers and other outdoor enthusiasts. Money will be saved on not fixing a dam that is past its life expectancy.	No. Breaching this dam is long overdue. Improved water quality and the restoration of the river ecosystem can't wait.	I am a Florida Master Naturalist and I understand the importance of keeping our natural ecosystems intact. Allowing the Ocklawaha River to flow free again will be a big step in restoring Florida's natural areas to a healthy balance.
9/29/2021 10:41	St Johns		No	Yes		2-5 times	Canoeing / kayaking Wildlife viewing	I would like to see the Rodman Res. and Kirkpatrick Dam abolished and returned to its natural state as soon as possible! Stop wasting money on the dam restoration. Reunite the the Ocklawaha, St Johns and Silver springs.	I love the Ocklawaha River and its being destroyed slowly by being dammed, not allowing a natural flow for native species, through poor water quality.	My biggest concern is destroying thousands of acres of floodplain forest which helps us all especially with climate change upon us now! More money spent to repair the damns and rivers because of its unnatural state. Blocked Manatee and native fish migration, invasive weed blockages, and less wildlife habitats.	no	Stop wasting my tax dollars on a damn that serves no purpose at all.	
9/29/2021 10:43	Pinellas		No	No				Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	Thank you for doing the best thing for the environmental health of the region!
9/29/2021 10:46	Dade		No	No				Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 Million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood damages. Restoration creates more	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provideadequatefi cant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/29/2021 10:47	Marion		No	No				Restore habitat	Habitat disappearing at an alarming rate everywhere in Florida. Developers are allowed to operate unchecked. It's time to rewild as much as possible.	That we lose some of our most iconic Florida species forever. All wildlife is under more and more pressure every day. They're running out of places to go	Stop the rampant overdevelopment of Florida! We need wild Florida, not a manicured Disney version		
9/29/2021 10:47	Gilchrist		No	Yes	1 time	2-5 times	2-5 times	I would like to see the removal of the Kirkpatrick Dam and restoration of the Ocklawaha River to its natural shoreline.	The Kirkpatrick Dam is one of the last remaining relics of the Florida Barge canal. The Florida Barge Canal was conceived in a time when many Floridians did not fully appreciate the destruction that such a project could cause. The Kirkpatrick Dam, which does not provide flood protection, power, or a water supply, is beyond its life expectancy; destruction of the dam will save our state millions of dollars.	Now is the time to complete this project. The national economy is booming, leaving state and federal funds to complete a project such as this. When we are struck by a downturn in the economy (as we most likely will be in the next 5 years), allocations to complete a project such as this will disappear. The dam is unsafe and contributes to the overall degradation of the Ocklawaha River and its fish stocks.	Unfortunately no. The time has come for the dam to be removed.	
9/29/2021 10:52	Alachua		No	Yes		2-5 times	Canoeing / kayaking Wildlife viewing	Take it down and let the river flow!	The river needs to flow in her natural state to allow wildlife to survive.	We will lose precious, irreplaceable wildlife.	Mo		
9/29/2021 10:53	Orange		No	No				Breach the Rodman/Kirkpatrick Dam	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No	Florida waterways desperately needs help. You can see the damage being done to the springs day by day. Algae blooms due to overpumping and overuse are killing the eel grass, changing the habitat for fish, turtles, manatees etc. Breaching the dam is a cost efficient step on the way to clean(er) water.
9/29/2021 10:54	Sarasota		No	Yes	1 time		Canoeing / kayaking Wildlife viewing	Thu dam should be breached and removed and that is long overdue.	taking down the dam will restore dozens of streams and a river, add wildlife, prevent unwanted water plant growth and add to tourism and recreation.	The environment will die and be polluted by overgrowth of algae and plants.	no		
9/29/2021 10:56	Leon		No	No				Remove the dam and restore the Ocklawaha River	Removing the dam will help restore a large number of springs, as well as restoring the Ocklawaha, Silver, and St. John's Rivers...	Economic losses for Putnam County and Silver Springs, as well as continued water quality to decline in the springs and rivers.. BAD!	No		
9/29/2021 10:58	Pinellas		No	Yes		2-5 times	Canoeing / kayaking Boating Wildlife viewing	Breach the Rodman/Kirkpatrick Dam.	The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No. Breaching the dam is 50 years overdue.		
9/29/2021 10:59	Alachua		No	Yes		1 time	Wildlife viewing	Remove the dam and have a natural waterway. Let nature, over time, correct the damage that has been done.	poor water quality in Florida and the St Johns in particular.	poor and non life sustaining water quality. Less fish and wildlife that support a healthy natural environment and our waterways.	Not really, please remove the dam :)	thank you for your time and concern for Florida's waterways!	
9/29/2021 10:59	Alachua		No	Yes		2-5 times	Canoeing / kayaking	Restoration of the Ocklawaha River by opening the Rodman/Kirkpatrick Dam. Every day the dam is in place there is harm to the water quality, wildlife throughout the Great Florida Riverway and thus, the economy.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	We miss the best opportunity to do correct the damage from the continued dam. At the moment state and federal funds are available, public interest is high and environmental needs are critical (manatee, water quality, wildlife habitat).	Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This exciting restoration will improve water quality and flow by generating an additional 150-million+ gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
9/29/2021 11:02	Seminole		No	No				Save the springs!	Must reunite springs.	Unsafe dam, missed chance for progress.	No.		
9/29/2021 11:04	Outside of state / other	Citrus County, Florida	No	Yes		1 time	Other: none of the above	Removal. Restore the site to its original configuration.	The failed Cross Florida Barge Canal Project left environmental destruction and burdensome infrastructure in its wake. The damming of the Ocklawaha River and creation of the Rodman Reservoir has smothered 20 springs, blocked manatee and fish migration, and destroyed thousands of acres of floodplain forest.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	The state has to decide whether to invest millions of taxpayer dollars in repairing and continuing to operate a dam with no purpose or remove it, finally reuniting the Ocklawaha, St. Johns, and Silver Rivers.		
9/29/2021 11:09	Sarasota		No	No				Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No	
9/29/2021 11:10	Alachua		No	Yes		2-5 times	Boating	Breach the damn to better the community environment	The dam was made for a project abandoned 50 years ago	Manatees have no refuge	No		
9/29/2021 11:10	Escambia		No	Yes		More than 5 times	Fishing Fishing (shoreline/structure)	Remove the dam and restore the Ocklawaha River and fill the great mistake called the cross Florida barge canal.	I have personally seen what the barge-brained canal has done to the coast ecosystem over the past 40 years. Rodman is just a component of that mistake and is beeing more of a cesspool than a healthy lake. Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	The Everglades restoration effort, particularly turning the Kissimmee River back into a river versus a canal, has shown us what can be done the reverse the idiotic schemes of the money-grabbers who don't give a damn about the environmental havoc they cause. Why continue to facilitate the actions of morons that have such a wide-ranging impact on a wide variety of animals, hydrology and water quality, and human populations?
9/29/2021 11:16	Lake		No	Yes	1 time		Wildlife viewing	Removal of the dam and restoration of the natural resources.	Lack of use of the canal	Costs of restoration of the dam.	Let the dam deteriorate naturally.		
9/29/2021 11:17	Collier		No	No				Twenty natural springs will be restored and the flow to the St. John and Lower Oklawaha Rivers will be restored. This will improve the ecosystem for humans and the natural environment, and support the economy which is dependent on tourism and quality of life.		We will spend millions of dollars needlessly if the money is spent on repairing the Kirkpatrick Dam.	Any other scenario than breaching the Kirkpatrick Dam will not produce the desirable results to benefit people, the environment and the economy.	For once, you, are representative officials, are able to make a good decision that does NOT require spending millions of dollars.	
9/29/2021 11:21	Monroe		No	No				Think preservation of nature and wildlife !!!	Future existence !	Death !	Preservation and conservation of nauture and wildlife !		
9/29/2021 11:22	Pinellas		No	Yes		1 time	Wildlife viewing	Remove the dam and restore the Ocklawaha River	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	
9/29/2021 11:26	Putnam		No	Yes	2-5 times	More than 5 times	Fishing (shoreline/structure) Canoeing / kayaking Wildlife viewing Other	Open the Kenwood area back up to camping and add kayak ramps to kenwood and at the dam. More areas to fish from	Kenwood was once a beautiful camo ground. It can be that and more now.. It will be an asset to the community.				
9/29/2021 11:27	Monroe		No	No				•Remove the dam and restore the Ocklawaha River.	•Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	•If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	•No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	Please do the right thing, as we have a treasure in the natural environment of Florida.
9/29/2021 11:33	Escambia		No	No				get rid of it and save what God created.	It is costing the area around it money, destroying nature and cost of upkeep is high.	Many river creatures will did, money will be wasted.	no	It is time for humans to start fixing the damage we have done to the earth.	
9/29/2021 11:34	Seminole		No	No				Removal of the dam and restoration of river/land to a more natural state. my	Cross FL barge canal was a failed project that had negative environmental impacts. Putting taxpayer funds into restoration and not a new dam makes economic sense.	More money being spent to maintain status quo	removal of the dam		
9/29/2021 11:34	Volusia		No	No				We need to see the restoration of natural glow and improvement of our natural springs.	The Florida Springs are favorite for tourist to our area. The quality has plummeted in the past 30yrs in part due to the damn and over use of the ground water for ranching and farming	Loss of another natural gift in our state	Absolutely no need for this damn as far as the general public is concerned	Please vote on the side off the people of Florida and not special intetests	
9/29/2021 11:37	Pasco		No	Yes		2-5 times	Wildlife viewing						
9/29/2021 11:45	Seminole		No	Yes		1 time	Canoeing / kayaking Wildlife viewing Other: I was so despondent in seeing this dam and reservoir that I have not returned - despite the good fishing	Breach the dam and restore the amazing Oklawaha River	Water quality reports throughout the state that show we need natural water filtering systems like river systems and wetlands.	Silting in of the the reservoir, diminishing of water quality, loss of plant and animal species	No		Can we finally acknowledge that natural systems are nearly always far superior to human-made systems for maintaining water quality and intact ecosystems.? As we continue to destroy Florida with "development," we loosen the quality of life for humans right along with all the other plant and animal species.

9/29/2021 11:48	Leon		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Remove the dam and restore the Ocklawaha River	It's pretty simple: removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	Absolutely not. There is no time to waste. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait. Just do what you have been elected for.	Thank you.
9/29/2021 11:48	Indian River		No	No					Remove it, stop wasting taxpayer monies for it maintenance. If it doesn't work, remove it!	The environment was natural before the dam. We interrupted the natural flow of the river and decided we knew better… Stop trying to better Mother Nature, it seldom works.	Along with global warming, and rising animal extinctions… We are not invulnerable to the same.	Ya DAM or NOT TO DAM, what's the compromise?	Common sense, use it!
9/29/2021 11:49	St Lucie		No	No					Remove the Kirkpatrick Dam & Rodman Reservoir to let the rivers flow naturally again.	They are smothering 20 springs, blocking manatee and fish migration, and destroying thousands of acres of floodplain forest.	Loss of manatees and fish are destroying the ecosystem & the local economy.	Removal is the only choice.	
9/29/2021 11:50	Marion		No	Yes		2-5 times	More than 5 times	Fishing	Keep the water lettuce controlled, also possibly a few additional buoyed boat lanes.	Water lettuce gets so thick you cannot launch and or safely navigate	None its a win / win	Water Lettuce still needs to be controlled boat lanes are optional	
9/29/2021 11:53	Pasco		No	No					Breach the dam	The worsening water quality and lack of flow of the main river	Water quality and flow would continue to decrease and native species would lose even more habitat	No, it's overdue	The dam prevents native species like manatees and largemouth bass from having more space and food to continue to compete with invasives. Breaching would also open up way more recreational opportunities to residents and restore the water quality immensely.
9/29/2021 11:53	Duval		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Canoeing / kayaking Boating Wildlife viewing	Keep it as it is. It is a Great resource and ecosystem that should be protected and the economic impact is vital to community.	It is a Great resource and ecosystem that should be protected and the economic impact is vital to community. It offers some of the best Trophy Bass fishing in the country…	Unthinkable.. if it is not kept as is,, the resource will be gone, the economic impact on community will be very negative… Rodman is a Destination! While the initial plans that created Rodman were ill conceived, the end results is a wonderful resource that shld not be reversed… two wrongs don't make a right	Not sure how to respond to this…. No! Keep it as it is… I would like to see more frequent draw downs, planting of Live Cypress, re-position of dead / fallen trees / logs to maintain structure… over the years a lot of logs have been removed. instead relocate and strategically build wood piles around the lake	
9/29/2021 11:54	Pinellas		Yes	No					Breach the Rodman/Kirkpatrick Dam.	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs.
9/29/2021 12:02	Orange		No	No					Privaninvation!	Protonic!	Not sure	No	
9/29/2021 12:07	Marion		No	Yes	1 time	2-5 times	More than 5 times	Fishing Boating	Save Rodman	The habitat	The mess	No	
9/29/2021 12:08	Charlotte		No	No					remove the dam		harm to the aco system		
9/29/2021 12:09	Collier		No	No					I would like to see the dam removed and the Ocklawaha River restored. We in Florida have done enough damage to the water systems in our state.	As I mentioned above, restoring the natural flow of water in the state is most important.	Continued degradation of the natural flow of water in the state……and, I expect, a negative economic impact in the counties most directly affected.	No, none.	Please, please, please….let us begin to move in the direction of restoring the ecosystem and natural habitat of Florida, our most important resource!
9/29/2021 12:12	Pinellas		No	No					Remove the dam and restore the river.	We need to restore more natural green space to preserve what makes Florida so special.	More of the same inaction for environmental improvement projects.		
9/29/2021 12:14	Marion		No	Yes	1 time	More than 5 times	More than 5 times	Fishing	Bass fishing	Please keep in place. Awesome bass fishery. One of my favorite places in Florida	We love a great fishery	No	
9/29/2021 12:16	Outside of state / other	Texas	No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	
9/29/2021 12:20	Alachua		No	Yes	More than 5 times			Canoeing / kayaking Wildlife viewing		Remove it	More local mess	No. Just open the dam thing	Why are we still pissing around with the obvious after over 30 years of debate
9/29/2021 12:21	Pinellas		No	No					Breached	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	That the population of wildlife will greatly suffer	No the dam needs to be breached	
9/29/2021 12:21	Marion		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing	leave it as is	I know several persons that come to Florida to fish Rodman along with other hot spots in our state	lose of a valuable income stream for the surrounding businesses.	None that i can think of	
9/29/2021 12:22	Volusia		No	No					Breach the Rodman/Kirkpatrick Dam	Restoration of the springs	The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	No	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future.
9/29/2021 12:27	Orange		No	No					No	Our natural springs is a vital resource here in Florida	Wildlife		
9/29/2021 12:27	Hillsborough		No	Yes				Wildlife viewing	The dam should be removed as it doesn't serve a purpose other than to take taxpayers money to maintain it.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. Millions will be saved on a dam that is past its life expectancy and serves no purpose.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, while allowing blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	Florida's eco systems need protections, we are running out of natural Florida areas from development. We need to preserve them and make sure that our water quality doesn't decline.
9/29/2021 12:28	Seminole		No	Yes			2-5 times	Fishing Wildlife viewing	Remove it.	The many native species that are blocked from the dam.	That down river non native species are flourishing. Removal of the Rodman brings more native migration of top species.. Open flow of the river helps manatees.	No.	1st whats the possibilities with a dam thats beyond it expiration date. Ck lessup in Seminole county is a prime example of river's blocking natural flow. What more the Everglades in which I grew up on is another similar situation.
9/29/2021 12:28	Jackson		No	Yes			1 time	Wildlife viewing	I would like to see it removed and the waterways restored.	Wildlife migration and well being	Wildlife destruction continues and species experience more stress and destruction.	No	
9/29/2021 12:29	Lake		No	Yes		2-5 times		Boating	Remove it	Open flow for ocklawaha river and allow manatees to enter silver river	We keep wasting money maintaining a dam that is not needed for a few fisher people	Yes, disabling it into weir design, so fishing could still be good, but opening the main channel	
9/29/2021 12:32	Palm Beach		No	No					Remove it and restore natural water flows.	We have seen how disrupting the natural flow of rivers has hurt Florida's environment and natural habitat for our native species of plants and animals.	Loss of habitat for Florida plants and animals	Restore natural flows.	
9/29/2021 12:33	St Johns		No	Yes			2-5 times	Other: Events were held around the area so we stopped by.	Breach the Rodman/Kirkpatrick Dam	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/29/2021 12:33	Outside of state / other	Franktin Wisconsin	No	Yes			1 time	Wildlife viewing	Clean it up	600+ manatees have died due to the pollution	Manatees would become extinct because of humans	no	
9/29/2021 12:35	St Johns		No	Yes			1 time	Other: Went to a wedding in the area. We stopped by.	Breach the Rodman/Kirkpatrick Dam	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No! Breaching the damn is 59 years overdue.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/29/2021 12:38	Outside of state / other	Bethlehem, PA	No	No					We need to restore the Ocklawaha River by breaching the Kirkpstrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No.	
9/29/2021 12:44	Citrus		No	No					I would like to have the dam removed	Restoration of fish and habitat for manatees	Amount if money needed for restoration of current dam and contributing to the further decline of manatee populations	No	I have seen many dam removals come to fruition in Massachusetts with extremely beneficial results
9/29/2021 12:47	Alachua		No	Yes		2-5 times		Wildlife viewing Other: Observing the dam and surroundings, seeing how many people are benefiting from it.	It should be removed.	It costs lots of taxpayer money, benefits very few people, and its removal will all recovery of a natural river and numerous springs contributing to the ecotourism economy.	Continued degredation of the environment and huge future cost maintaining and dredging to keep the lake open, and also contributing further to ecological damage.	No. This dam serves no useful purpose.	Building this dam was a boondoggle to begin with, allowing it to continue just continues that waste of resources. We know so much more now than 50 years ago about what is best for our environment, our economy, and what is of greatest benefit to all the people of Florida.
9/29/2021 12:54	Marion		No	Yes			1 time	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers $4-14 Million in dam repairs saved on a dam past its life expectancy Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. $57 million in potential flood damages avoided to downstream property owners	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Recutting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. Let us be the generation that takes decisive action in the vital matter of improving the environment for coming generations.
9/29/2021 13:02	Outside of state / other	Wisconsin	No	No					Restoration of the Ocklawaha River is an important and feasible conservation action that will greatly impact manatees and other wildlife.	Ocklawaha, Silver and St. Johns rivers are restored plus 10,000 plus acres of the Florida Wildlife corridor are restored or positively impacted. The wildlife impact is significant. This is an important piece of improving Florida's environmental sustainability	Rodman/Kirkpatrick Dam serves no purpose and can be drawn down gradually. This would be the same old, same old do of nothing until a crisis strikes. Algae blooms on both coasts are a classic example of waiting too long.	This action is way overdue - the time is right to do this.	
9/29/2021 13:10	Orange		No	No					As stated in initial statement, the dam needs to be breached and let normal flow and restoration of wetlands occur now. Long over due. This states ecosystem depends on flow of water if it is to survive. We are seeing the ramifications of bad decisions on our state. Now is the time to reverse decades of this approach.	All the data and research on these wetland systems.	Destruction of water ways and all species concerned if this is not done now	no	no
9/29/2021 13:10	Lake		No	No					Breach the dam and free the river and springs for the manatees and nature enthusiasts !	Manatee and springs are not just essential parts of the FL ecosystem, water quality for the FL aquifer is at risk in the area and all over the state. More and more people are enjoying the springs and manatee or fish related tourism, whereas a stagnant body of water has limited usefullness for anyone or living thing. The dam has outlived its usefullness, time to apply what we know about FL environment and state water needs to get rid of it.	Are we really going to spend millions repairing a useless dam? Manatees are dying at record numbers, this dam freeing up warm water habitat helps counter this nightmare. FL residents and tourists love the springs, love the fish, love the manatees - getting rid of the dam is the right ecological and economic decision.		Ask all the Springs just how much demand for manatee sightings and springs water fun has grown. We have a chance to improve A LOT if we free this river for animals and people to enjoy!
9/29/2021 13:15	Hillsborough		No	Yes	1 time				Remove the dam to put the land and waterways back to the way it was before somebody thought it was a good idea to put a barge canal across Florida and destroyed natural areas that have never been the same since then.	History tells us that man can't interfere with natural habitat without destroying it and everything around it. Put it back the way it was.	It needs to be done completely and not just started and then let sit for years. The barge canal project was a huge mistake and should never have been started. Now let's try and fix our stupid mistakes.	The dam has to go to restore all the springs and rivers back to their original state. Some minor issues could wait as long as there is a solid plan to address them in a specific time frame.	
9/29/2021 13:17	Duval		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing	Emphasis on making it the cleanest and most productive fishery in NE Florida.	I have fished "The Pool" since I was a boy and have lasting memories of our favorite fishery survive battle after battle to be changed, adjusted or tampered with.	Ruining a legendary, nationally known fishery that brings enjoyment and frankly revenue to a growing communities in and around Putnam and surrounding counties.	Not at this time.	
9/29/2021 13:17	Hillsborough		No	No					I'd like the dam to be responsibly uninstalled and discontinued.	I believe the future health of our springs and water table depends on the free-flow of natural resources.	My biggest concern is in regards to what is currently happening there. Dams are an outdated tool, costs too much to upkeep. Dams have unintentional consequences to our natural ecosystems.	We ought to be more mindful in how we store/treat/transfer hazardous waste and contaminated waters. We can't simply inject hazardous materials deep in the ground thinking it'll all go away. We need a harmonic relationship with nature.	
9/29/2021 13:18	Orange		No	Yes		1 time	1 time	Boating					
9/29/2021 13:18	Marion		Yes	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing	I would like to see it retained in its current state.	It's a thriving ecosystem and acts to purify the water that passes through it before it reaches the St. John's!	The destruction and displacement of so much wildlife habitat! Lots of nitrates that are now cleansed reaching the St. John's!	No	
9/29/2021 13:18	Volusia		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	Return the whole area to the way God had it. Restore riverbanks with cypress trees and other native trees and plants.	Kayak and canoe and water enthusiast with decades of paddling central Florida with friends that are biologists and scientists.	More years of chemical use, wasted tax money, ecosystem collapse, and lack of water.	None whatsoever.	Removing something that should not have been started is the right thing to do.
9/29/2021 13:18	Outside of state / other	North Carolina	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. $5,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/29/2021 13:19	Lee		No	No					Breach the Rodman/Kirkpatrick dam	* There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. * Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. * Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. * The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	* We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. * The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. * Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. * Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. * Hundreds of manatees loose access to essential warm water winter habitat. * Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
9/29/2021 13:23	Marion		No	Yes		More than 5 times		Fishing Canoeing / kayaking Boating Wildlife viewing	I would like to have it left in it's present condition	When I go there I can really enjoy the solitude. Most importantly is that I really enjoy looking for and finding the manatee that live in Rodman … The wild life viewing is second to none other in the state.	There is an abundance of different wildlife that rely on Rodman for their home and I would hate to think of what would happen to them, especially the manatee.	I don't see that there is.	Please leave Rodman like it is at the present.
9/29/2021 13:29	Seminole		No	Yes		1 time		Boating	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored. 20 lost springs and Silver Springs ecosystem are restored. 100s of manatees gain essential warm water winter springs habitat.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.
9/29/2021 13:29	Marion		Yes	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Canoeing / kayaking Boating Hunting Wildlife viewing	Maintain Rodman reservoir current state	Protecting the endangered manatee	Contributing to the endangerment of the manatee	Have not heard a resolutions but would be will to hear one.	
9/29/2021 13:31	Collier		No	No						the dam serves no purpose	wasting money unneeded project	no. water quality has enough challenges in Florida.	
9/29/2021 13:34	Volusia		No	Yes	1 time			Wildlife viewing	Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	What do you treasure about this ecosystem, or about natural Florida in general?
9/29/2021 13:35	Highlands		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	I would like to see the removal of the Rodman Dam to provide access to natural springs which are instrumental in providing warm water habitats for threatened manatees during the winter months.	The very recent and dramatic increase in manatee deaths directly attributable to a lack of seagrasses in the Indian River Lagoon region. Removing the Rodman Dam will give manatees access to a bounty of eelgrass on which to feed and access to springs needed as a warm water refuge during Florida's winter months.	We greatest concerns are an increasing level of manatee deaths because they cannot access an abundance of aquatic grasses and from cold stress from decreased access to warm water springs.	No!!	Thank you for your time and consideration of my input.
9/29/2021 13:35	Columbia		No	No					free the water supply	my concern for the main flow in South Florida…. any thing to restore back to original pattern of rivers flowing	another environmental failure.	yes.. blow it up	
9/29/2021 13:37	Outside of state / other	- former resident in Manatee and La	No	No					Breach the Rodman/Kirkpatrick Dam	There are 20 drowned springs that would be restored by this project, making it an impactful and cost-effective program; it would also save taxpayer money not to have to repair the dam, while improving the health of the spring and safety for fish and manatees.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. As the effects of man-made climate disasters become more widespread and longer-lasting, it is clear that any actions we can do to improve environmental outcomes cannot simply be pushed off to another generation.	No. This action is long overdue.	Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.

9/29/2021 13:42	Orange		No	No				Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Please act QUICKLY!
9/29/2021 13:43	St Lucie		No	Yes		1 time	Canoeing / kayaking	Remove the dam. I was so sad in 1971 when canoeing and realized that the springs and river on the maps we had were flooded due to this horrific dam. We need the springs and the river and the land back. More economic benefits from so many ways than just this narrow minded small fishing faction.		We have an opportunity to help our waters. It's been long overdue. IT should never have been done. We need to reclaim the springs, the rivers and the land.	No.	
9/29/2021 13:48	Orange		No	No				Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 Million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities. The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier.	Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored. If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/29/2021 13:56	Hillsborough		No	No				I would like the Ocklawaha River restored by having the dam removed.	The fact that the dam is past its life expectancy. When the river is allowed to flow, it will rejuvenate many of our natural springs. Over 4 million dollars would be saved from becoming a burden onto the tax payer.	If the dam is not removed, Florida will miss out on thousands of acres of restored forests and Putnam county will continue to have its water quality decline.	No, the dam must be removed.	Florida is the most beautiful state in the nation and one of the primary reasons for that is our amazing ecosystem. Our springs, beaches, and forests deserve to be at the forefront of development in order to keep our home beautiful and our tourist economy booming.
9/29/2021 13:58	Orange		No	Yes		2-5 times	Wildlife viewing	remove dam and restore Ocklawaha			no	
9/29/2021 14:01	Collier		No	No				Florida's richness is slowly being depleted. Any opportunity to restore the natural environment and support the unique wildlife of Florida is critical. It supports all of us in ways often we are not always aware of in the present moment.	Protecting what makes Florida so special.	A missed opportunity to do the right thing.		
9/29/2021 14:05	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Hunting	Leave it as is. I don't see the benefit or monetary gain if the dam is removed.	It an outstanding fishery which provides ample opportunity for recreational fisherman to catch a basis of a lifetime.	Environmental impact	No
9/29/2021 14:05	Outside of state / other	United States	No	No				Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/29/2021 14:06	Duval		No	No					Take it down let it flow naturally	Fishing	Not sure	
9/29/2021 14:09	Marion		No	Yes			Other: While I have used the Ocklawaha for boating, canoeing/kayaking and wildlife viewing, I have only toured Rodman in my official capacity as a former County Commissioner in an effort to gain firsthand knowledge of the impace of Rodman from an economic and environmental standpoint. It has been over 10 years since I was in office - Rodman was an issue then and it remains an issue today - perhaps even more so.	It is long past time to restore the natural flow of the Ocklawaha by breaching the Rodman Reservoir/Kirkpatrick Dam not only from an economic standpoint but most especially from an environmental standpoint. It is my understanding the the Kirkpatrick Dam is in need of critical repairs - the cost of which could run in the millions of dollars...why not invest those same dollars to breach the dam and finally restore the natural flow of the Oklawaha.	Restoring the environmental integrity of the Ocklawaha has far reaching implications for the entire Great Florida Riverway as evidenced during the 10 year drawdown - the degradation that has occurred must be remedied for the long-term sustainability of the springs, the fish and wildlife and natural fauna and flora along the length of the waterway...the positive economic benefits follow "naturally".	The stop gap measures have been tried; the focus groups have been held; the studies have been done ad infinitum - we know what needs to be done - the time for courageous action is now...breach the dam...	I often use the closing line of Marjorie Kinnan Rawlings iconic CROSS CREEK... The earth may be borrowed but not bought, may be used, not owned. It gives itself in response to love and tenderness, offers its seasonal flowering and fruiting. Cross Creek belongs to the wind and the rain, to the sun and seasons, to the cosmic secrecy of seed, and beyond all, to time. I would argue that one can substitute any other environmental entity for Cross Creek ...in this case the Ocklawaha/Great FL Waterway...the reflection is the same...this natural flowing waterway is not ours to own and control by the Rodman...We must recognize and acknowledge our stewardship role. Thank you for the opportunity to respond.
9/29/2021 14:15	Indian River		No	Yes		1 time	Fishing (shoreline/structure) Wildlife viewing	Dismantle it and call it a day. No sense in maintaining a public structure that has no future purpose! Waste of taxpayers money. The State had many other social and environmental priorities.	Restoring our precious natural resources i.e. Everglades, Kissimmee River, Floridas natural springs watershed.	Completing the Barge canal!	There is always room for compromise but not on this current issue.	Open the dam Dam!!
9/29/2021 14:19	Sarasota		No	Yes		1 time	Wildlife viewing	Remove the dam and restore the Ocklawaha River	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	
9/29/2021 14:28	Seminole		No	No				I would like to see the damn dismantled so the Ocklawaha river can flow freely.	The building of the dam submerged valuable habitat and flooded many freshwater springs. Springs are important for habitat and provide valuable eco tourism opportunities	Continued degradation of habitat	No	
9/29/2021 14:31	Hillsborough		No	No				Restore the Ocklawaha River, remove the dam!	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No...the dam is outdated. Florida residents will benefit greatly from removal of the dam.	Florida has unique waterways - springs, rivers, inlets, bays and oceans. Preservation benefits all of us.
9/29/2021 14:36	Outside of state / other	Oxford OH formerly Jupiter	No	Yes		1 time	Wildlife viewing	removal asap	Why put more money after bad for an outdated structure that does more harm than good	SS wasted and wildlife challenged	Know of none	check out state of Maine and how dam removal has benefitted environment and citizens
9/29/2021 14:38	Dade		No	No				Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	Restoring the Florida springs is extremely important for future generations of Floridians. The reestablishment of wetlands, forests and springs will also help to stop deleterious climate change effects on the environment.
9/29/2021 14:45	Monroe		No	No				Restore the Ocklawaha River by breaching the dam	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of native fish and prohibits manatees from obtaining refuge in winter months. Restoring the Ocklawaha River will provide millions of gallons of freshwater flow to the Lower Ocklawaha and St. Johns Rivers making them less susceptible to saltwater intrusion. The St. Johns Estuary will be healthier. With restoration, taxpayer money will be saved on dam repairs.	The dam is unsafe to peoples' property and also to animals such as manatees and fish.	No.	
9/29/2021 14:46	Pasco		No	Yes	1 time	2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Manage it for fishing and boating. Improve access to the lake. Keep the lock operational	The economic benifit to the surrounding areas from the fishing and boating community.	We would loose a valuable resource if the lake is destroyed. The wildlife has adapted to the lake and the surrounding area and taking it back to its natural state would achieve nothing.	Keeping the lake open and fishable.	
9/29/2021 14:46	Outside of state / other	El Paso, TX	No	No				To have it protected and preserved so that I can visit it in the future.		I would not be able to enjoy the beautiful birds and animals that depend on this ecosystem when I visit in the future.		
9/29/2021 14:53	Putnam		No	Yes	More than 5 times			Fishing Boating Hunting Wildlife viewing	removed	wildlife corridor, clear up the water below the dam, restore the springs, and better fishing.	The black bears need more space to roam. The OCALA FORREST is overpopulated with them now.	nope	I live out there by the dam for over 25 years and have seen many drawdowns. The deer raccoons,bob cats turkeys and wading birds utilize the land every time they have a drawdown. Not to mention the billions of mussels they kill every time they draw the water down. You can only use 10 a day to fish with. Gather anymore and you get a ticket. The water below the dam would clear up after a drawdown. You could see the bottom of the river from the dam all the way to the bridge on 19(Johnsons Field). The manatees would return too. I know from personal observation that ten times more people fish the river than that stump filled pond.
9/29/2021 14:56	Marion		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Boating	I hope it stays the way it is because it is an unbelievable fishery.	My son is 12 years old and I love taking him fishing, he loves fishing Rodman, he's has caught one of his biggest bass there.	That the place that my father took me fishing for so many years and the place I've been taking my son with now for a few years will be gone for our futuer kids to fish.	I really don't think that there is one, either it stays as it is or it will be gone forever as we know it.	
9/29/2021 15:02	Palm Beach		No	No				Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every additional day the dam and reservoir remain in place results in additional environmental degradation.	7,500 acres of the lower Ocklawaha's historic forested floodplain, 20 freshwater springs, and many miles of natural river channel that were drowned as a result of dam construction would be restored. • Thousands of acres of submerged aquatic plant communities would be able to regenerate in the restored river channel, and in the re-emerged spring run streams that drained into the Ocklawaha historically. • 8,000 acres of stressed floodplain wetland located downstream of the dam would be enhanced. • Imperiled plant species like the endangered Star Anise and threatened Hartwrightia, which are native to the banks of this region's spring run streams, could expand their range into the restored spring systems. • Draining the Rodman Reservoir would remove the single greatest barrier to plant and animal movement along the Ocala to Osceola (O2O) Wildlife Corridor by replacing the open water expanse of the Reservoir with a restored floodplain forest, to the benefit of many listed plant species native to the region including the Federally listed Clasping Warea and Scrub Buckwheat. Preserving, conserving and restoring the native plants and native plant communities of Florida • Three river systems - the Ocklawaha, Silver and St. Johns - would experience significant environmental improvement from restoration. • Manatees would regain open access to the warm water habitats of the Ocklawaha and Silver Springs. • Migratory fish including the Striped Bass, American shad, American eel, and the critically Endangered Atlantic Sturgeon and Shortnose Sturgeon would once again have open access to the Ocklawaha system if the dam is breached. • Recreational sport fishing would be enhanced by allowing the Florida strain of the Striped Bass to reclaim what used to be its primary spawning habitat - the Ocklawaha. • At least 150 million gallons a day of additional natural flow, and potentially much more, would be restored to the Lower St. Johns River, improving water quality and increasing resiliency of the entire St Johns/Ocklawaha River system by impeding the salt water intrusion resulting from sea level rise. • An estimated $14 Million in dam repairs, measured in 2006 dollars, would be saved by avoiding repairs to a dam that has exceeded its life expectancy and never fulfilled the purpose for its construction. • The large expenditures required for herbicide treatments to control the growth of invasive aquatic weeds and to conduct other ongoing maintenance needs.	The broad array of environmental benefits to native flora and fauna, including many imperiled species, that would result from restoration would not be possible. • Water quality in the Rodman Reservoir and Lower Ocklawaha/St Johns River system would continue to decline. • The economic benefits that would result from increased and enhanced recreational usage would be denied to the surrounding local communities. • Residents and business owners in areas immediately downstream of the dam would continue to be under threat in the event of failure of a dam that has never, and will never, satisfy the purpose of its construction. • Thousands of acres of submerged aquatic plant communities would be unable to regenerate in a restored river channel and in the re-emerged spring run streams, and 7,500 acres of floodplain forest would not be restored. Preserving, conserving and restoring the native plants and native plant communities of Florida • The Reservoir would continue to be a barrier to movement by native wildlife and plant life along the length of the O2O Corridor, and compromise the value of Florida's investments in conserving lands like the Etonian Creek State Forest, and approved Florida Forever projects. • Taxpayers will perpetually be on the hook for repair and maintenance of the dam and Reservoir, and continue to be liable for any loss of life or property damage that would result from a dam failure. • Imperiled plant species like the endangered Star Anise and threatened Hartwrightia, which are native to the banks of this region's spring run streams, would be unable to expand their range into the unrestored spring systems.	No. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration.	
9/29/2021 15:12	Marion		No	Yes	2-5 times			Fishing Boating	leave it alone			
9/29/2021 15:20	Marion		No	No					Like to keep the preservation of the lake. Wouldn't want to disturb.	Ongoing issue of the subject	The community will suffer jobs will be lost in the habitat to wildlife will be destroyed.	Keeping those working out in the field	I'm not 100% sure we can make it but I know some things are certain of why we should contest and to my understanding for many years they have been trying to remove the dam and drain the lake but here are my reasons why they should not take away the lake that is home to popular fishing tournaments, it will take away tourism, it will affect our fish camps financially and economically and also take away a natural habitat to our wildlife that remains in the area.
9/29/2021 15:22	Marion		No	No					Let the waters flow freely and return us to way God created it.	This will give more habitat to the bears and other creatures.	This defeat will give the Army Corp of Engineers a license to destroy what nature intended for us all.	No	The environment should be the #1 priority in Florida. What kind of place do we want Florida to be for our kids?
9/29/2021 15:24	St Johns		No	No				We need to restore this important ecosystem. I support breaching the dam and bringing the river back to its former glory. Manatees need this for their winter survival! Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality, and wildlife can't wait.	Please remove the dam and restore the Ocklawaha River! The failed Cross Florida Barge Canal Project left environmental destruction and burdensome infrastructure in its wake. The damming of the Ocklawaha River and creation of the Rodman Reservoir has smothered 20 springs, blocked manatee and fish migration, and destroyed thousands of acres of floodplain forest.
9/29/2021 15:26	Palm Beach		No	Yes		1 time		I would like the dam to be removed	The dam is harming the springs and harming manatee populations	Irreversible impacts to Florida's wildlife	No	
9/29/2021 15:26	Pinellas		No	No								
9/29/2021 15:26	Marion		No	Yes	1 time	2-5 times	More than 5 times	Fishing Boating Wildlife viewing	I want to see the State of Florida maintain the current ecosystem to support wildlife conservation and manage the habitat for the fisheries.	The existing dams have created 1 of the best fresh water trophy bass fisheries in the state.	My biggest concern would be that the loss of commerce and tourism revenues would cause local businesses to go out of business due to the loss of business.	The dams MUST remain. I am always open minded to alternate solutions that may be better for the overall interests of the area, businesses and the residents.	
9/29/2021 15:30	St Johns		No	No				For the sake of wildlife, please remove the useless, crumbling dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If this harmful dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	We are at a crossroads. The Rodman/Kirkpatrick Dam that blocks the Ocklawaha River is in decline. Florida should NOT invest millions of taxpayer dollars in repairing and continuing to operate a dam that is a detriment to the environment. Instead, this dam, thus finally reuniting the Ocklawaha, St. Johns, and Silver Rivers, which will help manatees and other wildlife thrive.
9/29/2021 15:33	Lee		No	No				Remove the dam and fully restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities.	No	The dam serves no useful purpose and would cost a substantial amount to maintain.
9/29/2021 15:35	Orange		No	No				Breach the Rodman/Kirkpatrick Dam.	Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue.	I fully support actions to restore Florida waterways to their original, natural state, especially when there is little to no influence on human quality of life. We all benefit from making Florida waterways pristine.
9/29/2021 15:35	Putnam		No	Yes		2-5 times	Fishing	Remove the dam, restore the river	My own opinion as a Florida resident and taxpayer.	I don't think we should spend money to maintain the dam, the reservoir, spray the weeds in the reservoir.	Not really, quit spending money on true dagum thing.	Are used to fish on the Rodman, but the fishing is not what it used to be, it's hard to use the boat ramps with so many weeds, there are many more places to spend our resources and have a gruit fishing elsewhere, the water management District has done a great job with the headwaters project, etc. And we should do things like that and not spend money I worn out dam and Reservoir. Put your resources into cleaning up our water and improving the submerged vegetation in the Saint Johns, that's where your money is better spent improving fishing.
9/29/2021 15:36	Lee		No	No				Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss.	No	The time has come to remove the dam.
9/29/2021 15:41	Marion		No	Yes		1 time	Other: we tried to fish but boat ramp we tried over grown with water Lilies	remove it and restore at least some of Floridas nature. with so many people moving here we need to have something in place before its to late.	When I visited I was in shock at the condition of this place being overtaken by invasive water species.	visitors loose out on another view of native florida habitat.	use taxpayer money to clean up the invasive species and restore access to fishing through multiple working boat ramps.	
9/29/2021 15:45	Marion		No	Yes		1 time	More than 5 times	Fishing Other: Wildlife viewing, fishing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000 or more acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife.	100 miles of the St Johns River Estuary continues to be deprived of natural water flow to improve water quality. restore fish and wildlife habitat and reduce saltwater intrusion.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
9/29/2021 15:46	Duval		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Boating	Leave it as is,	Attracts numerous sportsmen to the area to fish. Brings in a large influx of money.	The area would lose a great deal of money	No	
9/29/2021 15:51	Palm Beach		No	No				Restore the Ocklawaha River by removing the dam.	I've read that removing the dam will help restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers and that the Lower Ocklawaha and St.Johns Rivers will receive 150+ million gallons a day of restored natural flow. Also, a lot of money will be saved by not restoring a dam whose life expediency is over.	If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss & Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more. We need to help bring back our planet.	No. Improved water quality, and wildlife can't wait.	Please help restore natural Florida.
9/29/2021 15:55	Sarasota		No	No				Let the river flow. My family was from Gainesville and Preacher Gordon was always against the Cross Barge Canal.	St Johns need free flowing water.	St Johns will be an algae slump.	No Free flow	You do not want the St. Johns to be Piney Point.
9/29/2021 16:07	Collier		No	No				•Remove the dam and restore the Ocklawaha River.	•Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	•If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	•No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	Thanks for asking water in Fl is our MOST important resource for animals plants and US. If we do not reistore water flow our environment will suffer and water will suffer and tourism will end
9/29/2021 16:15	Outside of state / other	marvland	No	No								

9/29/2021 16:23	Orange		No	No					A removal of the dam and restoration of the site	Dam removal would restore the ecosystem and promote tourism	Continued degradation of the area			
9/29/2021 16:35	Lee		No	No										
9/29/2021 16:35	Lake		No	Yes			1 time	Wildlife viewing	Restore all or much of the natural flow of the Ocklawaha River to the St. Johns river	Need for return of natural flow to the Ocklawaha and St Johns rivers.	Loss of historic water quantity inputs to the St Johns River	No		
9/29/2021 16:35	Putnam		No	Yes		More than 5 times	More than 5 times	Canoeing / kayaking Boating Wildlife viewing	I would like to see the dam breached so the Ocklawaha can return to its original channel. Existing facilities could remain in place, including the spillway structure. The original bridge that ties between the spillway and the Ocala National Forest could be revamped to allow passage as it is now. The boat ramps, fishing piers, bathrooms, picnic areas could be updated as needed to allow for more recreational opportunities.	Recent user survey that clearly shows that more recreation is possible with breaching the dam. Recent study by the SJRWMD by John Hendrickson which explains how nutrient loading to the St. Johns could be controlled. The 2000 Record of Decision by the USFS on the staged drawdowns over 6 years and breaching of 2000 feet of the dam on the USFS side where the original Ocklawaha River lies. Numerous past studies done and included in the FDEP 20 volume study of the restore or maintain question.	1) Florida continues to grow in population and subsequent development. The need to not only preserve what is left of natural Florida but to restore and correct past mistakes that cost us in wildlife corridors, green space, water resources, and, carbon sequestration. 2) Putnam County will continue to suffer the consequences of reduced eco-tourism opportunities we so badly need to rise above our near bottom ranking of Florida counties. 3) The St. Johns River will continue to degrade without the fresh water inflow of its largest tributary. 4) Manatees will be denied access to quiet areas for breeding and warm water refugia. The publicly owned Florida Greenway habitat will continue to be decimated by adjacent private landowners that insist on clearing, mowing and building structures while the Florida Park Service looks the other way. 5) Continued flooding in the Cypress Bayou area and north of Highway 315 in the Deep and Sweetwater creek areas drown more and more woodlands. Many of the forested areas are severely stressed but could recover if the dam was breached and water levels lowered. Many of these flooded areas cannot support flora and fauna that flourish in intermittent wetlands as in a healthy floodplain forest but are severely impacted by constant flooding.	My desired outcome would be a complete restoration that would include removal of the locks and dam but I would be satisfied with partial restoration by breaching 200 feet of the dam.	The idea of using Rodman as an alternative water supply has been researched thoroughly by SJRWMD. A study done by Grenville (Sonny) Hall in 2002 (?) specifically stated that more water could be extracted from the restored river than from Rodman. While I hope Florida can learn to live within its water means, this seems to invalidate using Rodman as a potable water resource to be piped at great expense to populated areas. That doesn't help the local economy and surely would impact the usability of boat ramps which provide the only access to the pool.
9/29/2021 16:37	Marion		No	Yes			2-5 times	Other	Restore the river. Tear down the dam.	Natural Rivers are best for the earth and wildlife.				
9/29/2021 16:40	Marion		No	Yes	2-5 times			Fishing Boating Other: BASS TOURMENTS	STAY THE SAME	STAY THE SAME	BASS FISHING IS GOING TO SUCK!!	YES LEAVE IT LIKE IT IS		
9/29/2021 16:43	Sarasota		No	No					Dismantle and remove the dam in order to restore the original rivers and allow the springs to recover.	The dam is not allowing any sort of positive outcome. The restoration of the rivers and the springs will allow a very positive outcome in terms of environmental and water reclamation for the region.	If the dam is not removed, then the consequences would be dire for both water quality and environmental impact, both of which impact the region's economic prosperity. If restoration of the rivers and springs can occur then a variety of positive effects can buoy the surrounding communities. There are large costs associated with keeping the dam functional.	No. The dam must be removed and the rivers and springs allowed to recover fully.	Thank you for allowing public input.	
9/29/2021 16:43	Manatee		No	Yes		1 time	2-5 times	Other: Hiking	Removal of the dam	Historic flow to the river downstream	Habitat impacts for estuary species	No		
9/29/2021 16:45	Orange		No	Yes	1 time	2-5 times	More than 5 times	Fishing Wildlife viewing	It should be removed to return the river to a free flowing condition.	The dam is an unnatural barrier along the river	The river will continue to be prevented from being a free flowing river	No, the dam needs to be removed		
9/29/2021 16:46	Alachua		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	I'd like to see the dam gone and the river restored.	Continued maintenance costs on a system that silts up, stops the free movement of fish.	Continued maintenance costs on an unnatural system.	restore the river while leaving much of the dam structure in place.	The time to fix a problem is never better than now.	
9/29/2021 16:47	Pasco		No	Yes			1 time	Wildlife viewing	Remove the dam	Audubon	Environmental damage	No		
9/29/2021 16:53	Pinellas		No	No					As half of a couple who travels to hike and see birds I am in favor of restoring the river and habitats to help wildlife.	Humans are destroying habitat and wildlife at an alarming rate. We must do what is available to us to restore habitat.	The continued disruption of natural habitat.	Incremental restoration		
9/29/2021 16:58	Duval		No	Yes	1 time	2-5 times	2-5 times	Wildlife viewing	Remove the Dam and allow the water to flow naturally	$4-14 million will be saved on a dam that is past its life expectancy. Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers.	water quality will continue to decline, contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	no		We are suffering a huge loss of birds and other wildlife across the entire US and need to restore natural habitats to encourage growth of endangered and critical endangered birds and wildlife
9/29/2021 17:02	Putnam		No	No					Remove the dam--let the Ocklawaha River run free again	The research done about the harm by the dam to the ecosystem and wildlife in the area	That the backed-up water would continue to degrade. more loss of indigenous flora and fauna	No		Maintaining this useless dam is also costing us as taxpayers
9/29/2021 17:04	Seminole		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Breach the dam and restore the natural flow to the Oklawaha. I will then be eager to visit several times a year for paddling. Not the one or two times in several years that I do now. I'm waiting to come up and spend time and money in the area.	Existing springs are swamped under. Habitat is degraded. Fishing tournament participants are leaving the lake through the dam lock in order to catch tournament worthy fish in the naturally flowing St Johns.	That the existing dedicate would continue. That public money will be spent defending the existing illegal operation of this dam.	I do not know of any.	This always seems to boil down to one marina and one congressperson. Could we not just buy out the marina with public funds. The cost will seem negligible 20 years from now.	
9/29/2021 17:05	Osceloa		No	Yes		2-5 times		Canoeing / kayaking	Tear it down	Return it to it's natural direction and flow and to help Manatees migratee	Further conversation deterioration	No		
9/29/2021 17:07	Columbia		No	Yes			1 time	Other: Visit to see the dam and know a bit of its history and present condition.	Remove the dam. The dam is not needed and with Florida waterways being drained and overcome with invasive species we would do well to put available finance into the restoration of the Ocklawaha River.	Restoration of the Ocklawaha will have a significant impact on the restoration of multiple springs as well as the Silver and St. Johns Rivers as more than 150 million gallons of water a day of natural flow will be added.	If the dam remains, water quality will continue to decline with increased invasive weeds, fish kills, and submerged aquatic vegetation loss.. Most immediate is impact of restoration of the Ocklawaha would be on Putnam County and Silver Springs as restoration would bring increased better health, increased visitation to the area, jobs and construction to the area. Thousands of acres of forests can be planted which will ensure good water storage and filtration for downstream communities.	NO. Improved water control and quality will provide for community safety and a more healthy life for people and wildlife alike.	Florida is blessed with extensive and unique geology (aquifers,),flora and fauna. We need to use our 21 century knowledge and technology to use and enjoy these resources while preserving them not destroying them.
9/29/2021 17:30	Orange		No	No					For it to be breached/destroyed.	The drowned springs and the welfare of the manatee population.	That the manatees would be cut off from a vital winter habitat.	Only if it includes getting rid of the dam.	Breaching the dam is necessary for helping the manatee population to flourish.	
9/29/2021 17:33	Osceloa		No	No					It needs to be removed so the environment surrounding it can go back to its normal state of being.	Removing the dam will help restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow, and anywhere from 4-14 million dollars will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is way overdue. Dam safety is an issue, and improved water quality and wildlife can't wait. We need to make this happen soon so the area can resume its normal course and balance can be restored to the whole surrounding area.	The area in question was disrupted by the construction of that dam, and the area needs to be restored so that nature can go back to its normal state. The animals and people in that area will need the flow of the water to be restored or it may soon become hard to sustain their way of life there. The damming of the Ocklawaha River and creation of the Rodman Reservoir has smothered 20 springs, blocked manatee and fish migration, and destroyed thousands of acres of floodplain forest. This needs to be rectified, and soon.
9/29/2021 17:33	Hillsborough		No	No					Keep environment in good condition	Florida is in need of better environment	Destruction of the environment			
9/29/2021 17:36	Polk		No	Yes		1 time		Canoeing / kayaking						Rodman was a mistake. It should be corrected for the sake of a NATURAL water system.
9/29/2021 17:39	Indian River		No	Yes			2-5 times	Fishing (shoreline/structure) Wildlife viewing	As a scientist I would like to see the dam removed so that the river flows freely again. We should restore fluvial and anadromous fisheries to the River, especially that of the Striped Bass. Florida has many Largemouth Bass fisheries so the loss of this artificial waterbody is not critical. However restoration of Striped Bass and American Shad fisheries would benefit both the ecology and economy of the region.	Knowledge of anadromous fisheries and 45 years of experience in studying Florida's waters	A continued decline in the existing fishery and continued costs of maintenance of this obsolete dam	There will still be a Largemouth Bass fishery once the dam is removed. I see no outcome that is desirable except full removal of that barrier.	The recovery of drowned springs along the river will attract many kayakers and canoeists to support the local economy
9/29/2021 17:41	Orange		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	
9/29/2021 17:50	Pinellas		No	Yes	1 time	1 time	1 time	Canoeing / kayaking	Remove and restore natural flow	Nature must not be attered or wildlife will suffer.	Extinction of manatee	No. The dam must be removed. it serves zero purpose.		
9/29/2021 17:51	Outside of state / other	however, I grew up in Volusia county,	No	No					I would like to see the dam breached to allow the natural flow of the river to return.	The scientifically supported positive impacts of returning the natural flow of the Ocklawaha river. These include winter warm water habits for manatees with the return of the numerous springs currently drowned by the reservoir, as well as access to the Silver River. Additionally, the restoration of historical migration routes of fish to Silver Springs will benefit the health of the entire Silver River. Furthermore, the dam is past it's life expectancy, and has never served a purpose after the cross Florida barge canal was, rightfully, abandoned. Additional money spent on repairs and upkeep is fiscally irresponsible; this fact is compounded when compared with the numerous upsides of breaching the dam.	Taxpayer money is wasted on repairs and upkeep of the dam. Loss of economic growth surrounding the natural beauty of the area. Continued natural degradation that has already gone too far. Loss of winter warm weather habitat that is vital for the struggling manatee population. The continued decline of fish populations and the overall health of the Silver River.	No, breaching the dam should have been done 50 years ago.	While I do not currently live in the area, I grew up in central Florida and spent countless hours and days along the St. John's, Ocklawaha, and Silver River. Many of my earliest and fondest memories were riding the glass bottom boats at Silver Springs, fishing with my family along the Ocklawaha, and boating, skiing and tubing in the St. John's River. Returning to the area with my daughter has been bitter-sweet seeing the decline of the natural beauty of these rivers. Breaching the dam is a good start in correcting the mistakes that have lead to the issues we now face. From an environmental, fiscal, and public awareness standpoint the time to breach the dam has never been more opportune. I pray the decision makers come to the correct conclusion as well.
9/29/2021 17:54	Clay		No	Yes			2-5 times	Fishing Boating Wildlife viewing	Keep and maintain Kirkpatrick dam!	Rodman reservoir is an excellent bass fishery and supports the local economy in the area.	Detriment to the local economy. And the destruction of rodman reservoir!	No. The damn must remain in place in good working order. To preserve the pristine ecosystem and excellent bass fishery like Rodman reservoir.		
9/29/2021 18:07	Orange		No	Yes	1 time	1 time	2-5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Wildlife viewing	I would like to see the dam removed and the river restored to a more natural state.	Dam removal will restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Dam safety, improved water quality, added economic benefits, and wildlife need the river restored to a more natural state.	
9/29/2021 18:11	Marion		No	Yes			2-5 times	Wildlife viewing	I think it would be beneficial to restore the springs and breech the dam. Manatees need access to them and a clearer path to Silver river and silver springs.	This reservoir is no long needed as the barge canal did not get completed. This passage can be utilized to help manatees have access to warmer water that is vital for them in the winter months.	Manatees will suffer as the water in the reservoir is too cold for the them especially in winter months.	I believe the right thing is to restore this area to its original condition.	Please consider restoring this area to its original state to benefit the manatees. We must protect them and their natural habit! Thank you!	
9/29/2021 18:15	Pasco		No	No										
9/29/2021 18:17	Sarasota		No	No					Restore the river					
9/29/2021 18:18	Clay		No	Yes	2-5 times			Fishing	I would like to see it left alone!!	Rodman is one to the top fisheries in the country. It supports all kinds of habitat and is a wonderful place to enjoy.	it would be very concerned that it would take many many years for this area to ever get back to a natural landscape.	Not at all!! Leave it alone!!!		I have fished Rodman and the river basin for over 50 years. It's one of the most beautiful bodies of water and is loaded with fish. The people that are pushing this most likely has never been out and enjoyed this wonderful place.
9/29/2021 18:20	Palm Beach		No	Yes					Breach the Rodman/Kirkpatrick Dam	* There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. * Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. * Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. * The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	* We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. * The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. * Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. * Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. * Hundreds of manatees loose access to essential warm water winter habitat. * Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	* MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. * SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
9/29/2021 18:25	Duval		No	No					Remove the dam and restore the river	Restoring the natural flow will benefit wildlife, residents, and visitors.	Continuation of what has been an environmental tragedy	No		
9/29/2021 18:43	Citrus		No	No					return our Waterways back to its normal flow.	Natural flow of the old Florida waters seem to be best ecology. The proposed waterway would have been good but since it is not going to be completed it only makes since to restore it.	algae and red tide destroying those waterways for lack of good water exghane	no		
9/29/2021 18:49	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Stay the way it is. Great fishery	Thousand if people visit every year.	That they mess the whole place up.	No		I've been fishing rodman for 51 years, please leave this beautiful place alone.
9/29/2021 18:53	Marion		No	No					Get rid of that dam. I've been hearing about this for 27 years. It's time!	It opens up areas for manatees and it's the way it was intended by nature.	I have no concerns because when you remove it, it will go back to how it is supposed to be.	No.		
9/29/2021 18:56	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Wildlife viewing	To be left alone, to be left a beautiful sanctuary, fishing spot	I've grown up going there. I Know.	That they mess it all up . fish kills .	No		A native Floridian, been fishing rodman forever. And I hope it stays the way it is
9/29/2021 19:00	Orange		No	Yes	1 time	2-5 times	More than 5 times	Other: Kayaking	Free flowing for Manatee & to help other natural springs' environments	It's beneficial for the environment	Lack of natural vegetation and environment	Partial opening		
9/29/2021 19:02	Marion		No	No					Take the damn down	It impedes the manatees from the springs when they need the warmer water.	The manatees are dying off we need to help them.	No.		
9/29/2021 19:05	Marion		No	Yes	More than 5 times			Fishing Canoeing / kayaking Wildlife viewing	preserve the Dam	Nature and the beautiful of the revivor that is amazing	move away from this area	none		Its unbelievable that we are still dealing with this, the most beautiful lake with all wildlife thriving and still dealing with people who don't know what nature is. Save the lake poeple or were going to lose everything
9/29/2021 19:08	Manatee		No	Yes		2-5 times		Wildlife viewing	Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.		
9/29/2021 19:30	Marion		No	Yes	1 time	2-5 times	More than 5 times	Fishing Boating Hunting Wildlife viewing	Keep it as is.	I've fished and hunted on Rodman all my life.	We would loose true sportsman's paradise.	Keep it as is.		
9/29/2021 19:36	Dade		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	More wildlife protection. Many areas are left unregulated.	A severe decline in manatee sightings I personally can attest to.	An even higher decline in overall manatee population numbers.	Yes. Maybe lowering number of water vehicles allowed. Allowing for a decrease of manatee strikes.		
9/29/2021 19:38	Outside of state / other	Alpharetta, GA	No	Yes		1 time	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Keep it. Don't cut it.	Amazing wildlife habitat. Nature flourishes.	Loss of one of the most amazing fisheries in the nation.			Save Rodman!
9/29/2021 19:41	Marion		No	Yes	1 time	1 time	2-5 times	Other	Breach the Dam	Allowing manatees access to warmer waters	Manatee deaths	No		
9/29/2021 19:51	St Johns		No	Yes		1 time		Wildlife viewing	Bring it back to. Close to former natural . Natural river.	Many years ago, I was on the river many times, boating and fishing. I lived in Gainesville, and my family loved the river as it was, in its natural state.	Too many of our natural springs, waterways and lakes have been changed and ruined in Florida. The Oklawaha River needs to have more of its original river returned.	I am sure there could and would be some negotiating.		Thank everyone who brings conversation and solutions to bringing back the River we all love.
9/29/2021 19:56	Alachua		No	Yes			1 time	Wildlife viewing	Breach the dam!	I would love for my son to be able to see any of the 20 springs that the damn has subsequently drowned.	Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	for my entire life people have been begging the state to do something. It's time to take steps to properly restore our most precious resource, fresh water.		Please! I beg you to consider breaching the dam. I love our beautiful state and we should treat its waters with respect.
9/29/2021 20:11	Baker		No	Yes	2-5 times			Fishing Boating Wildlife viewing	Leave it alone	Economic impacts from the fishing industry and the loss of the mass ecosystem that lives there	Millions of dead fish and wildlife	No		Rodman reservoir has been around long enough and has flourished with wildlife and has its own ecosystem It should be protected just the way it is
9/29/2021 20:13	Volusia		No	Yes	1 time	2-5 times	More than 5 times	Fishing Boating Wildlife viewing	that they be left as is for people to enjoy like they have since 1968	I have taken my kids and grandkids there to enjoy the fishing and abundant wildlife, from Bald Eagles to the numerous Manatees. Endangered species that need a natural habitat to survive.	If you drive up to Gainesville you will see the mud flats that was once an area like Rodman that was supposed to be restored back to what it was before. Not sure how many years ago this was done but it's still mud flats that supports no form of life either human or nature. is that what we want to do with something beautiful that was created for a specific reason and should be left well alone.	No, not really. Sometimes the behest of the minority should not be implemented against the wishes of the majority. Rodman reservoir sounds so much better than Rodman mud flats. I have taken 3 generations of my family there and hope they can take future generations of my family there .		I understand that some studies have been done on this, please keep in mind that if you pay someone enough money then they will say exactly what you want them to say, thank you.
9/29/2021 20:18	Clay		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Wildlife viewing	Repair and upgrades for future generations					
9/29/2021 20:27	Columbia		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure)	Upgrade boat ramps so you can host larger tournaments	increasing the boat ramp size and and parking areas would positively impact local communities	None	None		I have grown up fishing and enjoying the reservoir and want to make sure future generations get to use and enjoy this wonderful place
9/29/2021 20:32	Duval		No	Yes	1 time	1 time	2-5 times	Fishing Fishing (shoreline/structure) Boating	Leave it like it is.	Without those dams working we the fishing community are screwed.	That fish won't be able to thrive and live like they are supposed to.			Please do not spray this place it would easily be the best place in the world to fish if you would just keep the fec out of there.
9/29/2021 20:36	Putnam		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Canoeing / kayaking Wildlife viewing	I would like to see it better maintained. If it cannot be maintained efficiently, it needs to be taken out and the river restored and maintained as a wildlife habitat for the community.	I live and work at the Rodeheaver Boys Ranch. I don't have a position either way. I simply want the rivers (Ocklawaha / it Johns) managed in a way to decrease risk of flooding, decrease algae blooms and to increase aquatic wildlife habitats and improve recreational opportunities.	I am concerned about the poor condition of the dam and the possibility of unstable water levels in the surrounding areas.	I would support the improved maintenance of the dam and reservoir. It is not in good condition. The area surrounding the dam is poorly maintained and people are trashing it regularly. If the property can't be maintained, it needs to be eliminated if this would bring about a more beautiful and wildlife friendly area.		trust those who study the rivers and area to do what's best for the future environment.
9/29/2021 20:38	Nassau		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Canoeing / kayaking Boating Wildlife viewing	I would like to see this preserved. It is a huge freshwater resource.	Wildlife living in the lake	We lose a great resource of fresh water in north Florida.	No the damn must stay		
9/29/2021 20:40	Marion		No	Yes		More than 5 times		Fishing Boating Wildlife viewing	Keep the dam operating	With the growth of north central Florida water is and will become a greater needed resource	Loss of Rodman pool	No		
9/29/2021 20:41	Sumter		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.		
9/29/2021 20:49	Putnam		No	Yes				Fishing Wildlife viewing Other	Make the necessary repairs to the Kirkpatrick Dam and continue water quality, marine and wildlife studies.	I have fished the Rodman from the first year it was created to this date (0/28/21). It's has it's own echo system and cannot be restored to what it was 55 years ago.	Not sure.	None		
9/29/2021 20:50	Duval		No	No					I would very much like to see the Rodman/Kirkpatrick Dam be breached. Restoring the Ocklawaha River & the springs by doing this would restore critical manatee habitat (an iconic FL species! tourists LOVE them!) as well as for migratory fish - another key FL tourist draw! Anyway, the dam is past its useful life, & breaching it will save us taxpayers from $4M to $14M. This really does seem like a no-brainer decision.	Weird question, but here goes: that breaching this one old, expensive to maintain dam will restore migratory fish populations AND provide habitat for hundreds of manatees.	Wasted taxpayer money on a dam we don't need that destroys wildlife that we do (helloooo tourism!) and results in lower water quality for us humans.	No.		very much hope that the decisionmakers who read these comments make the right decision & breach this dam. Fifty years ago, we had a different understanding of how to manage the natural world in which we live for better human health & prosperity. Now, our understanding of how to achieve those goals is far better, & we know breaching this dam is the correct decision. Please make it. Thank you.
9/29/2021 20:53	St Johns		No	Yes			1 time	Fishing Canoeing / kayaking Boating Wildlife viewing	I would like it to remain as is. It is a great body of water to watch wildlife and enjoy nature.	It's the reason I come to the area.	We'd lose out on all the fishing and nature this reservoir provides.	Please keep the dam.		
9/29/2021 20:55	Putnam		No	Yes		More than 5 times		Fishing Boating	Repair existing structures, clear vegetation out of the waterway, keep locks up and running several times per day, support manatees and other wildlife (avoid herbicides that harm them)	As a frequent visitor I know how great Rodman is to the Florida outdoors lifestyle	Destruction of homes for wildlife, lack of good quality fishing	Keep Rodman open even if locks aren't able to keep running		Save rodman

9/29/2021 21:03	Outside of state / other	Michigan	No	No					Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	Even while manatees are still struggling with starvation from seagrass loss, the greatest long-term threat to these animals is the loss of warm water habitat that manatees need to survive the winter. Right now, 60% of Florida's manatees depend on power plant outfalls to keep warm and survive the winter - an unsustainable and unnatural situation.	Manatees dying from loss of habitat.	If there is another proposal that will help restore manatee habitat, I believe people would be willing to listen. I know I'm not a Florida resident, but it's crucial that manatees are protected to prevent their extinction which affects everyone. !	Thank you for your time.
9/29/2021 21:07	Hillsborough		No	No					remove the dam	restore the Ocklawaha, Silver Springs and St. Johnriver systems	water quality continues to decline	No, the rivers should be allowed to flow naturally	
9/29/2021 21:09	Duval		No	No					Breach the dam	The dam is old	Taxpayer dollars would go to waste on dam repairs	No	
9/29/2021 21:10	Outside of state / other	Memphis, Tennessee	No	No					I would love to see it breached	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. I have fallen in love with these beautiful peaceful creatures, and it's been cruel to take away their warm waters.	* Hundreds of manatees loose access to essential warm water winter habitat. * Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Very sad when this in-needed dam could be taken out to help the situation.	None. Breaching the dam is over due and needs to be done.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs.
9/29/2021 21:13	Hillsborough		No	No					Breach the Rodman/Kirkpatrick Dam.	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No. Breaching the dam is 50 years overdue.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/29/2021 21:13	Palm Beach		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	We are losing our beautiful native habitats and wildlife. We should be doing everything possible to protect it all.
9/29/2021 21:36	Marion		No	Yes				Other	Restore the oklawaha river, get rid of the dam	Water quality, environmental protection' wildlife habitat, enjoyment of nature.	Water,environment, loss of flora and fauna	No	Florida water is i danger. The springs are getting contaminated by river backflow into springs as the springs are losing flow due to overuse of water, selling it to Nestlé, ect.
9/29/2021 21:36	Clay		No	Yes	More than 5 times			Fishing Boating	Nothing. Leave it alone.	This eco system was created years ago. It is full of life, and removing the damn would be catastrophic to the eco system that has been created	Like I said, this was created, by man, years ago. This entire habitat would be a mud hole for years to come. My children's children would never see the end result that those who are claiming that it would return to its natural state.	No. Just leave it alone.	This is one of the most unique fisheries in the state of Florida, or maybe even the entire country. Full of wildlife from fish, to birds, manatee, and of course alligators. What purpose would it serve to remove the dams, and turn it into an inaccessible swamp. Right now. The animals are happy, and I think that's what it's all about.
9/29/2021 21:53	Alachua		No						Breach the Rodman/Kirkpatrick Dam.	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No. Breaching the dam is 50 years overdue.	
9/29/2021 21:59	Alachua		No	Yes	2-5 times			Wildlife viewing	Remove the dam. Let the Ocklawaha river return to how it originally was.	The dam is preventing important water flow which helps support the ecosystem and recharge dozens of springs and rivers. It negatively impacts the natural environment. The Bible says that we are supposed to be good stewards of the land, and destroying God's creations by preventing the natural flow of the river is going against his will.	The water quality is going to decline because it is preventing recharge of the river so pollutants are building up faster. It is going to lead to massive algae blooms and fish die offs which we are already experiencing due to our destruction of Florida's natural ecosystem. If we do not do the bare minimum by removing the dam, then massive catastrophe will happen in the long run. And even if you do not care about the ecosystem and are okay with it being destroyed, it is going to cost the tax payers a lot of money when the dam eventually breaks!	No. We need to get rid of the dam.	People have been manipulating Florida's natural ecosystem for decades. The cross Florida Canal was a terrible idea and should have never happened. As I mentioned previously, we are going against God's will by tearing up his environment. We are not being stewards of the land. God created Florida the way that it was meant to be, and man is going against God's will by destroying the land to make a quick buck.
9/29/2021 22:02	Brevard		No	No									
9/29/2021 22:04	Marion		No	Yes			1 time	Wildlife viewing	Remove the dam	How much of the natural flow of the river would improve the fish and other wildlife population.	Continued degradation of the river.	No.	
9/29/2021 22:11	Lee		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is more than 50 years overdue.	Florida wildlife and water quality, not to mention dam safety, are at risk if this does not happen.
9/29/2021 22:19	Outside of state / other	Chattanooga, TN	No	Yes	More than 5 times			Fishing	Nothing	Personal experience	We would lose a great place to fish	Is there something in between removing the dam and doing nothing ?	The Oklawaha River is long and beautiful, but I think there would be tremendous drop in public use to the area if Rodman Reservoir is no longer there. I'm sure I would remove it as a destination, but I am a fisherman. Maybe there would be more kayaking, but would there be an increase in public use compared to current use? I hope THAT is the question!
9/29/2021 22:19	Marion		No	Yes	1 time	2-5 times		Fishing Canoeing / kayaking Wildlife viewing	Remove the dam and restore the Oklawaha river.	Restoring the natural springs and improving water quality.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region.	No. Breaching the dam is long overdue.	
9/29/2021 22:20	Clay		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Boating Hunting Wildlife viewing	I would like to see the dam stay open for all of the recreational users to have access	I am on the water around the time 2-3 times a week bowfishing about 9 months out of the year and when Alligator season starts im normally around the dam 5-7 days/nights a week hunting. It is a very important place in the area for hunting,fishing,boat ing,wildlife watching and everything in between.	My biggest concern is the loss of one of the best recreational places in this part of the state.	No	
9/29/2021 22:29	Clay		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Hunting Wildlife viewing	I would like to see it stay opened.	We are out there several times throughout the year, hunting , fishing, watching all the wildlife in the area. It's an amazing place for all outdoor enthusiast.	My biggest concern is the lost of all the wildlife and the area to recreate.	No	
9/29/2021 22:29	Outside of state / other	Cook County Georgia	No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Maintain Ecosystem for wildlife and recreation	Friends that share the same views	Fishery , wildlife endangerment in certain species , plants , animals , eagles	Would depend	Keeping this ecosystem alive is important foe That region , Rodman is well known world-wide , there are hundreds of species that thrive in Rodman reservoir . People love fishing Rodman and have for years and years , I believe Rodman should continue to stay for our youth for generations to come .
9/29/2021 22:29	Duval		No	Yes	1 time	More than 5 times	More than 5 times	Canoeing / kayaking	Remove it, Please!	Spring restoration, and help impact manatee population, and hopefully help with migratory fish populations.		No, I see no other option. It is the only way and the right thing to do.	Please take this seriously. Put nature above petty short term human needs for once. Thx
9/29/2021 22:30	Alachua		No	Yes			1 time	Canoeing / kayaking	Take it out	The dam causes toxic algae blooms and massive fish die-offs as well as enables the spread of invasive aquatic plants. It also causes the tax payers millions of dollars. Worst of all, it causes the build up of pollution in the water by preventing flow of multiple rivers and stops the recharge of dozens of important springs.	The further destruction of Florida's water/eco system.		
9/29/2021 22:30	Alachua		No	No					To see it removed	It causes a lot of ecological damage to our waterways and costs a lot of money to maintain.	That there would be continued damage to Florida's waterways.	To see it partially removed.	
9/29/2021 22:36	Clay		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Boating Hunting Wildlife viewing	It needs the hydrilla tamed down a tad bit but other than that leave it in its natural beautiful state the ecosystem out there is amazing it's true Florida at its best	The amazing wildlife an habitat it supports for them an the lessons my kids learn out there how to respect nature at its finest	The government steady taking our rights an places we can express those American rights as outdoors men our future generations will not be able to experience or learn life lessons and how to survive		Please don't shut down Rodman most of my best memories have been made in that channel an some are best yet to come with my 8 year old son
9/29/2021 22:41	Outside of state / other		No	No									
9/29/2021 22:43	Outside of state / other		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/29/2021 22:47	Putnam		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing Other: Picnicking	Gradual removal of the dam and restoration efforts of the Ocklawaha River.	Costs associated with maintenance and upkeep, historical documents and information on why the dam was initially constructed, and it's present effect on the environment, wildlife migration, and mating habits.	Taxpayer money allocation and long term environmental effects.		
9/29/2021 22:48	Pinellas		No	No					Open allowing water to flow to springs	save Florida wildlife	The dam will stay up	N/A	
9/29/2021 22:56	Clay		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing	I would like to see it continue to operate in the same manner as it has for over five decades.	The reservoir has a well established ecosystem that would suffer greatly if the dam was removed.	Rodman would become a desolate wasteland of a beautiful fishery that is a crown jewel of Florida, which offers so much more than simply fishing	Absolutely not. Anything short of leaving the reservoir "as is" would be inexcusable and I would never support it.	The continued efforts of ill-informed citizens who do not use simple measures of checks and balances when fighting for the removal of the reservoir and dam must be stopped. The economic impact that it would have on the area is enormous. The fishermen and general nature lovers drive the economy of the adjacent towns surrounding Rodman. Why would an ecosystem of this magnitude even be in jeopardy of being destroyed? The Oklawaha river on either side of Rodman pool is as natural and beautiful as ever. The water flowing continues all the way to the St. John's as it always has.
9/29/2021 22:57	Pinellas		No	Yes			More than 5 times	Canoeing / kayaking	Please destroy the dam and let the natural waterways join again	Four to fourteen million dollars in overdue repairs to the Rodman Dam can be saved.	The dam is flooded and overflows and we owe millons of dollars to homes that are flooded. Look at the map! Please!	This dam has been there way too long. It's going to cost a lot of money to keep and it's bad for the ecosystem. Let a few fishermen mean the loss but everyone else has been moaning a long damn time.	My college buddies and I eat at the Dam Diner twice a year when we gather in the forest to remember old times. We've been coming here for over fifty years. We want our river back. Please help us.
9/29/2021 22:59	Alachua		No	No					Take down or breach the Dam.	With no other real vues for the Dam, the amount saved by not restoring the Dam in addition to the number of springs that would be restored makes this a very cost-effective move with very few cons.	Millions in taxpayer money used to restore or repair the Dam, which does not provide flood protection, power, water supply or any other public benefit. There would be greater public benefit by restoring the wildlife of the area.	No.	Breaching the Dam to restore the Ocklawaha River will be the most cost-effective springs protection project in Florida. Protecting the natural areas will help foster (sustainable) tourism to the area and allow us to grow the local economy in other more creative, less harmful ways.
9/29/2021 23:00	Duval		No	Yes	More than 5 times			Fishing Boating Hunting	Continue to stay open for recreational use by the public as well as hunting and fishing. This is a beautiful place that we as outdoorsman treasure.	There are certainly not many places like Rodman, and as outdoorsman we treasure the ability to be able to hunt and fish there. Please continue to allow us to do so	It would take a huge opportunity away from outdoorsman to hunt and fish such a beautiful place that is abundant with opportunity	No. Rodman should stay open	Rodman needs to stay open to hunting and fishing. The public deserves access to Rodman and to be able to enjoy it to the fullest.
9/29/2021 23:11	Alachua		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Take it down	I remember the abundant migratory fish and wilderness before the dam...stirped bass up river...it stopped the natural movement of wildlife. The manatees need the habitat at this critical time.	Continued deterioration of the waterway.	Ummm, no.	
9/29/2021 23:13	Sarasota		No	No					I would like to see manatees allowed to move freely between the springs.	Manatees require these consistent temperatures of the springs to survive the winter.	Manatees are doing at a record number because of lack of breeding and winter grounds. This could only get worse.	Not unless there's another way to allow the manatees to freely move.	
9/29/2021 23:57	Seminole		No	No					To bring the river water flow back to the way it is supposed to be	All changes to waterway flows eventually end up worse for our environment and ecology.	There is no concern because the outcome will be the way 'mother nature' intended it to be	No	
9/30/2021 0:03	Broward		No	Yes		1 time		Wildlife viewing	I would like to see the damn breached.	The return of habitat to wildlife.	The certain environmental blight.	Unfortunately no	
9/30/2021 0:28	Marion		No	No					Tear it down!just back what was once so. for the animals that can't migrate and for the waste of my hard-earned tax money for upkeep.futhermore the place is a dump people have no respect garbage everywhere, restore what was once pristine.	I am a lifelong resident of areas around dam it's a shame that we as humans cannot learn from our mistakes!	That one of the most beautiful places on earth would be forever lost to mans stupidity	No	
9/30/2021 0:29	Flagler		No	Yes				Canoeing / kayaking Other: When I was young (some thirty years ago) I did some canoeing in the area	Restore the wetlands and Ocklawaha to the way the Creator created them.	If we've learned anything over the years it's that natural systems function better than anything we can engineer. Florida needs to protects its water and water recharge areas. The boys in their motorboats have plenty of other places to play in.	Desalination plants as our main source of drinking water.	Boardwalks for those who feel a need to know it's there.	This was a mistake from the get go. A few good old boys wanted a playground and taxpayers, the vast majority of whom got no benefit from it whatsoever, paid for it. The one's who want the dam are the ones who whine about socialism and taxes and big government. Well, now is their chance to undo a boondoggle for good.
9/30/2021 0:32	Dade		No	No					It would be nice to preserve fishing and recreation, but the restoration of river flows takes precedence.	If the dam is about to fail, why not help it along in a controlled manner?	Continued environmental damage.	No, restoration of as much of Florida as possible is the best outcome for people and nature as well. As a native of Florida, I remember well how it was even half a century ago, and it was a fine place to live. Now it's sad and awful.	
9/30/2021 0:34	Alachua		No	No		More than 5 times			Leave it the way it is	Wildlife			
9/30/2021 0:43	Outside of state / other	UK	No	Yes			2-5 times	Wildlife viewing	For a regular holiday visitor to the area, coming predominantly for the wildlife, breaching the Dam would enhance the area and undoubtedly improve the habitat for manatee and other aquatic wildlife.	Improvement to the habitat of wildlife as stated by several groups	Continued erosion of natural habitats, endangering particularly manatee by bringing them into an ever more populated area used by motorised leisure participants	No	The area relies heavily on tourism and particularly on those coming for the wildlife. This is an opportunity to not only support wildlife, but also to further attract visitors to the area, boosting the local economy at a time when it has been hit by global events and the lack of international visitors.
9/30/2021 1:01	Alachua		No	No					Remove the dam	Toxic algae blooms are caused by the dam, and too much money has gone into maintaining the decrepit dam	Continue to spend money on a useless piece of infrastructure that causes negative environmental impact	No	
9/30/2021 1:15	Orange		No	Yes			More than 5 times	Wildlife viewing Other: Artist sketching	Remove the dam	Increase in water quality, return of wildlife and environmental viability. Funding opportunities for area responsible development	Increase in negative environmental impact on area and surrounding communities	No. Fix what's broken before it's too late.	Thank you for your time.
9/30/2021 2:00	Leon		No	Yes				Other: I don't use the reservoir, but what difference does it make.	Removal of the dam and restoration of the Ocklawaha River	Restoring the river and flood plane and benefiting the St. Johns River is more important than maintaining the reservoir that should never have happened.	That the St. Johns WMD pays more attention to local politics than its responsibilities to protect and enhance the district's water and natural resources.	No.	This survey appears to be biased towards users of the reservoir. The general public would probably have varying opinions....I was onsite with Governor Martinez at the celebration of the deauthorization of the barge canal and assumed that the canal's destruction would be rectified. Will send an email.
9/30/2021 2:02	Alachua		No	No					I would like to see it removed.	The existence of the dam benefits few and causes continuous damage to the local environment as well as contributing to toxic algae bloom, an increasingly disturbing problem in the Florida. As the purpose of the dam will never see completion, it serves no purpose other than to drain tax dollars.	Continued growth of toxic algae blooms which in turn causes a steadily declining fish population. Lack of water choking out springs and contributing to the pollution of surrounding waterways. Wasted tax dollars on dam maintenance.	I'm not sure how one could partially remove a dam, but if some arcane method is devised to do so, I suppose I could potentially support it if it resulted in greater water flow to the area.	None.
9/30/2021 2:27	Pasco		No	No					Breach the Rodman/Kirkpatrick Dam	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/30/2021 3:36	Alachua		No	No					remove the dam	The dam has blocked the path of fish and manatees at a time when manatees are dying at an alarming rate.	More manatees would die, water quality would worsen, and money is wasted on repairing a dam that doesn't anything to help the majority of people in Florida	no	The dam isn't contributing flood protection, power, water supply or any other broad public benefit so we should remove it to help the environment, which is a public good. Also, unblocking the 20 natural springs buried by the reservoir would increase tourism because everyone loves springs.
9/30/2021 4:27	Taylor		No	No									
9/30/2021 4:48	Marion		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait. The dam was built to support the barge canal. The dam was found to be an environmental disaster and keeping it is also.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 60% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.
9/30/2021 5:08	Manatee		No	No					Remove the dam and restore the natural flow of the rivers.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy	If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	For far too long humans have manipulated Earth's natural systems, mostly with grave results. This is just another example. This can be easily remedied.
9/30/2021 5:09	Duval		No	Yes		1 time	2-5 times	Wildlife viewing	Breach the dam before disaster strikes	FEMA, Silver Springs biodiversity scientists		Don't replace the dam	
9/30/2021 5:19	Marion		No	Yes		More than 5 times		Canoeing / kayaking Boating Hunting	Take it down	Saving the springs, wildlife,	Springs will dry up, wildlife will die, air pollution	No	
9/30/2021 5:32	Pinellas		No	Yes	1 time	2-5 times	More than 5 times	Wildlife viewing	Please return the water to the springs to help increase the populations of manatees & migratory fish. These animals are intrinsic to the health of our ecosystems.		Manatee populations are in serious decline and we must do everything we can to save them.		
9/30/2021 5:52	Putnam		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing	Keep it. Two wrongs don't make a right. Strong eco system in place, and I personally know guides who rely on the reservoir.	Reservoir. Proven, time and time again. The eco system is in tact and thriving. Every drawdown, people in the area experience problems with their wells. The basin holds emergency use water for Putnam County. We have more important things to productively spend taxpayer dollars on in Putnam County than DE shrutting the dam. The reservoir is a major source of income for one of the poorest counties in FL. We not only have guide services, but hotels, restaurants and tackle shops that rely on the fishing industry as well as gas stations and marine exchanges. makes no economical or ecological sense. On any given trip you see manatees, Eagles, ospreys, alligators, snakes along with ducks all freshwater species of fishes. The place is thriving and healthy. You will displace more wildlife the removal than people realize. The reservoir is also a proven filter for the river.	Displacement of wildlife, major loss of water retainage for West Putnam and major loss of income for many business.	NO. Keep the dam and reservoir as is.	
9/30/2021 5:55	Brevard		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No.	
9/30/2021 5:56	Brevard		No	Yes	1 time	2-5 times	More than 5 times	Wildlife viewing	Breached	Let the river flow freely and restore itself all the way downstream	the river is dying and will continue to degrade		

9/30/2021 6:09	Alachua		No	Yes	1 time	2-5 times	More than 5 times	Wildlife viewing	Restore the free flowing river.	The profound economic and environmental costs of maintaining a damn increase over time. I would love to be able to see manatees in Silver Springs in my lifetime.	Damn failure. That structure is getting old	There is no "half a damn" scenario. Wmd does a pretty good job with drawdowns, etc. but that is not a free flowing river.	Really, it's time. Just remove the damn.
9/30/2021 6:14	Alachua		No	Yes			1 time	Wildlife viewing	Remove it	Would like to see the flooded springs under the reservoir	I could not see the area in its natural state.	Like what?!	Free the Ocklawaha River. There are plenty of places to fish. Springs are unique.
9/30/2021 6:25	St Johns		No	Yes			2-5 times	Canoeing / Kayaking Wildlife viewing	Remove the dam so that the water can flow freely. It will be a different kind of attraction, but there will still be fishing, boating, and wildlife and hopefully the natural balance will improve.	I have been following this debate for years, and I understand the concerns people have about changes to the river. However, one the dame is gone and the river restored, there will be new possibilities for all the current uses. Our watershed needs to be as natural as possible in order to keep the level of pollutants down.	Continuing rise in the level of pollutants in the watershed; continued difficulties for plants, animals, fish, and invertebrates, adjustments for those who rely on the dam for their livelihood (which could be bridged with some grants or loans to give people time to adjust their businesses).	We need a free-flowing river.	Thank you for asking what we think.
9/30/2021 6:30	Alachua		No	Yes	1 time	2-5 times	More than 5 times	Other	Remove them and restore the flow of the Ocklawaha River	Structural and environmental studies	Collapse of the dam long past it's life expectancy or frivolous continued maintenance of unneeded infrastructure	Phased removal	
9/30/2021 6:31	Marion		No	Yes			2-5 times	Fishing	Protected/cared for	Resource protection	Health of the ecosystem	Improve the health of the water	
9/30/2021 6:31	Alachua		No	Yes			1 time	Canoeing / Kayaking Wildlife viewing	Remove the dam.	Restoring the natural flow of the river.		Greatly increasing the flow of water on the Oklawaha river.	
9/30/2021 6:37	Alachua		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / Kayaking Boating Wildlife viewing Other	I would like to see the dam either removed or altered for a free flowing river.	The manatees, aquatic animals and springs are perishing. The water used to be clean and clear. I had to report a dead manatee.	The ocklawaha river suffers further damage.	Open the dam so wildlife can pass.	
9/30/2021 6:39	Alachua		No	Yes					Remove the dam				
9/30/2021 6:42	Marion		No	No					I'd like to see the Ocklawaha River restored to better ensure a healthier water environment. The dam should be removed, at least partially. I understand this will positively impact the St. Johns River estuary from Welaka to Palatka to Jacksonville.	The rising salinity in parts of the St. Johns River.	The river's rising salinity will lead to greater environmental damage along the St. Johns River and estuary.	While I believe removing the dam entirely is the best method and solution, I would be OK if part of the dam were removed to accomplish an improved environment along the St. Johns and its estuary.	Thanks for asking for public input.
9/30/2021 6:52	Putnam		Yes	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Continue to make necessary repairs and maintenance. Invest in the facilities to improve community use.	Effects to the environment and ecosystem if removed would be detrimental on both sides of the dam.	Loss of ecosystem, environmental damage, loss of community activities, loss of tourism.	I don't think any other scenario would benefit the surrounding environments.	
9/30/2021 6:53	St Johns		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing	Keep the Dam and Reservoir. It is world famous.	The reservoir has created a unique environment for wildlife. Jacksonville government should not have the right to influence another county's right to make its own decision on what is or is not important. The river keepers studies have been slanted toward their bias.	We would lose this unique environment. I fear those making the most noise don't even use the reservoir. This would make a poor country even poorer at the expense of a greedy few.	No	This reservoir is visited by people from around the country I suspect they would not return.
9/30/2021 6:57	Marion		No	Yes			1 time		Remove Kirkpatrick Dam and restore the Ocklawaha river to its natural state.	The aging dam will need continuing maintenance to avoid failing and that records from Florida's Department of Environmental Protection showed it was 'subject to catastrophic failure' that could affect hundreds of properties.	Failure of the structure, especially during a severe weather event (or caused by such) could cause untold hardship on residential and commercial properties, whereas a staged dam removal would mitigate such an occurrence.	A partial removal of the dam	
9/30/2021 7:00	Alachua		No	Yes			More than 5 times	Canoeing / Kayaking Wildlife viewing	Restore the springs and connection between the Ocklawaha, St John's and Silver River so that fish and manatee can return as they once were. Stop spending tax payers money on maintaining the dam.	Water quality and manatee and fish populations are declining in the rivers and we are spending millions of taxpayer money to support a dam that is unnecessary and harmful to the historic natural environment.	Continued environmental degradation. Loss of historic ecosystem.	Not really.	Until recently I was a resident of Putnam county and I regularly visited the Ocklawaha, Silver, and St John's river to kayak and just enjoy nature. During the drawdowns I was amazed at the changes in the Ocklawaha and visited the lost springs. I live in Gainesville now but still visit the rivers, but I am increasingly concerned about the way the rivers are declining in health. I just don't understand why the water district retains the Rodman Dam at such a high cost to taxpayers and just for special fishing. I feel like tourist dollars would increase if the area is restored to it's natural state.
9/30/2021 7:01	Duval		No	Yes			2-5 times	Boating Wildlife viewing	We would like the dam to be removed and the river returned to a free flowing, natural state.	The continued upkeep of the dam and waterway is not a long term solution. The free water connection to the St. Johns River will benefit the St. Johns River and local environment.	The health of the St. Johns River.	None that I have heard or thought were viable and practical.	
9/30/2021 7:02	Marion		No	Yes		1 time		Fishing Boating Wildlife viewing	I think the dam is no longer needed in order that the Ocklawaha River downstream becomes environmentally friendly again.	Environmental protection of the river. Central Florida has many other fishing areas both accessible from shore and boats. Fishermen and women do not need Rodman reservoir and the canal.	The dam falls and destroys all in its wake of escaping water.	Don't know of one	
9/30/2021 7:03	Hernando		No	Yes			1 time	Canoeing / Kayaking	Remove the dam and restore the Ocklawaha River.	Removing the dam help will restore 50 springs as well as the Ocklawaha and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	Comments submitted on behalf of Hernando Audubon Society, Inc. by Tom St Clair, PhD, Conservation Chair. Our mission statement is that "Hernando Audubon works to promote an awareness and appreciation of nature, to preserve and protect natural ecosystems, and to encourage responsible environmental stewardship.
9/30/2021 7:05	Duval		No	Yes			2-5 times	Canoeing / Kayaking Wildlife viewing	Remove the dam and restore the river	it's necessary to periodically drain and clean the artificial reservoir. The river would thrive in its natural condition	Expense to maintain the dam and reservoir.	No	
9/30/2021 7:07	Duval		No	No					I'd like to see both removed and the river allowed to return to it's original footprint.	A free-flowing Ocklawaha would supply fresh water that's needed to offset rising salinity in parts of the St. Johns nearer to where it meets the ocean at Mayport.	Salinity levels will continue to rise as water from the river continues to be diverted for other uses. This increase will affect the wildlife and plants that really on the river. Ex: Kill off grasses that rely on freshwater. Reduction in grasses will directly affect Manatee populations and fishes that use them as nurseries.	Partial breach, but full removal is preferred.	NA
9/30/2021 7:12	Alachua		No	No					Remove the dam. Restore the river. The dam is old and not useful. Its removal would restore many fresh water springs and several rivers. These natural waters are the lifeblood of Florida, upon which we ALL depend.		Leaving the dam dooms us to the loss of more than natural resources and wildlife habitat. Florida's economy depends upon tourism, which requires clean and sustainable ecosystems. Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more. Leaving the dam dooms many fresh water Springs and several key rivers. Florida's economy depends upon eco tourism. Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. I've been opposed to this dam as long as I've known about it. Since I grew up in Florida, this is my whole life. Removing it is long overdue.	Fresh water and the life it supports are priceless. That means that no amount of money is worth losing them. That means we must act to protect LIFE.
9/30/2021 7:13	Alachua		No	Yes			2-5 times	Wildlife viewing		Destroy it	It's too costly to keep up and provides no benefit.	We miss the best opportunity to do this. State and federal funds are available; public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe	No. This is long overdue	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
9/30/2021 7:14	Sumter		No	Yes		1 time	2-5 times	Fishing Other: Beautiful to see various wildlife and no homes or traffic		Nothing unless it needs repairs	Florida is losing areas like Rodman and the dam to development. It is such a peaceful area. I go to watch Eagles flying and have fished it a few times. I was amazed to see so many manatees in the reservoir.	I have read a few articles about wanting to remove the dam and let the natural flow return. It boggles my mind that this is being proposed, especially by people who say they are naturalist. I've never been to a place that has so many different species of birds and various other wildlife. I have fished the lake multiple times since 1985 and the fishing is great. I also believe if they change anything there will be the potential for development.	Not really	I also don't believe we should spend tax payer dollars to change something we spent tax dollars on to build. It's a beautiful nature sanctuary, leave it alone.
9/30/2021 7:14	Volusia		No	Yes			1 time	Canoeing / Kayaking Boating Wildlife viewing	Restored to its original flow	To help wild life	Slow continual deteriation of wildlife	no	
9/30/2021 7:19	Marion		No	Yes	1 time			Fishing Fishing (shoreline/structure) Canoeing / Kayaking Boating Wildlife viewing	Please leave it be.	I frequently go and watch the manatees and bald eagles.	Rodman played as one of the key factors to getting the bald eagle off the endangered species list.	You can't meet in the middle with nature, so no.	Is this really what the state needs to worry about and use valuable time on when we have a bigger problem statewide with spraying of our waterways.
9/30/2021 7:19	Sarasota		No	Yes			2-5 times	Canoeing / Kayaking	I would like to see it removed immediately.	The removing of the dam would restore 50 natural springs in the area and restore the natural flow of the Ocklawaha, St. Johns and Silver Rivers. The natural water flow would remove invasive weeds, blue-green algae and fish kills, therefore improving the overall water quality and wildlife habitat. This would also save millions of dollars that it will cost to maintain a dam that is well past it's life expectancy.	The creation of dead rivers where no aquatic life or wildlife can survive.	No	
9/30/2021 7:24	Alachua		No	No					Demolish it and restore River flow	Ed Johns river flow salinity	Cost of maintaining dam and environmental effects on river habitat	Probably not	
9/30/2021 7:26	Duval		No	Yes				Boating	Tear it down	Bass will be restored in the Ocklawaha River if the dam is torn down. A UNF student in approximately 2015 did a study that showed bass levels in the Ocklawaha were much higher before the dam than after. This would appease the fishers - show them that they get better fishing if the dam comes down, which has the added benefit of restoring the Ocklawaha and helping the health of the Silver River	Continued declining health of the river system	Not sure	Stop letting businesses take water out of the Silver River. It's killing the springs.
9/30/2021 7:26	Hernando		No	Yes			1 time		Remove the dam and restore the Ockawaha River.	The dam shouldn't have been put there in the first place. Now is the time to correct a past mistake.	continued stupidity.	no	
9/30/2021 7:32	Flagler		No	Yes				Other: Used to go look at it when I lived in Palatka	Remove the dam and restore the Ocklawaha River (or leave it to Mother Nature to restore itself).	Knowing that an important part of Florida ecosystem is restored	The failure to correct a big mistake and the continued waste of money to maintain the artificial structure.	Sorry. I cannot think of any.	It's about time.
9/30/2021 7:34	Alachua		No	Yes			1 time	Other: I do not use the facilities in their present state.	I would like to see the dam removed and the reservoir drained/returned to its natural state existing prior to dam placement.	Ecological restoration.	That, once again, big money trumps environmental justice.	No.	Please remove the dam. I've been reading about this for decades. It's time to take action. Thank you.
9/30/2021 7:35	St Johns		No	Yes			1 time	Fishing Boating Wildlife viewing	Remove the Dam and restore the natural flow, water access and fish and wildlife habitat as much as possible. Allow striped bass, and sturgeon to spawn again.	Much environmental harm was and is caused by the dam. There will be much more recreational opportunities if it is removed and habitats and functions restored. It is much more expensive to maintain a dam than to restore the naturally functioning ecosystem.	Wasting taxpayer money to further harm the ecosystem, fisheries, threatened species and recreational opportunities.	Fish and manatees must be able to migrate.	High speed bass boats may have reduced use in the former reservoir area, but there is ample open areas on the St. John's River and lakes for them. It will open up much more area and higher quality resources for slower boats, canoes, and kayaks as well as shoreline fishing and perhaps hunting.
9/30/2021 7:38	Marion		No	Yes			More than 5 times	Fishing Boating Wildlife viewing	Don't mess with it. one of the best fishing lakes around	The fishing	The Fishing	no	
9/30/2021 7:39	Orange		No	No					Breach the Rodman Reservoir/ Kirkpatrick dam.	The dams have artificially raised water levels have drowned TWENTY natural springs that would be restored with the breach of Kirkpatrick dam, making the breach the single most effective spring restoration project in Florida.	Due to the drowned springs, hundreds of manatees lose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. There is no purpose for the dam's presence; it only causes harm.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years.
9/30/2021 7:41	St Johns		No	Yes			1 time	Other: I drove there one day with my family just to see the reservoir	Remove the dam and allow the river to return to its original intent	The reservoir was created under false pretenses	Ultimately, it will be what it will be, however, i simply feel there is more potential good from the river flowing unimpeded (spring re-charge, etc.)		
9/30/2021 7:42	Duval		No	Yes			2-5 times	Wildlife viewing	Take it down.	Restoring the natural flow of the Ocklawaha River and the original ecosystem.	The continued decline of the entire St. John's River system.	No.	Supporters of the dam are concerned about the loss of a "fisherman's paradise"? Really? There are plenty of places to fish in that area.
9/30/2021 7:45	Nassau		No	Yes			More than 5 times	Fishing Boating Wildlife viewing	Would love to be able to enjoy the Reservior and my family continue to visit amd enjoy for years to come.	The preservation of the wildlife related to Rodman is vital for Florida.	Loss of wildlife and loss of family owned businesses that rely on the Reservior for their livelihood.	N/A	
9/30/2021 7:59	Alachua		No	Yes			2-5 times	Wildlife viewing	Take the dam down and return the area to its natural state.	The importance of the natural state and the damage by man made changes.	The health of the environment	Increased flow from the dam	
9/30/2021 8:02	Alachua		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Canoeing / Kayaking	It is time to remove the damn.	Blocks natural flow of river. Requires too much money, time and effort to maintain for the benefit of a few.	The politically driven non-sense will continue	no	
9/30/2021 8:04	Alachua		No	Yes			2-5 times	Canoeing / Kayaking Other: Only during the drawdown, otherwise only kayak on the river	Removed	The history of the canal that was clearly not economically feasible as a transportation channel but was pursued long beyond those determinations. The dam is a relic of that misguided project and as such should be removed and the river restored.	That North Florida will permanently lose a unique natural environmental treasue.	no	
9/30/2021 8:04	Alachua		No	No					Removal of the dam	River restoration	Algae blooms	More water drained every year	
9/30/2021 8:09	Alachua		No	Yes			1 time		The dam should be removed and river restored.	Removing the dam will help restore a natural ecosystem that will benefit native plants and animals. It will also create a new natural recreation area that will draw visitors. Keeping the dam is expensive.	We may miss a rare opportunity to restore and preserve a natural Florida resource.	No	
9/30/2021 8:11	Duval		No	Yes		2-5 times		Fishing	Maintain & improve			No	
9/30/2021 8:12	Outside of state / other	pennsylvania	No	Yes			2-5 times	Fishing	stay open for fishing	wildlife	loss of wildlife	no	
9/30/2021 8:13	Alachua		No	Yes		1 time	More than 5 times	Canoeing / Kayaking Boating Wildlife viewing	Removed to allow the free flow of the river and allowing the SJWMD to focus on other more important issues.	Allow the natural system to operate. We are diverting funds from critical needs to support an attempt to change the natural flow of this river.	Missed opportunities for water protection and land conservation. Continued adverse effects of this ill conceived water project.	Not certain.	Restoring natural flow can still provide jobs.
9/30/2021 8:13	Duval		No	Yes		2-5 times		Fishing	left as it is now			no	
9/30/2021 8:14	Marion		No	Yes			2-5 times	Wildlife viewing Other: Hiking	The dam should be removed and the Ocklawaha River restored to its original channel.	Degradation of native fish species and other aquatic life in Silver Springs and Ocklawaha River.	Continued degradation of Silver Springs and Ocklawaha River.	No.	Removal of the dam and the restoration of the Ocklawaha River is long overdue. This should be done as soon as possible.
9/30/2021 8:14	Alachua		No	Yes			2-5 times	Fishing Canoeing / Kayaking	Remove the dam and restore the natural flow. This will increase tourism, and collateral income for businesses.	Where are most of the large fish caught in tournaments? St. John's River. Not the lake.	Continued stagnation on environment and economy.	No	
9/30/2021 8:18	Alachua		No	Yes		1 time		Wildlife viewing	I would like to see it breached to let the river flow free.	This will greatly enhance the habitat for wildlife.	A huge missed opportunity to restore an important ecosystem.	Not really - unless the dam is breached, I don't see how the ecosystem would be restored.	
9/30/2021 8:21	Alachua		No	Yes			1 time	Canoeing / Kayaking Boating Wildlife viewing	I would like to see the Rodman Reservoir and Kirkpatrick Dam removed to restore the St. Johns River to its original place. I would like to see the springs hidden by these unnecessary structures restored.	The ongoing cost of maintaining these 2 structures is a burden to the US and Florida taxpayers should be of concern to all of us. I support the restoration of the St. Johns River	Funds available now to remove the Dam may not be available in the future. Florida has a chance now to reverse the damage done in the past.	I do not know of any options other than full restoration that I would support.	Maintaining a flawed fishing hole for a few people is a misuse of funds and a misguided assault on the environment.
9/30/2021 8:27	Alachua		No	No					I would like to see the Dam removed and the Ocklawaha restored to its natural state.	I have seen many pictures from family members that went up the River before the Dam was built. My generation has been deprived of the natural beauty and grandeur of this marvelous river and it would be a dream to enjoy the river as generations prior have done.	Taxpayer dollars are being wasted away to preserve a dam and reservoir that has no purpose whatsoever. The only reason cited for keeping the dam is recreational, yet the recreational opportunities of a natural Ocklawaha are much more numerous and will bring much more economic activity to the area.	No	Please, for the love of our beautiful state, remove the dam and reservoir and restore the river. The dam was built for a purpose that never was realized. It has stood for way too long. Let's get on the right side of history and remove this monstrosity and stop wasting money on a pointless dam. Removing the dam is a win-win, we save taxpayer money, while restoring the river to its natural state, for all Floridians and visitors to enjoy.
9/30/2021 8:28	Alachua		No	Yes			2-5 times		Removal	It is not necessary	Undesirable outcome for nature	No	
9/30/2021 8:30	Clay		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Boating	Save Rodman for future generations!	It is a GIFT to Wildlife.	The upper communities would Suffer flooding Just recently heavy rains flooding Probably saved by the Dam controlling Outflow. PLUS it is an water reserve For fresh water for surrounding Communities.	None.	It would take 150 years to restore The River to original .
9/30/2021 8:30	Leon		No	No					Breach the dam! Doing so will restore the many springs and be beneficial to fish, migratory birds, and manatees. The dam is expensive to maintain and harmful to the environment.	The research done by The Florida Srings Council and by the American Rivers Foundation.	I am most concerned about the quality of Florida's springs.	No. Breaching the dam is 50 years overdue. Maintaining the dam is a huge waste of money and detrimental in many ways.	Restoring the natural flow of the river is both economically and environmentally the right thing to do.
9/30/2021 8:32	Marion		No	No					restore the river; take down the dam	restoration of the river flow, eco-systems and wildlife, lost springs; opportunities for eco-tourism, better fishing with greater numbers and varieties of fish; canoeing and kayaking	further deterioration of all of the above mentioned concerns	Absolutely not.	Restore and save the river for future generations. Please. Please. Please
9/30/2021 8:36	Volusia		No	No					Remove it as it serves no purpose and does harm to the environment.	studies from Audubon.	The dam needs repair and is a hazard.	NO	
9/30/2021 8:37	Duval		No	No					Remove the dam entirely. Return the reservoir to its original natural river state.	The benefit to the local fishing economy does not justify the cost of maintaining the dam and the environmental harm caused by the dam.	Tax dollars wasted on repairs, and continued environmental damage	No	
9/30/2021 8:37	Duval		No	Yes		1 time	2-5 times	Fishing Boating	Leave it alone. Do whatever maintenance is needed.	N A	No concerns other than the loss of fishing	No. If the dam is removed and reservoir is drained...what's to support?	
9/30/2021 8:37	Alachua		No	Yes			2-5 times	Other: hiked by the dam	remove the dam	It was an ill conceived project from the start. The time is long past for the government to right this wrong.	It would perpetuate the mistake, and require maintaining a structure that should never have been built.	Well, it's an either / or question. I can't conceive of anything in the way of a compromise that makes any sense. The answer is no.	This structure has been kept in place for purely political reasons. It's time the SJWMD finally uses reasoned decision making and overcomes the politics.
9/30/2021 8:43	Duval		No	No					Tear it down	No need for fishermen to use it when there are other places to fish	Man trumphs over nature	No.	
9/30/2021 8:44	Duval		No	Yes	1 time		2-5 times	Boating Other	Keep it as it is. It is its own thriving ecosystem.	I am an armature environmentalist. I have been up and down the Ocklawaha River many times. The damn helps maintain a flow during drought. It is a water shed among fears of water shortages. The lake is thriving with native vegetation and animal life.	A tremendous amount of money spent, and the environmental damage caused by restoration with little benefit.	Not sure	The road to Hell is paved with good intentions. Leave well enough alone.
9/30/2021 8:47	St Johns		No	Yes			2-5 times	Fishing Boating Wildlife viewing	Remove, or partially remove, the dam to restore the Ocklawaha to its natural flow.	The legislative Canal Lands Advisory Committee final report (1992); U.S. Forest Service Environmental Impact Statement for Occupancy and Use of National Forest Lands and Ocklawaha River Restoration (2001); SJRWMD Environmental Studies Concerning Four Alternatives for Rodman Dam (1994); Fla. Attorney General Opinion 96-10	Continued deterioration of the river	no	
9/30/2021 8:48	Alachua		No	No					Have it removed and let the river flow	environmental sustainability & safety for people (damn failure vs regular river swelling)	environmental, animal, & human costs		
9/30/2021 8:50	Alachua		No	No					Remove it to restore natural flow to the Ocklawaha River.	Years of studies showing deteriorating water quality in the Ocklawaha and tributaries	More water quality issues affecting fish, wildlife, tourism	Not really	
9/30/2021 8:54	Orange		No	Yes			1 time	Wildlife viewing	Remove the dam	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait	Wildlife and nature areas are being destroyed all over the world. We have to start bringing our nature areas back to how they were intended to be. Please help us bring Florida back.
9/30/2021 8:54	Sarasota		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. John's Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. John's If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	Florida wildlife is like no other on earth! We need to protect our environment for future generations to enjoy!
9/30/2021 8:55	Alachua		No	Yes			1 time	Canoeing / Kayaking Boating Wildlife viewing	Breach the dam for restoration! The dam is harming wildlife and water quality.	The cost to our natural resources is the cost to the people as well: $57 million in potential flood damages to property owners. $4-$14 million in dam repairs across the future.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized	No - our state is DECADES past breaching this dam. We NEED this.	Thank you so much for this survey.
9/30/2021 8:58	Suwannee		No	Yes			2-5 times	Canoeing / Kayaking Wildlife viewing	Removal of the dam and restoration of the Ocklawaha's natural flow	News articles from various groups and publications	Continued environmental degradation on the Ocklawaha and Silver Springs	No	
9/30/2021 8:59	Duval		No	Yes			2-5 times	Canoeing / Kayaking Wildlife viewing	Remove the dam. Keep the water flowing.	Study of springs. We have too much development in FL that is already running the land.	Manatees need more feeding grounds. We do not promote the healthiest FL that we can be.	No.	It's already frightening that they want us to recycle used waste water. Why isn't the state promoting and protecting all the free flowing water in our state?
9/30/2021 9:00	Alachua		No	Yes	1 time	2-5 times	More than 5 times	Wildlife viewing	Remove the dam. Restore the habitat	Three fact that the dam is pointless and has negative effects	Environmental impacts	Not in this situation.	
9/30/2021 9:03	Alachua		No	Yes		2-5 times	2-5 times	Fishing Fishing (shoreline/structure)	Hydro electricity.	opinion.	It's too late to restore the oklawaha. i believe there will be more damage if the dam is removed.	I suppose.	

9/30/2021 9:07	Marion		No	Yes	1 time	2-5 times	More than 5 times	Fishing (shoreline/structure) Canoeing / kayaking Boating Hunting Wildlife viewing	Return the area to its natural state, by removing the dam.	The natural migration of fish has been disrupted by the dam and the dam is subject to a catastrophic failure.	Failure of the dam would be very costly to all concerned, such as property owners, taxpayers, and our government.	Breaching the barrier of the reservoir to allow the natural flow and leave the dam in place for the historical record. Thus showing how difficult it is to make changes to restore our environment.	When this project was shut down, it left a scar which shows to this day. It should have been removed before the shutdown, as it is incomplete. We owe and own it to return it to its natural state.
9/30/2021 9:09	Alachua		No	No					I would like the dam to be removed.	I personally know an author who wrote book about the Cross Florida canal project	Environmental impact (toxic algae blooms, buildup of pollution, etc) and cost to tax payers.	No.	
9/30/2021 9:13	St Johns		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	I would like to see the dam removed and the Ocklawaha restored.	The environmental benefits of restoring the river. The dam was part of the misguided and failed barge canal and should have been removed when that project was scrapped.	Failure of the dam and continued artificial manipulation of the river's course.		
9/30/2021 9:15	Marion		No	No					Take it down and allow the Oklawaha to return to as near its prior state as possible	Ocala has been my home for 78 years and I have seen the degradation of water flows, springs, and fish numbers and diversity in Silver Springs, Silver Run, and the Oklawaha River. The fishing in the reservoir would be more than made up for by improved fishing in the river.	Large amounts of money wasted to repair a dam that shouldn't have been built in the first place.	No.	I believe in the principle of majority rule, and I think polls have shown that the majority of people want the dam removed. Political donations by a few fishermen should not overrule that.
9/30/2021 9:17	Alachua		No	No					The dam being breached with restoration of critical wildlife habitat, River systems, and springs.	Water quality, restoration of the river systems, habitat restoration, protection of vulnerable wildlife including the manatee. End of the economic waste of dam repairs	Continued demise of the springs and water quality, loss of critical wildlife corridor and species	Absolutely not.	Now is the time and opportunity when funds are available and before the environmental loss is irreversible. If looked at purely from an economic standpoint, restoration of the rivers, springs and wildlife corridors will bring in tourism dollars to the state with visits to the springs, fishing opportunities and wildlife viewing. We have lost so much of our state to development and with an ever increasing population water quality and quality of life are paramount.
9/30/2021 9:18	Alachua		No	Yes				Fishing	Take down the dam. Restore river to its natural state			No	
9/30/2021 9:18	Alachua		No	Yes			1 time	Wildlife viewing	Remove the dam and restore the Ocklawaha River	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	Florida's fragile environment should be respected and allowed to combat the encroachment of development.
9/30/2021 9:19	Alachua		No	No					Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
9/30/2021 9:20	Pinellas		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	Breach the dam	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	Springs would not be restored. Water quality and manatee habitat would continue to decline. Expenses would increase. Poor quality would have negative effects on tourism and economy.	Not really	
9/30/2021 9:22	Clay		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking	remove the damn	restore the natural wild life	Waste money for a damn that was NEVER needed	no remove the not needed damn don't waste money	
9/30/2021 9:23	Indian River		No	No					Remove the dam and restore the Ocklawaha River!	Removing that dam would help restore 50 springs! as well and the Ocklawaha Silver and St Johns rivers - thats huge! The Lower Ocklawah and St Johns Rivers will receive over 150 million gals a day! To restore the natural flow. Plus, 4.14 million dollars will be saved to not try to keep up the repairs on an old dam.	Putnam County and Silver Springs will lose out on 47mil dollars in economic benefits in a 10yr time. Restoration is needed!! It will bring more visitation, construction and hospitality jobs to that area. If you dont remove the dam, water quality will continue to decline, and contribute to that scourge blue green algae, killing fish and more vegetation loss. Plus, if you dont remove the dam, Florida will lose out on thousands of acres of forests that could have been restored - which creates water storage, filtration, flood protection! More wildlife habitat and more	Sorry, NO! Breaching the dam is at least 50 years overdue - that dam is old and needs to come down and let the waters flow again.	Please, please do this, its best for florida and our waters -- with thanks
9/30/2021 9:24	Alachua		No	No						Removal of the Kirkpatrick!	The Barrier that the dam provides that hinders the Natural or Wildlife and Green Development!	Lost and Decline of the Naural Area!	At this time ,given the loss of the Natural Environment over the years,I do not see a compromise that would be effective!	ACTION is NEEDED NOW!!!!.....Thank You
9/30/2021 9:25	Alachua		No	Yes		1 time	1 time	Boating Wildlife viewing	Free the river	A free flow of the river would restore the important eco system - provide flood protection, and offset the salinity of the St John river near Jacksonville.	The sluggish pollution will continue. The eco system will not be restored.		
9/30/2021 9:26	Alachua		No	No					Breach the dam and restore the normal water flow	Restoration of the river system for water quality, restoration of critical habitat for many species including those that are threatened or endangered and restoration the springs. In summary, the environment and water quality which ultimately translates into quality of life and safety for the human population.	Continued loss of water quality, our spring system, wildlife and quality of life.	No	For those that view economics more important than environment it needs to be understood that in the long run the economic costs of not breaching the dam will prove far higher with repairs, risk of collapse and property damage, loss of tourism dollars from springs loss, problems with water quality which will require economic and technological solutions and ultimately loss of quality of life.
9/30/2021 9:26	Baker		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Boating	Keep it. The reservoir isn't hurting anything. Tearing it down would cause more harm than good.	The reservoir brings a great deal of tourism dollars to Putnam county as it is a nationally known renowned fishing destination.	Loss of income to an already struggling county. If it was removed an entire thriving ecosystem would be ruined.	No	
9/30/2021 9:29	Columbia		No	Yes			1 time	Wildlife viewing	Return the river to it's natural course. Nature recovers quickly historically and the resumption of flow will salvage the region ecologically.	After 50+ years as a Mainer and a teacher of environmental sciences I've personally serene the benefits of dam removal. See the record for other states.	The usual sacrifice of nature's imperitives to Florida's emphasis on tourism and recreational sports. There has been systematic commercialization of the very things that create Florida's value naturally.	Only the pace of implementation to reduce shock to the environment leading to removal of the dam.	
9/30/2021 9:29	Alachua		No	No					Remove it	Environmental information	Rising salinity levels, lack f a free flowing river.	Not really.	The dam should never have been built. Free the Oklawaha!
9/30/2021 9:33	Marion		No	Yes	1 time	2-5 times	2-5 times	Boating Wildlife viewing Other	,that the Ocklawaha be restored and the dam removed	Impact on the Environment, recreation	Cost of maintenance , polution	Permanent Drawdown	
9/30/2021 9:34	Putnam		No	Yes		2-5 times		Fishing					
9/30/2021 9:35	Hillsborough		No	No					Remove the Dam and t's time to restore the Ocklawaha River for Florida's wildlife. Time and science is showing how Dams provide more harm than good and is not helping with Climate change nor wildlife or environment. Do the right thing and remove the dam.	Reading science magazines, listening to biologists and various scholars. Also various environmental organizations and proof such as red tide, obscene increase in manatees death.	We would be constricting the reasources for Florida's great river waterways, which would decrease the natural habitat of wildlife, including our Manatees and hundreds of other species. We need to stop interfering with Nature and let it run its course. We need to figure out better ways than Dams. See what happened in Utah, Nevada and Calif. when there are dams? They eventually become empty pits.	Not really? What is the purpose of this comment section. Either we remove or leave it. This decision impacts all of Florida. Let's do what is best for the majority and not minority. Thanks for reading and your time and consideration in this critical decision.	
9/30/2021 9:41	Alachua		No	Yes		1 time		Canoeing / kayaking Wildlife viewing	Remove the dam and restore the Ocklawaha to it's orginal condition.	The scientific studies that show the harm done by the dam.	The continued damage to the overall ecosystem from the St. John's down to the end of the Ocklawaha.	No.	
9/30/2021 9:41	Alachua		No	No					Remove it	The massive ecological harm it causes	Continued and worsened ecological damage	No	It's a remnant of a failed project, long overdue for removal
9/30/2021 9:43	Alachua		No	Yes			1 time	Other: Observe dam	Remove dam to restore river to natural state	Dam blocks manatee and fish migration. Covers natural springs. Reduces flow to silver springs silver river	Dam sudden failure. Loss of wildlife habitat	More frequent release of river beyond dam. Permanent lowering of dam so flow levels increased. Open dams during winter months for manatee migrations to warmer springs	Put vote on state agenda for a voter mandate
9/30/2021 9:44	Nassau		No	Yes		1 time	2-5 times	Wildlife viewing	restore a free flowing Ocklawaha	Floodplain destroyed, springs covered up, natural habitat lost, freshwater flow to St. Johns River decreased, saltwater inflow to St. Johns increased	decrease in water quality, recreational opportunities lost, natural habitat lost, new business opportunities lost	No	Stop wasting taxpayer money on a dam that should be removed
9/30/2021 9:47	Alachua		No	Yes			More than 5 times	Canoeing / kayaking Wildlife viewing	Get rid of it	Science	Algae bloom	Nope	
9/30/2021 9:48	Marion		No	No					Remove the dam. Restoration cost for something never used for its intended purpose would be foolish. Ecosystems would be restored to a more natural status. Fishing and leisure activities would be different but they wouldn't likely end.	Costs financial and environmental	Continued degradation of the Ocklawaha River basin and its ecosystems.	Why keep any part of the dam?	
9/30/2021 9:48	Putnam		No	Yes			1 time		Remove the barrier to let the Ocklawaha be rejoined and flow freely to the St. Johns River. This opens many of the now flooded springs in the River. Without the barrier boaters will be free to boat the entire Ocklawaha, not just to the dam. Buckman Lock is ineffective and needs to go as well. By removing the barrier more fish/manatees etc will have open range. Fishing will improve. Fishermen do not fish in the pool anyway. They can be found in the river channel around the pool. I live in Welaka. My husband was practically raised on the Oklawaha. He saw the first explosion to start this boondoggle and hopes that in his lifetime he will see the river free once again. Welaka has a lot of boat traffic. Many would be happy if they could boat further than the dam. If this controversary had been resolved even 10 years ago, nature would have reclaimed the land and new growth would be well in progress. This has been a political football and never should have been. It is an environmental disaster and those with the education and knowledge should have been listened to. This has NOT been a financial boom for Putnam County. Can you say buying a little bait here and there is a good impact? I think NOT. With the barrier gone, there will be many places for boaters/fishers/families to camp and fish along the banks. At this time it is all flooded. The people on the left have been trying for these many decades to get those in favor of the dam to be outnumbered. I hope by this survey, and voices of the many in favor of removal, will be heard. PLEASE HEAR US!	Environmental Impact on the Ocklawaha and St. Johns Rivers. Improving the health of both.	Continuation of the destruction of the environment. Continued promotion of the falacy that the pool has such great fishing. Would you take your boat into an area full of submerged trees???	I DO NOT SUPPORT KEEPING RODMAN. THERE IS NO OTHER OPTION - KEEP OR BREACH AND WE ALL HOPE BREACH WILL BE THE DECISION. GROW SOME CONJONES AND DO THE RIGHT THING.	Those of us who remember the river before the dam would like the honor of celebrating the destruction of this barrier and hopefully be still living to enjoy the new growth and life of this beautiful and historical Ocklawaha. Is all this worth a few redneck fishermen?
9/30/2021 9:52	Alachua		No	Yes		1 time		Canoeing / kayaking Wildlife viewing	Have it be removed				
9/30/2021 9:52	Putnam		No	Yes			More than 5 times	Boating	Get rid of the dam and let nature do the rest!	The fact that so many springs are covered.	The manatees being displaced.	No	
9/30/2021 9:54	Marion		No	Yes		2-5 times		Wildlife viewing	Return the Oklawaha River to it's natural state. Fishing might be good for a few, but the dam is not a natural state. We lose so much of natural Florida to growth and development, let's do the right thing here. Restore the river to it's natural state	64 years as a native Floridian.	Money ill spent, and permanent loss of a treasured ecosystem.	No	
9/30/2021 9:54	Duval		No	No					removed 100%	news articles	further pollution of the St. Johns River	no	the use for which it was built was never completed and the natural flow of water needs and should have been restored many years ago.
9/30/2021 9:56	Duval		No	No					Remove the Dam.				
9/30/2021 9:56	Marion		No	Yes		1 time		Other: just to see how it's backing up the oklawaha					
9/30/2021 9:56	Putnam		No	Yes			1 time		I'd like to see the river restored to its original state, or a reasonable facsimile thereof.	The numerous conservationist op-eds published to date.	The sitting-in of the St. Johns Rivr shoraline (notably on Wilson's Cove) once the dredging of the Lower St. Johns River is completed.	No.	
9/30/2021 9:59	Duval		No	No						I want it to be breached	Catastrophic flooding among properties costing millions of private and government dollars and an ongoing expensive project.	A partial breaching.	
9/30/2021 10:00	Marion		No	Yes			2-5 times	Other: just to see how it's backing up the oklawaha		I want to support the St Johns River and it's tributaries' health. It does not serve any purpose since the construction was stopped.	Silver Springs may be beyond reclamation	some method of allowing fish & mammals to traverse the area without impediment	
9/30/2021 10:03	Clay		No	Yes			2-5 times	Wildlife viewing	remove it	Silver Springs - growing up I used to see Manatees & schools of mullet that kept the springs clean. Now the silver river is cloudy & the water grass is covered in silt			
9/30/2021 10:03	Duval		No	Yes		1 time	2-5 times	Canoeing / kayaking	I would like it removed to restore the natural environment	That this was a man made structure that is not part of the natural environment	That we continue to influence the natural flow of water in our state.	We need to allow the natural flow of water to limit down stream flooding such as happened in hurricane Irma.	
9/30/2021 10:04	Orange		No	Yes		1 time		Fishing Fishing (shoreline/structure) Canoeing / kayaking Wildlife viewing Other	Breach the dam - it's important for the health of the river. Remove the dam and naturalize the area.	The inability of species to migrate due to the dams presence.	Lack of resiliency in Florida to climate change.	No. No	Please remove this outdated dam and restore this beautiful area.
9/30/2021 10:06	Outside of state / other	NY	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam	15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 11,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/30/2021 10:06	Manatee		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 310-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 Million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds support.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 310-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway	
9/30/2021 10:07	Outside of state / other	Wichita KS	No	Yes			More than 5 times	Fishing	I would like to see it stay, we vacation there and bass fish we have seen more manitees there than any other body of water we've fished in Florida its a beautiful place and one of the finest bass fisheries in the state.	Support of privately owned business that depend on the fishery to support their families.	That future generation will not get to enjoy one of Florida's hidden treasures and impacts on mantees.	I'd have to see a proposal	None
9/30/2021 10:07	Citrus		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	It should be removed.	The Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored, in wildlife habitat restored.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No	This restoration will improve water quality and flow; support coastal resiliency; and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha.
9/30/2021 10:08	Hillsborough		No	Yes			1 time	Canoeing / kayaking	Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	People move to Florida for its abundance of wildlife and natural elements. Please help to restore this.
9/30/2021 10:10	Orange		No	Yes		1 time	2-5 times	Canoeing / kayaking Wildlife viewing	I would like to see the dam removed.	After kayaking the Ocklawaha and Silver rivers on numerous occasions, I've come to realize the Kirkpatrick Dam has negatively impacted the quality of those rivers and the springs that support them.	The continued degradation of those rivers and springs.	No	
9/30/2021 10:10	Alachua		No	Yes		1 time	2-5 times	Wildlife viewing	remove the dam and allow the Ocklawaha to flow	The condition of the river and its springs that existed prior to the dam's construction	wasting millions of dollars spent to maintain this unnatural ecosystem	no	
9/30/2021 10:11	Alachua		No	Yes		2-5 times		Wildlife viewing	I'd like it to be removed.	Removing the dam would allow manatees access to a vital part of their ecosystem, potentially aiding in their recovery. It would also allow over a dozen springs to be restored, providing vital habitats for native species and aiding in ecosystem recovery.	The dam is overdue for repairs, which would be a waste of money that could go to other projects. Also, reservoirs like this one cause nitrogen build-up, which in turn creates deadly and toxic algae blooms, further destroying our already precarious native ecosystems.	No. The dam is a relic of a failed project.	Climate change is already impacting our beautiful state in terrible ways; removing the dam is just one small thing we can do to help our wildlife and flora remain resilient in the face of other changes. Especially for manatees, who rely on that access to warm springs in the winter. The dam does not provide power, it does not stop flooding, it does not improve water quality, and it will require taxpayer funding to fix. Removing it will impact sportsfishing and boating in the short term, but not removing it would impact both in the longterm due to fish die-off and algae blooms anyway. Funds are available now to make this needed change - it's never been easier to do the right thing.
9/30/2021 10:15	Alachua		No	No					Remove it	The dam is a remnant from the failed Cross-Florida canal project. It causes toxic algae blooms and massive fish die-offs	Toxic algae blooms and massive fish die-offs	No	
9/30/2021 10:16	Martin		No	No					They need to be breached to allow the river to run free, recreating the natural ecology of the area, allowing the springs to regenerate, opening pathways for the animals and plants in the area to move to new locations.	The history of the area as a floodplain forest	Would want to know who is resisting the repair of the natural area. A renewed Oklawaha will help the St John's and other waterways to resist salt water intrusion as sea levels rise.	No	The dam has no future except as a drain on Florida's pocketbook!
9/30/2021 10:18	Alachua		No	No					Breaching the Dam.	The Dam is causing ongoing harm to local ecosystems and economies -- reduced fish populations in Silver Springs, nearby drowned springs, reduced manatee habitat.	Ongoing ecological and economic harm in nearby areas, including reduced job growth and tourism, lack of habitat for fish and manatees, and millions funneled into repair of a Dam that does nothing for flood protection, power generation, water supply, or public benefit.	The Dam really needs to be breached.	Breaching the Kirkpatrick Dam benefits both the public and the environment. Manatees are facing brutal die-offs without access to the warm water habitats the reservoir has destroyed. Springs provide great benefit to the people and ecology of this state, but 20 are drowned in the reservoir. Breaching the dam makes a better Florida for every living thing in the state.

9/30/2021 10:20	Bradford		No	Yes	1 time	2-5 times	More than 5 times	Boating Wildlife viewing	Remove dam structure and let the Ocklawaha run free again.	Reports by SJRWMD staff	We will lose the springs along the River and the fish won't be able to thrive	No. It's been too long. Take the dam structure down	
9/30/2021 10:21	Alachua		No	No					take down the damn, let the natural water flow return	The dam causes toxic algae blooms and massive fish die-offs as well as enables the spread of invasive aquatic plants	The dam causes toxic algae blooms and massive fish die-offs as well as enables the spread of invasive aquatic plants	Open the damn at times.	
9/30/2021 10:24	Bradford		No	Yes		1 time	2-5 times		The dam should be breached!	There are 20 drowned springs flooded by the reservoir, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs and river restoration project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs…remember "catfish football" in Silver Springs? Where are the catfish now?	The entire river ecosystem will continue to degrade; counties more dollars will be wasted repairing the unsafe dam, and water quality declines further fueling invasive weed blockages that require constant application of poisonous herbicides. Hundreds of manatees would lose the potential access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	No, the Ocklawaha and St Johns rivers need to be allowed to heal	I vividly remember a fishing trip on the Ocklawaha as a child, before the dam. It was a magical place and experience, as we went up many spring runs and into little coves catching a variety of fish; bass, panfish, catfish. To keep this dam in place for the benefit of bass fisherman only, destroying a unique and priceless river ecosystem for countless wildlife species and humans, is totally unsustainable and hugely unfair.
9/30/2021 10:26	St Johns		No	Yes		2-5 times	More than 5 times	Canoeing / kayaking Boating Wildlife viewing	Restore the river get rid of dam	The wetlands improve water quality and many springs have been inundated by the dam. Also stagnant water is not great for biodiversity	The deteriorating water quality of the river. Tax payer money going to waste on a dam that doesn't even produce electricity	Increasing drawdowns of reservoir	
9/30/2021 10:32	Alachua		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing Other: Camping at the campground	The dam needs to be removed and the river restored.	The purpose of the reservoir is obsolete, and its permit is expired. It has no regulatory legitimacy. The water resource in the reservoir is wasted due to evaporation and suppression of spring outflow. The dam blocks migration of imperiled species like manatees, and important economic gamefish like striped bass. The reservoir is expensive to maintain. The dam is over 50 years old and due for major maintenance and/or replacement, it could be unsafe. Who (what agency) is going to pay the $300 million to make it sustainable and safe?	Impacts to fish and wildlife, and increasing risk of dam failure.	NO	
9/30/2021 10:35	Alachua		No	No					Remove the dam completely and, budget allowing, do as much remediation work as possible to expedite recovery of the Ocklawaha River. Manage and maintain and expand public access.	What I've read mainly in the newspaper since moving to Florida in 1986	Continued degradation of the Ocklawaha River basin.	Anything that restores the natural River flow.	Thanks for the survey.
9/30/2021 10:35	Pinellas		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier.	Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	
9/30/2021 10:36	Duval		No	Yes			2-5 times	Boating Wildlife viewing	Restore the rivers natural flow and destroy the dam	Health of the river which is an asset to us all	Politics at its worst will continue the decline of the St. John's water basin	If we can start by restoring 75% of the natural flow that would be a good start	
9/30/2021 10:36	Marion		No	No					Removed	improve the environment	Continue to harm the local eco system	No	
9/30/2021 10:37	Palm Beach		No	Yes			1 time	Canoeing / kayaking	Remove the Dam(m), and restore the Oklawaha River	Everything written about water quality, climate change, and wildlife habitat that I have read	Restore natural water course. Nature first, Big Ag last.	End corporate campaign contributions.	The earth was a perfect system until man started f-n it up.
9/30/2021 10:37	Duval		No	Yes			1 time	Canoeing / kayaking Wildlife viewing Other: Driving over the dam after paddling the Ocklawaha during the last drawdown	The dam breached, and the original channel restored as much as possible	it's objectively the right thing to do	More money would be wasted on a deadbeat dam and the Ocklawaha will continue to suffer from it	The FDE partial restoration plan	
9/30/2021 10:37	Putnam		No	Yes		More than 5 times		Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating	I am torn in 1000 ways on this item. I live in Putnam County and have always been a big fan of the Ocklawaha River, south of the dam. I spent many days as a youngster with my Dad and friends fishing this area and have many cherished moments on this section of waterway. The lower Ocklawaha River has provided for many fish fries. I have even canoed the south portion and camped along the way. Many memories. To this day, I still take my john boat to the lower Ocklawaha to spend time with friends or just get away from the craziness of society. Recently, a Jacksonville couple with their two kids saw me at the dam boat ramp and asked me if I would take them on a tour of the lower Ocklawaha River. I obliged. We all loaded up and cruised the River in my little john boat as I explained little details about the beautiful River along the way. We saw otters, freshwater turtles, gar, and gators as well. My time spent on Lake Ocklawaha is not as extensive but I have fished and camped in the campground. The area around the dam and lake are beautiful and provide many outlets for people to pursue the outdoors. You can even sit on the south side of Lake Ocklawaha in the evening and see a beautiful sunset shimmer to the west of the lake. I can see both sides of the argument, but for some reason my heart wants to release the caged up Ocklawaha and let her run free. The one environmental change I envision is the migration of some fish species such as stripped bass making their migration back to the springs. In addition, this may allow for more opportunities for our beautiful "mermaids" to forage and have more warm water access in the winter as I know currently the manatee population is in dire trouble. As I mentioned, my heart is torn. The diversity of wildlife, environmental beauty, and recreational opportunities are awesome on both sides of the dam.	See previous response.	The biggest concern I have is nothing being done due to lack of future funds and/or indecisiveness in which both sides of the dam become good for nothing sass pools of inactivity, devoid of wildlife, being environmentally decimated, with all recreational opportunities removed. To maintain Lake Ocklawaha or release the Ocklawaha River is going to require allocation of adequate funds way beyond our generation. To this point, if the area around Lake Ocklawaha is to be devoid of funds which help to maintain its beauty as a resource, then I am completely for releasing the Ocklawaha.	At this time, I have not seen any scenario's presented which are hybrids. I only envision the area the way it is, or the Ocklawaha River released.	Tough decision. Not one factor overrides another. Concerns include environmental, water quality, business, economic, recreation, funding, fisheries, the dam, the lock, surrounding communities, etc.
9/30/2021 10:37	Alachua		Yes	Yes	1 time	More than 5 times	More than 5 times	Boating Other: Access to the Florida Trail and Ocala NF	Tear it Down! All rivers WILD AND FREE! The NIMBY attitude of people that live around the reservoir are not reason enough. People can fish in the river instead of the lake.	The dam serves no purpose at this point except to promote boating and fishing opportunities. Those same opportunities will exist on a free flowing river. The land will adapt to becoming a river once again.	A dam that isn't needed serves only to disrupt the natural water cycle in the ecosystem. We spend millions on ecological restoration of forests, springs, prairies, everglades, so why are we not restoring the Okawaha to it's true path?	No. It's either a lake or a river, there is no middle ground.	I recognize that Putnam County is poor and the the reservoir brings in money. I also know how much money the sportsmen's lobby has. When the dam comes down there should be funds made available to keep recreation in Putnam County thriving.
9/30/2021 10:39	Hernando		No	No					Unlock the flow of water to the other rivers.	Environment Destruction.	We need to provide for our wildlife and native vegetation	No	
9/30/2021 10:40	Putnam		No	Yes	1 time	1 time	2-5 times	Fishing	I think it has outlived it's usefullness and should be taken down. Although it will take years to heal and reclaim itself, the Ocklawaha needs to be reverted back to it's orginal flow.	Studies by the University of Florida.	I do not have an answer for that, other than it will cost hundreds of thousands of dollars to either repair or replace the Dam.	Yes, I am open to other scienctifically based decisions.	Good luck!!!
9/30/2021 10:42	Alachua		No	Yes			1 time	Wildlife viewing	I would like to see it removed and the area reclaimed for ecological conservation.	Our waterways are a vital part of Florida's ecosystem, and restoring proper flow and environmental conditions are more important than ever.	Long term damage to the area's ecosystem		
9/30/2021 10:44	Alachua		No	Yes		1 time		Wildlife viewing	Remove the dam and rehabilitate the Ocklawaha	Diminished ecological state of the watershed	Continuing degradation of water quality and flora/fauna diversity	No	The longer we wait the more damage that is done and the more costly to repair.
9/30/2021 10:47	Duval		No	Yes			1 time	Other: Route in an atv through the Ocala National park to the Rodman Damn					
9/30/2021 10:47	Lake		No	No					Remove the dam and restore the Ocklawaha River. I'd love for it to remain the glorious preserve that it is. Our FL ecosystem is more important than ever with the thousands of people moving here every year! We NEED to preserve SAFE corridors and wildlife areas as well as KEEP FLORIDA WILD! Maybe adding a biking trail is the only addition I'd like to see.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait. I mean, its GREAT that FL repurposed One of the nation's largest incomplete public works projects and transformed it into the diverse Cross Florida Greenway, spanning Central Florida from the Gulf of Mexico to the St. Johns River. We NEED areas like this to help preserve FLORIDA FRESH and REAL FLORIDA. Let's not New Jersey/York our state!!	Yes, I am one of the MANY transplants from the tri-state area. Why? Because we NEEDED Florida and LOVE how real and fresh it is. Unfortunately, we've watched the growth and building of communities in wetlands and other areas that should be preserved. I've never seen a deer in Florida - and that's a GOOD thing!! Why? Because it means that FL still has wildlife areas for them to live in! IN the tri-state area they are everywhere, because they have nowhere else to live, let's keep it that way. Demolish the dam and give MORE wildlife a place to live and our FL ecosystem a fighting chance.
9/30/2021 10:48	Marion		No	Yes			1 time	Wildlife viewing	Breach the dam so that water quality, wildlife and the economy are improved.	$5,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	Water quality continues to decline, killing native fish, while exotics increase. Manatees lose opportunity to access warm water, and thousands of acres of forest are not restored.	No, this should have been done decades ago. Breach the dam!!	
9/30/2021 10:52	Citrus		No	Yes		2-5 times		Wildlife viewing	Demolished	it's completely defunct and damaging to the Ocklawaha River, lost springs, detrimental to wildlife.	That the dam will fail and endanger people and property	Not really.	
9/30/2021 10:56	Broward		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam. Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. $5,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Greetings, I am a farmer, entrepreneur and Floridian asking you to please restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/30/2021 10:56	Lee		No	No					Restoration of natural water flow throughout Florida is necessary to support wildlife and maintain access to springs. Not only with this project but throughout Florida. We need to have a comprehensive conservation plan to provide for the population, both human and animal in light of decreasing access to fresh water, planetary warming, and rising sea levels.	Science	Decreased access to fresh water resources and invasion of fresh water springs by seawater	Only a fully comprehensive plan made by dedicated people with future projections based in science will actually work. Plans will need to be updated, tweaked and evaluated as new information becomes available	Too many departments looking out for themselves and poof communication between/among them; this is what we currently have. This needs to be streamlined before appropriate progress can be made.
9/30/2021 10:56	Putnam		No	Yes		1 time	1 time	Wildlife viewing Other	Letting the River flow to its natural State.	Looking back at old photos of the area I feel it would ensure more wildlife habitat if the lands are Preserved around the flow of the River and not allowed to develop.	People trespassing onto more State owned property!	Compromise should be a factor in any decesion of this magnitude! When nature is charge and man!	Good luck pleases the masses!
9/30/2021 10:57	Lee		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue and a great decision for all Floridians. Dam safety, improved water quality, and wildlife can't wait.	
9/30/2021 10:58	Clay		No	Yes		More than 5 times		Fishing Canoeing / kayaking Wildlife viewing Other: Outdoor activities, biking, swimming	Remove it, restore the 20 springs which are now submerged so local Floridians can enjoy our natural springs. If these were made into parks, potentially great revenue source.	I regularly visit Florida springs with my family, more springs close to home would be a great thing for my family and the local economy. Rodman dam provides none of that.	Increased pollution, green algea due to stagnet water. Not being able to enjoy Florida natural spring close to my home.	Leave the dam open at all times.	Florida springs are a state treasure and should be a protected resource for Floridians and state visitors to enjoy for years to come. Don't think the dam is providing that, plus it is past it life span and a danger to Floridians.
9/30/2021 11:07	Alachua		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	Returned to its natural state	Writings of Marjorie Carr	Unnecessary monies spent on upkeep and the natural progression of wildlife through the river not happening	Don't know what that would be	it's just time to make the change!!
9/30/2021 11:08	St Lucie		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps to restore 50 springs as well as the Ocklawaha, Silver and St. John's Rivers with 150+ million gallons a day of restored natural water flow.	If the dam remains: 1) water quality will continue to decline. 2) invasive weeds will flourish. 3) the dam will contribute to blue-green algae outbreaks. 4) thousands of acres of forest will not be restored. 5) the region will lose out on millions of dollars of economic benefit from environmental restoration.	No.	
9/30/2021 11:09	Alachua		No	Yes			1 time	Fishing Fishing (shoreline/structure) Wildlife viewing	Removal of the dam.	Pollution	Pollution	No.	
9/30/2021 11:12	Lee		No	Yes		2-5 times		Wildlife viewing Other: Photography & interested in purchasing property	Would love to see the dam removed & allow the water to move freely.	Connection of waterways is vital for wildlife. Manatees and many others, If you repair the dam & constrict the natural water it will cost taxpayers much $$$$$. By letting it flow we will encourage FT visitors which creates jobs.	Ecosystem damage	No	
9/30/2021 11:12	Orange		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	Please stop investing millions of taxpayer dollars in repairing and continuing to operate a dam with no purpose and restore these ecosystems. This will benefit all Floridians and I appreciate your consideration.
9/30/2021 11:14	Alachua		No	No					Eliminate it !	It was never meant to be permanent...it was another bad idea from years ago...completely messed up the natural flow of water that feeds the springs..and estuaries...it's important as a life long resident of fla. to correct the mistakes of the past. let the Ocklawaha rive back to its natural course and just like the need to unleash the other rivers in fla. from ill advised damping and altering the course..stupid things like the cross channel bad idea..damn up the flows to create ag land for wealthy cattle and ag producers..that so Damaged the Everglades..let's correct these bad decisions..	Environmental catastrophe...stop messing with the natural flow of water..stop allowing companies like Nestle to rob us of our heritage and drain the springs and rivers	No!it's not a relevant damn never was..but the damage it cause is..	Grow a spine .quit selling out fla. To special interest and protect our waters and natural ebb and flow..thanks..everyone I know has been opposed the Rodman dam and resiver as long as I have been a Floridian which is well over 60 years..
9/30/2021 11:15	Orange		No	Yes			1 time	Wildlife viewing Other: To gain first hand information	Remove the dam to allow the water to flow as it was prior to its construction or as close to that as possible. So much of Florida's natural environment has been destroyed and can never be repaired. This is an opportunity to actually fix something and bring it back to a more natural state!	Scientific research that has been ongoing for many years plus common sense. Things that seemed reasonable years ago have turned out to be harmful to the larger ecology.	Water is essential for all life not just a few. Restoring the springs and rivers allow a greater chance of survival and this is an important step to show that Florida recognizes the importance of working towards the future not living in the past.		
9/30/2021 11:15	Alachua		No	Yes	1 time	1 time	More than 5 times	Fishing Fishing (shoreline/structure) Other: Birding, great place to take pictures of ospreys and bald eagles	Keep it up. The reservoir is its own (granted, man-made) ecosystem that has been around longer than most of us. Taking it down will disrupt this ecosystem.	The diversity of wildlife that you can find on the reservoir, especially compared to other stretches of the Oklawaha river.	Lack of access to a nice fishing place. One you don't need a boat for.		
9/30/2021 11:15	Marion		Yes	Yes	1 time		1 time	Fishing (shoreline/structure) Other: Camping	The dam needs to be removed. This would restore the natural flow of the Ocklawaha, Silver, and St Johns rivers. To restore the natural migration of not only fish, but also the manatees that are upriver from the dam. To help the health of the rivers. Help control the invasive species of fish (Blue Tilapia and Armor Catfish) that are increasing in population by an alarming rate in the Silver River.	Research by Robert Knight	The DEDINNI) health of the Silver River's ecosystem.	NO	Please return the rivers to their natural flow for the larger good for everyone and future generations, not the few!! The Cross Florida Barge Canal was a HUGE mistake back then. Please fix the problem now, before it gets worse.
9/30/2021 11:17	Alachua		Yes	Yes	More than 5 times			Fishing Boating Wildlife viewing	Keep it leave it alone	Leave it for the local fisherman that depend on it	Would not be a lake to fish anymore	No	
9/30/2021 11:17	Alachua		No	No					Would like to see it breached.	Florida's natural waterways are extremely important and I think the more we tamper with them, the more we're hurting our beautiful state's precious environment and nature.	That's it's overall not a good idea to keep the River dammed.	Not sure	
9/30/2021 11:18	Outside of state / other	ut American voting in Florida (Pinella	No	No					*Remove the dam and restore the Ocklawaha River.	*Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	*If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	*No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	My comments are inspired by the Audubon Society of Florida.
9/30/2021 11:20	Alachua		No	Yes		1 time			Remove the dam	It is an environmental hazard			
9/30/2021 11:24	Hillsborough		Yes	Yes	1 time	2-5 times	More than 5 times	Fishing Boating Wildlife viewing Other: Own property on Rodman	Retain them	The surrounding counties need the water that is retained by the reservoir.	The state does not have the funds to do a proper restoration so the property around Rodman would turn into a mosquito infested mud hole hole with little to no access.	Yes, if the dam and the reservoir are destroyed then the state should return the property that was taken from property owners to create the reservoir.	ok I've been going to this area since I was a young boy and remember the beautiful creeks and rivers on this land before the barge canal was made. It was a huge mistake to do what was done to the land to create the barge canal, but Nature has adapted and it would be an even bigger mistake to destroy this area again by removing the damn!
9/30/2021 11:28	Duval		No	Yes			1 time	Canoeing / kayaking Wildlife viewing Other: I wanted to see the reservoir and dam which I've read so much about. I've canoed the St Mary's River and the Suwanee.	I'd like to see the reservoir drawn down and the dam removed entirely.	The dam has drowned a vast area of the ecology & natural environment and disrupted the natural flow of streams and rivers. Restoration of the Ocklawaha is critical to the survival of manatees - which are increasingly endangered.	I would be concerned that we cannot act responsibly to correct the damage caused by the foolish cross-florida barge canal boondoggle. It would suggest that SJRMD is not capable of demonstrating environmental responsibility.	No; we need to act now while federal support is available and public interest is high. We've been waiting 50 years.	It's hard to believe the foot-dragging accompanying this issue. A restored Ocklawaha River would be a boon to many and a healing measure for our natural environment. Let's not miss this opportunity.
9/30/2021 11:29	Pinellas		No	Yes			1 time	Canoeing / kayaking	The land returned to its natural state	The project was cancelled long ago. so what is the point of still having the dam? Native plants and animals can use that land since we don't need that dam.	I mean it's not the end of the world, but a huge missed opportunity.	Learning why we would keep the dam and how native plants and animals are some how being helped or at least not harmed by keeping the dam.	Thanks for putting this together!
9/30/2021 11:31	Alachua		No	No					Drained and torn down.	Let the rivers and streams flow naturally again, if not use the dam and reservoir for power.	Nature is being blocked.	Do not know.	
9/30/2021 11:40	Duval		No	Yes			1 time	Wildlife viewing	Remove the dam	It would restore the river.		Remove part of the dam	
9/30/2021 11:44	Alachua		No	Yes			1 time		I would like to see it removed and the river restored.	Decades of research showing it was a failed and short-sighted project to begin with, backed by special interest groups with little scientific/ecological understanding of the impacts.	Continued decline of habitat and loss of water quality/wildlife.	NO	
9/30/2021 11:45	Duval		No	Yes			1 time	Canoeing / kayaking	Remove the dam	I love the springs that are flooded by the reservoir	No springs	Open the dam instead of removing it	
9/30/2021 11:46	Clay		No	Yes			1 time	Wildlife viewing	Remove the dam and restore the Ocklawaha River.	Wild Florida is quickly disappearing. As a Florida citizen and voter, I am urging that we protect, preserve and support the wild habitat that remains for future generations. Let the water flow to support Silver Springs and other natural areas.	Habitat will not be restored, water quality will continue to decline, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is years overdue. Take down the dam.	
9/30/2021 11:48	Alachua		No	Yes	1 time	1 time	2-5 times	Wildlife viewing	Restoration of the Ocklawaha River by breaching or removing the Rodman/Kirkpatrick Dam.	The Florida Wildlife Corridor will be restored or enhanced for people and wildlife and the St John's River estuary will be healthier	Continued degradation of the river, natural habitat loss and low water flow levels	No	I believe in the rights of nature. The dam has changed the ecosystem for the worse. Please breach or remove it
9/30/2021 11:49	Duval		No	No					Tear it down	Wet lands are essential for a sustainable environment!	Elect democrats.	Don't know	Save our planet please D's and R's
9/30/2021 11:49	Alachua		No	No					Removal of the dam and restoration of the historic water flow.	Algae blooms, fish die-offs, spread of invasive species.	The worsening of previously stated info.	No. remove that dam.	
9/30/2021 11:58	Dade		No	No					I would like to see removal of the dam and restoration of the Ocklawaha River.	If the dam is removed, it will help to restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	My biggest concern is that if the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Removal of the dam is way overdue.	I am a lifelong Florida resident. I volunteer at a wildlife rehabilitation center. We see an increased of injuries and illnesses in migratory birds and other animals because they do not have sufficient nesting and refueling stops on their migrations that have taken place over tens of thousands of years. Removal of the dam will restore an important sanctuary for native wildlife and restoration stopover points for migrating birds.

9/30/2021 12:00	Alachua		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier	The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.		
9/30/2021 12:01	Clay		No	Yes		More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking	Leave this masterpiece in place.	it has provided almost a lifetime of fishing and outdoor activities for me and my family as well as countless other families and outdoorsmen.	I believe it would destroy the ecosystem that is currently in place and not provide any positive results	none		
9/30/2021 12:03	Marion		No	Yes			1 time	Other	Remove the dam and restore the Ocklawaha River.	Too many to list.		Partial removal of the dam as long as the river flow is restored.		
9/30/2021 12:03	Putnam		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Wildlife viewing	I would like to see Rodman continue to be maintained as it is now.	It is a beautiful body of water that has provided an uncounted number of pleasurable hours of fishing for me and my friends. It has numeral different fishing habitats which, after over 20 years of fishing it, continue to surprise me. I fish numerous bodies of local water but Rodman is my favorite by far.	I would loose mf favorite body of fishing water.	I'm not sure how to interpret this. It seems like there are only two options. I would like to see Rodman remain the fishing and viewing paradise I have fished all of these years.		
9/30/2021 12:08	Putnam		No	Yes			1 time	Boating Wildlife viewing	Restoration of the Ocklawaha by opening the dam.	Health of the river system including the St Johns River.	Poor condition of dam and potential risk to Welaka, Florida.	Follow recommendations by agencies that are charged with studying impacts and benefits.	A restored river would increase ecotourism.	
9/30/2021 12:09	Broward		No	No										
9/30/2021 12:09	St Johns		No	Yes			1 time	Wildlife viewing	Remove the dam	Wildlife and environmental	Continuing reduction of environment	Not that I can think of.		
9/30/2021 12:10	St Johns		No	No					Breach the dam	Wildlife would benefit greatly from it.		Saves money on repairs.		
9/30/2021 12:11	St Johns		No	Yes			2-5 times	Wildlife viewing	Remove it.	It's an environmental disaster.	Management going forward.	No		
9/30/2021 12:14	Volusia		Yes	Yes			2-5 times	Boating	Remove and allow Oklawaha to revert to natural state.	History of project, need to protect water resources	Further degradation of water quality and decreased probability of regrowth of original forest	No	Rodman is a bad idea, perpetuated. Millions of gallons fresh water evaporates and doesn't reach thr St John's.	
9/30/2021 12:16	Outside of state / other	GA	No	Yes		2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Hunting Wildlife viewing Other: enjoying the reservoir and all it has to offer. a wonderful place I hope it never changes been going there since early 80's	maintain them	The amazing wildlife that the reservoir supports.	the loss of the lake and the wildlife that would be threatened.	no	keep rodman reservoir	
9/30/2021 12:22	Putnam		No	Yes		1 time	More than 5 times	Canoeing / kayaking	Breach the dam and drain the reservoir.	Various sources concerning the effect on the environment and water	continuing damage to the springs in the area	not that I can think of.		
9/30/2021 12:22	Alachua		No	No					Removal of the dam.	That the dam's true purpose is a part of a cross Florida canal project which fell through.	More algae blooms and downstream negative effects.	Creating a much larger flow past the dam.	Thank you for taking the time to receive comments and opinions. Hope you have a great week!	
9/30/2021 12:29	St Johns		No	Yes			1 time	Fishing Fishing (shoreline/structure)	Breach the dam	Restore the Oklawaha and surrounding areas to their natural state.	Continual decline of the St John's river waterways.	Not really	The Rodman dam was built for a barge canal that was never completed. It is selfish of us to only use this reservoir as a recreational area now. It is only right for us to return the land to its natural state if not using the reservoir for its intended use.	
9/30/2021 12:29	Outside of state / other	Minnesota	No	Yes		1 time		Wildlife viewing	take it down	the health of the springs and the manatees they cannot be ignored anymore	the future life of the springs and manatees	idk		
9/30/2021 12:29	Alachua		No	No					Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.	
9/30/2021 12:32	Alachua		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Wildlife viewing	Keep as is	It is the most unique body of water in the state of Florida. It's always available to fish, even in the droughts we had where it was hard to get in many of the lakes around here. The fishing is as good as anywhere in Florida. We see eagles, osprey, otters, manatees on every visit. And we don't have heavy boat traffic from skiers and jet skis to spoil the views and atmosphere.	We would lose the biggest asset we have in all of Florida. There are plenty of lakes and creeks, rivers in Florida, there is only one Rodman.	No	I keep hearing how it would improve the water quality down the St John's river. How? Almost all the flow is still going to the St John's now, the damn just slows it up a little. The water is much cleaner filtering through the reservoir than coming directly through the river.	
9/30/2021 12:33	Marion		No	Yes		1 time		Wildlife viewing	I think the dam should be removed.	Environment	That the river would never be restored and continue to be slow and contaminated.	I don't know if there is a way to do a partial removal, but I think eliminating the dam is the best thing. Provoding fishing for a few people doesn't justify leaving the dam.		
9/30/2021 12:37	St Johns		No	Yes		2-5 times	More than 5 times	Wildlife viewing Other: hiking horseback riding	more amenities for use. (parking, hiking, riding)	As Florida grows, there is more interest in getting into the outdoors and fewer places to do it. People need to get away from electronics. It is good for the body and the soul.	fewer opportunities for people to get out and about. Which leads to more emotional problems, more obesity, mudflations with life in general.	Getting the word out that SJWMD lands are open and available along with lists of available activities and locations.		
9/30/2021 12:41	Clay		No	Yes		3-5 times		Canoeing / kayaking	Breach the dam to return to a free flowing River.	Scientists	More degrading of River and the St. Johns	No		
9/30/2021 12:42	Alachua		No	Yes		1 time	2-5 times	Canoeing / kayaking	The dam needs to go. It blocked the natural water flow, requires take downs on a more frequent basis because of the stagnant water and inhibits migration of aquatic animals. FREE THE OKLAWAHA. Marjorie Harris Carr had the scientific facts to support stopping the dam but she was not listened to. Now is the time to address this wrong	SCIENCE...	Further degradation of the water within the dam causing more frequent draw downs and the cost associated with repair of the aging dam.	No.		
9/30/2021 12:46	Alachua		No	Yes			1 time	Boating	Remove the dam! The maintenance costs are prohibitive. The dam has reached the end of its lifespan. Let the Oklawaha run free and reveal the springs!	Easy--economics! Why am I paying to keep this antique going? Ecotourism brings in money, which should be preferable.	The dam falls and Welaka is flooded	No		
9/30/2021 12:52	Marion		No	Yes			1 time	Canoeing / kayaking	I would like to see the dam removed and the Oklawaha River restored to its original course.	Memory of the downstream changes to fish populations after the dam was completed.	The aging dam failing or requiring excessive public funds to repair and maintain.	Complete drawdown of the Rodman Reservoir.		
9/30/2021 12:55	Alachua		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River. Restoration will reunite the rivers and springs of the Great Florida Riverway and benefit communities, economies, and ecosystems all along the Riverway. This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.	
9/30/2021 13:01	Nassau		No	Yes			2-5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating						
9/30/2021 13:03	Alachua		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	±5,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.		
9/30/2021 13:09	Alachua		No	Yes		1 time	More than 5 times	Fishing Canoeing / kayaking	Breach it and allow water to flow back into the Oklawaha.	When the dam is breached, the river is clear and the natural springs are apparent.		No		
9/30/2021 13:10	Putnam		No	Yes			2-5 times	Canoeing / kayaking	The damn removed and the natural river restored.	The loss of water through evaporation and suppression of natural springs.			The return of the natural beauty of the Ocklawaha River would increase echo tourism in Putnam County.	
9/30/2021 13:13	Marion		No	Yes			1 time	Boating	Remove the dam.	Restore the Ocklawaha River to its natural form. The dam is no longer being used for its original intended purpose. Disrupting the Ocklawaha River's original course damaged the ecology of the river, Silver springs, and the St. Johns River estuary.	The waste of money to restore a dam that is not necessary. PLUS the declining water quality, spring flow, etc. caused by the dam.			
9/30/2021 13:17	Duval		No	Yes				Fishing (shoreline/structure)	Take down the dam, restore the Oklawaha			No		
9/30/2021 13:20	Leon		No	Yes			2-5 times	Canoeing / kayaking	Remove the dam and let the water flow to reveal it's natural beauty	Recreational and economic opportunities related to springs	Lack of recreational and economic opportunities	Drawdown annually		
9/30/2021 13:23	Alachua		No	Yes	1 time	1 time	2-5 times	Fishing Fishing (shoreline/structure)						
9/30/2021 13:24	Pinellas		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.		
9/30/2021 13:27	Clay		No	Yes	1 time	1 time	1 time	Wildlife viewing	Breach the dam	The environmental and physical cost	Damage to wildlife and the hit on the budget to repair it.	Breaching the damn		
9/30/2021 13:27	Alachua		No	No					Remove the dam and restore the Ocklawaha.	The health of the river and the need for it's fresh water to spread -- and to counteract the rising salinity in the St. Johns River.	We have a large publicly supported unhealthy fishing destination.	I don't know of any other solutions.		
9/30/2021 13:28	Volusia		No	Yes			2-5 times	Canoeing / kayaking	Removed	Connectivity	A lost chance			
9/30/2021 13:28	Citrus		No	No					I would like to see the Dam breached.	The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No. The Dam must be breached, and this should have been done years ago.	Breaching this dam causes less harmful algae blooms, gives manatees more protection (which they really need, if this current year is considered) and will replenish springs, causing more tourist activity here.	
9/30/2021 13:35	Duval		No	Yes			More than 5 times	Fishing Boating Wildlife viewing	I would like to see the damn removed.	It was built to build a cross Florida Canal that was never completed. I love the St. Johns river and as the population grows along the River and more water is removed by municipalities along its path (Orlando), I believe the best thing overall for the ecology of the state and the river would be to let it flow naturally. I love fishing and I see fishermen and tourism as the only proponents generally of keeping the dam.	As someone who spends time in the river around Jacksonville all the way down to Lake George regularly, I fear that as more salinity results further upriver from dredging the Upper St. Johns, it will kill a lot of the natural grasses and have a negative effect on the health of the river ecosystem. One of the issues with the upper St. Johns river in Jacksonville is that the river bottom grasses have died as a result of more salinity in the river.	The issue seems to be remove it or don't remove it. It doesn't produce electricity or have any other function at this point other than hold water and the biggest proponents of keeping it are probably folks who have property on the damned lake and bass fishermen/tourist businesses.	I grew up in Marianna FL and am very familiar with Dead Lakes which was dammed up off the Chipola river in the early 60's. My great grandfather had a house in that area and it was passed down and there has been a lot of fishing in dead lakes over the years. But the lake truly began do die - the fish species died out or didn't grow. After the damn was removed in the late 80's, the habitat as been revitalized by that natural flow. There are lots of springs on that river so there are some similarities - except it is a much smaller river.	
9/30/2021 13:37	Clay		No	Yes	1 time	2-5 times	2-5 times	Wildlife viewing	Remove the Dam and restore the river.	Dam removal elsewhere has had a beneficial impact on the environment and on the economy.	Salinization and silting along with increased algae blooms will continue.	Partial removal will only be a temporary fix.		
9/30/2021 13:40	Brevard		No	No					Phase it out. On. The next draw down, leave the reservoir drawn down. Remove the dam and restore the lower Ocklawaha to navigable condition when the budget allows.	Accumulation of runoff over the decades has made the lake polluted and a source of continuing pollution downstream. The springs that are currently under the impoundment would be a greater recreational/tourism draw than a lake fishing destination.	Increased pollution impacting upstream environments particularly the Silver.	Increased frequency/duration of draw downs. Shrinking the pool over time.		
9/30/2021 13:42	Levy		No	Yes		1 time	2-5 times	Other: I wanted to see the dam that is hurting the flow of our North Florida rivers.	I would like to see the dam removed to restore the Ocklawaha river, the Silver river and the St Johns river, and so many springs. We need to restore for the sake of the manatee and fish migrations and the forest flood plains.	The dam will need to be repaired which will cost millions of dollars. The dam was created as part of the cross barge canal which was scrapped.	The dam hurts water quality, wildlife habitat.	NO!		
9/30/2021 13:46	Duval		No	Yes			2-5 times	Fishing Canoeing / kayaking Boating Wildlife viewing	I believe it is it's own ecosystem now and should be left in place.		Indifferent, I think the economical output as a reservoir is greater than as a flowing tributary.			
9/30/2021 13:48	Alachua		No	Yes			2-5 times	Fishing Wildlife viewing	I would hope it remains the wonderful fishing and wildlife sanctuary that it is.		Fishing and wildlife could be tremendously affected.	No		
9/30/2021 13:49	Volusia		No	Yes			2-5 times	Wildlife viewing	I'd like to see all of it removed and the Ocklawaha River restored to its original, free flowing state.	The science supports restoration. Studies by federal and state agencies have clearly demonstrated that restoration of a free-flowing, connected system is cost-effective and will provide significant ecological benefits to the St. Johns, Ocklawaha and Silver Rivers as well as Silver Springs.	We miss a historic opportunity to stop the ongoing ecological degradation caused by the dam and finally reunite the natural flow of these rivers. Breaching the dam would restore the natural flow of 150 mgd of fresh water, improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. A free-flowing Ocklawaha will reestablish ±5,000 acres of forested wetlands and fortify downstream submerged grasses from Welaka to Jacksonville in the St. Johns River that are critical to river health and fish habitat.	No. Breaching the dam and restoring the Ocklawaha are 50+ years overdue. Dam safety issues and improved water quality, wildlife habitat, and recreational opportunities can't be ignored or delayed any longer.		
9/30/2021 13:51	Alachua		No	Yes			1 time	Wildlife viewing	I would like to see the Rodman dam destroyed and the Oklawaha put back to be what it was.		Water quality. Species survival.	No	This has been needed for decades.	
9/30/2021 13:53	St Johns		No	Yes		1 time		Fishing Fishing (shoreline/structure) Boating	Clean up but save	Natural habitat is needed for future generations				
9/30/2021 14:02	Marion		No	Yes	1 time	1 time	2-5 times	Boating Wildlife viewing	The dam needs to be removed so the area can go back to the way the area was liveforе the dam was built.	The many studies over the years that support this position.	The continued pollution and increased influx of invasive species.	I would need to know what other options could exist.		
9/30/2021 14:04	Volusia		No	No					I would like to see them destroyed, taken apart, taken down.	The river needs to be returned to his natural flow, recreating the environment as it was prior to the damimg of the river. It will restore the fish population that has suffered since the dam was built. It will also provide winter habitat for Manatees with free flowing waters which will be more naturally warm water when the springs currently submerged by the dam in the area reemerge and act as they were intended providing warming water to what is now a cold winter environment.	The continued degridation of the recreation area and the negative environmental impacts.	No! This is a boondoggle and it's time to right the wrong. Florida has a fragile environment that should be honored not mismanaged. This is the height Of mismanagement. Free the river; destroy the dams! Return this area to its natural environment.		
9/30/2021 14:09	Putnam		No	Yes			2-5 times	Boating	I think the ocklawaha river should be allowed to flow without the dam.	The amount of springs in the Rodman that used to flow into the river	Rodman reservoir sitting up.	No		
9/30/2021 14:10	Putnam		No	Yes	1 time	2-5 times		Canoeing / kayaking Wildlife viewing	St Johns River needs the fresh water.		the river will continue to rot	not really		
9/30/2021 14:10	Alachua		No	Yes		2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	I want the dam removed.	I want fish and manatees to migrate naturally. And the river to flow correctly.	No stripers, no mullet, no manatee, no springs.	No.	Please.	
9/30/2021 14:13	Duval		No	No					Remove the dam and let it go back to it's natural state.	There's no reason to spend money supporting a dam that is not needed.	We're spending money maintaining a dam that makes Jacksonville less storm resilient.	No		
9/30/2021 14:14	Clay		No	Yes			2-5 times	Other: Hiking						
9/30/2021 14:16	Duval		No	No					Remove thim	Restoring the balance of nature. Healthy rivers, watersheds, nature's flora and fauna make us safer and resilient from hurricanes.	Loss of the springs.			
9/30/2021 14:22	Palm Beach		No	No										
9/30/2021 14:22	Sumter		No	Yes		1 time	2-5 times	Wildlife viewing	Moving Forward, I would hope to see the Kirkpatrick Dam removed, the Rodman Reservoir drained, and the Ocklawaha river restored to its natural state.	Personally, the most important thing behind me opinion is the dozens of known springs that are currently being covered by the Rodman. I also would love to see better access for manatees to use the oklawaha river. I know ocassionally some get through the locks but it would be nice to see the silver river and other spring heads being used by manatees during the winter. I also believe this to be a large draw for tourism and keeping people coming to this area.	At this point, the Rodman is more of an eyesore than it is a true concern. Its unfortunate to see a river being dammed for no true purpose other than to make a lake, especially when the state is filled with so many other natural lakes just like it. For me it would be less of a cornern and more of just a sad scenario if the river isnt restored to its former glory.	I think both parties may benefit most from a 50/50 solution of sorts. I know some of the biggest opponents against the removal are fisherman. Id be satisfied seeing the lake drained so that the majority of the springs being inundated were allowed to flow naturally again. Perhaps the answer is the levy around the lake allowing most of the water to flow around the lake naturally and springs flow. This would also allow manatees and other aquatic wildlife to more easily and readily use the system. However, I believe this option would be too expensive to be realistic. It would likely be far less expensive to simply remove the dam. Perhaps another way to go would be to simply dredge a large portion of the lake and still remove the dam. That way the lake becomes more of a flood plain that the river passes through than a reservoir. I understand fisherman love to fish the rodman, but I dont believe allowing the lake to drain is going to completely erase the world class fishing from the area. It will surely become different but i think the opportunity will still exist. Hopefully there will be an outcome that satisfies both sides.		
9/30/2021 14:25	Volusia		No	No					For the dam to be removed and the river restored.	Manatee are dying off. They need more habitat and flood sources, which restoring the river could provide. Also, springs would be able to run, forest habitat restored	That the area will continue to degrade by not being restored to it's original habitat.	Not really.		
9/30/2021 14:29	Alachua		No	Yes		1 time		Boating	Take it down	Environmental concerns. We should restore the natural flow of the Oklawaha River. Further, it is my understanding that recreational use of the area (fishing, primarily) will not be seriously affected by taking down the dam.	Concerns about permanent damage to the river.	None of which I am aware.		
9/30/2021 14:29	Marion		No	Yes			1 time	Other: To see the problem the dam is creating	•Removing the dam and restore the Ocklawaha River to its original state	•Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	•If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	•No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	Removing the dam would provide the Manatees free access to the Silver River and the rest of the water shed of the St Johns River complex.	
9/30/2021 14:38	Hillsborough		No	No					Please restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs, and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provides thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 300-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 Million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation, and adds supporting jobs, which would be an economic win for the surrounding communities	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, the public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply, or another broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 300-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills, and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality, and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow, and an unobstructed blueway.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from the loss of seagrass, the greatest long-term threat to the manatee is the loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter – an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.	
9/30/2021 14:44	Clay		No	Yes		2-5 times		Other: Driving over	Dam removed and river and springs restored	Prevention of species migration and normal flow of river.	Catastrophic failure of dam without massive funding for maintenance.	No	Fishing quality has been diminishing. George Kirkpatrick is long dead.	
9/30/2021 14:45	Clay		No	Yes	More than 5 times		More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Keep what there everything is great as it is now	The fishery is amazing	The ecosystem of the lake			
9/30/2021 14:47	Baker		No	Yes		More than 5 times	More than 5 times	Fishing Boating Wildlife viewing	Maintain as environmental and recreational values	Amount of usage and environmental studies	Loss of ecosystem	NO		
9/30/2021 14:57	Pinellas		No	No			More than 5 times	Canoeing / kayaking Wildlife viewing	Breach the Rodman/Kirkpatrick Dam	The health of this water system is compromised and breaching the dam will restore about 20 drowned springs, restore habitat for manatees and restore the path used by migratory fish.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), the dam is unsafe and expensive to maintain.	No	The un-natural flow creates poor water quality which fuels an overgrowth of invasive weeds and blue-green algae. The dam does not provide flood protection, water supply or power and reduced visitation threatens the economic growth of Silver Springs and Putnam County. Thank you.	
9/30/2021 14:59	Marion		No	Yes	1 time	More than 5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Remove the dam and restore the old river	The dam and reservoir were a mistake from the beginning and the current cost to maintain the dam and the drawdowns for vegetation management are not justified for this current use of the dam.	Money will continue to be spent and the animal and fish population will continue to decline. The manatees cannot get from the St Johns to the springs during winter unless they lock through risking injury and death. People will forget what the old Ocklawaha River looked like and the purposes it served from transportation to recreation.	Remove the dam and leave it open		
9/30/2021 15:01	Pinellas		No	No					Restoration of the river and remove dam	the protections and restoration to fish, birds and native plants	the wildlife	no		

9/30/2021 15:03	Alachua		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Remove it	It is fucking up the ecosystem. Get rid of it	More massive die off of fish and marine life		
9/30/2021 15:03	Sarasota		No	Yes			More than 5 times	Canoeing / Kayaking Boating Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	
9/30/2021 15:05	St Johns		No	Yes			1 time	Canoeing / Kayaking Wildlife viewing	Remove the dam	Freeing the Ocklawaha River	The original state of the river was tampered with by man	No	
9/30/2021 15:07	Alachua		No	Yes			1 time	Wildlife viewing	Remove the dam and restore the river	Improve water quality for the St. Johns. Restore the river to its natural state.	Millions of dollars wasted maintaining the dam	No	This dam never should have been built. It destroyed a beautiful natural ecosystem.
9/30/2021 15:15	Palm Beach		No	Yes	1 time	2-5 times	More than 5 times	Fishing Boating Wildlife viewing	Dam needs to be breached	The return of the environment to its natural beauty. The return of all the buried natural springs and ecosystem.	The land locked manatees. They are saltwater animals not meant to be land locked. The destruction of the environment and wildlife. There are more stock fish species now than native species.	Well, the dam was built to cross barge Florida. Either finish the barge canal or breach the dam.	Do the right thing, breach the dam, save the manatees and striped bass.
9/30/2021 15:23	Pinellas		No	No					Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective spring protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-$4 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/30/2021 15:25	Charlotte		No	No					Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam to reunite the natural connection of Silver Springs, the Ocklawaha and the St. Johns River.	Knowing that the reunification of those 3 waterways will improve conditions for wildlife along the estuaries should be sufficient, manatees are endangered because of lost habitat, Silver Springs and other Springs lost need to have a chance for restoration for future Floridians.	We would miss a great opportunity to restore natural Florida and protect the natural resources for years to come.	I'm not aware of any scenario that would make sense, since the funding is available now. There is no good reason for delay.	Restore Florida's nature.
9/30/2021 15:27	Marion		No	Yes		2-5 times	2-5 times	Canoeing / Kayaking Boating Wildlife viewing Other: Snorkeling during drawdown	I would love for the Ocklawaha river to be restored to its natural state to benefit all, including fisherman.	It was a mistake to begin with and there is so much evidence to support restoration of the river. The plans already call for this! Maintaining a huge blunder is yet another blunder	Nature would continue to suffer. There is so much to be gained economically also	No, we need to stop killing nature. Right now the only ones who think they benefit from the dam are fisherman. Such a huge area should not be drowned for this!!!	Please restore the river. Declared the most endangered river because of this
9/30/2021 15:33	Putnam		Yes	Yes	More than 5 times			Fishing Boating Hunting	Leave the dam and keep the reservoir	The fishing is outstanding and brings revenue to counties that surround the reservoir	Economic impact for businesses that will be affected	No	
9/30/2021 15:33	Duval		No	Yes			2-5 times	Other: Not useful in current state but a huge opportunity for restoration that I am reminded of when traveling across Florida	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored	The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Very important, large scale yet simple water resource, environmental restoration project with an opportunity to positively impact all. Get the job done!
9/30/2021 15:33	Seminole		No	No					Remove the dam and restore the Oklawaha River	Removing the dam helps restore 50 springs as well as the Atlahabad, Silver and St John Rivers. The lower Atlahabad and St John's Rivers will receive 150 M + gallons a day of restored natural water flow. Over $4M will be saved on a dam that is past its life expectancy.	If the dam remains, water quality will continue to decline	No. Breaching the dam is 50 years overdue. The water quality can't wait	
9/30/2021 15:43	Brevard		No	No					Restore the waterways to allow the manatees' food sources to flourish again so they can thrive.	Manatees are starving because their food sources are depleted.	More unecessary manatee deaths		
9/30/2021 15:44	Orange		No	No					Remove the dam.	Free-flowing rivers provide recreation opportunities and homes for wildlife, fish and endangered manatees.	Florida loses another opportunity to restore its unique natural environment.	Open a hole in the dam to create a free-flowing waterway through it.	
9/30/2021 15:49	Duval		No	Yes		2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Hunting Wildlife viewing Other: Camping, and trails.	Remain as is, keep the dam!!! Keep the reservoir!!! Lake Ocklawaha!!!!	Great camping, fishing and hunting. Rodman does accommodate large groups for fishing, if the dam is removed only a little amount of people would be able to use the Ocklawaha River.	Lost family camping, fishing and hunting.	No.	
9/30/2021 15:50	Alachua		No	Yes		2-5 times		Fishing Fishing (shoreline/structure) Canoeing / kayaking Wildlife viewing	I would like for it to be removed		I would be concerned about the continuing environmental impacts	No	
9/30/2021 15:54	Outside of state / other	Bellingham, WA	No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, more harm is inflicted on wildlife, water quality, and the economy throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored, including 20 lost springs and the Silver Springs ecosystem, are restored. This will allow for historic fish and manatees to return to a free-flowing river, as well as providing hundreds of manatees with access to critical warm water habitats for the winter.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical, and the dam is unsafe. If the dam is not removed, endangered manatees and other native species have access to key habitats and invasive species like blue tilapia are given the opportunity to increase and inflict further harm on Florida's ecosystems.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife habitats can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka. It fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Additionally, sought-after migratory fish species such as striped bass will return. Thank you for your consideration.
9/30/2021 16:07	Seminole		No	No					Remove the dam and restore the river	Removing restores natural springs and rivers	Loss of vegetation,fish, and habitat	NO	treasure the wild beauty
9/30/2021 16:13	Marion		No	Yes			1 time	Canoeing / Kayaking Wildlife viewing	Breach the dam	Manatee survival	Springs lost	No	
9/30/2021 16:14	Alachua		No	Yes			1 time	Fishing Fishing (shoreline/structure) Canoeing / kayaking	Removal of the dam to return the waterway to its original state and reduce the buildup of harmful chemicals and sediment	Data from the Florida Springs Institute study on the Ocklawaha water systems	The further damage of the natural ecosystem in the name of big fish and centralized recreation	No	
9/30/2021 16:37	Duval		Yes	Yes	2-5 times			Fishing Fishing (shoreline/structure) Canoeing / kayaking Wildlife viewing	Tear down	Like the open nature	Life goes on	Start a fund to tear down	
9/30/2021 16:47	Gilchrist		No	Yes			1 time	Canoeing / Kayaking	I'd like to see the Rodman/Kirkpatrick Dam breached.	It's going to happen some day, either before or after $4-$14million of needed repairs are done, and before or after additional damage is done to the fish and manatee populations.	Manatee loss, water quality declines from invasive, blue-green alga and fish kills. And the crazy price tag for dam repair.	No - it needs to be breached.	Over 20 springs would be restored, which would go toward restoring the faltering Silver Springs. Restoration of the Ocklawaha would also create a warmer and thus safer habitat for the dwindling manatees.
9/30/2021 16:48	Seminole		No	Yes			1 time	Canoeing / Kayaking Other: I visited it with Lars Andersen during the last drawdown. What a shame this beautiful river has been so ill-used.	The dam should be removed so the river can be restored to its natural banks, and the 20 springs that have been covered can again be visible.	The deleterious effect the dam has had on manatees and other wildlife that would normally be able to move freely up and down the river.	That another generation of Floridians will spend most of their lives, as I have, wanting this dam to be removed and the river restored, and seeing it never happening in their lifetimes. And that the manatees and fish will continue to be deprived of their natural routes	No.	
9/30/2021 16:50	Alachua		No	No					I would like to see the dam breached.	I have read that restoring the 20 lost springs of the Oklawaha River would improve quality of life for fish, manatees, birds, and Silver Springs itself.	The water quality of the state of Florida in general is embarrassing, and I feel that we are putting money ahead of a gift from God, and we will eventually have no tourism or clean water.	No	Manatees need the habitat that the lost springs would provide.
9/30/2021 16:52	Alachua		No	Yes		2-5 times		Wildlife viewing Other: Hikinh	Kirkpatrick Dam must be removed, and the river restored.	Rodman Reservoir is an ecological disaster, causing toxic algae blooms and disrupting natural water flow	Continuing algae blooms and ongoing damage to the watershed	No	
9/30/2021 16:54	Putnam		No	Yes		2-5 times	More than 5 times	Boating Wildlife viewing Other	Free the Oklawaha	Environment returned to it's natural state	Will remain an expensive failed government project, that is environmentally harmful.	I doubt it.	
9/30/2021 16:56	Alachua		No	Yes				Wildlife viewing	Let the river run free				
9/30/2021 16:56	Duval		No	No					Remove it	Algae blooms	Our waterways continue to be toxic		Thank you for asking.
9/30/2021 16:57	Seminole		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
9/30/2021 16:58	Marion		No	Yes		2-5 times	2-5 times	Canoeing / Kayaking Boating Wildlife viewing Other: Snorkeling in the buried springs during drawdowns	Breach the dam! Restore the Ocklawaha	It's a man made mistake from day one. It's destroying so much just to keep a bass fishing lake intact? Far better economic outcome as demonstrated during drawdown.	Environmental disaster not to mention extremely expensive maintenance when this shouldn't be here to begin with. Why should taxpayers fund a few fishermen? Ridiculous.	No, there is no other option that is environmentally and economically ok.	Please do the right thing. The Ocklawaha has been labeled critically endangered by the damn dam.
9/30/2021 17:02	Pinellas		No	Yes	1 time	2-5 times	More than 5 times	Fishing Wildlife viewing	I don't want to see any changes at all.	I do enjoy fishing Rodman, but that isn't my most important problem with changing the lake in any way. My biggest concern is the manatees. Manatees in Florida are having problems finding enough vegetation to eat. It's bad enough that hundreds of them are coming into Rodman and staying there all year. Rodman has what they need, and a lot of it. If Rodman is drained or even lowered, the manatees will have to leave and find food somewhere else. But there isn't enough food for all of them. That's the reason they are in Rodman. If we change the lake we will be killing a large number of them. I think we need help them not hurt them.	I think we would be killing a lot of manatees.	I don't know what that would be.	
9/30/2021 17:03	Marion		No	Yes		2-5 times	More than 5 times	Wildlife viewing Other	There is no question that the Kirkpatrick Dam needs to be completely removed. It is well documented that the normal flow of water -for the St. John's/Ocklawaha/Silver Rivers and all the freshwater springs and marine life along those routes -in addition to the restoration of the forests on the banks and the wildlife that depends on its bounties is the primary consideration. Only then can homo sapiens truly appreciate and enjoy what has been lost by decades of inaction.	I have seen, with my own eyes, the degradation of the Silver River from the early 1970s when tourists marveled at the huge Channel Catfish swimming under the Glass Bottom Boats. There was Bass, Brim, Gar, Needlefish and Shiners; birds of every kind came to drink or eat; alligators, small amphibians abounded. It was well known that European travelers took buses from Orlando to visit the attraction -- now a State Park offering what used to be - and can be again - a pristine water highway abounding with wildlife.	My biggest concern is that we are reaching an existential environmental deadline when there will be nothing left to restore. No amount of will or money will be available to "fix" what has been despoiled by human, bureaucratic or political inaction. This is not a Putnam or Marion County problem only; this is a global problem. The sooner that is recognized, the better.	Yes. It is folly to expect that removal of the dam and its reservoir's restoration can be accomplished with a couple of bulldozers and front end loaders in a manner of days. It is assumed that is understood by any sentient person. But a planned timeline for environmentally responsible restoration of the rivers, springs, forests and wildlife is feasible even if it takes years. The first step is always the hardest, but it's worth taking when the risks of not taking it are catastrophic.	
9/30/2021 17:05	Outside of state / other	Alexandria VA	No	No					I want to see the Kirkpatrick Dam removed so the marine life and wildlife can move through freely again. Doing that could help save some endangered species like the Florida manatees.	That 3 rivers and many springs plus thousands of acres of land are negatively impacted by the dam preventing the free flow of water through the area and the free movement of wildlife, especially marine life, and the land itself has been degraded by not having that water flowing through naturally. So removing the dam and opening up the area do millions of gallons of water from the Ocklawaha River alone could flow through naturally will greatly benefit and improve the environment in general. The Silver Springs echo system would greatly benefit from this and the flow of warm water through the area would greatly benefit the wildlife, especially manatees who seek refuge in cold weather to warm water areas, and the general environment.	That the opportunity will be lost and there will be an accelerated decline in some species. That the dam is past its lifespan and will deteriorate and further degrade the area if it isn't removed. The manatees, for example had their worst year this year and the most died in a number of years; they rely on warm water and routinely congregate around power stations for their warm water output, but this source of warm water for them isn't sustainable long term. Removing the dam and giving them access to natural warm water in the river plus greatly expanding their range to swim would greatly alleviate some of that plus greatly improving their habitat and that of many fish and other wildlife. Will be incredibly beneficial if this opportunity is lost and if the manatee population were to continue to decline as a result. Then this may be looked upon as not only a missed opportunity, but another nail in the coffin to their long-term survival in Florida.	Not really. Only thing would be if, as with salmon ladders, a man-made river could be dug to allow wildlife direct access to swim to the reservoirs - a diversionary route for a portion of the Ocklawaha River to flow through naturally that circumnavigated the dam so wildlife can easily reach the water in the reservoirs on the other side. That would be an expensive undertaking. Demolishing the dam would be easier and far superior outcome.	
9/30/2021 17:11	Alachua		No	Yes			2-5 times	Boating Wildlife viewing	RemoveDam	better for environment and manatees	More wasted state taxpayer money to maintain dam. Unnatural environment	No	
9/30/2021 17:12	St Johns		No	Yes		1 time	1 time	Wildlife viewing Other: Relaxing					
9/30/2021 17:13	Marion		No	No					I would like to see the Kirkpatrick Dam removed to allow natural water flow from the Ocklawaha River into the St. Johns River.	Restoring the natural flow of water will help reduce the salinity of the St Johns that has been increasing.	Wildlife will continue to suffer due to higher chemical and salinity levels in the river. Plus, the costs of keeping the Rodman Dam functioning and avoid a catastrophic failure is a major concern.	Not really.	As a kayaker, I am very interested in what happens to our beautiful natural waterways. While there may be a period of adjustment for people who have become dependent on the manmade reservoir, once everyone gets accustomed to the new normal of the original waterway, it will be seen as a positive change.
9/30/2021 17:19	Outside of state / other	Santa Cruz CA	No	Yes			1 time	Wildlife viewing	Remove the dam please.	This dam is destroying the natural movement of all animals, and blocking a natural spot where manatees go	Extinction of some Florida wildlife like manatees and panthers.	No, the dam is ruining the environment and should be removed.	Please consider this opportunity to remove the dam and have more people come to see the beautiful nature that could re establish itself. Thank you.
9/30/2021 17:20	Orange		No	Yes			2-5 times	Canoeing / kayaking Boating Wildlife viewing	The removal of the damn	The fact that springs are being force below	The over used of our current springs there fore leading to destruction	Removing damb	
9/30/2021 17:23	Alachua		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing	Keep Kirkpatrick Dam and Rodman Reservoir as-is. Rodman is an absolutely unique treasure for North Central Florida and actually the entire country (based on documented visitors from nearly every state in the union). Large numbers of bass fisherman across the country see a visit to Rodman as the trip of a lifetime to catch their biggest bass. Tourism of that type simply can't be replaced. The ability to control the reservoir water level via drawdowns facilitates the management of weed growth and fishery productivity. Fishing in Rodman is world-renowned and it hasn't declined with age due to the periodic drawdowns that rejuvenate the lake. Just a few years ago drought conditions in north Florida created serious access limitations in many area lakes (Orange Lake, Newnans Lake, Keystone area lakes, etc.). Rodman was at full pool throughout this time and it was a great destination for anglers and boaters to enjoy. Cycles of rain/drought have always happened and will occur in the future. Natural lakes may become inaccessible but Rodman can remain full. Control of excessive weed growth using the drawdown method is certainly preferable over chemical herbicide treatments. Hydrilla and some other invasive species have proven to benefit fish populations but they can become overwhelming. Natural more shallow lakes create a greater management issue than Rodman.	Having both Rodman and the Ocklawaha River as-is provides the greatest benefit to our citizens. The Ocklawaha River flows about 74 miles from Lake Griffin to the St. Johns River. Rodman covers about 16 miles of the total. Many miles of small river are available south of Eureka and 10 miles of the river flow east from the dam to the St. Johns for those who prefer that type of waterborne recreation. The reservoir provides a huge area of about 13,000 acres suitable for numerous boats of all sizes. This size is at least 60 times the water recreation area that any restored river would have. The status quo provides recreational opportunities for the widest range of people and interests. Huge economic and recreational benefits result. Ecotourism can flourish in both types of environments. Agenda driven anti-Rodman activists make illogical claims like dam removal would increase fresh water flow. All flow of the Ocklawaha, less probably some aquifer recharge (a very good thing) simply passes through Rodman into the St. Johns. It is a steady state situation because the reservoir doesn't keep filling up. Activists also make dubious claims about wildlife; clearly wildlife is flourishing all over and around the shoreline of Rodman.	We would lose an awesome and unique fishery and wildlife viewing destination. Proprietors of area fishing related businesses would suffer greatly. Acreage for waterborne recreation would be lost. Area tourism would diminish. I have personally been visiting Rodman since 1971 and have many great memories. I am certainly planning to return there many times in the future. I simply do not see why those who prefer a small river don't just go to those existing parts of the Ocklawaha. Many miles of the river are present.	Rodman and the dam either exist or they don't. I don't see any scenario options in this case. Some people cite economic reasons for removing Rodman like the cost of lock and dam operation and maintenance but the economic benefits from Rodman far outweigh these costs. Operating Rodman is money well spent.	Please, please, please keep our Rodman Reservoir!!! Don't let a small vocal minority destroy our unique treasure. Feel free to contact me for further discussion or to answer any questions that you may have.
9/30/2021 17:24	Alachua		Yes	No					Remove the dam	Watching documentaries about this issue	Oklawaha River and adjacent springs are lost	Yearly drawdown for 6 months	Thank you
9/30/2021 17:30	Lake		No	Yes			2-5 times	Fishing	Maintained in their present condition		Loss of fishing area for me and loss of revenue for the area for other fishermen that fish there.		
9/30/2021 17:34	Alachua		No	Yes			2-5 times	Wildlife viewing	Breached	ecosystems would be restored	lose this opportunity to help nature	not really	hoping for the best solution to help nature as well as ourselves
9/30/2021 17:42	Alachua		No	Yes			1 time	Canoeing / Kayaking	Remove it and restore the Okalawaha river to it's former path & flow.	Everything I have read about this Dam over the years since it was built for a politicians friends use. I used to canoe on the original river and it was an amazing experience of nature in Florida at it's best.	Continued loss of heritage Florida.	No!	This has continued far too long and mainly for a small group of users.
9/30/2021 17:44	Orange		No	No					Breach the Rodman/Kirkpatrick Dam	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs.Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-$4 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration!
9/30/2021 17:52	Marion		No	Yes			More than 5 times	Canoeing / Kayaking Wildlife viewing	Dam removal	Restoration of the Oklawaha river	Continued devastation of springs and environment	No	Restoration of Oklawaha is over due - it would enhance the environment and bring people to the area - there would be a positive economic impact
9/30/2021 17:55	Sumter		No	Yes					Remove	Restore the Oklawaha river	Pollution, clogged paddle runs, and red tide along with trash from above the dam. Manatees as an endangered species cannot move freely.	Keep the dam as a tourist attraction while releasing all the water to restore the river.	Tear down the dam! I do not want my tax dollars to support repair of the dam. Let's us that money to restore Florida......
9/30/2021 17:55	St Johns		No	No					Removal to all reconnection of spring/waterway with the St John's river. Restoration of the natural state of the waterway to support wildlife and recreation in a sustainable manner.	The cost of restoring the dam is prohibitive and does not include the cost of continued harm to the ecology. The economy will benefit from a restoration of the natural state of this waterway due to the echo tourism that it will draw in.	Continued harm to the ecosystem above the dam, and to the St. Johns River.	Breaching the dam in a controlled manner to avoid flooding down stream.	Thank you for seeking public comment on this important issue. Thank you for providing this online survey as an easy way to provide our input.
9/30/2021 18:08	Seminole		No	Yes			More than 5 times	Fishing Canoeing / kayaking Wildlife viewing	Restore the Ocklawaha River by eliminating the Rodman/Kirkpatrick Dam.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	No. It's time. Dam safety, improved water quality and wildlife can't wait.	Thank you for your support. I've seen the affect humans have had on wildlife and it's time to undo the many mistakes and negative impacts.
9/30/2021 18:09	Lake		No	No					Restore the Ocklawaha River to its natural state.	The research that supports the ecological benefits: restoration of springs and Silver Springs ecosystem, a healthier St. Johns River estuary	Further degradation of habitats for wildlife, fish populations and Manatees.	No. Much of natural Florida cannot ever be recovered, but removing the dam will give us an opportunity to restore the area of these rivers to their natural state.	
9/30/2021 18:10	Duval		No	No					Restoring of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam and reuniting the Silver Springs, the Ocklawaha and the St. Johns River.	The increasing algae blooms I see on the St Johns river and reports of starving manatees. 150+ million gallons a day of natural flow would be restored to the Lower Ocklawaha and St. Johns Rivers. There is no time to waste.	We miss the best opportunity. State and federal funds are available, needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs, and invasive fish increase. Water quality declines, further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. The 100-mile St. Johns River Estuary continues suffer saltwater intrusion.	No. Breaching the dam and restoring the Ocklawaha are overdue. Dam safety issues and improved water quality, wildlife habitat can't be ignored or delayed any longer.	I haven't been to the dam but I do see and smell the algae blooms on the river that I see every day. How could there be any excuse not to take action? We are all affected by the unhealthy conditions of our shared waters. The waterways will not improve on their own. They support our lives and they need our help NOW.
9/30/2021 18:22	Putnam		No	Yes			2-5 times	Fishing (shoreline/structure) Canoeing / kayaking	Remove the dam	Return the Oklawaha River to it's natural environment	More endangered animals are wiped out	No	
9/30/2021 18:23	Marion		No	Yes			More than 5 times	Fishing Boating Wildlife viewing	Please remove it. It should have never been put there in the first place	It was only built for barge canal system and when that was not built, it should have been removed then.	Even greater loss of wildlife habitat. We have multiple threatened species that will thrive if the dam is removed. It's about more than trophy bass. Orange Lake and many other rural lakes have big bass too.	A gradual opening of the dam so the wildlife and citizens have a chance to adjust.	Please remove the dam. People come to Florida for the water and the wildlife, all wildlife, especially manatees. A healthier natural ecosystem out there will bring in tourist and sportsman dollars too. Thank you for your consideration.
9/30/2021 18:23	Leon		No	No					I would like to see the Kirkpatrick Dam removed and the Rodman Reservoir restored to the natural flowing Ocklawaha River and its natural habitat.	It will cost millions of taxpayer dollars to repair the damn. It will restore dozens of springs and return the Silver and St Johns Rivers to there natural flow as well.	If the damn remains water quality in the rivers will continue to decline and contribute to blue green algae. The restoration of thousands of acres of forest will contribute to water storage and better filtration for downstream municipal water use. It will also provide opportunities of revenue from visitation for recreational purposes.	NO	One of the reason that I moved to Florida is for the its beauty and natural areas available for outdoor recreation. Tourism is one of the driving economic factors for Florida and Florida's natural beauty a large reason that brings tourists.
9/30/2021 18:27	Volusia		No	No					Clean it up	Manatee deaths	Manatee deaths		
9/30/2021 18:28	Seminole		No	No					repair the dam or restore the river		Any improvement ok		
9/30/2021 18:31	Pinellas		No	No					decommissioned	historical flow of water in the Florida Wildlife Corridor	loss of manatees/ seagrasses/		

9/30/2021 18:39	Clay		No	No				I think Silver Springs should be restored by allowing the Ocklawaha River to freely flow. To remove the dam.	The ecological and recreational benefits of a free-flowing connection between the St. Johns River, the Silver River, and the Ocklawaha River. Some of these ecological benefits are: *Three rivers, Ocklawaha, Silver and St. Johns, and 50 springs are restored *20 lost springs and Silver Springs ecosystem are restored *Essential manatee habitat restored - manatees are struggling over the past couple of years because their habitat is being compromised *Historic migration paths for fishes will be restored *150+ million gallons a day of natural flow restored to the lower Ocklawaha and St. Johns Rivers. Hopefully this will counteract the saline balance increase when the upper St. Johns is dredged. *100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier, helping to guard against storm surges from increasingly violent tropical storms/hurricanes.	Long-term ecological damage: Water quality declines, further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss, and thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	No. Breaching the dam and restoring the Ocklawaha are 50+ years overdue. Dam safety issues and improved water quality, wildlife habitat, and recreational opportunities should not be ignored or delayed any longer.	We need to carefully consider costs of a deteriorating dam - the safety risk for those living downstream and the estimated $57 million repairs. With free-flowing water in these rivers, water quality, coastal resiliency, and wildlife corridor will flourish, increasing tourism and sport- related dollars will increase income for the local economies. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. The greatest long-term threat to the manatee is loss of natural warm water winter habitat. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/30/2021 18:48	Manatee		No	No				Breach them.	Environment degradation.	Further environmental degradation.	No.	
9/30/2021 18:53	Citrus		No	No				Restoring the habitat for fish, manatees, birds, and other native wildlife.		Lack of habitat for wildlife.	Not sure.	
9/30/2021 18:57	Martin		No	No				breach/remove the dam	I am unaware of any benefits to leaving the dam in place. Removing it would provide significant economic benefits to the local communities and the people who live there.	lack of opportunity for local citizens	no	Thank you for considering my opinions.
9/30/2021 18:57	Sarasota		No	Yes			Fishing Fishing (shoreline/structure) Canoeing / Kayaking Boating Hunting Wildlife viewing Other:	I would like for it to be taken down, the damn as it's not natural and it's only caused destruction of our Florida waters as they were intended to be naturally.	Natural design	My biggest concern would be the future of Florida and Floridas waters, highly intelligent people usually understand nature.	At this point, at the tipping point of Florida losing everything it's ever had dear to everyone who has grown up here and everyone who is moving here, quite frankly NO.	We are well past any other outcome other than cleaning up our waters and saving as much conservation land and wildlife Corridors that we can. I would see any other decision as political or corrupt.
9/30/2021 19:00	Seminole		No	Yes		1 time	Wildlife viewing	Allow to become natural river in the future		Unneeded expense to replace the dam.		
9/30/2021 19:09	Putnam		No	Yes	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Leave it alone	I moved to Putnam county to be close to the body of water I grew up on with my father and grandfather . If this is removed it would be devastating to Putnam county .	I don't have any concerns I The ones advocating for the removal of the Kirkpatrick dam are trying to make everyone believe that they want it returned to a free flowing River but will never achieve this outcome when the headwaters of the Ocklawaha River is a dam Moss Bluff , between lake griffin and eustis is another small set of locks that control how much water is released into griffin , another set of locks on Apopka ! So if by some chance the Kirkpatrick dam is taken out then we are at Marion counties mercy on how much water will be released to the St. John's River ! If we have any more droughts from this day forward after it is removed Marion county will not let their lakes go dry and will not release excess water to appease the people wanting the dam removed ! Every time I hear someone talk about the removal of Rodman The first thing that comes to my mind is hypocrites ! You can never have a free flowing River unless you get everyone on board with taking every lock system from the Harris chain of lakes !	Just leave it be ! If you want anyone to believe that the Ocklawaha River would be healthier with the removal of the Kirkpatrick dam then discuss the removal of every lock system on the Harris chain of lakes ! Not just one dam and lock system! Kayaking and Birdwatching would not bring in a fraction of the revenue that Bass fishing and tournament fishing does in Putnam county !	
9/30/2021 19:11	Outside of state / other	Douglasville, Ga	No	Yes		1 time	Fishing	Maintain those locations as is	The fishing and wildlife (manatees) are second to none.	Not only my personal impact but the local guides and community impact would be severe. I'm planning at least three guided trips to Rodman over the next year.	Any negative impact on the current state would be detrimental.	Rodman is one of the most desired bass fishing locations in the world. Please protect this place for us and our grandchildren.
9/30/2021 19:16	St Johns		No	No				Tear it down. Not needed and the Manatees need it as a route to springs for winter migration.		Silver Springs fish stock is being depleted due to the dam.		
9/30/2021 19:26	Seminole		No	No				Remove dam				
9/30/2021 19:30	Osceloa		No	No				Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	
9/30/2021 19:37	Pinellas		No	No				I'd like to see it breached.	• There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. • Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. • Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. • The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	• We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. • The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. • Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. • Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. • Hundreds of manatees loose access to essential warm water winter habitat. • Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No, breaching the dam is the only option I support . Please 🙏	It is so important that we make decisions today that will impact the future generations of tomorrow. Not just the human generations but the generations of manatees (who are largely impacted by this dam). Due to seagrass dieoff, etc. Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
9/30/2021 19:41	St Johns		No	Yes	More than 5 times	More than 5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	The dam cannot happen	The manatees way of life	The manatees not being able to survive	No. The water must flow.
9/30/2021 19:42	Dade		No	No				restore the riverway and save the Everglade drainage	manatees	ecocide	no	
9/30/2021 19:44	Duval		No	Yes	1 time	2-5 times	More than 5 times	Fishing Boating Hunting Wildlife viewing Other: Camping	Keep the dam and manage the reservoir more effectively by stopping the spraying of herbicides and mechanically removing the detrimental weeds, especially the floating weeds	Continual decline of fish primarily due to decrease of hydrilla and eel grass, which is decimated by spraying of herbicides	Removal of the dam would cause a loss of habitat for a large and wide variety of species of birds, animals, fish and reptiles.	No. Unfortunately no, and we gave this much thought.	Please KEEP RODMAN DAM! And put mechanisms in place to manage the reservoir!
9/30/2021 19:50	Alachua		No	Yes		2-5 times	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	1. Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 2. 20 lost springs and Silver Springs ecosystem are restored 3. Historic fish and manatees return as breach opens creating a free-flowing river 4. 100s of manatees gain essential warm water winter springs habitat 5. 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 6. 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife 7. 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers 8. $4-14 Million in dam repairs saved on a dam past its life expectancy 9. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. 10. $57 million in potential flood damages avoided to downstream property owners.	1. We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. 2. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. 3. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. 4. A storm event triggers a dam failure or overtopping resulting in potential damages to $37 property owners and up to $57 million in damages. 5. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. 6. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. 7. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. 8. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. 9. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. 10. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
9/30/2021 19:58	Duval		No	No				Removal	Animal habitats being restored	Native animals will go extinct	We need to support more over or under road pathways for animals to cross highways and we need to support using less chemicals that are polluting the waterways in the first place and causing the sea grass to die off and in turn have a negative impact on manatees and other Florida wildlife	
9/30/2021 20:00	Outside of state / other	Virginia	No	No				I would like to see it removed to restore more natural flow of the Ocklawaha River.	Personal experience as a geospatial analyst where I have worked extensively with the SJRWMD as well as SFWMD, SWFWMD, and SRWMD on several habitat monitoring and restoration projects. I have seen the incredible rebound nature makes when we give back land. Restoring natural habitat to include natural water flow is something that Florida has struggled with for decades. The wheels for this project have been in motion longer than I have been alive.	I care deeply for the state I once called home. Even though I no longer reside in Florida, friends and family still do and it saddens me every time I read about another project that should have never been permitted or the latest assault on nature there.	No	I also the fact that the construction that required the dam was never completed should be a big factor in its removal. It clearly is serving no point
9/30/2021 20:15	Duval		No	Yes		1 time	More than 5 times	Boating	Remove the dam to restore the surrounding areas a d the river	The fact that the dam needs millions of dollars of work	The long term health of the river	Breaching the dam but leaving a portion as a fishing pier	A solid plan to move forward with at least partial dam removal needs to be assembled after so many years of back and forth and continued debate.
9/30/2021 20:17	Putnam		No	Yes		More than 5 times		Maintain as is		It's a beautiful place			
9/30/2021 20:17	Marion		No	Yes		1 time		Remove it and return the area to nature	Other: To see the harm caused by the dam	Scientific research from state and University of Florida	That algae blooms will destroy fisheries	No	Remove the dam. It's from a failed project and is causing harm to florida waterways
9/30/2021 20:18	Putnam		No	Yes	1 time	More than 5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Considering the established ecosystem, even though man-made, I believe removing the dam would cause significant loss of habitat due not only to the lake draw down but the possible flooding of shoreline. The damage has been done, let's not do more.	History	Loss of habitat for established species of both flora and fauna.	Not really. Continue with current draw down management plans.	
9/30/2021 20:20	Seminole		No	No				Removed. Once saw a dam removed in Washington State and the land and river returned to its former self.	That waters need to follow their former natural paths.	As a state we are going backwards a environmentally.		
9/30/2021 20:23	Duval		No	No					Breaching the dam will save money in maintenance and repair costs. It will allow manatees to pass through and access important habitats and breaching the dam will help to restore fish populations which are currently in decline.	That the springs will not be restored and we will lose valuable wildlife as well as money from tourism and hospitality.	No. Breaching the dam and restoring the springs is imperative and no other solution will account for the loss of endangered species.	
9/30/2021 20:25	Alachua		No	Yes			1 time	I would advise complete removal of the dam with restoration along the emerging river.	The removal would free the river for anadromous fishes to navigate up the river and spawn. Also, quite a few springs would be opened up to provide recreational and aesthetic benefits.	The density of fishes upriver to Silver Springs would remain depressed.	I am most concerned with full removal of the dam. If improvements could not be made to the emergent river, so be it. Nature can heal itself.	The dam was an environmental mistake to begin with. Its removal is much overdue!
9/30/2021 20:26	Alachua		No	Yes			2-5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	$150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers, restoring habitat for fish and manatees.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait. Let's not leave this problem for our children!	Its time. Lets finally fix this, and breach the dam.
9/30/2021 20:30	Alachua		No	Yes			2-5 times	Wildlife viewing	Breach it and reunite waterways	Benefits ecology and recreational use	Missed opportunity; spending on repair		
9/30/2021 20:31	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Boating Hunting Wildlife viewing					
9/30/2021 20:32	Martin		No	Yes			1 time	Wildlife viewing	Removal and restoration of the river	Loss of sturgeon and other wildlife I'm the sjr system	Continued degradation of natural ecosystems	Possibly	
9/30/2021 20:35	Alachua		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	We miss the best opportunity to do this. State and federal funds are available; public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
9/30/2021 20:48	Marion		No	Yes		1 time		Keep it the same	it's is it's own ecosystem	Fish more	Leave it as it is	
9/30/2021 20:54	Outside of state / other	California	No	No				Fishing				
9/30/2021 20:55	Marion		No	No				Restore the Ocklawaha River. Every day Rodman Reservoir and Kirkpatrick Dam are in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	There are many, but three rivers--Ocklawaha, Silver and St. Johns--and 50 springs would be restored. Also, historic fish and manatees would return as the breach created a free-flowing river	Again, there are many reasons, but you can follow the money. Millions in taxpayers' funds are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	This restoration will improve water quality and flow; support coastal resiliency; and strengthen a vital wildlife corridor. Moreover, rRaushing the rivers will provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. In addition, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.
9/30/2021 21:03	Alachua		No	No				Breach the dam.	20 lost springs and silver springs ecosystem restored. Three rivers restored. Ocklawaha, Silver, and St John's. Save millions to repair the dam.	Possible danger to homes if dam breaks. Loss of recreational opportunities.	No.	
9/30/2021 21:05	Alachua		No	Yes		2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing Other: Birding	Removal of the dam and restoration of the Ocklawaha River	1. The Ocklawaha, Silver and St. Johns Rivers, and 50 springs will be restored 2. 20 lost springs and Silver Springs ecosystem are restored 3. Historic fish and manatee populations can use the newly free-flowing river 4. Manatees gain essential warm water winter springs habitat 5. St. Johns River Estuary from Welaka to Palatka to Jacksonville will be healthier 6. Thousands of acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife 7. Millions of gallons a day of natural flow will be restored to the Lower Ocklawaha and St. Johns Rivers 8. Millions of dollars in repairs saved on a dam that is way past its life expectancy 9. Restoration creates more diverse recreation opportunities for everyone and increases visitation.	1. We miss the best opportunity to do this. State and federal funds are available, public interest is high, and environmental needs are critical (manatee, water quality, wildlife habitat). 2. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. 3. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and loss of native submersed aquatic vegetation. 4. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. 5. The 100-mile St. Johns River Estuary will continue to be deprived of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No.	
9/30/2021 21:05	Brevard		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Boating Wildlife viewing	Breach the Rodman/Kirkpatrick Dam	Natural habitats restored. wildlife returning to normal	Continued alteration of the land	No	
9/30/2021 21:07	St Johns		No	No				Removal of dam, restoration of river	Dam is expensive to maintain, reservoir provides little public benefit	Open-ended commitment to maintaining dam	User fees to support reservoir & dam, no taxpayer money, and preservation of other springs to make up for those lost under reservoir	There is little public benefit to most residents of the water mgmt district in keeping this dam operational
9/30/2021 21:07	Duval		No	No				Restoration of the natural flow of the rivers and protection of the ecological habitats	Science and the ecological benefits	Damage to the ecological habitats	No	restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife.
9/30/2021 21:22	Hillsborough		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	DESTROY THE DAM	it's useless. it's falling apart. It's cutting off the manatees and other wildlife that historically use t waterway. It was a failed project that should never have been started.	Continued destruction of historical migration grounds for manatee. Continued suppression of the ocklawaha springs.	No.	
9/30/2021 21:23	Alachua		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing Other: Fish counts with Florida Springs Institute	Take down the dam and restore the river to it's natural state	1. Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 2. 20 lost springs and Silver Springs ecosystem are restored 3. Historic fish and manatees return as breach opens creating a free-flowing river 4. 100s of manatees gain essential warm water winter springs habitat 5. 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 6. 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife 7. 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers 8. $4-14 Million in dam repairs saved on a dam past its life expectancy 9. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. 10. $57 million in potential flood damages avoided to downstream property owners What would be your biggest concern if your desired outcome is not achieved? 1. We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. 2. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. 3. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. 4. A storm event triggers a dam failure or overtopping resulting in potential damages to $37 property owners and up to $57 million in damages. 5. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. 6. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. 7. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. 8. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.		just leave the gates open so the manatees can swim back and forth. Let Striped Bass enter the river freely	Who put the Tilapia there? I'm seeing 10 lb monsters now..
9/30/2021 21:24	Putnam		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing Other: I boated the natural Ocklawaha in the reservoir reach before the project was started.	Removal of the dam and its water control capability to allow natural restoration of hydrologic regime and forested basin which was cleared and has been flooded continuously, except during occasional scheduled drawdowns, since completion of the project.	Professional knowledge of costs and impacts, not just direct but also within the entire river basin and the receiving waters of the St. Johns River.	That local political influence supporting single issue resource use by fishing interests will continue to hold sway over the range of ecosystem management concerns which have been exhaustively elucidated by state and federal government managers and scientists for decades, as though removal of the dam and impoundment would eliminate the sport fishing uses, which it will not.	No.	

9/30/2021 21:32	Outside of state / other	Illinois	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam	1) Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees; and 2) 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	1) Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future; and 2) Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("OSO") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/30/2021 21:37	Alachua		No	No				Removal of the dam & restoration of historical river course	Need for habitat restoration for native species	Runoff and water flow into the St John's River	Given publicized reports that the dam is approaching end of life, it would seem that either it needs to come down or be rebuilt. Since the initial purpose was to facilitate the cross Florida canal and that will never be, return to the initial watershed would seem to be best. Fishermen and boaters have numerous options, and reopening the waterway might actually open new opportunities for kayaking, wildlife and so on.	
9/30/2021 21:37	Alachua		No	Yes	1 time		More than 5 times	Wildlife viewing	It needs to go back to the way God intended. A natural river, wetland area	The dam goes against God's will. Mankind shall steward the animals and earth. It was never natural.	Continued algae blooms and degradation of the natural Florida environment that we were blessed with by God.	God's will shall be fulfilled.	I hope Ron DeSantis and Trump support the removal of the Dam. Like Moses parting the waters, they can achieve what God Wills. Make Florida Great Again!
9/30/2021 21:40	Alachua		No	Yes		1 time	Wildlife viewing Other: Landscape scenery	I support removing the dam, and restoring the river to a natural condition, or as natural as possible.	Need to restore the natural ecosystem of the river and springs. I saw the film 'Lost Springs' and think that there will also be benefits to state tourism if the system is restored. Also the water quality benefits are critical to human and wildlife health.	Excessive cost of maintenance of the dam, also the risk of possible catastrophic collapse causing flooding, damage and loss of life. We must plan for a future cooperating with nature, benefiting from natural functions rather than destroying nature and paying the costs.		Need to do everything possible to end problems of blue green algae. For human health this is critical NOW.
9/30/2021 21:41	Monroe		No	No				Remove the dam and restore the Ocklawaha River	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	
9/30/2021 21:53	Volusia		No	No					I would like to see it removed.	Wildlife and natural restoration.	More wildlife will suffer	No	
9/30/2021 21:59	Sarasota		No	Yes		2-5 times		Wildlife viewing	Become more of a natural habitat			No	
9/30/2021 22:08	Outside of state / other	Texas	No	No					Open it up. Allow the River to free flow like it should.	Habitat for manatees		No	
9/30/2021 22:14	Putnam		No	Yes	More than 5 times			Fishing Boating	Clean up the floating logs that hamper boating and provide safer boating. Keep the main boat lanes clear of vegetation.	The amount of boaters and fisherman that utilize Rodman reservoir.	Would hate to see a fully developed eco system destroyed by draining the reservoir.	None, keep the reservoir as is!	
9/30/2021 22:19	Broward		No	Yes		2-5 times		Other: NA	Remove the dam and restore the river	Condition of the rivers	Degradation of the rivers	No	Restore the original flow
9/30/2021 22:20	Outside of state / other	Pennsylvania	No	No					Free flowing water	The manatees	The manatees would be harmed		
9/30/2021 22:24	Volusia		No	Yes		More than 5 times		Fishing Wildlife viewing	Leave it alone	Their are reservoirs all over the country. They support many species.			
9/30/2021 22:51	Putnam		No	Yes		1 time		Other: NA	Remove the dam.	Return to natural flow		No	
9/30/2021 22:53	Alachua		No	Yes	1 time	1 time	1 time	Other: Viewing destruction to our natural Florida resources	I would like to see the dam removed	The dam blocks the river, causing dangerous algae blooms and spreading invasive plants, running the water in the area. Florida has the largest and most active aquifer in the world and we should not be ruining it.	Much more damage will be caused	No	
9/30/2021 22:57	Gadsden		No	Yes		More than 5 times		Fishing Canoeing / kayaking Wildlife viewing	I feel the damn should be removed to allow the original waterways to flow as nature intended.	Nature knows best. Restoration of natural habitat benefits animals, mammals, and people.	If the damn is not removed the natural springs will remain lost under the reservoir.	No. Nothing less than removing the damn will restore the natural habitat and access needed for endangered manatees.	
9/30/2021 23:06	Citrus		No	Yes		1 time		Canoeing / kayaking Wildlife viewing	This dam has damaged the Ocklawaha water flow for far too long. It is past time that it was removed.	If the dam remains, water quality will continue to decline to the point where the backed up waters will result in fish kills, more invasive weed blockages, and decreased economic benefit from visitors wishing to view a more pristine waters.	The Ocklawaha and St. John's rivers need to have their natural water flow restored so fish, wildlife, and avian life can once again flourish.	Not really, this issue should have been resolved a long time ago. It is shocking that the deterioration of the water flow in this area has been allowed to continue for years.	I would visit the dam area more often if it were restored.
9/30/2021 23:07	Outside of state / other	Illinois	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 300-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife.	If Florida does not act now, the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas is missed. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide unimbibed passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system.	No. Dam safety, improved water quality and wildlife habitat is needed now. A drawdown of the reservoir alone does not provide significant environmental benefits for fish, manatees, water quality, water flow--it is only a temporary solution.	
9/30/2021 23:34	Marion		No	Yes				Other: Drove by it a few months ago. Seems misplaced.	The Rodman Reservoir should be returned to the natural state. This will improve fishing and wildlife habitat.	Protecting Freshwater Resources The Cross Florida Barge Canal was officially deauthorized in 1990, and since that time FDR has focused its efforts on repairing the damage caused by the project. Efforts to restore more than 16 miles of river, 20 natural springs, and nearly 8,000 acres of biologically diverse hardwood floodplain forests are ongoing. Removal of the Kirkpatrick Dam will help provide expanded habitat for manatees in the Silver River.	Loss of Manatees and other wildlife that depend on the River system. Funds should not be spent to maintain and support a Dam which serves no purpose. Eco tourism, with trips originating in Putnam County, could provide useful alternatives to fish camps which evolved in the last 50 years.	My full vision would be to declare the River the St Johns to Silver Springs a National Wild and Scenic River and restored to it's original state. Leaving existing private properties would be the only reasonable alternative, dependent upon removal of the dam.	Save Tax dollars. Dismantle the dam.
9/30/2021 23:54	Alachua		No	Yes			More than 5 times	Canoeing / kayaking Wildlife viewing	Breach the damn and restore the natural flow of the Ocklawaha River	More than 50 years of blocking the flow of one of our State's most pristine waterways, provided by every environmentally involved restoration group available, that we must return the natural flow of the Ocklawaha to preserve the Floridan ASpecifically, Cannon Springs, manatee passages and rockDepfer to salvage the destruction caused by the detrimental effect of the Rodman Dam.	The loss of a great natural resources that may never be restored .Specifically the loss of manatee migratory venues, deforestation due to flooding and the coverage of natural springs (Cannon for example) and the free-flow of native fish which will actually IMPROVE fishing for sportsmen.	Nothing short of removing the Rodman Damn would I support.	Governors of all parties, Republican, Democrat and Libertarian (referring to the great Rubin Askew) were blocked from freeing this noble River by greedy anti--environmentalists factions who choke money and profit over the preservation of an irreplaceable natural wonder. As a native-born Floridian (1956) I find the entire argument for the existence of the Rodman Damn anathema to the preservation of our fragile ecosystem that remains a vital source of nature in a world of constant corporate destruction of our only Earthly domain.
9/30/2021 23:55	Duval		No	No					Remove the dams. Open up river for natural wildlife	Wildlife, new areas of Florida to explore		More water to keystone heights lakes	
9/30/2021 23:55	Clay		No	Yes		1 time		Other: Wanted to see it	Removed and the river restored.	Health of the St. John's river system and environment.	Benefit for most Floridians denied to support a few who want to preserve a failed venture.	No	That this error has not been corrected already is a shame.
10/1/2021 0:01	Duval		No	Yes		1 time	2-5 times	Fishing Wildlife viewing	Remove the dam. This is not a natural area and should be restored.	it is really weird to be fishing where pine forest/trees used to be.	Freshwater is held up from entering the St. John's River and operating costs	No	
10/1/2021 0:39	Orange		No	No					Tear it down				
10/1/2021 0:54	Putnam		No	Yes	More than 5 times			Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Hunting Wildlife viewing Other: To enjoy the beauty of nature.	I would like to see the dam remain intact and the reservoir maintained with draw downs as the have been in the past years.	Two wrongs do not make a right. It was a bad decision to build the dam in the first place and flood a natural forest that can not be reproduced in an economically feasible manner. The reservoir at this time also provides a future use of clean water for human county if we so need it : I was born in 1966 and grew up enjoying the dam and the reservoir with my family. I remember fishing in the reservoir when the cypress trees were still standing where they had been flooded and before the hydrilla became a nuisance. I remember my grandparents taking me striper fishing at the dam and then myself taking my daughter and son there as they grew up. As a lifelong resident of Putnam county I have always enjoyed the recreation opportunities provided by the dam and reservoir.	The mosquito and moccasin infested Myrtle swamp that would be left after dam is removed and the funding is not provided to return the forest to its previous state.	The only scenario that I can and will support is keeping the reservoir and dam. There is no way to return the floodplain of the reservoir to its natural state prior to flooding. The wildlife that now inhabits the reservoir and the barge canal along with the Oklawaha river is not aware of its prior state of free flowing river. The manatees are in Silver river in greater numbers than they have ever been. And other than a few old turtles and gators no other wildlife species lifespans have allowed them to miss a free flowing river.	Save Rodman dam and reservoir. Earmark funds to maintain to an economically attainable state for the future generations to enjoy and possibly rely on its water supply.
10/1/2021 4:17	Putnam		No	Yes			More than 5 times	Canoeing / kayaking Wildlife viewing	I would like to see the dam taken down and the river allowed to return to its natural state.	The reservoir is. It a healthy lake and requires much maintenance and weed control.	We continue to spend so much trying to shore up an unhealthy ecosystem	Drawing down on a more permanent basis	
10/1/2021 5:44	Volusia		No	Yes					Remove and let the river return to its natural course.	Statements from various environmental groups as well as a belief that we need to minimize man's attempted engineering of natural systems.	Negative impact to the St Johns River and unnecessary long term maintenance cost to maintain.	I don't see any half measures, so no.	As a teenager, I canoed down the Oklawaha from 40 to the dam. The river was so beautiful and wild until I reached the dam reservoir miles from the dam. What I found was an unnatural lake that seemed so out of place it was disturbing. Let's return the land surrounding the river channel to its natural state.
10/1/2021 5:54	Pinellas		No	No					Remove this dam and restore the natural environment. There is NO reason this should have ever been built in the first place, or should exist now. It is a travesty that this is even a question.	Manatees are starving to death and are losing warm water access as coal fire powered plants are decomissioned. They need river access. Manatees and ecotourism would be net beneficial for the local economy. The dam is already consuming millions of dollars in tax payer money for NO REASON and is actively harming the environment, which then requires MORE taxpayer money to restore. Fish populations in surrounding ecosystems are devastated. Dozens of beautiful springs could be restored. There are too many reasons to fit in this text box with limited characters.	The continued taxpayer expense of maintaining the equivalent of a "bridge to nowhere". Ongoing environmental damage. Water quality. Spring health. Aquifer health. Serious questions over political corruption. Serious questions over incompetence or corruption in Florida state agencies.	No. No half measures would be sufficient. The dam needs to be removed and the natural environment restored to how God created it.	
10/1/2021 6:22	Outside of state / other	North Carolina	No	No									
10/1/2021 6:28	Duval		No	Yes		1 time		Other: Just wanted to see it	Take them down	We need a free flowing river. Water worldwide is in jeopardy. We need to act now to keep our river as healthy as possible	A declining st johns river	I don't see how partially removing the dams would help either scenario	We must protect this water supply
10/1/2021 6:31	Duval		No	Yes				Fishing	Remove it	It would be best for the environment.	I have no biggest concern	Partial removal.	
10/1/2021 6:48	Clay		No	Yes					Remove the dam	Environmental studies showing benefit of restoring natural flow	Continued environmental decline	Not sure of any other alternatives but would consider when presented	
10/1/2021 6:51	Marion		No	Yes		2-5 times		Wildlife viewing	Remove the dam, restore the Ocklawaha free flowing river.	The environmental impact the dam has had on the down river areas. Fish and wild life has diminished since the dam. The wetlands that are along the river has been drained, this has killed the health of the environment.	The conditions will continue to degrade down river from the dam, this will also degrade the springs along the river including Silver Springs.	TAKE THE DAM DOWN	
10/1/2021 6:57	Duval		No	Yes		1 time		Wildlife viewing	Dam removal and restoration to return to its natural state, including the Ocklawaha River, perhaps the most beautiful river in NE Florida.	Environmental studies show increased salinity at least as far south of the Buckman Bridge in Jacksonville	Increased salinity of the St. Johns River and areas further south of Jacksonville.		Restore the Ocklawaha River.
10/1/2021 7:00	Osceola		No	No					If we don't need it, put it back to how it was.	Concerns about wildlife infradstructure.	Disappointing	No	
10/1/2021 7:05	Nassau		No	Yes				Canoeing / kayaking	Remove it	Hydrological studies indicate that salt water in trusting in the lower St John's may be offset by flow from the Ocklawaha.	Dam failure.	Increase the outflow to add freshwater downstream.	I would eventually like to see the Ocklawaha restored so that future generations can enjoy it.
10/1/2021 7:20	Clay		No	Yes		2-5 times			It should be removed.	Numerous studies that indicate impairvement of Silver Springs, Ocklawaha, and St Johns. Dams are not natural. They disrupt natural water flow and the ability of flora and fauna to freely move about.	continued reductionn in spring flow.	no	
10/1/2021 7:37	Alachua		No	No					Removal and restoration to natural state so both humans and animals can enjoy this area as it was meant to be.	Creating access to all these additional springs which have been covered up with provide enormous relief to the overstrained springs in Ocala national Forest, lightning the load of traffic to those springs will help preserve all of our springs. (Not to mention increasing enjoyment for visitors.. nobody likes fighting crowds especially to go visit something that should be a pristine natural area)	Florida's continued downward spiral . Wildlife and environmental mismanagement, habitat loss, etc.	If the dam cannot be entirely removed due to fiscal reasons, breaching, and allowing parts of the dam to remain would be alright.	
10/1/2021 7:38	Volusia		No	Yes		More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing Other: Hiking and Mountain Biking	I would like to see the Dam Kirkpatrick Dam maintained and the Rodman Reservoir and boat ramps maintained and kept open and free to the public as they are now.	How valuable I feel that having this type of access to nature is for the area including trips I make to Putnam County when I am in the area to enjoy the Rodman Reservoir and Kirkpatrick Dam	Loss of wildlife, nature and public access to an area that contains both.	Not aware of any scenario short of my desired outcome that I would be willing to support.	Thank you for making this Survey open to the public.
10/1/2021 7:44	Clay		No	No					Dam should be removed and let the river return to natural state.	Continued research showing lack of proper water flow throughout the system of rivers, springs.	Our rivers and springs dying.	No	
10/1/2021 7:50	St Johns		No	No					Remove it.	Restoring the natural flow of the rivers in the area.	Reduction of the quality of our water resources.	No.	There is plenty of fishing to be done at other places in Florida. Letting bass fishermen dictate keeping the dam which was a bad idea in the first place is bad environmental business. Fishermen can still fish in a healthy river environment, they don't have to have a dammed lake to fish.
10/1/2021 7:59	Duval		No	Yes		2-5 times	More than 5 times	Canoeing / kayaking	Dismantle it, and restore the habitat that was flooded.		The Millions in dam repairs saved on a dam past its life expectancy. The multi-millions in potential tourist revenue generated from kayaking and snorkeling.	No The fam was a mistake to begin with.	This is an opportunity for the state of Florida to do the right thing; to show other states that we regret making poor ecological choices in the past and we're doing our best to remedy them now.
10/1/2021 8:03	Putnam		No	No					I'd like to see the restoration of the Ocklawaha River by breaching the Rodman Reservoir/Kirkpatrick Dam. Short-term drawdown during the work with a firm timeline.	The 15,000+ acres of the Florida Wildlife Corridor that would be restored or enhanced for people and wildlife. will serve and inform our broad and growing population, help to protect our health and expand our economy.	Continued support with millions in taxpayers' money - of a dam that does not provide flood protection, power, water supply or other broad public benefit.	No - not in the long run.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. I believe this will enhance our quality of life by benefitting our economy, reputation and health.
10/1/2021 8:07	Alachua		No	Yes			1 time	Canoeing / kayaking	Removed and area restored, as much as possible, to pre-dam condition (natural flow).	Help improve quality of the St. Johns river ecosystem and mitigate effects of climate change and saltwater intrusion.	Water quality, ecosystem services, conservation value of the Silver River, Ocklawaha, and the St. Johns continue to decline.	Partial restoration proposals seem reasonable.	
10/1/2021 8:12	Wakulla		No	Yes		More than 5 times		Fishing	To be maintained and in good working order	I see both sides of the issue and being a fisherman it's a great place. The lake is one of the states greatest fisheries and seems to be managed very well by FWC. I would hate to see it go away.	I would take any business that I might do in the area away to some other part of the state. When I'm there I do more than just fish. I stay in the area hotel's eat at the restaurants and buy gas and bait from local stores.	If the lake was to go away then I really don't see a point.	As a fisherman I enjoy my time on the lake and it hold a special place in my heart. For sure is one of the true big bass factories in the state. We all know that the barge canal was a complete disaster from the start but it has made the lake one of the top places in the state to fish for bass. I'm not one that likes to see rivers dammed either. Free flowing the way mother nature had intended is always best. I really don't see this issue ever getting fixed where both sides would be happy with the results. I fear not having a place to fish. That would mean that I would take my money some place else.
10/1/2021 8:14	St Johns		No	No					I would like to see it's removal as that is 50 years overdue.	It would restore countless streams, 3 major rivers and help rebuild the ecosystem so that it once again flourishes	My biggest concern would be the wildlife that suffer because of the dam's obstruction.	No	Please help save the saa cows and the rest of the wildlife
10/1/2021 8:14	St Johns		No	Yes	1 time	1 time	More than 5 times	Wildlife viewing	Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Additionally, 100s of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No.	60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/1/2021 8:15	Alachua		No	Yes		More than 5 times		Fishing (shoreline/structure) Wildlife viewing	Remove the dam and attempt restoration of the area.	The poor quality of the reservoir, the lack of the forested area that was there originally, the blockage of aquatic species needing to move up river (in its natural state), the cost of dam and reservoir maintenance.	Continued degradation of the reservoir, dam structure maintenance, elimination of a natural flow for aquatic species needing a free flowing river	Absolutely not.	I fished the Ocklawaha River beginning in the 1960s and knew it as one of the most beautiful river systems in FL; I was also there when its destruction began for formation of the dam. I also worked for the former GFWFC as a biologist while the barge canal was being built measuring environmental destruction.
10/1/2021 8:16	Nassau		No	Yes		1 time			Take it down. Restore the natural environment.	Save our beautiful natural springs			
10/1/2021 8:37	Manatee		No	No					I would like to see an improvement in the preservation of nature, especially for manatees.	Manatees are an important animal in Florida and we have to do anything possible to preserve them. If the 20 springs that come with the Kirkpatrick dam could be beneficial for manatees why not do that.	This year was a very hard year for manatees. This is an endangered species that relies on its hot springs. If manatees don't get them they will die and eventually disappear because the are already in danger.	I could only support any decision that helps the manatees. It doesn't have to be the demolition of the dam but it should bring improvement to this species.	Please help the manatees
10/1/2021 8:20	Duval		No	Yes			1 time	Fishing	I would like to see the dam removed and the natural flow of the river restored.	The dam is an artificial, man made creation that blocks the river to the detriment on the ecology.	Continued deterioration of the St. John's River.	No	None
10/1/2021 8:21	Duval		No	Yes			1 time	Fishing	Keep the reservoir.....maintain the dam.	People come from around the nation/world to fish the Rodman Reservoir.	Nothing would be gained by removing the Kirkpatrick dam, the water flow to the St. Johns would remain the same.	Not at this time.	The reservoir & dam are paid for, and are an asset for that area. Why spend money to remove something that is beneficial to that entire area?
10/1/2021 8:24	St Johns		No	Yes		2-5 times			I would like to see it breached and have the river restored to its original path.	The looming problems in upkeep alone support this action.	I believe nature will take it in this direction even without our input, and it may be catastrophic.	A partial breach would be better than none.	Construction was a mistake.
10/1/2021 8:25	Alachua		No	Yes			2-5 times	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs.	Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/1/2021 8:25	St Johns		No	Yes		2-5 times	2-5 times	Wildlife viewing		Taken down	Restore St Johns river	Continued algae blooms and high salinity	Not sure	
10/1/2021 8:27	Sarasota		No	Yes			1 time	Wildlife viewing	Remove the dam and restore Ocklawaha River to its natural condition.	Environmental degradation caused by the dam, including negative impact on springs and on fish.	Corruption of government officials, unconcerned with restoring and protecting Florida's natural environment.	No.	Get with the program!
10/1/2021 8:35	Pinellas		No	Yes		2-5 times		Canoeing / kayaking	Breach the Rodman/Kirkpatrick Dam	The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue.	planning and working ahead for environmental improvement is critical for the future economic welfare of Florida
10/1/2021 8:36	Alachua		No	No					I would like to see the Rodman Dam removed.	Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, but the most important information supporting my position is the negative impact the Dam has had on the environment, particularly its impact on wild life.	continuing negative impact on the environment. Other concerns involve cost of maintaining the dam but that's not my initial concern.	no	
10/1/2021 8:37	Pinellas		No	No					Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration..
10/1/2021 8:38	Duval		No	Yes				Fishing	Maintain the impoundment and dam AS IS.	I fished the reservoir many times over the years, however, age has prevented me from continuing that passion and the fact that the impoundment has established it's own eco-system is extremely evident to anyone who has ever frequented it. That and the fact that, NOTHING would ever bring back the original river status leads one to the conclusion that... two wrongs will never make a right ...and therefore, the impoundment and dam must be left as is! Don't throw more money into a useless dam. It serves no purpose and to repair would spend tax payers dollars.	The total waste of tax dollars needed to TRY to restore the original river landscape.	I don't think so.	
10/1/2021 8:40	Marion		No	No					Take the dam down and restore the river.		It would cost big bucks to repair.	No	
10/1/2021 8:41	Putnam		No	Yes		1 time		Other: NA	Remove the dam	Return to natural flow		No	
10/1/2021 8:47	Volusia		No	No					the dam must be removed. It serves no helpful purpose.	Any natural aquatic system requires free movement of the water	we'll have to wait another 50 years for common sense to prevail	not really	Please make this happen. It's your job to protect our waters
10/1/2021 8:48	Clay		No	Yes			1 time	Wildlife viewing	Restore original riverflow	Nature	It will never be returned to it's original flow.	Nope	
10/1/2021 8:48	Duval		No	Yes			1 time	Fishing	I would like to see the dam removed and the natural flow of the river restored.	The dam is an artificial, man made creation that blocks the river to the detriment on the ecology.	Continued deterioration of the St. John's River.	No	None
10/1/2021 8:49	Duval		No	No					remove dam and restore natural flow				
10/1/2021 8:50	Volusia		No	No					Removal of the dam	Let water intrusion	Harm to fish, wildlife and people with salt water intrusion in wells	Opening it up	
10/1/2021 8:51	Marion		No	Yes			2-5 times	Fishing Fishing (shoreline/structure)	Destroy it.	Removal of dam.	Dead Manatees.	No.	

10/1/2021 8:51	Duval		No	Yes		1 time	Wildlife viewing	Removal of the dam to restore the natural flow of the rivers and springs for improved water quality and restoration of the natural wildlife habitat.	Federal and state scientific studies have clearly demonstrated that restoration of a free-flowing, connected system is cost-effective and will provide significant ecological benefits to three rivers and Silver Springs. Restoration will result in more diverse recreational opportunities, increase visitation to the area and increase jobs in the area to support this increased visitation.	We miss an incredible opportunity to reverse fifty years of damage to the area since currently, state and federal funds for restoration are available, public interest in restoration is high and environmental benefits are great. Furthermore, the dam not safe.	No. The economic and environmental benefits of restoration have been clearly demonstrated.	
10/1/2021 8:52	St Johns		No	Yes		1 time	Canoeing / kayaking	Remove the damn.	Allow the river and springs to return to their natural state. The entire ecosystem has suffered from altering the natural flow.	Fish stocks and water quality.	No, remove the dam.	Long overdue, the remnants of a failed project that needs to be corrected.
10/1/2021 8:54	Seminole		No	Yes		1 time	Canoeing / kayaking Wildlife viewing	Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss out on saving the state millions in trying to keep up maintenance on the dam. This is the best opportunity we have had to save money, and help local economies at the same time. It will also increase fishing opportunities.	No. Breaching the dam is 50 years overdue	This is way past overdue and the science AND economics supports the breaching of the dam. We need leadership to LEAD and get this done.
10/1/2021 8:56	Duval		No	Yes		1 time	Fishing	Get rid of the dam and restore the river	Loss of bird and wildlife habitat	I think it will be achieved with time	I could support a partial opening of the dam, but that doesn't make sense	
10/1/2021 9:00	Lake		No	No				I would like to see the restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway. This is a terrible shame.	All of these are important to me: Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers $4-14 Million in dam repairs saved on a dam past its life expectancy Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. $57 million in potential flood damages avoided to downstream property owners	We live on Lake Eustis and we are concerned about water quality throughout the state. If the breach does not happen water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Plus, thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	This is highly important and myself and our entire families are in full support of this beach.
10/1/2021 9:00	Duval		No	No					Remove it.	Better water quality downstream.	Algae blooms		
10/1/2021 9:05	Duval		No	No					Removed	Let the ocklawaha return to its natural state, the use of dams nationwide has only caused environmental destruction, what is its purpose? Save what's left of Florida	Just another blow in the continued destruction of the Aquifer	None	
10/1/2021 9:05	St Johns		No	No									
10/1/2021 9:05	Duval		No	No					I'd like the dam removed and the Ocklawaha River restored to its free-flowing origins	The St. Johns River would be healthier if the Ocklawaha River was restored.	That the St. Johns River salinity continues to rise and threatens the health of Northeast Florida's ecosystem.	Unsure	
10/1/2021 9:07	Duval		No	Yes		More than 5 times	Fishing	Maintain the dam and reservoir and to continue support for the fishery and other outdoor activities using tax payer dollars of the Counties the the project (though defunct) still has a footprint in.	My hundreds of times visiting the reservoir and Ocklawaha river for outdoor activities	By draining the reservoir you will ruin the current ecosystem in place and it would leave 20 miles of barren wasteland that would take over 100 years to recover.	No, the dam must stay	
10/1/2021 9:10	Martin		No	No					Anything that helps our springs and rivers.	The restoration of springs.	Continuing degradation of Springs in Florida.	Not really.	We have enjoyed visiting North Florida's Springs with our family for decades and we support efforts to improve the springs and rivers.
10/1/2021 9:35	Alachua		No	Yes		1 time	Other	Remove the dam					
10/1/2021 9:16	Outside of state / other	Indiana	No	Yes		1 time	Canoeing / kayaking	remove it	for the drowned springs.	springs, fish. manatees			
10/1/2021 9:16	Nassau		No	Yes		2-5 times	Fishing Boating Wildlife viewing	Take down dam restore natural flow	Health of St. John's river	Continued ecological imbalance	Partial take down of dam to restore natural flow		
10/1/2021 9:16	Alachua		No	No					I support the removal of the dam.	The dam causes toxic algae blooms and massive fish die-offs as well as enables the spread of invasive aquatic plants. It also causes the tax payers millions of dollars. Worst of all, it causes the build up of pollution in the water by preventing flow of multiple rivers and stops the recharge of dozens of important springs.	The long term negative effects to the environment and tax payers.		Please work with scientists on this instead of listening to fishermen and stores that are only looking at short term benefits to them.
10/1/2021 9:18	Duval		No	Yes		2-5 times	Wildlife viewing	Remove dam	restore springs, improve water quality in the St Johns River. Improve fishing. Improve environment for wildlife.	Continued destruction of springs and water quality.	NO		
10/1/2021 9:19	Duval		No	No				I would like to see the dam removed	The removal will improve the health of Silver Springs and the St John's River	Continued degradation of above	No		
10/1/2021 9:19	Volusia		No	No				The river system restored St. johns, Ocklawaha	We need to save our wetlands	Picture lack of water to maintain life	The dam is useless. restore the river system and the wetlands		Thanks for the opportunity
10/1/2021 9:21	Duval		No	No									
10/1/2021 9:27	Putnam		No	Yes		1 time	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing	Remove the dam and restore natural flow	Environmental restoration	I have waterfront property in Welaka as primary residence. If the dam fails the home will be most likely be flooded. Also restoration of salinity levels and more waterflow to clear up the stagnant sibal water. Hopefully it will allow for some underwater vegetation to return. Clarity is bad. bottom is just silt in the area.	There is either a nonsensical dam or no dam. Half a dam solves nothing. As an avid bass fisherman with a bass boat who lives in Welaka I say tear it down.	The Good 'Ol Boys in Putnam have kept this absolete abomination in place long enough. The return on investment is terrible and truth be told the fishing is not as great as it is made out to be. Take it down safely or a hurricane will do it without the consent of Bubba and his other brother Bubba.
10/1/2021 9:27	Putnam		No	Yes		1 time	2-5 times	Canoeing / kayaking Wildlife viewing	Remove the dam. Restore the Ochlawaha River	It will restore many springs and the Ochlawaha and Silver springs to their natural flow. Besides that, the dam has outlived it's life expectancy.	Declining water quality which often leads to blue-green algae events, under water vegetation loss, invasive weeds and fish kills.	No. It is time to put the environment, our wildlife and the quality of our water first. It should not be an after thought. Besides, we can save these bodies of water and still meet economic and recreational goals that all of us have for this piece of land and water. It could be a win-win. But the dam MUST go.	North Florida is a gorgeous and special place. The natural fresh water springs are a rarity throughout the WORLD and we have them here in our own backyard. We are fools to not protect them.
10/1/2021 9:29	Alachua		No	No				Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit—especially no economic benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/1/2021 9:29	Seminole		No	No				Remove the dam and restore the Oklawaha River	Removing the dam helps restore 50 springs as well as the Alahahoal, Silver and St John Rivers. The lower Alahahoal and St John's Rivers will receive 150 M + gallons a day of restored natural water flow. Over $4M will be saved on a dam that is past its life expectancy.	If the dam remains, water quality will continue to decline	No. Breaching the dam is 50 years overdue. The water quality can't wait	
10/1/2021 9:29	Monroe		No	No				Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/1/2021 9:31	Volusia		No	No					Take it down, un-dam the river.	Will of the people, science	Lack of acces due to crumbling dam	No	
10/1/2021 9:31	Brevard		No	No					Remove the Dam	We have visitited and kayaked the Ocklawaha, Silver and St Johns rivers for years and see the results of poor flow as well as the loss of the ability to view our 20 springs lost to the back up by the dam. Manatee are dieing due to loss of clean water from the springs to support grass grotth. REmoving the dam would allow many manatee to gain acces to springs in the winter.	The dam would continue to restrict full water flow from all the rivers in central florida as well as boating and access to manatee. The dam will continue to cost the state more money through maintenance. Also a possibility of dam failure in a major storm event	Draw down the reservoir 12 feet permanantely	We care about Floridas wildlife and environment and I newsest the restoration of rhe Oklawaha river the main part of the Great Florida Riverway. Restoration will help reorrite the 217 mile system and will benifit all communities while improving water quality and benifitting florida whildlife
10/1/2021 9:32	Alachua		No	Yes		2-5 times	Fishing Canoeing / kayaking	I'd like to see the dam removed and the area's ecology/flows restored.	There is no need to have the dam, therefore it should be removed and the flows restored.	Excess taxes being spent to maintain a non-essential structure.	Not really. It's either keeping the dam or removing it. If there are other scenarios (maybe I've missed them), the District should put those options out there.	If the dam is removed, area businesses that depend on the reservoir should be compensated for their financial losses, along with helping staff until they can secure new jobs.
10/1/2021 9:34	Volusia		No	Yes		2-5 times	Canoeing / kayaking Boating Wildlife viewing	The environment will recover and the nature will restore itself.	The environment will recover and the nature will restore itself. At present it is not a benefit to nature, not the people.	It will continue to obstruct the natural flow of what should have never been obstructed in the first place.	No, full restoration should take place.	This has been going on for way too long! Let's allow the river to be a river!
10/1/2021 9:35	Duval		No	Yes		More than 5 times	Canoeing / kayaking Other: Hiking		Leave it as is. There is a huge ecosystem that has developed there. If drained, it will be a MASSIVE smelly swampland for years to come.	Succession of a site takes many years to occur. Especially to a mature hardwood wetland environment. Rains would add significant silts to river.	See above. Significant siltation in both the Ocklawaha and St John's. Any fresh water GAINS would be short term while drawdown occurs. Then normal flow would return.	Periodic drawdowns as is the standard now.	
10/1/2021 9:35	Duval		No	No		2-5 times	Other	Dam removed and flow restored to natural flow	Healthier river downstream. Help restore lower salinity, improve wildlife and plant life.	Poor health of river downstream results in death of wildlife	Not sure what options are available		
10/1/2021 9:37	Putnam		No	Yes		1 time	2-5 times	Canoeing / kayaking Wildlife viewing	Remove the dam and restore the Ochlawaha river	It restores many springs and 3 rivers. The dam is past it's life expectancy and rebuilding it would be expensive.	Loss of water quality, increased algae events, more invasive species, fish kills.	NO. Natural springs are north Florida's most unique natural assets. Submerging 50 of them under the Rodham reservoir seems foolish and short sighted	
10/1/2021 9:39	St Johns		No	Yes		1 time	2-5 times	Wildlife viewing	Removal	Unnecessary blocking of natural springs	Further deterioration of natural resources	No	Any dam fool with a bulldozer can make a lake. only God can make a river.
10/1/2021 9:42	Clay		No	Yes		2-5 times		Other: Camping	Take it down.	The springs are a Florida treasure. The dam is a disgrace. A free-flowing river is a good thing I every regard. The reservoir right now is an abomination	We will be left with a semi-stagnant lake.	Nope	Thank you for all your hard work in preserving our natural resources. Take it down today.
10/1/2021 9:49	Duval		No	Yes			1 time	Canoeing / kayaking Other: canoeing/kayaking	remove the dam and free the movement of water of the Ocklawaha River	the dam impedes the natural flow of river water; during drawdowns, the view is horrible	dam is effective in its use	no	
10/1/2021 9:52	Outside of state / other	Carolina now; grew up in Lake Count	No	No					Remove or breach the dam.	It would restore ecological balance to the aquatic system, including springs, manatee habitat, fish migration.	The ecosystem would continue to be unhealthily fragmentat, with detrimental effects to wildlife and local economies.	No.	
10/1/2021 9:53	Alachua		No	Yes		2-5 times	Wildlife viewing	I would like to see the dam removed, allowing the reservoir to recede and the natural flow of the Ocklawaha River to be restored.	Florida has about 7800 lakes and far fewer streams: a combined total of only about 1700 creeks, branches, and rivers. Of those flowing waters, only nine have larger drainage basins than the Ocklawaha River, and most of those drain to the Gulf of Mexico, not the Atlantic Ocean. Bounded over much of its length by public lands, the Ocklawaha is the core of a unique corridor -- a ribbon of water through un-urbanized forest.	The forested wetlands that were present during my lifetime will not be restored, fish migrations will continue to be interrupted; water loss to the atmosphere through evaporation from the reservoir will continue to exceed water loss through evaporation from the river; and a singular opportunity to restore and retain a unique combination of water-plus-forest will be gone.	No. I would like to be able to compromise, but I see no scenario other than dam removal that would achieve the essential objectives of river and forest restoration.	In the early 1970s I provided a legal deposition related to the then-proposed Cross Florida Barge Canal. As I recall, my testimony dealt primarily with the biogeochemical problems (primarily sulfur, nitrogen, carbon) associated with conversion of flowing waters to reservoir. Given what we know today about methane emissions from shallow reservoirs, this topic needs to be re-examined; the potency of methane as a climate-changing gas is irrefutable, and land/water management practices that add it to the atmosphere are irresponsible.
10/1/2021 9:53	Alachua		No	Yes		More than 5 times	Fishing Canoeing / kayaking	I would like to see the dam removed and the Ocklawaha River restored. The dam was a foolish move from the get go, and the harm it has caused continues daily.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored, 20 lost springs and Silver Springs ecosystem are restored. It's a no-brainer.	This may be our best last chance to do the right thing. State and federal funds are available; public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. I'm afraid that if it doesn't happen now, it may never happen. The facts speak for themselves.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Please, do the right thing and restore the Oklawaha. You have a chance to make the historically correct decision. It's the right thing to do and now is the right time to do it.
10/1/2021 9:53	Alachua		No	Yes		1 time	Other: Observing changes in floodplain tree diversity	The dam should be removed, restoring the free flow of fresh water to downstream reaches.	Restoring the free flow of the Ocklawaha River would restore habitat for the endangered manatee population and downstream fisheries, including the estuary itself.	Death by a thousand cuts. The failure to restore natural wetland and aquatic habitat will add to the already-significant losses of pristine waters and wildlife habitat in the State of Florida.	No	Too often we have failed to retain the ecosystem services provided by our natural wetlands and aquatic ecosystems. The continued expenditure of state funds to prolong an otherwise unsustainable fishery is a senseless waste.
10/1/2021 9:55	Duval		No	No				I would like to see it totally removed to open up water flow to tributaries and to the St. John's River.	Water levels have been decreasing for years and algae blooms are getting worse. Water needs to be freely flowing to keep the areas healthy.	Florida's waterways will become damaged.	No.	
10/1/2021 10:07	Duval		No	No				Breach the Rodman/Kirkpatrick Dam.	Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No. Breaching the dam is 50 years overdue.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
10/1/2021 10:07	Duval		No	Yes		2-5 times	Fishing Canoeing / kayaking Wildlife viewing	I would like to see the Dam destroyed and for the natural flow of water to be restored to the region. Doing so will restore the natural movement of fish, water, and resources throughout the region.	Captains for Clean Water, Florida Spring Institute			
10/1/2021 10:08	Polk		No	Yes		1 time	Fishing Canoeing / kayaking Boating Hunting	I would like to see the dam removed and natural flow restored.	There's no purpose for maintaining the expense of the dam. It does not serve any real purpose. Continually spending money on it is fruitless.	We keep doing the same stupid stuff over and over and over. Look at the expense being incurred restoring the Kissimmee river to a more natural state.	No.	Knock it down.
10/1/2021 10:11	Hillsborough		No	Yes	1 time	2-5 times	More than 5 times	Wildlife viewing	Breach the Rodman/Kirkpatrick Dam	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No. Breaching the dam is 50 years overdue.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/1/2021 10:11	Dade		No	No				Breach the Rodman/Kirkpatrick Dam.	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available; public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	No. Breaching the dam is 50 years overdue.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
10/1/2021 10:15	Orange		No	No					The dam should be completely demolished and removed to restore critical habitat and springs.	Removing the dam would create access to over 20 springs currently submerged, and provide improved habitat for manatees and other endangered species.	The further degradation of natural habitat and water quality as well as inefficiency of spending more money to repair the dam.	No. The dam and reservoir provide little to no public benefits at high ecological and economic costs.	Removal of the dam is the single most effective task to restore the entire Ocklawaha River system and provide immense opportunity for economic development and habitat restoration.
10/1/2021 10:16	Orange		No	No					For it to be opened and to let animals benefit from it	Facts	the environment	no	protect the environment and do the right thing

10/1/2021 10:48	Outside of state / other	Texas	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 Million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	a. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway	As someone who loves to visit Florida, and who's always wanted to see manatees in the wild, in their natural habit, having the manatees home destroyed would be disastrous.
10/1/2021 10:18	Duval		No	No					Remove the dam to restore flow to the St John's River	Rising salinity in the river near Mayport	Salinity would move further up the river destroying wildlife and harming the health of the river	Partial removal of the dam	The aging dam will need repair and maintenance. Why spend our tax dollars for this?
10/1/2021 10:18	Hillsborough		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway. Do what the scientists urge is necessary	Not only do we save millions of dollars, but Historic fish and manatees return as breach opens creating a free-flowing river	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. And A storm event triggers a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages. And The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. And The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait. We have finances, property, and the future of our state to protect here.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.
10/1/2021 10:19	Duval		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	I would like to see the Dam removed and the natural flow of the river restored- reopening all the springs in order to restore environmental and tourism benefits.	Scientific data on damage to the environment, loss of tourism to the now flooded streams, improvement in the health of the St Johns River which is such a major factor in so many ways to NE Florida, restoration of a national significant historic river, perpetual cost of maintaining the Dam	negative impact on the health of the St Johns River, cost of maintaining the dam, loss of tourism (river fishing vs reservoir fishing and the restoration of the historic springs	No, the benefits to the entire area far outweigh any disadvantages. The local economy would have to change focus, but could be enhanced due to growing national interest in preserving the environment.	
10/1/2021 10:21	Volusia		No	Yes		2-5 times	2-5 times	Canoeing / kayaking Wildlife viewing	Breach the Rodman/Kirkpatrick Dam	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	Hundreds of manatees loose access to essential warm water winter habitat.	No. Breaching the dam is overdue.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
10/1/2021 10:26	Duval		No	No					Remove the dam completely, drain the reservoir.	Uncover the springs under the existing lake. The original water way should have been restored when the canal project was stopped by then President Nixon. That area was some of the most beautiful areas in the state. I remember it well!	Why should money be spent on a dam that shouldn't have been there in the first place.	NO! Get rid of the dam and restore the water way completely!	Get rid of the dam NOW!
10/1/2021 10:28	Alachua		No	Yes			1 time	Other: just wanted to see it.	have it removed.	health of the environment.	Our water ways will continue to have issues with pollution and algae bloom.	Start the removal process.	
10/1/2021 10:29	Alachua		No	Yes			1 time		I would like to see the Dam breached	The studies that suggest the positive impact of returning life to certain springs and species of aquatic life	The continued strain on already strained aquatic life	Not really, do the right thing. Return power to nature.	
10/1/2021 10:31	St Johns		No	Yes			1 time	Other: Have not used it, only visited to see it.	Destroy the dam and let the river flow freely	Its not fair to benefit only a few fishermen at the expense of the natural environment.	Cost of continued maintenance of the dam.	I would like to see public access to the river at multiple points. That way fisherman can fish the river from parks or piers. If there are various points of public access to the river, that is a good scenario.	Visiting the Rodman dam is not equivalent to "using" the reservoir.
10/1/2021 10:31	Pasco		No	Yes			1 time	Wildlife viewing	Complete removal and restore to the natural state	Florida has suffered significant wildlife diversity decline, especially with the fish population, and things like the Kirkpatrick Dam are directly responsible.	Ecological collapse	None.	
10/1/2021 10:33	Hernando		No	Yes		1 time	2-5 times	Fishing (shoreline/structure) Wildlife viewing	Dam needs to be removed or breached.	This was a project that no longer exist and isn't needed. But in the interim it has caused havoc to natural systems. Since the project isn't ever going to be completed there is no need to continue paying to maintain and repair this dam.	Continued government wasted resources and funds for a project that never materialized as well as the unnecessary strain it placed on natural resources.	No, why continue the upkeep and wasting of resources when it could be better served elsewhere.	
10/1/2021 10:37	Alachua		No	No					tear it down, not worth repairing		water dragons (manatees) need the habitat		
10/1/2021 10:38	Clay		No	Yes	2-5 times	More than 5 times	More than 5 times	Wildlife viewing	Protect it protect manatees	Science	Loss of wildlife	Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	
10/1/2021 10:41	Brevard		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Everyday that the dam is in place it is a harm to the water quality and wildlife is inflicted throughout the Great Florida Riverway	Tree Rivers, Ocklawaha, Silver and St. Johns and 50 springs would be restored. It is important that 20 lost springs and the Silver Springs ecosystem is restored.	The 100-mile St. Johns River Estuary continue to be deprived of 150mgd of natural water flow to improve water quality, restore fish and wildlife habitat and reduce saltwater intrusion.	No, Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Manatees: 2021 is the deadliest year on record for manatees; Unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for you consideration
10/1/2021 10:42	Brevard		No	No					Breach the Rodman/Kirkpatrick Dam.	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	Putnam County and Silver Springs economics lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years.	No. Breaching the dam is 50 years overdue.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
10/1/2021 10:44	Hernando		No	Yes		1 time		Other: Photography	Remove the Dam.	Environmental work in the area.	Continued environmental degradation.	No.	
10/1/2021 10:46	St Johns		No	Yes		1 time			Breach the dam	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	Missed opportunity. Further damage.	No.	
10/1/2021 10:47	Alachua		No	Yes				Fishing Rooting Wildlife viewing	Dam removal so natural flow can return	a ruined river bed	a ruined river system	there is none. It either is taken down or not	
10/1/2021 10:49	Broward		No	No					I would love to see it removed or breached.	Florida's ecosystems have suffered so much damage from artificial water management, drastically reducing the biodiversity in areas and submerging many natural wonders. For example, this dam reduced the fish in Silver Springs by 96+%, buried 20 natural springs, and restrict our endangered manatee's access to critical warm water in winter.	Continued use of tax money to maintain an otherwise useless dam which damages our ecosystem	Breaching vs removal, or digging a channel bypassing it.	Breaching the dam is cheaper than fixing it, by millions, and would open up access to 20 springs, at least some of which could be developed into state and local parks increasing tourism dollars while simultaneously benefiting the natural habitat.
10/1/2021 10:49	Orange		No	No					Breach the Rodman/Kirkpatrick Dam.	Restoration and habitat protection for manatee's that are in critical need for protection.	Florida's water quality has been declining and there are more blue-green algae blooms that are destroying our ecosystem. Our economy is driven by tourism, bringing in billions of dollars to our state. Tourists are no longer going to come when our waterways and beaches are too unhealthy to even breathe in the air.	No.	
10/1/2021 10:49	Alachua		No	No					Removal of the dam	Environmental effects of dam			
10/1/2021 10:52	Duval		No	Yes			1 time	Fishing Canoeing / kayaking	Breach the dam.	If breaching the dam will reintroduce a number of springs, it will bring a large number of tourists to the area enhancing the local economy. In addition to this, the local vegetation will be restored and the migration paths of the marine population will no longer remain stagnant.	The longer this is delayed the more damage to the environment and economy the dam will inflict. The creation of the dam is part of Florida's largest embarrassment in history and it would be unwise to hold on to the mistakes of the past.	No. Breach the dam.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
10/1/2021 10:55	Gadsden		No	No					I'd like to see it removed.	It's causing habitat loss to what makes Florida unique. You can have reservoirs anywhere, but springs and spring-fed rivers are special.	The continued habitat loss including the reduced access for manatees.	A drawdown to reveal more of the bottomland forest, original rivercourse, and the springs along the river.	I enjoy paddling on the Ocklawaha River, and would appreciate additional opportunities to explore the river and springs along it.
10/1/2021 10:59	St Johns		No	Yes	1 time	2-5 times	More than 5 times	Fishing (shoreline/structure) Canoeing / kayaking	Remove it.	The dam is keeping millions of gallon of high quality water from freely circulating downstream. As a result, the water sits and literally ferments the backed-up water. The water is already in a fertile state from septic effluent and agricultural runoff. If you stand below the dam you can smell the water and see foam produced by nitrates and phosphates. I have some background in freshwater biology and recognize the symptoms of polluted water. If the water were allowed to flow freely this would not be happening.	The process mentioned above would continue and the stJohns river would not get the fresh water it needs.	No because as long as the dam is there there is no hope.	Revenues lost because of bass fishing could easily be recouped by developing kayaking any tubing launches. I have kayaked the river above and below the dam. It has the potential to be the top kayaking spot in Florida and the country.
10/1/2021 11:02	Palm Beach		No	Yes		1 time		Wildlife viewing	Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs. Dams like this just arent needed anymore, safe Florida's wildlife where it is, so we can keep enjoying the most beautiful state there is.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economics lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is way overdue.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
10/1/2021 11:08	Duval		No	No					I'd like to see it removed.				
10/1/2021 11:08	Duval		No	No					Breach and remove the dam.	Restoration of the drowned springs and natural environment. Creating more access for fish and manatee habitats.	Money spent on maintaining a dam that is not used for it's original purpose. The continued decline of native fish and manatee populations due to habitat loss.	No. The dam must come down.	We must take every step to restore Florida's natural springs. 2021 has been the deadliest year on record for manatees and removal of the dam would provide much needed habitat and water quality improvements.
10/1/2021 11:11	Marion		No	Yes			More than 5 times	Wildlife viewing	Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	No.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/1/2021 11:14	Collier		No	No					Breached/ torn down	The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs. It's also drowning natural springs which could be boosting the fish population and helping our vulnerable manatees.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No, breaching the dam is long overdue	The dam not only incredibly destructive, it also serves no useful purpose and is actively costing us money if it isn't removed. I can think of no logical reason for its continued existence.
10/1/2021 11:16	Seminole		No	Yes	1 time	2-5 times		Fishing Fishing (shoreline/structure) Canoeing / kayaking Wildlife viewing	I'd like to see the dam removed and the springs restored	Ecological research and analysis from those in support of the dams removal	That the state of Florida is not prioritizing its aquatic ecosystems as a broad policy	No	
10/1/2021 11:19	Alachua		No	Yes				Other: I was interested in seeing the dam.	I would like to see the dam removed to allow the river system to regenerate.	The dam is old. Leaving the dam in place requires ongoing expenses of repairs and maintenance. Removing the dam, with the subsequent recovery of the Ocklawaha riparian system, will provide the region with a world class natural recreational attraction, a reopening of its migratory wildlife corridor and the many quality-related benefits of a functioning natural system.	My biggest concern is the expense of keeping the dam and the negative impact it has on natural resources.	Provide fishing businesses, fishing guides and boat/canoe rentals economic incentives and tax breaks to help them transition and adapt their business models.	
10/1/2021 11:24	Seminole		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking	Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. And it would give access to manatees.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No. Breaching the dam is 50 years overdue.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/1/2021 11:25	Duval		No	Yes		More than 5 times		Fishing Fishing (shoreline/structure) Canoeing / kayaking	Leave it as it is. Do not remove.	The people that use this resource.	Another recreation are done away with.		
10/1/2021 11:31	Pinellas		No	Yes			1 time		Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.			
10/1/2021 11:40	Putnam		No	No					Take it down and free the springs	Environmental impact	Flooding of welaka if the dam breaks	No	
10/1/2021 11:40	Duval		No	No					I think the dam should be removed.	Restoration of the river would benefit wildlife including migratory fish and manatees.	Continued spending to maintain a dam/reservoir that provides no benefit and is detrimental to the environment.	Not really. The dam never should have been built in the first place.	
10/1/2021 11:43	Volusia		No	Yes			1 time	Fishing Boating Wildlife viewing	Remove the dam and restore the natural flow of the Ocklawaha river.	Maintaining the barge canal and dam are an unnecessary expense, especially since the reason for the dam and resulting reservoir was for the abandoned cross Florida barge canal project. Why maintain the infrastructure and unnatural river configuration once the original objective was abandoned? There are plenty of other sport fishing opportunities in the St. John's river, aside from the Rodman reservoir.	That an unsustainable, costly river configuration will be maintained to suit a few individuals.	No	
10/1/2021 11:46	Pinellas		No	No					Breach the Rodman/Kirkpatrick Dam	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/1/2021 11:51	Duval		No	Yes			2-5 times	Fishing (shoreline/structure) Boating	I would like to see the Dam breached and preferably removed so the river can return to its natural state and the natural habitat of the underlying land can return.	My personal belief that the beautiful river and the gorgeous land underlying the reservoir should be returned to the status in which God created it. After all the purpose for which it dammed up in the first place, the "wicked ditch" was a bad idea which totally failed.	The people of the State of Florida and all the potential visitors will not be able to enjoy the natural beauty of the river and its surrounding land. The river will provide fishing just as good as the Reservoir and it will provide excellent scenic cruising for private boaters as well as commercial sightseeing tours.	No. I believe the River should be returned to the condition in which God created it. I feel very strongly about this.	While I live in Duval County where I was born, I have a lake house on Lake Broward south of Palatka in Putnam County. My grand parents had a house on the St. Johns at which my sister I stayed often when we were youngsters. I am 80 years of age and have lived on a little piece of water just off the Ortega River know as Pirates Bay for the past 35 years. I grew up skiing, sailing and boating on the River. Before the dam I ran up the Ocklawaha and Silver Run to Silver Springs. I am a member and past president of the Antique and Classic Boat Society's Florida Sunnyland Chapter. With the exception of the last two years due to Covid I have organized and led a 5 day St. Johns River Cruise from Jacksonville to Sanford for antique boats both prior to and in reverse after our Antique Boat Festival in Mt. Dora and Tavares, Florida. This Cruise attracts antique wooden boats from all over the US and Canada. One year we even had a boat from Australia. We usually have between 30 and 40 of these old wooden boats. Mine, for example, is a 1936 Chris Craft, 22' Triple Cockpit Runabout. We have had boats as old as a 1911 Mullins Launch from Canada in the past. I know the River pretty well. If the Ocklawaha River were restored we could run it up to Silver Springs and on up to the Harris Chain of Lakes to our boat show in Tavares. What a splendid adventure! But today it is only a dream due to the dam Dam. So we run to Sanford and pull our boats out for the drive over to the Show. Let's get the River back to the way God intended it to flow so all Floridians and guests can enjoy its natural beauty. It is the right thing to do. Let's step up and get it right!! Thank you. PS - There is no way to attach it, but I wrote a letter to Governor DeSantis saying much the same thing last December 2020. I'll see if I can get it to you separately.

10/1/2021 11:55	Palm Beach		No	No					Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy. 1. What would be your biggest concern if your desired outcome is not achieved? If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more. 4. Is there any scenario short of fully achieving your desired outcome you could support? No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait. 5. Open-ended section to add additional comments. Suggested prompt: What do you treasure about this ecosystem, or about natural Florida in general?				
10/1/2021 11:55	Orange		No	No					Destroyed, return river to natural flow	N/a	Environmental effects on the river	Lowering the reservoir	N/a
10/1/2021 11:56	Orange		No	No					Demolished, river returns to natural hydrology	N/a	Submerged springs	N/a	
10/1/2021 11:58	Columbia		No	Yes				Other: Visited as a child, to see it. Never had a use for it. There were natural lakes, rivers and springs closer to where I grew up to use for fishing, boating	Remove it, and let the river resume its natural course. This will allow unrestricted travel by various threatened aquatic species.	Public use from a river with numerous springs to support fish/ birds and likely manatees, i believe will outweigh what the reservoir currently generates.	It will prove humans have limited sight and think we know best about everything. (and clearly, we do not). suspect diversity of species will decline further, and you will end up with a silt filled, muddy water hole.	Not a feasible one. If money was no object, you could dredge a large deep bowl at the dam , so when it is removed you would still have a large uncontained lake, but still allow transit for aquatic species thru the lake and up stream. So, no other outcome I can see.	Florida needs to restore this area to an as natural condition as possible. It will generate more recreational uses like canoeing, kayaking, fishing and offer more diverse wildlife viewing.
10/1/2021 12:00	Clay		No	Yes			2-5 times	Fishing Canoeing / kayaking	I would like to see them removed	The positive environmental impact of having the river restored to its natural flow	That it will negatively impact the St John's River	No	
10/1/2021 12:04	Duval		No	No					Remove at least part of the dam	Restore the river with fresh water to offset rising salinity in st johns	Catastrophic failure of the dam	No	Restore the river for people and wild life
10/1/2021 12:04	Broward		No	No					Breach the dam	Increased wildlife!! The fish will have access to migratory routes and the population will increase.. MANATEES will use this habitat!!	Keep spending taxpayer money to repair a dam that serves no useful purpose. Missed opportunities to increase wildlife and uncover springs	No> this should have been done long ago	
10/1/2021 12:05	Marion		No	Yes		1 time		Wildlife viewing	I would like to see the river begin to open and permit the natural flow of wildlife to and from the St. Johns River to finally be able to occur.	The St Johns River suffers from the lack of water that could reduce the saline content . As wel the Trees and upper Ocklawaha River could begin to clear as well as the springs along its path which further dilute the saline conditions of the major River system.	That the native habitats of the upper Ocklawaha will continue to deteriorate and the value of this land for bio tours and viewing ecotourism will grind to a halt . I also feat that the saline content of the St. Johns river will continue to cause deterioration equally discouraging the bio tourism is now enjoys.	I could begin to hope a partial confluence of the two rivers may begin to rescue some of the species that brought travelers from the world.	
10/1/2021 12:08	Duval		No	Yes	1 time	More than 5 times	2-5 times	Wildlife viewing Other	TEAR IT DOWN	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	- No. Breaching the dam is 50 years overdue.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
10/1/2021 12:11	Duval		No	No					I would like to see the dam broached SOON to restore a free-flowing Ocklawaha River so we can get started on environmental restoration of this important riverway. How much longer to we have to suffer with bad decisions made decades ago? Especially bad decisions that are reversible???	Science. Science supports the benefits of restoration to 50 springs and 3 rivers. I live in Jacksonville. The health of the St. Johns River is visibly under duress and will benefit from the restoration of water flows from the Oklawaha	A missed opportunity and continuing environmental degradation of Florida's water quality and quantity. Plus, losing the opportunity to re-establish approximately 15,000 acres of forested wetlands o bad bird and water management.	No.	
10/1/2021 12:12	Alachua		No	No					Although I have not physically visited Rodman Reservoir, the Kirkpatrick Dam impacts the Silver River which I use extensively for recreation. Removing the dam will restore approximately 20 lost springs, rejuvenate the Silver River ecosystem, enhance and expand habitat for many native species including manatees, and provide multiple business opportunities related to recreational pursuits. It is time to remove this structure, which was ill conceived from the beginning.	Changing climate patterns are likely to significantly increase costs of dam maintenance and currently, the dam fails to provide substantial benefits to surrounding areas such as flood protection, power, or water supply.	We Floridians are stuck maintaining an antiquated and anachronistic structure that should have never been built.	We have been dealing with this issue for the last 50 years so NO - it is time to demolish the dam and re-establish appropriate waterways and water flows.	
10/1/2021 12:13	Flagler		No	Yes		1 time		Wildlife viewing					
10/1/2021 12:18	St Johns		No	No					I would like to see the dam removed and the area restored to its natural state.	Everything I read leads me to believe that removing the dam is necessary for the overall health of the St Johns river and that of the surrounding areas.	Further stress to the entire St Johns river basin. Loss of natural habitat, impact to animals and plant life.	No. The overall health of the entire area is more important than the impact to recreational fisherman. Their voice has been the only one politicians have listened to.	
10/1/2021 12:19	Duval		No	No					Breach the dam.	The dam has flooded over 20 natural springs. Silver springs has seen a 92% decrease in fish population since the dams erection.	We are wasting the opportunity to have 20 of this state's beautiful, natural spring hidden up by a man made project that has no significant effect in flood protection and does not provide any water diversion.	No. The dam needs to be breached and removed and not a single cent more spent on it. We are wasting our tax dollars on this pointless, frivolous project which does not benefit the local economy in which it is installed.	Our springs provide some of the best natural beauty in the world and are unique to Florida with their wonderful biodiversity. The only reason I would support this dam is if it was providing significant flood protection to citizens of the area. However, it does not and frankly it is hard to determine why it the project was approved in the first place as it seems completely unnecessary.
10/1/2021 12:19	Duval		No	No					I would like to see the dam taken down and the river restored to its natural state.	Fresh water influx would improve salinity conditions in the St. Johns River.	Increased salinity in the St. Johns River.		
10/1/2021 12:21	Clay		No	Yes		1 time	Wildlife viewing		Remove the dam	Water flow back to st johns river	Health of st johns River	No	
10/1/2021 12:22	Duval		No	No					Breach dam and restore river	Info from the riverkeeper	Further environmental damage	Not that I've seen	Thank you for the survey
10/1/2021 12:22	Duval		No	No					The Kirkpatrick dam is deteriorating and will need tax dollars for maintenance. Without maintenance, a breach would cause substantial loss downstream. Better to spend money to make a controlled breach and prevent uncontrolled loss.	Reports from Florida Department of Environmental Protection that the dam is deteriorating.	Damage to the properties downstream of the dam.	The dam does not have to be completely removed in order to restore the flow of the Ocklawaha.	The reservoir does provide sport fishing, but the river will continue to hold fish for anglers.
10/1/2021 12:24	Seminole		No	No									
10/1/2021 12:25	Duval		No	No					Removal of the dams	Environment	Failure of the dam		
10/1/2021 12:25	Palm Beach		No	No					Remove it or at the very least, breach it.	Manatee numbers have really fallen in the past year, and breaching the dam would allow them access to more springs and protected warm water. Florida wildlife is in crisis and needs to be helped by land and ecosystem conservation and restoration.	That we could lose the opportunity to help one of Florida's iconic species.	No.	Restoration of connected areas for Florida wildlife is so important. Please breach this dam which is not needed and in need of expensive repair anyway.
10/1/2021 12:26	Lee		No	No					Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
10/1/2021 12:29	Brevard		No	No					remove the dam	increases the flow to numerous springs and rivers improving their quality	The quality of our springs and rivers continue in a downward spiral. Economic benefits from additional recreational activities is not achieved.	no, so long overdue	I've been to Ocklawaha, Silver, and St. Johns Rivers, I've swum in many springs. Over the years I have witnessed the degradation of many waterways. We need help and this is a rational solution for improvement.
10/1/2021 12:31	Lee		No	Yes			2-5 times	Fishing	The dam should be removed to restore Florida to its natural state.	Removal of dams in other states has been wildly successful at restoring the origin ecosystem. Pennsylvania is a notable example.		Partial removal of the dam with plans for full removal down the line.	Thank you for allowing the public to comment on this matter.
10/1/2021 12:32	Dade		No	Yes		1 time		Wildlife viewing	It would be great to see it back to its natural state.	it's man-made and serves no purpose other then blocking wildlife.	That people continue to go fishing there	No	
10/1/2021 12:34	Orange		No	Yes			2-5 times	Wildlife viewing	I'd like to see it torn down	It is factually impeding economic growth, contributing to wildlife die off, and burying several natural springs	Mass extinction protected species that drive tourism, such as Manatee's. Continue job loss in affected counties, continued ecological disasters	No, it absolutely needs to go	
10/1/2021 12:36	Flagler		No	No					Removed and replaced with springs	The ecological damage of dam that provides no benefit.	Ecological damage	Yes	
10/1/2021 12:42	St Johns		No	Yes	1 time	2-5 times	More than 5 times	Fishing Canoeing / kayaking	I'd like to see the dam removed allowing the Oklawaha to resume its natural course.	Salinity of the St John's and the ecological benefit of a free flowing river	Continuing ecological damage and elimination of wildlife habitat.	No	The dam serves no useful purpose. It has no hydroelectric function. It's part of the disastrous cross Florida barge canal that was scrubbed in the early 70s. Let nature take its course.
10/1/2021 12:43	Broward		No	Yes		2-5 times		Canoeing / kayaking	Dismantle the dam, returning the area to a more natural state and restoring natural water flow patterns.	Having access to the apparently 20+ springs currently impossible to visit would be personally enjoyable, and economically valuable to the area.	Detrimental impact on already strained wildlife populations, and a decrease in the long-term stability of water availability in the area.	No.	Florida has "managed" water quite poorly over time. Misplaced goals of flood control are no longer viable, and have done more harm. (unforeseen consequences - except they were totally foreseen) Taking easy opportunities to correct past poor decision-making is essential.
10/1/2021 12:47	Volusia		No	No					I would like to see it removed and the natural river connection restored.	That is was put there to begin with. This was a mistake and has altered the natural system. It should have been removed years ago. Manatees are losing warm water refuges and this could restore some habitat for them to use as they once did.	The rivers would continue to decline in environmental quality and protection.	Even just removing the dam without a major restoration would be a start. It's a dividing symbol that has concerned Floridian's far too long.	While I have not visited the actual dam itself, I have enjoyed time on the St. John's, Silver and Ocklawaha Rivers. It would be amazing to experience the removal of this structure in my lifetime. I feel it would be a true win and great achievement for our future generations to return the system to flow as nature intended.
10/1/2021 12:48	Orange		No	No					Destroy it	It's useless, costs money, harms environment, looks ugly	None	No	Florida is by and large the worst place I've ever lived and I am leaving soon so I don't care much either way. However getting rid of this pointless monstrosity could maybe make the state less terrible so I support that.
10/1/2021 12:51	Duval		No	No					I would like it demolished so we could have springs access	Knowing about the springs and the potential tourism	Lost tourism	No	
10/1/2021 12:57	Clay		No	No					Our lakes refilling in Keystone Heights and also the Oclawaha River restored	The damage to our lakes and Oklawaha River	The river and our lakes pet WORSE!!!	No just remove the dams and let the water flow as it was before the dam	Thank you for reading this please let me hear back from you. Damdon40@comcast.net
10/1/2021 12:59	Volusia		No	Yes			2-5 times	Wildlife viewing Other: Photography		Wildlife population decline in Florida	Further decline in wildlife population	No	
10/1/2021 13:07	Orange		No	No					Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
10/1/2021 13:08	Marion		No	No					Restoration of the Ocklawaha River by breaching the Rodman,Kirkpatrick Dam	Three rivers ,Oklawapha, St. Johns, and,Silver are restored	The lower St Johns.Oklawaha,Silver River are not reunited and restored.	no	I am concerned about water quality and wild life
10/1/2021 13:08	Nassau		No	No					Remove the dam, at least partially, and restore the Oklawaha river.	Partial removal and restoration of Oklawaha River was approved years ago and should have been implemented by now.	The aging dam fails causing catastrophe and/or hugh expense of tax dollors .	implement the partial removal and restoration of Oklawaha	Just do it!
10/1/2021 13:09	Hillsborough		No	No					I would like to see the dam dismantled. I love our Florida springs and our beautiful manatees.	The gentle manatee, a symbol of Wild Florida, is endangered. By dismantling the dam, these animals will have safe access to warm, inland waters during the winter.	I am concerned for the manatees and other wildlife.	No.	
10/1/2021 13:11	St Johns		No	Yes	1 time	2-5 times	More than 5 times	Other: driving by	get rid of it	It costs money to maintain, and serves no purpose	we continue to pay for it, and the river will continue to be dammed up.	no, not really. It literally doesn't belong there.	It's kind of strange this is even open for public debate. We could restore a large portion of the Ocala Natl Forrest to it's natural state, which would be beneficial to fish, wildlife and everything in the whole area. Imagine being able to kayak from Silver Springs to the St.Johns.
10/1/2021 13:12	Marion		No	Yes			More than 5 times	Fishing Canoeing / kayaking	Restore the river by removing dam	River reports and dam condition	Manatee population degraded as well as water degraded	No	
10/1/2021 13:17	Duval		No	No					I would like to see the dam safely removed and the ecosystem restored allowing for the flow of fresh water and habitat for many critical native Florida plant and animal species recreated.	There are many drowned springs, a unique and important part of the Florida ecosystem which are directly impacted by this useless man made structure. Removing the dam would allow for the restoration of habitat for manatees, a much beloved symbol of the diverse wildlife Florida supports, which have faced extreme loss of safe breeding and wintering areas.	The ongoing cost to tax payers in the state of Florida to maintain the dam system and the destruction of wildlife and habitat that is already critical.	No, at this point the dam provides no benefit to the community, be it safety from storm surge/flood or power, while the costs, both economically and environmentally, are immeasurable.	
10/1/2021 13:17	Lake		No	Yes	1 time	2-5 times	2-5 times	Canoeing / kayaking Boating Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in breach opens creating a free-flowing river. 100s of manatees gain essential warm water winter springs habitat	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored. Historic fish and manatees return as breach opens creating a free-flowing river. 100s of manatees gain essential warm water winter springs habitat	The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway.
10/1/2021 13:18	Hillsborough		No	No					Tear the dam down!	20 springs would be freed. supporting both tourism and manatees/wildlife. Let's bring back some of Old Florida again.	Millions of dollars spent repairing a dam that is an ecological mess	Not really. The dam is past its end of life.	Tearing down the dam would do so much to help restore Silver Springs by freeing 20 springs.
10/1/2021 13:19	Seminole		No	No					It disappear.	lost springs and unique habitat that they support. Cost of maintaining a structure that has little value.	That we spend tax payer money on maintaining a reservoir that has little character instead of restoring our uniquely Florida springs.	Not really	Please stop wasting our tax money on maintaining structures that ruin our natural Florida.
10/1/2021 13:26	Orange		No	No					Take it dow	Helping bring back floridas springs	Fish and manatee population disappeared	No	
10/1/2021 13:26	Volusia		No	No					Breach it.	Wildlife and water quality.	Loss of habitat for manatees, fish, and quality of life and water resources.	The cost of upkeep is to expensive and we need to help wildlife and water quality. Breach the dam.	Florida needs to be proactive with the waterways.
10/1/2021 13:27	Alachua		No	No					Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
10/1/2021 13:32	Duval		No	No					Breach the Rodman/Kirkpatrick Dam.	The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No. Breaching the dam is 50 years overdue.	
10/1/2021 13:32	Duval		No	Yes			More than 5 times	Fishing Canoeing / kayaking Wildlife viewing	Maintain the dam structure and the reservoir	Current ecology, wildlife and fish.	If the dam is breached even in a controlled manner acres of land will be exposed with nothing but the remains of the original landscape which is not viable so millions would have to be spent restoring the flow of the river and all adjacent land.	Not really!	It's a wonderful environmental asset, removing the dam would spoil it and have an extreme economic impact on the area.
10/1/2021 13:33	Hillsborough		No	No					Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	NO	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.

10/1/2021 13:40	Putnam		No	Yes		2-5 times	More than 5 times	Boating Wildlife viewing Other: monitor aquatic vegetation	Restore the natural flow	Rodman Reservoir is 52+ years old and, to date, no real maintenance has been performed on the structures. The earthen dam, the spillway, and the lock are all in need of major renovation. That type of maintenance will be extremely expensive to the tax payers of Florida. When the reservoir and associated structures were transferred to the State of Florida, the state was in no position to except responsibility for operation and maintenance of the system so the SJRWMD was given that responsibility until the state could go through its budget cycle and gear up for the take over with equipment and personnel. Since the SJRWMD already operated and maintained structures throughout the District it was in position to operate, maintain, and inspect portions of the system. During my time with the SJRWMD, I was given the responsibility to operate and maintain the system during that 9-month period, we had our structure personnel inspect both the spillway and the Lock. The lock was the primary problem at that time, and we recommended that the State prepare to have the lock shut down, fully inspected, and renovated. To date, none of this work has been performed. If renovations are made to the dam, spillway, and lock, a dedicated funding source for future maintenance should be identified, starting with the primary users of the reservoir and the locks: fishermen and duck hunters.	One of my big concerns is the lack of proper maintenance of the structures which could cause the failure of any of the systems such as down stream flooding in the case of the dam failure, rapid increase or decrease in water level due to spillway malfunction, and/or failure of the gates in the lock and complete loss of the lock are a few examples. Another of my concerns is the cost to renovate the system	I could support the complete renovation of the structures to ensure their safety and proper function I could also support the radical drawdowns to levels even lower and of longer duration than the 11 foot NGVD drawdowns in the past. I could also support an increased fluctuation in the annual maintenance of water levels	
10/1/2021 13:41	Duval		No	Yes		1 time	Other: I don't use it.	Remove the dam and let the river return to it's natural state.	River water supply to the St John's would be increased, much water is lost from evaporation. The flow from the springs would increase without the suppression by the reservoir water levels.	More damage to our natural springs. Greater salinity in the St John's River due to recent dredging.	Not that I am aware of.	
10/1/2021 13:42	Duval		No	No				I'd like to see it removed	Manatees need these springs if we're going to stop them from dying off even more	Wiping out manatees	No	
10/1/2021 13:44	Alachua		No	Yes		1 time	Wildlife viewing	This is submitted by the Conservation Committee of the Alachua Audubon Society on behalf of our 700 members. Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. This is necessary to restore the ecosystem, improve water quality and improve habitat for wildlife.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored and 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife. Restoration will create more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years.	No. Breaching the dam is 50 years overdue. We must take this opportunity to restore the ecosystem and improve habitat for wildlife in a state whose population grows every year, crowding out wildlife.	The first proposal to cut a canal across the Florida Peninsula was by King Philip II of Spain in 1567. The canal was proposed again several times by people in the United States, with the first actual work done in 1935. The massive, full scale effort by the Army Corps of Engineers began in 1964. This destructive project was strongly opposed by The Florida Defenders of the Environment headed by Marjorie Harris Carr. Marjorie began her opposition as president of Alachua Audubon, but created Florida Defenders of the Environment to concentrate her efforts on this fight. By the time she, and the many other people, environmental groups, and politicians she enlisted managed to stop work on the canal in January of 1971, Rodman Dam had already been constructed and the section of the Ocklawaha River from Eureka to Rodman Dam (George Kirkpatrick Dam) had been destroyed and deeply inundated by the water held back by the dam. This section of the Ocklawaha River had been one of the most beautiful sections of river in Florida, with its winding channel of clear water surrounded by a floodplain of mature cypress/hardwood forest, and it was one of the premier fishing destinations in Florida. Red-breasted sunfish (red-bellies) and black bass were abundant. It was also a major wildlife corridor, supporting populations of Florida manatees, stripped bass, and many other species. Now, it is a stagnant, weed infested pool of water that supports bass tournaments and a few bald eagles, but is otherwise an environmental disaster. The dam and stagnant pool of water stand in the way of manatee and striped bass migration, cover up several springs, and prevent a high quality fishing and boating experience. Maintaining the dam and stagnant pool of water has always been wastefully expensive, and now the dam needs even more expensive repairs. It is time to remove these environmental insults and reclaim the free-flowing Ocklawaha River.
10/1/2021 13:46	Duval		No	Yes	1 time	1 time	1 time	Canoeing / kayaking	REmove the dam	more springs	that no springs would be exposed	no	
10/1/2021 13:47	St Johns		No	Yes		2-5 times	Canoeing / kayaking	Demo the dam		Salt water intrusion on St Johns River			
10/1/2021 13:51	Duval		No	No				Remove the dam	Improve the St John's River		Not sure		
10/1/2021 13:55	Putnam		No	Yes	1 time	2-5 times	More than 5 times	Wildlife viewing Other: Watching and daydreaming that one day this natural area and river system will be restored.	Breach the Kirkpatrick Dam and Rodman Reservoir to restore the Ocklawaha River. This would allow the economy, wildlife and water quality to be restored throughout the Great Florida Riverway, which is crucial.	Restoration of the ecosystem; Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored.	This Dam was a complete mistake in history and that is now very clear. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	NO. The wildlife and water quality simply cannot wait. Breaching the dam is 50 years overdue.	Thank you for working towards what will be a monumental win for not only the surrounding area but all of Florida, showing that we can learn from history and support our precious natural areas that so many depend on.
10/1/2021 13:55	Duval		No	No				I would like to see the dam removed so that the river can flow freely as nature intended	The negative impact that this structure has had on the surrounding area. I understand numerous natural springs were flooded to create this dam.	That more tax money will be spent to fix and maintain the dam.	Just let the dam thing fall apart. This is what will probably happen, as this has been a debate going on for decades. It will be a pile of rubble by the time Tallahassee makes a decision		
10/1/2021 13:55	Duval		No	No					It needs to be torn down, it should never have been built in the first place.	The dam is BAD for the environment, BAD for the health of the St. Johns River, and BAD for the surrounding waterways.	More of our waterways will DIE.	No.	Tear that Frankenstein monster down NOW.
10/1/2021 13:56	Volusia		No	Yes		1 time	Fishing (shoreline/structure) Wildlife viewing Other: Spent many summers as a Child Silver Springs - last time i visited it was baron wasteland so sad depressing	Open to natural flow - make a park for tourists kids families locals other - ALL to enjoy	1980 I was a 10yo Child and visited Silver Springs it was the most amazing place on earth. The fish the birds the native the waters. It was an amazing place. Ive tried to revisit the area many times with my son and myself and new girlfriend more recently. I wont go back visit the area until something is done it is totally devastated and depressing - absolutely priceless resource we have destroyed - it can be fixed - whats the hold up?	Someone will whine cry make this about politics left right other and the mission to restore this river will be lost if we have delays or setbacks. It is going to take money patience to restore this area. It is a priceless part of Florida	dude really? DO SOMETHING - START SOMEPLACE - Restore the flow is step1....	As a young child in the late 1970s early 80s. My parents would take us to Silver Springs glass bottom boats stay for a few days over the summers. It was a magical special place that truly touched something inside deep down inside all of us humans... it was beautiful connection with mother nature and it filled young and old alike with wonder and amazement at how special our mother earth really is. Has anyone taken a Silver Springs glass bottom boat ride RECENTLY - NO .... it is a baron wasteland of depressing SO SAD.... RESTORE the flow let mother nature FLOW!! We must start restoration someplace - THIS DAM! is the prefect place to start . . why haven't you started why are you reading this right now not getting plans for removal of the dam restoring the River and its tributaries and begin the miraculous comeback - starting now ... go .... !
10/1/2021 13:58	Dade		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs.	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	No.	
10/1/2021 13:59	St Johns		No	No				Breach the Dam.	Hundreds of manatees would gain access to much-needed habitat. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Construction of the Dam was an outdated and misunderstood strategy based on what we know now.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years.	No, breaching his Dam is long overdue.	Do the right thing. Destroy this Dam.
10/1/2021 14:01	Hillsborough		No	No				Deconstruction	It will greatly impact the environment (and in turn people) in a positive way.	We would lose an amazing opportunity for helping fish and manatee numbers repopulate.	No		
10/1/2021 14:02	Broward		No	Yes		1 time	Canoeing / kayaking Wildlife viewing	Take down the dam	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We could lose momentum and the opportunity to preserve these springs and save habitats for native Florida wildlife. Furthermore, the more we let the dam remain, the more dangerous it becomes since it is far past its expectancy	No, let's get this done	
10/1/2021 14:04	Marion		No	Yes	2-5 times	2-5 times	Fishing Canoeing / kayaking Wildlife viewing	Remove the dam and associated structures and implement restoration studies/prooedures to regain the historic flow of the river and begin restoration of the watershed.	Time and time again studies have shown that natural systems trump human manipulated systems in terms of flora and fauna diversity, water and air quality and long term sustainability of resources and recreational opportunities.	This will be just one more domino allowed to fall in Florida's long history of environmental degradation of resources.	No.	I hold a Wildlife Management degree and have 40 years experience managing Florida natural systems.
10/1/2021 14:05	Duval		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Hunting Wildlife viewing	Maintain as a recreation area for generations to come. This is truly a unique area of the state for all outdoorsman for fishing, hunting, birdwatching and family recreation.	The number of people from not only Florida, but other states that frequent Rodman Reservoir for its outstanding fishing opportunities, as well as duck hunting.	The loss of habitat for Fish and fowl to the anglers and hunters of Florida.	NO	
10/1/2021 14:05	Marion		No	Yes		1 time	Canoeing / kayaking	REMOVE the dam!	Study showing the dam is subject to a catastrophic failure affecting hundreds of properties.	harm to the environment, the adverse effects on the river	NO! There is NO need for the dam! Study after study has proven there is no need for the dam.	REMOVE the DAM!
10/1/2021 14:06	Duval		No	Yes	1 time	2-5 times	More than 5 times	Fishing (shoreline/structure) Wildlife viewing	Take down the dam	Access to new springs and better habitat for wildlife	Na	No	
10/1/2021 14:07	Jefferson		No	No				Breach the Rodmon/Kirkpatrick Dam.	There are 20 springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	Manatee and fish populations are in trouble across Florida. Without restoring historic migratory routes, these populations will most likely continue to decline. This dam is past life expectancy and will require maintenance in the near future if not breached.	No.	2021 is the deadliest year on record for manatees, unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. Breaching the dam will provide essential warm water habitat for hundreds of manatees by providing access to historically available springs. Both natural springs and manatee habitat provide tourism to Florida. To not take advantage of this opportunity to restore habitat would be a serious mistake. Thank you for your consideration.
10/1/2021 14:08	Escambia		No	No				The dam removed so the river can run free.	This would bring back 20 springs that have been flooded.	The dam will break, wreaking havoc.	No, the dam has almost no practical purposes.	20 springs will help tourism.
10/1/2021 14:09	Putnam		No	Yes		1 time	Wildlife viewing	Canoe on down Copyright (c) 2010, 2011, 2012 William F. Quinlivan to the tune of "Deep River Blues" by Doc Watson Barge canal? Don't cogitate! Forget the river, let's move some freight! That was the start of the Okla-uh-oh blues They dammed that river, the gators and glades Room for progress must be made That's how we got these Okla-uh-oh blues Well, all those plans are ashes now But the river sits bottled up anyhow Sighin' Cryin' Dyin' with them blues The water flows used to run so deep Right down to where the sacred keep It's the river that pays the Okla-uh-oh dues(these God Almighty Blues) (solo break optional) ... now this this here's my favorite part: Two hun'erd horse to seek your wish Gasoline sure to chase your fish Thank you for these Okla-"uh-oh" blues Motor oil, styrofoam Another six-pack might get you home So thank you for these Okla-uh-oh blues				
10/1/2021 14:10	Alachua		No	Yes		1 time	Wildlife viewing	Get rid of it	common sense. pollution reports	Revolution	nope	get rid of the dam thing
10/1/2021 14:10	Lee		No	No				Breach the Rodman/Kirkpatrick Dam.	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	Hundreds of manatees loose access to essential warm water winter habitat.	No. Breaching the dam is 50 years overdue.	Thank you for your consideration.
10/1/2021 14:12	Martin		No	Yes			Canoeing / kayaking Wildlife viewing Other: Ecosystem viewing.	Remove the Dam.	Restore original ecosystem to the extent possible.	Continued habitat degradation.	Restore as much as possible.	
10/1/2021 14:14	Orange		No	Yes		1 time		A demolition.	There are multiple obscured and underwater springs/habitats, making the demolition one of the largest springs conservation efforts in history.	Loss of high public support and continued lack of habitat for local wildlife, such as the manatee.	No.	
10/1/2021 14:18	Broward		No	Yes		1 time	Wildlife viewing Other: It wasn't worth the trip in its current state	Tear it down and let the springs flow naturally.	The 20 drowned springs are an shame to the state and the people that live here as a whole. The local fish populations have suffered greatly. Springs in Florida are one of the main attractions that I visit yearly. Fuck Disney world and the rest of the trash tourism traps. Embrace nature in its purest and let Florida be great again. Drain the swamp.	Loss of tourism. Loss of fish populations. Manatee habitat loss. One more spot that I won't want to visit in Florida	No.	
10/1/2021 14:25	Pasco		No	No				Breach / tear out the dam	The dam is old and it's too expensive and completely unnecessary to keep maintaining it.	Tourist damage to the restored springs	No	This dam needs to come down for financial and environmental reasons. Tearing it down will promote much needed natural waterways and help the manatee population.
10/1/2021 14:25	Pasco		No	No				Breach the Rodman/Kirkpatrick Dam.	The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years.	No. Breaching the dam is 50 years overdue.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
10/1/2021 14:26	Duval		No	No					Breach the Rodman/Kirkpatrick Dam	The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No.	Breach it.
10/1/2021 14:27	Duval		No	No				remove the dam southwest of Palatka that blocks the Ocklawaha River.	Rodman Dam is a threat to clean water, wildlife habitat, and recreation. It was part of the cross Florida barge canal which was never built! It's OBSOLETE.	The continued threat to clean water, wildlife habitat, and recreation.	I haven't heard of nothing yet.	
10/1/2021 14:27	Duval		No	Yes	1 time		Other: Hiking	For it being totally removed.	Let's get those natural springs back, baby!	The dam breaking and sever flooding. Also the manatees need their refuge.	Govt politics	Just do it
10/1/2021 14:28	Jackson		Yes	Yes	More than 5 times	More than 5 times	Other: DUMP THE DOG POOP	A poop station	I INVENTED PORTALPOODIES	PORTLUER WILL BE RUINED	I WILL BE KING OF PODIES	
10/1/2021 14:29	Palm Beach		No	No				Breached for environmental health	That it would improve environmental health	Our environment and natural habitat will continue to suffer. Old Florida is being restored throughout the state and this is another step to do so.	I think that the dam represents an outdated view of water management.	
10/1/2021 14:31	Duval		No	No				I'd like to see the dam breached.	All the springs we'd have access to if it was breached.	The dam doesn't really serve a purpose outside of costing citizen's money to maintain so I guess I'd be concerned about the waste of taxpayer money.		
10/1/2021 14:33	Indian River		No	Yes		1 time	2-5 times	Canoeing / kayaking Wildlife viewing	Remove or breach the dam, it serves no purpose.	Wildlife/fish and manatees all need this space in its natural state, where everywhere in Fla we have dying natural space, we need to add it here when we have this chance.	The beauty of seeing the wildlife and the amazing springs here would be lost, Florida will continue to harm its natural wonders and its precious water. Don't let the damage continue!	no, it's not enough to just draw it down once in awhile, that doesn't create habitat nor sufficient flow for same. Without free flow, water quality continues to degrade here and downstream.	The lost springs also bring a great many visitors to this area when they are freed from the dammed water, the financial benefits to local business is also important, and it continues downstream. Fla's natural wonders can be as valuable as Disney, but also healthier for the whole water system.
10/1/2021 14:34	Outside of state / other	Wisconsin	No	Yes		1 time	Canoeing / kayaking Wildlife viewing	I would like to see the dam breached and the rivers and drown springs restored to their natural state.	#1. I love manatees and opening this up would increase their available habitats. (Huge for tourism) #2. The damn is 50 years overdue for repair and without purpose. #3. Restoration of the natural river and springs will bring in much more economic money in the form of tourism, hospitality, construction. ...etc.	The loss of an opportunity with a hugely positive cost/benefit advantage. Loss of warm water winter habitat for manatees, and the damn is unsafe. The advantages of breaching this damn far out way any disadvantage.	NO. Breaching this damn is 50 years overdue.....	Springs and manatees are huge for Florida! Restoring this river to its natural state will benefit both and bring in 10's of millions of dollars in tourist and development activity.
10/1/2021 14:36	Outside of state / other	Oregon	No	No				Love the Manatees and would love to have safe waterways for them.	Manatees	More injured manatees and wildlife.		
10/1/2021 14:45	Duval		No	Yes		1 time	Other: I don't. It is good that it is there, but there's not really something to do there if you don't have a boat.	Maintain it. Improve recreational access opportunities, such as adding cabins for people who don't do RVs, camp, or have a boat.	It serves to remove nitrogen and recharge the aquifer. The SJRWMD spent many millions to create similarly-functioning marshes in the upper St. Johns River basin. It would be crazy to remove this one. The flora and fauna don't know the marsh and reservoir are manmade. The upper Ocklawaha, from the dam at the north end of Lake Apopka to a considerable distance north, is also manmade and channelized. There is no real "putting it back". Fighting the dam is feel-good environmentalism that doesn't actually help the environment. As a freshwater lake, it has the advantage of being able to lower and raise the water levels to maintain biodiversity, control nutrients, and control invasive vegetation.	Excessive algal blooms and fish kills on the St. Johns River. Flows from Lake Apopka (which I think were stopped) and other areas upstream are well-known to be excessively high in nutrients.	Sort of. How about continuing to focus on the upper Ocklawaha - the water quality there and Lake Apopka, dechannelizing it, reconnecting it to Lake Apopka, and improving recreational access to the meandered section? There is plenty to spend dollars on to improve the system to the south and to even increase the meandered section of the river.	This battle is not about the Rodman Dam. It is about tribalism: urban folks, understandably concerned about the future of the environment, baited by the environmentalism business and sympathetic media into supporting this and other causes that do not make them feel guilty about their own impact on the environment, versus rural people who enjoy the environment, fishing and hunting in their home area, and who see with their own eyes a thriving environment. They wear different clothes, speak differently, and use different cars and boats. We should be focusing on water quality, protection of the aquifer, and carbon emissions, not chasing our tail over things like the Rodman Dam. The reservoir is as natural as the Orange-Lochloosa system (artificially connected and level-controlled, the Harris Chain of Lakes (controlled), the Indian River Lagoon (very controlled though polluted), the Banana River, the Everglades or the upper St. Johns Basin. So many lakes are manmade, yet people and nature don't realize it. It is more important to focus on water quality and the aquifer, which both benefit from the reservoir. Thanks for sending out the survey.
10/1/2021 14:46	Marion		No	Yes		1 time		Canoeing / kayaking	Dismantle the dam.	The cost of upkeep.	Degradation of the river and it's tributaries.	Allowing the free flow of the Ocklawaha River

10/1/2021 14:47	Pinellas		No	Yes			2-5 times	Fishing Canoeing / kayaking Wildlife viewing	Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No	
10/1/2021 14:48	Brevard		No	Yes			More than 5 times		Remove the Dam immediately...	Nature Conservation	Spending money to maintain a dam that was put in for a barge canal that never existed?	Nope just get rid of it.		Free the river please!
10/1/2021 14:48	Duval		No	No					Removed, restore natural flow	Need more freshwater into the St Johns River system	Continued algae blooms on St Johns River	Don't know		
10/1/2021 14:52	Dade		No	Yes			1 time	Canoeing / kayaking	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe.	No.		Thank you.
10/1/2021 14:54	St Johns		No	Yes			1 time	Other: Family gathering but some of the relatives fish. I'm	Remove it	Restoring the riverway	I'd be disappointed but I also know I have family members who go there more often than I do and they go for the fishing			
10/1/2021 14:55	Duval		No	No					It should be removed as it's original purpose is now a moot point and it is negatively affecting fish, wildlife and fauna.	There are numerous studies about the negative effects of this dam. Open google :)	That we will continue to pay maintenance on a dam that has no purpose other than harming our environment.	No		
10/1/2021 14:56	Brevard		No	Yes			1 time	Canoeing / kayaking Other	Remove the dam	Bring back the natural ecosystem and springs	Failed opportunity to restore vital natural habitats and pieces of Florida's ecosystem	No		
10/1/2021 14:56	Brevard		No	No					Y'd like to see it disappear.	It's unnatural to the environment.	The natural environment will be irreparably harmed	No		
10/1/2021 14:57	Duval		No	No					Remove and restore natural waterways	Removal of the dam would uncover a number of natural springs	None	No		
10/1/2021 14:57	Duval		No	Yes			2-5 times	Canoeing / kayaking	Breach the Rodman/Kirkpatrick Dam.	Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs.	The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	No. Breaching the dam is 50 years overdue.		
10/1/2021 14:59	Pasco		No	Yes			2-5 times	Fishing (shoreline/structure) Wildlife viewing	Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.		Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/1/2021 15:00	Manatee		No	Yes			1 time	Fishing (shoreline/structure) Canoeing / kayaking						
10/1/2021 15:02	Marion		No	Yes		2-5 times	More than 5 times	Wildlife viewing	I would like to see it removed.	I believe that the damage it caused to the original Natural ecosystem needs repaired.	It will remain an eyesore and a festering swamp.	Not really		
10/1/2021 15:04	Pinellas		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.		Returning the natural world to its original state is the only way it and humans will ultimately survive
10/1/2021 15:07	St Johns		No	Yes			2-5 times	Canoeing / Kayaking	Remove the damn and restore the lake and springs to their natural condition.	Opening springs to recreation and restoring the natural ecosystem. There are 20 drowned springs that would be restored by this single project. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	Opening or partially destroying the damn to allow natural flow of water may achieve the goals without expense of full removal.		Florida is uniquely beautiful and a lot of that beauty resides in our springs and wildlife. Corporations, inconsiderate humans, and climate change are already threatening those springs and wildlife. This seems like an easy win for natural Florida.
10/1/2021 15:08	Pasco		No	No					I would like to see the dam breached and removed.	I believe the ecological conditions of the watershed would generally be improved, specifically conditions would be improved for manatee and fish, and the wildlife that rely on them.	We would miss an opportunity to correct an error that has been in place for a number of decades.	No, the dam should be removed as a minimum to start on the path back to a healthier ecosystem in the larger watershed.		Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
10/1/2021 15:12	Orange		No	Yes				Fishing Boating	Dam removed, river restored.	Environmental publications.	Stagnation.	Possibly but not likely.		
10/1/2021 15:12	Duval		No	Yes		1 time		Canoeing / kayaking Wildlife viewing	Remove the dam	The dam was built to support a project that never happened. The cost to maintain the dam along with the environmental impact doesn't make sense anymore.	Continued impact to the environment along with wasted money.	No		
10/1/2021 15:16	Outside of state / other	Northern Wisconsin	No	Yes			1 time	Fishing (shoreline/structure) Canoeing / Kayaking Wildlife viewing	Dam breached.	We vacation in Florida specifically to paddle fresh water springs and swim with manatees. We recommend doing so to like minded friends with the springs restored we would vacation there.	Loss of opportunity to return springs and support the declining manatee population	No		We attend paddling events in Wisconsin and Minnesota would love to let paddlers know of this great new springs area to paddle
10/1/2021 15:19	Hillsborough		No	No					It's removal	Restoration	Lost conservation	No		
10/1/2021 15:19	Duval		No	No					Would like to see the dam breached	Providing additional warm water places for manatees	That we will continue killing off manatees in our state and possibly lose them forever	No. Maintaining the dam is a huge expense and is environmentally destructive		Please keep Florida Florida!
10/1/2021 15:23	Duval		No	Yes			2-5 times	Fishing	Take down the dam. Love it but it needs to go.	It's better for the environment to remove it.	Long term health of the river is best served plus a lot of wasted money taking care of it.	No.		
10/1/2021 15:23	Leon		No	No					remove the dam and restore the flow of the river	dam has outlived its usefulness	The cost to repair the dam	I do not think so		
10/1/2021 15:25	Duval		No	No					Breach and Remove	Negative Environmental consequenses to the Ocklawha and St. John's River outweigh recreational benefits	Continued environmental degradation	No		
10/1/2021 15:26	Hillsborough		No	Yes		1 time		Wildlife viewing	Please restore the natural waterways.	Conservation is more essential for the financial health of Florida. We have new solutions to other problems since creating dams.	More extinction, more loss of natural beauty and life that uplifts people especially the best parts of people.	More of the same is not good.		
10/1/2021 15:29	Alachua		No	Yes		1 time	2-5 times	Canoeing / Kayaking Wildlife viewing	Remove the kirkpatrick dam	There are 20 submerged/flooded springs that would be restored which is vital to protecting springs in Florida. It would also restore habitats for migratory fishes and manatees.	The continued loss and decline of our springs and loss of habitat for wildlife. Maintenance of the dam would also require continued funding which could be used for other projects around the state.	No, the dam needs to be removed.		Removal of the dam is long overdue as it serves no purpose today. Removing it would restore 20 springs and help protect Silver Springs. It would also provide vital habitat for migratory fishes and manatees which is essential as 2021 has been the most deadly year for manatees in Florida on record.
10/1/2021 15:32	Hillsborough		No	No					Remove dam to restore watershed closer to its natural/historic conditions.	It's time to fix mistakes of the past.	The problem will persist.	No.		I'm a civil engineer.
10/1/2021 15:34	Clay		No	Yes			1 time	Other: sightseeing	Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam to reunite the natural connection of Silver Springs, the Ocklawaha and the St. Johns River.	The science supports restoration. Studies by federal and state agencies have clearly demonstrated that restoration of a free-flowing, connected system is cost-effective and will provide significant ecological benefits to the St. Johns, Ocklawaha and Silver Rivers as well as Silver Springs.	Water quality declines, further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam and restoring the Ocklawaha are 50+ years overdue. Dam safety issues and improved water quality, wildlife habitat, and recreational opportunities can't be ignored or delayed any longer.		This exciting restoration will improve water quality and flow by generating an additional 150 millionn gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
10/1/2021 15:36	Pinellas		No	No					Get rid of the dam. Let the water flow!	The underwater springs that are being blocked and for the protection of the manatees	Continued environmental degradation	Get rid of the dam		Get rid of the dam
10/1/2021 15:36	Hernando		No	Yes		1 time		Wildlife viewing	Restoring the Great Florida Riverway by removing key portions of this dam	Restoring the Great Florida Riverway to reinstate traditional access to essential habitat for manatees, bring back migratory fish, connect three river ecosystems and historic Silver Springs, and restore a lost riverway for anglers and paddlers from Ocklawaha's Harris Chain of Lakes to the Atlantic.	The animals			
10/1/2021 15:36	Leon		No	No					Breach the dam and bring back the springs.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	That a minority of special and recreational interests will trump over a majority of concerned citizens who have grave concerns about the future of Florida Springs and our aquifer.	Not really. You either remove the dam or not. Can't think of a middle ground in this case.		
10/1/2021 15:37	Leon		No	Yes			2-5 times	Canoeing / Kayaking Wildlife viewing	Take it down! Restore the springs!	I want to see the springs returned to their natural habitat	Insufficient high quality springs habitat	No, get it done already!!		This has been years in the making. Why is this still an issue? Please take it down.
10/1/2021 15:40	Lee		No	No					Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	Loss of habitat for native species and the overall decline of our environment. We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No		
10/1/2021 15:41	Hillsborough		No	No							Manatees would still be dying.			
10/1/2021 15:45	Duval		No	No					Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue.		MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/1/2021 15:51	Hillsborough		No	No					Breach the Rodman/Kirkpatrick Dam.	The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit	No. Breaching the dam is 50 years overdue.		MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. 10/1/2021 15:52	Duval		No	No					Please breach and remove the dam	Environmental and wildlife impact	The lack of manatee habitats and fish population continue to be suppressed	Breaching rather than removing entirely		
10/1/2021 15:52	Alachua		No	Yes		1 time		Fishing Boating Wildlife viewing	I believe a scaled draw down would be in order to eventually return the river to its natural flow.	My understanding is that a small town, Welaka, at the outflow of the dam is at risk should there be excessive water and possibly dam breakage or overflow.	I am concerned that given some of the recent water related issues that the state is coping with (phosphate pond overflow) that lives could be lost and severe property damage may occur. The increase in storms predicted would hasten this outcome. I would hate to see the state of Florida be blamed due to inaction.	Like, I said, a scaled drawdown would be preferable to the current situation if the river cannot be immediately restored to its traditional flow.		
10/1/2021 15:54	Duval		No	No					Take down the dam and let the river flow	Ready for the St. John's water basin to get back to how it had been.	Clean water will be less accessible	No comment		
10/1/2021 15:59	Pinellas		No	No					Take it DOWN	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	That we miss the chance to do right by the environment	Nope		
10/1/2021 16:00	Marion		No	Yes		More than 5 times		Fishing Boating	Leave it alone!!!!!	Fishing				
10/1/2021 16:00	Lake		No	Yes		2-5 times		Wildlife viewing	Remove the dam.	Saving money on useless dam repairs.	Further degradation of the Ocklawaha River.	Remove enough parts of the dam that it is no longer functional.		
10/1/2021 16:03	Monroe		No	No					Remove or breach the dam to restore the natural state of the waterway.	Dams in general destroy ecosystems.	Continued disruption of the natural waterway.	Maybe		
10/1/2021 16:06	St Johns		No	Yes		1 time		Other: checking out what the fuss was about	Breach the damn dam - remove it!	The dam was built to support an initiative that never happened. Instead it's blocking up the natural 20 springs the have been drowned.	The natural decline of fish in Silver Springs, and the ongoing maintenance costs with the damn dam.	Blowing up the dam might be fun? It really needs to be removed in a safe, controlled way, to eliminate the ongoing costs and return the natural springs to their original state.		
10/1/2021 16:07	Duval		No	No					Tear it down so the springs are not flooded and so the manatees are not cut off from warm water in the winter.	Pictures of the springs before the flooding from the dam	that we never see the springs again	no		just tear it down please. The canal was never completed. This dam serves no purpose
10/1/2021 16:21	Outside of state / other	Silverdale, WA	No	No					All waterways cleaned up and restriction on boat motors (covers required) and speed limits.	Photos of injured manatees	survival of this wonderful species	more environmental action		
10/1/2021 16:24	Alachua		No	No					Remove them please!	The removal of the dam would restore the natural flow of the river and provide tourism dollars with the opening of multiple springs!	Wasted taxpayer money and a disturbed ecosystem			
10/1/2021 16:32	Duval		No	No					Remove the dam	saint johns river keeper	increasing salinity of the river	No		
10/1/2021 16:34	Alachua		No	Yes			2-5 times	Wildlife viewing	Please take the dam down	The dam doesn't serve any real purpose and is negatively impacting the natural environment.	1. Continued environmental impact, 2. Waste of taxpayer money to maintain dam	no		
10/1/2021 16:36	Outside of state / other	PA	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.		As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/1/2021 16:42	St Johns		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / Kayaking	Remove the dam and allow the Ocklawaha River and associated springs to return to their original forms.	The decline of the water quality of the St John's River, Silver Springs and other Springs, and the decline of wildlife in the area.	Unknown	No		I've been kayaking the Ocklawaha and Silver Springs for over 20 years and the clarity of Silver River has declined noticeably each year. I also understand that the salinity of the St John's has increased dramatically.
10/1/2021 16:43	Duval		No	No					Get rid of it	fish populations, drowned springs, manatee habitats	fish populations, drowned springs, manatee habitats	No. Breaching the dam is 50 years overdue.		
10/1/2021 16:43	Duval		No	Yes			1 time	Fishing (shoreline/structure)	Remove the dam. Return the river to its original state	Natural water flow to the St John's River. Evaporative loss from the reservoir	St John's River decline continues so that a very few people can bass fish.	Free-flowing reduced dam May work		
10/1/2021 16:46	Duval		No	No					I would like to see it torn down.	The Rodman reservoir and Kirkpatrick Dam serve no purpose and costs money for maintenance. They are also blocking manatee migrations and natural springs.	Water quality continues declining, taxpayers money continue to be wasted, manatees are denied access to their necessary winter habitat and we lose the chance to restore beautiful rivers and springs.	No		
10/1/2021 16:55	Lee		No	Yes			1 time	1 time	Wildlife viewing	Breach the damn and let nature flourish. The environment would benefit from this damn being breached	This would allow migratory fish and other wildlife to thrive rather then having a damn that prevents this	The ecosystems will continue to fail causing loss of environment and basic business that relies on the environment in the area	No the damn is a detriment to the environment	

10/1/2021 16:58	Alachua		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	Remove the dam	Not only do we get 20 new springs, which will bring lots of money in, we get a cleaner environment.	We will spend tons of money fixing a dam that isn't needed	No	
10/1/2021 17:03	Hernando		No	Yes			1 time	Wildlife viewing Other: Just visiting it because family lived nearby.	From my limited knowledge, I believe the proposed "Partial Restoration" project would be the best solution	The defunct cross-Florida barge canal project was a disaster that thankfully, was stopped by the work of Marjorie Carr & Johsn's. I am a birder & wildlife enthusiast and support the vanishing natural systems in our state and country; the more preservation and removal of impediments, the better.	That this state, again, does not do what is economically, scientifically and environmentally sound.	I am not knowledgeable enough about this situation to address that question.	This offers an opportunity for the exercise of good judgment that benefits the public by protecting and enhancing our wonderful, natural systems in Florida.
10/1/2021 17:14	Citrus		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	Breach the Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	Please move forward with breaching the Kirkpatrick Dam.
10/1/2021 17:15	Orange		No	No					I would like to see the dam breached.	The dam disrupts that natural ecosystem in the area.	Further environmental damage.	Not that I am aware of.	
10/1/2021 17:16	St Johns		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing	Keep the Dam and Reservoir. It is world famous.	The reservoir has created a unique environment for wildlife. Jacksonville government should not have the right to influence another county's right to make its own decision on what is or is not important. The river keepers studies have been slanted toward their bias.	We would lose this unique environment. I fear those making the most noise don't even use the reservoir. This would make a poor county even poorer at the expense of a greedy few.	No	This reservoir is visited by people from around the country I suspect they would not return.
10/1/2021 17:18	Columbia		No	No					Breach the Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	fish and manatee decline	Breaching would help fish and manatee populations	please read above comments
10/1/2021 17:22	Outside of state / other	Ann Arbor, MI	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. £5,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	As someone who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/1/2021 17:22	Duval		No	No						Removed.	Damage to native ecology	Flood risk	No	
10/1/2021 17:42	Volusia		No	Yes			1 time			It should be removed	The 20 new springs which will be unburied.	It won't ever happen	No.	
10/1/2021 17:48	Alachua		No	Yes		1 time	2-5 times	Other: Pretty much don't use it. It's a feature/body of water that I visit for sightseeing purposes when I'm in the area	I would like to see the dam removed and the river allowed to resume its natural flow and cycles.	There are two - One. The dam costs taxpayer revenue to maintain the structure and reservoir. I know that a small number of businesses have sprung up to support recreational fishing on the reservoir. That's fine, however, I believe a compelling argument can be made that the return on investment is negative, which means we have selective profitability being subsidized by the taxpayers. One absolutely cannot assume that the recreational and business opportunities on the river would not exist without the dam. Two - The dam degrades the natural environment: Requiring use of herbicides to control exotic invasive plant species, loss of habitat diversity, productivity and habitat access to wildlife. The St. Johns river watershed would greatly benefit from a free flowing Ocklawaha river.	The Cross-Florida barge canal was axed decades ago because it was clear that it was a use of taxpayer money to support selective beneficiaries without any cost benefit to society. AND because the CFB would have been an ecological disaster (As if Florida needs more of such.) The Rodman reservoir is just the dead zombie child of that failed project. A continued misuse of taxpayer money.	None that I have heard proposed.	
10/1/2021 17:49	Duval		No	Yes			1 time	Fishing	Remove the damn	Restore the natural water flow	Wasting state funds to maintain a failed canal system	No	
10/1/2021 17:55	Outside of state / other	Sacramento, California	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 Million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an undistructed blueway.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/1/2021 18:01	Lake		No	No					Protect wildlife- be responsible!	Defenders views	Harm to creatures and complex ecosystem	Don't know	
10/1/2021 18:04	Duval		No	No					Dismantle the dam	Save the manatees and open up new springs to explore	Eating money on a dam that is well past is useful and safe lifespan	No	
10/1/2021 18:06	Duval		No	No					Remove dam and restore Oklawaha River	Restores free flow of natural waterways	Ongoing expenditures for repair/replacement of the dam	Not that I am aware of. although the possibility exists	
10/1/2021 18:11	Orange		No	No					Removed / Breached	The dam is expensive to maintain, and hurts the local ecology of Florida by simply existing. It's overtaken multiple springs, blocked off previous freshwater routes. Taken up valuable habitats for Manatees.	Further damage to the local ecology, excessive costs and unwarranted spending, and finally no mitigation of manatee deaths from their already dwindling habitats.	No	
10/1/2021 18:14	Palm Beach		No	No					I would like to see the dam removed and the natural flows to be restored.	Environmental information showing that the dam is not needed.	Loss of natural flows and environmental integrity of the flow of the river.	no	
10/1/2021 18:15	Palm Beach		No	Yes			1 time	Canoeing / kayaking	Breach the Rodman/Kirkpatrick Dam	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	Hundreds of manatees loose access to essential warm water winter habitat.	No, breaching the dam is overdue.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	
10/1/2021 18:45	Volusia		No	Yes		1 time	2-5 times	Wildlife viewing	Removed to return the area to its naturally-occurring state.	1. Critical water issues affecting the entire state for the future.	Continued deterioration of the ability of the land to support current and future growth.	Don't know.	
10/1/2021 18:54	Outside of state / other	Kentucky	No	Yes			1 time	Canoeing / kayaking Wildlife viewing	The dam should be removed and the river restored to its historical bed	The submergence of Springs and loss of significant riverine forest.	Continued loss of riverine habitat for native animals and plants.	No	
10/1/2021 18:54	Osceola		No	No					Breach the Rodman/Kirkpatrick Dam.	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years.	No	
10/1/2021 18:57	Marion		No	No					Breach the dam.	There are a multitude of springs that would be opened/uncovered bringing many benefits ie. increased fish habitat, warm wintering areas for our manatees, increased recreation and tourism along with income from the visitors and tourists.	Loss of opportunity to do this, expenses thrown away on repairing the dam, and ongoing losses to wildlife.	No.	Let's do all that we can to restore the natural balance of habitat and beauty to Florida.
10/1/2021 19:02	Brevard		No	Yes			1 time	Canoeing / kayaking	Remove the dam.	It's old and useless.	Too much tax money spent.	No.	It's simply not needed.
10/1/2021 19:08	Volusia		No	Yes		1 time	More than 5 times	Boating Wildlife viewing	I would like to see the dam removed	The Oklawaha River would be restored to pre-dam free-flowing river	It is long past time to remove this dam. Back when the Cross Florida Barge Canal was a possibility maybe this was a good idea, but not now.	Something that improves the flow of the river like lowering the lake level; alternatively, have the people that actually want the dam fund the maintenance and repair and operation.	Any tax dollars are going to maintain and operate this dam and there is really no return except to a few special interest groups. As the dam ages more and more of those dollars will be wasted with no gain.
10/1/2021 19:15	Bay		No	Yes			2-5 times	Canoeing / kayaking	Remove the damn and restore the river.	Multiple springs are buried under the reservoir. The dam is blocking manatees from their natural habitat. The dam is approaching it's life expectancy. It would cost millions of dollars to replace. Removing the dam would improve water quality.	It will cost tens of millions of dollars to replace the dam. Manatees are dying at record rates. Opening their habitat back up may help save them.	No.	
10/1/2021 19:26	Volusia		No	No					Breach the Rodman/Kirkpatrick Dam	The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No. Breaching the dam is 50 years overdue.	
10/1/2021 19:26	Alachua		No	Yes			1 time	Fishing	Remove the dam. Restore the river and springs to their natural states.	Reciverring the submerged springs and restoring the natural environment to its natural state. Improve the water quality, fish habitat, foliage and most importantly, allow warm water access for manatees.	Continued environmental destruction and willful, deliberate anti-environmental management for no reason, and to only benefit a small group of special-interests at the expense of all other citizens. It also seems extremely wasteful to continue to spend money maintaining this expensive mistake for no reason, which is a waste of taxpayer money. Taxpayer money should be spent preserving our shared natural resources for future generations, and above all, protecting the environment.	No, the dam should have never been built in the first place. The environment should be restored to its natural state.	Thank you for accepting public requests and for doing the right thing for Florida's environment and the future of our state. This decision should be made for the future of Florida. Environmental scientists should make this decision according to what is best for Florida's natural environment.
10/1/2021 19:28	Nassau		No	No						Breach it	Environmental causes.	Distress to the area.	not sure
10/1/2021 19:37	Dade		No	No						It is not being used for its intended purpose and I feel has changed the landscape to the detriment of our wildlife, especially the manatee.	That we have altered our natural resources unnecessarily and our wildlife population has suffered for it needlessly.	Honestly not sure how we can help revert the flooded springs and reopen rivers to manatees without doing this but I'm open to hearing other options.	
10/1/2021 19:43	Duval		No	No					Breach the Rodman/Kirkpatrick Dam.	Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/1/2021 19:52	Duval		No	No					Breach the dam and minimize costs for upkeep. Let Florida's natural waterways flow as intended.	Breaching the dam will minimize costs, restore several natural Florida springs, and aid fish/wildlife and the threatened manatee population.	The unnecessary costs involved with maintaining a long abandoned Florida Canal system are not worth it, and the damn prohibits natural water flowing to nearby ecosystems that would benefit greatly from breaching this dam.	Breaching the dam is the best choice for Florida and nearby waterways. It's cost effective to breach and is the ONLY option that I support.	Thank you for accepting public comment on this important matter.
10/1/2021 20:01	Sumter		No	Yes			1 time	Canoeing / kayaking	Breach the 2	Will save manatees and fish. Will add water to small springs.	Death of manatees and other fish life. Put back what nature intended.	No	
10/1/2021 20:20	Marion		No	Yes					Leave it in its presence state.	It is a wonderful opportunity for hunters and fishermen to enjoy the Florida wildlife.	loss of opportunities to enjoy Florida nature and the very ugly scars that will exist for 25 years.	Build a fish ladder at the dam. I do miss the runs of catfish, mullet and stripers.	I opposed the original concept but after spending many hours fishing hunting and enjoying the varied wildlife. I think it should stay as-is. I also think that a lot of small businesses would be hurt.
10/1/2021 20:25	Alachua		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Wildlife viewing Other	I would like it to be dismantled.	There are 20 drowned springs unavailable to view or utilize by wildlife like manatees.	Continued destruction of the forest environment and degradation of aquatic wildlife.	Yes. Total drainage of the reservoir if the dam cannot be dismantled fully.	This is an opportunity to restore natural Florida, wildlife habitat, and the springs. Please do this.
10/1/2021 20:25	Lee		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	

10/1/2021 20:34	Hernando		No	Yes		1 time		Wildlife viewing	Remove the rivers, and don't waste more money on a dam that stands in the way of restoration. The failed Cross Florida Barge Canal Project left environmental destruction and burdensome infrastructure in its wake. The damming of the Ocklawaha River and creation of the Rodman Reservoir has smothered 20 springs, blocked manatee and fish migration, and destroyed thousands of acres of floodplain forest. We are at a crossroads. The Rodman/Kirkpatrick Dam that blocks the Ocklawaha River is in decline and in need of repair. Now the state has to decide whether to invest millions of taxpayer dollars in repairing and continuing to operate a dam with no purpose or remove it, finally reuniting the Ocklawaha, St. Johns, and Silver Rivers. We may never have another opportunity to restore this important ecosystem. We need your voice to tell the District that you support breaching the dam and bringing the river back to its former glory. The St. Johns River Water Management District is asking interested citizens to provide their opinions on the future of this resource. Below you can preview the questions as well as information from Audubon Florida that may help shape your responses. We strongly encourage you to make each response unique to your experience. Click here to give your comments by 5 p.m. on October 22, 2021.	Will Florida reunite the rivers or waste more money on a dam that stands in the way of restoration? The failed Cross Florida Barge Canal Project left environmental destruction and burdensome infrastructure in its wake. The damming of the Ocklawaha River and creation of the Rodman Reservoir has smothered 20 springs, blocked manatee and fish migration, and destroyed thousands of acres of floodplain forest. The Rodman/Kirkpatrick Dam that blocks the Ocklawaha River is in decline and in need of repair. Now the state has to decide whether to invest millions of taxpayer dollars in repairing and continuing to operate a dam with no purpose or remove it, finally reuniting the Ocklawaha, St. Johns, Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills and further endangerment of iconic wildlife spe is that draw tourists from around the world.	Doubtful.	Please do the right thing and restore the habitat to its natural state.
10/1/2021 20:53	Duval		No	Yes		1 time		Fishing Canoeing / Kayaking Wildlife viewing	Remove the dam and restore the natural flow	Health of the St John's River	Continued degradation of St John's health	No	
10/1/2021 21:02	Seminole		No	Yes	2-5 times			Wildlife viewing	It needs to stay open to the public and no changes made				
10/1/2021 21:02	Volusia		No	Yes	1 time		More than 5 times	Boating	REMOVED	I traveled the Ocklawha from the St Johns to Eustes in the fifties and enjoyed it. The trans Florida Barge Canal might have been a good idea in the 1700,s but the Key West pirates are no longer a problem. Like we found out with the Kissimmee river, nature does best when left alone.	It would become a structural and financial problem.	I don't know if is is possible to restore the natural flow to the river without removing the dam. Maybe that is a possibility.	I appreciate this opportunity. Thank you
10/1/2021 21:06	Leon		No	No					whatever is best for marine life, fish and manatee populations. I am a native Floridian and I've witnessed the decline in fish populations over time. The St. Johns River is vital to Florida's future. We must avoid turning into the "eastern Colorado river" which is quickly deteriorating.	Life experience and daily news reports. I consume news and information 3-4 hours each day (my job) and understand the delicate balance between 'progress' and the 'environment.'	That Florida has again decided to sacrifice the future for short-term financial gain.	Of course. That's what legislators are SUPPOSED to do. It should not always be all or nothing.	I'm a native Floridian familiar with the state history and it's environmental challenges. This dam is nothing new. It will bring change. Some will say it's positive (cuz it makes $$$$), but we know what's really going on. And we vote.
10/1/2021 21:18	Polk		No	Yes		1 time		Boating Wildlife viewing	Remove/breach the dam so that the Ocklawaha River can flow free as it did before we decided to be in charge instead of nature being in charge.	It is hard to pick just one but getting rid of Rodman Reservoir to remove the barrier to animal and plant movement along the Ocala to Osceola Wildlife Corridor and remove the money pit that the reservoir costs taxpayers in upkeep and herbicide treatments to control invasive aquatic weeds.	Taxpayers will continue to pay for upkeep and repairs to the dam and reservoir that should never have been built.	Absolutely not. This is way overdue.	I am a native Floridian and have visited this area several times in the past. I have seen too much environmental degradation of my beautiful state during my lifetime. We now have an opportunity fix a problem that causes environmental degradation on a massive scale by preventing migratory fish and manatees open access to the river, drowning freshwater springs, stressing downstream floodplain wetlands and preventing ecotourism opportunities in surrounding communities. It is last time to arrive let the Ocklawaha run free.
10/1/2021 21:23	Duval		No	No					Return the river to free flowing, broach the dam.	restoring the environment, protecting manatees	damage to environment, waste of tax payer dollars to maintain dam, invasive species	The dam must be breached.	The dams of past years that are destroying rivers and the environment are all coming down. Time this dam is breached as well.
10/1/2021 21:34	Lake		No	No					Remove the dam and restore the natural river.	Research from the Florida Springs Institute.	Environment suffering for no reason at all.	No	Are there any reasons to keep this dam? It was a misguided effort that built it, now the government should own and fix its mistake.
10/1/2021 21:38	Pinellas		No	No					I would like to see it breached	The country as a whole, let alone the state of Florida, is becoming to industrialized and needs to restore all parts of nature that are physically possible	Another opportunity missed to restore our state to it's original beauty	A possible way to divert some of the water in prefer to restore at least a portion of the springs	Florida is more then beaches and tourists traps. We as citizens need to bring nature back to the fore front
10/1/2021 21:38	Nassau		No	Yes		1 time		Wildlife viewing Other: While passing through the area	Remove the dam to restore the natural flow of the Ocklawaha River	The restoration of the Ocklawaha River would also restore springs that have been inundated by the reservoir and help improve the water quality of connected springs and rivers, including our St. Johns	That the best opportunity for restoring the Ocklawaha will have passed and we'll continue to see declines in the quality of our precious waterways	No, to me it seems to be a straightforward choice between breaching the dam or leaving it in place and the former leads to the best outcomes for our waterways, the environment, wildlife, the citizens and the local and state government.	This seems like a win-win for all parties. We restore the river and surrounding ecosystems to their natural states. We provide access for threatened manatees to spring habitats and corridors for other wildlife to travel. We improve water flow and quality of connected waterways, including our state's most significant river, the St. John's. And we save millions of dollars in taxpayer money for maintenance and repairs to a dam that serves no practical purpose. Free the Ocklawaha!
10/1/2021 21:44	Alachua		No	Yes		1 time	2-5 times	Wildlife viewing	breach the Rodman/Kirkpatrick Dam. 2. What is the most important piece of information that supports your position? Possible answers could include: There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs. 3. What would be your biggest concern if your desired outcome is not achieved? Possible answers could include: We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. If the dam remains, Florida will lose out on thousands of acres of forests that could've been restored, providing water storage & filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the damn is 50 years overdue. Damn safety, improved water quality, and wildlife can't wait!	This issue is a far-reaching one and the time is now to resolve it
10/1/2021 22:00	Duval		No	Yes		2-5 times		Fishing Fishing (shoreline/structure) Canoeing / Kayaking Boating Wildlife viewing	Nothing - it's a well-established habitat and a world-famous fishery	Self/observation	Loss of fishery	No	
10/1/2021 22:02	Calhoun		No	No					Tear it down	Manatees	Loss of habitat for manatees	No, tear down the dam.	Tear it down
10/1/2021 23:03	Nassau		No	No					I'd like to see the dam removed	It would restore the environment to its natural state, improving the health of the waterways and providing wildlife habitat	Ongoing harm to the environment	No	Since the dam is a remnant of an ill-advised, abandoned project from 50 years ago with no functional purpose, it makes economic sense to stop spending taxpayer money to maintain it and instead restore the environment to benefit wildlife and water quality.
10/1/2021 22:07	Duval		No	No					Breach the Rodman/Kirkpatrick Dam at once.	20 drowned springs and hundreds of manatees would benefit from this. It's an obvious choice. It just makes sense.	We miss a perfect opportunity to make this happen. Public interest is high. The funds are available. The time is right.	No. This is overdue. There's not a single reason not to. It would be ridiculous to pass this up.	
10/1/2021 22:17	Alachua		No	No					Drain the reservoir and remove the dam.	This project has been an environmental boondoggle from the start.	That we will continue to pay for this disaster.	No.	Free the river!
10/1/2021 22:17	Volusia		No	No						Restoration of the springs	The overall health of the river	No	Even though I don't live in the immediate area, I would like to see the restoration of the springs and natural environment
10/1/2021 22:17	Outside of state / other	Los Angeles	No	No						Restored so the waterway can be used by manatees.			
10/2/2021 22:32	St Johns		No	Yes			2-5 times		Breach the dam and return the Ocklewaha River to its natural channel	The cost it'll take to maintain the dam, both in money and ecological impacts	Politicians don't listen to the people	No	
10/1/2021 22:42	Seminole		No	No					Remove the dam. Open the reservoir.	Open the waterway returned to its natural state and to rediscover the lost springs in the reservoir.	None	Reducing the water level in the reservoir to recover the lost springs	
10/1/2021 22:46	St Johns		No	Yes		2-5 times		Other: We drove down to see it out of curiosity. I had read much regarding the terminated canal project and was just curious to see what the dam looked like.	I would like to see the dam removed to help restore the Ocklawaha River and increase the flow of fresh water into the St. Johns River.	The Dam & Reservoir were established to support a canal project that ultimately was never completed and therefor does not serve its intended purpose. Its existence has damaged the Ocklawaha River and its supporting springs.	Increased salinity levels in the St. Johns River at locations much further up river alltering its ecosystem.	Thank you for asking, but no.	Thank you for creating this survey and inviting public comment. I'm sure everyone on all sides of this issue are greatly appreciative of this opportunity to advocate for their position.
10/1/2021 22:52	Outside of state / other	Little Elm. Texas	No	No							Making sure manatees are safe and protected.		
10/1/2021 21:58	Alachua		No	Yes			2-5 times	Wildlife viewing	Breach the dam and restore springs and the silver river	The damn serves no purpose and reduces fish in the silver river	Another project that should have never been started that produces no benefit will need to be uselessly maintained	There is no other logical option beyond removing this worthless money-pir dam	
10/1/2021 23:22	Indian River		No	Yes		1 time		Canoeing / kayaking Wildlife viewing					
10/1/2021 23:26	Seminole		No	Yes			1 time	Other					
10/1/2021 23:44	Clay		No	Yes				Fishing	Open the reservoir and allow the river to flow freely into the St. Johns.	Three Rivers are allowed to flow freely once again and many Springs will be uncovered when the reservoir empties. Manatees and other wildlife will have restored habitat. Lots of water will flow into the St. John's improving water quality down river.	We miss a great chance to improve the environment and restore these important habitats.	No, the dam was part of a project that was never finished for environmental reasons and breaching of the dam is 50 years overdue.	Let's do the right thing and undo the dam
10/1/2021 23:54	Seminole		No	Yes			More than 5 times	Canoeing / kayaking Wildlife viewing	Breach the dam.	A record number of manatees died this year, we need to create a habitable place for all wildlife	The structure has been neglected and seems to do more harm than good.	Having a free flowing River will restore the ecosystem of surrounding areas and save millions of taxpayer dollars.	Florida is a beautiful state with its natural springs, rivers, and wildlife. We need to preserve these treasures the best we can before it's gone.
10/1/2021 23:59	Pasco		No	Yes	1 time	1 time	2-5 times	Wildlife viewing	1am in favor of breaching the dam.	Springs restoration	Loss of opportunity	No	
10/2/2021 0:02	Seminole		No	Yes			1 time		I would like to see the dam removed.	The most important information is scientific from the SJRWMD and other research organizations that have already recommended removal. Personally, my most important reason is the restoration of the cypress forest that is now under water but will recover and grow again when the water is drawn down. The state would no longer be spraying chemicals in the water to destroy the accumulation of unwanted vegetation.	We will continue to delay the restoration of important ecosystem functions such as fresh water flowing into the St Johns which is necessary to control salt-water intrusion. Sea level rise will make this salt water intrusion worse. We will continue to lose the carbon sequestration value of the restored forest. Fishermen will continue to have limited species of fish to catch. Manatees will still have limited access up the river.	I would support a breaching of the dam but full removal would he the best solution.	Construction boondoggles have destroyed Florida ecosystems for years. Draining the Everglades and straightening the Kissimmee River both were ill-conceived and have required Millions of dollars in restoration money. By spending a relatively small amount of dollars we can restore a river ecosystem that will also be financially beneficial for the counties involved by increasing recreational activities.
10/2/2021 2:46	Palm Beach		No	No					Open the dam and let the waters flow to reverse the damage.	I am Florida resident, born and raised. My family and I take our water issues very seriously in Florida. We want to see the springs restored from this senseless dam.	habitat loss. Further destruction leading to further habitat loss; perpetuating extinction among the species that rely on the Florida waters, springs.	No. If it's not restored now, more loss will follow! We must restore the lost flows now!	
10/2/2021 3:42	Putnam		No	Yes			2-5 times	Fishing Wildlife viewing Other: I have at times fished on the Ocklawaha spillway side of the dam . Never Rodman Reservoir . To much structure in water for safe boating.	Remove the dam , and the barge canal lock system . Attempt to restore as much as possible the river system as it once was . There can be boat ramps , camping areas , picnic area parks , ect . for public use .	No damming of any river is ever a good idea for wildlife and human use for that matter . The fish can not migrate as nature intended .	Having to keep repairing that wore out dam and lock system . And all the springs that are submerged .	Not really .	The Cross Florida Barge Canal system was never completed and it was always controversial.
10/2/2021 4:37	Hillsborough		No	No					Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	No. Breaching the dam is 50 years overdue.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/2/2021 4:38	Brevard		No	No					Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/2/2021 5:30	Duval		No	Yes			1 time	Wildlife viewing	Tear it down. A few bass fisherman should not hold up fixing what never should have been broken in the first place. The fishing opportunities will still be there.	Restoration of the Northeast Florida aquatic environment. Restore the water shed and the abundance of fish species will return.	Continued salinization of the St. John's river. I'm a recreational fisherman. That's my priority.	No. You are spending tax dollars to maintain an unnatural environment.	I know we poon fishermen don't stand a chance against the monied special interests. But every voice may make a difference. This is a half century boondoggle. Time to fix it.
10/2/2021 5:37	Hillsborough		No	No					For the dam to be removed and the natural flow of water restored.	There are many springs that would be restored. The dam is also in need of repair, it's demolition would save the state money.	further degradation of our waterways and springs.	no	
10/2/2021 6:30	Duval		No	No					Breach the Rodman/Kirkpatrick Dam.	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record!	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue .	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees.
10/2/2021 7:05	Orange		No	Yes		1 time	2-5 times	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/2/2021 7:10	Sumter		No	No					They need to remove it so the river flows the way it is supposed to.	I read an article about it. Environmental groups want the dam to be removed and the river restored.	The river needs to be restored to its former function. The reservoir and dam are not practical.	No	
10/2/2021 7:17	Duval		No	No					Breach the Rodman/Kirkpatrick Dam.	Return of the natural ecosystem.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No. Breaching the dam is overdue.	
10/2/2021 7:17	Volusia		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing Other: to study this prime exampit of wasteful and expensive government ecosystem destruction, which is ruining without any more "help".	Take the dam down (or at least open it up) and let the river basin restore itself to historic levels and water course. I have seen the banks during drawdowns several times, and the native plants sprout prolifically	Fifty years of studies showing the damage done by the dam and the environmental and economic benefits from restoring the flow. And MOSTLY: simply look a the river above the dam and then below the dam, and if you can't see the dramatic difference between a beautiful tree-shaded classic Florida meandering stream full of diverse wildlife, and the fetid weed-choked lake above, then this whole inquiry is a sham.	1) The continued destruction and prevention of a beautiful wildlife system, and (2) the millions of dollars being spent to continue this travesty, which should be used to make Florida nicer, not maintain eye-sores.	If you just open up the dam (gradually if necessary), and do not spend any money on restoration, then letting the river heal itself would be good enough.	
10/2/2021 7:27	Orange		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St Johns rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	The damming of the Ocklawaha River and creation of the Rodman Reservoir has smothered 20 springs, blocked manatee and fish migration, and destroyed thousands of acres of floodplain forest. Please restore it back to it's natural state!

10/2/2021 7:36	Outside of state / other	NC	No	Yes			More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Wildlife viewing	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 Million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to $37 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/2/2021 7:39	Putnam		No	No					Tear it down. I would love to watch a controlled demolition and get to see the gorgeous springs more often than I do waiting for draw downs.	Maintaining the dam is a waste of money and just makes the fishing worse. I was born and raised in Florida, this dam is cutting us off from the kind of Florida beauty that makes us all proud to live here - at the insulting cost of tax dollars wasted on a dam that serves no purpose (not even power).	That our elected and appointed officials haven't a little common sense and even less regard for what's best for their constituents.	There are really only two options: keep wasting money restoring the dam or tear it down.	Tearing the dam down now saves the people of Florida a lot of money. This decision will set a precedent that will keep the state wasting money on this for decades before anyone does something about it.
10/2/2021 7:42	Marion		No	No					Remove it. It serves no purpose. Restore Florida.	The twenty new springs will be revived. Also, increase in habitat for fish and manatees.	The cost of maintaining something that has no purpose.		
10/2/2021 7:49	Lake		No	Yes		2-5 times	More than 5 times	Fishing Boating Wildlife viewing	Keep the dam and preserve the watershed	wildlife habitat	loosing the beauty of the area along with the birds	I would need more information and education of why this is a better way	
10/2/2021 8:03	Duval		No	Yes			1 time	Boating	It is time to remove the Rodman dam.	The Rodman dam is reducing the flow of water to several spring systems which could be open and available for tourism, manatee habitats, and more.	The dam will require additional spending for continuous repairs in the future that will put a burden on the state.	No, there is no way to partially remove a dam.	
10/2/2021 8:12	Pinellas		No	No					Breach the dam	The dam serves no valid purpose but is expensive to maintain and damages fish populations and water quality	The status quo is wasteful and expensive.	No	
10/2/2021 8:13	Citrus		No	Yes		2-5 times		Canoeing / kayaking	Remove the dam to restore the Ocklawaha River to its former state .	loss of fish variety caused by dam. Loss of river habitat by damming up the Ocklawaha and making the river a lake. The dam is killing the natural river flora and fauna from Eureka downstream.	Death of the natural river habitat causing irreversible damage. I don't expect to see the results in my lifetime, but future generations may again enjoy the springs that are now under water. Stripers and other fish may come back to spawn up river of the dam.	The dam is not natural. The functionality of the dam was never achieved. There are other lakes in Florida to hold lake events like bass fishing tournaments. No, we should not be spending money on the dam , no other outcome makes sense.	Thanks for opening this discussion. Tom Craig
10/2/2021 8:32	Nassau		No	Yes		1 time	2-5 times	Other: I don't. I have taken several boat/kayak trips on the upstream Ocklawaha River.	Breach the Dam immediately!!!	Environmental restoration. The reservoir/dam are all part of a 1950-60s DEAUTHORIZED Federal Cross Florida barge canal project that has never been anything but a ridiculous BOONDOGGLE!	Continued destruction of the Oklawaha River environment. FREE the Oklawaha. The Feds/State of FL can spend billions of $ "restoring the Everglades", WHY can't we restore the Oklawaha River in our own backyard? There is already PLENTY of excellent River/lake Fishing already in the Ocala area, without the reservoir destroying the Oklawaha River environment. Enough with the local BS State politics to keep the reservoir.	Possibly. The the dam HAS to be breached. Periodic drawdowns are NOT a solution.	SJRWMD/FDEP/Governor's Office/State Legislature- step up a do the right thing!! Restore our Oklawaha River!
10/2/2021 8:38	Broward		No	No					Breach the dam	Protection for Manatees.	Waste of tax dollars for repairs.	Let loose the springs.	
10/2/2021 8:44	Alachua		No	Yes		More than 5 times		Boating Wildlife viewing	Returned to it original state				
10/2/2021 8:46	Pasco		No	No					Breach the dam	dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No. Breach the dam	
10/2/2021 8:59	St Johns		No	Yes			1 time		Breach the Rodman/Kirkpatrick Dam.	The dam is past its life expectancy, requiring $4-14 million of taxpayer dollars in repairs.	Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat.	No.	Don't continue to drain taxpayer resources for a project long past its expiration date. Breach the dam.
10/2/2021 9:01	Duval		No	Yes		1 time		Wildlife viewing	I'd like to see the dam removed and the freshwater flow restored to the St. Johns River	Declining water quality, high salinity, habitat & watershed restoration	The silting in of the reservoir, dam deterioration, downstream home & property damage in the event of a failure	Partial restoration of freshwater flow.	It's too bad this relic of a failed canal project hasn't been addressed sooner. It's good the area has been enjoyed for fishing over the years, but it's time to reverse the effects of a failed big-government project. The St. Johns is taking big hits in high tides and estuary decline. This long-term infusion of fresh water is badly needed. There's no reason why the former reservoir acreage can't be a wildlife preserve once restored.
10/2/2021 9:04	Duval		No	Yes	1 time	2-5 times	2-5 times	Wildlife viewing	I would like it to be breached.	The simple fact that the dam is limiting habitats, restricting springs, and costing millions, without adding any great public good. Why is this up for debate?	Taxpayer money being pointlessly thrown into keeping the dam.	No. The dam must be breached.	
10/2/2021 9:12	Lee		No	Yes	1 time	2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing Other: The wilderness look.	Keep it as is.	It is a Florida treasure even if it happened by "accident".	Loss of a now natural treasure and protection of manatee in upper St Johns	No	Survey questions seems biased in direction of removing dam.
10/2/2021 9:12	Alachua		No	No					Breach the dam and restore water flow to the river.	Cross-Florida Barge Canal never built.	Permanent loss of natural flora.	No	
10/2/2021 9:15	Polk		No	No					I love this river and all it has to offer. I also believe that Florida's natural resources deserve to be returned to their natural state.	Florida has been ravaged by a population boom and an increase in provisions to support it. This is wreaking havock on the natural beauty and recources. Please please return the river to it's natural state.	Ecological effects that damage that continues to damage wildlife and their habit		
10/2/2021 9:24	Alachua		No	Yes		1 time		Other: I don't use it. I have to go around it for kayaking.	Breach it	Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	Wasted tax payer money to fix an obsolete dam	No. Breathing of the dam is long overdue	Let's breach the dam, stop wasting tax payer money on bad decisions from decades ago, and let's restore wildlife habitat which will draw more tourism to Florida.
10/2/2021 9:26	Marion		No	Yes		2-5 times		Wildlife viewing	Restore river.	Fish and animal migration, springs access.	Dam and Reservoir will cause futura housing developments.	no	
10/2/2021 9:26	Okaloosa		No	Yes		1 time	1 time	Canoeing / kayaking Wildlife viewing	Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	No. Breaching the dam is 50 years overdue.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
10/2/2021 9:29	Lake		No	No						Drowning in it	Fish and manatees continued deaths.	No	
10/2/2021 9:27	Hillsborough		No	No					Remove it	Save the manatees	manatee deaths		
10/2/2021 9:28	St Johns		No	Yes		2-5 times		Fishing (shoreline/structure)	Stay as it is	Been that way so long don't want to see the ecosystem that is has created destroyed	The ecosystem would be changed again well enough leave it alone	Control the dam and let as much water flow without changing the ecosystem	
10/2/2021 9:28	Alachua		No	Yes		1 time		Canoeing / kayaking	Remove it. The damage caused was documented in the 70's it is now time to restore the river and springs ecosystem.	50 year old proof of the damage caused by the restoration and cross Florida barge canal.	Why tax dollars continue to be spent on maintaining a the damage caused by the cross Florida barge canal.	Drain the lake and keep the drain open allowing recovery.	
10/2/2021 9:30	Outside of state / other		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier.	Why tax dollars continue to be spent on maintaining g the damage caused by the cross Florida barge canal.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to $37 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills, and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored. 4. Is	
10/2/2021 9:31	Alachua		No	Yes			1 time	Fishing Wildlife viewing	Breach the dam, restore the river.	The continued waste of money to maintain the dam.	Continued waste of taxpayer dollars.	No	I was taken to the Ocklawaha as a small boy. I remember that it was a beautiful wild river with springs, fish and wildlife. I would like to see it that way again.
10/2/2021 9:45	Pinellas		No	Yes			2-5 times	Wildlife viewing	Removal and river restoration	There are reams of scientific data in your files that make this position a shoo in vs. the reasons from the few fishermen and politicians advocating to keep this mistake.	Lack of funding to properly finish restoration properly	Without dam removal, no.	
10/2/2021 9:45	Alachua		No	Yes	1 time	2-5 times	More than 5 times	Fishing Wildlife viewing	Breach the dam and partially restore the Oklawaha River	There is no current use for the dam.	Millions of dollars wasted restoring something that isn't needed.	Not really.	
10/2/2021 9:49	Duval		No	No					Free the river. Breach the dam.	Springs are an amazing attraction and recreational opportunity to see natural Florida plants and animals.	Missing out on available funding.	No.	Do the right thing and your reputation will improve.
10/2/2021 9:50	Lee		No	Yes		1 time		Wildlife viewing	Breach it! Restore natural flow of the Everglades.	Updates from National Audubon Society keep me informed about pending legislation.	The real Florida is being lost. Habitat encroachment is a big deal. and more people should be mindful of it.	This is non-negotiable. Florida is at the forefront of climate change. and has a lot to lose if we don't mitigate the risks.	
10/2/2021 10:15	Marion		No	Yes			2-5 times	Canoeing / kayaking	Remove them		Continued ecological damage	No	
10/2/2021 10:17	Alachua		No	Yes			2-5 times	Boating Wildlife viewing Other: We travel by boat to enjoy the drawdown	I would like to see the river allowed to flow freely.	Restoration of natural flow to help mitigate rising salt levels in the St. John's river. Freshwater springs will help prevent rising salinity that will infiltrate the aquifer allowing brackish flow into water pumped on crops in dry weather. Springs need to interact naturally.	Continued degradation of water in that system. Continued use of herbicides to counter the nitrates that continue to feed clogging plant growth.	No	The fate of this dam was determined years ago. Why it has not been taken down is a result of political haggling that can no longer jeopardize the health of our waterways. We are in the fight of our history to protect fresh water resources worldwide. Our spring system should be considered a world heritage site. We act as if we are clueless as to the importance of clean water.
10/2/2021 10:17	Alachua		No	No					Remove the dam.	Continued Destruction of the Springs		NO	
10/2/2021 10:18	Volusia		No	Yes					Decommissioned/removed from service	Preservation of critically endangered flora & fauna	Continued loss & extinction of species	No	It's time to put our wildlife first above greed
10/2/2021 10:19	Orange		No	No					Remove the dam	Would allow the river to return to more natural state and end the idea of the cross Florida barge canal.	Perpetuation of costly repairs to dam and loss of natural habitat beyond.	Start with small steps if necessary, but ultimate objective is unchanged.	
10/2/2021 10:20	St Johns		No	No					Take it down	Environmental Concerns	Flooding	No	
10/2/2021 10:23	Clay		No	No					tear it down	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	
10/2/2021 10:34	Seminole		No	No					Restoration of the river by breaching the dam.	Protect wildlife.		No	
10/2/2021 10:38	Palm Beach		No	Yes		More than 5 times		Fishing Boating Hunting Wildlife viewing	Keep the dam. The lake has great habitat for a lot of fish and wildlife	the lake is a destination for bass fishing and has marshes that attract waterfowl. We have a farm nearby and enjoy using the lake multiple times each year.	Loss of a great fishery and freshwater habitats, including marshes.	No reason to destroy a long time habitat that is attractive to many outdoor sports enthusiasts.	The river has long stretches remaining below the dam that are also great places for recreation...But, there is no reason not to have the variety of recreation available on a healthy freshwater lake above the dam destroyed. If the dam is removed, the current lake bottom will become a tangle of vegetation, much of it exotic, and will not be useful for recreation, nor a natural timbered swamp as was historical...
10/2/2021 10:45	Duval		No	No					Breach the Rodman/Kirkpatrick Dam	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/2/2021 10:49	Putnam		No	Yes		2-5 times		Boating Wildlife viewing	Leave it be	Value to the area and community	Stupidity wins again	No	
10/2/2021 10:49	Clay		No	Yes			More than 5 times	Canoeing / kayaking Other: Photography	Remove the dam and restore the river to its original course.	Reduction of freshwater flow to the St Johns river caused by spring suppression when the reservoir is full. Declining health of the reservoir. I kayaked the shallows near what used to be the Blue Springs run during the last drawdown and was aghast at the almost complete absence of animal life except for leaches. Even Gambusia were absent. Acres and acres of fishless water. No aquatic insects, either. The reservoir is dying. Even the fisherman I talked with said the fishing was not as good as it used to be. The reservoir is slowly dying. Get rid of it.	The health of the St. Johns River and the final fate of the reservoir.	Not really.	Follow the science. Restore the river.
10/2/2021 10:52	Marion		No	Yes	1 time	2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing Other: Photography	Keep it	It's now part of the environment and the counties.	Angry Forest Residents. We're weird	Nada	
10/2/2021 10:54	St Johns		No	Yes			2-5 times	Wildlife viewing	Preserve it	Historic usage		No	
10/2/2021 10:56	Volusia		No	Yes			1 time	Canoeing / kayaking	Take the dam down and let this vital river run its natural course. After paddling through he heavily vegetated waters of Rodman reservoir I am convinced that this is a totally unnatural flowing waterway. Dead fish were seen floating in it. No manatees had access to it.	All the federal and state agencies agree that maintaining the Rodman Dam is not economically viable. Biologists, hydrologists and ecologists have all supported the Ocklawaha's return to its natural flow and riverine forested state. I was a student at UF when the whole biology department rose up in dismay when it was learned that the cross Florida barge canal would change the natural flow, flood numerous springs and drown a healthy riverine forest. For at least 50 years now this boondoggle has been allowed to linger as a blot on the face of Florida's riverine systems and hydrology.	If the dam is not removed and this weed-choked Rodman pool is allowed to persist the loss of more manatees due to loss of historic access to spring-warmed overwintering waters where underwater grasses abound, additional money would be allocated to maintain the dam and upkeep. Blue green algae is more likely in this stagnant system.	No!! Let the bass fisherman continue to catch their prize bass in the St.John's river. Let the floodplain forest return to the heart of Florida and it's free flowing spring fed waterway.	In addition to numerous paddle trips near the outflow of Silver River to Ft. MCoy, I have paddled the headwaters if the Ocklawaha from Eustice (441) to Welaka in the St. John's River. The Ocklawaha River is a personal experience for me. It is one of Florida's living legacies. Let's be proud of honoring the wisdom of nature as it provides a continuous life flow for the real Florida!
10/2/2021 10:58	Lake		No	Yes			1 time	Fishing Fishing (shoreline/structure) Canoeing / kayaking Wildlife viewing	Breach the Rodman/Kirkpatrick Dam, to allow free flow of the river	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No. Breaching the dam is 50 years overdue.	SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
10/2/2021 10:59	Okaloosa		No	No					Breach the dam.	Restoring manatee habitat and migratory fish access to the springs.	That the dam will fail eventually and flooding could be catastrophic.	No	
10/2/2021 11:00	Alachua		No	Yes			1 time		Other: I don't. Only went with friends that were boating	Man made obstruction to the natural flow of wildlife and scenery. It is ugly and does not serve a purpose.	Other ill conceived structures that hurt the wildlife and beauty of the land. It will hurt the attraction of Florida which so many people enjoy and come to these places to vacation.	Vote for the Democratic Party which much more fully supports the environment and not development of our natural resources.	
10/2/2021 11:01	Duval		No	Yes	2-5 times				Keep as is, been fishing and camping there my whole life. I now take my kids there regularly. The wildlife is so abundant.	Wildlife, access to nature for my family. Outdoor activities	Could be taken away for my kids and grandkids to enjoy.	More access, more promotability	
10/2/2021 11:07	St Lucie		No	No									
10/2/2021 11:22	Outside of state / other	Knoxville, TN	No	Yes		1 time	2-5 times	Fishing	Keep the dam and Rodman Reservoir as is, continue to manage for wildlife and fishing.	As shown in Florida Trophy Bass data, Rodman is regularly the most productive lake in Florida.	Our fishing groups (one in February and one in October) would no longer make the annual trip to Palatka in order to fish Rodman Reservoir.	No	
10/2/2021 11:27	Sarasota		No	No					Remove the dam.	I've read articles about restoring natural ecosystems and the positive outcomes in Yellowstone Park and in locations around the world. Our Florida environment deserves a chance to renew, too.	Ecosystems continuing to deteriorate, plus millions spent on maintaining an intrusive dam.	I don't know, but time and again, nature has shown us the correct path.	
10/2/2021 11:37	Brevard		No	Yes	1 time	2-5 times	More than 5 times	Wildlife viewing	Remove the dam.	The death of the forest that once surrounded the river. The reservoir is little more than an impoundment with little enviro mental value and will require greater management as time goes on and it naturally stills in.	Spending money to keep the reservoir as a fishing hole.	No. The dam need to go to allow nature to heal this scar.	
10/2/2021 11:37	Pinellas		No	Yes			1 time	Wildlife viewing	Remove it, please!	This is in part a critical piece of restoring a natural system that should have never been altered	Years of continuing decline of a high magnitude natural system that may loose it's ability to naturally recruit historical plants and wildlife	Remove the dam is step one and a must	Please remove the dam for the good of Florida's environment and natural history
10/2/2021 11:39	St Johns		No	Yes		1 time		Canoeing / kayaking Wildlife viewing Other: I am more likely to visit this area during the drawdown. While the dam blocks the natural cycle I am less interested in being there.	I would like to see the dam dismantled and the Ocklawaha support natural migrations of species that depend upon a free flowing river and the natural habitat that it provides.	A free-flowing Ocklawaha provides important ecosystem services such as mitigating salt water intrusion downstream for a healthy St. Johns. Many ecosystem services are curtailed now when the dam is closed. And the dam is nearing the end of its projected life span. Maintaining it involved increased costs and increased risks.	Increased risk from dam failure, salt water and flooding during rain events, wildlife loss.	NO. Even the bass fishermen realize the quality and size of the catch is reduced over time. Unless the dam is gone the springs will be gone.	The dam only serves big boaters and the recreation that requires a big boat. Its time to realize there are other recreational opportunities provided by a free flowing Ocklawaha, not to mention the ecosystem benefits.
10/2/2021 11:43	Hillsborough		No	Yes	1 time	2-5 times	2-5 times	Wildlife viewing	I would like to see the breach of the Rodman/Kirkpatrick Dam.	The fact that Florida has some of the most unique and valuable landscapes in the world is one of the things I look at in the scheme of this dam. There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project. actual figures show that by breaching this dam - which is already past it's life expectancy - saves $4-14 Million in dam repairs.	We could miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), the dam is unsafe serving no real purpose - it is a waste of taxpayer money to keep, but it could really stimulate an economy (struggling after Covid) and put people to work doing a valuable public project protecting the environmental issues that are Florida's claim to fame - manatees, springs, and outdoor recreational opportunities! This is a huge reward with up to $47 million dollars in economic benefits!	No, breaching the dam is 50 years overdue. It is the equivalent of starting a project, getting bored, and leaving all the jet restaurants, stay in local hotels and bed and breakfasts, rent canoes/kayaks/paddleboards, go boating, and yes, still go fishing after the removal of the dam would be such an amazing economic opportunity for the area! It would also present the unique opportunity to help save the Florida Manatee after the record year of 2021 die-offs. Habitat restoration as one of the benefits of the removal of the dam would help to restore native grass beds and warm water refuges for the Florida manatee - a widely recognized and well loved iconic animal crucial to the identity of Florida.	I can't imagine we would want to miss the amazing opportunity to put Marion and Putnam county on the map as a destination location for its amazing natural wonder of 20 springs (just in this one area!) and the flora and fauna that come with it. The number of businesses that could flourish with the uptick in visitors here to see the springs, birds, eat jet restaurants, stay in local hotels and bed and breakfasts, rent canoes/kayaks/paddleboards, go boating, and yes, still go fishing after the removal of the dam would be such an amazing economic opportunity for the area! It would also present the unique opportunity to help save the Florida Manatee after the record year of 2021 die-offs. Habitat restoration as one of the benefits of the removal of the dam would help to restore native grass beds and warm water refuges for the Florida manatee - a widely recognized and well loved iconic animal crucial to the identity of Florida.
10/2/2021 11:48	Leon		No	No					I would like to see it removed.	The fact that it impedes the natural springs and is only there due to an unfinished canal that was a terrible idea in the first place.	The continued degradation of Florida's springs and aquifer.	Perhaps more frequent drawdowns/ breaches	I understand why those that live down river would be concerned about flooding. The biggest obstacles would be those that have a business dependent on the reservoir and those that live downriver. These are the people this effort needs to be focused around.
10/2/2021 11:57	Lake		No	Yes	1 time	1 time	More than 5 times	Other: Travel	Breach the dam for wildlife benefit and to avert potential future flooding downstream.	Information from the SJRWMD and local Florida Audubon studies.	Catastrophic flooding and the continued impoverishment of this blue-way. negatively affecting our precious whitlife.	NO! This environmental restoration is long overdue and needs to be accomplished NOW!!!	
10/2/2021 12:12	Alachua		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	Torn down to restore natural flow	Newspaper articles	Continued pollution down river	No	
10/2/2021 12:19	Alachua		No	No					I would like to see the Kirkpatrick Dam breached, to release the free-flowing Ocklawaha River.	Breaching this aging dam would restore the river and its floodplains, allowing vegetation to regenerate and plants and animals (fish, manatees) to migrate as previously, while refreshing the many affected rivers and springs.	The environmental benefits above would be compromised, and economic risks elevated from this aging dam that serves no purpose.	Breaching the 53-year-old dam is the only solution to the environmental and economic risks it poses to our river systems.	
10/2/2021 12:21	St Johns		No	No					Slowly demolish the dam, letting the water flow into the St. Johns.	Need to reduce salinity at other end.	Loss of wildlife and certain fish that need fresh water.	A smaller dam, creating a smaller lake and less flow.	

10/2/2021 12:28	Alachua		No	No					Take it down.	Ecology, science.	Continued incompetance of state officials.	No	
10/2/2021 12:40	Duval		No	No					I would like water flow to be restored to the St. John's river.	The St Johns river is suffering from more frequent algae blooms.	The health of the St. John's river.		
10/2/2021 12:55	Volusia		No	Yes		1 time		Fishing Fishing (shoreline/structure) Canoeing / Kayaking Boating Hunting Wildlife viewing	Water level back to normal level.	Free the springs	Fish not able to make it to their spawning area.	Have to dam free flow unless the is a reason to raise the dam. Like to prevent flooding down stream.	
10/2/2021 13:01	Palm Beach		No	No					I would like the reservoir to have better water quality monitoring, remediation and management to stop any toxic water from being stored or released there		seagrass will die, manatees and other wildlife will be killed		
10/2/2021 13:07	Duval		No	No					Please remove the dam and partially restore the river.	This is a cost effective solution that will repair some people of the environmental harms of the dam.			
10/2/2021 13:14	Brevard		No	Yes			1 time	Wildlife viewing Other:	Take it back to original flow.	No need for the dams. Wildlife and connecting bodies of water will greatly benefit.	Con3tued degradation of waterways and wildlife health.	No.	
10/2/2021 13:17	Volusia		No	Yes			More than 5 times	Wildlife viewing	No more dam	It will bring many springs back to life. It will help our manatees who are struggling severely.	Our springs and manatees continue to die off.	No	There is no reason for the dam.
10/2/2021 13:22	Marion		No	No					Keep as is.	It's been functioning for years the way it is...		disappointed...	not sure...
10/2/2021 13:24	Alachua		No	Yes		1 time		Wildlife viewing	I think it would help the local environment to take away the dam and restore the river flow.	We need to keep the river flows and spring levels healthy	Even more damage to the water ecosystem and all that relies on it	No. This needs to e done for the future of water resources in the area.	
10/2/2021 13:24	Sarasota		No	Yes		1 time	2-5 times	Wildlife viewing	I'd like to see it removed and the Oklawaha restored	I have been to the reservoir when it was full and when it was empty. It is much more beautiful and useful when it is empty and the natural flow of water is established.	That it will be too late to restore the environment if we wait too long.	No	
10/2/2021 13:24	Duval		No	Yes			1 time	Wildlife viewing	I would like to see the dam removed and the reservoir drained and the river cleared to return to its natural flow.	Ecology not commerce.	The St Johns River will continue to degrade as water is removed and nutrients are added.	No	
10/2/2021 13:30	Marion		No	Yes			2-5 times		Remove the dam. Restore ocklawaha to it's natural state	This river was untouched for thousands of years and we came in the last 50 years and changed it for the worse. Manatees and fish cannot access their natural habitat, aquatic vegetation is choking the river and the solution is to spray with awful herbicide. 50 years is not long in the span of nature's lifetime. If we remove the dam, in 50 more years, the land will be back to it's natural state and it will be better than it is now. Just because some people use the reservoir for fishing and monetary gain, that shouldn't be a reason to keep the dam. With a natural habitat, we could bring even more money in tourism to view this beautiful, natural, free flowing jewel of central Florida. We have nothing to lose and a lot to gain. Healing the choked out springs, even helping maintain balance of salinity in the st John's river. I see no practical reason to keep the dam besides some people like to bass fish in lake ocklawaha. That benefit of a few fishermen doesn't outweigh all the damage it is doing to our ecosystem.	The poor manatees and fish. The ecosystem as a whole is suffering. Our area is growing and we are missing out on so much natural tourism. Also the dam will need repairs soon, so hopefully it will crumble and breech naturally if we don't remove it.	No. Remove the dam, restore the ocklawaha	I'm tired of money hungry legislature thinking they know what's best for everyone and everything. When they don't, they just care about lining their pockets. I live in spitting distance of the river and spend lots of time on it. This is my home and it makes me sad seeing the river choked, Lilly, and hardly any fish anymore. The manatees can't even get to silver springs because of the dumb dam. They are starving to death and the river has a surplus of vegetation that the state dumps harsh herbicide on. It's an atrocity and makes me sick that so many people oppose restoring the ocklawaha just so they can go bass fishing. If the manatees could get to silver springs, do you realize how much tourism our county could attract?? Look at blue springs, and homosassa, they Garner so much tourism and people would prefer to go somewhere less crowded so silver springs and ocklawaha would be the perfect destination! It's common sense really. I don't see how this is still a debate
10/2/2021 14:06	Lake		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam will help restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. As much as $14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 30 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	We have done enough damage to the ecology of our great state. Every opportunity to repair the damage should be taken advantage of.
10/2/2021 14:36	Alachua		No	No									
10/2/2021 14:47	Alachua		No	Yes		1 time	1 time	Boating Other: See clear natural springs during drawdown	Would like the reservoir and dam to be removed or opened and return to original River to natural flow pattern	Fishing will be better. Land will be in natural preserve state	That it will stay and require tax dollars to keep in unnatural conformation for the benefit of just a few. The River can supply sport and activity in natural state	Would love to hear options and +/- of each	I am 72 yo native Floridian. I was on the River multiple times with my family BEFORE the canal project, fishing, swimming, boating. It was gorgeous. Animals plants flowing water. Sport fishing can be done without reservoir. So ugly.
10/2/2021 15:04	Duval		No	Yes		1 time		Other: I visited just to see what it looked like.	Remove the dam and restore the Ocklawaha River to it's original condition.	The loss of the springs while the dam remains in place.	The loss of one of the most amazing natural wonders in the world. Also, the continued use of taxpayer dollars to maintain the lake for the few people who benefit by it, and after it's purported purpose has been negated.	No	
10/2/2021 15:08	Alachua		No	Yes		1 time	More than 5 times	Boating Wildlife viewing	Restore the River by opening up the dam	Friends of the River study	The springs are affected along with the River quality	No	
10/2/2021 15:16	Martin		No	Yes			More than 5 times	Canoeing / Kayaking Wildlife viewing	Take out the Rodman/Kirkpatrick Dam	Restoring drowned springs and historic routes for migratory fish. Opening up more habitat for manatees. No more maintenance dollars on a worse than useless dam.	Water quality continues to decline. Taxpayer dollars are spent to achieve nothing positive. One more opportunity to begin to restore Florida's natural water system is missed.	No. The dam should not have been constructed and needs to be gone!	I love Silver Springs and the Ocklawaha. Please don't let them go the way of Lake Okeechobee and the Indian River Lagoon.
10/2/2021 15:17	Duval		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 30 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	It's time to do the right thing.
10/2/2021 15:24	Duval		No	No					I would like to see it removed to restore the natural flow of the river.	The natural flow of the river will help restore the natural path of fish, birds and water. It will also reduce the unnecessary expenditure of money	We will waste money and continue to block water flow. We have considerable trouble with water flow in north central Florida from over drawing water and it is foolish to distort the natural flow of water.	no	
10/2/2021 15:41	Pinellas		No	No					Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every additional day the dam and reservoir remain in place results in additional environmental degradation.	The large expenditures required for herbicide treatments to control the growth of invasive aquatic weeds and to conduct other ongoing maintenance needs, including periodic drawdowns, in a futile attempt to maintain water quality and recreational access in the stagnant waters of the Reservoir, would become unnecessary. An estimated $14 Million in dam repairs, measured in 2006 dollars, would be saved by avoiding repairs to a dam that has exceeded its life expectancy and never fulfilled the purpose for its construction. Manatees would regain open access to the warm water habitats of the Ocklawaha and Silver Springs. Draining the Rodman Reservoir would remove the single greatest barrier to plant and animal movement along the Ocala to Osceola (OZO) Wildlife Corridor by replacing the open water expanse of the Reservoir with a restored floodplain forest, to the benefit of many listed plant species native to the region including the Federally listed Clasping Warea and Scrub Buckwheat. Three river systems - the Ocklawaha, Silver and St. Johns - would experience significant environmental improvement from restoration. 8,000 acres of stressed floodplain wetland located downstream of the dam would be enhanced.	The broad array of environmental benefits to native flora and fauna, including many imperiled species, that would result from restoration would not be possible.	No. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration.	
10/2/2021 15:41	St Johns		No	No						Dam removal	Water quality	Detrimental water quality	Maybe
10/2/2021 16:02	Duval		No	Yes	2-5 times			Fishing	I would like to see it left alone and just like it is.	It is a beautiful lake with lots of wildlife and it also brings quite a bit of essence to the local economies.	That once again, our government has bowed down to a few loud people that really do not know what they are talking about.	No	This has now become a beautiful part of this area. It is also, an area that the manatees live. I have heard the river keepers talk about the "extra" flow to the St John's. The same amount if water goes to the river no matter what. To keep the lakesfrom flooding, thecwater has to pass to the river at Rodman Reservoir would be flooding Orlando by now.
10/2/2021 16:03	Orange		No	No					Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economics lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No	
10/2/2021 16:08	Alachua		No	Yes			2-5 times	Canoeing / Kayaking	I would like to see the dam removed.	Few Manatee, mullet, and other aquatic wildlife can get to Silver Springs.	The native fish populations in Silver Springs continue to drop.	Not really.	The dam never should have been built. It needs to be removed. The local bait shops and other businesses have disappeared. If the fish return, maybe the local economy will get a boost.
10/2/2021 16:13	Alachua		No	Yes			2-5 times	Boating Wildlife viewing Other: Hiking around the river	Having seen the area during draw down, I firmly believe the dam should be breached and the Ocklawaha should be restored to its natural flow.	First the am benefits a small percentage of the population. Many more will benefit from the restoration of the flow. The are so many lost springs (many of which I observed during a drawdown, that would be restored, which would allow the historical flora and fauna to thrive once again. The three rivers that have more that 50 springs, truly a Florida treasure and certainly will provide more than enough tourist interest to offset the sad state of fishing in the unnatural lake. Maybe the manatees (which are declining) would return. I think more than 10,000 acres of the Wildlife Corridor would be restored to be enjoyed by people and wildlife providing lots of recreational opportunities. Economic opportunities would be available for more people who live and work along the rivers. Potential flood damage for those downstream might be less of a risk.	Tax payer money spent to keep the dam in repair. Taxpayer money used to subsidize flood insurance. Dam failure might cause extensive flooding and climate projections indicate increased storms and flooding for Florida. The St. Johns River Estuary will continue to suffer from lack of fresh water flow.	Not really. Breaching the dam should have been done decades ago. It is time and should be done intentionally not as a result of poor repair or storm damage.	As a property owner and taxpayer and resident of the State of Florida, I request that the Ocklawaha River be allowed to flow in its natural state and that the 200+ miles of rivers and springs be restored so that humans and wildlife may flourish. There are numerous scientific, environmental. aesthetic, and socially beneficial reasons to breach the dam appropriately and restore the flow. There are only a handful of, in my opinion, rather selfish and out-of-date reasons for not doing so.
10/2/2021 16:18	Marion		No	Yes	1 time			Fishing Wildlife viewing	Leave it alone	It is its own ecosystem now. Too late to go back. Not right	All the wildlife that would be impacted	No	Please leave it
10/2/2021 16:20	Putnam		No	No					I would like to see ecologically safe changes made in the running of the Rodman Reservoir and Kirkpatrick Dam.	My concern for the manatees and other land and water creatures that rely on these waters for their survival.	I would like to see ecologically safe changes made in the running of the Rodman Reservoir and Kirkpatrick Dam.		
10/2/2021 16:23	Alachua		No	Yes			2-5 times	Canoeing / kayaking	Remove dam and restore the Oklawaha	Fishing in the reservoir is declining. Migratory fish are suffering	Maintaining dam is expensive. Fishing failing	No. There is either a dam or there isn't	Restore this wonderful river
10/2/2021 16:26	Orange		No	No									
10/2/2021 16:30	St Johns		No	Yes			1 time	Wildlife viewing	Returning the waterflow to the natural state, as closely as possible	Removing the dam will help restore many natural springs, as well as restoring the more natural flow of the St. Johns and Ocklawaha Rivers--all BEAUTIFUL Florida areas and assets to tourists and Floridians alike.	money wasted to maintain the old dam	No	We need to save natural Florida for our kids and Grandkids.
10/2/2021 16:35	Outside of state / other	Kent, Wa	No	Yes			1 time	Fishing	Leave it alone as is for fishing and wild land refuge	I saw all kinds of fantastic wildlife during my one day trip fishing. The birds the fish. etc. all was beautiful	Losing the catch and release fishing and the industry that goes with it	No	
10/2/2021 16:39	Alachua		No	No					Remove the dam.	It will restore the river as well as improving the flow on the St. johns and Silver Rivers.	The St. Johns will continue to become more polluted.	No	
10/2/2021 16:54	Putnam		No	Yes	More than 5 times			Fishing Fishing (shoreline/structure) Boating Hunting Wildlife viewing					
10/2/2021 17:04	Marion		No	Yes	1 time	2-5 times		Canoeing / kayaking Wildlife viewing	Open them up and give our Florida nature back.	The flooding of over 20 springs is just wrong. Wildlife and aquatic life have been and continues to be impacted.	The Ocklawaha and Silver will continue to die. This impacts all:	If the cost is a problem, i.e. removal of the dams etc. At least get them opened up and the water flowing freely.	
10/2/2021 17:05	Volusia		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 Million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economics have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife.
10/2/2021 17:05	St Johns		No	Yes	1 time	More than 5 times	More than 5 times	Canoeing / kayaking Other:	remove the dam	return river to original site	to have to continue to seek removal of dam	no	
10/2/2021 17:10	Gadsden		No	Yes			1 time	Canoeing / kayaking	Restore the river	Can visit all the springs again	Lake fills with aquatic weed	No	I thought the dam was to be removed years ago!
10/2/2021 17:21	Alachua		No	Yes			More than 5 times	Canoeing / kayaking Wildlife viewing Other: Photography	I would like to remove the dam so the Ocklawaha River is restored and the ecosystem is fully functional.	100's of manatees would benefit as well as other unique FL species and 1000's of acres of precious habitat is would be improved or be restored.	The ecosystem continues to decline impacting water quality, fish and manatee populations while taxpayer money is wasted on a dam that does not provide flood protection, power, water supply or other broad public benefit	No. Breaching the dam is long over due	Thank you for the opportunity to voice my opinion.
10/2/2021 17:33	Marion		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	keep this valuable resource available for future generations	This resource provides habitation for for many endangered species such as manatees, eagles, alligators and a large range of other species that need this habitat. It also provides revenue for the county and state. IT IS IMPORTANT TO KEEP RODMAN RESERVIOR ALIVE.	The loss of wildlife	No	Leave this resource as is , we are lucky to have it.
10/2/2021 17:33	Alachua		No	Yes		More than 5 times		Fishing Boating	For the Dam to remain, it's a phenomenal fishery and great sanctuary for wildlife. Removing the Dam would also have a negative impact to the local economy.	Over 20 years spent on the reservoir	Giving in to a bunch animal activists with no hard data or scientific evidence to back up their claims	No	Rodman is a beautiful place please leave it alone
10/2/2021 17:45	Orange		No	Yes			2-5 times	Boating Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers $4-14 Million in dam repairs saved on a dam past its life expectancy Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. $57 million in potential flood damages avoided to downstream property owners	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. A storm event triggers a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages. Putnam County and Silver Springs economics lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway.
10/2/2021 18:05	Outside of state / other	Minnesota	No	No					I'd like to see the Kirkpatrick Dam breached in order to restore the Ocklawaha River.	15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to negatively impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	At this point, there is not, as breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	I am also concerned with how the dam negatively impacts manatees. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 has been the deadliest year on record for manatees. Unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation.

10/2/2021 18:11	Lake		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm-water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/2/2021 18:42	Putnam		No	Yes	2-5 times			Other: I don't use it, I just wanted to see it to have an opinion about it.	Removed	To cut down on the maintenance cost to the state	A constant drain on the Florida budget	No		
10/2/2021 18:49	Walton		No	No					like to see it gone	Natural habitat will benefit entirely	Wasted opportunity and funds	No		Love to visit "all" florida springs
10/2/2021 19:11	Broward		No	No					Remove the dam and restore the rivers	4-14 million in $ saved	A dam with no purpose, failing, loss of wildlife			
10/2/2021 19:46	Leon		No	No					Get rid of it	Impact on springs and fish/manatee				
10/2/2021 19:49	Orange		No	No					Removal to restore the manatee habitats	Health of the environment	Loss of biodiversity			
10/2/2021 20:04	Citrus		No	Yes	1 time	2-5 times	Canoeing / kayaking Wildlife viewing		I would like to see the dam breached and the original and natural river flow restored.	All the springs that would be restored and the benefit to manatees.	We would miss this opportunity to do something that is 40 or 50 years overdo. With manatee deaths at an all time high last year, this action will finally benefit nature and the springs, and it will also benefit Florida's iconic manatees.	No. The time is now. Restore the Ocklawaha.		
10/2/2021 20:17	Hillsborough		No	No					Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue.		2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/2/2021 20:28	Alachua		No	Yes		2-5 times	Wildlife viewing		Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	The Ocklawaha, Silver and St. Johns Rivers will be restored as well as 50 springs and the wildlife that desperately need it eh.	The extensive damage to natural wildlife habitats and water quality, not to mention the expense of trying to maintain the dam.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.		2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/2/2021 20:30	Putnam		No	Yes	2-5 times		Other: None of the above. Only during drawdown		Restore the Ocklawaha river and develop recreational opportunities.	$50 million gallons of fresh water per day NOT flowing into the SJR	The SJR continues to deteriorate and the mud hole continues to fill up with crap.	Not really. Development of economic assets while the restoration in in progress.		This has been a political football much to the demise of the SJR and the environment. This is FL's second worst environmental disaster. We are finally restoring the Everglades it is time to fix the Ocklawaha and stop wasting $ on a mud hole.
10/2/2021 21:10	Leon		No	Yes		2-5 times	Boating Wildlife viewing		Get rid of the dam, ASAP	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years.	nope		Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
10/2/2021 21:27	Alachua		No	Yes		2-5 times	Canoeing / kayaking Wildlife viewing		Restore natural habitat	Ecosystem would function better if restored	Continue deterioration of environment	Not really		
10/2/2021 21:45	Alachua		No	No					I would like the natural environment to be restored protected.	The updates that I have received regarding the campaign.	The environment will continue to be degraded.	Greater environmental protection, more investment in protecting wild spaces, no new dams, no development allowed in coastal areas and on rivers, and so on.		We need greater environmental protection in Florida. Our shorelines are a travesty!! We keep building in wetlands and Floodplains. Our Springs are being drained by water bottling companies. The development and deforestation is unchecked.
10/2/2021 22:22	Leon		No	Yes		2-5 times	Wildlife viewing		The Dam should be breached, if not wholly removed. I've followed this issue for nearly 40 years and have engaged stakeholders on all sides of the issue. To the extent the pool is opened, evaluation of the restoration needs of the floodplain should be undertaken and activities undertaken to accelerate floodplain recovery and renewal. Organic (and nutrient) accumulation may warrant isolation and partial removal. Floodplain and river species of fish may need to have some restocking -- again, the idea is to accelerate recovery/ Not completely unlike the efforts on the Kissimmee, this would represent a great opportunity to reverse a poor ecological decision.	The Cross Florida Barge Canal has been abandoned. This is a non-project. Residual elements of its construction have no serious value to the environmental health of Florida or its economy. Other portions of the abandoned canal concept have been restored, there is no scientific, ecological or significant economic reason to leave this element in place.	That the issue be dropped in perpetuity. The system need not be studied to death with no action whatsoever.	A partial breach would be a start . . . . with commitments to conclude the job at a time certain. This allows adjustments to reservoir users and property owners (who would still benefit from the floodplain and river).		The decisions not to act for the past decades are based on (unwarranted) political fear and the volume of voices opposed. At some point rational decisions need to be made.
10/2/2021 23:03	St Johns		No	Yes		1 time	Other: Driving past seeing all the non-native vegetation		Remove it.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	The continued disregard for nature and the balance that was destroyed when this was built	No		
10/2/2021 23:03	Duval		No	Yes		1 time	Canoeing / kayaking		I would like to see the dam breached to allo free water flow to the Oklawaha river. Doing so has the potential to warm the waters, creating a suitable habitat for manatees	Restoring the river , by allowing the water to flow freely, can help restore the springs currently impacted by the high water levels created by the dam.	Ongoing destruction of habitat. Our natural world is under assault. It seems like a very important time to restore natural habitats for water and land creatures.	No.		People could benefit from the money saved by not repairing the dam. At this moment, we need to put endangered species and habitat loss as a top priority. Let's repair that habitat so that we can continue to enjoy these amazing creatures and all other wildlife.
10/2/2021 23:13	Nassau		No	No					Please remove the dam	The fact that the project, of which the dam was a small part, has been stopped and the dam is no longer needed.	Wasted $ to maintain the dam plus additional $ needed to resolve environmental issues such as to restore unencumbered passage for manatees to access the springs blocked by the dam.	Eliminate the dam and redirect maintenance funds to instead create other ways to provide the positive benefits of the dam (if there are any positive benefits).		
10/2/2021 23:40	Duval		No	Yes	1 time		Canoeing / kayaking		Breach it.	The ecology and how it was destroyed.	Flooding, permanent damage to fish and wildlife			
10/3/2021 1:10	Dade		No	No					Remove it and turn adjacent area into nature center, kayak lounges, etc.	Negative environmental impacts caused by the dam.	Wildlife populations and the amount of tax payer money going into repairing the dam.	No.		
10/3/2021 0:27	Pinellas		No	Yes		1 time	Canoeing / kayaking Wildlife viewing Other: Spring hunting		Remove the dam ave restore the natural flow of the Oklawaha	Water quality inn area springs and devastation to the flooded landscape	Why a government would leave a dam in place that serves no purpose and does great harm.			Free the Ocklawaha
10/3/2021 0:59	Putnam		No	Yes		2-5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing		Dam destroyed and Reservoir turned back to natural.	About dam being destroyed.	Wild life & fishing habitats destroyed. Springs destroyed also.	The locks at the dam and locks staying open all the time or the physical locks taken out.		
10/3/2021 1:04	Palm Beach		No	No					Remove and open up the Rodman/Kirkpatrick Dam	Some 20 natural springs would be returned to life by removing the dam & reservoir. In this one action, the removal of the Rodman/Kirkpatrick Dam would be one of the most cost-effective springs protection project in Florida.	$$$ wo$ted. Millions$ in taxpayer$ money is being unnece$$arily $pent to repair the Rodman/Kirkpatrick Dam that does$ not even provide flood protection, power, water Supply or even any clear public benefit.	Umm… leave a small portion of the existing waterworks as a monument to man's folly and our disregard of what Mother Nature is telling us…		
10/3/2021 2:00	Outside of state / other	Brisbane, Queensland, AUSTRALIA	No	No					I'd like to hear that with doing what is said to be needed to be done in this article that hopefully with time, hope, effort & love that over time hopefully we'll live to see these beautiful creatures known as Manatees also known as "sea cows", do actually come back to these dams which once were a known place for these mammals to be. So I'm hoping with these changes I'll hopefully be alive to hear or see the outcome we do desire !!! Let's not kill off another piece of our food chain like every other animal species alike and different ie extinction of New Zealands native animal the little Tassie Devil aka Tasman Devil and alike all animals on verge of extinction like the beautiful chinas black and white bears known as the panda !! We need to turn things around and fast before it's too late	extinction - this word is almost like a demonic creature we all have come to know as the bad side of good. There's always the evil side and I refuse to be defeated on this and allow the bad to beat the good .. we can save this creature if we stand together as one !!	Then these creatures will go in to extinction			
10/3/2021 2:22	Escambia		No	No					Remove the dam Restore Ocklawaha River			NO		
10/3/2021 2:50	Outside of state / other	Langhorne Pennsylvania	No	No					Restoration of free flowing waters. Dam removal.	Returning the waterways and lands to their natural state for the benefit of native wildlife.	Continued human intrusion causing an unnatural state and its related impacts.	No		When we know better, we do better. Today we know that damming rivers negatively impacts wildlife and the environment. Returning the area to its pristine state, without dam, is the RIGHT thing to do for humans and wildlife.
10/3/2021 4:26	Putnam		No	Yes		2-5 times	Canoeing / kayaking Other: Camping		Breach the dam, restore the river.	Improved water quality, return of submerged springs.	The ongoing expense of maintaining the locks and an earthen dam beyond the end of it's planned life.	No.		
10/3/2021 6:11	Lake		No	Yes		2-5 times	Fishing (shoreline/structure) Canoeing / kayaking Wildlife viewing Other		Open it to allow natural migration of fish and manatee and allow the flow to help naturally maintain the water lettuce population allowing manatees to eat it and the natural flow takes care of the amount of foliage gathering in different areas of the river allowing it to spread out. When I visit during the draw down there are so many many birds and animals all along the shoreline that you don't see because it's all flooded. And you see the growth of the trees in the grass and the natural foliage and the beautiful white sand beaches flourish to the wild Plum trees etc. Please just let it free flow I beg you. This is a dream of my heart. For the health of the trees the animals environment for more opportunities for different types of recreation and for the springs that will be revealed that are covered up right now due to flooding! Believe you melt is going going to substantially change the natural beauty of this area! Thank you so much for doing this!	It is going to substantially change the natural beauty of this area! When the drawdown is going on I see so many people shoreline fishing that could help sustain people who can't afford to eat. There was a different dynamic they're wider variety of people who were actually using the river to sustain themselves! It was such a heartwarming seen.Thank you so much for doing this!	The natural free flow of the river will keep the river from being flooded which will allow the trees to properly grow and not be flooded and the other foliage and birds and animals to feed along the shore lines and grow and the manatees to free flow and freely eat the clogged up river due to water lettuces. I have no doubt this is going to just substantially positively change everything in a positive way people and foliage and animals and birds and reptiles and fish.	The natural free flow of the river will keep the river from being flooded which will allow the trees to properly grow and not be flooded and the other foliage and birds and animals to feed along the shore lines into r have no doubt this is going to just substantially positively change everything in a positive way people and foliage and animals and birds and reptiles and fish.grow in the manatees to free flow and freely eats the clogged up water lettuces. At least open the damn half of the year and the other part of the time let it flood again I guess? setting it flood is never a good idea. It just sickens me seeing it. And then they just use all that chemical spray to get rid of the water lettuce which doesn't even work.	At least open the damn half of the year and the other part of the time let it flood again I guess? I setting it flood is never a good idea. It just sickens me seeing it. And then they just use all that chemical spray to get rid of the water lettuce which doesn't even work. It's such a rich and beautiful environmental area i can't wait to be able to get out and see the Springs being exposed again so that the fish can be healthy and that environment as well so they're not flooded out all the time and browned out. It's just such a different dynamic and natural dynamic that is exciting at the thought of it. I went when it was during draw down and it the sand on the beaches were white and beautiful and the natural wild plum trees are blossoming and growing and there was all kind of new green shoots coming up from the trees and they were so much more wildlife and birds and it was so peaceful and just gorgeous.
10/3/2021 6:29	Marion		No	Yes		1 time	Canoeing / kayaking		partial breaching of the dam.	Silver Springs alliance recommends and other articles I have read in the Ocala Star Banner. Cost of upkeep of the present dam.	continuing the degradation of our springs.	no.		
10/3/2021 6:32	Volusia		No	Yes		1 time	Canoeing / kayaking		Restoration of a free flowing Oklawaha River.....please breach the dam	Studies and research by both environmentalists and economists give evidence that by breaching the Rodman/Kirkpatrick over 7500 acres would be restored to the natural floodplain. Another 20 fresh water Springs and miles of natural river channel would also be restored. Plant and animal habitats restored to its natural state. Millions of taxpayer dollars currently spent on herbicides to control invasive growth of aquatic weeds could be better spent.	Taxpayers on the hook for repair and maintenance of the dam and reservoir, and liable for loss and property damage should the dam fail.	No		
10/3/2021 7:07	Marion		No	Yes		1 time	Fishing (shoreline/structure)		Remove the Dam and restore the River	Fishing quality of the river and loss on natural migration of the manatee to silver Springs. Flooding of the upland up stream from the dam	Continue loss of the river's natural habitat	No		
10/3/2021 7:09	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Boating Wildlife viewing						
10/3/2021 7:10	Duval		No	Yes		2-5 times	Canoeing / kayaking		Breach both	restore springs, restore routes for migratory fish and additional access for manatees	Spending of tax payers money to repair a dam that does not provide protection, power, water supply or other public benefit.	no		
10/3/2021 7:12	Alachua		No	Yes		2-5 times	Wildlife viewing		Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs.	Continued and increased pollution.	No.		
10/3/2021 7:20	Marion		No	No					I have visited the dam when I was younger. I would like to see the dam removed and area returned to its natural state.	I have witnessed the degradation to Silver Springs and the Ocklawaha River over the last 50 years.	I would like to see Silver Springs return to its original clean water condition	Any improvement is better than nothing		
10/3/2021 7:28	Alachua		No	No					Remove the damn dam	Killing of flora and fauna on the Oklawaha	River would continue it's degradation	No		When our children were young my good friend and I would take them on canoe/camping trips on the Oklawaha- pre Rodman Dam. We would see huge gar(5-6ft) as well as all kinds of other flora and fauna These wonders are rapidly disappearing on the Oklawaha which is now just a shell of its once majestic beauty and vibrancy.
10/3/2021 7:30	Clay		No	Yes	1 time	2-5 times	More than 5 times	Other: I dont	I would like to see the Oklawaha restored to where it was 50 years ago. I grew up on the river and then the dam just ruined it. I was there as a young adult when the dam was built the bridges built and one of the most beautiful river with springs was destroyed.	That the manatees suffered, the residence lost livelihoods, one of the most beautiful rivers and its 22 springs destroyed. Wildlife and families all suffered great loss.	We will continue as we have the past 50 years throwing away money on something that went nowhere and millions of manatee die.	Just put things back the way God intended!		Please I beg you we have spent millions destroying this beautiful river. Just STOP and restore what was meant to be.
10/3/2021 7:38	Alachua		No	No					Free the river. Remove the artificial dam.	The river should flow as it was intended to restore nature.	Same old political crap where the "good old boys" get whatever they want and the rest of us wither.	Yes,STOP THE GERRYMANDERING!! let all Floridians have a say, not just the Republicans and fat cats.		When there is a legally supported state referendum, it should be honored when voted in and not twisted for those who didn't like it. For instance, restoring the vote for felons who have served their time.
10/3/2021 7:44	Alachua		No	No					Destroy the dam and restore the Ocklawaha river	The reservoir has become a cesspool, discharging polluted wastes into the St Johns river basin. Restoring the river would bring back pristine river water and allow the migration of native Florida species, such as Manatees, who would benefit from the warm springs and the vegetation.	Continued pollution and degradation of the reservoir, and further loss of manatees. Growth of invasive species such as blue tilapia. Continued maintenance costs.	Breach the dam, and restore the river flow. Not as desirable but better than nothing.		
10/3/2021 7:45	Outside of state / other	Pennsylvania	No	Yes		1 time	Wildlife viewing		Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 Million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	The flooding of properties north of the St. Johns River during hurricanes and tropical storms could be mitigated or impact reduce by restoring the wetlands needed to slow the flow of the river during heavy rain and pushing winds.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway. I would rely on both water management experts working with wildlife experts to come up with a solution that is best for the environment and the communities affected.		2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/3/2021 7:52	St Johns		No	No					I would like to see some or all of the wetlands restored.					
10/3/2021 7:54	Alachua		No	No					Remove the dam & restore the river.	The restoration will help manatees & bring revenue to the area.	Manatees will die.			
10/3/2021 7:56	Lake		No	Yes		2-5 times	Fishing Canoeing / kayaking		Breach the dam	The water flow is not natural and is resulting in poor water quality. The water levels created by the dam drown out the numerous springs along the Ocklawaha River. The dam also inhibits the natural wildlife migration from the St. John's River thru the Ocklawaha.	Continued deterioration of water quality upstream of the dam. Declining fish varieties. Loss of ecotorism due to the inaccessibility of the natural springs that are currently hidden.	No. This dam should have been removed when the barge canal plan was eliminated.		Please act now. This is long overdue.
10/3/2021 7:59	Marion		No	Yes	1 time	2-5 times	More than 5 times	Wildlife viewing Other: Picnic	Remove the damn	The dam was installed as part of the cross Florida Burger canal and the canal and the dam are a bad idea.	Fish and animal species will not be allowed access to more portions of their Ocklawaha.	There are other dams impeding the river, they are not part of this discussion.		
10/3/2021 8:09	Alachua		No	No					I would like to see the Rodman Dam removed quickly and forever!	The environment has suffered decline all the years the dam has been in place. Much of beautiful, natural Florida has been degraded or destroyed. Many springs have been covered by the higher water levels. Salinity of the St. Johns River has been adversely affected. As early as 1940s I remember my father speaking of the Ocklawaha River and the springs that flowed into it. If the State of Florida saw fit to stop the Barge Canal decades ago, then why has the dam stayed in place. It's just wrong!	Interests of a minority have will have outweighed the interests of the majority and denied future generations the pleasure of experiencing natural Florida.	No.		
10/3/2021 8:10	Alachua		No	Yes		1 time	2-5 times	Fishing Canoeing / kayaking	I would like to see the dam removed, and the river restored	Scientific studies on the environmental benefits of restoration	Continued decline of habitat	Maintain and manage a smaller reservoir as a trophy bass fishery, while still restoring the river		
10/3/2021 8:15	Alachua		No	Yes	1 time	1 time	1 time	Fishing	Preservation	Good business sense	Animals and people will be harmed	More preservation		
10/3/2021 8:17	Marion		No	Yes			More than 5 times	Fishing (shoreline/structure)	Remove the dam. Restore the Ocklawaha to what it was. The dam was a bad idea 50 years ago and is a bad idea today	Information from the scientific community	The Ocklawaha and its tributaries will continue to deteriorate	I don't see one now. I don't see this issue lending itself to compromise. Th dam goes or stays There's no middle ground. I would like to see something done to help those who are impacted by the loss of fishing but I don't know what that would be		Act decisively and soon. This can has been kicked down the road long enough
10/3/2021 8:20	Marion		No	Yes		1 time		Fishing Boating	Remove	Water quality	Declining fishery	Don't know		
10/3/2021 8:23	Alachua		No	Yes			1 time	Wildlife viewing	Remove the dam and lose the reservoir	Poor water quality running downstream	Continued degradation of the river environment	NO		This dam was and remains a money pit of wasted finances and environmental waste.
10/3/2021 8:25	Putnam		No	Yes			2-5 times	Wildlife viewing	I would like to see the reservoir and dam removed.	Removing the dam and reservoir will restore the health of the Ocklawaha as well as ad the St. Johns River. Restoring the Ocklawaha as a free flowing river, I believe, will lead to an equal or greater number of visitors for fishing or sight-seeing. This will also eliminate the need for costly maintenance and repairs to the dam.	Should the cost burden of maintaining the dam become too much in the future, it will simply be allowed to deteriorate and fall of its own.	There may be, but I have not heard of any.		I believe removing the dam and reservoir is more popular than it currently seems. The reason being that supporters of its continued existence are so much more vocal than advocates for its removal.
10/3/2021 8:29	Marion		No	Yes		2-5 times		Fishing Boating	It should have never been dammed. It's time to turn the river back to its natural flow!!!	Take down the dam!!!	Another sad day to see. Things need to go back to what it once was!! The fish and other mammals are dying from lack of natural environments and they so badly need help!!	I'm supporting it now!!		Help the environment and all the animals and fish that live in the river!!
10/3/2021 8:34	Alachua		No	No					Restore the Ocklawaha River.	EPA analyses and Earthjustice reports.	Continued water/environmental degradation.	None.		Continue to keep the comment effort open and publicize the issue.
10/3/2021 8:41	Alachua		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat)	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.		
10/3/2021 8:41	Alachua		No	Yes		1 time		Wildlife viewing	Restore natural flow to the Ocklawaha River by decommissioning the dam	Impartial cost-benefit analyses invariably favor restoration to natural habitat for environmental health over maintenance of a project designed as part of a failed engineered canal	Continued degradation of an ecologically important river system	Who knows? What are the scenarios?		Instead of only asking how often folks visit the dam, why not ask how often people boat/kayak/canoe the river up to the dam. Ask how that frequency might change if the river were restored to its historic flow
10/3/2021 8:42	Leon		No	Yes		More than 5 times		Canoeing / kayaking Wildlife viewing	restored to its natural state	letters to the editor	loss of wildlife	not sure		

10/1/2021 8:44	Duval		No	No					Breach the dam.	The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No, maintaining the dam is a waste of money and breaching is the only desired outcome.	
10/1/2021 8:46	Marion		No	Yes		2-5 times		Canoeing / kayaking	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	20 lost springs and Silver Springs ecosystem are restored	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.
10/1/2021 8:54	Marion		No	Yes	1 time	2-5 times	More than 5 times	Fishing Wildlife viewing	The Rodman Reservoir and Kirkpatrick Dam have to go down! Too much environmental disaster, it is obvious to see.	The river has drowned springs that could be used for manatees in the winter to keep warm. The river needs to go back to its natural course, the way it was intended to be.	That the river will be destroyed because of human greed.	NO! The life of nature, and animals is more important than ANY money grab situation going on right now.	I am sure that this will be ignored, because I am against it, but please consider the manatees that used those springs for years before human greed took a hold of the river.
10/1/2021 8:54	Lake		No	Yes		2-5 times		Wildlife viewing	breach the dam ..... free the waters, they were meant to be free from the beginning of its time	Scientific studies show ecological benefits to restoration. manatees, fish, otters, turtles, water birds await the glory days of the St Johns River.		No	I live on the Harris Chain of Lakes in Lake County since 1990. We moved here because of the 1400 lakes in this county, because of the beauty of water and all the glorious benefits they provide.
10/1/2021 8:56	Alachua		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	We want to see Rodman Dam breached to restore the natural balance and flow of the Ocala Esha, diver and St. John's rivers. We do not want to waste Florida taxpayers money by repairing and keeping in place these dams that have seriously impacted Florida wildlife and the natural river corridor that historically had been in place for 1000's of years.	The Rodman and Kirkpatrick dams are beyond repair in a cost effective manner and decreasing wildlife population	Continuing decreased populations of native wildlife and over stress to natural eco balance in our rivers and springs	No! I strongly urge you to breach these dams ASAP!!!!	Thank you
10/1/2021 8:56	Hillsborough		No	Yes	1 time	2-5 times	More than 5 times	Fishing Canoeing / kayaking Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.
10/1/2021 8:58	Marion		No	Yes		1 time	2-5 times	Canoeing / kayaking	Remove and restore	Restore the river's natural beauty	Costly repairs	No	
10/1/2021 9:11	Lake		No	Yes	1 time	2-5 times		Canoeing / kayaking Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	$4-14 Million in dam repairs saved on a dam past its life expectancy	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	NO! Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/1/2021 9:12	Alachua		No	No					Restore the Ocklawaha River by breaching the dam on the Rodman Reservoir.	Flood support, social support, and biodiversity support (https://www.wcrr.org/River-Restoration/Social-benefits-of-river-restoration)			
10/1/2021 9:13	Lake		No	No					Demolition and removal	Environmental impact	Plan B	Potentially	
10/1/2021 9:14	Alachua		No	Yes			1 time	Wildlife viewing	Remove the dam and reservoir.	Restoration of the Ocklawaha river will enhance the overall health of the watershed.	Loss of habitat for manatees.	No	It is time to repair the damage we inflicted on this river over 50 years ago. Thanks
10/1/2021 9:18	Alachua		No	Yes		2-5 times		Wildlife viewing	The dam should be removed. The reservoir should be drained, returning the river to its natural path and flow levels to the maximum degree possible. All trash should be removed from the currently submerged land adjacent to the original and newly-recovered banks of the river. Except possibly for a small and discreet historical marker, the objective should be that no trace of the dam or the reservoir remains observable after sufficient time for the native flora and fauna to return to the reclaimed land areas. That process may be assisted and supported (but not impeded) by a responsible non-political state government agency, with input from citizens and/or environmental organizations that have no fiscal or other economic interests in the ultimate outcome of the process.	We should not have messed with the river to begin with.	The current abomination would remain.	None that I have seen proposed to date.	
10/1/2021 9:20	Marion		No	Yes	1 time	1 time	More than 5 times	Wildlife viewing	Remove dam.	It's a mistake held over from the defunct Cross FL Barge canal	Continued deterioration of the Oklawaha and Silver Rivers	No	
10/1/2021 9:21	Marion		No	Yes			1 time	Wildlife viewing	Restore the river and entirely remove the dam!!	The deterioration of the dam.	Flooding	No	
10/1/2021 9:25	Marion		No	Yes			1 time	Fishing	Breach the dam.	Dams are inherently destructive to nature, and this one more than most because it serves no legitimate purpose. The bass fishing in Rodman is not as exceptional as it once was unless you can find the fish in a hole during a drawdown, which isn't very sporting. Nature knows best, and restoring nature will benefit every plant and animal in the ecosystem, and the fishermen too.	The continued degradation of the river system.	No.	
10/1/2021 9:29	Hillsborough		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	I would like to see the Ocklawaha River restored by breaching the dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 300-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 Million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 30 years.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/1/2021 9:31	Alachua		No	Yes		1 time	2-5 times	Other: Visiting a site important to Florida environmental history	I support the restoration of the Ocklawaha river by breaching Kirkpatrick Dam. Most of the drained reservoir should be rehabilitated with native vegetation and managed as a conservation area with opportunities for research in restoration ecology. A portion of the reservoir should be allocated for recreational/tourism infrastructure to support the local community.	The reason for Rodman Reservoir existing, the Cross-Florida Barge Canal, was canceled long ago, and it came at the cost of flooding valuable floodplains, forest, and an ecologically valuable river. Maintenance of the aging infrastructure consumes resources disproportionate to the benefits the reservoir provides.	The continued degradation of the Ocklawaha basin and Rodman Pool itself, increasing maintenance costs for the dam, and the lost opportunity for Florida to continue building a positive environmental legacy for this and future generations	I think breaching the dam rather than totally removing it and the aging infrastructure constitutes a compromise in and of itself.	The state should consider a visitor center near the site of the reservoir for installation of a museum about the Cross-Florida Barge canal and support needed investments for the local community to benefit financially from the restoration of the Ocklawaha.
10/1/2021 9:32	Outside of state / other	MN	No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.			
10/1/2021 9:36	Alachua		No	Yes			2-5 times	Wildlife viewing Other: Hiked by it	Please restore the river to its natural state.	Articles in the Gainesville Sun	Continuing decrease of biodiversity. We need to support wildlife over recreation.		
10/1/2021 9:36	Alachua		No	No					Breach the dam and restore the Ocklawaha river.	Information showing that it would benefit wildlife, in particular manatees. It would also improve water quality. The dam has never been used for its original purpose.	Ongoing declines in manatees and other wildlife. The expense of maintaining the dam long term.	Breach half the dam?	
10/1/2021 9:36	Duval		No	Yes			1 time	Fishing Wildlife viewing	I would like to see the dam removed to allow the environment recover to preconditions.	Environmental degradation	That the stakeholders are not listening to the scientific community.	There may be an alternative option that can support all parties.	
10/1/2021 9:37	Marion		No	Yes			2-5 times	Other: sight seeing, picnicking, fishing	Leave it as it is.	The fishing and recreation upstream.	If the real purpose is to free the Oklawaha river the Moss Bluff lock and dam must also be removed.	There are few options. It's either there or it's not!	I would like to know who benefits financially if the dam is removed. The dam has established a sustainable ecosystem upstream. The only reason I can imagine for this annual hullabaloo is that some one or group stands to make a significant amount of money. To truly free the river Moss Bluff dam must also be removed.
10/1/2021 9:48	Alachua		No	Yes			1 time	Other: Don't use the dam or reservoir, but do use the river, what's left of it.	The dam should be demolished allowing the river to flow naturally.	Most recent of many, report by Gixler Engineering Inc., concludes that Rodman Dam should be removed unless the state commits to a large and ongoing investment of tax dollars to address years of neglect and ongoing legal liability. The report notes that removing the dam would provide the added benefit of restoring the river to its natural state, benefiting fish migratory routes and the passage of manatees up and down the river	Continued harm to the river, surrounding environment, and humans and animals that use it.	The only sensible scenario is removing the dam. This will save the river, our natural heritage, and money.	The dam should have been removed a long time ago. It's time to let it go.	
10/1/2021 9:53	Okaloosa		No	Yes		2-5 times		Fishing Canoeing / kayaking Wildlife viewing	Breach the dam	Mother Nature	The longevity of our springs	No	
10/1/2021 9:55	Alachua		No	Yes	2-5 times		2-5 times		Slowly draw down Rodman Pool to avoid harm to private property and wildlife. Remove the dam once water levels are equalized.	There is no rational basis -- it is completely illogical -- to maintain relics of a Cross Florida Barge Canal that was halted because reasons for it no longer existed. National defense, piracy. transport of people and goods by water no longer are factors. Moreover, there is much greater knowledge of its ecological harm today than there was years ago. The public understands that the The dam contributes to degradation of the water supply of Florida which is solely a groundwater state.	Degradation of Florida's water supply and continued ecological damage.	No.	The public would be grateful for the removal of the dam because Floridians are concerned about their water supplies and fragile environment. This is a paramount quality of life issue, and, it must be said, would be well received politically.
10/1/2021 10:11	Citrus		No	Yes			1 time		Restore the free flow of the Oklawaha river.	Restoring the river would expose many springs and allow manatees to migrate to warmer waters during winter and allow fish populations to return.	Manatee and fish populations would continue to decline. The Silver River has already lost more than 90% of its original numbers.	No.	The dam was built with no real purpose in mind other than providing lakefront development.
10/1/2021 10:13	Marion		No	No					I would like to see the Rodman Reservoir and Kirkpatrick Dam breached to allow the water to flow and restore the Ocklawaha River.	To allow fish to migrate to the lost springs and Silver River where blue tilapia are taking over with no predators.	A loss of a natural habitat for a free flowing river where manatees and fish could freely migrate.	No	
10/1/2021 10:15	Marion		No	No			1 time		Remove the dam and let the Ocklawaha River go back to its natural state.	The information that supports the ongoing damage the dam is doing.	Another piece of natural Florida is destroyed. I'm a 76 year old native Floridian and this state is in ruin because of developers and projects like this dam.	No	
10/1/2021 10:16	Marion		No	Yes		1 time			Tear it down	Let the manatee and other native species to be able to travel freely.			
10/1/2021 10:31	Lee		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 30 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	
10/1/2021 10:47	Marion		No	Yes				Wildlife viewing	Dismantled	Restore water flow and biodiversity to the Oklawaha River and Silver Springs. Many studies have been conducted showing that this would improve the condition of these waters, surrounding habitats, and wild life.	The river and the springs would continue to deteriorate. Every year the quality of the river and springs gets worse.	I understand that breaching the dam might be beneficial although I personally think it would be better to eliminate as originally proposed.	Years ago the destruction of the dam was supposed to happen and still we and nature wait.
10/1/2021 10:51	Sarasota		No	Yes					Remove the dam and let the river flow free!	7,500 acres of the lower Ocklawaha's historic forested floodplain, 20 freshwater springs, and many miles of natural river channel that were drowned as a result of dam construction would be restored. Thousands of acres of submerged aquatic plant communities would be able to regenerate in the restored river channel, and in the re-emerged spring run streams that drained into the Ocklawaha historically. 8,000 acres of stressed floodplain wetland located downstream of the dam would be enhanced.	Thousands of acres of submerged aquatic plant communities would be unable to regenerate in a restored river channel and in the re-emerged spring run streams, and 7,500 acres of floodplain forest would not be restored. The Reserved would continue to be a barrier to movement by native wildlife and plant life along the length of the O2O Corridor, and compromise the value of Florida's investments in conserving lands like the Etonian Creek State Forest, and approved Florida Forever projects. Taxpayers will perpetually be on the hook for repair and maintenance of the dam and Reservoir, and continue to be liable for any loss of life or property damage that would result from a dam failure.	No. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration.	This is important. It is not the only dam that has been taken down with POSITIVE results.
10/1/2021 10:53	Alachua		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Take it down	Dam removal would be very good from r the env, and it would improve tourism to the area and thus the economy would benefit. More people would come to the immediate area for recreation and tourism the presently come to fish for bass. If the dam is removed, there would be much greater biodiversity which would be a good thing.	The environment would continue to be degraded.	I can't think of one. It seems to be an either/or situation. If the dam were to be taken down, there would continue to be good fishing.	Very thoughtful questions. Than you for this survey.
10/1/2021 10:54	Alachua		No	No					Restore The river	This artificial impoudion Will not be there forever, someday the river will return, why not now	Cost of maintaining a dam	No	
10/1/2021 11:13	Duval		No	Yes			2-5 times	Other: Sightseeing	Remove damn and restore free flow to the river.	Damage to Springs including Silver Springs.	Lost opportunity to restore free-flowing balance to the waterway systems.	No. The damn needs to be removed.	No. The damn needs to be removed.
10/1/2021 11:24	Alachua		No	No					Please remove the dam to restore the ocklawaha river	Migratory route for manatee to the St. John's river	Loss of manatee habitat	Partial removal of dam to allow for migration.	
10/1/2021 11:32	Volusia		No	Yes		More than 5 times		Fishing (shoreline/structure) Wildlife viewing	I would like to see the Rodman Kirkpatrick Dam breached so the Springs and River corridor may flow freely again.	There are at least 20 springs that are drowned in the current situation. The damn impedes free movement for migratory fish and is disastrous for Manatees. Also the dam is old needs repairs. If we did away with the damn that would save billions of dollars.	Spending money on a day that useless and impeding the St John's and Ocklawaha River Corridor. Also 2021 was the worst year yet for Manatee deaths. If the dam was removed they would be able to swim freely to get to warmer springs and food sources.	No.	
10/1/2021 11:44	Orange		No	Yes			2-5 times	Boating Other: Class field trips	I would like it removed. It serves no useful purpose and prevents a historically iconic waterway from flowing naturally while impeding the movement of people and species (some endangered) in its path. And the dam has outlived its lifespan, threatening to cause a disaster when it fails.	Multiple, multiple environmental studies and histories of the dam.	That Florida would be deprived of a beautiful river and endangered species will perish and people will be hurt when the dam fails.	NO	Stop the insanity of this dam. It is costing taxpayer money that I'm not willing to spend and preventing all Floridians from enjoying the true beauty this river could be.
10/1/2021 11:48	Pinellas		No	No					Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. Too much tax payer money is spent on the unnecessary dam.	No. Breaching the dam is 50 years overdue.	Open and free flowing waterways are essential for fish/manatee migration and spring/water health.
10/1/2021 11:51	Alachua		No	Yes		2-5 times	More than 5 times	Fishing Canoeing / kayaking Boating Wildlife viewing Other: surveying conditions on the river and at the dam	Move forward with the partial restoration alternative as was occurring under Florida Governor Lawton Chiles in the mid to late 1990's. The partial restoration alternative accomplishes all of the benefits of restoring a free-flowing river at the least possible cost. And that cost is actually an investment that will eventually pay returns far in excess of costs as studies have shown. This alternative will improve water quality, reduce evaporative water losses, restore habitat to native species of fish, provide much needed natural habitat for manatees, restore 20 lost springs, and will greatly increase economic opportunities for communities along the Silver, Ocklawaha, and St. Johns rivers.	There is no single piece of information that is most important. There are numerous reports that document the benefits of restoring free-flowing rivers once it has been determined that a dam can no longer serve its original primary economic purpose, whether that purpose was water supply, power generation, flood control, or commercial navigation. The Rodman Reservoir/Kirkpatrick Dam never served its original purpose of commercial navigation. Even if it had, the U.S. Army Corps of Engineers eventually recognized in its revised economic analysis for the project (1977), that the costs for the project outweighed the potential benefits. Hence, the project should never have been authorized. However, by restoring a free-flowing river, we can realize multiple economic, ecological, and water resource benefits. Every governor of Florida spanning 40 straight years from 1971 to 2011, Republican and Democrat alike, supported restoring a free-flowing Ocklawaha River.	I lived in Putnam County for 8 years. My three children attended schools in Putnam County. My biggest concern is that economic stagnation and decline will linger in Putnam County, a county that has been plagued by a variety of troubling conditions including low per capita income, poor educational performance, limited economic opportunities, poor health outcomes, and criminal conduct. Restoration of a free-flowing Ocklawaha River would transform communities near the river into thriving destinations for visitors from Florida and beyond.	Yes, on an interim basis. Move forward with a drawdown of water levels behind the Kirkpatrick Dam. This could be done in a phased approach to promote revegetation by native species of plants and trees, eventually reaching the natural channel of the Ocklawaha River. This would also reduce the risk of a catastrophic failure of the aging Kirkpatrick Dam. The Dam is now 53 years old and showing multiple signs of deterioration, including possibly hazardous piping through portions of the dam (https://en.wikipedia.org/wiki/Dam_failure). As an earth-fill dam, the bulk of the Kirkpatrick Dam was constructed from highly-permeable sand. Earth-fill dams constructed from sand are more susceptible to piping failures than other types of earth-fill dams.	There is a small but vocal group supporting the status quo. Many of these people honestly believe that preserving the Rodman Reservoir is the right thing to do. Most of their reasoning for supporting the status quo focuses on bass fishing. Curiously, some of them don't even fish there anymore due to declining fishing conditions. Many fish for sport only. That is, they release their catches back into the water. However, there is another group of people who fish for an entirely different reason. They fish for sustenance. These people, often low income, put food on the table for themselves and their families. Few if any of these people know just how hazardous it is to eat largemouth bass caught in the Ocklawaha River. Multiple reports by the Florida Department of Health have cautioned users to limit their consumption of largemouth bass taken from the Ocklawaha due to dangerously high concentrations of highly toxic mercury. Men have been cautioned to eat no more than one catch per month. Children and women of child-bearing ages have been cautioned to never eat largemouth bass taken from the Ocklawaha. This is clearly an issue of social justice. This problem could be entirely eliminated by restoring a free-flowing river.
10/1/2021 11:53	Flagler		No	No					Remove both dams quickly.	Ecology studies of dam removal benefits.	The canal was a disaster and needs to be fixed so wildlife can recover.	Only dam removal.	
10/1/2021 12:18	Marion		No	Yes		2-5 times	More than 5 times	Wildlife viewing	Let the dam go... Let nature have it with natural springs. Please	Let nature return! Please	Killing animals	Let nature have it	
10/1/2021 12:20	Orange		No	No					Breach the dam.	It will help the environment to breach it.	Our fish population will continue to decline.	No.	Florida's ecosystem is the #1 thing we should be proud of in this state. It's time to stop killing mother nature.
10/1/2021 12:31	Alachua		No	Yes			1 time	Other: none of the above	remove the dam		Despite bipartisan support from past Governors and many other groups, off this effort fails it will never happen permanently preventing environmental benefits		
10/1/2021 12:31	Lake		No	Yes	1 time	1 time	1 time	Wildlife viewing	Remove the dam and let the Ocklawaha river flow free.	Restore river wildlife, birds and manatees		Very aggressive seasonal water release to annually restore some environmental benefits	Thanks for asking for public input beyond understandable very vocal NIMBY opposition
10/1/2021 12:35	Orange		No	Yes			1 time	Wildlife viewing	Breach it. Restore the river, the springs, and this vital ecosystem and aquatic habitat for migratory fish and manatees.	The fact that the springs have been drowned and the river decimated. We can fix this now.	Extinction of the manatees, which are under immense stress in their quickly disappearing habitats and scarce natural warm water havens.	No. Breach the damn dam. It is rare, particularly today, that people get an opportunity to right such an obvious wrong. Breach it with pride and rest in the knowledge that you've done the right thing.	May wisdom guide you to heal our land. Peace be with you.
10/1/2021 12:36	Orange		No	Yes		2-5 times		Wildlife viewing	I would like to see the restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	The outcome will be 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers. Some 20 lost springs and Silver Springs ecosystem will be restored.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits	Unfortunately not. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	The citizens of Florida deserve clean, healthy waterways and springs. The time has come for restoration of the Ocklawaha.
10/1/2021 12:48	Putnam		No	Yes			1 time	Wildlife viewing	Restore the River breech the dam	Water quality improvement; improve wildlife conservation	Continued harm to the natural environment	None	Let's not let this opportunity pass
10/1/2021 12:48	Duval		No	Yes			1 time	Other: I don't.	Removal	Useful only to fishermen.	Same old story ruining a beautiful state.	No.	Best of luck doing good
10/1/2021 12:53	Pasco		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating	Leave it like it is	The fishing and recreation	Loss of income to the business and loss of recreation	Maybe	
10/1/2021 13:07	Marion		No	Yes		2-5 times	More than 5 times	Fishing Boating Wildlife viewing	Remove the dam and restore the natural path of the river	Scientific studies and personal observations over 20+ years	The health of the river will be negatively affected	No	
10/1/2021 13:32	Hillsborough		No	Yes		1 time	2-5 times	Boating	The dam needs to be removed and restore the natural river	We only need to look at the restored Kissimmee river south of SR 60. What an amazing rebounding of wildlife and natural beauty.	Taxpayer expense of maintaining a deteriorating structure.	The dam needs to be demolished to restore this river back to its original state. Moss Bluff will control the lake levels in that area.	

10/3/2021 13:36	Alachua		No	Yes		1 time		Wildlife viewing	Remove the dam and restore the free-flowing river	The dam was built for the cross-Florida canal, which was not completed.	Continued degradation of the river and wildlife	No	
10/3/2021 13:41	Duval		No	Yes			2-5 times	Wildlife viewing	Breach the Kirkpatrick/Rodman Dam and restore the natural flow of the Ocklawaha River	A healthier river and springs system in central and northeast Florida including the Ocklawaha, Silver and St. Johns Rivers by restoring the many springs that are drowned by the Rodman Reservoir and the 14,000+ acres of woodland that is either underwater or impaired by the reservoir	The waste of millions of taxpayer dollars spent to repair and maintain the existing dam that is actually damaging to Florida's natural environment	No. The dam should be breached, the sooner the better	With sea level rising and Florida continuously under pressure from development, it is increasingly imperative to restore natural landscapes wherever possible. Restoration of the natural flow of the Ocklawaha River will benefit not only wildlife along the river, but will help provide flood control and slow the effects of salt water intrusion into the St. Johns River system. As we create and maintain Florida's Wildlife Corridor, this piece of property as an undammed river becomes an important link for many species both on land and in the water, particularly manatees and many species of fish. It seems like a waste of taxpayer money and time to continue to maintain this area as an artificial lake with very few positive attributes.
10/3/2021 13:42	Alachua		No	No					Breach the dam, drain the reservoir, and allow the river to run free	evidence documenting damage to environment and aquatic life	continued environmental deterioration and loss of aquatic life	breach the dam at a minimum	
10/3/2021 13:44	Alachua		No	No					I would like to see it removed. Restore this mistake to its original, natural state.	Kirkpatrick Dam was put in as part of the now-defunct Cross-Florida Barge Canal. It now has no purpose except to keep Rodman Reservoir as a stagnant bass fishery. Studies have shown that the economic as well as environmental impact will be beneficial and more than make up for the loss of the bass fishery.	The environment will continue to deteriorate.	No.	
10/3/2021 13:49	Alachua		No	Yes				Canoeing / kayaking Wildlife viewing Other: Hiking the Florida Trail	Restore the Ocklawaha River by removing the dam.	Scientific research showing the benefit to the River's ecology if the dam were removed.	Continued degradation of the River such as increase in invasive fish and decline in manatee populations.	Breach the dam but leave the structures in place.	I would visit the Ocklawaha River more often if the dam is removed due to exposure of the springs, the longer available paddling route, and enhanced wildlife viewing.
10/3/2021 13:57	Alachua		No	Yes		1 time			The dam should be removed	Before the dam was built, I considered the Ocklawaha River to be the most beautiful place on earth. We need it back.			
10/3/2021 13:58	Marion		No	Yes		2-5 times		Fishing Fishing (shoreline/structure) Wildlife viewing	leave it be.	its a great fishery.	we would lose an amazing fishery.	no	
10/3/2021 13:59	Volusia		No	Yes		1 time		Wildlife viewing	I would like to see the dam removed and the flow of the Oklawaha River restored to what it was when I was a child.	Water in Florida is in trouble. If the dam is removed, it will help restore 50 springs plus the Ocklawaha, Silver, and St. Johns Rivers. More than 150 gals a day of restored flow would go to The Lower Ocklawaha and St. Johns Rivers. It's economically wise. $4-14 million will be saved on a dam that is past its life expectancy and whose reason for being was invalidated 50 years ago!	We'd miss many opportunities to improve water in FL: Putnam County and Silver Springs will miss out on $47 million in economic benefits over 10 years. Water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae blooms, fish kills, and submerged aquatic vegetation loss. Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more. And finally, restoring the flow will bring many needed jobs to the area.	No. Not at all. Getting rid of the dam is 50 years overdue. I hear my parents' voices in my head --- they are dead now --- talking about it.	Florida is such a beautiful, wild place but the developmental pressures it is facing, especially when it comes to water, are like never before. We must act now to preserve the State we love so that our children and their children can enjoy it as we have -- or even better!
10/3/2021 14:02	Marion		No	No					Breach the dam and restore the Ocklawaha River!	Wildlife needs a free flowing river. If it was restored it would generate eco tourism.	Manatees are dying and invasive fish species are overwhelming the native fish.	No	Please do the right thing for the environment!!
10/3/2021 14:02	Broward		No	No					I would like to see the dam breached/removed so the Ocklawaha can be restored back to it's natural state/flow.	The 20 springs (one of Florida's most important sources of drinking water & some of our most beautiful tourist attractions) that were flooded by the reservoir would be restored to their former beauty, increasing essential habit for our endangered manatees & allowing natural migratory routes to resume down the Ocklawaha, increasing the fish populations in the Ocklawaha, Silver Springs & other tributaries.	We would miss out on a great opportunity/time to get this done. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No! This something that is long over due and anything short of breaching the dam would only further/continue the damage being done.	The environmental impact of this project is profound and the most important thing to me as a native Floridian of 61 years, who loves the beauty of this state. However, almost as important to myself and most Floridians is the amount of money that would be saved by the state in breaching the outdated, unsafe dam, plus the increased revenue the state would gain from increased tourism down stream from the unnecessary structure.
10/3/2021 14:05	Marion		No	Yes			1 time	Other: wildlife viewing and walking	Remove all or a portion of it so that the natural flow is as before it was constructed to allow all of the connecting streams and rivers to return to their historical flow.	The lack of manatees, snook, mullet etc. in the Silver Spring headwater like the headwater of the Homosassa river.	The loss of wildlife and the deterioration of the waters below the dam.	Create a bypass around the reservoir as a passage to create a natural flow.	
10/3/2021 14:05	Duval		No	Yes		2-5 times	2-5 times	Wildlife viewing	taken down--PLEASE; Restore the river!!!	wildlife habitat and river restored	Wasteful expense of our resources--the State getting in the way of Mother Nature.	No--can't fathom any that make any sense. The money to keep this going could be put to better uses for all of us!!	
10/3/2021 14:09	Putnam		No	Yes	More than 5 times			Fishing Fishing (shoreline/structure) Boating Wildlife viewing	repatce the dam and put in a boat ramp on the north side of the dam.	i dont have any information on the Dam, I just spend a lot of time on and around the dam.	May move out of Putnam county	I would have to see both sides.	
10/3/2021 14:12	Putnam		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	I would like to see the dam removed and the reservoir drained to restore the natural river channel and riverbed, a healthier water flow and un-drown the natural springs that are currently not visible and under utilized. The freeing of manatees and other blocked migratory fish to continue upriver to the Silver River would benefit both rivers and attract many people to see them.	The comparison with other river and spring parks in Florida (and even other states) (e.g., Troy Springs, Lafayette Blue Springs, Juniper Springs) where thousands of visitors come to swim, snorkel, canoe/kayak, picnic, walk, sightsee, wildlife viewing, etc. and spend money in the area.	The continued need to spray toxic chemicals to control aquatic plants and the loss of ecotourism based visitor spending in our economically deprived county (of which I am a resident of Putnam county).	I think the best solution is the removal of the dam, but permanently breaching it would be my second choice and permanently lowering the water level would be my 3rd choice.	My family lives about 15 miles from the Rodman reservoir, and we live in the watershed of it. The lake near us drains into Orange Creek and then on the Ocklawaha River. I fear that the next major hurricane that passes over the area, could drop 10" of rain and potentially collapse the dam. I also think the money needed to upgrade the dam could benefit the local economy much more by creating a natural flowing river revealing springs that would support visitors coming, enjoying themselves doing various recreational activities (fishing, boating, swimming, sightseeing, hiking, enjoying nice winter days, camping, kayaking, etc.) in our natural Florida and spending ecotourism dollars in the local economy.
10/3/2021 14:33	Polk		No	No					Remove dam and restore river.	Historical data on how important the free-flowing river was.	Continued bad effect on water quality	no	
10/3/2021 14:49	Duval		No	Yes			2-5 times	Boating Wildlife viewing	We should return the Oklawaha River to its intended role as a free flowing tributary of the St. Johns River.	My 76 year long life, almost all in Florida, has shown me that the less we alter nature the better off we and other species will be in the long run.	I fear many unintended consequences. We are already way too crawler with our water supply. In my 40 years on Strawberry Creek in Jacksonville, I have watched cypress trees steadily retreat upstream due to salt water intrusion. How many other species have decamped as well?	Not that I know of.	The Cross Florida Barge Canal project was stopped in 1971 due to unintended environmental and social consequences. And here we are 50 years later, still arguing about it. There are winners and losers in almost any action. We need to grow up and move on.
10/3/2021 14:51	Putnam		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing (shoreline/structure) Hunting Wildlife viewing Other: relaxing	Leave it alone. Too much economically and environmentally rides on it in its current form. People travel here from all over the world for the recreation (fishing, Osceola turkey, etc.) Destroying one ecosystem with the vain hope of replacing it with a cinderella dream ecosystem just won't happen. Yes, the original GOD mad Ocklawaha ecosystem was destroyed. We can't change that. After 50 years nature adapted, we can try to change it back and hope Nature adapts to its original form, BUT it won't; that is gone. Not even in 50 years as they believe. How many times do we have to screw with nature to learn our lesson.	Joe Biden	A poor county becomes poorer and destitute	time machine	Stop playing GOD and "redestroying" what you shouldn't have destroyed to start with. Everglades all over.
10/3/2021 15:01	Marion		No	No					Remove and restore the river.	Water quality studies.	Catastrophic failure or extreme high cost to retain the safety.		
10/3/2021 15:14	Manatee		No	Yes		1 time		Canoeing / kayaking Wildlife viewing	Please remove it	There are countless ecological studies that show the benefits	That corruption would continue to fester in our government and we would have lasting ecological damage	No	
10/3/2021 15:16	Seminole		No	No					restore the river	science and research	fate of many	do the right thing and complete the restoration so all can thrive	
10/3/2021 15:27	Alachua		No	Yes			1 time	Other: Observe environmental damage	Remove the dam	History of the Ocklawaha River and its restoration	Lack of environmental stewardship by government officials	Remove a significant part of the dam so that flow of water out of Rodman Reservoir would be continuous	Removal of Rodman Dam is long overdue
10/3/2021 15:31	Putnam		No	Yes	1 time	More than 5 times	More than 5 times	Wildlife viewing Other	Keep it. Great fishing draws people to our poor county. If you ever take it out, Putnam should get mitigation payments each year for 20 years.	Great reviews from anglers and guides.	Runoff from exposed nutrients would reach the St. John's and make algae blooms even worse.	Not really. Those mitigation payments would have to be big. Clean up money to protect the St. John's would have to be huge as well.	Environmentalists in Alabama would go nuts if some wanted to drain Guntersville reservoir where they reestablished bald eagles. Why do our want to destroy habitat. Natural or man made, habitat is habitat. Rodman is cleaning water and giving animals a safe place to live.
10/3/2021 15:31	Columbia		No	Yes	1 time	1 time	1 time		Restore the river by removing the dam completely. But at least breach the dam.	it's no secret that the Cross Florida Barge Canal was an ill-conceived pork barrel project when it was begun and the river and the environment that depends on it has suffered for it ever since. Now is the time to restore the Oklawaha as much as possible. Ideally we should completely remove the dam. Barring that, let's at least breach it.	That the water-quality, deteriorating biodiversity and chances for manatees to survive would continue to decline.	We could support breaching the dam.	We were 22 and 23 years old when this unneeded and destructive project was begun. We'd like to see it repaired in our lifetimes.
10/3/2021 15:37	Alachua		No	Yes			1 time	Wildlife viewing	Take down the dam	Constant need to maintain the dam and do drawdowns.	Wildlife can not migrate up the Ocklawaha.	No	
10/3/2021 15:39	Hernando		Yes	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manatee unfriendly gauntlet that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm-water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/3/2021 15:41	Marion		No	Yes		2-5 times		Fishing Boating Wildlife viewing	The dam needs to come down, restoring the river to origins	The dam has done more harm than good as years have proven and now will be a fruitless expense to our economy as it ages. Let's return nature to its origins	More damage to our rivers and springs	No.... just do it	
10/3/2021 15:44	Alachua		No	Yes		1 time		Wildlife viewing	Open or remove the dam and let the Ocklawaha return to its natural state.	Sierra Club	More wasted money maintaining an unnecessary structure	Opening the dam instead of removing it entirely would be a good temporary measure	
10/3/2021 15:51	Alachua		No	Yes			2-5 times	Wildlife viewing	Breach the Rodman Dam and partially restore the Ocklawaha River. (By partial restoration I mean take down the dam materials that block the flow of water but not remove associated structures, which would be very costly.)	I believe the Economic Development Element of Putnam County's Comprehensive Plan that emphasizes the importance of tourism to the county and the potential of ecotourism is a powerful position in support of breaching the dam. Jeremy Walker, Jacksonville University associate professor of Marine Science, has presented compelling science to back this position.	Further degradation of the regional ecosystem, including worsening threats to endangered species that have state and federal protection.	I believe the breach and partial restoration is the position that reaches this balance.	
10/3/2021 16:20	Marion		No	Yes			1 time	Wildlife viewing Other: wildlife viewing and walking	restore the river to pre dam conditions. remove the dam.	that the dam has impeded the flow of the river for 50 plus years.	continuation and increase of poorer water quality and blocking the natural movement of aquatic life.	some form of a bypass canal so that the manatees and fish could access the warmer water and migrate naturally leaving reservoir is ok. could leave dam structure if there is no impediment of marine life and aquatic vegetation.	too much man made destruction taking place for no real environmental purpose what so ever. the cross florida barge canal needs to be removed as it was an environmentally destructive project from the beginning.
10/3/2021 16:23	Marion		No	Yes			1 time	Wildlife viewing	The dam removed and the river restored to what it should be.	The river needs to be restored in order to return to a healthier environment for vegetation and wildlife.	Continued loss of healthy environment.	Removing dam.	
10/3/2021 16:27	Alachua		No	Yes	1 time	1 time	2-5 times	Wildlife viewing	Dam removed and river freed	Dammed for the wrong reason. Relic of past planning	That pool would not be permanently drawn down	Not really	It was a mistake that needs correcting by restoring the River!
10/3/2021 16:33	Collier		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	I would like to see the Dam removed so that the river and springs can return to a more natural state. I paddled this area with a group and we had to have an airboat push aside all the weeds because it was unnavigable	The springs are browned/drowned by the current system	The loss of this river and its associated springs	No, the dam needs to be breached.	
10/3/2021 16:38	Volusia		No	Yes					Restoration of the Ocklawaha River by breaching the Rodman dam. This will enhance the quality of water	The current environmental evidence of the negative impact on wildlife and plant life. The plant and animal corridor are impacted by this dam. By breaching the dam a variety of environmental benefits would be seen 150 million gallons/day of water would be restored to the lower St. Johns River, a huge benefit. Migratory fish would have access to the Ocklawaha system	That the quality of water would be greatly impacted. The animal and plant corridor, along the O20 corridor, would not be restored. A variety of environmental benefits to native flora and fauna could not occur. We need the river to proceed as intended - how it was designed, how nature formed it	No	This is important. And instead of spending millions to repair a defective and environmentally damaging dam, we need to restore things as they were. This is a huge opportunity, let's not miss it
10/3/2021 16:44	Nassau		No	Yes			1 time	Wildlife viewing	My thoughts are to breach the Rodman/Kirkpatrick Dam to reunite the Ocklawaha, St. Johns and Silver Rivers and Silver Springs & recreate The Great Florida Riverway.	All the springs that are buried under the flooded area. We need to restore the natural flow of these rivers.	That the springs will remain covered. Our drinking water supply will continue to be impacted negatively.	No	
10/3/2021 16:46	Lake		No	Yes			1 time	More than 5 times	Canoeing / kayaking Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored and $4-14 Million in dam repairs saved on a dam past its life expectancy	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. (characters: 478) SECOND PARAGRAPH OPTIONS GENERIC: This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration. (characters: 517)
10/3/2021 16:47	Alachua		No	Yes			1 time	Wildlife viewing	Removed /dismantled restore the flow of the Ocklawaha	The dam restricts natural corridor for aquatic wildlife	Prolonged damage to the natural environment		
10/3/2021 16:55	Putnam		No	Yes	More than 5 times			Fishing Boating	keep as is a great fishery has tournaments almost every weekend	a great place to take children fishing			
10/3/2021 17:01	Pinellas		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. Moreover, 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefiting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No, breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm-water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/3/2021 17:01	Outside of state / other	Minnesota	No	No					The Ocklawaha River needs to be restored by breaching the Kirkpatrick Dam.	I am very concerned about the future of the manatee in Florida, and restoring the Ocklawaha River is the best manatee habitat restoration project in the state. It will provide essential warm water winter habitat for hundreds of manatees. Over 15,000 acres of the Florida Wildlife Corridor will be restored or enhanced, which will benefit species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed will deprive hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	Because breaching the dam is 50 years overdue, I cannot support any other outcome. Manatees, other wildlife and water quality cannot wait any longer.	
10/3/2021 17:05	Alachua		No	Yes			1 time	Fishing Other: Took a group of from the VA to visit the damn and fish if desired.	I would like to see it removed and for the river to flow freely.	Variety of environmental groups	Life in river is diminished, springs not returned.	Probably not	
10/3/2021 17:06	Alachua		No	Yes			1 time	Canoeing / kayaking Boating Wildlife viewing Other: Photography	Remove it!	The health of the Oklawaha and the Silver rivers and the aquatic species that depend on free-flowing water.	Continued degradation of the habitat	No. Taking out an earthen dam is not as destructive as removing the average dam.	A free flowing oklawaha would expose the natural springs that make the Oklawaha an even greater attraction for boaters, and would still support fishing.
10/3/2021 17:14	Outside of state / other	NEWTOWN PA	No	No						YES	CLEAN WATER FOR ALL	SEA LIFE AND HUMANS	NOT SURE
10/3/2021 17:20	Gulf		No	Yes			2-5 times	Fishing Wildlife viewing	Nothing. Leave it alone. Leave it there. Rodman Reservoir is a fantastic treasure of the outdoors in Florida.	Unmatched freshwater fishing and I mean anywhere in the US.	It would destroy families that live and work in the area	I don't know what that could be.	It's there and it's beautiful. The wildlife and marine life is thriving. To hear the people who want to destroy the dam sate it's ugly is just a lie to advance their cause.
10/3/2021 17:34	Alachua		No	Yes			2-5 times	Canoeing / kayaking	Restore it to its natural flow!	Stop invasive species & environmental decline of the waterway.	Continued increase in tilapia, loss of manatee habitat, & other environmental decline of the waterway.	No! A majority of citizens have been "voting" for this for many years! It is long overdue!	
10/3/2021 17:55	St Johns		No	Yes			2-5 times	Wildlife viewing	Complete removal and restoration to pre-dam conditions	The reason the dam was installed is no longer valid and the reasons for removal and restoration outweigh the perceived reasons to keep the structure in place.	The environmental impacts from the installed dam will continue	Leaving the levee in place, but removal of the dam structure to equalize flow	
10/3/2021 17:58	Marion		No	Yes			More than 5 times	Fishing Boating Hunting	I would like to see the damn removed and the river restored	fish and animal migration.Cost to maintain.	It is an environmental disaster and a money pit.Tax dollars are better spent elsewhere than on maintenance and drawdowns.	no	This reservoir wasn't needed for water storage but was built to accomodate cargo shipping.When president Nixon cancelled the barge canal the river should have been restored then.It is a boondoggle that must be corrected for future generations.
10/3/2021 18:10	Columbia		No	Yes			1 time	Wildlife viewing Other: Walking	The U.S. Army Corps of Engineers has built countless projects. Years go by and some need re-evaluation for example the Kissimmee River. This success has been used to justify the value of ecosystem restoration. How about the Dead Lakes, a 10-mile-long waterway near Wewahitchka? After this dam was torn out the biologists found the lakes were healthier without the dam. I think it is time to reassess the Rodman Reservoir and Kirkpatrick Dam. The dam is past its life expectancy. I am in favor of the removal of the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. I think a restored natural flow - original flow is important.	If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. Florida will lose out of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, and recreation.	I am not a civil engineer or Army Corp engineer. I am not privy to future Florida plans but an open mind is a good place to start. The controversial Cross-Florida Barge Canal never happened, do we benefit from the Rodman Dam? Has this become Florida's longest-running environmental wrongful? How much do we want to spend? How long should we wait?	Thanks for your time and consideration.
10/3/2021 18:24	Hernando		No	No					removal of the dam.	just don't feel that dams are good for the environment	Loss of habitat. Changing the natural course of water flow affecting the environment.	If there was a way to let more water flow below the dam	
10/3/2021 18:24	Duval		No	No					I would like to see it removed entirely	It's been very bad for the environment, and would save tax payors money if it were removed.	Continued destruction of natural Florida.	I'd like a full removal.	
10/3/2021 18:26	Lake		No	Yes		1 time	1 time	Other: wishing that I could Kayak past the dam (from downstream)	For many, many years people running for office in this area have promised to remove the dam, but it never happens. I would like to see the dam removed and the flow restored so the fish and maybe manatees can use the river.	Talking with Audubon members and others about the whole situation. Why was it ever built?	stagnation	no	as has been said before "TAKE DOWN THE DAMN DAM.
10/3/2021 18:30	Alachua		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Please remove the dam and allow the flow of the Ocklawaha River.	I have seen the damage that has been done to the river and area. I remember the beauty of the river before the cross-Florida barge canal and Rodman Dam. I believe the river and wildlife can be restored in time if left alone.	I would be disappointed to see continuance of destruction and wildlife imbalance.	No.	
10/3/2021 18:31	Marion		No	Yes			1 time	Fishing Fishing (shoreline/structure) Wildlife viewing	Close the Dam	Wildlife & Water Life			
10/3/2021 18:36	Alachua		No	No					I would like to see the dam removed.	The degradation of water quality, manatee requirements, migratory route for fish and manatees should be opened.	That the deaths of manatees and degradation of water quality would continue.	None.	
10/3/2021 18:41	Alachua		No	Yes		1 time	2-5 times	Fishing	Restore the river to pre-dam conditions.	The confluence of economic, scientific, and environmental advantages.	Further economic and environmental degradation.	No.	

10/3/2021 18:45	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Wildlife viewing Other: photography	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored. 20 lost springs and Silver Springs ecosystem are restored. wasting millions of dollars repairing and maintaining the dam.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 150-mile lower St. Johns River. This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.
10/3/2021 18:49	Putnam		No	Yes	1 time	2-5 times	2-5 times	Canoeing / Kayaking Boating	Breaching the dam and draining the reservoir.	American Rivers report on the Ocklawaha being the 9th most endangered, because of the da..	The continued need for draw downs to to reduce invasive species, the expense of maintaining the locks.	No.	
10/3/2021 18:52	Duval		No	Yes		1 time		Wildlife viewing	Restore the natural flow of the river.	Articles about invasive aquatic plants present at the dam.	Restoring the natural flow of the river.		
10/3/2021 19:01	Walton		No	No					Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No, this action is overdue and necessary	Manatee populations are dying. These animals are important to the environment but also local economies. We should not continue to put local people and wildlife at risk.
10/3/2021 19:17	Pinellas		No	No					This was a badly conceived project right from the start. These dams need to be removed so the natural river flow can return and habitat restored.	The reduction of water flow has killed or damaged thousands of acres of cypress trees, native plants and habitat area. The streams that flow off this river have also been depleated. I also understand that the dams are in poor condition and will require millions of dollars of repair. This would be a total waste of taxpayer money which would be much better spent restoring the natural flow.	My concern is millions of wasted dollars repairing a harmful project. I am also concerned with the depletion of all of our springs emptying into the Gulf. Their water level is getting lower and lower. The state is also, in my opinion, corruptly allowing bottling companies to continue to take water to fill polluting plastic bottles. These beautiful, natural springs and surrounging habitat will be lost to salt water intrusion or just dry up and disappear which would be tragic.	NO! It is long overdue to restore our rivers , protect habitat and wildlife , protect the springs and preserve natural Florida for future generations . This state has been exploited for far too long . The Everglades are another example of that . The diasterous phosphate slacks are another disgrace . It is time to do the right thing with this river . Thank you for your work . I hope 🙏	
10/3/2021 19:20	Brevard		No	No						Opened		Detriment to wildlife	No
10/3/2021 19:23	Bradford		No	Yes		2-5 times		Fishing Fishing (shoreline/structure) Canoeing / Kayaking	Remove the dam to restore the natural flow of the Ocklawaha.	Ecological integrity of the aquatic system to ensure healthy and available freshwater to people and nature.	Spending more tax dollars to keep an aging and unnecessary structure operating.	None that I could think of.	
10/3/2021 19:46	Outside of state / other	Prince George's County, Maryland	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 Million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/3/2021 19:49	Alachua		No	No					Tear it down and restore the river, opening up much more recreation while also creating better habitat for all the flora and fauna native to the area.	This is not a sustainable use.	That this resource continues to be wasted and that manatee and other animal populations continue to dwindle.	There needs to be free flow of the ocklawaha, not sure what that exactly looks like, the the dam staying should not be on the table, it does very little for the people of Florida, a restored Ocklawaha, will increase water quality, habitat, recreation and many other parts of this basin. Think of the thousands of people recreating on the silver and Santa Fe Rivers every single day, the Ocklawaha could have this and also increase property values and quality of life for those nearby.	
10/3/2021 20:09	Seminole		No	Yes			More than 5 times	Boating	Removed and the Oklawaha restored	Ecology of the region	Environmental issues	No	
10/3/2021 20:12	Outside of state / other	Illinois	No	Yes		2-5 times		Wildlife viewing	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/3/2021 20:16	Pinellas		No	No							If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.		
10/3/2021 20:26	Outside of state / other	OK	No	No					Remove the dam and restore the Ocklawaha River. Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy. If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, constructers, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more. No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait. Your attention to this most urgent matter would be much appreciated by all present & future generations of all species! Make the river come alive & free again! Lydia Garvey Public Health Nurse 429 S. 24th st Clinton OK 73601				
10/3/2021 20:28	Brevard		No	Yes		More than 5 times		Fishing Fishing (shoreline/structure) Boating Wildlife viewing Other: Hikaing	Keep it in place. It a great wildlife refuge and is some of the best big bass fishing in the country.	The Reservoir is easily the best bass fishing in the state and an abundance of wildlife	It would ruin one of the best big bass fisheries in the country if not the world. Also it is a place where the Florida Manatee still have plenty of grass to survive.	No	Please keep the damn. The wildlife and the birds you see out there besides the greatest bass fishing, it also provides grass the that the Florida Manatee need to survive.
10/3/2021 20:30	Duval		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing	I would like the Oklawaha River to be opened up the way it was when I was a kid living in Ocala. The dam is ugly and it is prohibiting the natural flow of the river.	The fish that have disappeared and the pile up of water plants clogging the area	Silver Springs will be affected as are the many springs that are covered up. This area could be a boon with activities that everyone could enjoy. Even if it takes years to reestablish what was damaged by the dams. These rivers are treasures and were disrupted by dumb politicians.	A drawn down then full dismantle at some point- soon.	These dams and the cross Florida barge canals construction had zero regard for the beauty, nature and environmental impacts on this great state. It would improve the tourist dollars by regenerating these pristine springs and areas.
10/3/2021 21:02	Polk		No	Yes		1 time		Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Leave it as is		Florida is losing its natural resources		
10/3/2021 21:07	Orange		No	Yes		1 time		Canoeing / kayaking	Restore the Ocklawaha River by breaching the dam on the Rodman Reservoir.	The Ocklawaha River was named among America's Most Endangered Rivers of 2020 by the American Rivers organization.	Continued degradation of the Ocklawaha River's 20 freshwater springs and continued significant harm to threatened and endangered species, adjacent wetlands, forests, Silver Springs, and the the St. Johns River.	No	Thank you for the opportunity to comment.
10/3/2021 21:08	Pasco		No	Yes			1 time	Wildlife viewing	Restore the natural flow	The ecosystem and manatees are suffering	Continued decline if the environment		
10/3/2021 21:26	Outside of state / other	Seattle, WA	No	Yes		1 time	2-5 times	Wildlife viewing	Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam to reunite the natural connection of Silver Springs, the Ocklawaha and the St. Johns River.	The science supports restoration. Studies by federal and state agencies have clearly demonstrated that restoration of a free-flowing, connected system is cost-effective and will provide significant ecological benefits to the St. Johns, Ocklawaha and Silver Rivers as well as Silver Springs.	We miss a historic opportunity to stop the ongoing ecological degradation caused by the dam and finally reunite the natural flow of these rivers. Breaching the dam would restore the natural flow of 150 mgd of fresh water, improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. A free-flowing Ocklawaha will reestablish 15,000 acres of forested wetlands and fortify downstream submerged grasses from Welaka to Jacksonville in the St. Johns River that are critical to river health and fish habitat.	No. Breaching the dam and restoring the Ocklawaha are 50+ years overdue. Dam safety issues and improved water quality, wildlife habitat, and recreational opportunities can't be ignored or delayed any longer.	I just moved to Washington state after living in Florida for most of my life. The St Johns watershed will always hold a special place in my heart, and I hope that moving into the future we can fortify its natural beauty.
10/3/2021 21:26	Alachua		No	Yes				Wildlife viewing	The dam should be breached and the floodplain of the Ocklawaha River should be restored.	Decommissioning the dam and reservoir would aid in restoring the hydrology and natural communities of the Ocklawaha River. Importantly, it would allow greater access to the river for the manatee.	The Ocklawaha River ecosystem will continue to degrade and the manatee will be denied a potential refuge when the species is under such severe threat.	The dam should at least be breached.	
10/3/2021 21:29	Duval		No	Yes		More than 5 times		Boating Wildlife viewing	Removal	Freeing up the springs and aiding in manatee migration to Silver Springs in the winter	Continued degradation of the St. Johns and lower Oklawaha Rivers	no	
10/3/2021 21:31	Duval		No	Yes		1 time	2-5 times	Canoeing / kayaking	It is time to breach the Kirkpatrick Dam!	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat.	No	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/3/2021 21:38	Hillsborough		No	No					Breach the Rodmon/Kirkpatrick Dam.	Restoring drowned springs, letting the fish and manatees through as it would through nature, not waste money maintaining the dam	the status quo is not sustainable for nature	no	
10/3/2021 21:39	Alachua		No	Yes		2-5 times	More than 5 times	Canoeing / kayaking Boating Wildlife viewing	The Oklawaha is one of Florida's most beautiful and historic rivers. It should be allowed to run free.	The impact of the dam on the fish populations, manatee migration, and water quality is well documented.	To continue this insult to nature is fiscally imprudent, and not justified for the minimal benefits provided	The drawdown could happen slowly - even over decades	
10/3/2021 21:56	Marion		No	Yes		1 time		Other: I think that all of the above activities can be more enjoyable without the dam blocking the flow of the river.	I would like to see it removed.	I would like to see the Oklawaha River and the submerged springs flowing freely again so that the river can become healthy again to support wildlife and recreational activities.	I fear that invasive species of plants and fish would ruin the ecosystem of the river and we would lose so many native species.	Breaching the dam is a good alternative.	The Manatees are a unique mammal that should be helped to thrive before we lose them all. The economic benefits and opportunities along the river would be increased with a free flowing river.
10/3/2021 22:15	Lafayette		No	Yes		1 time		Other: Kayaking the Natural Springs in the Reservoir/River, When Lowered.	All Mari Made & Maintained Equipment/Dam Removed! Let the River Flow Naturally, Again. All Rivers, Waterways, Natural Springs are Connected Naturally, Let them be that way again Please. Capt. Cas Suwannee River Reid	The Dam has simply deprived the Natural Flow of the Natural Water, this has caused many migrating species, such as Manatee's, Bass, and other species to change their migration habits causing the loss of the species with the dam in place.	Those species numbers would continue to shrink until extension.	It seems simple, the Bass Fishing Industry is Not as profitable as Opening the waterway, eliminating the dam would bring a much broader demographic of people that would utilize the whole River, as it was meant to be.	Please count this as MY VOTE to Remove the Dam and Free the River. Thank you for your hard work and concern. Sincerely, Capt. Cas Suwannee River Reid
10/3/2021 22:17	Alachua		No	Yes			2-5 times	Other: I don't use it	The dam should be removed to open the flow of manatee traffic and to decrease the amount of algae due to sluggish water	Endangerment of manatee	Endangerment of manatee	Removal of any part of the dam to allow free passage by manatee	The dam should have never been built - neither should the cross-florida barge canal - there was a movement against it at the time of construction that was ignored.
10/3/2021 22:19	Seminole		No	No									
10/3/2021 22:33	Brevard		No	Yes			1 time	Wildlife viewing	Remove the dam	The a dam serves no purpose and artificially restricts natural water flow	Continues restriction of natural water flow	No	The dam must go.
10/3/2021 23:12	Marion		No	Yes			1 time	Boating	Restore the Ocklawaha , remove the dam.	It's ecologically the right way to restore the natural river and prevent further degradation of our environment.	Florida must preserve the natural beauty of our State as we keep increasing our population. It is economically and environmentally the right thing to do.	None	
10/3/2021 23:20	Alachua		No	No					I would like to see the Kirkpatrick dam breached and the Ocklawaha river restored	I am sustainability studies major taking multiple classes this semester about hydrology and geographical sciences, and I have learned about the many drawbacks of dams. I do not think that this dam has enough benefits to outweigh the many problems that it causes to the environment.	I am concerned about the waste of money that would be required to maintain the dam as it ages. I am also concerned about the ecological impacts of the dam and the continued harm that it causes to the environment and the wildlife.	I would like at least some portion of the dam to be breached if it isn't possible to return the river to pre-dam conditions.	
10/4/2021 0:22	Marion		No	Yes			More than 5 times	Fishing Boating Wildlife viewing	I would like to see the Dam removed and natural water flow restored to the Ocklawaha River.	Spending time on the Ocklawaha River and observing how unhealthy it looks.	More destruction of a precious natural resource and ecosystem.		
10/4/2021 3:50	Manatee		No	Yes			More than 5 times	Wildlife viewing	Remove the dam and restore the Oklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	
10/4/2021 4:34	Putnam		No	Yes	More than 5 times			Fishing Boating Other: Hikaing					
10/4/2021 5:55	Alachua		No	Yes				Fishing Fishing (shoreline/structure) Boating Wildlife viewing Other: Casual observing of boaters and fishers as well as wildlife	Maintenance of the dam itself is minimal.. hydrilla is controlled by opening and closing the spillway and requires only a single visiting operator. However, seal the lock! At least stop maintaining it for transiting boaters. Use the lake...launch on the lake!	Decades of use as a boater and fisher. Experience both above and below the dam.	Continued pressure from a few people who never use the lake and just climb on that bandwagon just to go along.	Maintain the dam. Seal the lock.	While, it would have been better decades ago NOT to build the canal and dam the river, the deed was done, and the creation of Lake Oklawaha produced a unique and largely self-sustaining ecosystem. The lake at drawdown is not pretty but the aftermath is a healthier and more vibrant system in which the wildlife both below and above the water have thrived. Pulling the plug would create more decades of natural disruption and would produce no actual improvement. Two wrongs do not make a right.
10/4/2021 6:00	Marion		No	No					Remove the dam and open the 50 lost springs and restore Silver Springs back to the beauty I can remember as a child. We have the knowledge now moving forward to know changing natural waterways is unethical to our future and the future of all species and the environments that surround them.	Record dying of manatees in 2021 should be on the front line. This is urgent news and moves need to be made quickly. Fish and wildlife that's once inhabited the springs are no longer there or very minimal, compared. Over 90% of the population of inhabitants for these springs have vanished.	It would reach a point of no return and our greed and egos get in the way of a brighter future. More clean water and more wildlife vs. less of both and countless (millions) dollars spent on restoring a dam that devastated the area from the start.	No, it's been long enough and the time is now. We can't waste another second wondering if, when, and how. All supporting factors to restoring the springs have been put on the table. We have evidence to prove what it's worth to have these waterways restored. Foot forward, let's make the right decision together.	I am born and raised here in Marion County, Florida. This is home. Always will be. Has been for generations before me and I intend on making a happy place for the generations to come. Within my lifetime things that seemed so expendable are now of highest concern. 1000+ people moving to Florida every day and Florida NATURE depleting just as rapidly. PS: For the first time ever in my life I had the privilege of paddling next to a family of manatees in Silver Springs. Only because someone at the dam let them pass!
10/4/2021 6:29	Marion		No	Yes		1 time	2-5 times	Fishing Boating	Return River back to natural state. Remove the dam. It has no purpose.	Recover Wildlife habitats. The dam is also aging. Restore natural flow of the Ocklawaha River.	The Ocklawaha River may never recover if something isn't done quickly.	Probably not. Removing dam is bestscenario.	
10/4/2021 6:33	Hernando		No	Yes			More than 5 times	Wildlife viewing	Remove the dam	Historical data	Loss of wildlife	No	
10/4/2021 7:31	Alachua		No	Yes			1 time		I'd like to see the restoration of the Ocklawaha River take place by breaching the Rodman/Kirkpatrick Dam. This is my preference because for it to remain the way it is negatively impacts water quality and wildlife throughout the area.	That three rivers--the Ocklawaha, the Silver River, and the St. Johns Rivers, and over 50 springs will be restored and the habitat of manatees will be regained.	I have many concerns--primarily the loss of the precious springs and manatee habitat.	No, not at all. It is time!	It is time to finally restore the Ocklawaha River for the future of our state and its wildlife.
10/4/2021 7:14	Duval		No	Yes			2-5 times	Wildlife viewing Other: Wanted to see where our tax money had been wasted.	Remove the dam and restore the natural flow of the river.	Cost effective project with the best return for the taxpayer dollars spent.	Continual decline in our springs and loss of winter habitats for our endangered manatees.	No not really. The cross barge canal project was a mistake from the very beginning. Why was taxpayers money to maintain that mistake. More benefits can be gained by removing the dam and allowing nature to repair itself to hopefully its prior glory.	People come to Florida to enjoy our springs and waterways. We need to preserve our natural resources for ourselves, our children and our tourism. We are allowing millions if not billions of dollars of water to be bottled out of our springs. Draining our natural resources for the mighty dollar. Why can't we spend our taxpayer dollars on a project that will help restore some of those resources back to health. We/Am for our natural resources and those who use them.
10/4/2021 7:26	Alachua		No	No					remove the dam, plain and simple.	it's not serving the purpose it was created for, so the negative side effects are all for nothing.	compounding negative effects on the local environment.	why stop short of removing the dam? it's not doing what it was originally built for, and actively hurting the long term health of the local environment. is all of that worth making a few captive fish easier to catch for a few years? why not make fishing more sustainable and vibrant for the long term by removing the dam?	

10/4/2021 7:52	St Johns		No	Yes			1 time	Other: Have never utilized since the early 1970's when I lived in Putnam County.	Remove it and restore the river to natural beauty that I remember as a young person.	Remove so the natural springs within the system will return.	It continues to be the destructive boondoggle it has always been.	No!		
10/4/2021 8:02	Duval		No	No					Destroy it and allow nature to be in its natural state	Allowing the springs to return to their natural states. Giving our manatees a place to be during the cold season, they're close to being endangered again! And don't California up Florida. They screwed with the natural systems so much and now they're suffering for it.	Death of the manatees, waste of money to repair and upkeep of the dam. What true benefit does the damn provide? It doesn't provide electricity, it's blocking natural habitats	No		
10/4/2021 8:05	Pinellas		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing Other: Relaxing.	Breached.	Support for the Manatees and other species of wild life.	Putnam county's tourism would be limited to just Bass tourists. If the River is restored many other people would come. Not just them. Another point is Manatees need the warm springs that would be restored. To many are dying.	Not really. The status quo is not working or appreciated by many.	Do the right thing.	
10/4/2021 8:14	Columbia		No	Yes			1 time	Canoeing / kayaking	Remove dam.	The river would return to its natural state, or close to it. Dam is unnecessary.	Unnecessary structure would remain.	Not certain.	Remove the dam; it serves no necessary purpose.	
10/4/2021 8:20	Volusia		No	Yes			2-5 times	Fishing (shoreline/structure)	I would like to see the dam removed and the river restored over time.	The dam is old and continues to deteriorate.	Loss of wildlife.	None that make sense.	This dam was built for the terrible idea of a cross Florida barge canal. Fortunately that was shut down by President Nixon. That would have been an enormous disaster to the environment of Florida. So it is time to remove this current artifact that is harming our natural environment.	
10/4/2021 8:24	Orange		No	Yes			1 time	Wildlife viewing	removal of the dam and restoration of the natural functioning of the Oklawaha River	Restoration of natural fish and manatee populations	extinction of manatees	no. This dam removal should have been done many years ago	Natural Florida is disappearing. We must do what we can to protect and restore the pieces we still have.	
10/4/2021 8:47	Baker		No	No					Remove the dam and let the water flow resume a natural state.	My understanding is the dam is no longer viable and requires extensive maintenance. The purpose of the dam is outdated making maintaining it a waste of public funds that could be better spent elsewhere. In addition, many springs and tributaries could once again be regenerated with fresh water to prevent their demise and support wildlife throughout the region.	Continual decline of wildlife that is already struggling to survive due to habitat loss and waste of tax dollars on an outdated useless project.	No. The dam needs to be removed for any real benefit to occur.		
10/4/2021 8:51	Lee		No	No					Make it good	water bad	I will kill myself	Eat my ass		
10/4/2021 9:03	Hamilton		Yes	Yes	More than 5 times	More than 5 times	More than 5 times	Wildlife viewing Other: I come here to have oreys with my family.	Give out better condoms.	I have the birth records	Ur mom	I would be satisfied as long as I can legally fuck a porcupine.	I found a condom here, used it, and now im pregnant. I'm going to sue you. I also made tea with the water and now my baby is black.	
10/4/2021 9:07	Putnam		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Wildlife viewing	Keep it. Very relaxing. Place to just go and sit. Smoothing. To here water housing out	Love it out in woods restoring something. Beautiful. And. And accessable. For handicap. And. Veterns. To fish from				
10/4/2021 9:10	Alachua		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	Restore the springs and the ecosystem for all the wildlife.	The dam is useless and a waste of money to retain and repair. The possibilities are endless for the environment and the wildlife if we breach the dam.	No. This is 50 years overdue - let's do what is right!		
10/4/2021 9:13	Alachua		No	No					Remove the damn dam and let our spring water flow again	That the natural environment was not the primary concern of the dam project.	Destruction of our natural environment: plants, animals, water, recreational use for humans, and much more.	I would be open to suggestions	Put the environment and Floridians first!	
10/4/2021 9:27	Brevard		No	Yes			2-5 times	Wildlife viewing	Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.		
10/4/2021 9:33	Putnam		No	Yes	1 time	More than 5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Remove the Dam to FINALLY restore the Ocklawaha River! A half century of damage should not continue just because that is what people are used to, the dam negatively impacts water quality, submerged springs and even hinders the local Putnam County economy.	Manatees & fish will return once the breach opens creating a free-flowing river, the St. Johns River Estuary from Welaka to Palatka to Jacksonville will be healthier, 15,000+ acres of the Florida Wildlife Corridor that just received $100million in acquisition funding will be available, and millions in dam repairs will be saved since the dam is well past its life expectancy.	We will miss the best opportunity to finally fix this debacle of a failed project. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money will be spent on dam repairs for a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. The 300-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No.		I don't understand why this public polling is being conducted when the state is LEGALLY obligated to remove the dam and restore the river. Stop wasting time and money on feel good antics designed to provide cover for politicians. Get the job done. It IS your job.
10/4/2021 9:34	Marion		No	No					Breach the dam and restore the Ocklawaha River!	Wildlife needs a free flowing river. If it was restored it would generate eco tourism.	Manatees are dying and invasive fish species are overwhelming the native fish.	No	Please do the right thing for the environment!	
10/4/2021 9:39	Clay		No	No					Restoration to original state; remove the dam.	The dam is old and no longer serves a purpose.	Impact on local economy.	I have not heard of a proposal so no.	Restoring full flow to the Ocklawaha River should reduce the stagnation of Silver Springs and the Silver River.	
10/4/2021 9:50	St Johns		No	Yes			1 time	Wildlife viewing Other	Restore to its natural form as a river.	So many, many years of important info/data regarding why the Rodman Dam has endangered the natural water system in Florida (first meeting in 1998) - too much info to list.	Continued deterioration of natural water/river system.	No		
10/4/2021 9:52	Lake		No	No										
10/4/2021 10:07	Marion		No	Yes	1 time			Boating	Removed	Environmental	Mover of the environment being distorted	No		
10/4/2021 10:27	Alachua		No	Yes			2-5 times	Canoeing / kayaking	Lower the reservoir and breach the dam to restore the Oklawaha.	Economic and environmental studies supporting the breaching of the dam.	The continued degradation of the Oklawaha and Silver rivers and the continued death of manatees due to lack of warm-water habitat.	This action is 50-years overdue. There are no half measures left that can save the water quality of the rivers and provide the needed manatee habitat.	It's finally time to get this done. The disastrous cross-Florida canal project was abandoned 50 years ago, and the Rodman dam is the last remaining wedge of that mistake. Time to remove it and let the real, old Florida flourish again.	
10/4/2021 10:38	Putnam		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Remove the dam, restore the ocklawaha river please	Scientific data/research	Endangered species, environmental harm, expense of maintaining the dam	Let the dam crumble and collapse on its own	The dam is not serving any purpose don't listen to people who say it is necessary for fishing there are plenty of places to fish and the restored ocklawhaha river would benefit the area environmentally, ecologically, and economically.	
10/4/2021 10:47	Alachua		No	No					The kirkpatrick dam should be breached, and sincere actual reasources should be put into restoring the Ocklawaha River to help wildlife and water quality in the river to recover.	That manatees are starving to death from loss of seagrass caused by the dam and the degrading state of the river and lack of access to natural springs. The dam blocks the movement of fish and wildlife along the river and it should have been removed years ago.	That we continue to hurt yet another Florida waterway and that the wildlife in the area will continue to suffer as a result.	No. I am sick and tired of all of the ways in which Florida's waterways and springs are being abused and neglected. It's shameful. Our children will bear the consequences of the selfishness of their grandparents if we don't change our ways.	The efforts to make this problem better should not stop with breaching the dam. That is not enough, and acting like it is enough would be a lie. Resources and actual sincere effort needs to be spent cleaning up and restoring the river and then protecting these areas from future human tampering.	
10/4/2021 10:48	Outside of state / other	Ohio	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 300-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 Million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 300-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economics, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration	
10/4/2021 11:15	Madison		No	Yes		1 time	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Preserve the Dam and Reservoir as is currently.	The area is fully stabilized and the home of many wildlife and is an important sanctuary for bald eagles and manatees to name just 2.	Destruction and havoc to the wildlife habitat and resulting serious fallout and negative impact on numerous species.	no	As a frequent user who cares about Florida's environment and wildlife, I am asking you to increase the maintenance and improve access to the lake, update the boat ramps, add additional facilities, and expand park areas for public access. While public use is now tremendous these small improvements would steadily increase. The dam and adjacent parks alone are used by hundreds of people every month for fishing and recreation! A day NEVER goes by that people aren't there fishing! Most importantly environmental needs are critical as the lake and adjacent area are homes to numerous manatee, bald eagles, black bear, and other wildlife that were rare prior to Rodman being constructed. Rodman and surrounding land have become a vibrant and vital ecosystem. It would be a sacrilege to destroy it and the fact a group who call themselves environmentalists is hard to believe. I hear continued comments about protecting the manatees. Rodman is NOW their natural habitat and its existence has no effect on die-offs! The warm water from Ocklawaha's "drowned" springs is still there! Untold numbers of manatee habitualte Rodman and access it every year to mate. Just ask the lock managers how often they open the locks to allow the manatee to gain access to rodman! I just recently watched from the bank for almost an hour more than half a dozen manatee mate. For the size of the area, it's amazing how often I get to see the manatees. Natural Springs? Silver Springs is upriver from Rodman and is its major resource. The fact that Rodman supposedly encompasses a number of small springs has absolutely NO effect on the condition of Silver Springs. In the years prior to Rodman with few exceptions, likely none of these small springs had any visitors at all. The handful of visitors the uncovered springs would attract is laughable compared to the vast number of visitors the lake attracts. Rodman has become one of the leading fishing resources in the country and has increased historic fish populations for all species. Rodman contributes millions to the local economy every year and property values adjacent to the lake have increased over 50% just in the last few years. Putnam and Marion county economies would take a huge hit and future opportunity for economic growth in the area would be stifled if this resource was lost.	
10/4/2021 11:15	Sarasota		No	No					I would like the dam removed.	Restoration of the river and other water features.				
10/4/2021 11:28	Marion		No	Yes			1 time	Wildlife viewing Other	Breach the dam.	The dam impedes water flow and blocks migratory routes for wildlife.	We need to provide a healthy ecosystem for wildlife and improve water quality in Silver Springs. I remember when Silver Springs was healthy. Now it is home to invasive tilapia.	Not really. The unhealthy situation would just continue.	I realize bass fishing is a big industry. However, creating a healthier ecosystem would bring other kinds of economic benefits to the area. Plus the taxpayers wouldn't have to pay ongoing maintenance costs for a dam that was a disaster from the beginning.	
10/4/2021 11:40	Gilchrist		No	No					Remove the dam and restore the area	Local people				
10/4/2021 11:48	Volusia		No	No					Have it deconstructed and let the river flow in its natural state.	Reports about its ecological impacts.	The continued alteration of an ecosystem.	Construct a weir instead of a dam.		
10/4/2021 11:50	Marion		No	Yes		2-5 times		Fishing Canoeing / kayaking	Remove the dam gradually,not to flood or overwhelm areas and let nature as intended do its thing.	The dam is man made(for our use)thats not its origin.	The quality of our water.			
10/4/2021 12:18	Pasco		No	Yes				Other: I don't use it	Blow the son of a bitch up			no.		
10/4/2021 12:27	Duval		No	Yes				Other: I visited only once. Want to see it go away.	TEAR DOWN THE DAM and ELIMINATE THE RESERVOIR. This ill-fated project has been an ecological disaster and a financial boondoggle.	It is a Win/Win no-brainer economic decision benefitting everyone which is long overdue. It has less than a 4 year payback and returns estimated $50 million net benefit over the first 10 years alone! It ought to then provide annual economic boost of $8-10 million according to economic experts from the Univ. of Fla. In 2020 the national organization American Rivers put the "trapped and devastated" Ocklawaha on its Top 10 most endangered rivers due to "steady declining water quality, spring flow, necessary wetland forests, and quality and quantity of fish and wildlife." These 40+ environmental organizations working toward complete restoration of this important river. At least 15 scientists and professionals have provided great justification via their You Tube posts as presented on the website www.free the ocklawaha.com, which provides tremendous supporting evidence for the restoration.	If restoration DOES NOT happen we have again continued to squandered to make right what was mistakenly conceived way back in the 1930s and 1940s. Specifically: The lower St Johns river estuary continues to be deprived of 150 million gal./day of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce unnatural salt water intrusion. Thousands of acres of forests are not restored to their natural state which would provide wildlife habitat, natural flood protection, cooling canopy, enhanced recreation benefits. Millions of dollars of taxpayer money is tragically and unnecessarily spent on a useless, deteriorating structure that does not provide BROAD public benefit, any flood protection not any water or power supply. Also risks failure which could result almost $60mil in damages to over 500 Putnam County homeowners. Putnam County and Silver Springs are deprived of substantial increased revenue from eco-tourists and sightseers. Substantial quantity of manatees lose the ability to migrate up the Ocklawaha to essential water water springs that are not released by the restoration and can't travel all the way to Silver Springs where they formerly resided in the winter. Historic fish are not allowed to once again habituate the Ocklawaha and Silver Rivers And we may miss the opportunity to received the State and federal funds that are now available	No	The Ocklawaha is the centerpiece of the 217 mile Great Florida Riverway system of rivers and springs flowing north from lake Apopka in the St Johns and Atlantic Ocean. Its restoration to its natural state would: a. greatly improved the natural habitat for wildlife of all kinds by restoring 15,000 acres of forested wetlands, b. benefit water quality through biofiltration c. provide at least 150 mil gal/day of fresh, cooler water which will help restore the lower St Johns aiding in combating algae blooms, counter-salt water intrusion, and bring back more necessary and lost vegetation on the Lower St Johns d. result in significant net economic benefits to the surrounding area. On a personal note, I enjoy taking guests on my 1929 antique Chris Craft wooden boat to view the natural Florida. I have ventured up the Ocklawaha briefly and would love to make the journey all the way to the Silver River and maybe even the Lake Harris chain of lakes. As a citizen and stakeholder I ask you to complete this restoration with all due haste.	
10/4/2021 12:29	Broward		No	No					Restore the River!!!!!	restoring The Great Florida Riverway will be vitally important for manatees, other wildlife, and people.	Death of a multitude of creatures including our beloved manatees!			
10/4/2021 12:38	Marion		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	the dam removed and the river restored to its natural state	the decline in water quality of the river and other natural resources	continued decline in the water quality and other natural resources of the area	not really, I see no advantage to keeping it as it is	the dam impedes the natural flow of the river and its inhabitants. the ocklawaha is a beautiful and vital waterway for our area and the state. it's time to allow it to follow its natural course.	
10/4/2021 12:41	Marion		No	No					Restore the Ocklawaha and get rid of the dam					
10/4/2021 12:42	Volusia		No	Yes		1 time		Canoeing / kayaking Wildlife viewing	Free the River	Return nature				
10/4/2021 13:10	Hillsborough		No	Yes					Remove the dam, restore the Okalahawa River & let the natural ecosystem return itself to all 3 rivers. Help wildlife flourish!	Removing the dam helps restore the springs & the rivers flow.	Destruction of forests, wildlife & algae blooms, fish kills, poor water quality. Restoration will create jobs & increased visitation/tourism will also create jobs.	NO. The dam must go.	We are the caretakers of the earth. We must Protect it and Allow it to flourish. The dam is destructive & has outlasted its usefulness.	
10/4/2021 13:10	Orange		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	$150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers	A storm event triggers a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages.	None. This is long overdue.		
10/4/2021 13:17	Duval		No	Yes		2-5 times	2-5 times	Other: Hiking	I support the restoration of a free-flowing Ocklawaha River, knowing that it would eliminate both the Dam and the Reservoir	The science. Studies by federal and state agencies have clearly demonstrated that restoration will provide significant ecological benefits to the St. Johns, Ocklawaha and Silver Rivers as well as Silver Springs.	We miss the best opportunity to correct a mistake. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe and requires expensive maintenance.	No not really. I do recognize that, for the fishermen in the area, they can still catch large and healthy fish with a restored free-flowing Ocklawaha River.	Thank you for this opportunity	
10/4/2021 13:21	Alachua		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	I would like to see the Ocklawaha River flows restored and the dam eventually phased out.		The quality of fishing and boating experiences as well as wildlife habitat may continue to decline over time.			
10/4/2021 13:27	Escambia		No	Yes					Remove the dam and restore the Ocklawaha!	Restoration of the ecosystem	Failure of the dam. Depletion of drinking water for the state.	No	I grew up in the Ocala National Forest. I have been an active duty Marine for 28+ years and maintain my Florida residence in Escambia County.	
10/4/2021 13:35	Marion		No	No					Remove the dam. Allow the Great Florida Waterway to fully open.	Watching documentary, talking with experts.	Dam is not needed. Manatee and other aquatic animals are endangered.	Not that I know of	Please help FL aquatic life.	
10/4/2021 13:43	Duval		No	No					Remove the Rodman dam and restore Oklawaha to its natural flow	President Nixon ordered the construction of the canal/construction of dam to cease in the 1960's because he saw the environmental damage. That's 60 years ago !!! It's way over due !!!	Environmental damage would continue. The herbicides required to keep the reservoir weed free would continue contaminating the natural flora and fauna. A new dam would have to be built and more maintenance would follow on and on. Who pays ???? Florida's natural environment continues to deteriorate. Endless cycle.	NO		
10/4/2021 14:09	Duval		No	Yes					Remove the dam completely	Support among numerous environmental organizations. Return the river to its natural state.	Continued loss of natural environment	Nope		
10/4/2021 14:17	St Johns		No	Yes		2-5 times	2-5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Leave as is in its beautiful state.	Scenery, beauty, fishing, solitude and the opportunity for others to see enjoy this pristine water resource.	Impact on fishing and wildlife. Loss of a resource.	No		
10/4/2021 14:18	Outside of state / other	California	No	No					The dam must be removed and the surrounding waterways restored for the benefit of manatee and other species that call this area home.	We cannot sustain ourselves without sustaining the environment in which we live.	We are killing our environment and ourselves in the process of holding on to old technologies that did not consider the sacred nature of nature.	No. Halfway measures are no longer adequate. We have abused our environment fir so long that we ate in a crisis situation now. Only dramatic remediation will suffice.		
10/4/2021 14:25	Broward		No	Yes			1 time	Other: Just went to see it & take photos there.	Open it up to connect the Florida rivers.	Restoring the Great Florida Riverway by removing key portions of this dam will re-establish traditional access to essential habitat for manatees, bring back migratory fish, connect three river ecosystems and historic Silver Springs, and restore a lost riverway for anglers and paddlers from Ocklawaha's Harris Chain of Lakes to the Atlantic.	Losing habitat for our beloved manatees plus fish and active water adventures for citizens and visitors.	NO	This is very important to many of our friends and neighbors throughout the state.	
10/4/2021 14:26	Alachua		No	Yes			1 time	Other: I am not a fisherman	Dam removed. Other structures stay in place. Explore possibilities for compensating those whose businesses are critically dependent on lake fishing	Restored river and springs would be an economic plus for the region.increases tourism and decreased cost to maintain the area.	That our state will persist in its downward environmental spiral in the interest of business as usual	Not aware of any		
10/4/2021 14:29	Alachua		No	Yes			1 time	Wildlife viewing	Remove the dam	History and Science	Long term degradation of the river system. continued impacts to Manatees	No		
10/4/2021 14:31	Marion		No	Yes	2-5 times			Fishing (shoreline/structure) Wildlife viewing	Go back to it's natural state	Wild life and the fish and Manatee migration surpression sense they changed it	It hurts all the rivers that come together in that area	No		
10/4/2021 14:44	Bay		No	No					I would like to see the dam opened/breached.	Restoring the springs, fish, manatees and saving money.	the funds won't be available in the future, restoration of a key part of the ecosystem won't take place, this damn does not serve a public purpose. It is time for Florida to start being a MUCH better steward of our natural gifts, the basis of all of our income	nope. this project is long overdue.	Save more manatees!	

10/4/2021 14:52	Alachua		Yes	Yes		More than 5 times		Canoeing / kayaking Wildlife viewing	Restoration is also an ideological term. Conservationists can never use a historical or natural baseline by which to "restore" nor do they take into consideration how the landscape has changed over time and what it now realistically can be restored to. The "restoration" of the Ocklawaha River and the decommissioning of the Rodman Dam is not one of those obscure or ambiguous prospective projects. The natural flow of the watercourse beyond the damn towards Little Lake George still exists; the adjacent hydric hammock floodplain along the Ocklawaha beyond the dam is still present; the springs that lie submerged beneath the Rodman Reservoir, as evident during its drawdowns, are still flowing. Unlike dams in other parts of the country, the Rodman Dam serves no function. It was developed during an era in our State's history where the concept of a cross-Florida barge canal was feasible...which never, thankfully, panned out. Therefore, the dam is functionally obsolete. It doesn't provide hydropower nor does it protect urban areas from flooding. The dam's adverse effects are far more considerable than its positive. West Indian Manatees have been blockaded from making their seasonal migrations into the Ocklawaha and its first magnitude springs; striped bass and other estuarine fish species are also prevented from making their seasonal movements into the Ocklawaha River; the dozens of springs that lie submerged beneath the surface of the Rodman Reservoir are inaccessible to those tourists and naturalists who would otherwise invest in visiting the area to explore and visit this landscape. To those sports fisherman and their lobby who claim the removal of the dam would adversely affect their sport, how? We know from multiple examples and academic studies that the restoration and decommissioning of dams increases the abundance of fish stocks and would have a positive effect on a region's biodiversity. The only adverse effect it would have for sports fisherman is reducing the concentration of targeted fish species in the reservoir by actually allowing those species to be able to fully	The West Indian Manatee was down-listed from endangered to threatened under the federal Endangered Species Act back in 2015. It was one of an assemblage of species that were either down-listed or de-listed as a result of legal pressure from the Florida Home Builders Association against the USFWS as a result of the USFWS's failure to promptly update Species Protection Plans in the timeframe they should have. This is understandable...despite the Florida Homebuilders Association's intentions...and it is true that, at the time, many of these species' numbers had recovered significantly, including the West Indian Manatee's. However, the population dynamics and demography of a species can change from year to year and dramatically over a short span of time. West Indian Manatees have been featured in local, state, and national news again as videos showing starving manatees attempting to feed on turf grass along residential canals and washing up bloated and dead on Gulf Coastal beaches as a result of annual Red Tide events become all too frequent. We know that West Indian Manatees naturally and historically rely on our freshwater springs and their watercourses for overwintering habitat, and the Ocklawaha River and its springs were a part of that historical range. Why wouldn't the State seek to restore that...especially now that Silver Springs State Park is in State hands. Please fill in the gaps that remain vacant, and let's all celebrate the return of the manatee into our celebrated eastern North Central Florida springs and rivers.	At this point, the status quo is a liability. A blighted major river is..well it's a blighted major river. Will the State kowtow to the sports fishing lobby, who wouldn't even be adversely affected by the removal of the Rodman Dam, or will the State recognize the expertise, data-driven research, and (righteous) desires of those conservationists, naturalists scholars, academics, experts, scientists, and other concerned residents who are fully aware of the impacts the Rodman Dam continues to have on the Ocklawaha River and its watershed? I do hope the State will make the good and sensible decision regarding this matter.	Unfortunately, no. I imagine that any other scenario, short of the outright removal of the dam, would require an unnecessary amount of public funds and, therefore, be unnecessarily and wastefully cost prohibitive.	
10/4/2021 15:05	Duval		No	Yes		More than 5 times		Wildlife viewing Other	remove the dam and restore the floodplain	Restoring migratory fish species, restore more natural water temperatures, and detrital export. Also, reduce E.T.	Continued degradation.	No	
10/4/2021 15:25	Levy		No	No					remove the damn	various studies	health of the river	no	
10/4/2021 15:25	Alachua		No	Yes			1 time	Canoeing / kayaking	Remove the dam to restore the Ocklawaha River.	Florida fresh water springs need to be supported for the Florida aquifer to survive so we can survive.	Salination of ground water when springs' flow is degraded.	No.	Artificially provoding bass fishing is not sufficient reason to keep the reservoir.
10/4/2021 15:30	Duval		No	No					Remove this dam! ASAP! I like kayaking and going to Springs. Our Springs are so popular we need to allow patrons to spread out. There are 20 springs buried by this dam. The kayaking and Springs tourism would be significant. The health of fish, water quality all the way to the St Johns would improve by its removal.	Buried Springs, promoted health of natural systems that protect us. BETTER fishing if it was removed.	You would only be pushing the issue down the line. At some point NATURE WINS and we will HAVE TO remove the dam. Why waste more money and time, do it now.	No not really. I would be happy if the water was drawn down but if you were to do that, why not just remove the dam. It serves no purpose other than supposed bass fishing. However, the bass fishing will INPROVE if the dam is taken down. There will still be bass fishing to be done.	
10/4/2021 16:11	Hernando		No	Yes			1 time	Wildlife viewing	I strongly support the removal of the Kirkpatrick Dam across the Ocklawaha River, which created the Rodman Reservoir. Over 50 years ago this reservoir was to be part of the ill-fated Cross-Florida Barge Canal. It is time to stop wasting millions of dollars on continual repairs of this dam.	If the Ocklawaha River is allowed to flow freely, the additional fresh water will play an important role in offsetting the rising salinity level as higher sea levels push into the river's mouth at Mayport.	In addition to the waste of money in continuing to repair the dam which has no purpose, water quality will continue to decline.	NO, the dam should be removed!	
10/4/2021 16:23	Columbia		No	Yes			1 time	Canoeing / kayaking Wildlife viewing Other: Springs viewing during drawdowns.	Would like to see the dam removed and the river system restored.	Restoration of the springs and natural flow that would increase biodiversity of the area. Currently millions of dollars are spent supporting a man made alternative that benefits only a few and continues to degrade the environment of the area. ?	Cost of maintenance of the repairs and maintenance but more importantly a lost opportunity for restoration and an economic driver for the area.	No. Building this dam and flooding the area should never have happened. The cross FL barge canal was a misguided idea which is why it was finally stopped. It is time to finally acknowledge that this was a mistake and do what's right, restore the area.	This is an opportunity to do the right thing and to create a win win both for people and the natural resources dependent on this area. Let's get rid of the dam!!!
10/4/2021 16:34	Brevard		No	No					Stop the area of focus as an economic benefit that actually only benefits a small portion of well off people of society. Our ecosystems are barely hanging on based off of man made intervention. Put the process and flow of water back to what it is intended to do. Stop thinking about the benefit to humans and give back to nature what we have taken or expect the generations to come to struggle to survive based off the actions of old people who are not first hand witness to the destruction of the country'.	I have lived in Brevard my whole live, as a young aspiring architect, I have seen how people (older generation) do not care to invest in nature as much as should but rather economic or touristic appeals finalize their decisions. I do not know everything, but one thing I do know is that this whole country was built for their time and after many years have passed, still are doing the same thing. You can't take money with you when you die, but you take your memories. Do you really want the memories of the future generations to be concerned about how they will receive their basic human right, access to water?	The devastation of wildlife and the extinction of natural systems that have lasted hundreds of years before intervention. Florida is incredibly unique geographically and we have already disrupted the flow of water from Lake Ocklawaha to the Everglades. Sources for energy are still developing and the new graduates of universities will have the skillset needed to provide these solutions. Just expand the ways of thinking.		Please think about the future generations. Do not take nature for granted. The earth does not need us, we need the earth. Think about that.
10/4/2021 16:34	Outside of state / other	Riverdale, MD	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/4/2021 16:41	Putnam		No	Yes			2-5 times	Fishing	Keep the reservoir and dam as it is.	The environment is now set. Removing the dam would destroy then current ecology	see above	No.

10/4/2021 20:28	Pinellas		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.		As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/4/2021 20:36	St Lucie		No	Yes		1 time			Remove it and restore free flow.	The springs are in terrible condition.	Manatees will continue to die. 2020 and 2021 they were dying of starvation and less access.	No.		The money I voted for in the tax increase is there. This is the most cost effective use of the money with the greatest environmental improvement. Please make this dam come out!
10/4/2021 20:40	Marion		No	No					Nature needs to be restored to what she was before this boon-dongle was created.	The quality of the water in the Florida Aquifer	What kind of water/ecosystem are we leaving for future generations	Anything that aligns with returning the area to what it was. Natural, not a money making or bureaucratic endeavor		This area must be "put back". It is time to set politics aside, big business aside, and do what is necessary to sustain Florida's Ecosystem
10/4/2021 20:47	Orange		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	30 lost springs and Silver Springs ecosystem are restored	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.		
10/4/2021 20:48	Outside of state / other	Ky	No	Yes			More than 5 times	Fishing	I think the reservoir should remain in place. It is always an amazing experience to see the birds and other wildlife that make the area home. The fishing is truly unique and the health and quality of the fish are outstanding.	The preservation of this unique recreational property for generations to come.	The welfare of the wildlife that live in and around the reservoir.	No. Leave it alone.		
10/4/2021 21:15	Duval		No	Yes			1 time	Fishing Hunting Wildlife viewing						
10/4/2021 21:37	Lake		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	Florida's ecosystem is very fragile. We have destroyed the Everglades - the only place like it in the entire world - and have gone too far down the path of destruction to hope for a complete recovery. We still have a chance to undo some of the damage done to the Ocklawaha River Basin. With the dam breached and the river returned to its natural state, thousands of acres could be returned to provide habitat for our native plant and animal species that are losing habitat at a rapid pace across Florida. We could preserve some of natural Florida for future generations - and increase the ecotourism offerings in Central Florida. The positive economic impact would benefit the area which would offset any economic loss from draining the reservoir. A win for the future of Florida in every way - a win for the native plants and animals, a win for the preservation of nature, a win for the economy, and a win for our descendants!	That we will continue to lose what makes Florida unique - like we lost the Everglades - and not due to any natural disaster or global warming - just to our own stupidity. We have a chance to be heroes to our children and grandchildren - we should not lose our opportunity.	Absolutely none - the breaching of the dam is long overdue. The cross Florida barge canal seemed like a good idea at the time - however, it has proven to be destructive to the environment and never served it's original purpose. We should take this opportunity to right the wrong.ALL THE WAY - not just partially.	Please do the right thing for the future of Florida. Thank you for your time.
10/4/2021 22:26	Outside of state / other	Cartersville	No	No					I would like to see the manatees live out their lives peacefully and the resources get more advanced and more worldwide.	I LOVE MANATEES. Also I would love to see them live a happy life.	That manatee would not live peacefully.	Being more worldwide and becoming more advanced in saving the manatees.		
10/4/2021 23:30	Duval		No	Yes			1 time	Fishing	I would like to see the dam removed and the river and land restored to their natural state.	Research has shown that restored areas help wildlife and naturally filter the water.	My biggest concern is that Florida's natural ecology will never be restored thus preventing future generations the experience of seeing the wild beauty of Florida.	No. Remove the dam, drain the reservoir and restore the ecosystems.		
10/4/2021 23:51	Alachua		No	No						Removal	Save the manatees	Continued decrease in manatee and fish habitats / resources and thus their population eventually.	Slow removal of the dam	
10/4/2021 23:59	Putnam		No	Yes	More than 5 times			Fishing Boating Wildlife viewing		leave it be, its beautiful				
10/5/2021 2:41	Hillsborough		No	No						Remove the dam	No Rodman Dam = healthier St Johns River, more Manatee shelter and migration, 20 Springs to recreate in, etc. Those springs bring in a lot of money. AND fishing will probably improve.			
10/5/2021 4:49	Duval		No	No						Restore the Ocklawaha River	It stands as an impediment to the movement of native Florida wildlife.	Impact to wildlife and water quality.	No	
10/5/2021 5:39	Duval		No	No						Tear down the dam and bring back the springs	Manatees are having their deadliest year on record. This would provide an essential food source and habitat for them.	Manatee populations continue to decline.	No.	
10/5/2021 5:58	Duval		No	No						Remove the Dam and restore the river	Lack of biodiversity in river. Manatees are dying.			
10/5/2021 6:13	Putnam		No	Yes			More than 5 times	Boating	remove the dam and restore the river	return access to our river, the natural way to Silver Springs, Ieesburg, etc.	the river and areas surrounding it will never return to the way they were and the cost of keeping the dam running and operating will continue to increase every year.	No. I have been fighting this for years. the dam is only supported for the fishermen.		Lets get the dam removed before we spend a fortune to restore it for no reason other than the fishermen.
10/5/2021 6:26	Columbia		No	No					I would not like to see it move forward. I would like to see the Ocklawaha River restored to its natural state.	The dam serves no purpose other than for fisherman. The river's water quality and quantity has been degraded; the river's wildlife has also been harmed. Restoring the river would bring more outdoor tourism to the area than fishermen.	That once again Florida's flora and fauna fall victim to mismanagement.	The dam either stays or goes; I'm not sure you could leave it there and still have complete river flow.		
10/5/2021 6:29	Clay		No	Yes			2-5 times	Fishing	I would like to see the dam removed to restore the river	I have a degree in Forestry, and I have been on the Rodman lake. I have read the newspaper articles for and against restoring the river. It seems obvious that, politics and money aside, the ecologic benefits would be better by restoring the river.	a weed choked lake would remain.	no		see the lake for yourself. Boat up the river below the dam. it is obvious
10/5/2021 6:48	Duval		No	No					Remove the dam and restore the river	The St John's River is saltier and plant life is dying.	The destruction of the river plants and ecology	No		There has been too much discussion and not enough action. A handful of jobs should not hold up correcting a mistake made decades ago.
10/5/2021 6:48	St Johns		No	Yes			1 time	Other	remove the dam	St Johns River Keeper		No		
10/5/2021 6:50	Duval		No	Yes			More than 5 times	Wildlife viewing Other: I have hiked near the dam.	The dam removed and the Ocklawaha River restored to its natural state.	Scientific research.	The effect on tourism.	No.		
10/5/2021 6:52	Duval		No	Yes		2-5 times	1 time	Canoeing / kayaking	Totally remove the dam or partially breach it	Restoring the natural environment	Higher salinity in the St Johns river	Not sure what the options are		
10/5/2021 7:02	Duval		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	Remove it , restoring the flow of freshwater to the St John's River	Ecohns Riverkeeper provides good data to its members and the public	Continued degradation of St John's River	Not aware of one .		In this case , the bass fishing interests in water backed up by Rodman dam are not as important to Florida's future as the free flow of the water. Water is Florida's most important resource
10/5/2021 7:06	St Johns		No	Yes			1 time	Fishing	Like to see the dam removed and the Ocklawaha restored	Dying seagrass due to increased salinity downstream of the dam. Prefer to see the larger river system benefit rather than preserving one small part of it.	No concerns. A natural state is always better than a man-made state. We have many environmental problems to fix. This is one of them. Fix it and move on to the next.	No		Great, unique bass fishing spot, but there are many great bass fishing spots all throughout Florida.
10/5/2021 7:40	Duval		No	Yes			1 time	Other: Just for viewing	Removed and restore the waterways	The review by informed scientists.	We will continue to destroy our environment.	No.		
10/5/2021 7:43	Duval		No	No		More than 5 times		Canoeing / kayaking Wildlife viewing Other: Camping	Restore the river to its pre-canal status.	Man meesses up everything we touch!	Continued destruction of natural habitat and the spring?H20 system of Florida	Nope		Just restore the Natural River
10/5/2021 7:46	Levy		No	No					The Kirkpatrick Dam should be removed.	Decades of research showing deleterious effects of dams. This dam is particularly disruptive to manatees.	Further botching of a natural waterway	What are the alternatives that are supportable?		
10/5/2021 7:47	Duval		No	No					remove the dam. the sooner the better.	freeing the Ocklawaha river	a small group is allowed to overrride a larger group. politics usa.	no		i cant believe this dam has been allowed to impede the flow of a major river for so long.
10/5/2021 8:07	Duval		No	Yes			1 time			History. restore to the prior ecological system that supports our waterways and surrounding biota	The future of the St Johns River will be negatively impacted, especially as pressure increases to draw water from the river due primarily to ongoing population increase.	I am not sure how to view this as anything but an "either or" question.		
10/5/2021 8:09	Duval		No	Yes			1 time	Boating		Get rid of it and restore the Oklawaha	There are too many stumps to enjoy boating! The Oklawaha is beautiful and the water needs to be restored!	The Oklawaha will no longer exist!	No	I have a house in Buffalo Bluff in the river! I dated my husband in the Oklawaha! Bring it back for us to enjoy as well as the wildlife! The Rodman is only good for various fisherman, not boaters! Too many stumps and it's not pretty!
10/5/2021 8:09	Duval		No	Yes			2-5 times	Canoeing / kayaking		I want the Dam removed!	The studies that show the benefit to the Ocklawaha, Silver River, and St Johns. IT will be great for the water quality and for wildlife.	Continued degradation of the Ocklawaha	How do you partially remove a dam?	
10/5/2021 8:12	Marion		No	Yes		2-5 times		Canoeing / kayaking	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	20 lost springs and Silver Springs ecosystem are restored	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.		Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.
10/5/2021 8:15	Duval		No	Yes			More than 5 times	Boating	Restore the river to its natural flow	Studies presented by the St. Johns Riverkeeper and my personal experience.	The permanent destruction of the natural flow of the river.	No		
10/5/2021 8:18	Duval		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	Remove the dam, restore the waterway	DEP reports	Continued degradation of the river and associated habitats	No		
10/5/2021 8:29	Duval		No	No					I would like to see the dam removed and let the Ocklawaha flow naturally again.	The ecological impact he dam has had on the St Johns River.	Further degradation to the St Johns River.	No other options seem viable.		
10/5/2021 8:30	Duval		No	No					Remove dam and restore river to its natural flow.	It's the way nature intended it to be.	further ecological destruction	possibly.		
10/5/2021 8:34	Duval		No	Yes		1 time		Wildlife viewing	Breach the dam	improvement of surrounding waterways, benefit manatees, native fish species, etc.	postponing the right thing to do.			
10/5/2021 8:35	Duval		No	No					Remove the dam and restore the river to its natural flow	https://www.jacksonville.com/story/news/environment/2021/10/01/ocklawaha-river-restor-it-consoder-kirkpatrick-rodman-dam/5980682001/	Continued harm to the St. Johns River	No		
10/5/2021 8:36	Putnam		No	Yes			2-5 times	More than 5 times	Other: Not at all. I live in Welaka and we go up to the dam by boat from the St. Johns River. That stops us from going any farther.	Open it up and allow the Oklawaha to run free as it should.	The dam has stopped all migrating fish and wildlife from continuing up the Oklawaha as it should be. Removing the dam does not stop people from fishing. They will be able to fish on the Oklawaha like we do on the lower river.	More of the same backward logic. The dam does not do anything positive for the river and its inhabitants. The fisherman that use it will still go fishing on the Oklawaha like we do on all the other parts of the river. The river would actually get a lot more usage from the lower end of the river.	No. Open up the Oklawaha river.	I have been to the Rodman dam at least 30 - 50 times. I have never seen more than a dozen people fishing at the dam. On the actual reservoir, I have seen fisherman there but not all that many. Who pays for the maintenance on this structure that blocks all access from the lower Oklawaha? If it is so healthy, why do they have to drain it down every few years to help clean it out? I have even seen Manatees on the lower Oklawaha trying to go up river. The lock is in operation. Who pays for that ridiculous scenario? A lock that gets used once or twice a week? I have never seen it in operation.
10/5/2021 8:39	Putnam		No	Yes			1 time	Wildlife viewing	Remove the dam and restore the original river to it's natural state	Nature always knows best!	Continued environmental damage	No		
10/5/2021 8:42	Duval		No	Yes		1 time		Wildlife viewing	Remove the dam and restore the river	Newspaper articles	Continued degradation of the St John's river			
10/5/2021 8:46	Duval		No	No					Breach the dam	Restoring the natural flow of the river and improving water quality	Death of natural habitat	No		
10/5/2021 8:46	Duval		No	Yes			1 time	Other	Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian in the world.
10/5/2021 8:52	Duval		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	I feel that the Kirkpatrick Dam needs to allow more water from the Rodman Reservoir to enter the St. Johns River to improve the health of the river and Silver Springs associated with reservoir. The water in the river and the springs has deteriorated significantly since the Ocklawaha dam was built. There is no need for a canal which was never completed. Wetlands and springs which have been effacted by the dam need to be restored to their natural origins to improve the ecology of the region from Ocala, Palatka and Jacksonville. Removing these wetlands destroyed the ecology and drainage from this entire region. Restoration of the natural environment of the region will improve the food web in Silver, Ocklawaha and lower St. Johns River by offsetting the impact of dredging, pavinging and wetland destruction. It would also help curb the creep of salinity of the St. Johns River which is heading further south each year and changing the ecology of the river negatively.	Algae blooms have increased dramatically the last 10 years. Vegetation in the St. Johns River is declining. Manatees are dying due to a shortage of food. People are unable to swim or fish in the river due to the poison in the water. An increase in fresh water would improve the safety of the water.	The St. Johns River will become a flowing, smelly nuisance flowing through our community rather than a thing of beauty. The springs will stop flowing as they clog up with chemicals. The natural regeneration areas which help recharge the aquafer will become less effective each year which cause salt water intrusion and less potable water.		
10/5/2021 8:53	Duval		No	Yes			1 time	Other: hiking around it						
10/5/2021 8:53	St Johns		No	No					Tear down the dam! Remove it completely.	Ecological damage to the river and surrounding areas.	Continued harm to the river	No		
10/5/2021 8:53	Duval		No	Yes				Other: Informational	It should be removed	Combination of impact on water quality and deleterious effects on manatees, etc.				
10/5/2021 8:57	Duval		No	Yes			1 time	Wildlife viewing	I think the dams should be removed.	Many areas of the country are removing old ill- conceived dams. Oregon and Washington have already done many dam removals. The dams interrupt migratory routes for fish and manatees. We need to better respect our natural environments and get back on a path toward saving our planet. Although our planet will survive, we may be seeing the beginnings of human extinction.	Concern for the natural environment if Florida. Our state is a remarkable place, but it needs protection.	I don't think so.		Thank you for seeking the interests of the people of the state.
10/5/2021 9:00	St Johns		No	No					Tear down the dam	Put the river back in its natural state. Make the St John's river and its tributaries cleaner	Dame old ho hum and do nothing			
10/5/2021 9:03	Duval		No	No					Remove the dam and let nature take its course in repairing five decades of man-caused damage.	Science/ecology/common sense. A cross-state canal was a classic boondoggle with no economic or ecological justification.	That we would continue to maintain an expensive and damaging structure.	No		It is long past time to cure this problem by removing the dam.
10/5/2021 9:03	Duval		No	No					Tear it down!!! It was absurd to begin with and has totaly screwed south Florida waterways including the Everglades.	The deterioration of the rives and springs and animals and fish that rely on it. Remember when Silver Spring was a major tourist attraction?	Continue ill effects on the rivers and lakes and the Everglades in Florida.	NO! You are messing around with Mother Nature!		Do not let Nestles have water rights n Florida! We only have so much water you know. Less water, less evaporation, less evaporation, less return of water to the state with painful.
10/5/2021 9:05	Duval		No	No						restore flow of Ocklawaha River	Environmental Health of the river system & positive impact on wildlife, migratory routes	Continued deterioration of biodiversity and poor water quality	The dam should at least be breached to restore the river flow to pre-dam conditions	
10/5/2021 9:06	Duval		No	No						Breach the dam and restore the Ocklawaha	River water quality	River pollution gets worse	Not really	No
10/5/2021 9:14	Duval		No	No						Remove it.	Scientific evidence. Multiple studies. Recommendations from all environmental organizations support the immediate removal of this dam. Let the river flow as nature intended!	Continued environmental destruction.	No.	I support the complete removal of this environmental boondoggle.
10/5/2021 9:16	Duval		No	No					I would like to see the dam removed and the flow of the Ocklawaha River returned to normal.	Being an active boater on the St. Johns River, I have observed the consequences of the reduced flow of fresh water resulting in dying vegetation due to salt water intrusion. Also, I read the scientist analysis that makes many arguments for removing the dam.	Continued salt water intrusion into the river, resulting in additional impacts on the vegetation and marine life. This could also increase the likelihood of more often and sever algae blooms in the river. Generally, overall continued environmental deterioration to the lower river. Also, the cost of continuing to maintain the dam and potential catastrophic damage to massive failure of the dam.	Possibly, but none that I am aware of.		I am personally familiar with Dead Lakes in the Florida Panhandle which and the damn restricting the flow natural flow of the Chipola River, springs, creeks of that area. While the fishing was good, it deteriorated over time. Ultimately that damn was removed and the area has since made great improvements.
10/5/2021 9:17	Alachua		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing	Keep Rodman Reservoir and Kirkpatrick Dam.	Rodman is a great world known fishing destination. It provides so much space for many people in many boats to enjoy their pastimes whether they are fishing, boating, or wildlife viewing. Keeping Rodman and the surrounding area the same makes the most sense. People can go to the large reservoir or they can go to small rivers. No need to change anything. Another great thing about Rodman is the ability to control the water level. In times of drought (which we all know will return) the reservoir can be kept full when other natural lakes may get very low. Even to the point of being almost dry like the Orange Lake cycle. People can always have access to a lake with Rodman in the area. Rodman is a great tourist destination for fishermen. Many people visit to attempt to catch their largest bass ever. And many have succeeded! Rodman has great wildlife viewing. The shoreline (much longer than would exist with a small winding river) provides habitat for many birds and animals. Ospreys and Bald Eagles can often be seen. Their nests are visible in many parts of Rodman. The drawdown program for Rodman has kept the reservoir "young" and productive. The fishing has not declined as so often happens with other man-made reservoirs. And weed control using drawdowns is so much preferred to chemical treatments!	The large beautiful reservoir would be gone. A small windy river would be all that remained. The size of the Ocklawaha River makes it unsuitable for large numbers of typically sized pleasure or fishing boats. The area has several locations where rivers are available for use by those who like that type of recreation. Miles of the Ocklawaha either before Rodman or below the dam are available for people in small boats or canoes or kayaks. The Silver River is just slightly south as another similar location. Rodman is the only lake in the area where the water level can be controlled. This provides great benefits.	No. If the dam is removed then Rodman is gone. That would be a tragedy.		Input from local people who frequent the reservoir should carry the most weight. Area people absolutely want to keep Rodman. There is a small but vocal group who have been trying to remove Rodman for decades. They end up trying to make their case with crazy claims about reduced fresh water flow, less wildlife, a "weed-choked" lake, etc. In standard conditions, all normal flow of the Ocklawaha River just travels into and out of Rodman to the St. Johns River. Fresh water flow is whatever nature provides. This only changes during the periodic drawdowns and this impact on the St. Johns River is trivial. Rodman supports more wildlife of all types than would a small "restored" Ocklawaha River. Weeds in Rodman facilitate the great fishing for all species of game fish. The water depths with old river channels and the like keep boating access open. And drawdowns can reduce the weeds if necessary.

10/5/2021 9:20	Duval		No	Yes			1 time	Other: Visited to look at the structure	Take the dam down. Restore Ocklawaha	The science that supports restoring the ecology and economy of the entire region from Ocala to Jacksonville.	The continued cost to maintain a structure that has no real purpose	No		
10/5/2021 9:29	Putnam		Yes	Yes		More than 5 times		Canoeing / Kayaking Wildlife viewing	Be taken down	I grew up on that River it was better when it Fla's free seen first-hand	Being baffled by humans once again	No		I have always loved this River and it needs to be restored
10/5/2021 9:31	Pinellas		No	No					Preserved	Save the manatees	Manatee endangerment	No		
10/5/2021 9:33	St Johns		No	Yes		2-5 times	More than 5 times	Fishing Boating Wildlife viewing	I would like to see the Rodman Reservoir remain the way it currently is. Have you visited the Rodman area. It is beautiful. When you spend a few hours in the Rodman area, you will probably see many different types of water birds, ospreys, eagles and manatees. One of the best areas to fish in the state is the Rodman Reservoir.	The bass fishing and wildlife viewing is outstanding.	If the reservoir returns to its former self, the ability to view the wildlife will be more difficult. Currently, the viewing is wide open. Birds are plentiful and easy to see. In a creek or river, the ability to view would be obstructed by trees. The fishing is outstanding and one of the best areas in the state for bass.	If the reservoir goes back to its original state, why would I need to visit it for wildlife viewing and fishing. I live in Ponte Vedra. I have several opportunities to visit water nearby with the Atlantic Ocean, the intercoastal and Guana State Park. I go to the Rodman because it is a special place. The bass fishing is the best around. If the reservoir disappears, I will not return.	The way I see it, one side of the public wants the reservoir to remain the way it currently is. The other side wants the reservoir to go back to the way it was. Who wants it to go back to the way it was? Have those people actually visited the reservoir? Have they spent a day on the water for the viewing of many species of birds that are attracted to the area? Have they seen the gentle creatures called manatees come near your boat while fishing and stay in the area for 30 minutes? And, do they fish for bass. Best bass fishing in north Florida. The people who are voting on the Rodman should be those people who have actually visited the reservoir. What have they seen that should promote a change? I do not support a change in the Rodman. The many people visiting the Rodman are also spending money for gas, food, hotels, fishing supplies and etc. This money goes back to the town of Palatka. I wonder what kind of changes are in store for Palatka if the Rodman changes. Currently much of the money spent goes back to the town of Palatka. This is a town that I'm pretty certain, depends on the Rodman.
10/5/2021 9:36	Levy		No	No					The Kirkpatrick Dam should be removed and the Rodman Reservoir allowed to drain so that the Oklawaha River can return to its natural water course.	The Cross Florida Barge Canal was a boondoggle of the highest order from its inception. There was no valid economic justification to build the dam or create the reservoir and there never has been a valid economic justification for allowing it to continue. Maintaining the dam and reservoir is an irresponsible use of scarce resources and a prime example of the worse sort of political backscratching. After 50 years, it is time to tell the politically connected good old boys it is time for the dam and reservoir to go.	The continued waste of money contrary to all valid cost benefit studies in order to appease the wishes of a politically connected minority.	No, there is no "middle" ground that justifies the continued existence of the dam and reservoir. It was conceived because of greed and stupidity; it was built because of greed and stupidity; and it continues to this day because of greed and stupidity. There is no need to compromise for compromise sake when there is no rational basis to support anything other than the removal of the dam and natural restoration of the river. In this instance, pandering to greed and stupidity is no justification for agreeing to a partial solution for the sake of compromise. Sometimes the right solution is the only solution.	acknowledge that I am biased. My wife worked with Mrs. Carr in the 70's to restore the Oklawaha and we have been members of Florida Defenders of the Environment since that time. However, I have a degree in resource economics and the opinions expressed herein are primarily based on a cost/benefit analysis that does not support or justify the continued existence of the dam and reservoir. Thanks.
10/5/2021 9:37	Duval		No	No					Remove the dam and let the river go back to it's natural course.	There is no cross-Florida canal at this location and the dam is hurting the flora/fauna/water environment in NE Florida	Continued negative environmental impacts.	No.		Please remove the dam...it's time and removal will support a more vital natural environment for all to enjoy--both humans and fish/animals/birds/critters while supporting a more robust natural, green space.
10/5/2021 9:39	Marion		No	Yes				Other	Taken down and restored to original water flow. Kirkpatrick Dam and Rodman Reservoir are a hinderance to natural and original water flow and cause great damage to the natural order. Manatees would be helped by removal of this obstruction.		That things continue on the same damaging path.			
10/5/2021 9:40	Duval		No	Yes		1 time	Other	Restore river	My father rafted logs down O river years ago.... got caught in log jam for days. Ate swamp cabbage to survive on way to St Johns River where logs moved logs to Jacksonville sawmill.	Sadness that normal nature will not happen	No			
10/5/2021 9:43	Leon		No	No					Free the damn dam NOW! And sign the 5 petitions generated by FLS.	Ensuring the pristine nature of our state's many springs and rivers	A continuation of the human attitude that we can do almost anything even if natural waterways are compromised	no		Please encourage your audience to sign the FLS.org petitions to help save our waterways and wetlands!
10/5/2021 9:47	Duval		No	Yes		1 time	Other	I'd like to see reservoir removed	Climate change and water resource	Death of the river	No			
10/5/2021 9:47	Leon		No	Yes		1 time	Wildlife viewing	Remove the dam and allow the river to flow free!	Nature does it best!	More of the same blockage will not make it better.	No			
10/5/2021 9:48	Alachua		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing	Nothing. Keep Rodman open for use. Do not remove the dam.	The reservoir is a great and unique destination in this area of Florida. The great majority of area residents favor keeping it because it provides a large area for water recreation.	Our area would lose a fantastic and unique lake.	no. If the dam is removed Rodman would be gone.		Keep Rodman Reservoir for our use
10/5/2021 9:49	Hillsborough		Yes	Yes		1 time		Wildlife viewing	Remove the dam and restore the river flow. Repair the environmental damage done by this boondoggle	This was built to support an ill conceived transportation project that was never completed and serves no purpose	Not restoring and preserving Florida's natural environment and protecting the water supply	No		
10/5/2021 9:49	Duval		No	Yes		1 time	Fishing		Dismantle the dam	Mostly from conservationists that say it should come down	Water of St Johns river will remain in poor quality	No		
10/5/2021 9:51	Volusia		No	Yes	1 time	2-5 times	More than 5 times	Fishing	Be removed and allowed to be restored.	The harm it is doing ecologically and environmentally.	The damage it will cause in the future	No		None at this time
10/5/2021 9:53	Alachua		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing	Keep the reservoir and the dam as they are now and have been for 50 years.	The greatest benefit to the greatest number of people results from having Rodman as well as the small area rivers like the rest of the Ocklawaha. If Rodman is eliminated all that would remain there is a small little river that can't handle anywhere near the number of boats as Rodman.	A lake that my family has visited for decades would be gone.	NO		Rodman is a great location. Never let it go away.
10/5/2021 9:53	Duval		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing Other: Bird photography, picnicking	Demolish the dam, restore the Oklawaha ss springs and tributaries dependent upon this source are resupplied. Important to ecotourism and numerous communities downstream.	Scientific studies have all concluded restoration of the Oklawaha is among the most important factors in restoration of riverine health.	That the springs' qualities continue to deteriorate, that algae blooms continue to proferate, endangering human and wildlife.	No there is none.		Thank you for opportunity to express alarm and concern for this great Florida treasure, the Oklawaha River.
10/5/2021 9:54	Duval		No	Yes			1 time	Other: Just drove in area to look around	Tear down the dam and restore natural flow of river.	I've been following this for years. The dam was created as part of a failed canal project. It shouldn't be there. I read the newspaper and various newsletters from river keepers etc...	Manatee and fish habitat, free flowing springs that would help with st. John's river water quality.	I don't know one at this time.		
10/5/2021 9:58	St Johns		No	No					Would like to see restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam to reunite the natural connection of Silver Springs, the Ocklawaha and the St. Johns River.	The original reason and purpose of the reservoir that was built from legislature halting the Cross Florida Barge canal is obsolete.	This would continue to negatively impact water quality and biology of the St. Johns River.	None at this time.		The damn should be removed to restore a natural balance to the environmental waterways. People who may be impacted by home properties should be compensated if negatively impacted by removal of the dam.
10/5/2021 9:58	Escambia		No	No					I would like to see it removed.	The Ocklawaha river should be restored to it's natural state. I am very concerned about Manatees, and they need to be able to use the springs that were completely covered up by the formation of this reservoir.	Further degradation of Florida's water system. Also, the cost involved in maintaining the dam.	No.		This dam should never have been built in the first place. The cross Florida Barge Canal was done away with by Richard Nixon and the rest of it should have stopped then. The amount of revenue that will be generated by restoring the Ocklawaha River will surpass any gained from leaving the reservoir. Please end this environmental mistake.
10/5/2021 10:00	Duval		No	Yes				Fishing	I would like to see the dam removed and the river restored.	The quality of the St Johns and the benefit to manatees.	Algae blooms will continue to increase in the river and slat water intrusion will increase.			The Rodman Dam was a political boondoggle to begin with and needs to be removed.
10/5/2021 10:01	Duval		No	Yes		More than 5 times		Boating	I think the dam should be removed.					
10/5/2021 10:01	Clay		No	Yes	1 time			Wildlife viewing	Dismantle the dam. Restore flow to the Ocklawaha River. Restore flow of submerged springs. Restore stocks of native fish species. Eliminate Tilapia.	Deteriorating health of the St. Johns River system.	Continued deterioration of the St. Johns River and Ocklewaha area wetlands.	No.		
10/5/2021 10:08	Duval		No	Yes		1 time		Wildlife viewing	Removed and the river restored	That removing it will benefit the ecology of the entire region.	The health of the St. John's river and the aquifer.	No.		
10/5/2021 10:19	Duval		No	Yes		1 time		Wildlife viewing	Removed	Revitalization of the Cross Florida barge canal.	The loss of the 20 springs that feed the St. John's River.	No		
10/5/2021 10:19	St Johns		No	Yes			2-5 times	Other	Open the dam	Restore the Ocklawaha	Further degradation of the St. John's River.	No		
10/5/2021 10:40	Orange		No	No					I wish to see the restoration of the natural Ocklawaha River!! This can only be achieved by removing the Rodman Dam, which has caused endless harm to the wildlife, water quality,and even economy of the raceway.	There have been dozens of lost springs and ecosystems destroyed, specifically the Silver Springs.	The fish, manatee, and other wildlife populations are devastated from continued destruction of water quality. Look at the Indian River Lagoon - dead manatees and fish everywhere due to government lack of support.	The dam needs removal - it should have been removed decades ago!		As our technology advances, individuals are being exposed less and less to our natural resources. Every boundary placed to make our wildlife removes the chance for thousands of generations to fall in love with nature just like I did. Restoring the river is essential.
10/5/2021 10:41	Duval		No	Yes		1 time			Remove the dam please	Ecology and St Johns river flow	The future of our water system			
10/5/2021 10:47	Duval		No	No		More than 5 times		Wildlife viewing	I would like it taken down and have the Ocklawaha restored.	That there is a depletion of fish life by 90% since the dam went up.	Concerns are the continuous depletion of fish life, manatees and water quality.	No		Breaching this dam is the number one thing we could do in support of our natural waterways.
10/5/2021 10:48	Duval		No	Yes		1 time		Canoeing / kayaking	Remove the dam	SJRK information	Continue degradation of the rivers	Partial removal of the dam and permanent drawdown		
10/5/2021 11:01	Clay		No	Yes		2-5 times		Fishing Boating Wildlife viewing	Keep the dam and reservoir as is.	Loss of reservoir would be a great loss of bass fishing and a great refuge for waterfowl.	Loss of bass fishing and sanctuary for waterfowl.	No.		Rodman Reservoir and the outstanding bass fishing is what drew me to this area over 30 years ago. Health issues have recently kept me from going to Rodman, but I hope to return to fishing in the near future. Fishermen like me have supported the local economy by buying food, lures and gasoline. Canoeing can still be done down stream of Rodman Dam. If you visit the reservoir during a draw down you will be able to see a amazing variety of waterfowl using it as a sanctuary.
10/5/2021 11:05	Orange		No	Yes					Breach it	Restore the springs and oklawaha	Lose a good fishing spot for no good reason	No		
10/5/2021 11:18	Duval		No	No					Removal	Waterways being restored for manatees, restoring the springs, reviving fish life	The suffocation and depletion of our springs and restriction of water flow to the St. John's.	No		
10/5/2021 11:18	Duval		No	No					I would like to see the damn removed Ocklawaha River restored to its natural state	I would like to see the damn removed Ocklawaha River restored to its natural state	The health of the Saint Johns River. Restoring the natural wetlands and the springs.	No		
10/5/2021 11:21	St Johns		No	No					I think the Dam should be breached to allow for restoration of the Ocklawaha, returning the river to its natural flow. The St Johns & Silver rivers should be reconnected.					
10/5/2021 11:24	St Johns		No	No					I would like to see the dam breached and the Ocklawaha restored to a more natural flow.	Research studies indicating benefits to the ecology as well as the economy of the area affected.	Continued degradation of the riverine systems affected by Rodman.	No.		
10/5/2021 11:26	Duval		No	Yes		2-5 times		Wildlife viewing Other: Flow from the Ocklawaha effects all downstream users in the lower St Johns River Basin	Restore of the free flow and ecosystem of the Ocklawaha River.	The restoration of the Silver Springs ecosystem and multiple springs, natural flow to the St Johns River needed to avert the adverse impacts of increased dredging near the mouth of the river.	The prescient opportunity to restore this once-magnificent ecosystem will be lost for another 50 years.	No. This is long overdue. Failure to do this will demonstrate one more political decision to support limited business interests over the protection and conservation of our natural resources.		Please, we have witnesses tragic degradation of Florida's water resources under the past two administrations. How about doing something positive for a change.
10/5/2021 11:26	Lake		No	Yes	1 time	1 time	More than 5 times	Boating	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water springs habitat 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers $4-14 Million in dam repairs saved on a dam past its life expectancy Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. $57 million in potential flood damages avoided to downstream property owners.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. A storm event triggers a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.		Florida is rapidly losing its natural areas to development. River systems are being polluted and ruined. Algae blooms are everywhere. Wildlife is in decline. This is a chance to right a terrible wrong and restore a beautiful and unique Florida aquatic ecosystem that will attract nature lovers from around the world.
10/5/2021 11:37	Duval		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.		As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.
10/5/2021 11:39	Alachua		No	Yes			1 time	Other: n/a, don't use	Restore free flow of the river, wildlife movement streams, and plants. Reduce maintenance costs.		Increased Expense to water, wildlife, plants, maintenance of the dam.	Partial restoration		
10/5/2021 11:42	Duval		No	Yes			2-5 times	Other: To observe first hand the negative effect the reservoir and dam are having on the Oklawaha River .	I would like to see the Dam removed and the natural flow of the Oklawaha River restored.	The Dam and Reservoir has blocked the Oklawaha's flow for 50 years or more. The dam has blocked the movement of aquatic life. It has also degraded the water quality in the surrounding area.	The water quality flowing to the St Johns and through the Oklawaha River areas will be made worse. The environmental damage can easily be seen as well as harm to all of the species of wildlife in this Ecosystem.	ABSOLUTELY NONE		I grew up traveling the 80 +miles from the St John's River up the Oklawaha to Silver Springs at least once each summer with our family by boat. The water quality and other environmental damage from Dam and Reservoir is blatantly obvious. For crying out loud, get up from your desks and go look at it first hand.
10/5/2021 11:42	Outside of state / other	Massachusetts	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.		As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/5/2021 11:51	Polk		No	No					I would like to see the dam removed to restore the natural flow of the Ocklawaha River	The dam has covered the presence of multiple natural springs(20), and is costly to maintain for little benefit and a continued destruction of the natural environment. The state has the funds; this is a no-brainer cost effective use of environment funding to restore the natural environment of the Ocklawaha area	This is a very cost-effective way of restoring a large area of the natural environment. It is foolish to throw good money after bad by continuing the maintenance of the dam, as the barge canal was canceled in the 1970'sPresident Nixon can you believe it?), yet we still throw money at it.	Not of which I am aware		We are at a tipping point concerning the destruction of Florida's natural environment. As a fifth generation Floridian, I have seen many changes in my over 70 years. I am concerned with loss of natural habitat due to explosive population growth. We need to value Florida for what it once was-there is more here than sunny skies and warm winter weather. I want my grandchildren and their offspring to be able to experience some of the Florida environment I have enjoyed in my lifetime.
10/5/2021 12:06	Marion		No	No					Finally after years of ,effort on the part of environmentalists, I would like to see the dams torn down.	I support the the environmentals like Bob Knight.	The lakes continue to deteriorate.	No		
10/5/2021 12:11	Alachua		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	100s of manatees gain essential warm water winter springs habitat.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.		As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/5/2021 12:11	Duval		No	No					Removal of the Dam and the free flow of the river.	Information on the damage caused to wildlife and the health of the St Johns River.	Continued deterioration of both of the above concerns.	No		
10/5/2021 12:11	Duval		No	Yes			2-5 times	Fishing	I would like to see the dam breached/removed in order to restore the Ocklawaha River to its prior condition of flowing to the St Johns.	Research from experts indicates the dam's removal will provide ecological and economic benefits to the region. The dam was only constructed because of its role in the long-abandoned Cross-Florida barge canal.	Continued degradation of food supply for manatees and other wildlife that rely on quality fresh water.			
10/5/2021 12:12	Outside of state / other	Jefferson, NH	No	No					BREACH the dam; restore the waterway!	Manatees are dying	Manatees at gone	no		
10/5/2021 12:14	Duval		No	No					Returned to natural state	Environmental impact of current dam on lakes, wildlife, flora and fauna supporting wildlife and the overall health of the St. Johns river	The continued environmental degradation. Rodman lake will support tourism and fishing if returned to its former state.	Haven't seen one proposed.		Thank you for allowing input in this Florida issue
10/5/2021 12:26	Duval		No	Yes				Other: many years ago we went camping there	get rid of this monster and restore the natural flow of the river before it comes crashing down anyway. We do not need to continue to support this dam because a select group wants to fish. Restore the river and they can fish in the river. They knew 50 years ago that this was environmental detrimental	a natural habitat for fish, manatees, etc. is far more important than someone catching a big fish for sport. These mammals depend on our help for their absolute survival	that even more instances like this may occur and a species that lives in our rivers will be gone forever Man should not be allowed to destroy this God-given land and its inhabitants	breaching the dam is not what I desire but it is better than nothing		50 years ago it was known that this dam and the continued cross-Florida barge canal was environmentally destructive so can someone please explain to me why this is even an issue? this dam should have been undone 50 years ago and the beautiful Ocklawaha would flow in all of its glory insuring better water quality and better environments for our fish, mammals and wildlife. I am 77 years old please make it happen in my life time.
10/5/2021 12:45	St Johns		No	No					Take the dam down!	Restoring the Ocklawaha river to benefit many existing issues that have been identified!	That politics once again blocks another worthy project!	No!!!		This awful decision to do this dam injustice to the Ocklawaha has lasted far too long and MUST be corrected asap!
10/5/2021 12:51	Marion		No	Yes			More than 5 times	Fishing Canoeing / Kayaking Boating Wildlife viewing	Removal of the dam.	Restoration of he natural Oklawaha River. No more chemical spraying of he reservoir.	Continued chemical spraying of the reservoir and not allowing the natural flowing of the Ocklawaha River.	NO!		It is noticeably apparent that the cross Florida barge canal should never have been started in the first place. So, restoration of the changes that were made should have been made immediately. It's not too late now.

10/5/2021 12:52	Volusia		No	Yes		2-5 times	Canoeing / kayaking Wildlife viewing	Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every additional day the dam and reservoir remain in place results in additional environmental degradation.	• 7,500 acres of the lower Ocklawaha's historic forested floodplain, 20 freshwater springs, and many miles of natural river channel that were drowned as a result of dam construction would be restored. • Thousands of acres of submerged aquatic plant communities would be able to regenerate in the restored river channel, and in the re-emerged spring run streams that drained into the Ocklawaha historically. • 8,000 acres of stressed floodplain wetland located downstream of the dam would be enhanced. • Imperilled plant species like the endangered Star Anise and threatened Hartwrightia, which are native to the banks of this region's spring run streams, could expand their range into the restored spring systems. • Draining the Rodman Reservoir would remove the single greatest barrier to plant and animal movement along the Cross to Osceola (COO) Wildlife Corridor by replacing the open water expanse of the Reservoir with a restored floodplain forest, to the benefit of many listed plant species native to the region including the Federally listed Clasping Warea and Scrub Buckwheat.Preserving, conserving and restoring the native plants and native plant communities of Florida • Three river systems - the Ocklawaha, Silver and St. Johns - would experience significant environmental improvement from restoration. • Manatees would regain open access to the warm water habitats of the Ocklawaha and Silver Springs. • Migratory fish including the Striped Bass, American shad, American eel, and the critically Endangered Atlantic Sturgeon and Shortnose Sturgeon would once again have open access to the Ocklawaha system if the dam is breached. • Recreational sport fishing would be enhanced by allowing the Florida strain of the Striped Bass to reclaim what used to be its primary spawning habitat - the Ocklawaha. • At least 150 million gallons a day of additional natural flow, and potentially much more, would be restored to the Lower St. Johns River, improving water quality and increasing resiliency of the entire St Johns/Ocklawaha River system by impeding the salt water intrusion resulting from sea level rise. • An estimated $14 Million in dam repairs, measured in 2006 dollars, would be saved by avoiding repairs to a dam that has exceeded its life expectancy and never fulfilled the purpose for its construction. • The large expenditures required for herbicide treatments to control the growth of invasive aquatic weeds and to conduct other ongoing	• The broad array of environmental benefits to native flora and fauna, including many imperilled species, that would result from restoration would not be possible. • Water quality in the Rodman Reservoir and Lower Ocklawaha/St Johns River system would continue to decline. • The economic benefits that would result from increased and enhanced recreational usage would be denied to the surrounding local communities. • Residents and business owners in areas immediately downstream of the dam would continue to be under threat in the event of failure of a dam that has never, and will never, satisfy the purpose of its construction. • Thousands of acres of submerged aquatic plant communities would be unable to regenerate in a restored river channel and in the re-emerged spring run streams, and 7,500 acres of floodplain forest would not be restored. Preserving, conserving and restoring the native plants and native plant communities of Florida • The Reservoir would continue to be a barrier to movement by native wildlife and plant life along the length of the COO Corridor, and compromise the value of Florida's investments in conserving lands like the Etoniah Creek State Forest, and approved Florida Forever projects. • Taxpayers will perpetually be on the hook for repair and maintenance of the dam and Reservoir, and continue to be liable for any loss of life or property damage that would result from a dam failure. • Imperilled plant species like the endangered Star Anise and threatened Hartwrightia, which are native to the banks of this region's spring run streams, would be unable to expand their range into the unrestored spring systems.	No. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration.	Free the Ocklawaha!!
10/5/2021 13:01	Marion		No	Yes		1 time 2-5 times	Fishing (shoreline/structure) Canoeing / kayaking	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife4-14 Million in dam repairs saved on a dam past its life expectancy Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs.	We miss the best opportunity to do this. State and federal funds are available; public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. A storm event triggers a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	The original purpose of the dam no longer exists
10/5/2021 13:01	Volusia		No	No				Removal the dam	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers.	If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss.	No. Way overdue	
10/5/2021 13:02	Alachua		No	No				Remove the Dam so the river can flow along its pervious course and the springs can be restored.	The environmental degradation along the rivers natural course, the Dam's barrier to the natural movement of aquatic wild like, and salt water intrusion at the mouth of the St. John's River is Jacksonville caused by the lack of natural water flow.	The continued degradation of the natural environment caused by the present of the Dam.	No, the Dam must be removed.	The original purpose of the Dam was removed when the cross Florida canal was stopped. So the Dam has not purpose.
10/5/2021 13:25	Duval		No	Yes		2-5 times	Canoeing / kayaking Wildlife viewing	It's removal and restoration of the original river flow	I saw and enjoyed that part of the river system before Rodman and see what the dam did to impede the natural flow of the springs and rivers.	The damage to the environment and the declining health of the St Johns is at a critical point-maybe even too late, but we need to try.	Stop allowing so much removal of water from the aquafer in that part of the State	I am 85 years old and got to see the amazing beauty of the rivers and springs before Rodman. The barge canal was lunacy, and putting bass fishing above the chance to restore the river before it was too late was cras greed by the few who benefited. For once, let's try to preserve what is left of this once pristine environment ,we are running out of time- it may even be too late.
10/5/2021 13:32	Marion		No	Yes		2-5 times	Fishing Boating Wildlife viewing	Nothing!! It is perfect	All the wild life	It would be ruined, the wild life and fishery lost	None	Leave it alone. Improve parks and viewing areas
10/5/2021 13:32	Marion		No	Yes		2-5 times	Other: Remembering how it used to be before the dam.	To restore the Ocklawaha River to as close as it was before it was obstructed by the dam. The natural flow of the Ocklawaha will allow the numerous springs to recover and become what nature intended. Our natural resources, especially water, is essential to life in all aspects. Please, please, please.	There are so many aside from spending my summers as a child on Lake Kerr and Salt and Juniper Springs. My memories and all that I have read.	We will not have enough healthy water to sustain the population that continues to grow.	The Barge Canal should have never happened. No, my desire is to restore to as close to what Mother Nature created.	It is time to heal our springs.
10/5/2021 13:33	Duval		No	Yes		1 time	Wildlife viewing	I would like to see the dam breached or removed so that the tributary can flow into the St. Johns River	The ecological condition of the St. Johns River which should have had its tributary all these years.	Continued degradation of the St. Johns River	no	
10/5/2021 13:33	Duval		No	Yes		1 time	Wildlife viewing	I would like steps taken that would allow the Ocklawaha River to flow freely to the St. Johns River. This would necessarily require the elimination of the Rodman Reservoir.	Actions taken to achieve my position (stated above) would increase economic opportunities to the area, and allow the ecology of the central and northeast Florida St. Johns River system to return to its natural state. This would improve the water quality and environment within all the waterways involved while improving economic benefits to the Rodman area with increased tourism.	The water quality of the St. Johns River, Ocklawaha River, Silver River and others would continue to degrade to the detriment of the environment and area tourist industry.	If it cost too much to eliminate the dam, the at least permanently breach it to allow the Ocklawaha to flow freely to the St. Johns River. The breach should be sufficient to allow marine life to move up and down the entire length of the Ocklawaha system.	Studies seem to indicate removal of the Kirkpatrick Dam and the elimination of the Rodman reservoir would initiate an economic boom in the area. In addition to all the water quality and environmental benefits that would come from these actions.
10/5/2021 13:34	Duval		No	Yes		1 time	Boating					
10/5/2021 13:37	Pinellas		No	No					Removed	River water quality	River quality continues to degrade	Expanding water flow through the damn
10/5/2021 13:40	Manatee		No	No					Removal	Improve the water flow to the springs	Continued degradation of the water quality	
10/5/2021 13:41	Lake		No	Yes		2-5 times	Wildlife viewing	Remove the dam to restore a free-flowing Ocklawaha River	Three river systems - the Ocklawaha, Silver and St. Johns - would experience significant environmental improvement from restoration. Over 7,500 acres of the lower Ocklawaha's historic forested floodplain, 20 freshwater springs, and many miles of natural river channel that were drowned as a result of dam construction would be restored. Thousands of acres of submerged aquatic plant communities would be able to regenerate in the restored river channel, and in the re-emerged spring run streams that drained into the Ocklawaha historically. Fish and manatees could migrate without the dam impediments and challenges.	The environmental travesty of the Cross Florida Barge Canal continues and continues to degrade a significant national river system and its ecology for the purposes of maintaining a reservoir for fishing purposes. Secondly, the citizens have to continue to may to maintain this degraded system and its failing dam structures.	NO. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration. Let's show the world how Florida can do restoration right and create huge economic benefits through the entire Ocklawaha River system.	
10/5/2021 13:44	Duval		No	No				The fact that the dam and reservoir were originally a part of the trans Florida barge canal project and now make no sense as the project has been abandoned.	I would like to see the dam removed and the Ocklawaha river returned to its natural state.	Natural flow to the St. John's river would continue to be maintained in an unnatural state		
10/5/2021 13:52	Citrus		No	No				Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway.
10/5/2021 13:53	Nassau		No	Yes	1 time	1 time 2-5 times	Canoeing / kayaking Wildlife viewing	I would Like to see the dam breached.	Restoring the river and helping wildlife. Plus the springs are important.	Harm to wildlife	No	
10/5/2021 13:54	Pinellas		No	Yes	2-5 times	1 time	Canoeing / kayaking	the Color of the water	Follow the science and let the water run	The deterioration of the rivers, and waterways.		
10/5/2021 13:55	Duval		No	No				I would like the dam to be removed to restore the river	It would be beneficial to native fish and to manatees. It would be healthier for our river systems and it is important that we begin to take care of them. Four different governors have supported removing the dam.	Detrimental to the health of our river systems and manatees and wildlife. We are already losing so many.		
10/5/2021 14:00	Duval		No	Yes			Wildlife viewing Other: Once a number of years ago.	I would prefer to see the dam removed and the original river restored to the extent possible.	I believe it would improve the health of the St. Johns River basin and the river itself.	Continued impact on the St. Johns and cost to maintain the status quo	No	I feel strongly that the short and long term health of the entire St. Johns River system would be greatly improved by returning the Ocklawaha to its condition prior to construction of the dam. I have and will continue to support the removal of the dam.
10/5/2021 14:07	Duval		No	Yes		1 time	Wildlife viewing Other: Just to visit.	Remove the Kirkpatrick Dam and return and restore the Ocklawaha River to its natural flow.	Returning the river's natural flow is common sense, and it benefits the ecology and economy of the entire region.	Continued cost of dam maintenance and a missed opportunity to restore and enhance the health of the vast network of tributaries, creeks and rivers as well as the enhancement of the food web throughout the lower St. John's River including the Silver and Ocklawaha Rivers.	No.	
10/5/2021 14:11	Duval		No	Yes		1 time		Remove the dam.	Riverkeepers support removal of the dam. Marine biologists support removal of the dam. The Army Corps of Engineers cannot make better what God intended for the Ocklawaha River. Remove the dame to restore the Ocklawaha River to a more natural state.		No	
10/5/2021 14:17	Putnam		No	Yes		2-5 times	Fishing Boating	Remain as it is	economic development and water storage for extremely wet conditions	A mud hole would be created for the rest of my life and my Grandkids life	no	
10/5/2021 14:29	St Johns		No	No				Please remove the dam as soon as possible and restore the river to its original flow.	Improvement of the water quality of the St. Johns River system, both in the headwaters/springs and the flow to the ocean.	Continued deterioration of the Florida aquifer.	None noted.	
10/5/2021 14:29	Pasco		No	No				Have it removed	The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No the dam is an unnecessary expense	SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
10/5/2021 14:36	Duval		No	No				The dam needs to be torn down and the river restored.	It was man made and should have never been built.	Continued water quality issues for the St. Johns	no	
10/5/2021 14:38	Duval		No	No				Breach the dams	Improve the health of the springs and rivers. Protect wildlife and allow it to flourish	Manatee and fish population will continue to struggle. Springs will continue to be suppressed.	I'm not aware of any	
10/5/2021 14:42	Alachua		No	No				Restoring the river by breaching the dam.	7,500 acres of the lower Ocklawaha's historic forested floodplain, 20 freshwater springs, and many miles of natural river channel that were drowned as a result of dam construction would be restored.	The broad array of environmental benefits to native flora and fauna, including many imperiled species, that would result from restoration would not be possible.	No	I'd be much more like to visit and paddle the river if it was free flowing instead of stuck behind the dam.
10/5/2021 14:42	Monroe		No	Yes		2-5 times	Fishing Canoeing / Kayaking Wildlife viewing	Restoration of the Ocklawaha River to a free flow by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway. Seeing the 4 year draw down reveals what is lost a quickly begins to recover during the draw down only to be lost again	The benefit to manatees, birds and other native wildlife would be immense.	Continued natural environment damage and loss.	There really is no halfway working solution.	While not a resident of the area (but of state), I love visiting the area, but seeing the dam an its damage is painful.
10/5/2021 14:43	Sarasota		No	Yes	1 time	2-5 times More than 5 times	Fishing Wildlife viewing	Leave it as-is. It is one of Florida's greatest wildlife habitats.	Numerous wildlife sightings	Draining thousands of acres of wetlands would be devastating and would destroy wildlife. Where is the justification prohibiting draining much smaller wetland areas while justifying the draining of one of the largest wetland areas in the State of Florida?	No	
10/5/2021 14:43	Duval		No	No				Tear it down and return the River to its natural flow	Improve water flow, restore and preserve springs and wildlife/fish/aquatic life	Continued degradation of springs and habitat	No	
10/5/2021 14:43	Pinellas		No	Yes		2-5 times	Fishing Canoeing / kayaking Wildlife viewing	Remove the dam. Open back up the river.	We need to restore our springs. We are destroying out environment with dams like this. Manatee need habitats restored.	Just more death of our beautiful Florida.	No.. Please save our state.	
10/5/2021 14:47	Alachua		No	No				it to be removed	to free the Ocklawaha river	the native species will be negatively impacted and some resulting in no longer living in the Ocklawaha River	NO!! take down the dam!!	
10/5/2021 14:52	Alachua		No	Yes		More than 5 times	Fishing Boating Wildlife viewing	I want Rodman Reservoir to remain as a lake. So no change should happen to the dam.	local residents strongly favor keeping Rodman. Many people use Rodman for fishing and boating and wildlife viewing certainly a great many more than would or could use a small restored river. Rodman offers huge flexibility as a man-made reservoir compared to natural lakes in the area. The water level can be controlled as needed in periods of drought to keep a full lake. Water is available from the lake as needed, perhaps to fight forest fires when they occur. The water level can be lowered as needed to control weed growth and to drawdown the lake periodically. This method is well known to keep lakes productive as fisheries. Rodman is over 13,000 acres. This is a large area where many boaters can be on the water without crowding each other. A small restored river would be just a small fraction of this size. Very few boaters could comfortably use such a river, especially if small craft like canoes or kayaks are paddling on the river. There are several small rivers in the immediate area, including the remaining parts of the Ocklawaha, available for such pursuits.	Floridians would lose a great resource for recreation. Shoreline habitat for wildlife would disappear. Birds and wildlife would decline. Fishing opportunity in the area would be decreased.	No.	We are blessed to have Rodman in our area. The reservoir should be kept in operation.
10/5/2021 14:57	Levy		No	No				Like to see data published on the benefit of restoring the river and the timeline needed to accomplish it.	Need for manatee access to inland springs and other wildlife systems that would be restored.	That Florida will lose habitat needed to maintain water wildlife systems unique to the state and a fear that development nearby will further degrade the river.	I would need to see more specific alternatives and the benefits that go with them.	Thank you for this chance for input. As Joanie Mitchell once sang: "You don't know what you've got til it's gone". I hope we don't have to experience that.
10/5/2021 14:59	Alachua		No	Yes		1 time 2-5 times	Fishing Boating Wildlife viewing	I like having Rodman. Man-made reservoirs are non-existent in the local area. My Dad loves to go there and he has done so since the early 1970s.	Large numbers of people use Rodman and the surrounding area. The greatest benefit to residents results from the current situation with a reservoir and several small rivers in the area.	A world famous lake would be gone. Tourism in the area would be cut. A premier bass fishing destination would be lost.	No. I don't see any choice in this matter. Rodman needs to remain.	Keep Rodman Reservoir!!!!!!!!
10/5/2021 15:01	Clay		No	Yes		1 time	Wildlife viewing	I would like to see the dam removed and fresh water from the springs going into the St. Johns River.	It is from personal observation of the changes to river plant life and the effects on manatee population in my area of the river. We have lived here for 37 years and have a 350 foot dock on the river in Fleming Island. In the past 10 years we have seen all our river grass disappear, the emergence of Green Algae every summer and a sharp decline in Manatee sightings. I have counted as many as 25 manatees at 1 time in the vicinity of my dock and my 2 adjoining neighbors. This year I have seen 1. I believe the evidence shows that increasing the flow of freshwater, which manatees and river grass love will be accomplished by destroying the Kirkpatrick Dam and restoring the balance of fresh and Salt water in the St. Johns.	The return of the manatee to the endangered list and a further degrading of the river water quality. The dredging and deeping of the St. Johns in the north end of the river needs to be offset with more fresh water sources. More salt water intrusion is already happening and something needs to be done to save our river grass and the wildlife it supports like the manatees.	no	
10/5/2021 15:05	St Johns		No	No					Tear down the dam! Remove it completely.	Ecological damage to the river and surrounding areas.	Continued harm to the river.	No
10/5/2021 15:11	Putnam		No	Yes		More than 5 times 2-5 times	Fishing (shoreline/structure) Wildlife viewing	We would like to see the continued operations supporting the Buckman Lock, Kirkpatrick Dam, Rodman Lake and all of the recreational areas surrounding it. This area is a thriving wildlife habitat, with world-class fishing that helps support a largely rural economy	This area is one of Putnam County's top tourism assets drawing thousands of visitors each year. This asset delivers much needed profitable tourism dollars for our county. Much of the success of soliciting large-scale nationally televised tournaments is due to the presence of Rodman. Rodman Lake is featured annually as one of the top ten bass fisheries in the State and in the top 100 in the United States.	Tremendous loss of critical income to an already fiscally constrained County. Putnam County is a designated RACI (Rural Areas of Opportunity) - Defined as a rural community that has been adversely affected by extraordinary economic events or natural disasters.	We are unaware of any compromise that could help both sides achieve their desired outcomes. We respectively ask that the fate of Rodman Reservoir be guided by facts and reason, not overwhelming campaigns of misinformation.	
10/5/2021 15:11	Putnam		No	Yes	1 time	More than 5 times More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing Other: family gatherings & picknicking	Remain where it is and continue support of the locks and dam. There is already an established ecosystem since this Dam has been in place for more than 50 years. This is a huge economic impact to Putnam County through fishing tournaments. My brother comes from Ohio annually and looks forward to fishing in the Reservoir. The thriving wildlife, ecosystem and best fishing spot around helps support our rural community and economy.	Personal experience and seeing one of Putnam County's top tourism spots that brings thousands of visitors to Putnam County each year. The dam/reservoir brings in tourism income to our fiscally constrained county. Many of these fishing tournaments are on national television which brings attention and attraction to our small county. An economic impact study by the US Fish & Wildlife Service in 1988 supports the fact that this asset brings in millions of dollars to our area. Where Fish & Wildlife actually has a list of the top bass fisheries in the State and Rodman has been on the list for at least 10 years.	1) Negative economic impact 2) disturbing the established eco system that is thriving 3) cost to purchase land that would become flooded 4) if it were breached 4) lost tourism 5) bird kills and other wildlife negatively impacted or possible death (look at what happened at Lake Apopka when SJRWMD purchased property and flooded it---worse bird kill and fish kill ever recorded in my lifetime in Florida!!)	Not sure until I saw the different scenarios. I do think whatever happens should be based on facts and previous experience like the Lake Apopka bird and fish kill. An updated economic impact study should be done and any other factual data that can be gathered should be provided to the community.	The Rodman Reservoir is considered a premier largemouth bass fishery, along with other species like the channel catfish, redbreast sunfish and trophy bass. Some of the largest bass have been caught in the area (see TrophyCatch by FWC)
10/5/2021 15:14	Putnam		No	Yes		2-5 times	Wildlife viewing Other: I am a university professor researching and teaching the history of Palatka and the St. Johns River.	A leadership effort by the St. Johns Water Management District and Governor Ron DeSantis to prioritize this historic opportunity to save the Great Florida Riverway by breaching and removing the Kirkpatrick Dam at Rodman Reservoir and restore the free-flow of the impounded Ocklawaha River.	The research results and factual information reported in newspapers, articles, media resources primarily by Dr. Quinton White, executive director Jacksonville University Marine Science Research Institute. and the excellent investigative effort into the "voices" of support for restoration of the waterways in The Great Florida Riverway: Voices for the Rivers (2021) by Dr. Margaret Hankinson Spontak.	Continued decline of the water quality, spring flow and wetland forests; weakening of the Florida Wildlife Corridor which is home to 34 federally threatened and endangered species and native fish and wildlife; interference in the winter habitat and historic migration for Florida's aquatic life	When the fine balance of restoring fresh water from the St. Johns River and saltwater from the Atlantic Ocean is accomplished by the removal of the Rodman Dam, the healthy freshwater fishing habitat and estuarine fishing environment will be nourished and there is no need for a less-than-complete reconnection of the Ocklawaha River and the St. Johns River Estuary.	A restored Ocklawaha River to its natural level will be a refreshed and renewed economic recreation generator for an estimated 30 thousand visitors and $3 million in economic impact to the benefit of Floridians and visitors from around the world. Anglers, and in particular bass fishing enthusiasts, acknowledge that this investment will result in the restoration of a healthy freshwater fishing habitat.
10/5/2021 15:15	Duval		No	Yes		1 time 2-5 times	Fishing Wildlife viewing	I would like to see the Kirkpatrick Dam well maintained, modernized if necessary, and left entirely intact.	What a bizarrely worded question. The "important piece of information" That supports my position is the livelihoods of those who depend on Rodman Reservoir. An entire industry has evolved based on fishing, water sports, family camping and general outdoors enjoyment. Rodman is a mecca for fishermen from all over, a virtual jewel in the tourism industry in the state of Florida. The existing ecosystem supports native wildlife and birds, various fishes and other aquatic species, as well as native plants. To dismiss this ecosystem, this economic system, and what each means to the state of Florida would be a travesty. The wasteland that would result from a breached dam and a drained lake would hardly be anyone's vision of a pristine wilderness.	My biggest concern would be that the Kirkpatrick Dam will be destroyed; lands will be be flooded as a result; fish, alligators, and all other aquatic animals will be displaced and will move into locally inhabited areas; vegetation will be destroyed for a foreseeable future; businesses and livelihoods will be lost, resulting in an economic disaster for that region of the state.	I could support my desired outcome plus the addition of improved facilities for launching kayaks and canoes and other non-motorized personal watercraft.	
10/5/2021 15:24	Flagler		No	No				Remove the dam and restore the Ocklawaha River.	That it is a remnant of a failed effort. It's time to admit it's a failure and move forward, for the sake of our children. Removing the dam keeps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	I'm from Flagler County, so Putnam is a neighbor and I have friends trying to survive in that county. If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	I don't think so. This should have been accomplished long ago, and now it would be shameful to use tax payer dollars to reinforce what has already been deemed a mistake. Take it down now. Dam safety, improved water quality, and wildlife can't wait.	We have maybe the most beautiful and diverse of the 50 states, and removing this dam will continue that legacy. The wildlife, springs and rivers are what brings tax money to the State
10/5/2021 15:39	Volusia		No	No				I would like to see the dam removed and the natural waterways restored to the extent practical	need to have waterways free-flowing and as natural as possible/practical & provide additional habitat for manatees	continued waste of taxpayer funds on this envir. disaster/boondoggle	NO!	I understand why the people who recalled all the allied shipping lost going around FL during WWII thought this was a good idea, but times and envir awareness have changed
10/5/2021 15:44	St Johns		No	No				I would like to see the dam removed and the natural water flow restored!	We lose on the Saint Johns River and we have seen the water quality get worse and the amount of wild life in our area of the river go down.	We are going to destroy the quality of one of north Florida's greatest resources for recreation and wildlife conservation.	No!!	
10/5/2021 15:55	Duval		No	Yes	1 time	More than 5 times More than 5 times	Boating Wildlife viewing	Both should be breached and removed	The river should be returned to it's natural state and the entire area restored to it's natural flow and habitat.	The area springs are being ruined and the river is suffering greatly, as well as the St.John's is suffering too.	No	The dam and reservoir are obscene to nature, the environment, and the eye!!
10/5/2021 15:55	Marion		No	Yes	2-5 times		Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Hunting Wildlife viewing	Keep it as is and continued the great job by the Parks & Recs & FWC	The population of birds, fish, reptiles, mammals, wildlife & etc. that has flourished over the past 50+ years would be devastating to all of the above if modified in any way in the future.	The loss of habitat to all living things listed above.	NO	Appreciate the effort & hard work to those who keep one of the best places to enjoy Florida outdoors
10/5/2021 15:58	Duval		No	Yes		2-5 times	Fishing	Pull it down to allow the Ocklawaha to flow freely.	Times-Union and the St. Johns River Mgmt	Continued dying of the water, sealife and flora and fauna.	No	I know that the old bass fisherman will be angry, but they will have new areas in which they can continue their hobby.
10/5/2021 16:07	Brevard		No	No				I would like to see the dam removed and the natural flow of the river restored	Life on this planet	Continued damage to the environment and the flora and fauna that depend on the restored ecosystem.	no.	
10/5/2021 16:25	Duval		No	No				Remove the dam and drain the reservoir	Environmental studies	Damage to the Ocklawaha river and wild life	No	
10/5/2021 16:26	Duval		No	No				Demolish the dam and restore the Ocklawaha River.	Restoration of t		Restoration of the river to the original condition designed by nature will bring multiple benefits, including restoring healthy flow of fresh, algae-free water, providing a healthy environment for fish and manatees, freeing up submerged springs and more.	

10/5/2021 16:45	Lake		No	No					I'd like it removed and see the Ocklawaha River restored. The dam prevents the migration of Florida's native fish and prevents manatees from using the area as a refuge in the winter because of its warmer water. It would also benefit other wildlife, such as bears and panthers. After the restoration the state would save money currently spent on dam repairs.	See discussion above.	The Ocklawaha and St. Johns river flows would continue to be deprived of fresh water which could lead to more blue-green algae events and an opportunity for more invasive species to invade the area.	No. The dam never should have been built. It provides no economic benefit to property owners or businesses whereas restoration would increase outdoor recreation opportunities with attendant activities such as boat rental and accomodation for visitors.	Removing the dam is a win/win scenario for people, wildlife and economic activities.
10/5/2021 16:46	Duval		No	No					Remove the dam	More fresh water for the St John's River to help offset salt water intrusion.	Permanent damage due to algae blooms in the St. John's.	Limit the amount of water the water bottling companies take from the springs that feed the St John's.	They've finally restored the Kissimmee River in the South Florida, it's time to restore the Okahusa
10/5/2021 16:53	Duval		No	Yes					Take down the dam and restore full flow of water to the St. Johns River	Help counter other environmental impacts, for example dredging for Jax Port.	Increased water salinity and detrimental effects to flora and fauna.	I don't know, there's been no proposed compromise that I'm aware of.	
10/5/2021 16:56	Duval		No	No		1 time	Other: sightseeing		Remove it	The dam contributes to damage of springs.	Loss of habitats, destruction of natural areas.	N/a	
10/5/2021 16:59	Seminole		No	No					I would like to see the reservoir drained and the resulting resurfacing of the springs be a tourist attraction and ecological reconstruction effort.	Manatees need wintering spots and the Rodman damn is blocking a huge area of potential manatee wintering area as well as a potentially popular state park which would generate revenue for the FWC	That the manatees will die and my children will grow up without faith that anyone is looking toward the future and to right historical wrongs.	The dam seems misplaced and it would truly generate more revenue as a state park, boat launch site, etc than it currently does. It would also cost money to maintain which is a waste of valuable resources.	
10/5/2021 17:04	Dade		No	No					Restore, free flow	Environmental groups info and that of fellow Floridians who care about the environment.	More restricted movement of local species when natural flow is stopped and broken up.	Need more info.	
10/5/2021 17:06	Duval		No	Yes		1 time	Other: I don't use it.		Remove it and restore the Oklawaha to its once pristine beauty.	My own memory.	Water. e.g. springs, quality, salt water intrusion, sea cows,etc.	I would support removing the dam as a step in the right direction.	The Oklawaha was one of nature's true masterpieces. The dam served no useful purpose- only caused damage. The area was already the black bass capital of the world. I have traversed its entire length several times from Welaka to Leesburg.Mt Dora/Eustis, sometimes with stops in Silver Springs but alas, not in the last 50 years
10/5/2021 17:11	Duval		No	No					Remove dam and let the Oklawaha flow as God created it to flow.	Over 50 years of reading nature and environmental materials. Also the Bible. I honestly think God knew what he was doing when he created this glorious planet.	Frustration.		
10/5/2021 17:14	Alachua		No	No					It needs to be removed or at least opened up.	The quality of our waterways is not only important to our health, but also to the protection of our native species and to our economy that relies on said waterways.	Water quality would plummet and species, including our lovely manatees would become extinct.	None. Unless the dam is opened, the damage will continue when you're disrupting the waterways natural flow.	The quality of our waters are so important, please open the dam up and restore its natural flow.
10/5/2021 17:15	Pinellas		No	No					disassembled	Manatees will be able to go further upstream and access more seagrass to keep from repeating a mass die-off like last year	manatee extinction	I haven't entertained thoughts of any other outcome	
10/5/2021 17:20	Outside of state / other	Shreveport, Louisiana	No	Yes		2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	I believe it was in the late 1960's that I first heard of the cross Florida barge canal and I thought what a horrible ecological disaster. Thankfully it was stopped before it was completed. Soon after I began reading of the phenomenal bass fishing on Rodman Reservoir in the early issues of Bassmaster magazine and I have been traveling there from out of state to fish every since. Granted, a section of a beautiful river was lost forever but the wildlife mecca that was created in the process far surpasses what was lost. I feel that Rodman reservoir should be managed for what it is, a wildlife mecca as it is and a tremendous economic boom to the local economies that support the sportsmen who visit every year.	I have been traveling from out of state to fish Rodman Reservoir on occasion since I was a young man. I retired a few years ago and I now book two week long trips every year to fish and enjoy the wildlife and the other local attractions in the area. The fishing guide I use stays booked and I have to book my trips a year in advance to get the dates I want. I already have two trips booked for 2022 I spend many thousands of dollars each trip in the local economies for lodging, food, bait, guides, fuel, supplies, and other local attractions as I find them. I am one of many thousands of fishermen and sportsmen who come to Rodman every year and spend their money. And as for the wildlife mecca I have one word, manatees, especially this last year since much of the eel grass in the St. Johns was lost and they come into Rodman to feed. I have had days where I have seen a dozen or more and the curious ones will swim right up and look at you when you are anchored and fishing. Eagles, ospreys, and more shore and wading birds than I have seen anywhere plus all the critters that live in and around the aquatic vegetation make for a very interesting trip every time. Don't lose the economic benefit and the wildlife mecca that has been created.	The project that was started that originally created Rodman Reservoir was wrong! The ecological disaster and tremendous loss of wildlife habitat that will be created and the tremendous loss to local economies by removing Kirkpatrick Dam is wrong! Two wrongs don't make a right!!	I see no greater good than to manage Rodman Reservoir in its current state for the benefit of the wildlife habitat it has created and the tremendous economic benefit to the local communities that support those who come to enjoy it.	
10/5/2021 17:25	Duval		No	No					Get rid of them. There are plenty of other fishing spots in Florida (one of the reasons for keeping it-really?)	Need to restore the Ocklawaha and have it flow into the St. Johns, Florida's most important river. Dam should never have been built in the first place.	Nothing would be changed.	Maybe partially breaking up the dam.	
10/5/2021 17:29	Sarasota		No	Yes		1 time		Canoeing / kayaking Wildlife viewing	Strongly support restoration of the historic river by removing the dam after a controlled draw down of the reservoir.	Logic--the cost of maintaining and eventually reconstructing the dam, as well as the obvious danger to downstream properties and lives if the dam fails are completely understandable without documentation.	Loss of life and setting a state policy or precedent for other situations of environmental destruction and neglect.	No. I don't know how flooding a river, springs, and woodlands can be rectified without complete reversal of the flooding.	
10/5/2021 17:30	Duval		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Wildlife viewing	Keep it just like it is and reduce the draw downs to once every 5 years	The environment as well as the local economy	We would lose a great fishing lake as well as the great wildlife I can't wait to show my grandson	NO	Spend a day on Rodman and you will not want to change a thing!!!
10/5/2021 17:43	Duval		No	No		1 time		Wildlife viewing	Restore the Ocklawaha River by breaching the dam on the Rodman Reservoir	Helping wildlife, aquatic life, and improving water quality	Poor environmental health and concerns for wildlife		Honor President Richard Nixon's order to end the environmentally destructive project from decades ago. This also honors Florida governors who have advocated for the dam's removal.
10/5/2021 17:45	Duval		No	No					I would like to see the dam be breached and the river returned to its natural state.	Doing so will help restore the ecology of the region around the river and will be beneficial to the economy, as well.	The cost to maintain or repair existing structures built to create the reservoir--better spent to restore the river--and the further decline of wildlife.	Not really. It seems to me that funds are needed either to repair what is there now or to dismantle it. Since the cross-Florida canal never was created, it makes sense to have the river do what nature intended.	I have lived in Florida for less than a year, and the pandemic has sidelined my exploring for a time. I look forward to visiting beautiful, natural areas of the state. The Ocklawaha River sounds as though it can be just such a site if it is restored.
10/5/2021 17:49	Outside of state / other	St. Croix, USVI	No	No					Something that supplied habitats with a healthy trajectory	I am very ignorant on the specific subject	That more wildlife will suffer and individuals will no longer have access to natural resource. Additionally that taxes are routed to maintain something detrimental to ecosystem	I am too distant from this to have a desired outcome	
10/5/2021 17:58	Duval		No	No					I would like to see it removed entirely so that the Ocklawaha can return to it's original flow	Info from the Florida Times Union	Continuing degradation of the springs and food source for fish and manatee	Not that I'm aware of. There might be and I'd be happy to consider it.	
10/5/2021 17:59	Lake		No	No					Remove it and let the rivers & springs flow naturally for plant & wildlife to survive.	Would love to see the springs that are currently buried under the pool and be able to kayak further and see more clear water, fish, otters, birds & manatees abound.	destruction of habitat, saltwater is invading the St. Johns, climate change with more severe weather affecting surges	no remove the dam! Let authentic Florida return to be wild & scenic & free from meddling from man	I will camp & kayak all over these rivers spending money eating, drinking, lodging, gas which benefits Florida income and employment
10/5/2021 18:11	Alachua		No	Yes		More than 5 times		Canoeing / kayaking Other: Picnics	Remove the dam, fill in the canal and restore the historic channel	The need to constantly drawdown the reservoir and the expense to maintain the lock	Continued eutrophication of reservoir	No	
10/5/2021 18:13	Nassau		No	No									
10/5/2021 18:13	Marion		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Fishing	Leave it as it currently is	It is a thriving resourse	Loss of tourism and money coming to the surrounding areas. Loss of habitat for wildlife to name a few.	Nope	
10/5/2021 18:16	Duval		No	Yes	1 time	2-5 times		Wildlife viewing	Remove the Kirkpatrick Dam and restore the river to its natural course.	The natural river flow is better for wildlife and the people of Florida.	Diminished wildlife, diminished outdoor experience, and an artificial environment.	No	
10/5/2021 18:18	Seminole		No	Yes		2-5 times		Wildlife viewing	Let the river (and its inhabitants) run free!!	The extreme ecological importance of removing the dam and letting the water run free and clear for all affected parties - water and terrestrial creatures, and humans. This is extremely important to the future of all in this area, and can serve as an example of what can be done in other areas around the world	The myriad ecological effects.	I would support any helpful action, but I sincerely hope a strong, concentrated effort can be developed.	
10/5/2021 18:27	Outside of state / other	South Carolina	No	Yes		2-5 times	More than 5 times	Fishing Canoeing / kayaking Boating Wildlife viewing	Leave alone. A true treasure. Wonderful fishery and wildlife scenery.	Favorite spot for bass fishing and viewing Florida wildlife. Been visiting the natural forest my entire life.	Displacing wildlife and destroying this natural beauty. One of Florida's best kept secrets.	No. Please leave it alone. My best vacation spot because it is old Florida and natural.	Needs to be left alone. One of my favorite places in the US. All natural. Lake Rodman and Ocala National Park is a treasure.
10/5/2021 18:29	Duval		No	No					I would like to see the dam removed	I believe the cost of repair and maintenance is a negative and the restoration of the water flow is a major positive.	The hardships that will be placed on animals and aquatic life if this is not removed.	No	
10/5/2021 18:29	Alachua		No	No		2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Removed forever for all the right reasons.	The rising salinity caused by a dam imposed for financial reasons of the few instead of natural science for all.	A natural resource again is destroyed for a few.	Monthly draw downs to keep the St John's alive.	This idiotic idea was about barges and transport, not a few fishermen. Natural resources need to be managed on scientific grounds.
10/5/2021 18:33	Duval		No	No					Removed to return the natural flow of the water	The cost of maintenance and repair is too high and the dam is too restrictive for wildlife and aquatic life	The lack of a natural life for both wildlife, mammals such as manatees, and aquatic life.	No	
10/5/2021 18:34	Duval		No	Yes		2-5 times		Wildlife viewing	Take it down.	Taking down the dam would reveal the beauty of our natural springs and increase tourism exits & revenue. Also maintaining the dam is expensive and pointless.	Wasting taxpayer dollars maintaining a dam which brings in no revenue and serves no purpose.		
10/5/2021 18:34	Outside of state / other	South Carolina	No	Yes		2-5 times		Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing	Leave it as is	This area supports all kinds of wildlife, from land-based to Birds and all of the aquatic species. The lake helps purify the water coming down the river and provides outdoorsmen with hours of opportunities to appreciate the area and its diverse wildlife.	The negative impact on the natural resources that depend on it will be immeasurable.	No. It needs to be left alone.	
10/5/2021 18:39	Alachua		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Canoeing / kayaking Boating Hunting Wildlife viewing	Leave. It is the life of Rodman and home for alot of wildlife species.	It's an amazing eco system! By removing it you would destroy one the best fishing estuaries in the US!	Who in the hell is running yall environmental studies!!!! I can't remove a weed out in front of my home on the lake. But the state wants to destroy a whole ecosystem! Let's use some common sense.		
10/5/2021 18:39	Putnam		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Wildlife viewing	LEAVE IT ALONE!!!	It is a wildlife refuge and water resource for all Floridians. It is now in a natural state and should be left undisturbed!	It would take decades for the negative impact of draining Rodman to be apparent. It is great now...why make it something else?	No	If you want to turn Rodman into a mudpit in the name of conservation and wildlife mgt you must not have ever been there.
10/5/2021 18:40	Duval		No	Yes		1 time	More than 5 times	Canoeing / kayaking Wildlife viewing Other: Picnic, hiking, camping nearby	Remove dams and go back the way it was	Fish and aquatic life health	Continued degradation of natural habitat and lands	No	
10/5/2021 18:41	Marion		No	Yes		More than 5 times		Fishing Hunting	Leave it alone the damage was done to the native ecosystem over 50 years ago. It would take 1000 years for "restore" the damage that was done in the name of progress. There only way to truly restore it would be to remove all of the dams including Moss Bluff and at lake Griffin and remove all the houses along the river from it's start there all the way to the St Johns.	Growing up and living in Hog Valley and seeing the river before the Barge Canal project.	More lost jobs and more destruction to old Florida	No leave it alone.	Leave it alone
10/5/2021 18:48	Putnam		No	No						Breach it !!	Saved money , declined willife	No	I live in Putnum County and go to as many springs as possible. We need to preserve Florida's precious wildlife and ecosystem.
10/5/2021 19:04	Outside of state / other	Kentucky	No	Yes		2-5 times		Fishing Wildlife viewing	Leave it alone	Wildlife	Tourists will not visit. Manatee that it supports. Fishing.	Not that I know	It's an awesome reservoir please leave it like it is.
10/5/2021 19:09	Marion		No	Yes		2-5 times		Fishing Canoeing / kayaking Boating Wildlife viewing	Tear it down so FWC doesn't have to constantly spray poisons on the excess vegetation.	The dam does nothing, part of a defunct project. It doesn't hold back flood waters, protect homes or produce anything. The Ocklawaha River should be restored like the Kissimmee River. Just look at all the benefits there!! Personally, I do not understand why this has taken so long.	The river is dying	No	
10/5/2021 19:13	Duval		No	Yes		2-5 times	More than 5 times	Fishing	Would like the reservoir and dam kept as is.	Excellent place for fishing and camping			
10/5/2021 19:18	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing Other: Relaxing by taking a break from this crazy world by joining with nature on this beautiful pristine water.	LEAVE IT ALONE!!!!	Rodman has become a piece of our family history. Mothers, fathers, children, grandchildren and great-grandchildren have grown up enjoying it's beauty and wildlife, and have become fisherman, have learned how to survive, and have learned the lessons you learn from seeing wildlife up close while seeing nature at its best.	The loss of those links to family that were built around Rodman. It would be a huge loss for our future generations. They say you can never "go back home" and the destruction of Rodman would destroy those pieces of our lives that are cherished. I am also concerned about the businesses that rely on Rodman for their livelihood. I was a small business owner, and I know what that would do - destroy family business.	Unfortunately not.	
10/5/2021 19:20	St Johns		No	No						Why keep something that was a failure. I believe a natural flow will replace today's current recreation opportunities with new ones.	Water quality could suffer.	No, why go part way. The economy of the area changed when the dam was built, it will just change back.	Please do the right thing. It's like a scar that can be removed, so why live with it.
10/5/2021 19:38	Outside of state / other	CO	No	No					Breach the Kirkpatrick Dam.	The damage that could be done to the manatees who are at risk of becoming extinct.	The welfare of the manatees.	No.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Appopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/5/2021 19:38	Duval		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Canoeing / kayaking Wildlife viewing	Leave the reservoir alone My family goes there several times a year to enjoy wildlife and escape the concrete jungle	I Love Florida and it's Wildlife	Highly disgusted in those who were the opposition	None We love it, take care of it, and depend on it	Keep the lake It's our lake
10/5/2021 19:42	Clay		No	Yes		2-5 times		Fishing Wildlife viewing	Please do not do anything to change Rodman!	The current body of water supports so many natural species of wildlife that will not survive in a reduced volume of water.	The disruption of the current very complex eco system that is supported by the reservoir!	NO!	Please leave this wetland eco system alone!
10/5/2021 19:53	Outside of state / other	Indianapolis. IN	No	Yes		2-5 times		Fishing Boating Wildlife viewing	I do not want Rodman to be changed. It is a great fishing destination and the wildlife it supports is absolutely amazing!	The natural eco system it supports	I don't think there is middle ground here. If it is changed the eco system will irreparably damaged.	Not that I'm aware of.	Please keep Rodman in its current condition. Thank you.
10/5/2021 19:56	Nassau		No	Yes			1 time	Wildlife viewing	remove the dam and restore the river	benefit to fish and wildlife -- wetlands restoration	additional environmental damage to river, manitees, and fishes	breach of the dam	
10/5/2021 20:13	Alachua		No	No					From video, the dam is in total disrepair and needs to be removed and the river needs to be restored to allow the springs and land return to its natural state.	The Across Florida Barge Canal is no longer viable or necessary. However, the need for water and habitat is necessary to the future of Florida.	With our population, we need more potable water sources. We also need more water water re-shed areas to provide this critical resource. Very concerned for the future of our State.	I don't feel there is another feasible scenario. Also, this isn't for a select few who stand to profit to make the decisions.	
10/5/2021 20:16	Duval		No	Yes		1 time	2-5 times	Canoeing / kayaking Wildlife viewing Other: snorkeling	Remove the dam and open the waterway back up to its natural flow	restore access to the springs, improve water quality to the st johns river	a continued threat to the area's water quality	no	
10/5/2021 20:52	Clay		No	Yes	1 time	2-5 times	More than 5 times	Fishing Boating Hunting	Leave it alone and let thrive and support the local wild life	Common sense	That again as humans we mess up something good for political reasons or not thinking it all the way through. The effects it will have on other things.		
10/5/2021 20:52	Duval		No	Yes				Boating Wildlife viewing	Remove dam	Restoring natural flow of Ocklawaha will benefit the environment, from the Ocklawaha to the St.Johns to the Atlantic Ocean	Continuing degradation of the immediate environment and the river valley to the north.	No	
10/5/2021 20:57	Duval		No	No					Remove the damn and restore the flow of the oklawaha	Proven damage being done to the St. John's	Continued damage to the St. John's and ultimately problem like south Florida is currently facing	No. The dam needs to go. It serves no purpose and causes harm.	
10/5/2021 20:59	Duval		No	No					Return the Oklawaha River to its natural flowing route. Breach the dam.	Environmental impact on St John's River	Further degradation of St. Johns	No	
10/5/2021 21:01	St Johns		No	No					Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam to reunite the natural connection of Silver Springs, the Ocklawaha and the St. Johns River.	The science supports restoration. Studies by federal and state agencies have clearly demonstrated that restoration of a free-flowing, connected system is cost-effective and will provide significant ecological benefits to the St. Johns, Ocklawaha and Silver Rivers as well as Silver Springs.	We miss a historic opportunity to stop the ongoing ecological degradation caused by the dam and finally reunite the natural flow of these rivers. Breaching the dam would restore the natural flow of 150 mgd of fresh water, improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. A free-flowing Ocklawaha will reestablish 15,000 acres of forested wetlands and fortify downstream submerged grasses from Welaka to Jacksonville in the St. Johns River that are critical to river health and fish habitat.	No. Breaching the dam and restoring the Ocklawaha are 50+ years overdue. Dam safety issues and improved water quality, wildlife habitat, and recreational opportunities can't be ignored or delayed any longer.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/5/2021 21:05	Pinellas		No	Yes			1 time	Wildlife viewing	Remove the dam and restore the river	The dam was a part of a failed effort to build a canal. The project was wetoed and the dam needs to be removed.	A continued loss of habitat for the manatee population	No	
10/5/2021 21:31	Outside of state / other	Georgia	No	Yes		2-5 times	More than 5 times	Fishing Boating Wildlife viewing	My family would like YOU to LEAVE IT ALONE!!	The ecosystem there supports so much wildlife including manatees!!! It's an amazing place and YOU need to leave it alone!!!!!!	DO NOT KILL ALL THAT PRECIOUS WILDLIFE!!!!!!	NO WAY!!! WE ARE NOT COMPROMISING WHATSOEVER!!!	THIS IS BULL---T, YOU KNOW IT, I KNOW IT, and so does the MAJORITY!!!
10/5/2021 21:51	Palm Beach		No	No						It's record of negative environmental impact	That things get worse. That dam maintenance falls short and has a catastrophic failure.	Nope	
10/5/2021 21:52	Marion		No	No		2-5 times			Remove the dam. Restore the ocklawaha	Manatees and fish don't have free access to the river or silver springs. The dam affects the salinity of st John's river. The lack of free flowing water causes massive silt build ups and aquatic vegetation which in turn gets doused with herbicide so it doesn't create blockages in our boat ramps. None of these expenses would accumulate if there was simply no need for it. We would get lots of business from people wanting to see manatees and swim, kayak etc. A few people using the reservoir for bass fishing doesn't outweigh the harm that it is causing. The land has had to adapt over the last 50 years as we gave it no choice. In 50 more years, if the dam is removed, the land could be back to it's perfectly balanced natural steady.	The dam needs repairs anyway so it will require millions to repair. Also manatees are dying of hunger and we are here spraying all their food with herbicide because they have no access to it. Not near as many as could. They are already heading towards endangered again!!!!!!!!!!!!!!!!!!	No. Remove the dam	
10/5/2021 21:56	Citrus		No	Yes		2-5 times		Wildlife viewing	Restore the free flowing river by breaching the dam. This is the most economical solution and most environmentally sound solution.	This is the best cost effective method to achieve restoration of the 7500 acres of the lower Ocklawaha's floodplain, including it's 20 freshwater springs. Our natural resources are Florida's greatest asset. It is our duty to preserve them. It also makes no sense to spend millions of tax payer dollars on restoring a dam that will never fulfill its original purpose.	The natural pre-existing ecosystem would be lost, resulting in continued decline of the Rodman Reservior and the lower Ocklawaha/St. Johns River system..	No. This is the optimal opportunity to do the right thing. Breach the dam, restoring the natural ecosystem. Save tax payer dollars.	I spent my early childhood in the Gainesville area and early adulthood in Jacksonville. I have witnessed the gradual and steady decline of natural Florida, oftentimes resulting from ill conceived projects and practicals driven by economic forces, including the Cross Florida Barge Canal project and water overdraws from our natural springs for private water bottling companies. The degradation our natural Florida environment is heartbreaking. You have the opportunity to help restore the wrongs of previous administrations. Please do the right thing and restore the free flowing lower Ocklawaha River by breaching the Rodman-Kirkpatrick dam.
10/5/2021 22:00	Alachua		No	Yes		1 time		Canoeing / kayaking	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	$5,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No.	
10/5/2021 22:09	Outside of state / other	South Carolina	No	Yes		2-5 times		Fishing	Continue as it has	That it is a wonderful ecosystem for fishing	The loss of a wonderful ecosystem	No	Once actions are taken there is no going back
10/5/2021 22:13	Volusia		No	No					Removal or breach of the Rodman/Kirkpatrick Dam; it does not need to be there.	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. Also, the dam was only build as part of a now defunct cross-Florida canal, so it serves no purpose, only harm.	Water quality would decline further, hurting fish, plants, and manatees. Also, keeping the dam is a total waste of tax-payer funds, with no benefit.	No, it has got to go. If not today, then tomorrow.	Please consider the added economic benefit of opening up the river by removing the dam (like tourism), as well as environmental benefit, like Springs aquatic/water recharge.
10/5/2021 22:22	Orange		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing Other: Only during drawdowns. Other: Snorkeling Cannon Springs	Remove the dam.	Personal observation of Cannon Springs and its Run during he last two drawdowns.	That Cannon, Blue, Tobacco Patch and other springs will be submerged.	No.	Natural, a free flowing Okawaha is better then artificial. A dam and reservoir
10/5/2021 22:32	Duval		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Canoeing / kayaking Wildlife viewing	Removed and let the waters return back to natural flow	Studies showing the positive effect, the current flow of the river, and the belief that we should have natural unconstructed natural areas for recreational use.	Continue negative effects on the water quality and wild life in the area.	Better flow releases from the Dam and repair of the local natural habitats.	
10/5/2021 23:11	Duval		No	No					Please tear down this dam and restore the natural flow of water to the St Johns River.	This dam is blocking a major tributary of the St Johns River, which ends up leading to jacksonville, the largest city in our state. The interests that want to maintain this dam are essentially a small minority, while its removal will benefit countless cities further down this river in terms of ecological diversity. It will also restore natural flows of water that will benefit the environment.	That the environment will be continued to be harmed, and Florida's largest city will be robbed of a healthy river.	None. It is time to remove this dam.	The dam is harming the river and the natural flow of springs that are beneath the reservoir.
10/5/2021 23:37	Duval		No	No						harm down	Continued environmentar damages	Unkown	
10/5/2021 23:39	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Other: Picnics	Leave it as it is - don't change it	One reason my husband and I moved to Florida was because of the Ocklawaha River and Rodman. My husband was a fishing guide (catch & release). We lived in Eureka, and owned a business years ago. My husband and I loved the river and Rodman. It is a part of our life and history. Our children and grandchildren grew up loving it also.	The loss of a wildlife habitat; loss of business in that area; elimination of the opportunity for young people to learn about and grow to love and respect the natural beauty of Rodman and the wildlife it supports.	Absolutely not. It would be such a shame to lose this valuable resource and asset.	

10/5/2021 23:50	Putnam		No	Yes	2-5 times	More than 5 times	More than 5 times	Other: Observing	Let it free flow allow back to natural state for wildlife and springs	Changed the natural flow of nature and wildlife browned out natural springs	The way it has and will continue to change the natural ecosystem	Free the Ocklawaha	Please free the Ocklawaha the snimals and the springs please please free the Ocklawaha!!!
10/6/2021 0:50	Marion		No	Yes		More than 5 times		Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing	Leave as is	Wildlife	Wildlife and the fishing	No, should leave well enough alone	The lake has been here since I was a kid, it has proved to be on of the best fishing lakes in the US, you get to see more different types of birds and reptiles then anywhere around. Manatees are thriving in the lake, probably because boaters have to go at low speeds because of the stump field.
10/6/2021 3:04	Outside of state / other	Hong Kong	No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	$17 Million in potential flood damages avoided to downstream property owners.	A storm event triggers a dam failure or overtopping resulting in potential damages to $17 property owners and up to $57 million in damages.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife cannot wait.	The business of Florida is the environment. Any chance to restore wildlife is an opportunity to protect the state's main source of income (tourism drawn to the environment).
10/6/2021 4:15	Putnam		Yes	Yes	More than 5 times			Fishing Boating Wildlife viewing Other: Hiking	Restore the Ocklawaha river by breaching the Rodam /Kirkpatrick dam	$15 million in dam repairs saved on a dam that exceeds its life expectancy.(this money could be used for reforestation).	A storm causing a dam breach and the catastrophic loss of life and property.	No, Breaching the fifty year old umalle dam--OR--Draw down the reservoir to mean sea level, or to its natural level.	None
10/6/2021 4:50	Alachua		No	Yes					Restore the river, remove the dam.				
10/6/2021 5:02	Alachua		No	Yes			1 time	Other: Went to see what all the fuss was about	Dismantle the dam and restore the river	It reminds me of how we damaged the Everglades	Aging of the dam infrastructure and costs to repair	Not sure	
10/6/2021 5:11	St Johns		No	Yes				Wildlife viewing	Restore the Oklawaha River!!!	Important to our ecosystem			
10/6/2021 5:56	Alachua		No	Yes			More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Hunting Wildlife viewing	Remain intact	Recreational value	Loss of recreational resource, especially fishing.	No	There remains plenty of intact river for recreational use
10/6/2021 5:56	Alachua		No	No					Remove the dam	Past experiences on the oklawaha river	Further damage to our eco system	No	
10/6/2021 6:06	Alachua		No	No					let the river flow naturally	environmental protection	environmental consequence and cost	this seems like the perfect solution. fisherman can go elsewhere.	
10/6/2021 6:13	Alachua		No	No					Take it back to it's natural state.	Years of hearing of the dam ruining nature.	Continued degradation of the ecology of the area.	No.	
10/6/2021 6:16	Laon		No	Yes				Fishing Fishing (shoreline/structure) Wildlife viewing Other: Camping	I would like to see the dam completely removed and the river restored to the condition it existed in before the CP&L project.	Restoring the river would restore fish and wildlife access to riverine habitat and the springs submerged by the reservoir, and it would restore a uniquely Floridian recreational experience.	That the dam would continue to be maintained at significant cost to please a relatively small but local group of influential individuals rather than the broader public interest.	Yes, just removing the dam and allowing the river to naturally find its new course would be sufficient.	Thanks for taking public comment.
10/6/2021 6:25	Alachua		No	Yes			More than 5 times	Hunting Wildlife viewing	I would like to see the dam removed so the next generation could experience the beauty of the natural flowing river and springs that I remember experiencing as a child.	Personal experience	Loss of species of wildlife	No	
10/6/2021 6:29	Volusia		No	Yes			More than 5 times	Canoeing / kayaking Wildlife viewing	removal of the dam and the restoration of the Ocklawaha. I worked in alachua county for 25 years prior to retirement and spoke to long-time residents of the Ocklawaha system. destruction of the dam will allow this ecological wonder to return to semi-rural FL?	https://www.stjohnsriverkeeper.org/take-action/advocacy-campaign/free-ocklawaha/	the final demise of Silver Springs	no	
10/6/2021 6:39	Alachua		No	Yes		1 time	2-5 times	Canoeing / kayaking Wildlife viewing	put back to original (pre-dam) state	should never have been built in the first place- why throw more money at it?	failure of damn could effect property and wildlife	I'm for whatever the wildlife and environmental engineers deem best	none
10/6/2021 6:40	Alachua		No	No					I would like to NOT spend millions on a failing dam and all the river to freely flow and save the multitudes of flora and flora to replenish and survive. I want the manatees to have a safe and clean place to thrive.	Don't spend millions on a failing dam.	The loss of Florida's beauty, native species of flora and fauna, and the native wildlife's loss of more habitat.	No	
10/6/2021 6:50	Alachua		No	No					Remove the damn, restore the Oklawaha flow	Stated positions of groups and organizations with which I align	Special interests prevailing over public will and environmental responsibility	Don't know	
10/6/2021 7:23	Alachua		No	Yes			1 time		Release the River Destroy the dam	Return of natural Florida habitat	A sign that wild natural land preservation takes a back seat	No	The Barge Canal was a poorly conceived project and the reservoir is the final required for restoration Get it done and even the hard core bass fishermen will be grateful in time.
10/6/2021 7:30	Alachua		No	Yes		More than 5 times		Fishing Wildlife viewing	Leave the dam in place. Provides a nice body of water for people to enjoy fishing or viewing wildlife and birds.	It helps the surrounding area businesses survive and keeps the communities people employed.	I want the dam to remain! I would lose a recreational hobby.	Worse case scenario is many people would loose a lake that is nationally know as a superior fishing resource.	
10/6/2021 7:30	Alachua		No	Yes			1 time	Wildlife viewing	remove Dam	Environmental benefits	Continued cost and degradation.	No	
10/6/2021 7:33	Alachua		No	Yes			1 time	Canoeing / kayaking	Remove the dam and restore a free flow of the river	The area once had a free flowing natural habitat. The dam was built for the Cross Florida Bage canal, which was stopped more than 50 years ago.			
10/6/2021 7:34	Alachua		No	No					Remove it	The ongoing costs to maintain it.	Continuing to waste taxpayers money.	No	
10/6/2021 7:39	Alachua		No	Yes		2-5 times		Wildlife viewing					
10/6/2021 7:46	Alachua		No	No					have it dismantled and plan for solar installations to offset power generation losses	the ecology of the area could be restored and solar power could be utilized at lower cost all around	bad economic and environmental outcomes	no	the solar projects should include shading parking lots and utilizing roofs as much as possible vs using otherwise useful land to install panels.
10/6/2021 7:45	Alachua		No	No					Remove the reservoir and dam, restoring free flow to the river.	"Restore it to the way God made it." While that's not exactly a piece of information, I believe that in terms of the environment, most of the time it's best to just leave it alone, if possible. The idea behind the canal and the dam may have made sense back in the time it was created. But now, I believe it makes more sense to Florida's environment, animals and plants, tourism, and commerce to take it back to the way it was, or very close to it	Continued degradation and ugliness to the area.	It could be a step-by-step process over serveral years.	I'm glad to have the opportunity to comment and look forward to hearing what the experts have to say.
10/6/2021 8:04	Alachua		No	Yes		2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing	Get rid of Dam please	I can't use the springs Manatees need the warm water Need more predatory fish to eat Tilapia Let the forest grow back	Expense of new dam	Nope open the river up	Get er done
10/6/2021 8:12	Volusia		No	Yes			2-5 times	Fishing	dam removed	eco	water flow restored		
10/6/2021 8:14	Volusia		No	Yes			More than 5 times	Canoeing / kayaking Wildlife viewing	Breach the dam so paddlers and wildlife are able to access the entire Oklawahwa river.	We regularly paddle from Rays Landing until we hit the dam wall and can go no further	Lack of open waterway for paddlers and manatte will stifle eco tourism.		I have seen only one manatee in Silver Springs run and can't imagine how hard it is for them to get in or out of there due to dam.
10/6/2021 8:16	St Johns		No	Yes		1 time		Wildlife viewing	I think that the dam should be breached. The benefits of fresh flowing water far outweigh the desires of bass fishermen -- and I say this as someone who fishes regularly.	Defenders of Wildlife group says that allowing the water to flow freely will help fish and wildlife, particularly manatees. American Rivers says breaching the dam will increase biodiversity. Eel grass is dying off at an alarming rate. It also lists the Ocklawaha as one of our country's most threatened rivers. We must do something!	The extinction of manatees	Not that I can think of.	Water is Florida's biggest asset, and we're doing a terrible job of managing it for the future. Breach the dam and help the manatees .
10/6/2021 8:16	St Johns		No	Yes			1 time	Other: I just went to see the dam	I want to restore the natural flow of the Ocklawaha River, which I enjoyed fishing on as a boy in the 1950's. I would like to see the dam removed.	Restoring warm water habitat for manatees in the winter, a healthy ecosystem and the natural beauty of the river, all of which were compromised by the ill-advised construction of this dam that was part of a Federal project which was subsequently abandoned.	The continued destruction of one of Florida's most beautiful natural resources	Yes. Partial destruction of the dam necessary to restore the natural flow of the Ocklawaha	There was plenty of good bass fishing before the dam was built, and there will still be plenty of bass fishing available after the Ocklawaha restoration is complete.
10/6/2021 8:17	St Johns		No	Yes			1 time	Wildlife viewing	Breach the dam and restore the river	Free The Ocklawaha Coalition's recommendation. In 2020 the Ocklawaha was named as one of most endangered rivers due to poor water quality. The restoration would improve the health of whole environmental system and provide greater recreation.	Declining health of environment for quality of water that affects wildlife.	At least breach the dam	
10/6/2021 8:17	Volusia		No	No					Please restore the Ocklawaha to its original flow	The beauty of the original Ocklawaha before it was dammed and the possible help to manatees.	The continual decline of Florida waterways and its wildlife. Someone has to start somewhere to repair the damage done. This would be a good start	A partial restoration would be better than nothing but full restoration is what is needed	As a child in the 50's I spent a weekend on a houseboat on the Ocklawaha . Magic and beauty around every turn. I will never forget that trip. Please give it a chance to flow like it once did so some other child can come close to my experience.
10/6/2021 8:18	Outside of state / other	New York	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $17 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breeching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/6/2021 8:24	Volusia		No	Yes			1 time		Breach the dam and restore the Ocklawaha River.	Numerous articles on the health of the river and eco-systems.	Manatee decline and lack of river flow into the St. Johns.		
10/6/2021 8:25	Volusia		No	No					remove it	the improvement to water quality	where will our next glass of drinking water come from	no	
10/6/2021 8:28	Alachua		No	No					Remove the Dam	outdated	environment and wasted tax money	no	
10/6/2021 8:32	Volusia		No	No					Remove the dam and restore the natural flow of the Oklawaha River.	Manatee deaths are up and we need to restore a natural river flow for them to use for migration and feeding. This can only help their battle for survival.	The state of Florida is a natural treasure but with the population continuing to increase we are losing opportunities to preserve natural resources. Restoring the natural river flow and preserving it will help to stop more destruction of most important resource-"Natural Florida". Let's not take as long as it did to restore the natural water flow to The Everglades!	I would be interested to see other options to make an informed decision.	
10/6/2021 8:38	Palm Beach		No	Yes			2-5 times	Fishing (shoreline/structure) Canoeing / kayaking Wildlife viewing	Remove dam and restore water flow	The drawdown was impressive showing the drowned forest and how fast birds returned	Cost of removal later being enormous like the everglades	Maybe?	
10/6/2021 8:39	St Johns		No	Yes			2-5 times	Wildlife viewing Other: Hiking the Florida Trail at locks	I like the reservoir but it has to go. I feel bad for those who's income depend on it but perhaps a fund can be setup to ease their transition to something else.	I'm an outdoorsman. I've hiked the Ocala National forest and across the lock a few times and appreciate the opportunities it's provided	Continued water quality degradation. Why is the Army Corps of Engineers removing the channelized Kissimmee River?	Nope. Let the river run free	This shouldn't be a big deal in 20 years which is a blink of an eye people will wonder why there was ever a reservoir and they will have adjusted just fine
10/6/2021 8:44	Alachua		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Open the Rodman Dam to restore the natural flow of the two rivers to the St. Johns River, and, to recover our lost springs.	The scientific reports on the bad effects of creating the dam in the first place.	We would be stuck with this boondoggle for another fifty years.	No	River systems evolve in a natural way. We should let this one flow as it has for thousands of years.
10/6/2021 8:44	Alachua		No	No					let the river flow free	knowing how much was natural habitat was destroyed and how the natural habitats of the river's fish was eliminated by the construction of the dam	loss of the natural river life and habitats		
10/6/2021 8:44	Alachua		No	Yes			2-5 times	Boating	Cost and environmental damage	Remove it	Health of the St. John's River	No	It should have been done long ago when to canal was decommissioned
10/6/2021 8:51	Alachua		No	No					Remove the dam and allow natural water flow	The loss of so many natural springs and the destruction of habitat.	Continuing to spend state funds on a failing dam that has caused extensive environmental concerns	Not aware of any other practical solutions	My son is a fisherman. There are so many naturally great fishing sites. We don't need the reservoir for water recreation.
10/6/2021 8:55	Alachua		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Restore the natural flow of the Ocklawaha river.	Restoring the flow of the Ocklawaha river will create access to the many springs that have been covered by the effects of the dam.	Continued degradation of the natural ecology of the area and blocking access to springs to the public.	none	
10/6/2021 8:55	Alachua		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Breach the dam	would allow 20 drowned springs to flow once again. Removing the dam is essential to improving the health of Silver Springs. It is necessary to restore suffering migratory fish populations. And needed for the hundreds of manatees that could better access Silver Springs and other restored springs along the river, at a time with Florida's manatee population is experiencing unprecedented mortality. Florida already has enough money set aside next year to restore the Ocklawaha fifty times over. It's the most impactful springs restoration project available.	The continued death of Florida's freshwater springs and the ecosystem they support	No	Do something positive for Florida's environment and local businesses by breaching the dam
10/6/2021 8:58	Alachua		No	No					Demolish and remove the dam, restore the river to it's natural route.	A failed project doesn't deserve to continue to receive money. Nor should the environment continue to be negatively affected by the dams continued existence.	Money spent on a boondoggle and private interest that will negatively affect Florida's human and animal population.	You could blow up the dam or let nature take it's course and let it fail on it's own.	Damn dam
10/6/2021 9:01	Levy		No	No					The river restored to its natural course. Remove the dam.	Not one piece - the tomes of credible reports by environmental groups.	Continued ecological degradation of Florida's fragile waterways.	I defer to the environmental scientists' suggestions.	
10/6/2021 9:03	Nassau		No	Yes	More than 5 times			Fishing	Leave it alone				
10/6/2021 9:04	Putnam		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	breach the dam		continued deregation of the habitat		stop spending money to create a false habitat for the benefit of a few
10/6/2021 9:08	St Johns		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	Remove the dam and restore the river	Dam has no use	Health of the river	Remove the dam	
10/6/2021 9:10	Palm Beach		No	No					I would love to see the dam opened up and the river returned to its natural state. Don't spend more money to prop up this 50 year old dam.	The environmental groups, which include scientists, researchers and lots of people smarter than me, all say this is the right thing to do.	That the false landscape that the dam has created for 5 decades will continue, and that you will spend many millions in taxpayer dollars to maintain the dam.	Not really. A dam either is or isn't.	I have read history books and heard about the wild and scenic Ocklawaha River. I'd like to see it return to its natural state in my lifetime. We need to be better stewards of Florida, and taking down this dam would be a step in the right direction.
10/6/2021 9:24	Alachua		No	No					Breach the Rodman/Kirkpatrick Dam, remove it and free the Oklawaha	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. As an avid kayaker that spends a lot of time on the inland waterways in North and Central Florida, I think removing the dam would bring both ecological and economic value to the area. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	The continued decline in water quality on some of most ecologically unique and economically important spring-fed rivers.	No, breach the dam. It is long overdue.	
10/6/2021 9:28	Alachua		No	Yes			1 time	Wildlife viewing	I would like to see the Rodman Dam removed and the free flow of the Oklawaha restored.	Historic photos of the absolute beauty of the former Oklawaha River	The rights of a few boat ramps and fishermen trampling the rights of the environment, of all Floridians.		
10/6/2021 9:29	Clay		No	Yes					Remove the dam.	The fact that springs, wildlife habitat and a beautiful clear river was covered up.	Continued interference with Florida natural water flow. Though I am not hydrologist, I suspect the aquifer has been negatively affected by the dam.	No.	Though I live in Clay County I currently own a business in Putnam and have owned at least one other business in Putnam County. My family is based in Putnam County. (Middletons) To allow the continued degradation of Florida's natural resources in in Putnam to satisfy a very small minority of people who fish the reservoir. Imagine the number of Putnam County residents and visitors that will utilize the river.
10/6/2021 9:29	Alachua		No	Yes	1 time			Fishing Boating Wildlife viewing	breached		continued degradation of river	parial breah	
10/6/2021 9:32	Marion		No	Yes		2-5 times		Fishing (shoreline/structure) Wildlife viewing Other: natural beauty viewing	I believe that the dam should be partially removed to restore the natural flow and water levels	environmental impact statements and other related research	permanent damage to the environment and associated wildlife	NO	Should be done very soon
10/6/2021 9:37	Marion		No	Yes			1 time	Fishing Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored	Putnam County and Silver Springs economics lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This exciting restoration will improve water quality and flow by generating an additional 150 million+ gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
10/6/2021 9:41	Volusia		No	Yes			1 time	Fishing	leave it.	land development.	If it was reopened then your going to open it up for just a small river and a lot more land to build homes on right next to it in that river. More Yankee's to move and buy up the land to develop.		
10/6/2021 9:47	Collier		No	Yes				Wildlife viewing Other: My family vacationed close by in the 70's and early 80's	When you look at the dam and the surrounding rivers from Google Earth, you can see the bottoms of the surrounding lakes and rivers. The waters held by the dam are dark from stagnation. Natural water flow needs to be reinstated. It is an ecosystem that has worked for a thousands of years. I have lived in Southwest Florida for forty-five years and have watched water management destroy Lake Okeechobee, the Caloosahatchee River and Estero Bay estuary by restricting the natural flow of the lake. In fact, if you look at the Caloosahatchee River on Google Earth the water also appears nearly black as it flows into the coastal estuaries. These are precisely the areas where mass algae bloom fish killings have been so prevalent.	Man-made, controlled flow of water from Lake Okeechobee has made the bottom of the lake toxic. This polluted water is then flushed downstream when the locks are opened. The result is dead fish and other aquatic animals that line the shores of the Caloosahatchee and Southwest Florida beaches due to algae blooms and agricultural waste. Residents and tourists are sick and are sickened by it. The Florida Department of Health agencies have warnings against eating fish caught from these waters. Why would anyone want to support and maintain a water management system where this scenario is possible?	South Florida Water Management is a nightmare due to decades of mismanagement. The sooner the RR & KD is removed, the easier it will be for nature to heal the damage already done.	A statewide restriction of high concentrations of nitrates and phosphorus in commercial and residential fertilizer would also be a huge step. Of course, any scenario that allows water to flow naturally from River to River for manatees and wildlife without creating cesspools of reeking sickness would be great.	Please consider that ninety percent of Florida residents were not here to see the abundance of wildlife that was here before the 80's. They do not understand or even know what they have missed. Dams stagnate the flow of water and raises the level of rivers too deep for river grass-beds to grow. These grass-beds support fish, the endangered manatees and the quality of our water for Florida residents. Any responsible stewardship of Florida should be the protection of these grass-beds. It is there where residents can enjoy the wildlife like the manatees that thrive in clean waters that only Florida can provide. Also, a statewide fertilizer law that restricts the amount of nitrates and phosphorus flowing into our waters would be fantastic!
10/6/2021 10:04	St Johns		No	No					Breach the dam, at least, preferably take it down.	The project for which it was built was terminated about 50 years ago because the project was environmentally unfriendly.	My concern is for improved environment for manatees and necessary control of invasive blue tilapia in order to bring back native fish species.		
10/6/2021 10:06	Duval		No	Yes				Canoeing / kayaking	Remove Kirkpatrick Dam and drain Rodman Reservoir.	St. Johns river Water Management	More destruction of Florida's natural wildlife.	Breach the Rodman Dam.	Make every effort to save the Manatee.
10/6/2021 10:09	Alachua		No	Yes	1 time	1 time	More than 5 times	Wildlife viewing Canoeing / kayaking Boating Wildlife viewing	The Dam should be removed entirely.	The fact that the vegetation has to be sprayed to kill it and keep it from taking over the reservoir shows that the environment is out of balance. Also, during the drawdowns we can see the springs which always brings a lot of excitement among people which shows how much it could be enjoyed if returned to it's natural state.	The continued harm caused by the dam and the reservoir and worsening of water quality.	A substantially restored flow of the Ocklawaha.	I know that removing the dam would be a very difficult thing to do especially for those who've purchased property or otherwise planned their life around the reservoir. Any change is always hard for some and it's important that as we restore the river to it's natural state, we don't leave our neighbors high and dry, so to speak.
10/6/2021 10:10	Broward		No	Yes			More than 5 times	Fishing Canoeing / kayaking Boating Wildlife viewing	Breach the Rodman/Kirkpatrick Dam.	The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/6/2021 10:10	Alachua		No	Yes	1 time	2-5 times	2-5 times	Fishing Boating Wildlife viewing	The dam needs to be removed or at the very least substantially breached.	Continuing and future costs of maintenance paid by all taxpayers. Not just the very few that actually use the impoundment it created.	The continued degradation of the Ocklawaha River system.	No	As a sportsman and naturalist I have seen this River before and after the dam and after it's creation and vastly preferred the former.
10/6/2021 10:19	Alachua		No	Yes			1 time	Canoeing / kayaking	Removal of the dam and restoration of the natural flow of the river system.	Restoration of the the springs and habitats that support fish populations, manatees, and restores the natural flow of the river systems into the St. Johns River Basin.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No	

10/6/2021 10:19	Alachua		No	No				Restore the habitat. Take the dam down	We need flood planes and wetlands and to restore the St. Johns River. The most important piece of information that I know is that we need to restore the ecology central Florida	Continued degradation of our environment and negative impact on our water supply.	I do not see an alternative		
10/6/2021 10:23	Alachua		No	Yes			1 time	Other: We have occasionally driven here and there in the Nationalm					
10/6/2021 10:23	Alachua		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	I would love to see the Oklawaha run free. It will be a huge asset to our state.	How much economic benefit would come to our state and how much ecological benefit would be achieved by taking away the dam	That our environment continues to deteriorate	I don't think there is a scenario that could include the dam.	
10/6/2021 10:30	St Johns		Yes	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	taking down	bring back springs and native wildlife	Ignorant on the board will be exposed	NO, NOTHING	
10/6/2021 10:31	Volusia		No	No					The dam torn down and returned to a natural river flow.	Information I have read over years concerning the Dam and the fact it was built for a purpose that was never completed. It should have been torn down years ago.	Continued problems to aquatic wild life and bacteria issues common to non flowing water.	I would recommend a steady gradual return to the rivers flow.	
10/6/2021 10:37	Duval		No	Yes			1 time	Other: Don't use it at all. Depressing area.	Remove the dam and reservoir and restore the Ocklawaha river.	As a native Floridian, born and raised in Ocala, I spent many days and hours boating, camping and exploring the Ocklawaha and Silver rivers as well as the chain of lakes to the south in the 1950's and 60s. After returning to the area from being away for a number of years I have been saddened to see the decline of many environmental conditions that existed at that time.	Further decline and damage to this priceless Florida resource. Think Everglades and the Kissimmee river valley and watershed.	No. No sincere, meaningful plan or strategy for the area has ever been proposed. So far, all a lot of special interest rhetoric and noise.	I will stay posted on the SJRWMD activities and progress. Thanks.
10/6/2021 10:41	Clay		No	Yes			More than 5 times	Fishing Canoeing / kayaking Wildlife viewing	Remove the dam & restore the watershed.	The altercation of the environment, the destruction of habitat &the loss of species.	Further loss of species and habitat.	No	
10/6/2021 10:43	Leon		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4.14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide unimbibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riveraay, to ensure a bright future for our state's people and wildlife. The Great Florida Riveraay is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riveraay. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/6/2021 10:47	Alachua		No	Yes			More than 5 times	Other: passing through the area, stopped at restaurants near there.	I have lived in Florida since 1978, and all of that time the dam and reservoir has been a blight on the area's ecology. Flooding by the dam has changed and degraded the hydrology of the area and distorted the environment is much less diverse now than ever before. There was a very good documentary also on the area made a year or so ago that showed dramatically how the dam and reservoir have impacted the area in negative ways.	I have spent over forty years reading about the damage the dam and reservoir has done to what was a beautiful, natural area, full of springs and all sorts of wildlife. My observation of the area when I've visited it indicates that the	Florida is at a critical turning point. We must take steps to preserve the natural environment and ecology or we will lose it forever. Species are going extinct at a rapidly increasing rate, due to unnatural encroachment, such as dams and developments. Short-term economic interests are being systematically favored over long-term sustainability. We must consider our stewardship of the environment and preserve it for future generations. There is more to life than bass fishing, and that's all the reservoir is good for now.	No, the dam and reservoir should be decommissions, and the river should be allowed to resume its natural flow.	Thanks for considering my remarks. We don't have many chances left before it will be too late, and this one would make a big difference for all of Florida going forward. Please do the right thing for future generations. I'm too old now to benefit from restoring the Ocklawaha, but it's important to make sure future generations will have a livable environment for their children and all of nature to thrive in.
10/6/2021 10:49	Citrus		No	No					Dam removed. A natural, healthy, free flowing river and surrounding ecosystems. Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored, Twenty lost springs and Silver Springs ecosystem are restored, historic fish and manatees return as breach opens creating a free-flowing river, 100s of manatees gain essential warm water winter springs habitat 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier. 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife, $50+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers, $4.14 Million in dam repairs saved on a dam past its life expectancy. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs and $57 million in potential flood damages avoided to downstream property owners.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. A storm event triggers a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait. Natural levels and natural flow of the great riverway should be a goal desired by all who care about the environment.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riveraay, to ensure a bright future for our state's people and wildlife. The Great Florida Riveraay is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riveraay. Thank you for your time and consideration.
10/6/2021 10:49	Marion		No	Yes			1 time	Fishing Wildlife viewing Other: Concern over the restoration project.	Raise the dam and restore the Oklawaha	Existing information documenting that restoration would be in the best interest of all of the Florida fauna and flora, not just the local residents petty interests.	Same old concerns as always. The lack of consideration for science and the majority; pandering to the special interests as usual.	No!	I've been through this before and we all know you won't change anything. Politics is the real issue here.
10/6/2021 10:57	Volusia		No	Yes			2-5 times	Canoeing / kayaking Boating	Restore the River to its original course by removing the dams and locks.	Florida's aquifer evolved over thousands of years without human intervention. Our best course is to let nature sort out the water flows/levels after we remove the dams and locks.	As seas rise and rain events become more pronounced, the continued flow of water will be more likely to harm us.	No, nature has already figured out the best way for water to either accumulate or flow away. Human intervention only seems to make disasters more inevitable.	
10/6/2021 11:08	Levy		Yes	Yes	1 time	2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Flow restored. I have a residence of the Withlacoochee River and have noticed the negative impact south of the barge canal before my eyes over the last 5-10 years.	As is, we have submerged 20 springs, drowned out 15,000 acres of floodplain, destroyed habitats of many species of flora and fauna.	Destruction of the above beyond repair. As a native Floridian we are not allocating the resources to preserve the natural beauty and environment our state has naturally.	The end all be all of this is to ensure the proper protection for the waterway and environment. Much of this part of our state is sparsely populated; doing the work to protect it now would create broader use for tourist, businesses, and residence for years to come.	Restoring the 20 springs the current set-up would allow improved water quality and improve critical habitat for fish, shellfish, manatees, and other species. The existing infrastructure is beyond repair and poses a true threat to many residences, businesses, and the wildlife.
10/6/2021 11:13	Duval		No	Yes			1 time	Other: Just to see what it looked like	Remove the dam. Restore the swamp and marsh habitat. Replant trees that were destroyed when the land was flooded. Allow the Oklawhaha to reconnect with the St. Johns River.	Our climate is in bad shape. Global warming increasing. Dangerous algae blooms. Dangerous floods in Jacksonville. Starving manatees dying. Rising salinity in the St. Johns River.	That the situation will continue to escalate to the point of total collapse.	NO	I am 81 years old. My father, Stuart Dent, and my grandfather, John Walker were both avid fisherman on the St. Johns and Oklawaha in the 1930's and 40's. In 1954, my father and his fishing pal, Ray Ware, ran the entire length of the St. Johns, putting in just North of the St. Johns Marsh. My Dad wrote a journal describing the trip. On day 5 he wrote: "We passed the mouth of the Ocklawaha at Welaka and it brought memories of former fishing trips. This exotic stream carries the water from Silver Springs and empties it into the St. Johns. Recently a sixteen pound striped bass was taken." Please make it 'exotic' again.
10/6/2021 11:14	Alachua		No	Yes		1 time		Wildlife viewing Other	Remove the dam	History, science	Feeling that greed wins out again	No	
10/6/2021 11:15	Hillsborough		No	Yes		2-5 times	More than 5 times	Canoeing / kayaking Boating Wildlife viewing	The dam breached to allow the local wildlife to thrive	The manatees could use access to these natural springs that they have been blocked off from	The manatee population would continue it's decline if we don't act now	Perhaps some sort of pedestrian waterway for the aquatic animals of sorts	Breaching the dam would promote biodiversity in these trying times and give the manatee population the fighting chance it deserves. Please consider it.
10/6/2021 11:16	Alachua		No	No					restore the natural flow of our nearby Ocklawaha River	general public information	negative environmental impact	probably not	
10/6/2021 11:18	Duval		No	Yes			1 time	Boating	I would like to see the dam removed and the natural flow of nature restored.	There are many but primarily our need for fresh water flow in Florida and especially for the St. Johns River	We would continue to ignore the obvious need to respect natural systems and it will continue to hurt the health of the St. Johns River. The economic benefits of restoration could surpass the greedy needs of the present system so fighting restoration is shortsighted and hardly valid .	No. It is PAST time to do this.	
10/6/2021 11:19	Volusia		No	Yes			2-5 times	Canoeing / kayaking	KNOCK IT DOWN	if you paddle the area during draw down and see what was a majestic marsh cypress forest system with many springs covered up , it becomes apparent . The reason they do draw , is try to get rid of sediment (muck) deposited in the reservoir and river.	Continued degradation of a natural echo , and the harder and harder it will be to get rid of it	NO , NO , AND NO	How many times does it have to be decommissioned before they get rid of it
10/6/2021 11:25	Volusia		No	Yes				Fishing Canoeing / kayaking	Restore the river.	Restore the flooded springs and restore manatee access.	Continued lose of function for the ecosystem.	Not sure. Would have to here options.	
10/6/2021 11:27	Lake		No	Yes			More than 5 times	Canoeing / kayaking Wildlife viewing	It's a no-brainer. Breaching the dam to help restoration of the oklawaha river. It needs to be free flowing. I think it would be great if the 3 rivers United , seems a lot of good would come from that	Just think of the fish, manatees, birds that would benefit	We lost so many manatees this year . I believe this would benefit them greatly. Can you imagine Florida with no manatees. Some body has to step up and get this done because our governor sure doesn't care	No, this needs to happen soon	There are plenty of Pros to retoring the rivers together. Water quality improves, habitats for manatees , fresh water would help to prevent algal blooms. it would benefit other species of wildlife. How great to uncover hidden springs. Please just get this done
10/6/2021 11:30	Bradford		No	Yes			More than 5 times	Canoeing / kayaking Wildlife viewing	Allow river to return to original state	Current damage to springs (submerged), acres of floodplain lost, damaged and lost habitat	Continuing damage to all listed above	I would consider a compromise but am currently unaware of any	
10/6/2021 11:30	Outside of state / other	Utah	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4.14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide unimbibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/6/2021 11:30	Duval		No	Yes			1 time	Boating Wildlife viewing	Remove them so the water can flow naturally and the damage can be repaired.	The bad effect that the dam has already had on the many waterways like the Silver River.	The natural ecology will not be restored and the many springs and tributaries involved will eventually be destroyed.	No	
10/6/2021 11:32	Alachua		No	No						It was built as a part of the cross-Florida canal which was deemed an ecological disaster.	More manatee deaths, contributing to algae growth, smothering existing springs.	None	
10/6/2021 11:40	St Johns		No	Yes				Fishing	Remove the dam and restore the natural flow of the Oklawaha.	Frequent algae blooms in the St Johns; uncovering numerous springs that have been suppressed by flooding the Oklawaha; improving the quality of Silver Springs, a one-of-a-kind awesome resource for Florida; reforesting 1000's of acres of land that is currently submerged.	Florida's precious resource, water, is further degraded. Fisheries are further eroded. Florida's tourism industry and residents of Florida will continue to see problems with enjoying the state's natural, beautiful resources.	No. We must restore the natural flow. The only argument against this is the loss of the manmade reservoir that must be drained every 3 or 4 years to keep it from failing. This is not sustainable. There are many other fishing opportunities that will come from removing the dam and restoring the flow.	Water is such a precious resource. With more and more people moving to Florida we have to change the ways of the past, which benefited some and hurt others. Our solutions need to be a win-win. Our fishing club used t go the Stuart every year to fish for Snook under the dock lights. It's one of my favorites. The water was always crystal clear and the dock light allowed you see a fantastic array of marine life. The last time we went, a few years ago, the water looked like chocolate milk. The Corps had released fertilizer and other problems from Lake Okeechobee into the beautiful north and south forks of the St Lucie Rivers. It was awful. We tried to go south to the Loxahatchee, another crystal clear river, but no there are canals emptying polluted water here too. I was shocked to find out how many canals there are that allow this polluted water to be directed both east and west rivers. This is another system that needs to be reworked to restore the natural flow from Lake O to the south. Gov DeSantis campaigned on reducing the pollution impacts and he has signed legislation to help the Indian River Lagoon and Lake O discharges. It's time look at the rest of Florida too.
10/6/2021 11:41	St Johns		No	Yes			1 time	Wildlife viewing	Remove the dam and allow the Ocklawaha River to run its natural course	Manatee habitat needs to be restored and increased	Continued poor water quality in St Johns River and increased nonnative fish populations	At least breach the dam to allow increased water flow	
10/6/2021 11:43	Duval		No	Yes			1 time	Wildlife viewing	Breach the Rodman/Kirkpatrick Dam to restore the Ocklawaha River. The dam causes badly diminished water quality and seriously affects the well-being of wildlife throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver, and St. Johns Rivers, and 50 springs are restored, and manatees gain essential warm water winter springs habitat.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	So long as a future complete breach is provided for, temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	It's imperative to restore the free water flow so that nature itself can recover the former quality of life provided by the free water flow.
10/6/2021 11:45	Putnam		No	Yes			2-5 times	More than 5 times	Removed	Cost of continual, never-ending maintenance of dam and locks as well as labor and equipment for maintaining greenways	Cost of labor and maintenance in to perpetuity	No	I'm 64 years old. I know what the Ocklawaha River was like before the dam, and I know what it's like now. There's no comparison. I've no idea of the cost to maintain the structures of the dam and the lot, nor the cost and maintenance of the equipment for all of the Greenways but I know that those costs will never end. The maintenance and labor will be there forever.
10/6/2021 11:51	Lake		No	No					It, like so many other dams, should be removed to restore a free-flowing river.		Continued loss of biodiversity and continued loss of natural hydrological cycles. As wet, air organic matter flooded beneath the dam impound lake likely continues to generate methane, which is 80-times more detrimental as a greenhouse gas than carbon dioxide. Allowing the drying out of the dam impound will reduce this methane pollution.		
10/6/2021 11:54	Marion		No	Yes	More than 5 times	More than 5 times	More than 5 times	Canoeing / kayaking	I would like the Compass ha river go back to its natural course, remove the dam.	The dam is about to fail anyway so why keep something in place that we recognized was a mistake a long time ago.	Spending more money on a mistake does not make any sense.	No.	
10/6/2021 11:54	St Johns		No	Yes		2-5 times	More than 5 times	Wildlife viewing	Leave it alone. It's been like that for 50 years and maintenance of the dam probably will cost less than restoration.	The beauty of the reservoir and the "park" by the dam.	Loss of the reservoir and "park".	Find a way to let more fish, etc. through the dam to alleviate some of the concerns down stream.	
10/6/2021 11:55	Marion		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing Other: Artist	Removal	Research	Beautiful cypress forest and wetlands restoration. The crystal clear water from the springs again visible, and manatees access to the ocean and warm springs	Removal	It's a waste of money to rebuild it it's useless.
10/6/2021 12:02	Duval		No	No					Removal of the reservoir and dam	I was informed by an article in the Ft. Times Union 10/5/21 stating wildlife, especially manatees will suffer with the continued presence of the dam.	Features (plants, animals) of our natural habitat will continue to suffer - we must be kinder to our planet to mitigate past actions.	Small actions are not enough global warming presses us to do more	
10/6/2021 12:08	Alachua		No	Yes	1 time	2-5 times	More than 5 times	Wildlife viewing	Either let the dam erode over time. Greater good can be gained by returning the waterway to it's natural state	Reports that describe the state of the natural waterway and the effects of the dam on downstream recreation, businesses and habitat.	Human intervention when it is not needed.	Maybe I could support a program to keep a smaller reservoir with dramatically increased water throughput.	Thank you for the opportunity to comment on this situation.
10/6/2021 12:09	St Johns		No	Yes		2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Free the oklawaha	Good for Manatees	Continue extra pesticides and bad for endangered manatees		
10/6/2021 12:09	Alachua		No	Yes			1 time	Wildlife viewing	Remove this relic of the Cross Florida Barge Canal, restore the Oklawaha.	Covering springs, impacting natural water flow	Dam maintenance costs	Yes. Maybe a phased approach over no more than 3-5 years to accommodate wildlife transition.	
10/6/2021 12:11	Alachua		No	No					Breach the dam, empty the reservoir and restore the natural flow of the Oklawaha River. Completely remove the dam if warranted/recommended.	Scientists and ecologists recommending for many years that the river should be restored to reverse the continuing environmental harm being done with the dam in place.	Continuing damage to the environment in that area of Florida, as well as the continuing expense of maintaining the dam.	No.	
10/6/2021 12:11	Alachua		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Removal of dam.	Saving money by eliminating dam maintenance.	Waste of money on dam maintenance.	No	Restoration of river flow would allow return of bottomland forest and floodplain swamp and wildlife.
10/6/2021 12:19	Duval		No	No					I would like to see the dam removed and the Ocklawaha River restored.	I live in Jacksonville. I can see the St. Johns River from my back yard. I believe Dr. Quinton White from JU and Lisa Rinaman, the St. Johns Riverkeeper, when they say the St. Johns River will benefit from the removal of the dam and restoration of the Oklawaha River.	That the water quality of the St. Johns will continue to suffer and that tax payer money will be spent to repair and shore up a dam that has never been environmentally best for the region. Better to spend money to restore the Ocklawaha.	No. From what I read in Dr. White's column in the October 5th edition of the Florida Times-Union, removal of the dam and restoration of the Ocklawaha is the only true long term solution.	
10/6/2021 12:20	Alachua		No	Yes		1 time			Restore the Ocklawaha - get rid of the dam	Disrupting the natural environment has created negative consequences	Natural habitats would disappear		
10/6/2021 12:22	Alachua		No	Yes		1 time	2-5 times	Fishing Canoeing / kayaking Wildlife viewing	I would like to see the dam removed and the Ocklawaha River restored, allowed to flow unobstructed.	Several studies have been completed which indicate that a restored free-flowing river would create more and better wildlife habitat, would increase the diversity and number of fish and birds, and would allow manatees to navigate safely up to Silver Springs. A free-flowing river would also provide more opportunities to derive economic benefit than currently exist.	That this important riverine ecosystem would continue to be degraded, and the opportunity to experience one of the (formerly) most beautiful and historic rivers in Florida would be lost.	No	
10/6/2021 12:23	Washington		No	Yes			More than 5 times	Canoeing / kayaking Wildlife viewing	keep the animals safe		the wildlife will die off		
10/6/2021 12:26	Alachua		No	Yes			1 time		I would like to see it removed and the area restored as is practical to it's natural state.	I'm not sure I understand the question. I have followed the fiasco of the Cross Florida Barge Canal since the early '70's and have been aware of the ecological damage it's partial construction has caused. I would like to see this damage reversed.	That a lot of public money is waited maintaining the status quo by repairing the dam.	Simply removing the ability of the dam to block river flow.	
10/6/2021 12:34	Alachua		No	Yes			1 time	Wildlife viewing	Removal!	Drowning of land, loss of wildlife nesting and habitat areas, stopping of the free flow of the river so that SOME fishermen can catch a few fish. Let them fish in the river.		Get it done, We've been talking about it for decades. Enough already,!	
10/6/2021 12:35	St Johns		No	Yes	1 time	More than 5 times	More than 5 times	Canoeing / kayaking	Demolish it. Return River to original natural state	Kooks explaining that it was never needed. My own experience kayaking the river	Further destruction of the river	No.	
10/6/2021 12:35	Volusia		No	No					I support the proposed partial restoration of the Ocklawaha River.	Partial restoration will to a significant degree restore water flow and biodiversity to the river, compared to what it has now.	That, at a time when plant and animal habitat is giving way to human growth and development, this opportunity to add back habitat will be lost.	I'm not aware of another way to accomplish significant habitat restoration short of the one proposed.	
10/6/2021 12:52	Volusia		No	Yes		1 time		Wildlife viewing	Have the Kirkpatrick Dam removed so the natural flow at the riverwould be restored.	The loss of Manatees which have died.	Continued Manatees loss.	Partial restoration of the flow.	
10/6/2021 12:52	Duval		No	Yes			2-5 times	Boating		A natural flow of the river, this would allow a landscape of the whole area to recover. As of the dam, being built, this has created a false environment, and costly situation to maintain, All river wildlife is trapped and unable to exist naturally.	Flooding of property	Remove Dam	
10/6/2021 12:58	Alachua		No	Yes			1 time	Wildlife viewing	Please remove the dam and restore the reservoir to its original riverine system.	Lower long term costs of restoring to its original state.	Adverse impacts both upstream and downstream from the dam.	not really	
10/6/2021 13:00	Alachua		No	No					Destroy those obstacles and restore the natural flow of the river.	Data on the decline of fish and manatees unable to access the river beyond the reservoir/dam area	Continued deterioration of the wetlands, water quality, and the survival of animal species in surrounding areas dependent on that habitat	NO	
10/6/2021 13:07	Alachua		No	No					Remove the damn and restore the river	I'd like to see a reversal of the continued degradation of our rivers and springs	Long term environmental impact, loss of habitat	No	
10/6/2021 13:09	Manatee		No	No					Breach the dam				If the dam serves no purpose why haven't they breached it?
10/6/2021 13:23	Alachua		No	Yes		1 time	More than 5 times	Fishing Boating	Keep it as it is.	It is a good fishing spot and creates an environment for water-type wildlife.	It becomes an unusable swamp.		
10/6/2021 13:27	Orange		No	Yes			1 time	Other	Let the river flow	Freedom	Loosing our rivers	No	
10/6/2021 13:27	Alachua		No	No					RESTORE the Oklawaha River to its natural course.	The dam is destroying the natural habitat of many varieties of animal and plant life. It is destroying our natural springs and floodplains that feed and provide shelter for many species.	The loss of our natural springs, and species of wildlife.	I don't know of a "half-way" solution. The dam should be removed and the river returned to its natural course.	I lived near and fished on the Oklawaha River in my younger years. It is one-of-a-kind and too beautiful to allow the Rodman Dam to continue to cause ruin and destruction of our natural Florida habitat.
10/6/2021 13:29	Putnam		No	Yes			2-5 times	Wildlife viewing Other: I want to see the real Ocklawaha again.	I would like the Reservoir and the Dam to be eliminated. The Ocklawaha must be restored asap.	Restoration of the Oklawaha will increase waterflow, enhance grass growth, discourage those nasty tilapia and afford manatees a healthier and increased habitat.	Florida would sink deeper into the black hole of environmental disaster.	No. Fifty years ago, I marched against the damn dam. It needs to go.	The whole structure of the 50 year old dam is faulty. It should be removed quickly.
10/6/2021 13:33	Citrus		No	No					Take it down if not being used....allowing more space for wildlife to use	saving wildlife	lose more wildlife	no	

10/6/2021 13:34	Duval		No	Yes		More than 5 times		Canoeing / kayaking Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs.	The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This exciting restoration will improve water quality and flow by generating an additional 150 million+ gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
10/6/2021 13:39	Alachua		No	No					Remove the dam and restore the river	The Ocklawaha dam prevents people and wildlife from using the natural ecosystem that existed before the dam was built. Florida's tourism industry is built on Florida's natural ecosystem, not bass fishing.	Continued damage to Florida's environment and continued waste of money maintaining the dam and reservoir	Removing part of the dam wold at least help.	
10/6/2021 13:40	Alachua		No	Yes				Wildlife viewing	Remove the dam to allow water to flow freely	That so many species are denied their natural habitat as well as springs lost	Water problems below the dam from land lost as well as loss of springs		Perhaps it's time for water experts, not political appointees, to manage Florida's waterways
10/6/2021 13:42	Volusia		No	Yes			1 time	Boating Wildlife viewing	Whatever needs to be done to restore the Ocklawaha River to its original corse & permit boats to again travel from the St. johns river to Silver Springs.	Recreational family use of the now "hidden springs" and the beautiful Ocklawaha River which was destroyed by the senseless & ignorant idea of a barge canal.	That the bass fishermen had MORE INFLUENCE on the governor than the FAMILIES who don't fish!!	Not sure what this means.....please be more specific but probably no.	As a native Floridian I was HORRIFIED to see the damage that the damming of the river caused for absolutely no reason. Let's put people back to work. Folks need jobs now. This effort would help everyone except the bass fishermen.
10/6/2021 13:47	Alachua		No	Yes		1 time	2-5 times	Wildlife viewing	Please remove the dam.	Economics and environment restoration.	Continued waste of public funds and continued environmental degradation.	Just breach the dam and leave it non functional as a monument.	
10/6/2021 13:49	Polk		No	Yes		1 time	More than 5 times	Fishing Canoeing / kayaking Boating Wildlife viewing	I would like to see the damn removed and the Oklawaha River restored, along with it the many submerged springs.	Experiencing the River and springs during the draw down. It was unlike anything I've ever seen and done in Florida. Plus the fishing was still great!	Missed economic and ecological opportunities for the region. I believe this could be a game changer for eco tourism and fishing, and recreation.	It's time for the damn to be removed.	
10/6/2021 13:50	Gulf		No	Yes			More than 5 times	Wildlife viewing	I would like to see it removed and the river restored to its proper flow.	The fact that it would increase the tourism ta and economic strength of the area.	A beautiful place will remain submerged, and its benefits wasted.	I'm not sure.	
10/6/2021 13:54	Alachua		No	No					Removal of dam, restoring natural flow of Ocklawaha River.	Research that shows what the river was like before the dam and the damage done to the river and surrounding land after the dam. Also information showing that quality of fishing has declined in the reservoir so that it is no longer providing that benefit.	Further damage to river ecosystem and surrounding land.	Not really. I don't know if there is research on the possible effect of opening the dam up for longer periods of time but overall, no, there is no really desirable outcome other than removal of the dam.	This has been a long time coming. We are learning that man's attempts to control nature often cause harm in the long run even if in the short run it seemed like a good idea. Please listen to the science and remove the dam.
10/6/2021 14:10	Lee		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Cost: •An estimated $14 Million in dam repairs, measured in 2006 dollars, would be saved by avoiding repairs to a dam that has exceeded its life expectancy and never fulfilled the purpose for its construction. •The large expenditures required for herbicide treatments to control the growth of invasive aquatic weeds and to conduct other ongoing maintenance needs, including periodic drawdowns, in a futile attempt to maintain water quality and recreational access in the stagnant waters of the Reservoir, would become unnecessary. • $57 million in potential flood damages to downstream areas around the community of Welaka would be avoided in the event of a dam failure. • Economic analyses conducted by researchers at the University of Florida demonstrate the economic impact from eco-tourists who use the natural portions of the Ocklawaha River is twice that of the anglers and boaters using the Rodman Reservoir, and annual use of the Reservoir's recreation sites has been on a downward trend since records began in 2004 as water quality and fish production have continued to decline year after year. • When accounting for revenues generated by increased recreational usage, a cost-benefit analysis determined restoration would produce a cumulative net benefit of $47.2 million over the first 10 years, versus a cumulative loss of $5.3 million with repair and maintenance of the dam. • The recreational development component included in the restoration plan would benefit nearby residents and expand eco-tourism, and more than compensate for loss of the Reservoir.	Taxpayers will perpetually be on the hook for repair and maintenance of the dam and Reservoir, and continue to be liable for any loss of life or property damage that would result from a dam failure.	No. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The additional 150 million+ gallons per day of fresh water flowing into the St. Johns River and Estuary will help to prevent harmful algal blooms and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River. Thank you for your consideration.
10/6/2021 14:29	Duval		No	Yes		1 time		Wildlife viewing	Get rid of the dam. It encourages pollution and accumulation of garbage.	I was very sad to see how the area was full of garbage. Also the dam, on the pond side, was full of dead trees	It will get worse and if the dam is breached damage the water stream	I would need to understand other option, but I believe nature and its paths are always the best way to go.	
10/6/2021 14:32	Duval		No	Yes			1 time	Wildlife viewing Other: boar trip	See the dam taken down; the reservoir to be allowed to empty into the tributary; help to restore wildlife and sea grasses, permit the 20 plus springs to "spring" again - let the area go back to nature, health and beauty.	The need to repair an unneeded dam that was put in place for an idea that was abandoned years ago and the resultant damage to the natural habitat.	Big money politics wins again. Florida is not for the people and protection of our natural resources.	No	Come on, you know taking down the dam and draining the reservoir is the right thing to do, Let's get it done.
10/6/2021 14:35	Putnam		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Boating Hunting Wildlife viewing	Leave it alone.	I live within a mile and 1/2 if Rodman and the reservoir has an abundance of wildlife that live and rely of it.	Environmental disaster	No	
10/6/2021 14:45	Pasco		No	Yes	More than 5 times			Fishing Canoeing / kayaking Boating Wildlife viewing	Stay beautiful like it is now!	Just looking at the beautiful, peaceful area.	What would happen to the habitat? The animals; the plants the birds.....what would the area look like?	No	
10/6/2021 14:53	Duval		No	Yes	2-5 times	2-5 times		Wildlife viewing	That the Dam be taken down and the Ocklawaha returned to its natural flow.	The migratory route of fish and mammals would be restored. Invasive vegetation and wildlife would be mitigated. Salinity in the Lower St Johns would be (Hopefully) reduced and sea grasses restored. The vegetation will return to provide a safe habitat for native wildlife.	That this boondoggle (Cross Florida Barge Canal) of a project will continue to ruin one of the great rivers in all of the USA. It is an environmental disgrace and an embarrassment to Florida and its leadership.	No	
10/6/2021 14:56	Alachua		No	No					The Ocklawaha River needs to be restored. The costs are obvious and the benefits are numerous. The dam is a result of bad policy many years ago, it is time to move on.	At a time when communities are reeling from climate change and local governments are facing exorbitant resilience and repair costs, we can avoid $57 million in potential flood damages to downstream property owners and $4-14 Million in repairs for an outdated dam well past its life expectancy. Plus the environmental piece; 20 lost springs and the Silver Springs ecosystem will be restored and fish and manatees return once the river is free - flowing river	Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years	The scenario I support is the river running freely again.	Think of our struggling manatees as well. This river could be a lifesaver for the species.
10/6/2021 14:57	Duval		No	No					I would like to see the dam breached and water flow restored.	I believe the free flow of water is best for the river on both sides of the dam. With development expected all around its more important now than ever to restore this waterway. The dredging of the port in Jacksonville will surely impact the salinity of the tributary making this issue even more vital to the health of the river.		No other options are available as I see this issue.	
10/6/2021 15:03	St Johns		No	No					The most reasonable approach would be breaching the dam and creating the original river channel flow until an evaluation can be studied to prioritize a phased restoration and economic plan. The original river offered an opportunity to take a boat cruise up the river to enjoy the flora and fauna.	This solution prefered by the majority of scientific experts.	A lost opportunity for generations to come.	Simply breach the dam, restoration starts immediately.	Politics.....
10/6/2021 15:05	Outside of state / other	OR	No	No					Respect Wildlife and their Habitats	Earth is dying	Earth is warming rapidly	no	
10/6/2021 15:07	Alachua		No	No					Take down the dam.	Removing the dam will restore the natural flow of our nearby Ocklawaha River	Natural flow will not be restored.	Not really	
10/6/2021 15:14	Brevard		No	Yes			2-5 times	Wildlife viewing	Breach the Dam	Restoring springs and habitat for fish and manatees	Best opportunity that will have a large impact on the protection of Springs and manatees.	No, Breaching the Dam is long overdue.	
10/6/2021 15:16	Putnam		Yes	Yes	More than 5 times			Fishing Fishing (shoreline/structure) Boating Hunting Wildlife viewing	If you took it out, it would take 100 plus years to restore it to original like it use to be. It's what it is now and is a great fishing spot. No need tk change it	Left like it is.	Lose of habitat for wildlife and a eye soar for the next 40 years	Yeah leave it like it is a do the draw down every 4 years	
10/6/2021 15:18	Alachua		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing	Keep the dam in place and repair as needed	Top 5 bass fishing lake in the USA year after year.	Loss of best bass fishing in Florida.	Repair the dam. Improve the parks and ramps	This is a world-class lake that year after year produces the largest bass world wide.
10/6/2021 15:18	Alachua		No	Yes			1 time	Canoeing / kayaking	Remove the dam	Natural water flow	cost of dam upkeep	no	more jobs would be created than lost
10/6/2021 15:24	Alachua		No	No					Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every additional day the dam and reservoir remain in place results in additional environmental degradation.	7,500 acres of the lower Ocklawaha's historic forested floodplain, 20 freshwater springs, and many miles of natural river channel that were drowned as a result of dam construction would be restored. Three river systems - the Ocklawaha, Silver and St. Johns - would experience significant environmental improvement from restoration. At least 150 million gallons a day of additional natural flow, and potentially much more, would be restored to the Lower St. Johns River, improving water quality and increasing resiliency of the entire St Johns/Ocklawaha River system by impeding the salt water intrusion resulting from sea level rise.	Water quality in the Rodman Reservoir and Lower Ocklawaha/St Johns River system would continue to decline.	No. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration.	PLEASE PLEASE PLEASE do the right thing!!
10/6/2021 15:26	St Johns		No	No					abolish the dam and allow a return to natural flow	The natural order has been upset by this it advised and poorly thought out project	Forever losing the natural flow and ecosystem of this ancient river	no	
10/6/2021 15:36	Pasco		No	No					Pat the Rodman reservoir and Kirkman dam to be breached	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. The dam needs to be removed in order to keep our springs as well as all wildlife that maintains the life in these springs. The dam no longer is needed and is only doing damage more than any good.	If we don't act now, future generations will only hear stories and not get to the see the beauty that our state has to offer.
10/6/2021 15:41	Alachua		No	Yes	2-5 times			Fishing Boating	Leave it the way it is for fishing	Tournament fishing,local,b.a.s.s	Becoming waste land	None	
10/6/2021 15:43	Hillsborough		No	Yes			2-5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Hunting Wildlife viewing	Remove and restore natural flow.	History of cross Florida barge canal and it's decommissioning	Increased herbicide usage degradation of natural ecosystems	Keeping dam gates open more	
10/6/2021 15:48	Flagler		No	No					Restore the river flow and levels to pre-dam conditions.	Editorial in the Daytona-Beach News Journal (10/8/21) reprinted from the Gainesville Sun citing reports from Defenders of Wildlife, American Rivers, Free the Ocklawaha Coalition and other groups advocating that the dam be breached.	Loss of warm-water habitat for manatees, reduced bio-diversity, and degrading water quality for Florida's natural springs.	Partial restoration of the river is the preferred alternative to keeping the dam intact.	Environmental tourism to Silver Springs would increase following the free flow of the river. The cost of maintaining the aging damn would cease. After 50 years of environmental advocacy the time has come to restore the Ocklawaha River.
10/6/2021 16:06	Alachua		No	Yes		1 time		Wildlife viewing	The dam should be removed and the river should be allowed to flow naturally. This is what is best for the environment, especially water quality and wildlife.	Millions of dollars in potential flood damages would be avoided to downstream property owners.	This is our best chance since federal and state funds are now available.	No. Not taking care of this problem now means more expensive maintenance on the dam in future years.	The addition of fresh water into the river system will help to prevent harmful algal blooms, support coastal resiliency, and help to prevent saltwater intrusion. This will benefit wildlife, aquatic vegetation, as well as fish.
10/6/2021 16:14	Marion		No	Yes		2-5 times		Fishing Canoeing / kayaking Boating Wildlife viewing	Save the reservoir	wonderful lake	none	no	
10/6/2021 16:17	Alachua		No	Yes			1 time	Fishing	breach the Kirkpatrick Dam	The dam's original purpose is no longer valid and repair and maintenance to keep it safe is financially irresponsible. There are also the many environmental benefits which would result from allowing the return of the affected river systems to their natural conditions.	The dam will require costly repairs to reduce the risks of failure and downstream damages. Return of the natural systems will be enjoyed by the dam will not happen.	Not really. The dam is a product of the failed concept of the Cross Florida Barge Canal. Breaching it will have many benefits to the environment and will save the public the cost of repairing and maintaining an environmental mistake.	
10/6/2021 16:23	Duval		No	Yes			More than 5 times	Boating	Restore the river to its natural flow	Studies presented by the St. Johns Riverkeeper and my personal experience	The permanent destruction of the natural flow of the river	No	
10/6/2021 16:26	Alachua		No	Yes		More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing	Maintain it!	The number of happy recreational folks that enjoy the area.	The loss of a fabulous recreational area that is enjoyed by many many people including campers, hunters, bird watchers, recreational fishermen, tournament fishermen and other watersport activists.	Not really unless to save expenses they could possibly eliminate the opening and closing of the locks multiple times a day and just maintain the levels and open it only for conservation issues and or routine maintenance. Let the river folks enjoy the St Johns and Rodman would basically become a long controlled Lake. Just a thought. Don't know if that is even possible.	
10/6/2021 16:27	Clay		No	Yes			1 time	Other: Wanted to see it.	I would like to see it breached and the Oklawaha returned to its original flow. Also, I would to see the springs and all the wildlife and birds they will attract.	The environmental impact of damn..	The river not flowing swiftly into the St John's.	I think just breaching it and not tearing it all down is a compromise.	
10/6/2021 16:31	Volusia		No	Yes	1 time			Wildlife viewing	Restore the Ocklawaha River by at a minimum breaching the dam and restore the river flow and limiting use of land near the river	Free the Ocklawaha Coalition, editorial of The Gainesville Sun and Daytona Beach News Journal	The dam has caused increase in poor water quality and decrease in biodiversity of the Ocklawaha River. It will continue to worsen and lead to more deaths of Manatees and other wildlife	Destruction of the dam would fully achieve my desired outcome but any means to increase the restoration of the Ocklawaha River would help.	
10/6/2021 16:47	Hillsborough		Yes	Yes	More than 5 times			Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Hunting Wildlife viewing Other	Leave everything absolutely alone and how it is because it is now a viable sustainable ecosystem that provides shelter and food to many species of wildlife that are getting more endangered in Florida.	Messing around with it would disrupt the fragile ecosystem that has become established there and home to numerous flora and fauna that are rapidly being threatened elsewhere.	The disruption of a beautiful ecosystem for absolutely no reason other than the fact that some week need people don't like it but that's their own opinion to have because everything will still be there long after they are dead and gone.	No. Leave it alone leave everything alone.	Leave it alone leave it alone leave it alone, many folks as well as plant and animal species depend on the biodiversity of this ecosystem for survival don't mess with it if it's not broken don't fix it.
10/6/2021 16:59	Alachua		No	Yes			2-5 times	Canoeing / kayaking	Let the river flow as before the dam.	Environmental studies.	The river and springs deteriorate.	More flow.	
10/6/2021 17:06	Sarasota		No	Yes			2-5 times	Fishing	It's an incredible fishery, ecosystem that supports multiple species of animals, fishes and manatees. Leave it alone and allow the the Hvlxing ecosystem and businesses dependent on it to thrive!!!	Friends and family whose lives and welfare depend on it	One of my favorite honey holes would no longer support the hawgs I love to catch and release >=> Tis a beautiful place that would be forever changed for the worse 😢😢😢	Leave it alone	For the love of God and His amazin creation .. let it be as ALL will continue to live, thrive and multiply
10/6/2021 17:12	Outside of state / other	Kentucky	No	Yes			2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating	Leave it as it is! It's a treasure. I see many manatees, eagles, etc that utilize it. Please leave it alone	I think the wildlife refuge that it has become is a big part of it. It's absolutely beautiful and an amazing g fishery also.	Loss of wildlife, fishery and habitat in general	Close the locks keep the lake.
10/6/2021 17:18	Outside of state / other	Beaufort, South Carolina	No	Yes			1 time	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	I would like to see it remain the wold and beautiful ecosystem that is has become today. It would be a terrible tragedy to kill the wonderful wild spot this has become. It is home to the many wild creatures that abound on its boundary.	The sustainability of the current wildlife such as the manatee and the more than abundant wildlife but also the significant revenue from people like me who go to Florida because of this beautiful spot.	That the lives of so many wildlife and people would be once again torn asunder by a reckless ideology. What's done is done and is now the adjusted home of more lives than destroying it would sustain. Please keep it the way it is. It is a wild and beautiful place.	No, I don't see that.	- I'm from out of state but we all love wild and beautiful places and this is one of the best.
10/6/2021 17:21	Gilchrist		No	Yes			2-5 times		Returned to its natural state.	The dead trees sticking out of the water are disturbing reminding us of what is no more.	More build up of killing muck on everything behind the dam.	NO, fishing could go back to the way it should be - folks actually finding favorite spots w/o it being made so darn convenient. Pansy fishing is not cool.	Please let nature rule, it always does eventually.
10/6/2021 17:28	Outside of state / other	Tennessee now	No	Yes			2-5 times	More than 5 times	Canoeing / kayaking Boating Wildlife viewing	It should be left alone. The area is beautiful and any plans to redo it or make changes is unnecessary.	Simply the wildlife! I have seen so many areas undergo remodeling or revamping of systems which in return has lead to wildlife disruption even causing death. It has a chain reaction from wildlife leaving the area and the food chain is disrupted. Water contamination is also a huge factor. Building materials enter the water and kills fish and other animals who utilize the area as breeding grounds. Again another Chain reaction event.	Disruption of wildlife and thriving ecosystem. Too many animals lives depend on the natural area without man made running it.	Not really. Some things are better left alone.	I've been visiting the area for years especially when I lived in Florida. The areas like this need to be protected and left undisturbed. Any time man gets themselves involved it disrupts the natural process of the ecosystem. We are already losing so much from other reasons let's preserve what we have as long as we can.
10/6/2021 17:36	Putnam		No	Yes		More than 5 times	More than 5 times	Canoeing / kayaking Boating Other: Hiking, observe the area.	Like to see it restored.	For the river to be opened up free again. The river is so packed with logs it's hard to boat. To open up the springs that are under the reservoir.	It is whit is.		
10/6/2021 17:41	Alachua		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	Remove the dam. Return the Oclawaha to its free and natural state. ASAP	Science.	decline of the water system and wildlife	A definite timetable to remove the dam	
10/6/2021 17:41	Duval		No	No					Restore it	Maintain the wildlife.	I do not want wildlife to become extinct.	Depending on the subject	Eliminate politics from the outcome.
10/6/2021 17:42	Alachua		No	Yes			1 time	Wildlife viewing	Restore the Ocklawaha	I have read a bit about this issue and listened to friends who care deeply about bringing back the full flow of the river.	The dam will cost a lot of money to maintain as it ages and begins to fail.	No.	
10/6/2021 18:00	Bradford		No	Yes		More than 5 times		Fishing Fishing (shoreline/structure) Hunting Wildlife viewing	Managed as a fishery would be my main choice.	Over the last 50 years it has been one of the premier fishing places in the US.	That a few communities would suffer financial loss. That a lot of fishermen(boaters and bank fishermen) would be out of place to fish.	Not really	- I read in the Gainesville Sun an editorial this morning supporting removing the dam. One of their points was that the lake covered up several small springs, stopped them from flowing. I would think that is a good thing, that water is better off in our aquifer than flowing out into polluted St John's River. - I know if I had an artesian well on my property,SJRWMD would make me cap it. I don't see much difference in a spring and an artesian well.
10/6/2021 18:07	Outside of state / other	Alabama	No	Yes			2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Leave it alone	Saving the ecosystem , the wildlife , manatees , bald eagles and the fishery	The disappearance of all that I mentioned above	Nope NO compromise
10/6/2021 18:08	Putnam		Yes	Yes	1 time	More than 5 times		Canoeing / kayaking Wildlife viewing	Make the River be a River	Spraying herbicide on the lake cannot be good for our waterways free the springs a lot of people come to Florida to see the beauty of the they spend lots of money locally put docks on some parts of the river people will fish and spend money the big bass boats can still fish the St. John's River smaller boats will still fish the Oklawaha	Harming the environment	Eco tourism	Keep the Oklawaha wild such a beautiful river for our children and their children can enjoy forever wild Florida has disappeared south of us let's not make the same mistake
10/6/2021 18:09	Marion		No	Yes		More than 5 times		Fishing Boating Wildlife viewing	Keep them alive! I have been visiting Rodman all my life and I hope they never go away. I once saw 3 pairs of bald eagles flying over head at the same time. And another time my boat was surrounded by a bunch of huge manatees. What an amazing place	Many people and an amazing variety of wildlife enjoy this unique place. A crime to let it fall away to nothing	If the damn is ever closed the loss would way outweigh the cost of keeping it alive. Dam haters just got to hate. Leave the dam alone	No. No compromise when it come to the dam. It can only be all or nothing	
10/6/2021 18:11	Outside of state / other	Stephens county, Ok	No	No					Keep it in place. I can never fully get the reasons behind removal, anything reasonable at least.	Its a lake. Water storage n fishing.	Environmentalists will pet worse	Yes. Is there anyway of having more water flow to the river while keeping the reservoir sounds like best scenario.	
10/6/2021 18:17	Alachua		No	Yes			More than 5 times	Wildlife viewing Other: Touring the Ocklawaha river	Removed	Numerous environmental studies	Lack of wildlife migration	Breaching the dam	The space occupied by the dam, and the surrounding environment, have been significantly degraded by the existing structure.
10/6/2021 18:21	Duval		No	Yes			More than 5 times	Fishing Canoeing / kayaking Wildlife viewing	Breach the Rodman / Kirkpatrick dam	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 yrs overdue	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatee

10/6/2021 18:30	Volusia		No	No					In a perfect world, I'd like to see the natural flow restored! Given the impacts to humans in that path, I won't hold my breath... But that's the hope: to restore the watershed that existed before the misbegotten idea for the dam came up.	Every single instance of dam construction in the US has caused catastrophic ecological impacts upstream and down. From disruptions in breeding and spawning that threatens entire food webs, to the destruction and suffocation of huge swaths of habitat for hundreds of species--dams have been responsible for a lot of ecological carnage. And most of it happened in an era when we didn't collectively understand or prioritize that damage. But that is changing, and now there is a trend toward removal of dams, as may be happening here. "As we know better, we must do better". -- Nowadays, we do know better; now we're challenged to DO better.	That we confuse process with progress, and yap about this until we finally all move on to other pressing concerns, leaving the watershed to stagnate because no one has the balls to pull the trigger. It's a lot easier (especially for anyone elected!) to talk about something forever, than it is to actually make the dang decision.	Sure. Compromise has to be important. But half-hearted measures are not going to fix this.	
10/6/2021 18:36	Volusia		No	No					Remove the dam and restore the free flow of water	Dams are ecologically terrible, there are too many variables and negative effects to surrounding areas.	Continued negative effects to the environment and the people who depend on it.	No.	
10/6/2021 18:43	Alachua		No	Yes			2-5 times	Wildlife viewing Other	Remove the dam and restore the Ocklawaha River	Ecological gains, economic savings, ecological economic gains	Failure of Florida public interest	Minimum: drain Rodman Reservoir and restore the River. Some of the dam might remain without impoundment	Long past time for this action
10/6/2021 18:45	Marion		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Hunting Wildlife viewing Other	Keep everything as is, don't tear dam down. All animals, from land to water will be destroyed. Enviormental dieaster	Lived here saw how when dam built, land has to heal. Now you want to reverse,it and repeat destroying wild life Why can't you just leave it alone. Such a waste	All habitate destroyed as we have it stapled now.	Save the rodman and dam, will gladley volunteer to acheive this goal.	No one thinks about how much tearing these dam and kicks down. Waste of time and money
10/6/2021 18:46	Duval		No	Yes			1 time	Wildlife viewing	Restore the oklawaha	Enviornmental	Hurts wildlife		Thanks
10/6/2021 18:53	Duval		No	No					Would have it restored to original river flow.	Florida has a delicate ecosystem and damming up rivers doesn't seem to be a good idea	That the St.John's river and the wildlife will suffer	No. It was probably initiated for someone to make some money off of and serves no useful purpose.	
10/6/2021 19:02	Duval		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing	I would love to see the dam stay because of the beautiful wildlife and unique ecosystem it has created.	The fishery that the dam has created. In addition to the unique fishery, it is home to so many manatees and supports the manatee population immensely.	That the ecosystem the dam has created is destroyed and the animals and families that rely on it are put in jeopardy.	Leaving the dam and restoring other parts of the river and managing the vegetation growth on the reservoir.	
10/6/2021 19:35	Seminole		No	No					Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam to reunite the natural connection of Silver Springs, the Ocklawaha and the St. Johns River. The science supports restoration. Studies by federal and state agencies have clearly demonstrated that restoration of a free-flowing, connected system is cost-effective and will provide significant ecological benefits to the St. Johns, Ocklawaha and Silver Rivers as well as Silver Springs. More information to consider: Three rivers, Ocklawaha, Silver and St. Johns, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish migration patterns and essential manatee habitat are reestablished 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of forested floodplain wetlands within the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs	We miss a historic opportunity to stop the ongoing ecological degradation caused by the dam and finally reunite the natural flow of these rivers. Breaching the dam would restore the natural flow of 150 mgd of fresh water, improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. A free flowing Ocklawaha will reestablish 15,000 acres of forested wetlands and fortify downstream submerged grasses from Welaka to Jacksonville in the St. Johns River that are critical to river health and fish habitat. More information to consider: We miss the best opportunity to do this. State and federal funds are available; public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs, and invasive fish like the Blue Tilapia increase. Water quality declines, further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam and restoring the Ocklawaha are 50+ years overdue. Dam safety issues and improved water quality, wildlife habitat, and recreational opportunities can't be ignored or delayed any longer.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway.
10/6/2021 19:43	Marion		Yes	Yes	More than 5 times			Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Restored to full potential and maintained as needed.	I think the Kirkpatrick damn offers an amazing eco system to the north central Florida area. I love fishing it but on top of that, I take my wife and kids on nature rides. We see eagles, tons of manatees, snail kites and other wildlife. I've been coming here since a kid with my grandpa and it brings back so many memories everytime I visit. I think it would devastate many jobs on top of millions of wildlife if the damn was torn down. It would be horrible!	A loss of one of the best eco systems in the world! Much like a rainforest.	I'd support anything that preserves the damn and the eco system it's created!	Leave it alone and restore it! Please!
10/6/2021 19:54	Marion		No	No					Remove it	The multiple studies showing its negative effects on Florida wildlife	The harmful ecological and economic impacts it will have on our rivers springs and wildlife	Breaching the dams to allow for some restored flow	
10/6/2021 20:06	Outside of state / other	Columbus, Ohio	No	Yes			1 time	Canoeing / kayaking	Please breach the dam and restore the Ocklewaha River. Restoring the Great Florida Riverway by removing key portions of this dam will re-establish traditional access to essential habitat for manatees, bring back migratory fish, connect three river ecosystems and historic Silver Springs, and restore a lost riverway for anglers and paddlers from Ocklawaha's Harris Chain of Lakes to the Atlantic.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide unimbibed passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to $37 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees, unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/6/2021 20:08	Santa Rosa		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Wildlife viewing	Breach the dam.	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No, the dam must be breached as soon as possible. This is long overdue, and this is an opportunity to help remedy issues including poor water quality, low manatee populations, low fish populations, and wasted taxpayer money.	
10/6/2021 20:09	Alachua		No	Yes		More than 5 times		Fishing Boating	Restore the natural habitat	It's the most beautiful river in florida and it's a crime to have a dam keeping nature at bay.	Nature	Keep advocating	
10/6/2021 20:18	Volusia		No	No					Please remove the dam.	I want more help for manatees survival.	More pollution.	N/A	N/A
10/6/2021 20:22	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Hunting	Save Rodman damn	It provides sanctuary and forage for wild life. It is a manatee nursery and also known as one of the bass capitals of the world.	Loss of habitat for wildlife. Decline in the manatee population which is in severe Danger. Also a drastic decline in the Fishery	No	I have been fishing and hunting all of my life in Central Florida. I am an avid tournament Fisher. And in my large Network of Outdoorsman friends I know not one single person that wants to see it restored back to its original state. What was created when the river was dammed and the pool was formed draws people from all around the United States or even the world.
10/6/2021 20:27	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Hunting Wildlife viewing	Keep the dam it's a great ecosystem and provides for livelihood and entertainment for many families.	Great ecosystem	Ruining great fishing and livelihood to many	No	
10/6/2021 20:30	Clay		Yes	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Hunting Wildlife viewing Other: We own property on Rodman	Need to keep the damn . Is a major ecosystem for wild life and brings revenue to the county	Healthy ecosystem and wild life	They should leave the damn alone	They must leave the damn . It would destroy many ecosystems	This reservoir brings a lot of money to the county from fishermen, to hunters and also sight Seers
10/6/2021 20:36	Alachua		No	Yes	1 time	2-5 times		Canoeing / kayaking Wildlife viewing	destroyed and Ocklawaha river restored	it will improve waterway for migrating fish, manatees, other wildlife and for recreational boating.	poor management continues	no, remove the dam. A bad idea to begin with	
10/6/2021 20:36	Alachua		No	Yes	1 time	2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing	Removal and reooring the original channel. Possibly somehow keeping a bridge to content the roadway	I like the entire area better during the drawdown. The funds are not thier to maintain the dam . I would love to see springs come back to life. It would repare much of the wrongs done to the past to the aquifer in the past. More people fish the river than will ever fish in that big stagnant lake .	Dam failing causing major flooding	Remove the dam dam !	
10/6/2021 20:44	St Johns		No	No					Please restore the Ocklawaha River! Breach the dam or remove it altogether please!	Evidence of environmental destruction, and need to bring back native species, need to restore river flow to pre-dam levels, provide migratory routes for manatees from the Atlantic	Further death and destruction to the Florida wildlife I enjoyed since childhood.	Breaching the dam. But boating and migration need the dam to be removed for more full access	
10/6/2021 20:44	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing	Keep it	Wildlife and fishing. Been there a really long time	Loss of such a great body of water	No	Keep it
10/6/2021 20:48	Duval		No	No					To restore a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam and reunite the natural connection of Silver Springs, the Ocklawaha and the St. Johns River.	The science supports restoration. Studies by federal and state agencies have clearly demonstrated that restoration of a free-flowing, connected system is cost-effective and will provide significant ecological benefits to the St. Johns, Ocklawaha and Silver Rivers as well as Silver Springs. More information to consider: Three rivers, Ocklawaha, Silver and St. Johns, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish migration patterns and essential manatee habitat are reestablished 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of forested floodplain wetlands within the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs	We miss a historic opportunity to stop the ongoing ecological degradation caused by the dam and finally reunite the natural flow of these rivers. Breaching the dam would restore the natural flow of 150 mgd of fresh water, improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. A free flowing Ocklawaha will reestablish 15,000 acres of forested wetlands and fortify downstream submerged grasses from Welaka to Jacksonville in the St. Johns River that are critical to river health and fish habitat.	No. Breaching the dam and restoring the Ocklawaha are 50+ years overdue. Dam safety issues and improved water quality, wildlife habitat, and recreational opportunities can't be ignored or delayed any longer.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/6/2021 20:49	Alachua		No	Yes			More than 5 times	Canoeing / kayaking Other: Diving in the inundated springs for scientific purposes. Worked there as a young biologist in the early 1970's.	Get rid of the dam. Restore the river and springs. Allow greater access of upstream habitats to manatees. Possibly develop an American shad fishery, which is dependent on an undammed river system.	Wow. Where to start. How about the decline in fish abundance and diversity in the Silver River. How about the restrictions on manatee movement. The St. Johns/Ocklawaha/Silver ecological system may be more important than ever for manatees in light of the ecological collapse of the Indian River lagoon.	More decades of ugly ol Rodman Reservoir and all of its functional downsides.	Not really. Doesn't appear to be much of a middle ground with this issue.	The fishermen do not need Rodman. There are so many angling opportunities all around this part of the state. For starters, they can fish the St Johns and Lake George. Then add in the hundreds of lakes in the region. It is not like Rodman is the only game in town.
10/6/2021 20:53	Washington		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer. Other comments:	Thank you for your consideration in this matter.
10/6/2021 21:03	Seminole		No	Yes		2-5 times		Canoeing / kayaking Other: Camping and hiking Canoeing / kayaking Wildlife viewing	Please restore the river and remove the dam.	Water quality improvements and the restoration of the lost springs.	Waste of taxpayers money to fix the dam and impacts to water quality and wildlife.		
10/6/2021 21:09	Hillsborough		No	Yes		2-5 times			Restore the natural flow and stop the use of pesticides to control evasive water plants.	The constant use of pesticides to control vegetation, Wthe a free flowing Okalawha River would clear itself.	The inevitable failure of the dam causing uncontrolled release of water.	Drawdown more oftem, if the dam would withstand the action?	
10/6/2021 21:13	Marion		No	Yes			2-5 times	Fishing Other		Cost to keep the dam and environment issues.	Same as above.	Not sure.	
10/6/2021 21:19	Palm Beach		No	Yes					Restore the river. Remove the Dam.	The Dam does not provide water supply benefits. The Dam does not provide flood control benefits. A restored river is much less maintenance.	It would be sad. It will waste tax dollars on maintenance continuing to maintain this aging dam that has no purpose.	No	
10/6/2021 21:22	Volusia		Yes	Yes	1 time	More than 5 times	More than 5 times	Fishing Canoeing / kayaking Wildlife viewing Other: Adventure tours	Leave alone.	There is an Established Thriving Ecosystem.			
10/6/2021 21:23	Alachua		No	No					I would like to see the land with all it's magic restored to its former self as much as possible so that other living creatures and all the wondrous plant life have THEIR space in a pristine environment that is not ,as always, touched, tainted and terminated by us greedy, shortsighted, irresponsible and ignorant un-humans....	what I have witnessed throughout my life: that MANKINKIND is a very destructive force on the astounding fabric of our EARTH and it seems to be getting worse with each breath we take until there is nothing more to breathe. ----	that my above statement will not be proven wrong.....	N O !!!!!	unfortunately I have learned this : I AM SHAMED TO BE HUMAN --- PROVE ME WRONG!!!!!
10/6/2021 21:31	Dade		No	Yes	1 time	1 time		Canoeing / kayaking					
10/6/2021 21:35	Alachua		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing Other: Camping, hiking	Past due to remove & restore!	Maintenance costs and lost-opportunities until restoration is completed.	What a waste.	Not r really.	
10/6/2021 21:39	Lake		No	Yes	1 time			Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman Dam	I. If I wildlife corridor restored 2. Ocklawaha, Silver and St Johns River & 50 springs restored II. 100's of manatee gain essential warm water spring habitat	millions of taxpayer money spent to repair a dam that does not provide power water or other public benefit. 2. Water quality declines by fueling invasive weed , blue green algae and submerged aquatic vegetation loss 3. 100 mi St Johns River Esturay continues to bee deprived of 150 mgd of natural water flow to improve water quality, restore fish & wildlife habitat & reduce saltwater intrusion.	No breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/6/2021 21:51	Outside of state / other	Maryland	No	Yes		1 time	2-5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Nothing. Leave it alone.	Wild life preservation.	Destruction of a beautiful ecosystem and thriving wildlife.	None	Leave it alone and continue allowing us out of state people to support your community economically.
10/6/2021 22:04	Duval		No	No					I think that removing the dam to free the river\'s flow is a good idea.				
10/6/2021 22:18	Duval		No	No					Remove the Kirkpatrick Dam and restore the River	Removing the dam helps restore numerous springs as well as the Ocklawaha, Silver and St. Johns River. The Lower Ocklawaha and St. Johns Rivers will receive 150 million plus gallons of day restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	That the current dam will continue to deteriorate and natural resources will be impacted	No	
10/6/2021 22:29	Volusia		No	No					Partial or complete restoration of the Ocklawaha River	Use of taxpayer money to maintain Kirkpatrick Dam which has never fulfilled the purpose for which it was built and obstructs the natural flow of the river while benefitting only a limited group of people.	Development would continue to encroach on the area limiting the ability of the river ever to be restored, allow an invasive fish to keep multiplying free of natural predators and deprive the dwindling manatee population of inland waterways which should rightfully be theirs to sustain them during colder weather.	Have not seen any presented other partial restoration. Would prefer the removal of the dam.	
10/6/2021 22:37	Duval		No	Yes			2-5 times	Wildlife viewing	I would like to see removal of the dam and restoration of the Ocklawaha River. This will improve River flow to the St. John's River. It will offset some of the damages done by development, dredging and paving.	Research by Marine biologists has demonstrated that food webs will be enhanced by reestablishing tributary flow. The ecology of the waterways and wetlands will be improved as well.	The flow of water has impeded the health of the wetlands and the St. John's River.	No	
10/6/2021 22:42	Manatee		No	No					I would like to see it removed and the natural ecosystem restored	The amount of fresh water it would bring to the estuaries in need	More manatees will perish	No	
10/6/2021 22:50	Outside of state / other	Perth Australia	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	
10/6/2021 23:00	Marion		No	Yes		More than 5 times		Canoeing / kayaking Wildlife viewing Other: Landscape Photography	Return the river to it's natural flow. Remove the Dam.	The restoration of several rivers and springs helps support the overall health of Florida's ecosystems. Before you think, "oh, another environmental wacko", remember WE LIVE AND WORK IN THIS ECOSYSTEM, which is slowly failing around us.	Continued choking of the waterways by invasive plants that then require the use of pesticides to try to mitigate their growth. Those pesticides then end up in our drinking water. How does this make any sense?	No. Get rid of the aging dam that costs millions to maintain while simultaneously causing us to poison our own waters and destroy our local ecosystems.	The Rodman dam is a relic of a misguided management theory for our lands and waters. Much like the folly of the Cross Florida Canal, or the efforts to drain the Everglades, this error in planning has led to a myriad of negative consequences that have been allowed to continue for years. It's time to correct the mistakes of the past and help build a better future for Florida and our future generations.
10/6/2021 23:39	Alachua		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	Remove the dam and restore the natural flow if the oklawaha river	The loss of natural springs, wildlife habitat and natural water flow caused by the failed cross Florida barge canal.	I do not support the use of tax dollars to invest in a dam that is both unnecessary and environmentally damaging.	I can not support any further monetary investment if taxpayers money in maintaining the Rodman dam and reservoir.	It makes no sense to me why the Rodman dam has been maintained at great public expense with the abandonment of the cross Florida barge canal that originally necessitated its construction.
10/6/2021 23:59	Alachua		No	No					remove the dam, drain the reservoir	historic natural life of the Ocklawaha and all that it had previously sustained of Floridas native flora and fauna before its destruction for the failed cross state barge canal	it's too late maybe to return the run to its previous proclivity? hope not	no	
10/7/2021 2:30	Outside of state / other	Maryland	No	Yes			2-5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Leave everything the way it is. incredible ecosystem, wildlife, fishing, etc... Unbelievably, beautiful area that needs to be preserved and protected. What a gem; very special place. Nothing else like it. Why would you destroy an incredible natural resource that everyone enjoys and is beneficial to Florida's economy. I have a zoology degree and strong biology background. You have something special here; don't mess it up. Leave the Rodman Reservoir area alone. You will do more harm than good.	The extreme diversity and health of this special ecosystem. It supports so much wildlife. The incredible fishery, especially supports the health of this ecosystem. More big bass are caught in this area, than any other part of Florida. That is a bold statement and vois supported by statistics. That is huge for Florida's tourism and economy.	Your going to disperse a lot of wildlife and alter the ecosystem that was created. It will definitely affect the fishing and tourism, which will hurt the state of Florida's bottom line. You will gain very little and lose everything, if things are altered.	No! If you change anything, you will have ramifications. You will lose an incredible amount of tourism dollars related to fishing, if changes are made.	How many times have you heard it?? Don't mess up a good thing!!!
10/7/2021 4:45	Outside of state / other	California	No	No					We must restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation.
10/7/2021 5:27	Pasco		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing Other: hiking the area	remove the dams. This will restore the natural flow of the water	Historic fish and manatees return as breach opens creating a free-flowing river Hundreds of manatees gain essential warm water winter springs habitat 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville will be healthier	The rivers will die Too much money is and will be spent to repair the dams	no	
10/7/2021 5:43	Volusia		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	Breach the dam	Help the manatees get a feeding areas	Manatee populations are declining. Manatee die-off is biggest concern.	No. Must restore river flow for manatee access.	
10/7/2021 6:30	Putnam		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Hunting Wildlife viewing	Maintain the dam and reservoir for wildlife viewing, fishing and hunting.	The people that are always there using the facility.			

10/7/2021 6:56	Pasco		No	Yes		1 time		Fishing Boating Wildlife viewing	Removed	Mother nature didn't intend a dam.	The wildlife ecology won't be restored.	No.	
10/7/2021 7:28	St Johns		No	No					Allow the water to run free to the Ocklawaha river	Return River to its natural state. Avoid use of herbicides to control invasive plants	None		
10/7/2021 7:38	St Johns		No	Yes	1 time	More than 5 times	More than 5 times	Wildlife viewing Other: 4 wheel back roads	Completely tear down the dam. Restore the river & build upland camp site. Plant oaks in the uplands & cypress near the river.	weeds, backed up water. Only a few people fish on a regular business. Fishing will be better once restored.	man made structure blocking flow & springs.	breach the dam	Minimal maintenance after restored.
10/7/2021 7:47	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Wildlife viewing Other: Whaling, picnicking	The dam removed. Nature restored.	Science.	Continued destruction.	I doubt it	Make it right. Enough has been seen to know this waterway was the wrong call. Florida is environmentally sensitive and anything we can do to restore it, we should be doing. Natural wildlife habitats will rebound and everything benefits. Except the sleadfast bass industry- and they can fish anywhere.
10/7/2021 7:53	Putnam		No	Yes			1 time	Other: Not at all	It's removal so the Ocklawaha could be restored	Experience of what it was like before the dam was built. In 1966.			
10/7/2021 8:02	Putnam		No	Yes			1 time	Fishing	Total removal	Water flow restoration, natural striped bass fishery	Continued degradation of the river water quality.		Enough is enough. Get this done now.
10/7/2021 8:04	Alachua		No	Yes			1 time	Wildlife viewing	Remove the dam, return the free flow of the Oklawaha River	Numerous reports by wildlife ecologists and environmental scientists supporting removal of the dam.	Continued degradation of Florida's water quality, wild spaces and wildlife communities.	no	
10/7/2021 8:30	St Johns		No	No					I think the dam should be removed completely and allow the water to flow freely	Removing the dam will allow the Ocklawaha and springs to restore the environment and improve water quality which will encourage plants and fish and cleaner water for the manatees.	Water quality would degrade further and put manatees in even greater danger. So many have died already due to loss of quality water and food. Florida waters should, must be made free from pesticides and other harmful chemicals. These are destroying the environment.	River Keepers are doing a wonderful job of monitoring the rivers and water quality. Donations are always welcome and I would be glad to donate to such a worthy cause	Restoring our rivers, streams and springs will encourage more fish and in turn more fishermen, plus tourists who enjoy the natural beauty of fresh, clean water.
10/7/2021 8:34	Brevard		No	Yes			1 time	Boating	I'd like to see the dam removed and the river restored to its natural flow.	This is an unneeded remnant of an uncompleted project, planned then cancelled decades ago, that harms the local and regional environment.	The continued negative environmental effects leaving the dam in place would cause.	None that I'm aware of but I'd be willing to learn about more options.	
10/7/2021 8:39	Hamilton		No	No					Return everything to its natural state.	I am 68 years old. I farm in Hamilton county. It didn't make a lot of sense to me when the plan was first put in to place. Why would you dig up a natural river.? It was all political to me. Money. The cost of all evil.	Nothing really,except it's not in it's not in its natural state.	I don't have a dog in this fight. Just looking in from the outside.	I've seen ground water affected right here at home. I have a natural 5 acre pond on my farm. It's creek fed from surface water. It's level has been affected over the years by other people digging. The natural flow has changed for it.
10/7/2021 8:39	Lake		No	Yes		2-5 times		Other: I don't. I visit in hopes it has rotted away and the river system flow has been restored.	Take it down!	Access to all the springs and historic waterways for our dwindling manatee population.	More dead manatees.	No. This dam should never have been authorized, much less built.	Florida native here, I know the area BEFORE the dam. Our waterway, water quality, wildlife etc continue to be trashed by mismanagement and greed and this dam is a stellar example of just that.
10/7/2021 8:49	Hillsborough		No	No					Breach the dam and restore the river to its natural state	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No. Breach the dam	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/7/2021 8:57	Marion		No	No		2-5 times		Canoeing / kayaking Wildlife viewing	Removal	The benefits to wildlife and the health of the entire water system will be improved	Jacksonville will be in danger of flooding and salt water incursions due to sea level rise. This will happen. We have cut off the flow of shore and coastal building materials for 80 years. As for the sportsman economy, the waterway is turning into a mono culture of bass. Great for sportsman, horrible for the food chain and viability of the waterway. A proper diverse spectra of biology is needed to keep the length of the waterway healthy.	Perhaps a way to allow the river to run free but have gates that could be closed in time of extreme flooding situations. However, a healthy waterway can absorbe such flooding scenerios on its own.	
10/7/2021 9:00	Volusia		No	Yes			1 time	Wildlife viewing Other: Enjoyment of nature	I would like to see it restored to it's natural state.	Various articles by scientists and water management experts.	Continued degradation of water quality	No	We need to reverse a a terrible decision made years ago. We also need to learn to work with nature, not against it. The water quality in Florida is a serious concern.
10/7/2021 9:01	Alachua		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Boating Wildlife viewing	As a wildlife ecologist at a university who has worked closely with state and federal agencies on Florida wildlife-related issues for 30+ years, the evidence is overwhelming: The Kirkpatrick Dam must be removed and the river must be restored to its natural flow for the health of the entire ecosystem.	Evidence/data/an overwhelming body of scientific research!!!!! Hundreds of scientists and doctoral students have conducted research on the negative environmental impacts of this dam for years and it is abundantly clear that this dam must be removed if we have any hope of restoring the health of the river, spring system, the surrounding wetland ecosystem, and the hundreds of vertebrate and invertebrate species of wildlife (from aquatic snails to manatees) that depend on this ecosystem for survival. This ecosystem is one of the few remaining iconic and significant undeveloped natural areas in Florida. It needs our protection and restoration!	Silver River and its incredible network of springs is literally dying right before our eyes. If a minority of short-sighted, selfish interest groups prevent the scientific agencies of our state from doing what all of us who have conducted research on this ecosystem know what needs to be done, not only will it jeopardize the survival of iconic endangered species such as manatees, but it could also irreparably damage our state's fresh water supply! 90% of Floridians get their drinking water from the Floridan aquifer and the Ocklawaha/Silver River ecosystem is a major component of that underground water supply network.	No! This battle to remove the dam has been going on for decades. Enough is enough! We have reached a tipping point of opportunity to save this ecosystem. The dam must be removed, period.	
10/7/2021 9:11	Hillsborough		No	Yes			More than 5 times	Canoeing / kayaking	Tear it down.	Returning it to its natural state.		No	
10/7/2021 9:13	Alachua		No	No					Remove the dam and restore the free flow of the river.	Rivers need to flow freely; dams disrupt their natural functioning and all of the ecosystems that are supported by them.	The continued negative effects on the St. John's River increasing salinity.	No. This enormous mistake has been allowed to continue for far too long already.	
10/7/2021 9:16	Outside of state / other	Wisconsin	No	Yes		1 time		Canoeing / kayaking Wildlife viewing					
10/7/2021 9:19	Brevard		No	No					The removal of the dam seems to be the most fiscally and environmentaly responsible action! First, the repairs needed and continued cost to maintain a 53 year old structure is excessive. Additionally, and most importantly, removing the dam will allow the Ocklawaha River to flow freely, restoring one of Florida's natural waterways.	Before construction of the dam, the manatees navigated the river to reach Silver Springs for the winter. A free flowing river, should have a positive impact on the manatees!	The death of a species, the manatee.	Absolutely NOT!	
10/7/2019 9:19	Volusia		No	No					Restoration of the Ocklawaha aklawaha river by breaching the Rodmanr/ Kirkpatrick dam. every day that the dam is in place harm to the economy, water quality and wildlife is infected through the great Florida waraway.	2200 lost Springs and Silver Springs ecosystem are restored.	Restoration creates more diverse recreation opportunities for everyone.	No	Breaching the dam is 50 years overdue.
10/7/2021 9:21	Lee		No	No									
10/7/2021 9:27	Outside of state / other	Tennessee	No	Yes			More than 5 times	Fishing Wildlife viewing	I would like to see it left alone. It is a very diverse ecosystem.	I have been coming to Rodman since 1991 to fish for large mouth bass. On many of our visits there were any many as 24 members in our party. Just on my personal information, I think that draining Rodman would have a economic impact on the local economy.	Being able to fish the reservoir and enjoying the diverse wildlife.	None.	
10/7/2021 9:40	Duval		No	No		2-5 times		Other: To see how the Dam is used	I would like to see it dismantled	The Oklawaha River is not being able to function the way it is supposed to, to aid fish and other wildlife. The Reservoir needs to be drained every 3-4 years to clean up the build up of invasives, costing unnecessary tax payer dollars	It will just continue to "drain" resources for its continued maintenance.	No.	The original purpose for the Dam was never realized. Dams that are no longer functional have been taken down all over the country and have greatly benefitted species. It is time to take it down.
10/7/2021 9:45	Lake		No	Yes	1 time	2-5 times	2-5 times	Fishing Fishing (shoreline/structure) Boating Hunting	Just remove it it was a mistake from the beginning	It shouldn't have been built in the first place	Don't know	No	Just get rid of the damn thing
10/7/2021 9:51	Duval		No	Yes		1 time	2-5 times	Fishing Canoeing / kayaking Boating	It should be removed to enable the restoration of the Ocklawaha watershed.	I camped on the Ocklawaha in the 1950's and the 1970's. I owned riverfront property on Little Lake George for 28 years beginning in the early 90's. I have observed the deterioration of water quality and marine life in and around the area resulting from the dams and locks. The wd grass has all but disappeared in the area and the fishing has gotten worse. People are resistant to change but this would be a change for the better.	Continued degradation of water quality and marine life.	I'm sure some sort of compromise could be worked out, but it wouldn't be as beneficial as the complete restoration of the Ocklawaha to its original state.	Restoration of the Rodman lake area will take decades. Most people would be in shock to observe the "moonscape" that exists during drawdowns. This will be an issue to resolve in the planning for the restoration. Maintenance of the locks/dams will continue to rise in expense and the quality of the habitat will continue to decrease.
10/7/2021 9:52	Alachua		No	Yes	1 time		1 time		Remove it	return this destroyed ecosystem to nature	continued abuse of our natural habitat		no
10/7/2021 9:54	Citrus		No	Yes			1 time	Canoeing / kayaking	Remove the dam and then develop the area for greater recreation use.	Manatees and free flowing rivers to help the environment flourish	Greater destruction for all creatures that live in this type of envionm.	Not at this point but I'm open to suggestion.	
10/7/2021 10:03	Lake		No	No					Let the river go back to natural flow, just like they are doing to the Kissimmee	The success of returning the Kissimmee to its natural state.	The current problems as stated in this form.	No	Others are more eloquent than me.
10/7/2021 10:27	Alachua		No	Yes			1 time	Wildlife viewing	Remove and restore oklawaha.	Return to natural river system, renew flooded springs, safety of ageing dam	Continued environmental damage , collapse of dam	Not that I can see	
10/7/2021 10:32	St Johns		No	No					The dam removed and the water flowed allowed to resume its natural course	The renewal of the Ocklawaha River and natural springs	Environmental damage to the landscape around Oklawaha	Other than tearing down the dam? No	We have a cabin on Lake Weir so we drive over the Cross Florida Barge Canal Overpass on 19. So I see the stagnant water caused by a dam that never should have been built.
10/7/2021 10:33	Pinellas		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam	The Rodman Dam impacts three rivers, more than 50 springs, and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers, and other wildlife.	If Florida does not act now, we will miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and dangerous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	2021 is the deadliest year on record for the manatees; unless their natural habitat is restored, we can expect for die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/7/2021 10:36	Duval		No	No					Restore the natural flow of the Ocklawaha River by removing the Kirkpatrick Dam.	The overall health of the State's rivers and tributaries.	I have not seen any studies of a partial closing of the dam / partial opening of the Ocklawaha River flow, but if that resulted in a positive outcome, I could support this action.		As someone who has a life-time of sports and recreation on the St Johns River I have witnessed the decline in health of the river. Clean healthy water is a precious commodity that commands our respect and proper stewardship. The future health of Florida's natural environment and population requires it.
10/7/2021 10:42	Dade		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Hunting Wildlife viewing	Leave it alone. There is nothing wrong with them.	It's a thriving ecosystem that supports tons of animals and tons of manatees. It also purifies the polluted water coming down the Ocklewaha River.	I'm concerned that any changes will displace all that wild life.	No compromise. Leave it alone. There is nothing wrong with the current situation.	
10/7/2021 10:55	Volusia		No	Yes				Wildlife viewing	Remove all dams.	Restore the River to nature.	Loss of natural habitate.	Partial reoval. Only beavers should build dams.	
10/7/2021 11:04	Marion		No	Yes			1 time	Wildlife viewing	I would like to see the dam removed and the area returned to its natural state.	The rivers and springs will be restored to their natural state.	There are many - dam breaking, water quality declines, lost opportunity to provide access for manatees who are being stressed at unprecedented levels and historic fish populations.	Absolutely not. This should have been done 50 years ago. I'm a native Floridian and have lived through many governors who have vowed to remove Rodman Dam and it never gets done. It costs the taxpayers money and does harm to the natural environment. There is nothing natural about the ghastly sticks emerging from the water.	Please find the political will to do the right thing.
10/7/2021 11:04	Alachua		No	Yes			1 time	Other: Only went to take a look given the ongoing controversy over the dam.	This project, part of the cross Fla. barge canal, was a terrible decision from the start. I believe the dam needs to be removed. While I understand and appreciate to some extent the preferences of the people who fish the reservoir, I think keeping the dam, especially now that there are structural issues that will require more taxpayer money to repair, is far outweighed by the many positives of returning the Oklawaha river to its natural state. Though doing so might eliminate the big boat bass fishing, it would allow numerous other places along the river to fish. Additionally, people have rediscovered the natural beauty and function of free flowing rivers. I believe more wildlife would return and the opportunities for recreation along the natural winding river would eventually exceed that of the reservoir. Finally, given the environmental harm done to the river and the surrounding wetlands, this would present a wonderful opportunity to restore some nature in place of this man-made alteration. It isn't good to mess with mother nature.	For years I have read of the pros and cons of the dam. Over time the arguments for demolishing the dam and returning the river to its natural state have more cumulative heft, intellectually to me. All around us we see the unintended impacts when man alters nature. Typically they are negative. Recently a friend told me of visiting family who owned a cabin in the Ocala National Forest. He described sitting on their porch, surrounded by nature. A few feet below the porch a small spring bubbled. When the dam was built this area including the cabin and the spring were submerged. We hear fishermen would lose a cherished spot, but losses such as this one never seem to get mentioned in the ongoing discussion about what to do with the dam.	That mother nature will punish us all for not taking steps to undo the dam. That by continuing to support the dam we will be robbing Floridians of the lush natural beauty that is being taken away from us all by the minute.	Not being an engineer it is difficult for me to imagine some compromise here. Either the dam goes, or it stays. Being a person who spends a good part of my life outdoors, I am sensitive to taking away anyone's ability to be in and enjoy the outdoors but in this case, there really are alternatives to a contained, artificial body of water and with time I think even the adamant pro-dam people would appreciate the more natural option.	
10/7/2021 11:11	Duval		No	No						I would like to see the dam removed	Based on my understanding, concern for desperately needed clean water will be impacted	It would be difficult and would require compelling evidence that keeping the dam is best for the health and wellbeing of the environment and what it provides for us humans to thrive, long term.
