10/7/2021 11:11	Putnam		Yes	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Hunting Other: Camping, commercial fishing(catlines), sharing the nature and history of Ridman via boat with my grandchildren. Guiding.	Rodman Reservoir and Kirkpatrick Dam should be left intact and required maintenance budgeted to keep the overall quality of the areas for future generations. I am a life long resident and stakeholder,our families have the brunt of this from the beginning and have built our lives around it. It needs to stay and be maintained, it along with the lock have a great economic impact to all residents of Putnam County. We also need more unimpeded access to the canal banks. When I was young we had total access. Stop allowing FWC to lock everyone out.	Ecosystems and economic impact to residents and all Floridians if a restoration was attempted. Why do all the "environmentalists " want to destroy the Reservoir, lock, and dam? This would till the existing ecosystems, hurting, and fishing, and destroy the local economy. We do not want a "kayak industry", it is not viable. The Reservoir is also a great fresh water reserve. We don't need the pollution from upstream either.	The economic impact and recreational impact to Putnam County residents. The massive mess that would be the Reservoir without water, a skeeter and snake hole for generations. Loss of annual food production by low income residents who supplement fish caught at Rodman into their diets.	No.	This land was condemned for the canal and should have been given back to the original owners if the area was destroyed, all canal authority land too. We who live here have made our lives and families lives work with the Reservoir, dam,and lock. They should be left alone, not destroyed or tampered with.
10/7/2021 11:36	Alachua		No	Yes			1 time	Wildlife viewing	Remove the damn and restore the Oklawaha River		The damn is over 50 years old - past its life expectancy, it is a public risk and will be costly to maintain. It has also impacted the river negatively.	Risk of breach, waste of money and waste of opportunity.	no	
10/7/2021 11:37	Pinellas		No	Yes		1 time	2-5 times	Canoeing / kayaking	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Open up the Ocklawaha River to fish and wildlife, allowing access to more habitat, especially natural springs which provide important habitat for Florida manatees, as well as other species.	Manatees are losing valuable habitat (warm water and vegetation) and are dying at numbers never before seen. Restoring the river and allowing access to springs will remediate other habitats that are being lost. In addition, due to the age of the Rodman dam, it will cost millions and millions to repair it. Rather than spend money on outdated infrastructure, let's spend less and gain more by removing or breaching the dam.	Waste millions of dollars repairing an obsolete structure that is chocking Florida's valuable natural environment. We have the change to right the wrong from decades past. Let's not miss this opportunity.	Breach the dam, Allow the river to flow. A complete dam removal might not be necessary but the reservoir needs to be drawn down and river needs to be allowed to return to its natural channel	
10/7/2021 11:47	Alachua		No	Yes			1 time	Wildlife viewing	Breach	Springs and wildlife	Ecological disaster	No	
10/7/2021 11:54	Outside of state / other	Monroe County, PA	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	That the world will continue on without the existence of manatees, a creature so gentle and endearing, not causing any trouble at all. It would bring humanity such shame to continue on a path that eventually causes the extinction of these magnificent animals. PLEASE CARE ABOUT THE ANIMALS THAT MAKE OUR PLANET SUCH A WONDERFULLY RICH PLACE TO LIVE. This includes ALL wildlife but ESPECIALLY the large mammals that are suffering so much from human impacts. PROTECT THE WILD PREDATORS TOO! Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Appopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/7/2021 11:58	St Lucie		No	Yes			2-5 times	Wildlife viewing	Removal, free the water and save the manatees	The manatee deaths this year	Corruption of our elected officials.	Not really, it's like being a little bit pregnant	Undo the damage to the waterways
10/7/2021 11:59	Marion		No	Yes	1 time			Fishing Wildlife viewing	To be left alone	It's a thriving ecosystem that supports tons of animals	Displacing wild life	None. No compromise	
10/7/2021 12:01	Hillsborough		No	Yes			1 time	Canoeing / kayaking	Take down the Dam.		Continued decline of the River and Wildlife no	No	
10/7/2021 12:02	Marion		No	Yes			1 time	Other: Camping one time	Remove it and restore the river and natural flow. Remove Ingils Dam too. They both need to go.	Water quality diminishing. There won't be any bass left before long. Save the Silver and Rainbow Springs.	Having two bike Okeechobees nearby. Rodman and Rousseau will become cesspools	Absolutely not. It's not about politics like it has been in the past concerning these dams. Both need to go.	Why is no one talking about lake Rousseau in this discussion. It's the same issue. The Rainbow river is green all the way up to hiaad springs. Remove both dams or you will have unusable water ways and deterioration of plant and animal species
10/7/2021 12:04	Alachua		No	Yes			1 time		Remove the dam and let it flow naturally	not worth the environmental or economic cost to maintain.	Cost of maintenance.	no	
10/7/2021 12:10	Laion		No	No					Remove the aging dam and reservoir; restore the Ocklawaha River so that it is free-flowing.	A free-flowing river would ultimately restore natural grasses and other elements of habitat that support Florida's endangered manatees and other wildlife, as well as restore natural springs that were inundated by the reservoir.	I worry that the sport fishing industry will prevail, the old dam will be shored-up instead of razed, and environmental degradation there will continue. The cross-state barge canal was stopped, thank the Lord, Marjorie Harris Carr and her supporters. However this early mistake - a dam where none is needed - should be corrected.	No, the dam should go. The river should be restored. There are other places to fish. Heck, you can fish from the river, which would be much more interesting and challenging for skilled anglers?	
10/7/2021 12:30	Marion		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing Other: Show other people	Stay the same	I am 50 years old. Born and raised here in Marion County, FL. I want to share same memories with my grandson.	It would take the wildlife a long time to adjust. Access to the river would be limited.	Nope	If it is not broke, then don't fix it.
10/7/2021 12:47	St Johns		No	Yes		1 time	2-5 times	Wildlife viewing	remove the dam and restore the flow of water	nature, and the natural flow of water. Look what we did to the Everglades and how it is costing to engineer a new solution to get the water flow correct. also, Restoring warm water habitat for manatees in the winter, a healthy ecosystem and the natural beauty of the river, all of which were compromised by the ill advised construction of this dam.	The continued destruction of one of Florida's most beautiful natural resources	Yes. Partial destruction of the dam necessary to restore the natural flow of the Ocklawaha	There was plenty of good bass fishing before the dam was built, and there will still be plenty of bass fishing available after the Ocklawaha restoration is complete. The restoration and preservation of the Ocklawaha River far outweighs the benefits of Rodman Reservoir's bass fishery.
10/7/2021 13:31	Alachua		No	No					I want to see the damn breached to restore the Oklawaha river	The economic impact of destroying the river will be far larger than the impact of bass Fisherman. That's why most important reason for voting for this. I secondary reason is that it will increase recreational opportunities and I am an outdoors person and would like to do something in that area.	My biggest concern actually is that manatees population is declining and the lack of food for them breaks my heart	I am not aware of alternatives that would allow a damn to remain and also restore the river so my answer is no	
10/7/2021 13:40	Duval		No	Yes					We need to support the locals who use and love the reservoir with new boat ramps, docks, and access to expansive views and private retreats. But the river needs to be restored and the damn removed.	The loss of fresh water flow to the St. Johns caused by the damn (evaporation from the reservoir) and the pollution from necessary herbicide use at boats ramps and in the reservoir are my biggest concerns.	The loss of fresh water flow to the St. Johns caused by the damn (evaporation from the reservoir) and the pollution from necessary herbicide use at boats ramps and in the reservoir are my biggest concerns.	I think that's why this issue hasn't been fixed already. You can't have a partial damn. I guess you could build a smaller damn further upstream with a smaller reservoir. But I'm not sure that compromise would make economic sense or satisfy many.	Thanks for your courage to do the right thing on this issue.
10/7/2021 13:40	Putnam		No	Yes			2-5 times		Remove dam, restore Ocklawaha	Free flowing is better for springs, wildlife, water quality, and probably good for tourism too.	The very high cost of maintaining the dam		
10/7/2021 13:41	Lee		No	Yes			1 time	Wildlife viewing Other: To see for myself the irresponsible behavior that caused this disaster into existence. Return it to its natural state.	Tear down the dam. It is too old too fix and is an abominable attack on nature's wisdom. It should never have been there in the first place. In and off itself, it is habitat destruction/pollution. Stupidity incarnate.	The project itself was supposed to create an expedient pathway for commerce. This never happened and was never completed. THE PROJECT IS A FAILURE AND IS CONSTRUCTURALLY UNSAFE! Hundreds of Manatees died there this year due to lack of food. Let the area return to its natural setting.	The continued destruction of our natural habitat. This whole idea was stupid/unnecessary from the onset. Do the intelligent thing, WORK WITH NATURE, NOT AGAINST IT. Show some integrity for a chang and leave partisan politics out of this. Do you think you can do that?e	Yes. Take partisan politics and leave Earth forever.	Florida was once beautiful, before hubris, and greed thought they could make it better.
10/7/2021 13:42	Hillsborough		No	Yes		1 time	2-5 times	Canoeing / kayaking	Complete removal	Restoration of the Ocklawaha River, supporting wildlife that depend on it for habitat	A river choked with invasive aquatic vegetation, blocking out sunlight needed for native veg to grow, depleting water quality and harming wildlife that depends on the river for habitat and food.	Not in the long run. We've already wasted ~ 50 years since the Cross Florida Barge Canal's decommissioning. However, I do understand that river restoration needs to happen in smaller steps over time. Let's get going on these steps!	
10/7/2021 13:47	Flagler		No	Yes			1 time	Boating Wildlife viewing	The River returned to its natural state. As a child we do enjoyed boating the River.	The dam serves no useful purpose and blocks natural migration routes.	Less protection for our special dwindling Florida wildlife.	Have not heard of any & nature knows best.	
10/7/2021 13:53	St Lucie		No	No					I dont kno	manatees will go extinct if we dont do something	that we will continue to lose more marine life	no	
10/7/2021 13:56	Pinellas		No	No					I'd like to see the damn removed & natural water flow restored.	What a ridiculous question! I'm a 5th gen FL native immensely concerned about our environment.	Another ridiculous question	None!	Manatees are an emblematic animal drawing many tourists. They're dying at higher rates because pollution is destroying their feeding grounds, adding to that are deaths in locks.
10/7/2021 14:02	Alachua		No	Yes			2-5 times	Fishing Boating Wildlife viewing	I would like to see the dam removed.	The need for a free flowing river	That the aging dam will fail.	Perhaps a partial reduction of the dam and some release to the river flow.	
10/7/2021 14:13	Alachua		No	Yes			1 time	Other: I only want to observe. I do not wish to use the reservoir to perpetuate the problem of choking off the river and the springs.	To revert back to the original landscape. Barring that maybe a smaller reservoir could be managed that would not drown the springs.	The recent economic study that shows economic value from more than just bass fishing. Also the manatees are being hurt and the migratory fish as well.	That the damn would one day fall. Also the manatees and the migratory fish are being hurt.	I suppose a partial change in the size of the reservoir but I need to see there river flowing all the way to the St. Johns	It is outrageous that this has gone on as long as this! President Nixon announced an end to this fiasco many years ago.
10/7/2021 14:29	Marion		No	Yes	1 time	2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Wildlife viewing	Be removed, water needs to go back to its natural flow in the state	Fish - all types are disappearing, water looks bad now	We loose alot of fish and wildlife	no	we miss OLD FLORIDA clear waters and alot of activity from fish, wild life, etc. before the dam.

10/7/2021 14:46	Alachua		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Canoeing / kayaking Boating	Pave road going to kenwood ramp.	I'm a lifelong Floridian and sad to see what's happened to my state. I could understand different options than mine if those persons would only visit Rodman. There's too much misinformation being pushed by money.	I'm 59 years old and have learned how to deal with change but the economic impact on the area would hurt a lot of people.	Sure, what are my options?	While I'm not sure creating Rodman years ago was the correct thing to do destroying it now is even more wrong!
10/7/2021 14:46	Alachua		No	No					Remove the dam; eliminate reservoir and restore river to natural state	Continuing negative effect on the ecosystem	Extinction of wildlife habitat and deleterious effect on ecology.	Get rid of the dam without taking any other restorative actions.	I was in college when the dam was created and thought a cross-Florida canal had positive connotations. I no longer believe that and since the original purpose is no longer possible this remnant is nothing more than a reminder of why the plan for the canal was abandoned. That it has certain short-term benefits to a small subset of society does not translate into a benefit for society as a whole.
10/7/2021 15:07	Lee		No	Yes			2-5 times	Other	Destroy it, post haste.	Loss of ancient Florida for a minority group that is steadily falling in numbers.	Loss of dwindling ancient Florida. Need I remind that this was the ancestral home of Seminoles, who are reluctant to share their opinions, but Osceola himself loved this river until his death.	Nothing comes to mind!	Get it done already, and honor decent people who fought their adult lives seeking a restoration.
10/7/2021 15:07	Suwannee		No	Yes			2-5 times	Boating	I would like to see the dam come down and the original flow restored	all the flooded springs	that flora and auna would suffer as a result.	No.	
10/7/2021 15:16	Alachua		No	Yes			2-5 times	Wildlife viewing	Please remove or breach the dam.	I believe there is a need to restore the environment and the river flow.	The continued degradation of the environment.	Opening the dam at intervals too eventually achieve the environmental goal. Also keeping a take for continued fishing.	
10/7/2021 15:18	Duval		No	No					Have the dam removed and restored to free flowing!	Recommendations of the St. John's riverkeeper	The constant costs for cleaning out the waters behind the dam	no	
10/7/2021 15:29	Columbia		No	Yes			1 time	Other	Blow it up!	Videos depicting restoration of habitats in a short time.	Florida will continue to die	No	
10/7/2021 15:38	Alachua		No	Yes			2-5 times	Wildlife viewing	REMOVE THE DAM	ENVIRONMENTAL CONCERNS	MORE ENVIRONMENTAL DISASTERS	NO	
10/7/2021 15:45	Putnam		No	Yes		2-5 times		Fishing (shoreline/structure)	Tear the damage down and let the river flow like it is supposed to.	The dam should have never been built	Mor stagnation in the St. John's river.		
10/7/2021 15:48	Duval		No	Yes			1 time	Wildlife viewing	done away with	the seagrass for the manatees - environmental positions - river flow	the manatees would starve to death for lack of seagrass	get rid of that dam	it's crucial to Florida wildlife to get rid of that dam
10/7/2021 15:59	Brevard		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide $50+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to $37 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/7/2021 16:16	Duval		No	Yes			More than 5 times	Fishing Boating Wildlife viewing Other: Bird life	Expansion of the reservoir to include additional recreation amenities.Science Camps,Boy and Girl Scout camps Youth Lodging	The idea that it would take another 50 years to return the reservoir to maybe half of what it was before its establishment.Also creating a public health hazard in creating a "Pest Area for Mosquitoes"People who frequent the area certainly know the pluvies e.g. Migratory species that now call Rodman home. Giant Otters ,Bald Eagles etc Its a paradise.It doesn't get any better than thisJA pest hole	A Pest Hole of a Mosquito species that could eradicate a lot of people in the area	There could be more water added to the present allotment	It's really hard to turn around fifty years of adaptable landscape that has been denuded with out tremendous economic support and the question would be from what entity.
10/7/2021 16:19	Okeechobee		No	Yes			1 time		Breach it	Loss of 20 springs More habitat for manatees and no further spending to maintain the dam.	More general eco decline	No	Gettyng rid of the dam is 50 years overdue. Fishing in Rodman reservoir can be replaced by natural areas that will be gained by breaching the dam. Fishing in the reservoir is like shooting fish in a barrel. They have no where to go. We as a society are better than that. Lose the dam.
10/7/2021 16:22	St Johns		No	Yes			1 time	Fishing (shoreline/structure) Boating Wildlife viewing	I want to restore the natural flow of the Ocklawaha River and would like to see the dam removed.	Restoring warm water habitat for manatees in the winter, a healthy ecosystem and the natural beauty of the river, all of which were compromised by the ill-advised construction of this dam.	The continued destruction of one of Florida's most beautiful natural resources.	Yes. Partial destruction of the dam necessary to restore the natural flow of the Ocklawaha.	There was plenty of good bass fishing before the dam was built, and there will still be plenty of bass fishing available after the Ocklawaha restoration is complete. The restoration and preservation of the Ocklawaha River far outweighs the benefits of Rodman Reservoir's bass fishery.
10/7/2021 16:26	Citrus		No	Yes		1 time	2-5 times	Fishing (shoreline/structure) Wildlife viewing Other:	Please, restore the river & forest back to the way nature intended it to be!	So much of "old Florida" has been lost forever!	Not surprising, since it has been "shot down" several times in the past		Several generations of my family own/owned acreage in Moss Bluff. Many of them have passed away but we still have property there. I would like to see the natural habitat restored.
10/7/2021 16:28	Lake		No	Yes			More than 5 times	Canoeing / kayaking Boating Wildlife viewing					
10/7/2021 16:28	Putnam		No	Yes			More than 5 times	Fishing Boating	Demolish the dam and let the river flow normally!	Covering up the springs.	The harm to nature and the manatees.	No	
10/7/2021 16:35	Orange		No	Yes			1 time		Undo the dam	Rivers should run free to support wildlife and ecosystems	Wildlife and ecosystems die		We must start focusing on our environment in FL. There us no planet B.
10/7/2021 16:37	St Johns		No	Yes			1 time	Other: I don't use it, I wanted to see it	I think it should be breached to return to a naturally evolved Ocklawaha river	The dam impacts three rivers preventing natural migration of native fish and refuge for manatees.It also prevents the flow of 150 million gallons of freshwater flow to the lower Ocklawaha and St Johns rivers increasing intrusion of saltwater. The dam is costly to maintain because of its age and could lead to costly flood damage should a uncontrolled breach occur.	All of the above are equally concerning to me.	No! Action is needed now to help our wildlife and rivers and prevent future avoidable costs to the Florida taxpayers.	
10/7/2021 16:53	Alachua		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	1. Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 2. 20 lost springs and Silver Springs ecosystem are restored 3. Historic fish and manatees return as breach opens creating a free-flowing river 4. 100s of manatees gain essential warm water winter springs habitat 5. 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 6. 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife 7. 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers 8. $4-14 Million in dam repairs saved on a dam past its life expectancy 9. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. 10. $57 million in potential flood damages avoided to downstream property owners.	1. We miss the best opportunity to do this: State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. 2. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. 3. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. 4. A storm event triggers a dam failure or overtopping resulting in potential damages to $37 property owners and up to $57 million in damages. 5. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. 6. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. 7. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. 8. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. 9. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. 10. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Please open your eyes and think about the future of our natural resources -- not about money.
10/7/2021 16:55	Outside of state / other	MN	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to $37 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/7/2021 17:01	Alachua		No	Yes		1 time		Other: To see the dam in person while keeping an open mind.	I would like for the dam to be removed, the reservoir drained, and the river restored to its free-flowing state.	The dam and reservoir themselves. They are unnaturally in place, decaying with age, and require an unjustifiable tax-based expense to maintain.	The Floridians, and AmeriCans, would lose out on the incredibly rare opportunity to actually restore (and see restored) an ecosystem of cultural, economic and environmental significance. Rarely has a chance to do something right for the environment been so obvious and so achievable.	While some proposals offer that it could be done in stages, I think anything short of full restoration leaves us prolonging what a free-flowing, healthy river system would offer. If the purported economic impact of losing the reservoir is to be mitigated, only a fully- functioning river can offset those economic consequences.	Thank you for allowing comments and for addressing this decades-old issue with the renewed sense of urgency it so richly deserves. I'm a Florida singer-songwriter known around the state since the early 90s. The song I wrote and posted after my visit to the dam in January (A River Enslaved) describes in its title exactly what we're seeing when we look at the reservoir. It has received over 1500 views on Facebook. Please free the Ocklawaha.
10/7/2021 17:12	Orange		No	Yes		1 time	More than 5 times	Fishing Boating					
10/7/2021 17:14	Leon		No	No					Removal of the Kirkpatrick Dam and the restoration of the Ocklawaha River.	It would greatly help the chances for the Florida manatee to survive. It would increase tourism for local businesses - kayaking, nature photography, diving, etc. It would complete the Florida Wildlife Corridor for people and wildlife.	Florida will lose its manatees. Also, the dam is in need of urgent repair. It is currently a danger to surrounding communities.	No	Around 50 fresh water springs would be available for manatees and for diving. It would create many more jobs than are currently sustained by bass fishing in a dying lake.
10/7/2021 17:22	Marion		No	Yes		2-5 times		Fishing	Leave it alone. It's working.	The process of history can tell you that the Barge Canal was a mistake, however, the Rodman reservoir produces monetary income and does no harm to the eco-system.	Broad flood lands	No. Leave it as it is.	
10/7/2021 17:29	St Johns		No	Yes		More than 5 times		Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing	Nothing should stay the same	The amount of money we spend for lodging at food etc would be gone.	I won't be back	No	
10/7/2021 17:43	Duval		No	No					The dam to be removed, thereby allowing the springs to and adjacent wetlands to recover.	Numerous news stories for the last 10-15 years of how the North Florida springs are diminishing in flow rate, quality, and becoming overcome with underwater grasses. I realize that some of the damage is being caused by over-siphoning of the Floridan Aquifer due to sow grassland watering and residential expansion.	That my grand-children will never know the bliss and sheer peaceful joy of seasonally tubing down the Ichetucknee River, and picknicking in the park after the trip. You have to experience it to understand exactly what I mean.	Nothing aside from a full restoration and future funding of the preservation of the North Florida spring systems. However, I realize that many people enjoy boating and fishing on the Reservoir. Incomes and livelihoods are affected as well. We must consider this impact, and address this in any legislation.	PLEASE SAVE OUR SPRINGS!
10/7/2021 17:49	Alachua		No	Yes	1 time		1 time	Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing	Remove dam and restore River.	I used to visit there most often before the dam was built; almost every weekend during hunting season plus several other times during the year.	The original reason to build the dam was never realized. The dam degrades the Ocklawaha River.	I would support anything that would make progress to restoring the Ocklawaha River to its original state.	I had a friend who owned a cabin there which was torn down because of the construction of the dam.
10/7/2021 18:08	Volusia		No	Yes	1 time	More than 5 times	More than 5 times	Canoeing / kayaking Wildlife viewing Other: Photography	I would like to see the dam removed and let nature return. Once the dam is removed Manatees will once again be able to use the Ocklawaha and Silver Rivers as habitat and access springs for their winter refuge relieving the crowding that happens every winter at Blue Springs near my home in Volusia County. The Striped Bass will return and once again be able to used the Ocklawaha for spawning as it's the only suitable River in Florida for this purpose. Once again snook and Tarpon will be in the waters up to Silver Springs a long with other lesser known species. This boondoggle that never should have happened was killed by President Nixon! This dam should have been removed decades ago!	Wildlife will continue to suffer, the flooded forests will continue to drown and the springs which are now underwater aren't available for recreation. Manatee crowding is becoming a great concern because of detrimental actions the state is employing such as spraying of herbicides in all of Floridas waterways and now lining the banks of the run at Blue Spring with rocks eliminating any browsing of roots and foliage by manatees during the cold spells. These 2 actions will both cause hardships from a lack of food for the manatees and soon we will start seeing these animals becoming starved and dying in the winters. 1 Bad winter is all it will take. Freeing the Ocklawaha will alleviate some of this problem allowing more manatees to migrate to Silver Springs during the winters.	I could support breaching the dam alone and leaving out any "restoration", the rivers and forests will return to nature if left alone. Breaching the dam during the fall/winter seasons would allow manatees to access the rivers dammed.	It's the right thing to do!! It should have never been left in place 50 years after the project boondoggle was scrapped. There is no reason to keep it in place, the best and largest Bass are now caught in the St. Johns River. We could eliminate the need for a hatchery to stock hybrid bass for recreational purposes an as little as a decade saving us $5millions in unnecessary expenses and save 5 Millions by eliminating maintenance and upkeep on an already used beyond it's serviceable lifespan dam. Removing the dam will pay dividends versus leaving it in place and replacing it will cost untold $$ Millions. There is no good argument for keeping it.
10/7/2021 18:09	Marion		No	Yes			1 time	Wildlife viewing Other: hiking	Removal	Restore Ocklawaha to a free flowing river to facilitate habitat restoration	eventual breach of dam	I understand there is a proposal for a partial removal and drawdown. I will rely on the science to make the best choice.	The economic value of passive recreation is greater than the value for fishing. There is also significant cost to maintaining the dam that is unnecessary.
10/7/2021 18:50	Bay		No	Yes	1 time	2-5 times	More than 5 times	Fishing Canoeing / kayaking Wildlife viewing	Maintain the reservoir and dam	Reservoir has created a diverse eco- system			
10/7/2021 18:53	Alachua		No	Yes			2-5 times	Wildlife viewing	Removed completely and the entire area allowed to be returned to nature the way it was meant to be.	The environmental damage it has caused.	Further decline of the Beautiful Oklawaha River and surrounding land.	NO! The debate has gone on for way too long. Restore the river. The Cross Florida Barge Canal project was halted years ago and all structures associated with it should be removed.	
10/7/2021 18:56	Marion		No	Yes			2-5 times		Take it out	Numerous environmental surveys, it's old and costs to much to continue to maintain, historical evidence showing how many animal and plant species are negatively impactedby it	That it would cost millions of dollars to maintain	No	
10/7/2021 19:05	Duval		No	Yes	1 time	2-5 times	More than 5 times	Boating Wildlife viewing	Tear it out, return to natural state.	Restoring the floodplain function and natural stream flow, reduction of silting, more natural flow into the St John's, improved manatee habitat, improved water quality.	Catastrophic failure of the old dam.	Partial removal restoring streamflow.	Resident on Julington Creek, I highly value our natural waterways and have observed the negative impacts of dam projects in Florida since 1967.
10/7/2021 19:43	Marion		No	No					Demolish the dam, restore the river.	Concern for the environment.	Same- environmental concern.	No.	There are other places for people to fish. Recreation shouldn't take precedence over the natural environment.
10/7/2021 20:23	Alachua		No	Yes			1 time	Other: Just want to look at it.	I would like to see it removed and the Oklawaha allowed to go back to its natural course.	I took a trip on the river during the last draw down. What I saw and learned on that trip reinforced my belief that the entire St. Johns River ecology would benefit by taking the dam down.	Continued the water quality in this area of the state.	Just knock a hole in the earthen berm and leave the dam standing as a further testimony to human folly.	
10/7/2021 20:29	Duval		No	Yes	1 time	2-5 times	2-5 times	Fishing	I believe that we should return nature back to the way it is suppose to be, with OUT the Reservoir/Dam.	Studies and reports on the benefits of restoring the Ocklawaha. Let nature return to all of the springs year round every year.	We continue to kill nature in these springs and all of the habitat and animals	There seems to be only the two options. Free the Ocklawaha bring back the springs	I know Steve Miller. I respect him for his stance but I truly believe that him and his side is only looking at not being able to have a premier bass fishing spot... Hy/they are using the Manatees as the reason for keeping the dam/reservoir Restoring nature/Ocklawaha the way it should be is the right thing to do.
10/7/2021 20:34	Duval		Yes	Yes	1 time	2-5 times	More than 5 times	Fishing Canoeing / kayaking Wildlife viewing Other: Hiking the Florida National Scenic Trail	I would like to see the dam removed and the Ocklawaha restored to its natural flow.	The dam and reservoir has resulted in the significant reduction of marsh and floodplain lands necessary for flood attenuation, aquatic and terrestrial wildlife habitat, and water purification. The dam also prevents the natural migration of a variety of aquatic wildlife species (such as shad, mullet, catfish, North American eel and the manatee) and natural nutrient and detritus dispersal through the river system.	The continued degradation of the Ocklawaha and the St. Johns Rivers with the reservoir essentially functioning as a large unmaintained stormwater management pond, resulting in high organic accumulations and intrusion by aquatic weeds.	Nope. Remove the dam and restore the Ocklawaha.	
10/7/2021 21:45	Pasco		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	
10/7/2021 21:57	Volusia		No	No					It should be removed so that the river can run free again. It would improve fishing along the river, provide additional habitat for manatees, and remove a failing dam with no functional purpose.	Final Environmental Impact Statement for the Ocklawaha River Restoration https://www.federalregister.gov/documents/2021/03/26/01-6810/kirkpatrick-damoklawaha-river-restoration-project-ocala-national-forest-putnam-and-marion-county	We spend more tax payer money on a pointless dam.	No	
10/7/2021 22:38	Lake		No	Yes		More than 5 times	More than 5 times	Wildlife viewing	The Kirkland Dam should be destroyed and the Rodman Reservoir be allowed to return to its natural state.	Science and the environment	The loss of boating, fishing, sightseeing and Manatee habitat as well as the loss of the freshwater springs.	No. This is way overdue. Even President Nixon could see that continuing the project was wrong and he halted construction. Now we need to RESTORE the habitat and reverse the ecological damage finally.	Leaving this area as it is cannot be. It is way past time to restore the area to what it was before this horrible ugly ditch was dug. Opening up this area will bring tourism back to a blighted area.
10/7/2021 22:49	Putnam		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Boating Wildlife viewing	I would like for this entire area to eventually be restored to its natural state, allowing the river to flow as it did before the dam was built in the 1960's. What we have now, must be maintained. While in a natural state it would cost taxpayers nothing. I realize there will be a cost in removing the dam and infrastructure, but that would be a one time cost. Operational and maintenance costs will continue for as long as these structures exist.	The Cross-Florida Barge Canal was a bad idea. This dam, the reservoir it created and two ugly bridges on SR 19 and SR 40, are all that remains of this bad idea. It is past time to restore this public land to a more natural state. Continuing to spend taxpayer money to operate and maintain it is equivalent to doubling down on what was a bad idea to begin with.	My concern is the cost of operating and maintaining a dam so that a few hundred fishermen can catch big bass more easily. Admittedly, I am not an avid fisherman. But if I were, I'd be fishing in the Ocklawaha River, a healthier environment for the fish.	Yes. Simply open the gates of the dam, breach the spillways in the reservoir and let mother nature slowly wear away the damn and the infrastructure around it. Then spend the money saved on cleaning up the St Johns River.	If the river were to be restored, the fish in the reservoir would not be lost, they would end up in the river, not as easily caught. A restored river would benefit both sides.
10/8/2021 1:02	Brevard		No	No					Breach the Rodman/Kirkpatrick Dam!	Manatees are experiencing the deadliest year on record. Breaching the Rodman/Kirkpatrick Dam could restore access to critical habitat that manatees desperately need for the continued survival of the species.	My biggest concern is that hundreds of manatees would continue to be deprived of access to warm water habitat that is essential for their winter refuge.	No. Breaching the dam is 5 decades overdue.	While this year's manatee crisis was mainly caused by starvation from the loss of seagrass, the greatest long-term threat to the manatee is the loss of natural warm water wintering habitat. Restoration of access to winter refuge in the warmer waters of Silver Springs and the Ocklawaha's "drowned" springs could prove vital to the manatee's survival. Thank you for your consideration.
10/8/2021 1:49	Outside of state / other	Louisiana	No	No					The natural passage to the Ocklewaha River must be restored.	The dam is resulting in negative effects on the entire ecosystem, including threatened species in the area.	The detriment to the environment, the dam continues to block the natural passage of fish and manatees. The manatees are unable to access the warm water refuge of the Ocklawha River and will continue to perish at an accelerated rate.	No, the passage must be restored. This will improve the ecosystems and also have a positive economic impact on the area.	
10/8/2021 4:24	Alachua		No	Yes			1 time	Wildlife viewing	Free the river	Free the river	Water and wildlife devastation	Free the river!	
10/8/2021 5:31	Orange		No	Yes					Breach the Rodman/Kilpatrick Damn	Fish population in Silver Springs have declined by 92%, in part due to the construction of the damn, hundreds of Manatees would gain access to much needed habitat at a time when Manatees are experiencing the deadliest year on record, and the damn is past its life expectancy.	We miss the best opportunity to do this: State and Federal funds are available, public interest is high, and environmental needs are critical (manatee, water quality, wildlife habitat), and the damn is unsafe.	No. Breaching the damn is 50 years overdue.	Manatees: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more to die off in the future.
10/8/2021 5:42	Outside of state / other	New York	No	Yes							We Must preserve and protect wildlife of all species and plants!		
10/8/2021 6:52	Marion		No	Yes	1 time	1 time	2-5 times	Fishing (shoreline/structure) Wildlife viewing Other: camping	restore to free flowing springs	clean water flow and multi use natural Florida springs will be restored	the privileged few would hoard resources the public would lose again	nature knows best	

10/8/2021 6:59	Marion		No	Yes	More than 5 times			Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Hunting Wildlife viewing Other:	The dam should remain in place and remain as it is .. Florida is growing we just might need the water resource . It is also a good sanctuary for manatees! Maybe we can use rodman to release rehabilitated manatees.	Just take a boat ride it will give you all the information that supports my position!	Wild life will die!!!!! My well will go dry along with many others!!! Manatees will die!!!	Absolutely not!	Rodman reservoir is the most beautiful body of water I have ever been on! The ecosystem is incredible ! It's like no other! Getting rid of the dam would devastate the economy and the area! Thousands of people's wells will go dry! Businesses will go out of business!
10/8/2021 7:00	Martin		No	No					Restore the river to it's natural state	The current condition of the springs and the loss of manate habitats	The springs		None
10/8/2021 7:15	Outside of state / other	Litchfield County, CT	No	No					I would like to see the dam removed so manatees have a natural warm water habitat for the winter	Restoring the river to it's natural state is beneficial to other native species that would thrive in that habitat, in addition to the manatees.	The manatee population would decrease and possibly become extinct if humans don't help	No. This is long overdue.	As an occasional visitor/tourist of Florida, one of the most thrilling, iconic and important aspects my visit there is seeing the manatees.
10/8/2021 7:23	Marion		No	Yes		2-5 times		Fishing Other: Animal watching/photography	Leave it as it is.	The ecosystems are already established. What about all of the animals (fish, manatees, gators, birds, etc)	All of the animals will be displaced	No	
10/8/2021 7:52	Putnam		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing	LEAVE IT ALONE!!!	It is a wildlife refuge and water resource for all Floridians. It is now in a natural state and should be left undisturbed!	It would take decades for the negative impact of draining Rodman to be apparent. It is great now.. why make it something else?	No	If you want to turn Rodman into a mudpit in the name of conservation and wildlife mgt you must not have ever been there.
10/8/2021 7:57	Putnam		No	Yes	More than 5 times			Fishing Fishing (shoreline/structure) Boating Wildlife viewing	To stay like it is. Repair the dam and locks. This is the best fishing in Florida hands down	Habitat and wildlife. The fishing is excellent	It would cost more money to fill in the pool. It would take years for the muck to dry. Plus it would ruin the best fishery in Florida	SAVE RODMAN RESERVOIR	
10/8/2021 8:04	St Lucie		No	No					Restore the river natural flow beginning with a gradual increased flow to monitor the progress	Doesn't this fall into the same categories of road bridges abanded from the failed barge canal	Change control of board members making the decisions to keep this structure in place.	Increase flow !	Get her done !!
10/8/2021 8:07	Pinellas		No	No					reunite original river system	environment	our eco system is suffering and if we don't reverse ill advised decisions we won't recover	no	
10/8/2021 8:07	Sarasota		No	No					Have the dam stop holding water and damaging the wildlife	Sierra club	The damage to natural resources would continue	No	
10/8/2021 8:08	St Lucie		No	No									No comments
10/8/2021 8:08	Osceola		No	No					Breach the dam	Basic biology and hydrology knowledge	Continued separation of waterways	No	
10/8/2021 8:09	Orange		No	No					As it was originally built for a canal that never came to be, I'd like to see it destroyed to restore all the wetlands and springs that went away due to its construction. Florida's wetlands and springs are one of the State's greatest natural assets - and they attract tourist revenue.	Report from the Sierra Club.	More development and less natural wetlands and springs		
10/8/2021 8:09	Palm Beach		No	No					I would like to see the dam destroyed and the land to be restored to the way it was before.	The fact that it was put in place for a non-existent barge-way. Theres no reason to have the dam.	Wildlife and the area surrounding it has suffered and will continue to suffer because of the dam.		
10/8/2021 8:09	Pinellas		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Historic fish and manatees return as breach opens creating a free-flowing river	Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/8/2021 8:10	Seminole		No	No					restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam	Sierra Club	The destruction of the Ocklawaha River	no	
10/8/2021 8:10	Leon		No	Yes		1 time	Canoeing / kayaking		remove it	Environmental harm.	More harm.		
10/8/2021 8:11	Hillsborough		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.
10/8/2021 8:12	Brevard		No	Yes		2-5 times		Wildlife viewing	Dam opened to allow free flow as previous use.	Deterioration of water quality, as well as manatee and other Mari elude u able y you o reach warm water as needed for survival	Further deterioration and eventual costly damage to properties and economy of Florida.	No	Just clean up the mess that was produced with the dam. Return the flow of natural wa as yers so we can be safer and healthier
10/8/2021 8:13	Martin		No	No					Restore it to its natural state and let it flow!	The Ocklawaha River was severed in 1968 during the construction of a dam for the ill-fated Cross Florida Barge Canal, which was never completed. The dam destroyed 7,500 acres of forested wetlands, 20 springs and 16 miles of the river. Half a century later, the dam still blocks the river route for fish, manatees and boaters, from Silver Springs to the Atlantic Ocean.	Continued Blockage to the Atlantic Ocean.		
10/8/2021 8:15	Collier		No	Yes		2-5 times	Canoeing / kayaking Wildlife viewing		Remove it!	Manatees are not able to go up to the springs in the winter and the natural flow of the river has been destroyed.	See above	No	
10/8/2021 8:17	Martin		No	Yes		2-5 times	Wildlife viewing		Removal and restoration of the river and floodplain	Estuarine impacts, loss of springs habitat, loss of connectivity, loss of manatee habitat	Continued impacts downstream, continued threats to manatee population	This is a terrible question. There is either a dam or no dam. What possible scenario is in between?	
10/8/2021 8:17	Osceola		No	No					Restored	Environmental	Wildlife, Water.		
10/8/2021 8:17	Seminole		No	Yes	2-5 times	1 time	Boating		Restore the river connectivity	Wetlands were lost and can be reclaimed for wildlife	Loss of natural diversity over time		
10/8/2021 8:18	Volusia		No	No					Re-engineer using modern evidence-based eco-development models	Balance the needs of nature and people for a healthy pragmatic ecosystem.	Contaminations, Water insecurity, Economic reversals.	It needs to move in the right direction to achieve the goal of having a sustainable engineered reliable water system.	
10/8/2021 8:19	Duval		No	Yes		2-5 times	Wildlife viewing		Remove the dam.	Historic blockages/threating of our precious water resources, when allowed to return, the wildlife and healing occurs. An example, Kissimee River restoration.	Further stagnation and decline if a system that was always meant to flow free.	No.	Please just do this.
10/8/2021 8:19	Pinellas		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.
10/8/2021 8:19	Duval		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing Other: Off road motor sports	Leave as is.	This area is magnificent as is. I've used and enjoyed it for decades.	The ecosystem is fragile and any intrusive changes would be detrimental to the area.	No.	
10/8/2021 8:19	Palm Beach		No	No					Removed to allow the natural flow of the river and connect back to the ocean.	There isn't enough space to provide all of the information that supports this cause. Dams are environmental disasters and are extremely expensive to maintain safely.	We've lost countless amounts of natural habitat and water resources. As our community grows so does our need for fresh drinking water. Not to mention by removing the dam, the amount of visitors to the area will increase due to the recovery of flora and fauna of the area.	No.	
10/8/2021 8:20	Broward		No	No						Breach the Rodman/Kirkpatrick Dam.	Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No, the dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	From an ecological standpoint, human-made dams are overall detrimental to natural ecosystems. Not to mention the expense they impose to taxpayers. The dam must be breached.
10/8/2021 8:20	Marion		No	Yes		2-5 times		Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing Other: swimming in the lost springs.	I would like for the Rodman Reservoir and Kirkpatrick Dam to be removed	the free flowing river provides a healthier river ecology with accessible springs, healthy cypress, less non native aquatics, manatee habitat, fishing from the banks	the river will die	NO	
10/8/2021 8:21	Dade		No	Yes		2-5 times	Boating Wildlife viewing		I would like to see better protection for vulnerable wildlife, especially manatees.	Hundreds of dead manatees over the past couple years alone is unacceptable and we have a responsibility to protect these gentle creatures.	Further manatee deaths and destruction of wildlife/ecosystems	Not really.	Please help us protect the manatees.
10/8/2021 8:21	Lee		No	No									
10/8/2021 8:21	Charlotte		No	Yes		2-5 times	Wildlife viewing		Rsecre the Oklawaha to original flow patterns	Disruption of historical ecological balance	continued decline of water quality and ecological integrity.	None that I have heard	
10/8/2021 8:21	Alachua		No	Yes		2-5 times	Wildlife viewing Other: hiking nearby trails		Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored and Historic fish and manatees return as breach opens creating a free-flowing river	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/8/2021 8:22	Manatee		No	No					I would like to the dam breached.	Breaching the dam is a win/win situation. Maintsing the dam is costly money wise. Our fish, manatees, and lost springs benefit as well.	I am most concerned with the environmental impacts of keeping the dam. Throwing good money after bad is equally unwise.	No	Let's be a good steward of the Earth, and our resources.
10/9/2021 8:23	Manatee		No	Yes		2-5 times	Wildlife viewing Other: Bird watching		Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to habitat for birds, water quality, and wildlife is inflicted throughout the Great Florida Riverway. Once the Dam is gone, acres of forest will regrow reversing the effects of climate change.	Once the Dam is gone, acres of forest will regrow reversing the effects of climate change. Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored.	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	This exciting restoration will improve water quality and flow by generating an additional 150 millionn gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms which have become increasingly common downstream, support coastal resiliency by allowing the freshwater flow to be restored, and counter saltwater intrusion for the benefit of our groundwater drinking source, many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration and reversing climate change by storing carbon dioxide in the soil. Climate change solutions can't wait, and this Dam has been in place for the wrong reasons for far too long. Thank you for your consideration.
10/9/2021 8:23	Brevard		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/9/2021 8:23	Dade		No	No					restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	the dam still blocks the river route for fish, manatees and boaters, from Silver Springs to the Atlantic Ocean.	The negative impact on the wildlife and environment	Unsure	
10/9/2021 8:23	Franklin		No	Yes		1 time	Canoeing / kayaking		WT/hing how florida waterways are bribg & have been destroyed is sickening. Multi generational native of this stare. RESTORE the river ways (IMPRUDENTLY, UNNECESSATLY & without positive cause) severed	Avid follower of nature news in our state. The greatest thing that Florida has is it's natural essence beauty sites. Yet we continue to ruin them. This is one-sided unnecessarily altered that can be restored and must be restored ! For six decades I have visited one color Springs and watched what we have done to destroy that incredible natural site - truly of world value. Our state is a mockery - marketing the natural resources but OH SO RARELY protecting them!!!! INVEST A LUTLE for once instead of always TAKING AWAY	Already threatened waterways & wildlife Also, This is an antiquated man-made structure of it is going to continue concrete scald , deteriorate & decay - then fall away ..it needs to be managed in the right way and done now	I cannot imagine such. Please, inform me!!??!!	My grandfather Hus Coulter was State Forester & urged & taught Balance. ! I feel that Florida has lost its way all I see is EXPLOITSTION
10/9/2021 8:23	Orange		No	Yes		2-5 times			Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	$57 million in potential flood damages avoided to downstream property owners	Increasing flood risk due to climate change	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/9/2021 8:24	Orange		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. nd ecosystems all along the Riverway.
10/9/2021 8:25	Duval		No	Yes		2-5 times	More than 5 times	Fishing Wildlife viewing	Leave it alone	Fishing is unbelievable and it is a beautiful area.	It would be harder to fish and the area would lose it's beauty. Plus developers would move in.	No	
10/8/2021 8:26	Pinellas		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	Breached / removed	Restoring the natural waterway / ecology	It continues as is dam amazing the waterway and using tax funds for pointless maintenance	No	
10/8/2021 8:27	Highlands		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Historic fish and manatees return as breach opens creating a free-flowing river	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.
10/9/2021 8:28	Seminole		No	No					I would like it to be breached to restore the Ocklawaha River.	The destruction caused by the dam. The dam has already destroyed 7,500 acres of forested wetlands, 20 springs and 16 miles of the river. Half a century later, the dam still blocks the river route for fish, manatees and boaters, from Silver Springs to the Atlantic Ocean.	It is past time to do all we can to help our environment. Our manatee, for instance, are dying at an alarming rate. We can no longer overlook our past mistakes such as building this dam in the first place. We only have one planet.	No.	
10/9/2021 8:32	Nassau		No	No					Remove it	The cross Florida canal was never completed	Further environmental degradation	No	
10/9/2021 8:33	Palm Beach		No	Yes		2-5 times	Canoeing / kayaking Wildlife viewing		Breach the dam and let it return to the river its meant to be	Documentary I saw on the health of the ecosystem	Continued degradation of the area, silting up of the dam anyway	not really	Please return to its original state
10/9/2021 8:33	Pasco		No	Yes		1 time	2-5 times	Wildlife viewing	Restoration of the Ocklawaha River by breaching the dam	Restoring the Ocklawaha River would revitalize the entire system of waterways in the region by improving habitats for wildlife including manatees, improving water quality by restoring currently drowned springs, and enhancing the Florida Wildlife Corridor for people and wildlife.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No, the dam is outdated and unsafe and we are in an environmental crisis that could be ameliorated in part by breaching the dam and restoring the natural waterway, thus improving water quality and restoring wildlife habitats.	As a Florida resident who values our unique ecosystem, I am asking that you restore the Ocklawaha River to improve our key natural resources. 2021 has been a rough year for manatees in particular, and while restoring this river will not solve all problems related to manatee survival, it will allow access to cleaner water, more warm-water habitats during winter months, and reestablish access to Silver Springs. Thank you for your consideration.
10/9/2021 8:33	Volusia		No	Yes		1 time		Fishing (shoreline/structure) Canoeing / kayaking Wildlife viewing	The natural waterway should be restored.	There should be a natural outlet that flows to the Atlantic and the dam prevents that.	The quality of the water continues to deteriorate as more algae and weeds proliferate due to decreased flow.	Open the dam fully and continuously for increased water flow.	Better to dismantle the dam and increase flow in a controlled manner than have it fail and flood Putnam County properties without warning.
10/9/2021 8:33	Nassau		No	No					I would like to see the dam breached and the wetlands restored	The dam serves no purpose	Another part of Florida's beautiful naturalhabitat will be lost for no reason.	No	
10/8/2021 8:34	Marion		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	100s of manatees gain essential warm water winter springs habitat	Hundreds of manatees lose the opportunity to access essential warm water winter habitat and we all know Manatees are already endangered. We must save these amazing animals	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration
10/8/2021 8:34	Pinellas		No	No					To restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam in order to improve economy, water quality, and wildlife throughout the Great Florida Riverway.	It is vitally important that 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	I am very concerned hundreds of manatees would be unable to access essential warm water winter habitat.	No there is not. It is time to breach the dam for safety, wildlife, and to preserve the wild beauty of Florida!	This restoration will improve water quality and flow, help the coast, and preserve the wildlife corridor; it will provide habitat for the iconic manatees and help the local economy by increasing visitor traffic by a projected 28% (myself included!) What makes Florida such a special state is our nature, both coastal and inland, our waters, our birds and fish and mammals that are special to our state. Please restore this area and preserve the beautiful, unique, life giving natural space! Thank you for your consideration
10/8/2021 8:34	Pinellas		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	This exciting restoration will improve water quality and flow by generating an additional 150 millionn gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
10/8/2021 8:34	Duval		No	No					I am concerned about salt water intrusion here in the Jacksonville area. An influx of fresh spring water flowing north might help to counteract intrusion incouraged by the dredging at the moth if the St. Johns. Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored including the Silver Springs ecosystem. I went to Silver Springs as a kid and it needs help. 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers. Historic fish and manatees return as breach opens creating a free-flowing river. 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier. 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife It makes sense for our economy. $4-14 Million in dam repairs saved on a dam past its life expectancy. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. $57 million in potential flood damages avoided to downstream property owners.	With larger storm systems in our future I am concerned about flooding. Wetlands help to distribute flood waters. Water quality decline further fuels invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. We are currently dealing with a nasty algae bloom. The dam is expensive to maintain and there are just too many benefits for humans and wildlife in the waterways and on land with the dam gone. Right now is our best opportunity to get this done. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a homeowner in Duval county near Jungton Creek and the St. Johns River, who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. This exciting restoration will improve water quality and flow by generating an additional 150 millionn gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.

10/8/2021 8:33	Clay		No	Yes			1 time	Boating	I would like to see the original flow of the Ocklawaha restored.	I live on the St. Johns River and am deeply concerned about the health of our river and springs. Restoring the flow of the Ocklawaha would improve the health of that river, the Silver River, and the St. Johns and the springs that feed them.	Water quality due to overpopulation, nutrient runoff, waste, and dredging will continue to cause decline in the St. Johns River system. Habitats for manatees and other wildlife will continue to shrink. Money will be poured into maintaining a pointless and failing piece of infrastructure that was never needed.	No, the dam impacts river ecology and serves no purpose.	There is no cogent argument that a 50-year old dam somehow enhances a 300,000 year old river system, or that maintaining this pointless, aging infrastructure improves the ecology and economy. A few vocal fishermen and deep-pocketed politicians with ulterior motives should not hold hostage a river system affecting all of North Florida.
10/8/2021 8:35	St Johns		No	No					Take the dam down or allow it to breach	The restoration of 20 springs that were damaged as a result of the dam	The 20 springs will not be restored	No	Florida needs to care about restring these springs and becoming a beacon for environmental action to save this beautiful state
10/8/2021 8:35	Citrus		No	Yes	2-5 times			Fishing Canoeing / kayaking	Remove dam	Dam inhibits the ability of the River to revert to a natural state		Install fish ladders and a method to allow manatees to enter the upper upper reaches of both rivers.	
10/8/2021 8:35	St Johns		No	Yes			1 time	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat),	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	This project was created for commercial purposes and later cancelled, but the damage and the dam were not properly removed when the project was terminated. It is time to restore the river and springs and to reverse the damage done.
10/8/2021 8:37	Lee		No	Yes			1 time	Canoeing / kayaking Wildlife viewing			Killing fish, disturbing nature		
10/8/2021 8:38	Hillsborough		No	Yes			More than 5 times	Boating					
10/8/2021 8:38	Sarasota		No	No					Breach the dam and restore the river	Biodiversity reaumes open rivers for continued ecological balance	Additional senseless Species extinction	No please restore this river so our children can experience the beauty and like on this planet moving forward	
10/8/2021 8:39	Hillsborough		No	No					Dismantle	damage done to the river and marshlands for a dam that serves no purpose	Continued degredation of a natural resource	no	
10/8/2021 8:40	St Johns		No	No					150+ million gallons a day of natural flow will be restored to the St. Johns River Estuary, helping to mitigate the impact of salt intrusion from the Atlantic Ocean.	State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	Florida's natural environment is further degraded, and economic opportunities are lost.	No. Dam safety, improved water quality and wildlife can't wait.	
10/8/2021 8:40	Alachua		No	No					The area should be restored to its original state.	Habitat has been destroyed and far too much money has been spent to maintain this failed project.	This state and this country loses a valuable wildlife habitat. We cannot stand to keep losing these ecosystems to such folly!	None. Make this habitat right again is the only scenario!	Once it is lost - that's it. Restore and protect.
10/8/2021 8:41	Duval		No	Yes			1 time	Fishing (shoreline/structure)	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Historic fish and manatees return as breach opens creating a free-flowing river - this not only helps the wildlife, but also brings these animals back to the area creating great tourist opportunities	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. Not to mention The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.
10/8/2021 8:41	Duval		No	Yes		2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Removed.		Pesticides are killing wildlife.		
10/8/2021 8:42	Broward		No	No					Breaching the damn to restore the Great Florida River system for the improvement of water quality, wildlife sustainability and human economic benefit.	Breaching the dam will restore the Great Florida River system, it's lost freshwater springs and the surrounding habitat as well as alleviate the down River stresses associated with the dam's uselessness.	The dam has past its lifespan, costing millions in maintenance, furthering water quality degradation, continued threat to wildlife and worst case, dam failure or collapse.	No. Breaching the dam is long overdue.	Breaching the dam will allow the reunification of the Great Florida Riverway, improve the ecosystem for wildlife, spur economic and recreational activity and most importantly prevent catastrophic collapse and down River deterioration.
10/8/2021 8:44	Leon		No	No					Remove or breach dam restore river flow for fish and boaters and wetlands	Research that shows devastating effect of the dam	Continued loss of natural river flow and related ngative effects	Not sure	
10/8/2021 8:45	Hillsborough		No	Yes			More than 5 times	Canoeing / kayaking Boating Wildlife viewing	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers $4-14 Million in dam repairs saved on a dam past its life expectancy Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. $57 million in potential flood damages avoided to downstream property owners	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Thousands of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait. OR Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway.
10/8/2021 8:41	Brevard		No	Yes	1 time	1 time	2-5 times	Wildlife viewing Other	Restore River to pre damn condition	Great opportunity for natural enjoyment of restore rivrs, springs, and marine life	More waste of natural resources		Seems an easy decision. Bringing back a beautiful River and accompanying springs would bring nature lovers to support local economies
10/8/2021 8:46	St Johns		No	No					Remove it as much as possible	Fresght and decreasing aquifer and salt water incursion into St. John's river		See above	
10/8/2021 8:47	Sarasota		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Breaching of the Rodman/Kirkpatrick system in order to facilitate hydrologic connection of Silver Springs, the Ocklawaha and the St. Johns Rivers	Restoration of floweways would allow for natural connection to over 50 springs, migration of aquatic species such as fish and manatees which are already experiencing a threat to natural habitats elsewhere, and restoration of over 15,000 acres of natural forested wetlands. By breaching this dam, the hydrologic benefits may offset current threats to the springs systems caused by increasing public supply in surrounding areas and may benefit overall water quality in the springs and surrounding floodplains. Restoration of natural floweways and floodplains would also provide downstream benefits and reduce flooding risks for nearby homeowners. In addition, the restoration of 150 MGD of flow to the springs and river systems would reduce potential for saltwater intrusion.	SJRWMD would miss a significant opportunity to benefit the springs and restore 150 MGD of flow and the hydrologic connection for over 15,000 acres of wetlands and the greater springs systems. Should this connection not be restored, a continued threat to water quality and aquatic life will increase. Given current public supply projections, restoring connection to these major floweways would potentially offset both current and future water quality issues such as blue-green algae and saltwater intrusion and protect aquatic life by providing a sanctuary from an ever-decreasing habitat in the surrounding areas. In addition, continued economic impacts will occur due to required dam repairs and maintenance as the system degrades with time. Potential flood hazards for downstream homeowners would be significantly reduced by facilitating the restoration of floodplain area. Should this dam fail, the downstream impacts would be devastating. With public interest high and federal funding available, now is the time to take action.	Hydrologic connection for this area needs to be restored one way or another. Breaching of this dam would benefit water quality and aquatic life as well as mitigate threats of flooding for downstream homeowners	As an environmental professional, I fully support restoration of floweways caused by the breaching of the Rodman/Kirkpatrick Dam. This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.
10/8/2021 8:47	Seminole		No	Yes			More than 5 times	Canoeing / kayaking	Remove dam. Allow the river to return to its natural state.	The dam stops the flow of the river and movement of fish. The return of the river to its natural state would be great for canoeing.		No	We have seen the benefits of dam removal in many places across the country. There is no reason for a delay.
10/8/2021 8:47	Sumter		No	Yes		1 time	1 time	Boating Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	5,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. 10/8/2021 8:49	Seminole		No	Yes			1 time	Fishing Canoeing / kayaking Wildlife viewing	Back to nature and low impact pollution	Health of "mother nature's and the community	Kissing another price of earth good bye	Restrictions on pollution and fees for use.	
10/8/2021 8:50	Polk		No	Yes			1 time	Other	A natural resource for our environment and recreation	Needs to be properly maintained and vital for our economy and environment for Florida for the increase in population always raises more needs			
10/8/2021 8:51	Pasco		No	No					Restored back to its natural state.		It will become another dead lake like Cheechobee.	Not really, free flowing and natural is best for all in an ever shrinking natural world.	
10/8/2021 8:51	Pasco		No	Yes		1 time		Fishing Wildlife viewing	Removal	It's construction was for the abandoned Cross Florida Barge Canal project. It obstructs flow of fish and covers many fresh water springs.			
10/8/2021 8:53	Broward		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	
10/8/2021 8:53	Pasco		No	No					Remove it and restore land to natural condition.	The dam was created for a project that never came to fruition and flooded much needed wild life habitat.	That the dam will fall into disrepair because it's not necessary and fail unexpectedly and wild life will suffer.	No	Keep wild Florida wild. Save nature from unnecessary human development.
10/8/2021 8:54	Alachua		No	Yes	2-5 times			Fishing Fishing (shoreline/structure)	removal of the dam				
10/8/2021 8:55	Pinellas		No	No					Reunite the river's	Restoring the natural habitat and allowing the native animals to travel they natural path		No	
10/8/2021 8:56	Volusia		No	No					Breach the dam and restore the Ocklawaha River		Environmental damage		
10/8/2021 8:56	Duval		No	Yes	More than 5 times	2-5 times	More than 5 times	Fishing	Join togetherb	The natural flow of springs and rivers ttthv cross Florida barge canal was never completed	Environmental damage	Let it take its original natural shape !	
10/8/2021 8:57	Dade		No	Yes			1 time	Canoeing / kayaking	Breach it and restore the flow	Nature conservation and revitalization	Same	No	
10/8/2021 8:58	Putnam		No	Yes		2-5 times		Wildlife viewing Other	Keep it as it is for wildlife and fishing, it's an amazing place for nature lovers and the wildlife	We have few reserves in Putnam County and animals are being misplaced due to growth, Putnam has always been known for its fishing and river recreation	We are limited to clean waterways and places to enjoy in nature	It is imperative that we keep natural settings for people and the animals that depend on it to survive.	
10/8/2021 8:59	Citrus		Yes	Yes		1 time		Wildlife viewing	GET RID OF THE DAM AND MAKE WAY FOR OUR RIVERWAYS. RUINING ALL THAT BEAUTIFUL LAND FOR A PROJECT THAT WAS NEVER FINISHED, STORY OF AMERICA. LETS RUN WILDLIFE FOR PEOPLE YUCK!!	WILDLIFE IS KEY, WITHOUT IT WE ARE DOOMED ALONG W THIS SO CALLED PRESIDENT	WILDLIFE!	NOPE! GETTER DONE ALREADY! THIS IS MY STATE BORN AND RAISED HERE FOR OVER 50 YEARS! PEOPLE ARE RUINING OUR WORLD.	
10/8/2021 8:59	Columbia		No	Yes			More than 5 times	Wildlife viewing Other: Ride and walk the trails .	Open the dam and return the river naturally to it's previous state . Thank you .	The Rodman Reservoir is only good for fisherman and covers the springs and all of that land . Allow the fisherman and fisher ladies to fish the river and we all win .	That our children will never be able to see this natural wonder .	No .	I'm 61 years old and would like to see others enjoy this area again . I grew up in the area . No
10/8/2021 9:00	Palm Beach		No	No					Breach the dam to improve surrounding water quality no-no no-no	Wildlife would be positively effected	Expensive to maintain and improve dam that does not provided benefits	No. Breaching the dam is long overdue	Quality of water is crucial and this would help improve this need for Florida
10/8/2021 9:01	Hillsborough		No	No					make the dam go away	to restore the Great Florida Riverway	The dam was built for a canal - which was never built; so serves no purpose - just blocks the Waterway	No	from 4 very concerned Florid residents Doris H Lahr Deborah D Lahr Alexander Busch Susanna Busch
10/8/2021 9:02	Sarasota		No	No									
10/8/2021 9:02	Pinellas		No	Yes		2-5 times		Canoeing / kayaking	I support breaching the dam and restoring the river system to its natural state.	Restoring the natural system connects Silver Springs to the Atlantic, opening a waterway for manatees to find warm water in winter, and opening a corridor for restoring wildlife and fish. Wetlands also provide clean fresh water to the state. It will attract many visitors to the area and enhance the economy. Tourism will increase as people seek to visit natural Florida. The20 plus springs would be a huge attraction.	Florida misses an opportunity to improve the local economy, and restore our state's natural beauty…the rivers and springs that exist here are unique in the world!	I understand that a temporary gradual drawdown will provide assurances to local property owners but fully restoring the system is the final outcome I support.	As a kayaker I look forward to exploring this system and the springs, and seeing the manAtees. North central Florida is paradise when we restore it.
10/8/2021 9:02	Duval		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	The natrual floweway restored	We are losing so much wetlands to urban sprawl and construction that we need to restore any wetlands and springs that we can as well aa restoring the flow way to allow for drainage when needed	We are losing water in our aquafir and there are too many people and corporations allowed to remove water from the St Johns River basis. I fear that without restoring the wetlands and springs the population explosion will be beyond the capacity of our aquifer	No, the rodman damn has to be removed	
10/8/2021 9:04	Marion		No	Yes			1 time	Fishing (shoreline/structure) Canoeing / kayaking	Restore wetlands			Yes	
10/8/2021 9:07	Sumter		No	Yes			2-5 times	Canoeing / kayaking	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Historic fish and manatees return as breach opens creating a free-flowing river	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/8/2021 9:08	Outside of state / other	Charlotte, NC	No	Yes	1 time	1 time	2-5 times	Fishing Canoeing / kayaking Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife.	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait!	
10/8/2021 9:09	Pinellas		No	No					Whatever it takes to restore the area back to its original state.	All the damage the dam has done.	More destruction	I don't know	Keep up the great work you do!!!
10/8/2021 9:10	Volusia		No	No									
10/8/2021 9:11	Dade		No	Yes			1 time	Wildlife viewing					
10/8/2021 9:12	Lee		No	No					Removed	Wetland preservation and restoration	Continued degradation of Florida land and water.	Not really	
10/8/2021 9:12	Levy		No	No					It's removal in entirety.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored	We miss the best opportunity because State and federal funds are now available, public interest is high, environmental needs are critical for manatee, water quality, and wildlife habitat. And because the dam is unsafe in its present condition.	No. Breaching the dam is 50 years overdue. Dam safety is questionable, improved water quality is imperative, and wildlife issues can't wait any longer.	
10/8/2021 9:14	Pinellas		No	No					Remove it to allow the natural flow of water and a return to the original ecosystem.	That it will restore environmental and economic health on this important river area.	Continued damage to the ecosystem - manatees and fish unable to move freely in these waterways	Are there compromises with dams? I do not know if there is partial resolutions. In general dams are not a good thing.	
10/8/2021 9:16	Palm Beach		No	No					Breach it	Restore habitat for endangered species		no	
10/8/2021 9:17	Brevard		No	Yes			1 time	Wildlife viewing	I would like to see the restoration of the land as it was meant to be.	Everybody knows the information. Put all the data aside and do the right thing. Restore Florida. Big business is not the answer to Florida's problems. The problem is contractors who have been allowed to destroy our beautiful Florida. Man and nature must work together or man will lose and all we will have left is concrete, roads, and no water. Do the right thing for our future. Someone who reads this, act on what you know is the right thing to do. I am a native Floridian and in my 76 years have seen a beautiful land become a concrete eyesore with multilane concrete roads transporting vehicles going nowhere. Our future is at stake. Thank you.	That we today are no better than those who came before us desecrating our land. The officials who allowed this failed canal project to be constructed need to repair the damage to the land and put it back the way it was. And since they can't, we can.	Make amends. Work with our natural resources without destroying them and right the wrong that has been done. Thank you.	I am tired. I am old. And I hate to see my beautiful Florida destroyed instead of preserving the natural beauty for which it is known. Improve it vs. raping it and then leaving. Thank you for reading this far.
10/8/2021 9:18	Alachua		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored along with creation of more recreation opportunities and saving money on a dam well past its time.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No! Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.
10/8/2021 9:19	Hillsborough		No	Yes			1 time	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Breaching the damn benefits not only wildlife and the environment, but also saves $4-14 Million in dam repairs. This money can go on to be used elsewhere where it's most needed. The dams purpose was for a barge canal project in the 60's that never came to fruition. It has no use, and the small benefit it's providing now for recreation and wildlife could be greatly extended if it was breached. Springs and wetlands would be restored, and we could see Historic fish and manatee numbers return as breach opens creating a free-flowing river. In short, the benefits of removing the damn greatly outweigh repairing.
10/8/2021 9:20	Broward		No	No					I would like the recommendation of the Sierra Club followed.	Restoration of natural habitats.	Distruction of natural water flow.	No	
10/8/2021 9:20	Putnam		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing	I want you to leave it alone	Its a wonderful and thriving eco system, it supports a bunch and animals and especially the manatees. It also purifies the water coming down from the Ocklawaha river	My biggest concern is it will kill the ecosystem and many animals will suffer. AND DISPLACING THE WILDLIFE !!!!!!!!!!!!	THERE IS ABSOLUTELY NO COPROMISE!!!!!!!!	
10/8/2021 9:21	Lake		No	Yes				Fishing Wildlife viewing					
10/8/2021 9:21	Hernando		No	No					I would like to see it removed. I do visit Silver Springs and the st johns river for camping and kayaking primarily. the and I have seen the nonsense that is the beginnings of a cross Florida waterway which never went anywhere and I think the restoration of the original waterway would be a great thing for Florida water sport enthusiasts, for Florida fish and wildlife and for Florida tourism.	Everything I have read about the damage the Dems do United States was hell-bent on building dams for the first 20th century and now we are in the process of rethinking the cost versus benefit of those dams and in many cases are removing them to restore the natural waterways which protect the wetlands and the animals and plants who live there in which intern protect environment in Florida against do you evitable effects of global warming which in the case of Florida is rising water. Invasion of salt water into freshwater areas.	See above	I'm not sure what third alternative there is between having a dam or not having a dam. Half a dam? Lower dam? I don't think so.	
10/8/2021 9:21	Clay		No	Yes			2-5 times	Boating Wildlife viewing	remove the dam	100s of manatees gain essential warm water winter springs habitat	loss of ecosystem, plants and animals to extinction	no	The removal of the dam is overdue
10/8/2021 9:21	Alachua		No	No					I would like to see the damn removed and the river restored.	We destroyed the natural habitat of so many creatures and upset the balance of a beautiful area which is unique to FL.	The manatee will be extinct very soon. We will be complicit if we don't take this opportunity to do the right thing.	No, we must restore the natural flow of the river.	Please, let us show other states that we can deal with environmental issues and not ignore them.
10/8/2021 9:22	Sarasota		No	No					Eliminate it and restore original water flow and use	improving wildlife habitat	reduction in and damage to native species	no I feel any effects of maintaining and improving the dam would be counterproductive to improving the region's and the state's water usage and flow	
10/8/2021 9:22	St Lucie		No	No					Remove damn	Damn is hindrance to wildlife	Hindrance to wildlife	No	
10/8/2021 9:22	Sarasota		No	No					Get rid of it and restore the area to what it was in the 1960's!	Previous generations have made decisions that affect all of us Floridians, so good and some bad. This was BAD!	Let's think positively and think what could be achieved! Flow of fish, manatees and other wildlife to the Atlantic.	Not really.	
10/8/2021 9:25	Leon		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	I hope the oklawaha river will be restored to it natural path.	sust springs means more recreation possibilities in an increasingly populated state that depends on tourism. Providing natural areas for imperiled wildlife during the 6th greatest extinction is our responsibility and it is certainly an economic driver as we have seen in Crystal Springs. People love their sea cows.	This is the time. We know so much more than we did when this dam was built. Why spend to patch when we can prevent future floods, improve water quality for our growing population and restore springs, forests and wildlife populations for our citizens and visitors?	No. A drawdown does not create an unobstructed water way.	Our springs and rivers are natural wonders and deserve our stewardship. The benefits will be long lasting. We can grapple to hold on to the way things are which will be at great expense or we can redress our past errors and look to a brighter future with clean water, restored natural wonders with opportunities and a cleaner environment for all.
10/8/2021 9:25	Osceloa		No	No					I'd like to see it removed and water flows restored.	facts surrounding degraded water sources and habitats all throughout florida and the continued mis-management by corrupt water board members in your area.	more water waste degradation and corruption	no, the damn dam must be breached and this must be put behind us and science should only guide these decisions in the future not stupid republicons that can't even count votes	republicons are liars, cheats and thieves and cannot ever be trusted by what they say. just look at criminal desantis if you need any evidence.
10/8/2021 9:26	Duval		No	Yes		1 time	2-5 times	Wildlife viewing Other: Canoeing the Ocklawaha river up to the reservoir	The dam should be removed and allowing the natural flow of the river and restoration of the surrounding woods.	The reservoir covers up springs that are helpful to manatees; the cross Florida canal was not completed and the ecosystem should be returned to its natural state; the dam and reservoir inhibit canoeing and kayaking through the river system; the reservoir seems to only serve bass fishermen, not the entire recreational population; it makes no sense to me to continue to pay millions a year to maintain this dam.	A draw down is not sufficient. Not removing the dam will just continue millions of taxpayer money being spent for the sole enjoyment of bass fishermen, not the rest of us.	Not really, this has gone on far too long and the flooded federal lands need to be restored for use by all of us.	
10/8/2021 9:26	Pinellas		No	Yes			2-5 times	Wildlife viewing	Restore natural flows.	I believe having natural wetlands is a better use than another reservoir. It will clean the river, help manatees and increase recharge of the aquifer.	Further degradation of the environment	Let the science guide the decision, not just economic interests.	
10/8/2021 9:27	Duval		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	100s of manatees gain essential warm water winter springs habitat	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/8/2021 9:27	Orange		No	Yes		1 time	1 time	Canoeing / kayaking Boating Wildlife viewing	Take down the dam	Wildlife needs a safe corridor on the river	More loss of wildlife	No.	
10/8/2021 9:27	Volusia		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	I would like to see the dam breached to improve the river system quality, expose the 20 drowned springs, improve the habitat for wildlife, most especially the manatees which are suffering major losses in many of their habitats.	2021 has been a devesting year for manatees with record deaths due to degraded habitat. Restoring the river to its natural flow would also provide an improved area for recreation.	I think it would be a waste of taxpayer money to repair the dam when breaching it would accomplish so many good things for the Silver, Ocklawaha and St. Johns Rivers. So much of the beauty of Florida had been lost and breaching the dam would be one way to restore some of that beauty.	No.	The breaching of this dam is long overdue. I have kayaked from Silver Springs to the reservoir and from the dam to the St. Johns. I have also paddled on the reservoir, both when it is full and during drawdown so I am quite familiar with both the beauty of the rivers and springs and the blight that is the dam and reservoir. For the sake of the manatees and other wildlife and the beauty of the Florida environment, I ask that you decide that it is time for the dam to go.

10/8/2021 9:29	St Johns		No	No					It's time to take the damn down and restore the natural river system. The cost of maintaining the damn is not worth it. We can restore the rivers to their original state. This would restore natural habitats, provide cleaner water, and help with flooding/hurricane damage.	We can save $57 million I potential flooding costs as well as 4-14 million in cost to repair the damn.	Millions in taxpayer dollars wasted to keep a damn that doesn't provide flood protection, power, or water supply. There is little that this damn does to benefit the public and a lot that it does to harm the environment.	No, breaching the damn is overdue! Let's save money improve water quality, wildlife and tourism all at the same time	I care about Florida and restoring it to its natural splendor. Getting rid of the damn will reunite the 217 mile river way and provide countless benefits. The change would create a healthy water system that would benefit humans and wildlife throughout Florida. Restoration will provide crucial habitat for the manatees who saw the most deadly year in 2021 and are almost on the endangered species list. When you look at the pros and cons of this issue it is clear, the time has come to breech the Rodman reservoir.
10/8/2021 9:32	Lee		No	Yes	1 time	2-5 times	More than 5 times	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored. 20 lost springs and Silver Springs ecosystem are restored. Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait. OR	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. (characters: 478) MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. (characters: 521) WATER QUALITY: This exciting restoration will improve water quality and flow by generating an additional 150 million+ gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration. (characters: 516)
10/8/2021 9:33	Jefferson		No	Yes		2-5 times		Wildlife viewing Other: Painting the landscape	I would like to see the dam taken down so the river system can be restored	The climate/environment matrix is the most pressing concern for the whole planet We each have to do all we can to invigorate it.A restored river system will play a tremendous role in restoring habitat, cutting down on algae bloom, invite more tourist/recreational and aesthetic use,prevent flooding downstream.In the 19 and 20th centuries Florida waterways were an important route for business and tourism; tourists from the north could travel the length of Florida by paddleboat.Winslow Homer did beautiful paintings of Florida and wrote home that the Gulf was filled with fish -you could practically just reach down and grab one. The original inhabitants of the Gulf area surprised the European explorers by their height and health.Reason:they did not have to chase their food: it (the fish and sea life) came to them in plenty; each season brought different fish to their feet.(Book:The Gulf) Wouldn't it be wonderful if we could experience that again.	The dam would continue to be a huge taxpayer cost and serves no purpose.The health of the waterways is dangerously compromised and will continue to degenerate.I am greatly saddened by the life that is now extinct, not through evolution, but through human disregard and lack of respect.	No. This is too important	Please consider the larger consequences to our world and to our very life and existence, of each choice we make as state power holders and as individual citizens.
10/8/2021 9:35	Sarasota		No	Yes		2-5 times		Canoeing / kayaking Other: research- manatee distribution	Removal of the dam and restoration of the network of warm water springs for manatees	Removal of the dam to restore the natural flow of the Ocklawaha, Silver and St. John's rivers	Waste of tax payer dollars to repair the dam	Temporary draw-down of the reservoir	
10/8/2021 9:37	Pinellas		No	No					I think we should breach the Kirkpatrick Dam. Every day it still exists more harm is done!	There could potentially be damages worth about $57 million to property holders if flooding occurs, and breaching the dam would prevent this. It's the best environmental option as well!	We would end up wasting millions of dollars, which taxpayers would likely not appreciate, on a dam that isn't really doing anything helpful for those taxpayers.	There is not. We need to do this fully and completely.	There are SO MANY pros to beaching the dam. Better water quality, getting rid of costly flooding risk, providing a habitat for manatees (who doesn't love manatees?), striped bass, and other aquatic life, and increased fishing opportunities are just some of them. Why wouldn't we do this?
10/8/2021 9:37	Orange		No	Yes		2-5 times		Canoeing / kayaking Other: Hiking	Restore the Oklawaha River by breaching the Kirkpatrick Dam.	Three Rivers and 50 springs would be restored, much better.	We've lost a golden opportunity.	no	
10/8/2021 9:39	St Johns		No	Yes		1 time		Canoeing / kayaking Wildlife viewing Other: Scenery	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored and 20 lost springs and Silver Springs ecosystem are restored. Historic fish and manatees return as breach opens creating a free-flowing river	We miss the best opportunity to do this. State and federal funds are available, public interest is high and environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.
10/8/2021 9:39	Palm Beach		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	100s of manatees gain essential warm water winter springs habitat	Hundreds of manatees lose the opportunity to access essential warm water winter habitat.	No. Breaching the dam is 50 years overdue. 10/8/2021 9:48	Brevard		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	The 20 lost springs and the Silver Springs ecosystem are restored.	The Ocklawaha river, the springs and thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, recreation and economical benefits.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a Floridian who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.
10/8/2021 9:49	Hillsborough		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	If the dam were breached, there are significant improvements to water quality, restoration of the natural rivers and streams to include the Ocklawaha, Silver and St. John's Rivers. Help to restore springs as well which are some of the prime examples of "old" Florida	Probably the positive impact on wildlife and water overall. Fish, Manatees, the ecosystem become more natural and allow our precious heritage to be passed to our children and grands in Florida.	The time for action is now. When I moved to Florida 42 years ago, there were but 13million residents. Now there are 22 million. The natural environment is being squeezed by people, development and other pressures that harm wildlife. Let's get Florida a chance to retain some of its pristine locals.	The attempt to construct a cross-Florida canal did untold damage to 7500 acres of pristine habitat. We have waited for this opportunity, which, if not implemented, may never be available to us again.	As an Eagle Scout from the class of 1966 and a resident of Florida since 1979, I urge you to help us reclaim a small portion of the pristine Florida. The funding is promising and both political parties are interested in making positive steps to protect and restore the three major rivers impacted.
10/8/2021 9:50	Collier		No	Yes			1 time	Wildlife viewing	Flow of the river		We continue to hurt the environment and our planet		
10/8/2021 9:51	Pinellas		No	Yes			2-5 times	Wildlife viewing	Remove the dam and restore the natural flow to save dam repair money and improve the natural workings of this beautiful complex ecosystem of wetlands, springs, and riverine systems.	Dams are costly to build, maintain and eventually replace.	We lose the natural impact of a total integrated wetland system which one dam can not provide. Nature will bring back the springs, improve the water quality, create more robust wildlife diversity and abundance, manatee population could improve. The current situation is ready for a change if the dam is removed.	Yes. You could simply stop funding the repair of the dam and eventually nature will work its own way around the dam. Of course, this is a long-term cause and effect solution but nature will restore the system by itself, eventually. Doesn't that message tell us to help nature and physically remove the dam.	Thank you for asking. For an inexpensive way to improve water quality of the entire region, to allow for safe refuge for wintering manatees, for improving the diversity and abundance of wildlife, restoring the historical springs, remove the dam. Nature is less expensive than dams and more abundant to the bottom line in dollars, aesthetics, and recreational for all Floridians.
10/8/2021 9:51	Polk		No	Yes			2-5 times	Other: Visiting springs and outdoor areas.	Breach the dam	Will help put the area back to its natural state by restoring the Ocklawaha, St. Johns, and Silver river. Numerous springs would be restored and they are a natural Florida wonder that need to be restored and preserved. The Cross Florida Barge Canal project was long ago abandoned and the dam should be eliminated.	The loss of an opportunity to restore those rivers and springs to their natural state and achieve a major gain in wildlife habitat.	Not really.	
10/8/2021 9:52	Alachua		No	Yes			2-5 times	Wildlife viewing	Remove the dam!	Global warming!	Keep trying! The squeaky wheel gets the grease.	No	
10/8/2021 9:52	Marion		No	Yes		2-5 times		Boating	Breach the Rodman/Kirkpatrick Dam There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. 10/8/2021 10:00	Duval		No	Yes			2-5 times	Other: We canoe on the Ocklawaha and St Johns and Silver River and on the way we stop at the dam to mourn all that has been lost	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored bringing back manatee and fish habitat and making for beautiful long canoe and kayak runs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River. Thank you
10/8/2021 10:01	Dade		No	No									

10/8/2021 10:01	Orange		No	No					I would like to see the Kirkpatrick Dam removed because the reason it was built does not exist anymore, it is detrimental to the water quality and ecology of the area and it should have been removed decades ago.	The negative environmental impacts it has had over decades in this area of Florida. I believe the only beneficiaries of this dam are sports fishermen and boaters. This dam has damaged thousands of acres of natural habitat and should never have existed in the first place.	Continued damage to Florida ecosystems	If the choice is either keep the dam or remove it, the answer is no.	I urge the Florida Legislature to support funding for the removal of this dam. I have been an avid Florida kayaker over many years and have seen the damage that these kinds of projects have done to waterways in our state.
10/8/2021 10:02	Leon		No	Yes			1 time	Wildlife viewing		Breach the dam to restore the natural river system.	The dam was built for a project that was never finished. Since the project is no longer viable, the river system should be restored.	If the river system is not restored, we lose another chance to enhance wildlife and wild lands.	Propose something reasonable and I'll consider it.	
10/8/2021 10:05	Palm Beach		No	No						Returned to original condition before dam	The manatees need help right now. The dam is doing nothing. Florida is a natural habitat for so many fish and manatees. Here is an opportunity to return to nature.	The money is available and the need is great. Why wouldn't we forge ahead.	No	
10/8/2021 10:08	Alachua		No	Yes			1 time	Canoeing / kayaking Wildlife viewing		Removal.	Expensive studies conducted at taxpayer cost over several decades.	Stagnation/decomposition and infill of sediment that will turn the reservoir into an endless maintenance expense.	No. Why are you trying to find middle ground when the long-determined solution (reestablishing the river flow) has been established again and again? It would be so nice to finally have a water district board with backbone.	I have watched this issue evolve (and stagnate) for YEARS, and I have observed the slowedly conduct of the SJRWMB when it comes to permitting that runs counter to environmental common sense. What galls me most is that we taxpayers have funded studies that are then ignored because of the lack of courage on the part of appointed board members. Shame on you. Even this study is probably an exercise in procrastination.
10/8/2021 10:08	Pinellas		No	No						Breach the dam so that water again flows through to enhance the life around the waterway by returning the natural flow of water.	Rivers and springs are restored to benefit all the wildlife in and around the Florida Wildlife Corridor.	Rivers, springs, and the surrounding forests are not restored and the decline of wildlife and wild Florida will continue. This is an opportunity to make right a long-ago wrong. There is no time like the present to correct that wrong.	NO. This correction is long overdue and now is the time to complete breaching the dam.	I have lived in Florida for 42 years and watched the destruction of wildlife habitats all around me. The best part of Florida is wild Florida and all the different habitats and wildlife throughout the state. The waterways that provide kayaking are very precious to me and when there is an opportunity for restoring, enhancing, and /or cleaning these waterways, I am all in. From my kayak, I see the real Florida, wild Florida and I do not want to lose any of it.
10/8/2021 10:12	Volusia		No	No					I would like to see the Ocklawaha River restored for the state of Florida, it's people, and wildlife.	2021 is the deadliest year for manatees, a Florida treasure. The restoration of the Rivers and Silver Springs will provide natural warm water winter habitat. This in turn will draw many visitors to observe their beloved manatees in their winter home, benefiting the local economies. Thank you.	We don't want to miss this opportunity. State and Federal funds are available, public interest is high, environmental needs are critical, and the dam is unsafe.	No, breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	
10/8/2021 10:12	Monroe		No	No						Remove them	They are not necessary and I would like the River to return to its natural flow	Man made something worse again		
10/8/2021 10:13	Broward		No	Yes			2-5 times	Fishing Canoeing / kayaking		Restoration of the Ocklawaha River by removing the Rodman/Kirkpatrick Dam allowing for the natural flow of the river again.	60-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers	Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	No. Breaching is long overdue.	
10/8/2021 10:33	Duval		No	Yes			2-5 times	Fishing						
10/8/2021 10:14	Escambia		No	No						Restore the waterway and remove the dam for the overall support of the natural environment.	The Canal was never finished, making the Dam purposeless. Nature was cauterized for yet another human project left unfinished. This parasitic relationship with our environment has to stop. But we can do something about it by returning the River to it's natural state, creating some jobs/economy for doing so in the meantime.	Diminishing and disappearing natural waterways are ever present in the US and around the globe due to the rich, wealthy, and big business. Central Florida has some of the most beautiful natural rivers, streams in the US. ALLOW them to return to their natural beauty and glory as there is NO BENEFIT to anyone to continue with the Dam.		
10/8/2021 10:14	St Johns		No	Yes			2-5 times		Canoeing / kayaking	Restore the River to allow the manatees and other wildlife full access to our Florida waterway.	The lack of water flow and the springs that are submerged due to the dam.	Manatee restriction.	No	Please restore and preserve our waterways for future Florida residents. It's our most precious resource.
10/8/2021 10:14	Alachua		No	Yes		1 time			Canoeing / kayaking	remove	reestablish natural flow			
10/8/2021 10:14	Putnam		No	Yes	1 time	2-5 times	More than 5 times		Fishing Canoeing / kayaking Wildlife viewing	Ocklawaha River Restoration by breaching the Rodman/Kirkpatrick Dam.	20 lost springs, Silver Springs Ecosystem and Three rivers, Ocklawaha, Silver and St. Johns Rivers are restored.	Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riveraay, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway.
10/8/2021 10:16	Duval		No	Yes			1 time	Other		open the natural flow of the river	concern about the health of the St. Johns river. Personal observation	damage to the ecosystem	no	
10/8/2021 10:16	Martin		No	Yes						restore water flow that allows natural migration up stream for animals and improves flow to St Johns	I was born in florida ive lived here for all but 5 years when I recently lived in Ohio. During that time Ohio was executing a long term plan to eliminate dams and restore multiple rivers to their natural flow. I realize the eco systems are very different, however the results in Ohio were amazing. all kinds of plants and animal benefits were realized including long lost migration habits of fish, some not seen in a 100 years. The recreational use of the the rivers increased because the natural flow made the water quality much higher. While well intended, the reasons for dams are typically economic and always underestimate the impact to eco systems. stagnation is not good for any aquatic life except algae, let the water flow.	Big business would once again win over mother nature. The belief that the economic interest are better than ecological stability is the marketing objective of the industrial minded wealthy. I have no problems with wealth but don't want it to be the only thing that rules our doctrines		Thank you for opening this up to comments
10/8/2021 10:17	Martin		No	Yes			1 time	Wildlife viewing		Have it removed to allow all surrounding waterways to connect and flow	The unhealthy conditions of nature and wildlife that live in these areas	Unnatural events to occur w flooding or drought	No	
10/8/2021 10:18	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times		Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Leave it alone	The damn was made and messed up the ecosystem years ago. It is now thriving, don't upset it again just let it be.	You will kill more wildlife animals and their homes. Most of the wildlife was born into the ecosystem they are currently in.	N/A	N/A
10/8/2021 10:18	Seminole		No	No						Free flowing water	Healthy rivers	Unnatural water flow	No	
10/8/2021 10:18	Sumter		No	No						take it down	the canal was cancelled			
10/8/2021 10:21	Pinellas		No	Yes			2-5 times		Fishing Canoeing / kayaking Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As an avid fisherman and passionate naturalist who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. This exciting restoration will improve water quality and flow by generating an additional 150 million+ gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
10/8/2021 10:21	St Johns		No	No						Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Historic fish and manatees return as breach opens creating a free-flowing river	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.
10/8/2021 10:21	Lee		No	No						Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick dam. As long as the dam exists, it will negatively impact the economy, water quality, and wildlife throughout the Great Florida Waterway.	The restoration of Ocklawaha, Silver and St. Johns Rivers and 50 springs restored - awesome.	We miss the opportunity to do this restoration. Federal and state funds are available, public interest is high, environmental needs are vital and can't wait. Now is the time to do this.	No.	As a long time resident of Florida, I care deeply for this state. I have seen the environmental decline in my country and don't want this to happen in the Ocklawaha and surrounding waterways. It is heart breaking to see what is happening to our fresh water springs. It is vital to go ahead with this restoration, which has so many benefits like prevention of harmful algal blooms, countering saltwater intrusion, helping with aquatic vegetation, fish and wildlife resources. Please go ahead with the restoration. Thank you.
10/8/2021 10:22	Putnam		No	Yes	1 time	2-5 times	More than 5 times		Boating Wildlife viewing	Remove the dam!	Restore the river to its natural flow!	Replacing and restoring the dam will be expensive to the taxpayers!	No!	
10/8/2021 10:22	Hernando		No	Yes	1 time	2-5 times	More than 5 times		Wildlife viewing	Remove the Dam.	Wildlife conservation organizations.	Continued degradation of the Oklawaha	No.	
10/8/2021 10:23	Escambia		No	No						restored to nature	The Cross Florida Barge Canal project was canceled so there is no need to maintain the reservoir or dam. Restoring it will save taxpayer money in the long run and help reserve natural Florida	Who profits from keeping it open and how much did they pay Tallahassee for it. How much is it going to cost me the taxpayer to maintain it.	Yes, remove all state resources for its upkeep and let those who feel its so important and vital to pick up the maintenance and cost.	it's really about who profits and who is currently running the show. Appreciate the opportunity to comment though.
10/8/2021 10:24	Lee		No	No						The dam should be breached in order to reunite the Ocklawaha, St. Johns and Silver Rivers.	The dam that severed the Ocklawaha River in 1968 during the construction of the Cross Florida Barge Canal that was never completed. So its purpose was never satisfied, yet the dam still blocks the river route for fish, manatees and boaters from Silver Springs to the Atlantic Ocean.	Continued failure to meet environmental and recreational needs.	No.	I would like to know which industries would benefit from leaving the Rodman/Kirkpatrick dam in place.
10/8/2021 10:24	Indian River		No	No						Dismantle it	The fact that after 50 years it's still being debated	Eventual death of the waters, just like what is happening to the Indian River lagoon and the Everglades	No	Do the right thing & let the waters flow freely
10/8/2021 10:24	Hillsborough		No	No						Remove it and restore the river flow.	Canal was never completed so dam has no business existing.	Species that rely on a free flowing river would continue to have a diminished environment.	No	
10/8/2021 10:24	Marion		No	Yes			More than 5 times		Fishing Hunting	The natural flow of the river will be restored. Less pollution from Herbicide use.	The natural flow of the river will be restored. Less pollution from Herbicide use.	The river will continue to deteriorate	No	
10/8/2021 10:25	St Johns		No	Yes			1 time		Fishing	Leave it as it is.	It is a beautiful lake.	Loss of a Great Lake for fishing and boating.	No	
10/8/2021 10:25	Seminole		No	No						Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/8/2021 10:26	Pinellas		No	No						Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	3 rivers, Ocklawaha, Silver and St. Johns Rivers and 50 springs are also restored.	We miss best opportunity to do this, as State and federal funds are available, public interest is high, the environmental needs are critical (manatee, water quality and wildlife habitat) and the dam is unsafe.	No. Breaching this dam is 50 years over due so dam safety, improved water quality and the wildlife can't wait!	Right now this is a win-win for reasons listed and many that aren't. The manatees can return and have a warm water habitat-we are losing far too many manatees every year. Fish can restore to a river that is free flowing again and possible flood damage to downward property owners can be avoided! All of these are positive!!
10/8/2021 10:26	Alachua		No	Yes			2-5 times		Wildlife viewing Other	I would like to see the Oklawaha River restored to its natural state.	This would restore wild life and improve the quality of the water as well as increasing recreational opportunities.	It would be sad to see the springs that are covered by the reservoir remain drowned. We have tried this as an experiment and it has failed.	No	I have lived in Florida for almost 50 years and enjoy its natural beauty. Let us leave nature alone and let our great rivers flow free. Wild life and people will benefit greatly.
10/8/2021 10:29	Pinellas		No	Yes			1 time		Canoeing / kayaking Wildlife viewing	Restoration of lost springs, significant river health and water flow supporting fish, manatees and down river water levels. Prevention of flooding damaging properties and businesses which depend on the river ecology. Preservation of the recreation uses and wildlife habitats. Manatees will have better access to warm water habitats. The environment is an essential aspect of Florida economy which provide both current and future jobs and attracts tourism.	More than 150 million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers with $4-14 Million in dam repairs saved on a dam past its life expectancy and the continuing current and future benefits of the preserved ecosystem.	Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	Failure to act appropriately now will result in opportunities long over due and as climate related changes continue the time lost will lead to far greater consequences and economic losses which are still preventable in the present.	As a native Floridian, having a great concern for our unique history and natural beauty which the Florida Constitution cites as a responsibility of the State to protect it is my desire to conserve these environments, habitats and natural resources.
10/8/2021 10:29	Lee		No	Yes			2-5 times		Fishing Canoeing / kayaking Wildlife viewing	I would like to see dam breached to allow for restoration of the ocklawaha River and improved water quality.	Numerous springs, and the namely the ocklawaha River would benefit from this move.	Continued degradation of water quality until our precious and finitely healthy water is destroyed irreparably.	The water level being lowered within the damn by ten or more feet.	
10/8/2021 10:32	Lee		No	Yes			2-5 times		Wildlife viewing	It should be breached	It is harming wildlife	The ecosystem gets worse	No	
10/8/2021 10:33	Nassau		No	No						Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored	Hundreds of manatees lose the opportunity to access essential warm water winter habitat.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. (characters: 521)
10/8/2021 10:34	Dade		No	Yes			2-5 times		Canoeing / kayaking Boating Wildlife viewing	Remove the damn and restore the Ocklawaha River. This would revive up to 20 natural springs, which are unique to Florida and would drive much more tourism and natural health to the area. Eventually I would like to see the restored Ocklawaha become part of a Great Florida Springs National Park.	The Rodman dam has been a ecological disaster that drowned 20 precious springs for a boondoggle project that never happened. Keeping the River dammed up is bad policy, bad science, and bad economics.	The further decline of Florida's fresh water springs and the health of the silver river would be my greatest immediate concerns.	Just take down the dam and let nature run its course. The dam is a poor choice made 50 years ago that can be easily corrected.	
10/8/2021 10:36	Hillsborough		No	No						I would like to see the Rodman/Kirkpatrick Dam be breached so that the Ocklawaha River can be restored.	As I understand, the fish and manatees need the migratory routes and habitat that the dam has disrupted.	Both blue-green algae increase in the springs, and a decline in the manatee population due to loss of habitat.	No.	I visited Wakulla Springs three years ago and was shocked by the amount of algae suffocating the marine life and, frankly, destroying the beauty of what should be a pristine place. I've also been hearing lately of the death of so many manatees and can't help but come to the conclusion that the two events are related.
10/8/2021 10:36	Putnam		No	Yes						Return the river to its natural, undammed state.	It will restore the ecosystem to the state that Nature, or, God, if you will, intended. Once the river is free flowing, the springs will be restored and the original wildlife; manatees, and fish will return. The warm spring water will provide manatees refuge from the cold. Manatees, as I'm sure you know, do not survive in cold water.	Well, there are several negative impacts of not restoring the river to its natural state. For instance water quality will decline further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	Not that I can think of. Either the river is restored or it is not.	I first moved to Florida in 1980, when I was 18 years old. Since then, I've seen so many of its habitats degraded by folks looking to make a quick buck. The Bayway isles between 54th Avenue South and St. Pete Beach, the coral reefs off of Key Largo, sewage being dumped into Tampa Bay, the release of millions of gallons of phosphate polluted water from Piney Point just this past spring. Red tide and blue green algae feeding on nutrient rich water released from Lake Okeechobee. I really do believe that the economy of this state will suffer severe and irreversible damage if we continue to trash our environment. It's going to get to the point tourists will stop coming.
10/8/2021 10:38	Palm Beach		No	Yes			1 time		Canoeing / kayaking Wildlife viewing	I would like to see restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, our water quality, and our native wildlife is inflicted throughout the Great Florida Riverway.	150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers.	Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation losses.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	This restoration will improve water quality and flow by generating an additional 150 million+ gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
10/8/2021 10:39	Volusia		No	No										
10/8/2021 10:39	Seminole		No	No						To be open.	The natural way of water	Will be affect the ecosystem.	Open soon.	To the natural ways of our rivers
10/8/2021 10:39	St Johns		No	Yes	1 time	More than 5 times	More than 5 times		Canoeing / kayaking Boating Wildlife viewing	I believe it is time to remove the dam and restore the Oklawaha River to its former course.	There is currently federal and state funds available to do this now	The springs affected by the reservoir will continue to deteriorate. The water quality in the river will continue to go down	Perhaps drawing down the reservoir to the level of the river downstream	We have lived with this catastrophe (The Cross Florida Barge Canal for far too long . It is time to fix it!
10/8/2021 10:39	Polk		No	Yes					Boating Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	Silver Springs ecosystem will be restored. 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers. Acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	No. This dam has outlived it's usefulness. Dam safety, improved water quality and wildlife can't wait.	
10/8/2021 10:40	Palm Beach		No	Yes					Fishing (shoreline/structure) Boating Wildlife viewing	Open it to God's way	84 and after the dam and evidence it wasn't good	Disaster to waters and wildlife	Kill the dam	
10/8/2021 10:43	Orange		No	Yes			1 time			Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	$4-14 Million in dam repairs saved on a dam past its life expectancy	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/8/2021 10:43	Lake		No	Yes			2-5 times		Wildlife viewing	Restoration of the Ocklawaha, Silver and St. Johns Rivers and 50 springs as well as creating a free flowing river that enhances restoration of the wildlife corridor.	The dam is over 50 years old and the costs of repair has to be born by someone and that someone is me, plus the damage being done to the eco system and the environment is heart breaking to myself, a native Floridian. Everything - the water quality, the fish, the wildlife, the environment have all suffered because someone wanted to make money or didn't take the time to envision what would happen to this area in the years following construction.	A missed opportunity to do the right thing now while the State and Federal funds are available, public interest is high and environmental needs are critical (manatee, water quality and wildlife habitat) and the age of the dam that makes it unsafe.	No because breaching the dam is long overdue by 50+ years. Dam safety, improved water quality and wildlife can not wait.	I was 21 years old, living in Ocala, Florida, at the same apartment building where the supervisor of construction on the Cana also lived. I can only recall his first name - JB - but I can recall the excitement of the Barge Canal being built. I am 76 years young now and can see and understand the damage today that could NOT have been seen or forestold at that time. Please enough. Stop this lunacy and let restoration of this corridor and beautiful part of Florida begin now-so it can heal for future Floridians to enjoy! Please don't be part of something or some body of people or agency that continues to perpetuate the "myth" that the dam is a "good thing". If our generation today does not begin to be responsible and accountable for, at least, trying to right a wrong, then who will. One day each of the persons who are in a position to do something today to right this will be in their 70's, 80's, 90's and maybe even 100, and my hope is that, at that time, they don't regret letting this opportunity pass them by. Thank you.
10/8/2021 10:46	Orange		No	No						Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway.
10/8/2021 10:46	Duval		No	No						The Dam must be dismantled.	It is needed for the environment and life in middle and north Florida, and economic conditions as well as attitudes are right.	Quality of life will continue to be eroded at a faster pace for humans and animals.	No!! This is a golden opportunity.	Thank you for your efforts. Let us know if we can help.
10/8/2021 10:50	Brevard		No	No						Let the dam be breached. it is too old and costly to repair and its continued existence causes damage to many aspects of the environment.	This is a 360-degree issue for the environment all around that area; for starters, breaching the dam would mean that 20 lost springs and the Silver Springs ecosystem are restored, allowing for fish and wildlife to regain the foothold lost when the dam was built. This would be a boon for recreational visitors as well.	Continued destruction of environment, especially wetlands and wildlife (including marine life).	Not really. The dam is too old and too costly to repair; it's time to gat rid of the dam and let wildlife flourish again.	
10/8/2021 10:51	Dade		No	No						Restoration of nature friendly flow	Decreased pollution of fish and other nature	Loss of natural areas to urbanization	Park reserve areas	Extend population/urbanization and you take areas away from nature for interstate, roadways and parking for commercial business.
10/8/2021 10:53	Hillsborough		No	No						Breach the dam!	Nature made our waterways a certain way, and there's no strongly compelling reason to maintain the human change	A lost, rare opportunity to restore our state's natural beauty and harmony.	Just breach half of the dam? Jk--I can't think of any.	Thanks for asking!
10/8/2021 10:56	Volusia		No	Yes			More than 5 times		Fishing Boating Wildlife viewing Other- I breathe the air and drink the water here in Central Florida	Breaching the dam and restoring the natural flow of the river would be of great benefit to all life in Florida. We need to live in harmony with our state's ecology.	The restoration of 20 lost springs and ecosystems associated with the Ocklawaha will help keep Florida beautiful and more healthy for both human and wild life.	I have lived in Florida all my life and in Central Florida for the past 40 years. If we do not do everything possible to restore and maintain Florida's natural ecosystems and live in harmony with nature, I fear for the quality of life here going forward.	While it is my belief that we need to do everything possible to live in harmony with nature to avoid a disastrous future for all life on this planet, I could support a short-term measure, such as a drawdown, as a first step toward restoring the natural flow of the river.	
10/8/2021 11:00	Duval		No	Yes			2-5 times		Wildlife viewing	Remove the dam.	Restore the environment of the area.	Continuation of loss of wildlife.	No	
10/8/2021 11:00	Lee		No	Yes			1 time		Wildlife viewing	I would like to see the dam removed.	The eco-system needs to be returned to it's original status and not be impaired anymore.	A crippled environment that is not functioning as it naturally should.	No	This was a boondoggle to start with and the cross State canal was never even built.
10/8/2021 11:00	Outside of state / other	Washington DC	No	No						I would like to restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 300-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and the restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.

10/8/2021 11:01	Broward		No	No					Restore Ocksawaeha River by breaching the R/K Dam.	How about millions of potential flood damages to property owners as climate change worsens.	The time is now to use State and Federal funds available to breach dam and restore wildlife habitat.	No. The breaching of the dam is long overdue.	This is a no brainer for the welfair of the community and health of ecology
10/8/2021 11:05	Seminole		No	No				Wildlife viewing	Restoration of the Ocklawaha River by boaching the dam. On a daily basis the dam hurts the economy, water quality, and wildlife all along the Great Florida Riverway.	Three rivers and over 45 springs will be restored. Lost springs, and Silver Springs eco system will be restored. Manatees and fish return once the breach opens free flowing water. Manatees gain essential warm water springs and habitat. Money is saved not repairing an old dam. flood damage avoided to own stream property owners	Now we have this chance to have both Federal and State funds to assist. There is public interest in the environment. Climate Change is here and sadly to stay for a while and people know this for a fact. We will lose manatees and 2021 has been a horrible year of loss for those mammals. If the dam stays there will be weed blockages, blue green algae events will continue. Fish will be killed, water impaired and also negation loss. Thousands of acres of forest will not be restored with the dam in place. We will lose wildlife habitat along with natural food protection and a cooling canopy. This would mean a massive loss. I look at this as a person who loves wildlife and feel we need to work with the climate to produce the best outcome for all living things.	I would have to say no! The dam is 50 years old. Dam safety, improved water and wildlife can't wait.	It is a pleasure to view the beauty of these waterways; and we need more pleasure these days as news is grim. People will fish and fish will be there! I feel climate change is Nature directing us to improve our ways. Nature is lovely, peaceful, and yet has a wrath of her own. If we help her she will work with us but fi not then there is no greater destroyer. No bombs, armies, planes, war ships, or nukes can sustain her wrath. She uses fire, hurricanes, volcanoes, floods, and much more to say humans either live with nature or we won't live at all. Water is life. This planet is some 75% water yet less than 1% is drinkable. We have choice but we must choose wisely. I choose nature!
10/8/2021 11:06	St Lucie		No	No					Removal	Blocking the natural movement of water and causing damage to springsLimbs use of the river by manatees, fish and the public.			It's doable and the dam serves no useful purpose at this point.
10/8/2021 11:10	Pasco		No	No					The reservoir and dam need to be restored to the natural state before they were built.	In other parts of the country the removal of dams in particular has restored the movement of salmon into freshwater.	A river should be allowed to flow freely in its original state to restore a balance to nature.	No, this restoration is necessary and way overdue.	
10/8/2021 11:11	Hillsborough		No	No					remove the dam	research i have done about the negative environmental impact of the dam/reservoir	river will remain blocked for fish, manatees and boaters, from Silver Springs to the Atlantic Ocean.	no	
10/8/2021 11:11	Putnam		No	Yes	1 time	More than 5 times	More than 5 times	Wildlife viewing	would like to see the Ocklawaha River restored to permit wildlife and fish to travel freely through the Riverway.	This would create a free-flowing river that allows manatees access to the springs and restore the natural ecosystem. The dam is over 50 years old and it would save a lot of taxpayer money in repairs and possible flood damage downstream.	The natural habitat will continue to decay allowing invasive species to increase. It will also be a lost opportunity to utilize State and federal funds that are available.	No, the dam was a bad idea 50 years ago and remains an environmental problem to this day. The solution is simple.	The cross Florida Barge Canal was a terrible idea causing untold damage to the environment, waiting only exacerbates the damage to the environment and increases potential future losses while gaining nothing positive.
10/8/2021 11:12	Hillsborough		No	Yes		1 time		Wildlife viewing Other: Hiking	It is well passed time to draw down the reservoir and restore natural water systems and springs. Fish and wildlife cannot wait! There is high public interest and public funds potentially available. It would be a waste of taxpayer resources to attempt repairs to an antiquated reservoir that restricts water flow and damages water quality and wildlife habitat. Climate change is the earth's loud voice. We can't miss this opportunity.	Climate change-induced storms and flooding, degradation of water quality, loss of habitat, risk of manatee extermination.	Lost opportunity to protect precious water resources, wildlife habitat and build resistance to climate change. Longer term waste of taxpayer resources on inappropriate schemes.	We are at a critical fork in our decision-making to either protect our limited natural resources for future generations - or lose them.	We need visionary leadership that looks at long-term consequences and doesn't just respond to short-term monied interests. Florida's development has long been beholden to profit-driven developers. The earth & our future generations are not at the table but need a strong voice - before the opportunity is lost. Extinction is Forever.
10/8/2021 11:16	Citrus		No	Yes		1 time		Fishing Boating	REMOVE IT. Return the river to its natural course	the need to restore the hydric hammock and swamp forest and the ecosystem of the Ocala National Forest. habitat for nesting birds, deer, panther and other species of Florida's treasured plant and wildlife.	continued degradation of the Florida environment.	not that I can think of	
10/8/2021 11:18	St Lucie		No	No					Restore the Ocklawaha River by breaching the dam on the Rodman Reservoir. The dam has impeded the river's flow for more than 50 years, blocking the movement of aquatic life and degrading water quality.	Connecting a free-flowing Ocklawaha to the St. Johns River would create a migratory route for fish and manatees from the Atlantic Ocean. Manatees would be able to travel to the Ocklawaha's 'lost springs' that were submerged due to the dam and Silver Springs, and the environmental health of the whole river system would be improved. American Rivers named the Ocklawaha one of America's most endangered rivers in 2020, citing decreasing biodiversity and poor water quality due to the dam. A recent report by the Howard T. Odum Florida Springs Institute found that blue tilapia, an invasive fish, now dominates Silver Springs. Restoring a free-flowing Ocklawaha would bring back native species that compete with tilapia and control their population.	If this river is not restored, wildlife will perish and Florida will lose a precious natural resource. More than 640 manatees have died in 2021 already due to factors including starvation from seagrass loss. But their greatest long-term threat remains the loss of warmer-water habitat such as natural springs, which they need to survive the winter.	Not aware of any.	Restored the Ocklawaha River would bring environmental as well as fiscal benefits, generating tourism while ending the expense to Florida taxpayers of paying for this aging dam's maintenance and upkeep.
10/8/2021 11:19	Pinellas		No	No					That they be beached.		Future of our springs and rivers.		
10/8/2021 11:20	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing	Keep the dam and reservoir in place!!!!!!!!!!!!!!!	The excellent fishing!!!!!!!!!	Lost of access and the great fishing experience that is currently available.	NO	
10/8/2021 11:22	Marion		No	Yes	1 time	More than 5 times	More than 5 times	Wildlife viewing Other: Family time	I would like it to be properly maintained. I would LOVE for more green public space to be established around it to encourage visiting.	I believe it should be maintained because there is a thriving ecosystem over 50 years old within the reservoir. In my opinion, having been a resident in the area for 35 years, removing the dam would cause more damage to the ecosystem than it would bring benefit to the environment	Destroying one of the top ten largest bodies of fresh water and the ecosystem within it seems foolish for a state that is struggling to provide fresh water to particular regions.	If I could think of any, possibly.	I would like to say that I do believe the Cross Florida Barge Canal plan was a mess from the get-go. It didn't make sense ecologically and it still doesn't. That said, I believe destroying an ecosystem A SECOND TIME is equally as illogical.
10/8/2021 11:22	Brevard		No	No		1 time		Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat. 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier	The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.
10/8/2021 11:25	Seminole		No	Yes		2-5 times		Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife, 150+ million gallons a day of natural flow restored to the lower Ocklawaha and St. Johns Rivers, $4-14 Million in dam repairs saved on a dam past its life expectancy	We miss the best opportunity to do this. State and federal funds are available; public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	The time to act is NOW. As climate change accelerates, putting additional pressure on natural resources of all kinds, it is time to make this important step to protect wildlife, improve river and estuary health, and protect downstream property owners from flood damage. Let's take this, our best chance, to help the environment and set things right for citizens and wildlife.
10/8/2021 11:25	Pinellas		No	Yes	1 time	1 time	1 time	Wildlife viewing	The dam shouldn't be there. Restore the Ocklawaha River and correct a grievous, tragic mistake.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 30 years; restoration is REQUIRED to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more. Furthermore… how badly do we want to keep screwing Florida's environment? Here's your chance to do the right thing- a GOOD thing.	No. I will compromise on what to order at a restaurant, but not the health of Florida's natural environment. Y'all should have breached the dam more than a half-century ago.	I'm a Florida author (Backroads of Paradise, 2016, UPF) and hold a masters in Florida Studies from USFSP. In grad school, we studied the Kissimmee River disaster and the dam as poster children of what not to do. Wouldn't it be nice to be on the right side of environmental history on this one?
10/8/2021 11:26	Volusia		Yes	Yes		1 time		Fishing Canoeing / kayaking	Removal		Further water destruction	No	
10/8/2021 11:27	Lee		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.
10/8/2021 11:28	Martin		No	No					Please remove the Dam and restore the flow of the river.	I grew up near the St Johns River and want to see the natural flow restored to the Lower Oklawaha and St Johns River and estuary. I'm very concerned about the increased deaths of manatees and think it's critical for them to be able to easily travel to the springs area.	Continued harm of ecosystems and wildlife as well as taxpayer money spent on continued Dam maintenance.	No, continuance of the Dam is too harmful to the environment.	Breaching the Dam is essential to revving Florida springs including Silver Springs and providing habitat for manatees. This is long overdue and we should know better now. Just as we have restored the Kissimmee River to its meandering path, we should restore the Oklawaha. We now recognize that the cross Florida barge canal was a mistake, so let's remove the dam that was constructed. Thank you, Susan and Paul Yarke
10/8/2021 11:30	Palm Beach		No	Yes		2-5 times		Boating	Breach the dam and let. The river run	Studies done on waterflow	Area will dryup	Partial solutions will only postpone ecological disaster	
10/8/2021 11:30	Palm Beach		No	Yes		1 time		Canoeing / kayaking	It should be removed and natural water flow should be restored				
10/8/2021 11:30	Indian River		No	No					restoration and let mother nature do it the right way	human arrogance causes more problems than it solves.	poor water quality and negative impact on florid's economy	no	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. (characters: 521) WATER QUALITY: This exciting restoration will improve water quality and flow by generating an additional 150 millions gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
10/8/2021 11:34	Dade		No	Yes		1 time		Wildlife viewing Other: hike	sort of few options bit removal.	the lost of marine andamal life in the area	complete lost of Floridas best resorice .wild unspoiled areas.	like said before no other option.	
10/8/2021 11:34	Palm Beach		No	No					take it down	interfaces with open waters for fish and animals			
10/8/2021 11:35	Sarasota		No	No					remove dam	progress is not always progressive. Stop destroying the planet	As above	For the sake of all species aboard Planet Earth, nothing short of ending financial gain over planet destruction is acceptable.	NOW !
10/8/2021 11:38	Pinellas		No	No					Draw down the water and breach the dam allowing for free flowing water.	kayak and see issues with vegetation moving into areas that are not free flowing. I am concerned about the manatee. St John's river and the bay needs free flowing fresh water to help the manatee survive and find food and warm areas during the winter and food to eat.	A dam that has no use will either cost taxpayer's money to update or it will deteriorate and cause damage to property down the road.	No	
10/8/2021 11:46	Alachua		No	Yes		1 time	More than 5 times	Wildlife viewing	get rid of it	deteriorating structure	costs of maintenance	no	
10/8/2021 11:47	Marion		No	Yes		2-5 times		Wildlife viewing	The natural flow of the Ocklawaha River must be restored by breaching the obsolete Rodman/Kirkpatrick Dam. This relic of the Cross Florida Barge Canal project should have been removed decades ago, and now in its dilapidated state will require millions of taxpayers' dollars to repair. It is past time to open up the dam, eliminate the expense of annual spraying of aquatic weeds, provide a safe habitat for manatees, fish and other wildlife.	There are several: Restoring the Ocklawaha River and the associated waterways will provide an alternate refuge for manatees, which are now dying in record numbers; surveys show that the recovery of the river and the lost springs will promote tourism in the area and it will provide natural habitats for a wide variety of fish, birds and other wildlife.	If we delay the restoration of the Ocklawaha, St. Johns and Silver Rivers, millions in taxpayers' dollars will be needed to unnecessarily repair the Rodman/Kirkpatrick Dam. There were very valid fears during Hurricane Irma that the dam would be catastrophically breached, which if it happens in an uncontrolled manner, could cause widespread flooding damage. This is a concern with any major hurricane making landfall in the area. In addition, this will help in controlling encroachment of invasive aquatic weeds as well as the increasing salinity of the lower St. Johns River.	I think all efforts should be made to begin work on breaching the dam. In the meantime, however, drawing the reservoir level down can help prevent damages from a potential dam failure and still provide use of the area for recreation. However, this will not offer the environmental benefits for visitors, fish, manatees, and wildlife, nor improve water quality and flow of the Ocklawaha and the associated watershed that breaching of the dam will.	
10/8/2021 11:50	Pinellas		No	No					Return the area to its natural state.	For many years it is widely acknowledged that this ridiculous project was doomed from the start was an environmental disaster.	Continued environmental harm.	Get rid of the dam and nature will determine what happens next.	
10/8/2021 11:51	Brevard		No	Yes		1 time	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Historic fish and manatees return as breach opens creating a free-flowing river which has been historically, throughout the western United States, been proven to be successful.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a sportsman who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor.
10/8/2021 11:52	Duval		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.
10/8/2021 11:53	Putnam		No	Yes	1 time	2-5 times	More than 5 times	Fishing Canoeing / kayaking Boating Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/8/2021 12:08	Pasco		No	Yes			1 time	Wildlife viewing	Restore Ocklawaha River and surrounding habitat to it's natural (pre 1968) condition.	it's good for the earth, great for our state, and wonderful for the regional ecosystem: brings rivers and springs back to health - helps fishing, helps protect manatees.	I have many concerns, but the biggest would be the failure to contribute to the regrowth of forests that would help reduce CO2 in the atmosphere, an existential threat to the planet. Locally, biggest concern is loss of opportunity to provide warm water habitat for manatees.	I'm always open to new thoughts and ideas, but so far have not heard any 'partial' solutions that would address the existential danger of climate change, or the overall habitat need to provide a supportive environment for Manatees.	I urge you to restore the Ocklawaha River, the major waterway in the Great Florida Riverway , to conditions that creates an important wildlife corridor, and promotes a healthy habitat for wildlife and Floridians. It will improve water quality and help contribute (in our own small way) to pointing humanity in the direction of reducing atmospheric CO2 levels which will, among other things, slow sea level rise.
10/8/2021 12:10	Lee		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	Get rid of the dam. At this point it is so ridiculous that this Dam is still in place. I live in Fort Myers, Florida and the fact that I am aware of this horrible piece of concrete that negatively effects the environment and has little to no benefit whatsoever is absurd.	Our springs are unique and bring the state a massive amount of revenue and the fact that this over elevated water level blocks or otherwise inhibits one or more natural springs is not good. If the spring(s) along the river were more accessible/viewable with the lowered down water level would increase visitors to the area and income to the state.	That Florida will continue to make the national news as a state doing things the wrong way. Dam's around north America are being removed to great environmental benefit and we should be a positive part of this. See the movie "damnation" by patagonia		Gov Desantis, and his appointees, have the chance to make a positive impact to the waterways of FL with this easy, common sense action and they should seize the opportunity to make this happen and much like his efforts to restore the flow of the river or grass this would fit nicely in rounding out his campaigned upon promises to the citizens of the state.
10/8/2021 12:14	Alachua		No	Yes			1 time	Other: nothing. it is nothing for me but an eyesore.	Restore the Ocklawaha River	Expense of maintaining Rodman Dam compared to limited economic benefit	Continued environmental degradation caused by clogged reservoir that has to be drained every several years to prevent it from becoming a stagnant fostering wasteland, which it is, and with water backup and perturbed flow all the way back to Silver Springs.	No	When I was a boy we would go by boat from the Marion County boat basin all the way up the Ocklawaha to the St Johns River. It is incredible to me that the citizens of Florida have stood by and allowed the destruction of this once incredible beautiful waterway -- and for what?
10/8/2021 12:18	Outside of state / other		No	No					To restore the Ocklawaha River as it is critical to ensuring the survival of manatees in the winter and beyond	One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	The manatees will suffer, starve, die and eventually disappear for good	Make pro-active decisions and actions in the best interest of manatees, other animals and overall our planet	
10/8/2021 12:20	Brevard		No	Yes			1 time	Wildlife viewing	Breach the dam and open the river!		The river will continue to decline		
10/8/2021 12:20	Leon		No	No					remove	cross Florida canal was a big mistake, and problem its start at construction created problems which need to be corrected	environmental damage continues	am not equipped to make a suggestion	grew up in Sumter County, and all of the Central Florida area is still important to me.
10/8/2021 12:21	Escambia		No	Yes			1 time	Other: auto tour of the area	return of the natural connection of our waterways	Human hubris versus natural systems— Natural system are the best long term benefit and this includes economic benefits.	Same old continued failure of not addressing the harm we are causing and taking corrective action.		
10/8/2021 12:23	Orange		No	Yes	2-5 times			Canoeing / kayaking	Remove the dam	Nature was managing this river for millenia, and doing a wonderful job. Man came in arrogance and screwed it up. Return it to its natural flow.	The river will continue to degrade.	None that I can think of.	Do the right thing here.
10/8/2021 12:27	Alachua		No	No					removal of the dam and restoration of the Ocklawaha River	The dam has had an adverse impact on the environment below it. Restoration would restore wetland forest and springs and benefit the fish and wildlife in that area. It would also benefit the St. Johns River.	further adverse impact on the environment and endangered species	This question does not indicate what you are proposing short of removal of the dam. I support removing the dam and restoring the Ocklawaha River.	
10/8/2021 12:28	Hillsborough		No	Yes	1 time	2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Wildlife viewing	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The restoration of Silver, Stiohns, Ocklawaha Rrivers and 50 springs.	the lost of the 3rivers and 20 springs if not reunited would be an ecological tradgedy.	No. It would be unconscionable to endanger the water quality, safety and wildlife in the area.	

10/8/2021 12:29	Volusia		No	Yes				Fishing Fishing (shoreline/structure) Boating Wildlife viewing	reopen the rivers	too many spring have been destroyedwildlife	wild life and water		
10/8/2021 12:29	Leon		No	Yes		2-5 times		Fishing Boating Wildlife viewing	Remove the dam	Mussels and other wildlife are and have gone extinct forever mostly due to dams. In places like Maine where dams are removed the fush have improved better than ever expected!!!	More species going extinct, increasing taxes to maintain dam. Worse fishing and wildlife.	No.	Science and tax dollars support removing dam.
10/8/2021 12:30	Sumter		No	No					I would like to see restoration of the Ocklawaha River by breaching the Rodman Kirkpatrick dam. The damn harms the economy, the water quality, and wildlife throughout the great Florida waterway	20 lost Springs and Silver Springs ecosystem or restored, hundreds of manatees will gain essential warm water Winter Springs habitat, and 150+ million gallon a day of natural flow will be restored to the lower Ocklawaha and Saint johns river	We missed the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical, and the dam is unsafe.	No. Breaching the damn is 50 years overdue. Damn safety, improve water quality and wildlife can't wait.	The most beautiful part of Florida is its ecosystem. People come from all over the world to fish, swim and boat, view beautiful wildlife, and all of these natural rivers.
10/8/2021 12:30	Marion		Yes	Yes	1 time	1 time	2-5 times	Wildlife viewing	The dam should be breached to allow full flow of the Ocklawaha	150 millions gallons of water restored to full flow. Fish and Manatee will return to Silver Springs and the Ocklawaha. Three rivers and 50 springs restored. An eco tourism bonanza. Multi millions of dollars saved on dam repairs.	Silver Springs continues it's decline beyond repair. Millions of dollars needed elsewhere are wasted on maintenance of Rodman Dam	Nothing would come close to the positive outcomes of breaching the dam.	It is way past due time to let the Rodman Dam go.
10/8/2021 12:31	Alachua		No	No					Removal of the dam and restoration of the natural flow of the Ocklawaha River	The reservoir negatively affects all the upstream waterways and covers numerous natural springs.	Continued damage to the environment	No. Full restoration of the Ocklawaha is needed.	
10/8/2021 12:31	Marion		No	Yes	1 time	2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Wildlife viewing	I would like our district to keep Rodman as is. It is thriving right now and home to great fishing and wildlife. I back. My son out there and it was the same as it was when my grandfather took me out there. We caught an 8 pd bass. He is 12 and always brings that day up. It would be a tragedy to tamper with the current environment. There will always be management needed to an ecosystem. Taking the dam out will also create a new environment with new problems. It is so frustrating to hear the argument that getting rid of the dam will alleviate Rodman's issues. This topic should not be getting credibility every time a group thinks the dam should change. It is a part of our history, people's livelihood and childhood memories please keep it alive.	It will not answer all problems, will just create new ones.	A beautiful ecosystem lost.	No. This issue should not coming up every few years	
10/8/2021 12:31	Sarasota		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	I would like to see the dam removed so that the water quality can improve and the wild life thrive.	Removing the dam would create a free flowing river again and restore thousands of acres of the Florida Wildlife Corridor. Also it would allow manatees to access warm springs in the winter as we know how much threat they are currently facing.	The water quality further degrades enhancing more algae, invasive weed blockages and fish kill as well as impacting wildlife habitat.	I remain firm on getting rid of this obsolete and costly dam.	Please heed this plea to restore the Ocklawaha river into a free flowing river to again join the St. Johns and Silver rivers. Thank you for respecting my feedback.
10/8/2021 12:32	Pinellas		No	No					Restore to original remove the dam and let nature thrive and restore what has been don the the wildlife & habitat	There are many important reasons it is difficult to narrow down to even a few. The natural ability for the water, river, springs and wildlife to survive & flourish as intended by nature plus the cost to tax payers to maintain this destructive dam, in addition to federal funding available to help and the precious environment will have a chance to restore itself drawing wildlife, especially my precious favorite manatees, and visitors to experience some-of the very best of Florida! 1. This will restore 20 lost springs and Silver Springs ecosystem are restored 2. Historic fish and manatees return as breach opens creating a free-flowing river 3. 100s of manatees gain essential warm water winter springs habitat 4. 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 5. 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife 6. 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers 7. $4-14 Million in dam repairs saved on a dam past its life expectancy 8. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs.	There are MANY reasons, honestly this seems like a no brainer decision. Financially economic and environmental issues all would benefit from the dam removal. PLUS there is federal assistance available to make it happen! 1. We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. 2. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. 3. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. 4. A storm event triggers a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages. 5. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. 6. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. 7. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. 8. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. 9. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. 10. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam is 50 years overdue. This is a prime example of something that should have never been done. I feel we have a moral ethical and financial obligation to bring the area back to what it should have always been-natural! We can't wait and neither can the wildlife!	As a Florida resident and taxpayer, plus my y father grew up fishing exploring these waterways; I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. By eliminating the dam we will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Manatees my favorite mammal since seeing my first manatee and baby in a canal near our house, this year the die off at an alarming rate and need us to help them by restoring habitat. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. Please please help and make the right decision for all of us! Thank you for listening and helping restore our natural resources and wildlife. Deb Taylor
10/8/2021 12:33	Martin		No	Yes		2-5 times		Fishing	Take down the dam	The River system is far more important than a regional fishing spot.	River restoration will never happen.	No	
10/8/2021 12:35	St Johns		No	Yes		1 time	2-5 times	Canoeing / kayaking Other: To view the original channel of the Ocklawaha River during drawdown.	I would very much like to see the Dam removed and the Reservoir drained and the Ocklawaha and its floodplain restored to a pre-Barge Canal condition. I would like to see the Reservoir become a world-class restoration effort and site much like the St. Johns Rivers Upper Basin Project. I believe that not only would a restored Ocklawaha be an economic and recreational boon to Putnam County but the restoration effort itself would be a catalyst for environmental tourism in the area.	Technical Publication SJ2016-1 Effects on Lower St. Johns River Nutrient Supply and TMDL Compliance from Restoration of a Free-Flowing Ocklawaha River.	A continued decline in water quality and loss of habitat (especially Vallisneria Americana beds) in the Lower St. Johns River Basin and subsequent impacts on wildlife and fisheries.	Yes. Removal of the dam, re-filling or plugging of the dredged barge canal channel within the reservoir and closure of the Buckman Lock allowing natural succession and reforestation of the flood plain to occur and the Ocklawaha to return to its historic channel, or as close to it as practicable.	The construction of the Cross-Florida Barge Canal and its Reservoir were mistakes on a monumental scale. They were created for one purpose, and that purpose has never been realized. Public funds should not be wasted on continued upkeep and refurbishing of the dam and reservoir. Instead, any funds that would be used for those purposes should be channeled into repairing the environmental damage that has been done. I believe that the recreational use and environmental benefits of a restored Ocklawaha would far outweigh those of a maintained dam and reservoir. At a time when Florida is loosing so much of its forest-land to development, it would be a shame not to take advantage of this opportunity to restore some forest to Florida's landscape..
10/8/2021 12:36	Hillsborough		No	No					Dam removal and restoration of normal / historical river / wetland flows .	When natural flows are altered or impeded for short term benefit for a few , longer term and ongoing harm will be experienced by the public (the common good impacted) .	Ongoing undesirable / harmful environmental impacts will continue to bring harm to the public in general.	Nothing worth discussing would replace the benefits of restoring natural / historical flows and functions .	Follow the science. Always support the common good. Restore flows.
10/8/2021 12:37	Putnam		No	Yes		More than 5 times		Fishing (shoreline/structure) Wildlife viewing	Remove the dam	Let the water have its natural flow	No concerns	Drain Rodman lake completely	
10/8/2021 12:37	Sumter		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Waterway.	Three rivers, Ocklawaha, Silver and Saint Johns River is, and 50 springs are restored	Millions on taxpayers money are unnecessarily spent to repair the Rodman Kirkpatrick damn, damn that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	No. Breaching the dam is 50 years overdue. Damn safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the great Florida River Way, to ensure a bright future for our state's people and wildlife.
10/8/2021 12:41	Brevard		No	Yes		1 time	More than 5 times	Wildlife viewing	Tear it down and restore the river system as it was and should be	That the St Johns is deprived of a huge portion of its flow and the Oklawaha has become a swamp rather than a river. You should have seen it when I was a kid	further degredation of the entire system and a lost opportunity that is a lifetime overdue for remedy	No. Anything but a restoration of the entire system is putting a bandaid on a festering cancer	Just do it. The Oklawaha should have never been degraded for a stupid corporate dream of a destructive cross Florida canal
10/8/2021 12:54	Alachua		No	Yes		1 time		Fishing	Remove the dam.	Restore the Ocklawaha River.	More destruction of environment.	Nope	
10/8/2021 12:59	Lee		No	No					We need to protect our environment so if we need to reconnect river to other connecting rivers, streams and so forth we need it done. We can't keep pushing things off to a later date or someone else will do this. Look at where we are now.	We need to protect, improve, etc our earth for a better today besides tomorrow.	Hopefully someday someone will get this done!	My support is doing what I am doing now giving my opinion and viewpoint.	N/A
10/8/2023 13:06	Alachua		No	Yes		2-5 times		Fishing Canoeing / kayaking	Remove the Dam	Natural flow of water and wildlife	The continued waste of money to repair and maintain an obsolete structure.	No	
10/8/2023 13:06	St Johns		No	Yes			More than 5 times	Wildlife viewing Other: walking	Restore the Oklawaha River by breaching the Rodman/Kirkpatrick Dam and reunite the Oklawaha, St Johns and Silver Rivers.	Manatees and historic fish will return to these rivers. 100s of manatees need access to these warmer waters.	This would be a huge missed opportunity to restore our rivers and springs.	NO - this is long overdue!	Restoring these rivers will benefit the communities, economies and ecosystems all along the riverway.
10/8/2023 13:11	Duval		No	No					Remove the dam and have everything return to natural flow.	Published articles pertaining to Oklawaha River.	Worsening of the current conditions, feel natural flow is best.	No.	If the dam is not removed, feel the conditions of the St John's river will worsen. The river needs to be protected.
10/8/2023 13:11	Lee		No	No					I'd like for the dam to stop harming our economy, our quality of water & our wildlife. Let's restore things to a more natural state.	20 lost springs & the Silver Springs ecosystem are restored. 100s of manatees gain essential warm water winter springs habitat $4 to $14 million in dam repairs is saved on a dam past it's life expectancy.	Hundreds of manatees lose the opportunity to access essential warm water for the winter.	Definitely not, this is long overdue.	I'm really tired of people promising to do something for environmental issues and then once they elected or hired, the promises fall by the wayside. How many more endangered/threatened species have to become extinct?
10/8/2021 13:12	Palm Beach		No	No					Discontinued			recreation Area	
10/8/2021 13:13	Martin		No	No					Breach the dam to restore the natural waterway	The barge canal was never completed. Since that was the reason for the dam in the first place, the natural waterway should be restored.	Continuing environmental damage.	No	
10/8/2021 13:21	Sarasota		No	Yes		1 time		Wildlife viewing	Dam removed and river restored.	Science and studies back natura CAN recover if helped.	More degradation of that ecosystem.		
10/8/2021 13:22	Putnam		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	I would like to see the dam removed and the river restored to it's original flow patter	Expert study and research	A waste of taxpayer money to keep the dam intact	a permanent draw down	There are so many beautiful springs that could be enjoyed if the water was lower. The springs are being suppressed.
10/8/2021 13:23	Putnam		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Boating Wildlife viewing	Breach the dam and allow the river to flow freely.	Constant application of herbicide to control the aquatic growth. The inability to travel the river freely to Silver Springs.	Continued contamination of the sediments in Rodman Pool from herbicide applications	No	The dam serves no purpose other than maintaining a fishing pond for a limited number of anglers
10/8/2021 13:24	Palm Beach		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	We now have the funding being made available to help restore rivers and springs that are 50 years overdue in being restored.	Thousands of properties would be subject to flooding due to the dam and we would lose this opportunity to improve the ecosystem of the rivers and springs	No	
10/8/2021 13:26	Pinellas		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.
10/8/2021 13:28	St Johns		No	Yes			1 time	Fishing	Return Ocklawaha River to a free flowing river by breaching the dam.	As Florida Native who has lived in Alachua, Marion and St. Johns Counties, I have seen the terrible impact to the Ocklawaha and Silver Springs. Rodman has frequent algae blooms and is serving no purpose, I have fished there and was not impressed. It not only keeps the Ocklawaha River from flowing, it prevents the migration of fish and manatees. It costs millions to maintain and restricts boating. 50 years is way too long to leave this dam in place, when it does nothing but degrade water quality and hurts aquatic life in Florida.	Continued harm to Florida water quality, Ocklawaha River and fish/manatees.	Breach the Dam. Return the natural flow of the Ocklawaha River.	I go to Palatka frequently, the St. Johns River is the best and most fished waterway in Putnam County. Restoring the natural flow of Ocklawaha River, will only make the St. Johns River cleaner and better for fishing.
10/8/2021 13:35	Lake		No	Yes				Other	The dam needs to be removed after 50 years. It was ill-conceived as part of the even worse idea of the cross-Fl barge canal and serves no other valuable purpose. The dam has caused numerous natural disasters including shutting down an critical source of fresh water to the 3 rivers it used to source; destroyed multiple important natural springs and blocked free-flowing access to boaters and animals along the Great Florida Waterway. I live next to the Green Swamp and in Florida all my life (70 years) and it is incredibly important that this waterway be restored. The dam is old and past it's usefulness as well as being a hazardous situation and expensive maintenance problem. Please remove this damn dam!!	The three natural Florida rivers and multiple natural Florida springs that have been blocked and are slowly being destroyed by maintaining this ill-conceived dam. We need as much fresh water flowing from all natural Florida resources as possible as fresh water becomes a more and more critical issue with climate change. Especially here in fragile Florida.	The rivers and animals will all continue to be adversely affected by keeping this dam in place. It serves no purpose other than fishing and nature viewing for a few locals. The entire state's people, fish and land and aquatic animals would benefit from its removal.	No. It should never have been built in the first place and should have been removed long ago.	Please consider the future of Florida's waterways as well as its entire population, not just a small local group, and the fish, manatees and animals who depend on this access to fresh clean water from the springs and free-flowing River way. Thank you.
10/8/2021 13:37	Lee		No	No									
10/8/2021 13:37	Hernando		No	Yes			More than 5 times	Fishing Canoeing / kayaking Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Everyday that Dam remains is detrimental to the economy, water quality, and wildlife. It is time to remove this obstacle and restore the Great Florida Riverway.	3 rivers: Ocklawaha, Silver, and St John's. Up to 50 springs, 20 lost springs and the Silver Springs ecosystem is restored. Historic fish and manatees return. Breaching opens, promoting free-flowing water giving the manatees a warm water winter springs habitat. 15,000+ acres of the Florida wildlife corridor are restored or enhanced for the people and wildlife. $4-14 million in Dam repair is no longer required especially on a dam that is outdated. Restoration will create a recreational diversity and an increase in visitation, income and job opportunities. Last but not least, $57 million in potential flood damages could be avoided to downstream property owners. It's a win win situation.	We would miss the best opportunity. State and federal funds are available, public interest is high and the environmental needs are critical now and the Dam is unsafe.	No, breaching the is 50 years overdue. Dam safety, water quality and wildlife can not wait. Although, temporarily draining the reservoir 11-12 feet means sea level until restoration occurs will decrease stream property from potential loss behind. Dam safety, one of the largest artesian springs in the world. It provides 66% of the flow to the Ocklawaha River. For an estimated $26 million, it will restore a winter habitat for manatees, and 150 million gallons of natural water flow would help restore the 100 mile lower St John River. The restoration will put the land and wildlife back the way God intended.	As a Floridian who cares about the environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway. Breaching the Rodman/Kirkpatrick Dam is the most beneficial and cost effective spring protection project in Florida today. The project uncovers 20 lost springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. It provides 66% of the flow to the Ocklawaha River. For an estimated $26 million, it will restore a winter habitat for manatees, and 150 million gallons of natural water flow would help restore the 100 mile lower St John River. The restoration will put the land and wildlife back the way God intended.
10/8/2021 13:37	Alachua		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	River restored to natural flow	Ecological and scientific research establishing long term health of river and surrounding area depends on natural flow	River becoming a dead river	More frequent release of water but carefully monitored to avoid unintended negative consequences	
10/8/2021 13:44	Alachua		No	No									
10/8/2021 13:48	Pinellas		No	Yes			1 time	Canoeing / kayaking	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed bluewa	
10/8/2021 13:49	Pinellas		No	No					I would like to see the dam removed, saving money on repairs, and helping to restore valuable ecosystems.	The dam needs repairs, failure of the dam would endanger the lives and property of downstream residents, it's removal would help restore several habitats.	Catastrophic failure and possible loss of life.	I feel that removing the dam is the only long term solution, and the benefits of doing so would benefit threatened manatees, provide additional flow to the St Johns system,	Breaching or removal of the dam has many economic and environmental benefits, restoring Silver Springs, and the aid of added flow in reducing harmful algae blooms are all probable outcomes.
10/8/2021 13:50	Brevard		No	No					Remove the dam.	It is important to restore the natural wetlands. Wetland habitats are vital for native and migrating wildlife.	Continued restrictions to water flow, recreation, and native habitats.	No.	
10/8/2021 13:52	Citrus		No	Yes					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. There has been enough harm to the economy, water quality, and wildlife and throughout the Great Florida Riverway.	The three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored.	Millions in taxpayers' money will unnecessarily be spent to repair the currently-unsafe Rodman/Kirkpatrick Dam. It does not provide flood protection, power or water supply. We would miss the best opportunity to do this because State and federal funds are available. At a time when public interest is high and environmental needs are critical (manatee, water quality, wildlife habitat), we must take action to restore the Ocklawaha River.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/8/2021 13:53	Pinellas		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	100s of manatees gain essential warm water winter springs habitat	The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	No	
10/8/2021 13:56	Alachua		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing		Leave it as is.	It is nature, beautiful, entertaining for several recreations.	Mess up environmental balance	Unknown
10/8/2021 13:58	Outside of state / other	Carrollton Ga. 30116	No	No			More than 5 times	Fishing Wildlife viewing		Leave it alone. It has it's own eco system.	I fish the lake and go there to watch the birds, gators and manatees.	Probably stop fishing Fl. Read about Rodman since the early 70s. Had always wanted to fish the lake. My daughter and her husband own a house about 3 miles from the lake. We fish it often and it has been everything that I ever read the lake was. I hear a lot of talk about the kayakers want to put it back to it natural state. No more kayakers that I have seen in the area there it would be ridiculous to destroy such a beautiful place.	No	Rodman is a beautiful place. The lake has been there now for over 50 years why change it back. The reason I hear most is for kayakers can float the river. I have fished that lake numerous times per year for over 15 years and have only seen kayakers there maybe 3 or 4 times. It is a useless point to even think about destroying the lake. There is no way that the people that don't fish the lake can add anything to the value of the eco system that fishermen do. Why not do a count of fishermen on the lake compared to kayakers and see who value the lake the most.
10/8/2021 14:01	Putnam		No	Yes	2-5 times	2-5 times		Fishing Canoeing / kayaking Wildlife viewing	Return the river to near natural state as possible	Fishing will enprove	St Johns river continues to rot	partial restoration	
10/8/2021 14:03	Broward		No	Yes				Canoeing / kayaking Other: Silver Springs!!!	Breach the dam! It is not only non-functional and obsolete, it prevents the Great Florida Riverway from being a true "riverway". This dam sucks millions of dollars in repairs from us taxpayers, because it is so decrepit and if it fails, it will cause property damage and possible deaths.	Destroying the dam will increase the flow and quality of water to fish, mammals and wildlife along the 217-mile Riverway .	I cannot count them all!!! In the end, however, I and many millions/billions of other people would see Florida as a short-sighted state without honor. A state governed by people who are so narrow-minded they cannot see beyond their own petty boundaries.	Absolutely NOT! If the Great Florida Riverway is not restored SOON, our state will continue to lose visitors and discourage residents, as well as kill off a great deal of wildlife (fish and mammals alike). As a 40-year Florida resident, PLEASE help us restore our reputation.	Making the choice to close the dam will allow Florida to restore a grand riverway, increase a vital wildlife corridor, return to the local economy a $50-million net benefit over 10 years, and reduce or eliminate the toxic algal blooms that have made our state a laughingstock.
10/8/2021 14:03	St Johns		No	Yes		1 time		Canoeing / kayaking	I would like to see the dam removed and the river restored, saving the springs and giving manatees free rein to use the area again, and striped bass a way to breed and migrate.	The destruction of that area. Also the dam is deteriorated and needs repair, it should just be removed as its original purpose, the canal, was not feasible. 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Additionally, millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	This has been an issue of concern to Floridians for way too long, costly research has gone into deciding what course of action, and determined that full or partial removal of the dam was in the best interest of all of us. Currently, it is past its lifespan and needs work, it would be better to take it down and let nature return it to its former beauty.
10/8/2021 14:05	Seminole		No	No					Free the river				
10/8/2021 14:07	Okeechobee		No	No					Remove it!!!	I want the natural waterway to be restored	Loss of valuable wetlands	No	Let's remove the Dam and restore the natural waterway.
10/8/2021 14:13	Sarasota		No	No					reopen natural river flow	affect on fishstock	quality of water	I don't think it is feazible to have part of a dam. This was only created to facilitate the cross florida barge canal which was a very bad project then and even worse now. Just look at the statistics that have been created. look at our aquifer system and do all to protect it TAKE THE DAM THING DOWN	THE REAL QUESTION IS: WHAT IS THE CONTINUING JUSTIFICATION FOR KEEPING THE DAM? If there is none, then take the dam thing down.
10/8/2021 14:21	Monroe		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored. Historic fish and manatees return as breach opens creating a free-flowing river. $4-14 Million in dam repairs saved on a dam past its life expectancy.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	I am also concerned that millions in taxpayers' money could be unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.
10/8/2021 14:22	Marion		No	Yes		More than 5 times		Wildlife viewing	remove reservoir & dam, every time I have been there, there has only been one or two people there . Restore the Ocklawaha River, return the natural flow of the river. I often drive over it or near it,& it looks like a creek.Restoring it will also help restore Silver Springs. People can do all the recreational things on the natural river that they do on the reservoir & the rest of us & the environment will benefit from the natural flow.	years of comparable research on he value & use of the river as compared to the use of the Rodman Reservior	Disappointment that the St. Johns River Water Mgmt as a representative of elective government is not paying attention to the needs & wants of this area	No	thank you for this opportunity
10/8/2021 14:24	Leon		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	I would like to see it breached in order to give struggling manatees a warm water habitat.	Research done by environmental organizations such as Defenders of Wildlife & Save the Manatee	It would be another strike against the survival of manatees, pushing them closer to extinction	Develop other areas for manatee habitat and plant sea grass as the species is also threatened with starvation	
10/8/2021 14:25	Pasco		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, the Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored. This means 15,000+ acres of the Florida Wildlife Corridor being restored or enhanced for people and wildlife.	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits as The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Additionally, millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	I was born and raised in Florida, living here all my life. This is in part why I am a stakeholder for projects that can impact the future health and safety of people and wildlife here in Florida. I am an avid nature lover, and an advocate for Florida's ecosystems, especially in the face of climate change. This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.

10/8/2021 14:28	Monroe		No	No					Restoration of the Ocklawaha River by broaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	I live in Florida and really care about water flow everywhere being restored. As you know, humans have drastically altered the planet which is negatively impacting it's environment, including organisms. 2021 is the deadliest year on record for manatees, unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/8/2021 14:28	Alachua		No	Yes		2-5 times		Other: Just to see what a mess it is	remove damn kirkpatrick - let oklawaha run to the st johns	god made it that way for all the creatures	god will not like it	nope	just do it
10/8/2021 14:30	Pinellas		No	No					Restore the Ocklawaha River by broaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	The Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/8/2021 14:35	Charlotte		No	No					remove the dam once and for all.	stopping the migratory habits of the wildlife and general usage of the waterway flowing openly to the Atlantic.			
10/8/2021 14:39	Orange		No	Yes			1 time	Wildlife viewing	The dam to disappear.	The unhealthy changes in the surrounding area since the dam was built.	Mother nature not being allowed to "do her thing" at last.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	I have lived in the central Florida area since 1948. That dam should never have been built. It is WAY PAST TIME to correct that boondoggle creation!
10/8/2021 14:40	Clay		No	Yes			2-5 times	Wildlife viewing Other: horse back riding	Restoration of the Ocklawaha River by broaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Historic fish and manatees return as breach opens creating a free-flowing river.	We might miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No	I do hope the Ocklawaha is restored. It would be best for wildlife to return it back to its original state.
10/8/2021 14:41	Putnam		No	Yes			More than 5 times	Fishing	remove the dam and restore the river	the natural flow of the river would restore a higher quality habitat for many species and a return to the beauty of the landscape.	continued degradation of our dwindling natural local resources	no	
10/8/2021 14:41	Hillsborough		No	No					restore the Ocklawaha River by removing the dam	to avoid flooding to downstream homes	the 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion	no. it is long overdue	
10/8/2021 14:47	Clay		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	I want to see the Kirkpatrick Dam removed and the Ocklawaha River restored.	The Rodman Reservoir is dying. Removing the dam will improve the health of the Ocklawaha River, St. Johns River, Silver Springs, and the Silver River. It will free twenty natural springs.	The ecology of the Rodman Reservoir, the Ocklawaha River, St Johns River, Silver Springs, and Silver River will continue to decline.	No.	The Rodman Reservoir is expensive to maintain and the fishery is declining and will fail. The sooner we stop wasting money and start restoring the river the easier and more successful that restoration will be.
10/8/2021 14:48	Duval		No	Yes	1 time	More than 5 times	More than 5 times	Wildlife viewing Other: We drive over it	Nothing but maintenance	Preventative Maintenance System	No draw down	No	
10/8/2021 14:55	Martin		No	No					I would like the dam removed so that the Ocklawaha River can be restored. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.
10/8/2021 14:55	Osceola		No	No					repair / maintain and make it part of a natural open area for everyone to use.	Open areas help all peoples to see one another and lesson loneliness, foster new acceptance of various peoples in a non threatening manner.		a park like setting with some games for the young and shaded areas to sit an enjoy the waters calmness.	
10/8/2021 15:09	St Johns		No	Yes			1 time	Other: Just wanted to see it.	Restoring the flow and removing the dam.	The health of the environment--plants, animals, watershed, everything.	Further destruction of the environment--plants, animals, watershed, everything.	I support any amount of removal and whatever is best for the environment--an environment which humans benefit from also, if it is healthy!	
10/8/2021 15:20	Charlotte		No	Yes			2-5 times	Canoeing / kayaking	Restore waterway to its original levels	Restoration of old springs now hidden and the costs of repairing the dams	Missed opportunity to restore a beautiful river	This is an all or nothing project as far as I can tell.	This is a truly wild and beautiful part of natural Florida. It has history going back far beyond the damn constructions. It is time to move back to its original magnificence.
10/8/2021 15:26	St Johns		No	Yes			1 time	Wildlife viewing	Removal of the dam so that water may flow freely and the rivers are not blocked for manatees, fish and boaters.	The death of hundreds of manatees this last year due to starvation and the lack of access to springs and warmer waters flood during the winter makes this action even more critically needed. Removing the dam will allow a better distribution of manatees with access to more springs and food. Restoring the flow of water will help restore the ecosystems of the Silver River, Silver Springs and other springs and increase flow to the St. Johns River.	Irreversible harm to the manatee population due to loss of access to warm water habitat. And we will miss our chance to improve water quality by the natural filtration of surrounding forests; our chance to decrease algae blooms and fish kills, and our chance to reunite and restore the rivers and springs of the Silver Springs/Ocklawaha River basin.	No. We need to remove the dam now while funds are available and pubic interest is high.	Our State has habitats not found anywhere else in the US. We must restore the Ocklawaha, Silver, and St. Johns Rivers and springs for the health of our water, wildlife, and total ecosystems, and for the enjoyment of all. People are resourceful; businesses will be able to continue to cater to fishermen and increasing numbers of eco-tourists. I urge the District to act in favor of the restoration of the river which will benefit all.
10/8/2021 15:27	Duval		No	No			1 time	Fishing (shoreline/structure)	Would like to see the dam removed.	20 lost springs and Silver Springs ecosystem will be restored.	The three rivers, ocklawaha, silver and St John's River and 50 springs will never be restored	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait. t	The Ocklawaha was a beautiful river and they never should have put a dam on it. It should flow free like other Florida rivers.
10/8/2021 15:27	Duval		No	No					Restore the Ocklawaha River by breaching the dam on the Rodman Reservoir.	Connecting a free-flowing Ocklawaha to the St. Johns River would create a migratory route for fish and manatees from the Atlantic Ocean. The environmental health of the whole river system would be improved, increasing tributary flows to the Ocklawaha from the network of creeks, according to the Defenders of Wildlife, the St. Johns Riverkeeper and the Free the Ocklawaha Coalition.	The dam will continue to block the river's flow, impeding the movement of aquatic life and degrading water quality. It will also continue to decrease biodiversity and endanger manatees.	I do not believe a partial removal of the dam would be cost effective - it would just reduce it to a derelict, decrepit structure likely to harm fishermen and wildlife. A 50 year old mistake should just be corrected.
10/8/2021 15:32	Pinellas		No	No					Whatever is best for the natural environment	Natural flowing rivers are best for wildlife and water quality	Lack of health of the river and supporting wildlife.		
10/8/2021 15:32	Pinellas		No	Yes		1 time	2-5 times	Canoeing / kayaking Wildlife viewing Other: hiking and riding bicycles	Restore. I lived in Marion County and worked in Alachua County where I visit at least seasonally even now. It is a very special part of Florida that has managed to survive. Restore what is left of the river. For Florida.	The fragile remarkable environment struggles to support Florida wildlife. Opening the river will help to save threatened native species.	Desecretion of natural Florida in the gateway to Payne's Prairie the National Forest and the Aquafer.	The recreational fishing interests the dam and reservoir provide are an issue politically and financially to the businesses that would be affected but I support the natural river in the case of keeping Florida waterways and wetlands alive. It is way past time to do the natural healthy action talked about for decades.	Restore
10/8/2021 15:34	Duval		No	No					Restoration of the Ocklawaha River by broaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway.
10/8/2021 15:35	Duval		No	No					Restoration of a Free-flowing Ocklawaha River by broaching the Rodman/Kirkpatrick Dam to reunite the natural connection of Silver Springs, the Ocklawaha and the St. Johns River.	Science	Continued damage to Florida's ecosystem		
10/8/2021 15:39	Columbia		No	Yes		1 time	2-5 times	Canoeing / kayaking Wildlife viewing	open the dam. Let the river flow. Reveal the springs and bring back the wildlife	The graveyard of cypress. The hidden springs. The invasive vegetation due to lack of flow ...The lack of FLOW for the Ocklawaha !!	Continuing problems with invasive vegetation that thrives on the river's stagnation	??? Dam Itself open ??? Get rid of the damn dam	
10/8/2021 15:40	Duval		No	No					Move to a more natural and environmentally healthy river	Natural river flow and wildlife migration	We need to stop manipulating and trashing our environmental resources. Worst case scenario would be everyone's grandchildren hating them for being greedy and stupid.	It's been a problem for 50 years. Fifty. Take care of it.	Do something before the money is siphoned off for something else.
10/8/2021 15:47	St Johns		No	Yes		2-5 times	More than 5 times	Fishing Canoeing / kayaking Wildlife viewing	I would like to see a comparative study showing the positives and negatives of keeping it or taking it down. This should incude tourism and economic impact to the communities surrounding the area.	I dont have a position, I have many friends, fishermen and others who say keep it. I have friends who think it is time to go.	I want to see a way to insure that what is done is best for the area,	I dont know, would want to see the options and their pros and cons side by side.	You have a chance to do a significant citizens involvement with lots of transparency. If you are selecting a committee, do it with articulate people on both sides, people undecided, and commith to transparency. Follow the state's sunshine laws.
10/8/2021 15:50	Duval		No	Yes		1 time		Fishing	have it removed	Removal will help the springs and the St John's River	More damage to the springs and river	No	The dr.wedowns are expensive and other maintenance cost taxpayers too
10/8/2021 15:53	Alachua		No	Yes		1 time		Boating	Remove the dam and restore the river and surrounding lands.	The building of the dam was for the ill conceived Cross Florida Barge Canal. It's not necessary for the nor it truly healthy for the river or surrounding lands and springs.	The continued waste of money and harm to the river.	It's doubtful. What scenario would that be? Either the dam stays or it goes away.	
10/8/2021 15:54	Alachua		No	Yes		1 time		Other: Just to observe	Breach the dam and restore free flow of water.	Return of natural state of water flow to other waterways.	We continue to interfere with good water flow causing water supply in other areas to be insufficient for wildlife.	No. Fishermen will find another area and actually more diverse fishing would develop.	
10/8/2021 16:06	Charlotte		No	No					The dam should be removed. It is interrupting the natural flow of water to other waterways and vital marshland.	This would restore thousands of acres of marshland and streams and ponds vital to wildlife. The manatees are dying off at an alarming rate & this would be an additional safe place for them to go to in cold weather.	A huge and crucial opportunity to restore the natural flow of the river and provide thousands of acres of land and marshes for wildlife.	NO - the damn should be removed - permanently.	We need to stop trashing out natural surroundings - once gone we cannot get them back!!!!
10/8/2021 16:09	Alachua		No	Yes			1 time	Wildlife viewing	To be restored!	Environmental concerns.	Destruction of a beautiful and important area!	No	
10/8/2021 16:20	Dade		No	No					Restoration of the Ocklawaha River by broaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Historic fish and manatees return as breach opens creating a free-flowing river	Water quality, biodiversity loss, climate resilience	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/8/2021 16:23	Marion		Yes	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing		Fishing Guide	Loss of job		
10/8/2021 16:26	Indian River		No	Yes		2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Breach the dam. It cuts off access the the rest of the Ocklawaha and Silver Springs for fish and manatees.	Fish and manatees return as breach opens creating a free-flowing river and forest habitat can gradually restore itself, as was historically the case.	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	No - the dam was a mistake 50 years ago and it is not serving any good purpose now.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/8/2021 16:26	Dade		No	No					Restoration of the Ocklawaha River. It's time to breach the Kirkpatric Dam and restore the Great Florida Riverway in light of climate change. This is really important for the economy - the health of the economy is dependent on the health of our resources.	Avoiding $57 million in potential flood damages to downstream property owners. Additionally, restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs.	Pushing biodiversity to the brink, potentially losing manatees altogether. The impact on birds, trees, and the water itself affects us as well - let's make it a positive one.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits.	Breaching the dam is overdue. Please consider this positive impact for dam safety, improved water quality, enhanced wildlife, and a richer home for us to live and visit.
10/8/2021 16:28	Putnam		No	Yes		2-5 times	More than 5 times	Fishing	Retain reservoir. Unique ecosystem. Water quality and wild life.	Experience	Use of the Ocklawaha River would be lost to boaters.	No	I helped build this reservoir. The opposition has no idea as to construction means used to build this lake. In my opinion and from personal observations, Rodman can not be restored. If lake is drained where would all the birds and wildlife go? Prominent vegetation would be cat tails and myrtle bushes. To verify this senerio take a trip to any drained wet lands. Plenty of examples in Florida.
10/8/2021 16:33	Pasco		No	Yes			1 time	Canoeing / Kayaking	Please remove the dam and restore the natural flow of rivers and streams.	The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway	Unnecessary money spent on dam maintenance and water quality.	No	
10/8/2021 16:38	Alachua		No	Yes			1 time	Wildlife viewing	Restore the free flow of the Ocklawaha River.	The resulting restoration of the natural river would actually increase tourism, recreation and stimulate the local economy more than the present situation. Ecological benefits in terms of wildlife and the health of the St. Johns River would be tremendous.	Millions of dollars are spent to maintain the dam and reservoir which could be better utilized for other water needs. Every year the unnatural reservoir gets in worse condition, no matter what is done with drawdowns, etc. This relic of the cross Florida barge canal needs to go.	No.	
10/8/2021 16:39	Dade		No	Yes			More than 5 times	More than 5 times	Restoration of the Ocklawaha River by broaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored. 20 lost springs and Silver Springs ecosystem are restored. Historic fish and manatees return as breach opens creating a free-flowing river. 100s of manatees gain essential warm water winter springs habitat. 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier. 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife. 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers. $4-14 Million in dam repairs saved on a dam past its life expectancy. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds . supporting jobs. $57 million in potential flood damages avoided to downstream property owners	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. A storm event triggers a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait. OR Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an undistructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. This exciting restoration will improve water quality and flow by generating an additional 150 million gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefiting water quality through enhanced biofiltration. Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.
10/8/2021 16:43	Pinellas		No	Yes		1 time		Fishing Canoeing / kayaking Wildlife viewing	Restore the Ocklawaha River. There are so many reasons why this is a great idea. One is that Manatees would greatly benefit from a warmer winter water option.	Manatees are having a very bad time with record numbers of them dying. This can stop them from becoming endangered animals. Plus, this helps grow tourism on many levels. More fishing, wildlife and boating options with a restored river means more visitors - which always increases local jobs.	Manatees extinction, another area of Florida with water quality issues and domino effect these things have on the local economy/jobs.	No - we need to do everything we can to preserve the water quality and aquafer in Florida. With so many areas around the state having issues (like Pinney Point, Everglades, etc.) we need to keep our pristine waters. Restoring the landscape back to how it started out as many decades ago is critical to Florida.	Please do the right thing for water quality, manatees and local economies by restoring the Ocklawaha River
10/8/2021 16:45	Putnam		No	Yes		1 time		Canoeing / kayaking Wildlife viewing	The Great Rivers plan	FDR & presentation by scientists & economists No plans for area restoration & revitalization	Same old "good ole boy" mentality calling the shots	Anything that moves forward in environmental restoration	Glad you're asking residents
10/8/2021 16:47	Pinellas		No	Yes				Canoeing / kayaking Wildlife viewing	Full restoration	Protect our waterways	Continued disjointed ecosystems	No	It's about time.
10/8/2021 16:58	Hernando		No	No					Destruction	Natural flow of waterways	Continuing degradation of affected waterways	Unknown	
10/8/2021 17:00	Duval		No	No						Destroy it	There are many open connection to ocean for fish and manatee, less flooding and more water into John's river,increased water supply for growing areas	No	
10/8/2021 17:06	Duval		No	Yes			1 time	Boating	I'd like to see the Ocklawaha River restored to its natural flow.	This is an old dam past its life expectancy and it's not worth taxpayers spending millions in dam repairs to save it.	Declining water quality and loss of habitat for manatees and other wildlife.	No. but if we at least restored other endangered springs, that would improve water quality.	The St Johns needs this help and the dam isn't providing much for the money it's going to cost to keep it.
10/8/2021 17:08	Putnam		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing Other: And hiking	Stay as is.	With the water in our state being used at a large volume and season droughts, it would be crazy to remove an already existing large source of fresh water that can be drawn on when needed. When need used because we all know it will be needed.	The lack of fresh water in the future. The mess it would create that would take decades to recover from and the massive amounts of wildlife habitats that would be destroyed. The benefits to keeping it far out weigh the benefits of a hopeful restoration. I may not agree with it having been built, but now we have the fresh water source, we would be silly to do away with it.	Not sure. What would you suggest to replace this large of a body of water for future use?	
10/8/2021 17:11	Martin		No	Yes		1 time		Wildlife viewing	Restoration of the Ocklawaha River by broaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway	100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/8/2021 17:23	Palm Beach		No	No						As a Floridian anything environmentally sound	Our state is not keeping the pesticides and algae from any waterway	More pollution of waterways death of more species Septic tanks need to be replaced	Nikki Fried is in our state government and is running for governor hopefully she gets in because she seems to care about our environment
10/8/2021 17:25	Volusia		No	No					Restoration of the Ocklawaha River by broaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	20 lost springs, damage to Silver Springs.	A waste of tax payer money on a dam that is beyond aged and continued damage to wildlife.	No.	Should got a complaint letter signed by supporters to put manatee and any other animal that is dying on the endangered list
10/8/2021 17:25	Indian River		No	No					The dam should be breached to allow the river water to flow.	It would connect a free flowing Ocklawaha to the St johns River and create a migratory route for fish and manatees from the Atlantic Ocean	The death of more manatees.	No	
10/8/2021 17:39	Lake		No	Yes			1 time	Other: Hiking and visiting River					
10/8/2021 17:39	Palm Beach		No	Yes			1 time	Boating	Gradually drained over 5-10 years to restore the natural river	Restoration of the river is best for the ecosystem	unnecessary continued maintenance of an artificial system	No A dam/lake is not a free flowing river. As stated the lake should be drained slowly over several years	
10/8/2021 17:42	Marion		No	Yes		2-5 times		Fishing	Leave it alone. It's working.	The process of history can tell you that the Barge Canal was a mistake, however, the Rodman reservoir produces monetary income and does no harm to the eco-system.	Broad flood lands	No. Leave it as it is.	
10/8/2021 17:44	Duval		No	Yes		2-5 times		Canoeing / kayaking Other	Dismantle them and restore the Oklawaha River.	It would allow fish and manatees to migrate into the Silver River like they did for centuries before the dam.	Continued harm to the sustainability of fish and manatees	No	

10/8/2021 17:47	Orange		No	Yes		More than 5 times	Canoeing / kayaking Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.
10/8/2021 17:47	Lake		No	Yes		1 time	Other: Hiking and visiting River	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka. Is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway.
10/8/2021 17:47	Palm Beach		No	Yes		1 time	Wildlife viewing	Restoration of the natural river flow	Restoration to restore the entire ecosystem	Changes to original flow impacts entire environment	No	
10/8/2021 17:54	St Johns		No	Yes		1 time	Other: Heard a lecture about it and so went to look at it.	Would like to see it all removed and would like the river to be restored to its natural flow.	The health of the river, as the scientists said in the lecture I heard about the studies that had been done--apparently this is undisputed already, but the dam just has not set been removed (no reason why).	Losing more environmental health and wellness. As the studies showed this is seriously harming the ecosystem.	Any restoration would help, but why not do what is best and remove the entire dam, as the studies demonstrated would be the best course of action?	Thank you for removing this dam as soon as possible--the sooner it is removed, the sooner the ecosystem can begin to recover (to the extent it can).
10/8/2021 17:56	Escambia		No	No				Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The return of fish and manatees since a free-flowing river is created again and lost springs are restored giving manatees more habitat and it will benefit the Florida Wildlife Corridor which is crucial for our state.	That we miss this opportunity where state and federal funds are available to restore wildlife habitat and water quality, AND the dam is unsafe.	No, breaching the dam is way overdue!	As a native Floridian who was born here 60 years ago and has been a lifelong resident, I have a deep love for our beautiful state and am very worried about our environment. I think restoring the river would be great for the environment, for the wildlife and the people.
10/8/2021 17:59	Bradford		No	No				I would like to see the dam removed and the river restored to its natural flow.	I have been following this issue since I was in high school in Ocala in the 1960's. I used to live in the Ocala National Forest. I opposed the dam and barge canal from the beginning and I was relieved when President Nixon halted construction of the canal. As we now see, Florida is very fragile and our sources of potable water are at risk. Restoring the Ocklawaha River will benefit the environment and our health and safety.	The environment will continue to degrade and water issues will become more serious, which will impact the overall health of Floridians.	I believe it is inevitable that the dam will be removed, if not now, sometime in the future. The sooner the better.	
10/8/2021 17:59	Duval		No	Yes		1 time	Wildlife viewing			Sadness at what we are doing to our land	No	
10/8/2021 18:04	Hillsborough		No	Yes			Canoeing / kayaking Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. That would benefit both the Ocklawaha and St Johns Rivers downstream and improve the environment through springs restoration and other benefits upstream	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored. This will expand recreational opportunities and the tourist economy throughout the region and avoid the costs of maintaining a reservoir that serves little good except a sports fishery that will inevitably decline as the lake silts in and water quality deteriorates.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and failure to act would mean that Putnam County and Silver Springs would both lose opportunities for economic growth and environmental improvement	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level would avoid downstream property damages from a potential dam failure and still provide continued recreational benefits on the lake, though diminished by the continued degradation of lake water quality. BUT a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	Although not a local resident, I was very much impressed by the recreational potential of the river below the dam. I have paddled Silver Spring several times over the last 15 years and have been much dismayed by the decline of water quality.
10/8/2021 18:09	Polk		No	Yes		More than 5 times	Wildlife viewing	I would like to see the natural landscape restored and the river and springs restored. I strongly believe that neither the dam or the reservoir serve any useful purpose in a state with tens of thousands of other water bodies to boat and fish upon. a wild river is a much rarer thing that a static pool of water, and has far more economic and wildlife value as an attractor of both human visitors and resident populations of native Florida wildlife.	Common sense and more than 65 years living and working around Florida. I've seen the senseless destruction heaped on top of the necessary.	That Florida continues to be blind to the laws of nature and God's design for our state.	no	
10/8/2021 18:13	Indian River		No	No				I would like to see the restoration of the Ocklawaha River by breaching the Kirkpatrick Dam and restoring the river to benefit wildlife, especially Manatees, who need warmer water from the natural springs in the Rodman Reservoir.	A report by American Rivers naming the Ocklawaha one of America's most endangered rivers.	Continued degradation of wildlife and environmental health due to lack of clean water flowing into the St. John's River system.	None! Let's to this.	
10/8/2021 18:14	Highlands		No	Yes		1 time	Wildlife viewing	It would be good for wildlife and marine life to breach the dam so that fish and manatees can swim freely as they once did years ago.	I think it would be helpful to the rivers and the environment to reunite the Ocklawaha, St. Johns and Silver Rivers and Silver Springs - the Great Florida Riverway.	It would be a real disservice to our wildlife that fish and manatees could not swim freely to the ocean. If the rivers were reunited, the wetlands would also be restored. It really is a win-win situation.		Thank you for creating this survey and allowing people who care about Florida to share their views with you.
10/8/2021 18:17	Alachua		No	Yes		2-5 times	Canoeing / kayaking Wildlife viewing	I'd like to see the dams breached so the river can flow naturally and let it follow the old riverbed. It would become an even better area for recreational fishing, kayaking, and observing nature. It would be a much healthier aquatic area and even more appealing for recreation and wildlife alike. It could reclaim the charm of Ocklawaha. I'd love to see the manatees able to swim through freely and other former species of migratory fish return to the area.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	Field waters, log jam of dead cypress, rushed deteriorating infrastructure, continued ecological devastation. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A storm event triggers a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait. A drawdown can provide short-term safety needs as permit and plans are finalized.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.
10/8/2021 18:21	Pasco		No	Yes		More than 5 times	Fishing Canoeing / kayaking Wildlife viewing	remove	restores habitat		no	
10/8/2021 18:23	Alachua		No	Yes		1 time	Wildlife viewing	Remove the dam !!!!!!!!!! Open up the river.	Need for animal migration	Reduced wildlife habitat an corridors	NO!	
10/8/2021 18:29	Marion		No	Yes		1 time	Other: boy scout clean up					
10/8/2021 18:33	Hillsborough		No	No				Breached .natural flow restored	Alarming number of manatee deaths...this would give e them more area to avoid boat encounters.	Man's continuing to disrupt Natural Florida...at the expense of plant and animal life in Florida.	Not that I'm aware of...	
10/8/2021 18:48	Palm Beach		No	Yes		1 time	Canoeing / kayaking Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored allowing fish and manatees to return to what was always meant to be a free-flowing river.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (water quality, wildlife habitat), the dam is unsafe, and hundreds of manatees lose the opportunity to access essential warm water winter habitat.	Sadly, no. We have no national choice. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Seriously concerned about future of Florida's environment. We are big outdoor enthusiasts! We lived in Duval County, Dade, Okeechobee, and Dade. I am 6th generation Floridian!
10/8/2021 19:12	St Johns		No	Yes	1 time	2-5 times	Canoeing / kayaking Wildlife viewing	I would like to see the dam removed in order to restore the flow of the Ocklawaha River to its natural state.	The dam causes many ecological problems including the buildup of invasive plants, the drowning of natural spring sites, and the obstruction of normal migration patterns for native animals like manatees and crippled bass. Also, the dam was built for a project that was canceled decades ago because it was deemed too wasteful and ecologically damaging. It should've been removed when the project was canceled.	Public money would be wasted on the upkeep of the dam. Herbicide buildup would continue contaminating the water and the creatures that live in it. The dam may also affect the algae blooms downstream on the St Johns River, which seem particularly bad this year in the areas I normally take my kayak. Manatee populations would also suffer, since only a handful of manatees are able to get through the locks and access important feeding grounds like the Silver River. Unlike many springs in the state, the Silver River still has a healthy population of eelgrass, and it can provide the warmth and food that manatees need to survive the winter.	A permanent draw down would be better than what we have now, but the dam would still need to be removed eventually.	The dam isn't old enough to be part of our history. It was built for a foolish and shortsighted public project and it should've been torn down when that project was canceled. The drowned forest around the river is hauntingly beautiful during the drawdown. It will take time to heal, but it will heal on its own as soon as we let it, and I'd like to see it slowly transform back into what it looked like before the dam was built.
10/8/2021 19:14	Brevard		No	No				Removal to allow natural springs and habitat to be restored	30 lost springs and Silver Springs ecosystem are restored	Hundreds of manatees lose the opportunity to access essential warm water winter habitat.	No	
10/8/2021 19:23	Marion		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Hunting	Leave it be. It was a bad idea in the beginning but to do anything now would be expensive and would destroy one of the best fisheries in Florida. Continue as is with draw downs.	Nature will heal itself if you leave it be. To take out any structure on the lake or river would only do more harm.	More wasted tax dollars. More damage done. It will hurt the sport of fishing that brings in a lot of money for the north central Florida area.	None that I can think of.	If there is money to be spent on Rodman then use it to build more fishing piers for the people that cannot afford a $80,000 bass boat.
10/8/2021 19:25	Martin		No	No				Breach the dam to improve condition the river and help wildlife.	Manatees are in need of more habitat.	Another dead river and loss of wildlife.	No	
10/8/2021 19:25	Polk		No	No				It was Built for the wrong reason, we understand that businesses have grown up with the reservoir, and have "persuaded" politicians to ignore past efforts to return the river to it's natural state....Returning the Kissimmee to it's natural state has been a Blessing to the World Environment...I believe that returning the river to it's natural state will be wonderful for everyone but those businesses.	I've Talked with friends who have lived in Gainesville over 4 decades, and are marine Biologists, and they know the Dam should go.	I really don't have a Dog in this Fight, locally....But from an overall environmental , health of the State and Health of the World, the dam should go....If not, we have missed another opportunity to help repair the environment.	I don't know	If the Biologists ,Scientists, Water Managers, etc. say the dam should go, and many have for decades, and the business people an politicians say it should stay...I vote with the Biologists and Scientists.
10/8/2021 19:26	Sarasota		No	Yes		2-5 times	Canoeing / kayaking Wildlife viewing	I would like to see the Ocklawaha River restored by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	The Silver Springs ecosystem will be restored and fish and manatees will return as the breach opens, creating a free-flowing river.	Water quality will decline further, fueling invasive weed blockages, blue-green algae events, fish kills and submerged the dreams of a restored natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	I care deeply about Florida's environment and wildlife. I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to provide a better future for our state's people and the many species that depend on that waterway. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. If you restore the Ocklawaha River, it will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. The restoration will generate an additional 150 million+ gallons per day of fresh water into the St. Johns River and Estuary, improving water quality and flow. This infusion of pure water into the system will help to prevent harmful algal blooms, support coastal resiliency, and help prevent saltwater intrusion. This will benefit many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will also revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
10/8/2021 19:26	St Lucie		No	No				Cease it's operation, and turn it into a museum. Allow the river to run through the dam unimpeded, on to it's own natural course.	The environmental impacts on the wetlands and the manatee population all being put aside for the vain sake of recreational fishing. Illogical and childish selfishness is no excuse to be wantonly destructive. In the pursuit of "fun"	The continued destruction of life, the continued encroachment of artificial means in vulnerable environments. The continued magical thinking that our planet is a toy for our amusement. Instead of the factual understanding that this is our house, we're filthying it to the point that it's killing us in reciprocity. People are too stupid to catch on. We kill mom, we die too. Mom's gonna kill us first, before we can kill her...	Ceasing it's operation, preserving it as a historical landmark, and allowing the river to continue on it's own natural course IS the compromise here. It's the only way both parties can have an amicable outcome.	The "lake" was never a natural entitlement. It needs to be for/slit for the sake of the lives it will save, over the simple entertainment met got from killing things from it's water. Flowing water saves lives. Blocking this water takes lives at every angle. It's simple common sense for anyone with a "will to live" point of view.
10/8/2021 19:31	Marion		No	Yes	1 time	2-5 times	More than 5 times	Fishing	Maintain the lake for the great bass fishing.	Rodman is know nation wide for its great bass fishing and brings in a lot of money to local business in Marion and Putnam counties.	A lot of income will be lost to local business and fishermen	No	
10/8/2021 19:36	Putnam		No	Yes		1 time	More than 5 times	Fishing Wildlife viewing	No changes				
10/8/2021 19:38	Pinellas		No	No				Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a da in that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/8/2021 19:41	Seminole		No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/8/2021 19:42	Monroe		No	No				Breached to restore flow	It was originally that way	Historic flow never restored	Not that I know of	
10/8/2021 20:04	Volusia		No	No				Natural restoration	Natural environment supports all living things	All of nature is codependent	Other environmental consideration	Natural waterways are essential to every living thing
10/8/2021 20:05	Outside of state / other	Jackson, ms	No	Yes	1 time	1 time	1 time	Fishing Canoeing / kayaking Wildlife viewing	Be more friendly and safe for Manatees and all wildlife.	What is currently going on with Manatees and the environment.	The safety of the Manatees and all wildlife.	Can't think of anything right now.	please think about the safety of Manatees and all wildlife. Thank you.
10/8/2021 20:11	Outside of state / other	Inglewood, California	No	Yes		2-5 times		Fishing Fishing (shoreline/structure) Canoeing / kayaking Wildlife viewing Other: Photos.	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	We appreciate your support for manatee and aquatic habitat protection!
10/8/2021 20:13	Outside of state / other	Atlanta, GA	No	Yes	1 time			Fishing Fishing (shoreline/structure) Canoeing / kayaking Wildlife viewing	Please restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier.	Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years...	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway.
10/8/2021 20:15	Volusia		No	Yes		1 time		Canoeing / kayaking	Drain the reservoir Break the dam	Free flow is necessary Springs should run free and clean	Silted and polluted reservoir	Partial break	
10/8/2021 20:16	Bradford		No	Yes		1 time	More than 5 times	Canoeing / kayaking Boating Wildlife viewing Other: picnics and celebrations	Please breach the Dam and allow the reservoir to shrink back into the Ocklawaha River boundaries and be restored.	Providing winter habitat for starving Manatees in the springs that will re-emerge.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	No. This dam always was a bad idea, and we've been throwing good money after bad for 50 years. Enough!	At a time when human disregard for the needs and health of the environment has come to a head, let's just stop making things worse and begin to turn things around where we can. This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.
10/8/2021 20:16	Outside of state / other	Duluth, MN	No	Yes		2-5 times		Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	Canoeing / kayaking	The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/8/2021 20:30	Lee		No	No				I would like to see the dam removed.	The dam is hurting the environment.	People living in Florida.	None.	
10/8/2021 20:32	Putnam		No	Yes				Keep it as is.	It's a fresh water source which, as fresh water becomes more and more scarce, will become a valuable resource.	Loss of that potential fresh water reservoir.		
10/8/2021 20:40	Marion		No	Yes	More than 5 times			Fishing (shoreline/structure) Wildlife viewing				
10/8/2021 21:00	Manatee		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	1. Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 2. 20 lost springs and Silver Springs ecosystem are restored 3. Historic fish and manatees return as breach opens creating a free-flowing river 4. 100s of manatees gain essential warm water winter springs habitat 5. 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 6. 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife 7. 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers 8. $4-14 Million in dam repairs saved on a dam past its life expectancy 9. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. 10. $57 million in potential flood damages avoided to downstream property owners	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration. (characters: 317)
10/8/2021 21:17	Pinellas		No	No				Remove it.	The springs will be saved from further damage.	We will lose our pristine springs.	I doubt it.	Florida's springs are unique and outstanding and should not be jeopardized for the profits of a few.
10/8/2021 21:23	Gadsden		No	No				15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	the dam as far as I see is not necessary. Breaching it would allow the natural migration of Gulf coast stripers and shad to spawn in their natural habitats. Restoring the area to its natural state would create fisheries and other recreational opportunities and help preserve an area of flas dwindling wilderness.
10/8/2021 21:28	Lake		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	The Rodman Reservoir and Kirkpatrick Dam being the failed attempt of the Cross Florida Canal serve no viable purpose. It is time to restore the Ocklawaha River back to it's original state. It has been proven to work such as the restoration of the Kissimmee River.	The success in removing dams in other areas.	The continued decline in the environment of the area.	None that I could support.	

10/9/2021 21:32	Alachua		No	Yes		2-5 times		Wildlife viewing	I would like to see it going! Let the river flow in the way it was meant to.	Wildlife	Water quality		
10/9/2021 21:35	Lee		No	No									
10/9/2021 21:47	Nassau		No	Yes			2-5 times	Canoeing / kayaking	Rather than breaching the dam a slow draw down that allows the area behind to recover slowly. The wildlife needs time to relocate.	Paddling after a draw down and seeing the displaced alligators	The interaction between humans and wildlife will be negative.	Do nothing and leave the management of the reservoir as it is.	
10/9/2021 22:13	Polk		No	Yes		More than 5 times	1 time	Wildlife viewing Other: Flora and Fauna viewing.	Breaching the dam to restore the Silver Springs Ecosystem that includes springs that have been damaged by the presence of the dam.	Approximately 150 million gallons a day of water will be restored to the natural waterway that will not only heal our land and waterways but will also provide sustenance (new jobs) for many people. We will reap significant environmental benefits for flora and fauna.	Loss of opportunity to improve our water quality and simultaneously improve our economy. Possibility of wasting taxpayer money to repair a flawed and failed dam project.	Not really. Action to breach the dam is long overdue and there will not be a better time to do it than present.	
10/9/2021 22:22	Lee		No	No				Canoeing / kayaking	Have the dam removed. I've kayaked the Ocklawaha many times and feel the river should run its natural course. Dams ALWAYS have consequencies... the white man's ego continuance.	Lessening diversity of wildlife	Increase of previous response	No, it should be a simple thing to remove the dam...it's been hashed over and beat about for FAR too long. Just do it!!	Get on with it River Mgmt Board!
10/9/2021 22:25	Palm Beach		No	No									
10/9/2021 22:28	Seminole		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.		
10/9/2021 22:29	Broward		No	No									
10/9/2021 22:30	Hillsborough		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	A critical 15,000+ acres of the Florida Wildlife Corridor are restored or at least improved, facilitating enhancement of critical wildlife ecosystems.	Missing the best opportunity to do this while state and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe. Hundreds of manatees lose access to essential warm water winter habitat. Water quality declines further facilitating invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	No. The dam should have been breached 50 years ago. The dam is not safe. NOW; the water quality as well as the essential wildlife corridor MUST be protected.	As a person who was born and raised and lived most of my life in Florida, I care about all of Florida, it's waterways and ecosystems. I implore you to restore the Ocklawaha River to ensure essential water quality of these rivers, streams, and springs and critical wildlife corridors for our native wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. 2021 is the deadliest year on record for manatees. Unless their natural habitat is restored, we can expect more deaths in the future. The greatest long-term threat to the manatee is loss of natural warm-water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter – an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's springs and by providing access to Silver Springs. This restoration will improve water quality and flow by generating an additional 150 million+ gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River. Thank you for your thoughtful consideration.
10/9/2021 22:36	Leon		No	No					I want to see the Kirkpatrick Dam removed and the Rodman Reservoir restored to the free flowing Ocklawaha River.	Water is the most critical and vulnerable resource in Florida, not only for recreation and tourism, but for the health of Florida's $21+ million residents. We are privileged to have one of the best aquifers in the country, but short-sided development in the present and in past decades have undermined and endangered our drinking water. There are several natural springs under the waters of the reservoir. Let them become healthy, natural springs again! Protect our vulnerable and endangered water resources! Protect our aquifer - it's for our future!	Artificial altering of nature usually is ruinous. We are already doing too much to deplete our fresh water aquifer, and rising sea levels from climate change are causing salt water intrusion throughout our coastal areas. The Cross Florida Barge Canal, the dam, and the Rodman reservoir are together one of the biggest engineering mistakes undertaken in this state. The dam and reservoir do no good at all, other than making it a fishing hole, and the dam requires maintenance and improvements in the millions of dollars to keep it. It's time to undo this mistake once and for all. I grew up in Florida and remember when the Cross Florida Barge Canal and dam were constructed. There was a huge outcry with much objection, but the engineers and special-interests won the day - at least temporarily until the completion of it was stopped. Please undo this damage! The status quo provides fishing. But it creates a dangerous effort for manatees to attempt to over-winter. And it does nothing to assure healthy, pristine water for the human population. What does it do to the natural springs under the reservoir? If the springs were restored wouldn't that bring a more natural and healthier environment?	No. I am not a resident of the impacted county. But I am a lifelong resident of our beautiful Florida State, and therefore the final decision does impact me, in addition to the health of our state and our people. I drive across the Cross Florida Canal often and am horrified at the impact on the land.	
10/9/2021 22:39	De Soto		No	Yes			1 time	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam remains in place causes harm to the economy, water quality, and wildlife throughout the Great Florida Riverway.	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam will restore three rivers--the Ocklawaha, Silver and St. Johns Rivers--as well as 50 springs, including the 20 lost springs--and the Silver Springs ecosystem.	This is the perfect opportunity to accomplish this restoration: when state and federal funds are available, public interest is high, environmental needs are critical--including the improvement of habitat for manatees and other wildlife as well as water quality--and the dam is unsafe.	To avoid downstream property damages from a potential dam failure while continuing to provide recreational benefits, the reservoir could be temporarily drawn down to 11 or 12 ft. mean sea level. However, a drawdown alone is a stop-gap measure and will not provide environmental benefits for fish, manatees, water quality, water flow, and an unobstructed blueway.	The most beneficial and cost-effective springs protection project in the state of Florida today is breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River! Twenty springs submerged by the waters of the dam will be uncovered by this project that is a vital step in restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the Ocklawaha River's flow. For an estimated cost of $26 million, this project will provide an essential warm-water winter habitat for hundreds of manatees as well as 150 million gallons a day of natural and historic water flow to help restore the 100-mile lower St. Johns River.
10/9/2021 22:51	Marion		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Boating	Remove the dam and let the river flow	LIF study on tourism and manatee and fish projects	That the fish counts keep decreasing and the weed clogging continues and the weed control continues	The only was to to stop the clogging of the river and allowing manatees and fish to use the river is to make it free flowing	
10/9/2021 23:06	Gadsden		No	No					I will tell you something, OK, is there any reason Florida needs another lake that is full of invasive weeds? Rodman is choking with invasive weeds right now IMO.	the restoration of natural riverine species of this area	Global Warming and the survival of several riverine species	ok why be second best? I support this dam removal 100%	
10/9/2021 23:19	Putnam		No	Yes			2-5 times	Wildlife viewing	Left alone as it is now.	Wildlife appears to have positively adapted to its present being. The ecosystem has adapted to its present state.	Wildlife having to try to readjust. Safety of wildlife. Possible negative impact to the ecosystem.	A very gradual restoration to it's original state so that wildlife and the ecosystem could hopefully safely readjust.	Appears to be a waste of taxpayer money to restore something that taxpayers already paid to obtain its present existence.
10/9/2021 23:32	Volusia		No	No					The dam needs to be breached	Dams create problems and in the end block the natural flow.	The Ocklawaha and other rivers will continue to diminish.		
10/9/2021 23:44	Palm Beach		No	Yes			1 time	Canoeing / kayaking	I would like to see it removed.	As I understand it, it was decided at its beginning, that it was a mistake. It should have been removed then.	The manatees and fish will not get the benefits that they would get if it is removed	no	This damn was a mistake from the start. Let's try to fix the problems created by this. It has been so many years. Let's make it happen.
10/9/2021 0:03	Broward		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Historic fish and manatees return as breach opens creating a free-flowing river	Hundreds of manatees lose the opportunity to access essential warm water winter habitat.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm-water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter – an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/9/2021 0:08	Duval		No	Yes		2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Remove the dam. Let the water flow.	Our manatees are in peril. They need access to warm water.	That a mistake made decades ago has not yet been corrected and our manatees and fish populations are suffering.	No. Take the dam down.	
10/9/2021 0:16	Hillsborough		No	Yes			2-5 times	Wildlife viewing	Minimum invasive improvements.	Save the environment from humans damaging it.	Bad pollution.		
10/9/2021 0:39	Escambia		No	No					Whatever is best for the Earth,people animals,air,act				Like I said, I want the best for everything & everyone!😊
10/9/2021 1:39	Volusia		No	Yes			2-5 times	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Restoration of rivers, streams, and associated ecosystems; increase manatee habitats; help return the rover to a more natural state; additional water recreation for canoe and kayak excursions to view the diverse wildlife.	Manatee deaths are increasing, the dam is aging rapidly as it exceeds its lifespan, and the environment is more threatened and vulnerable than ever. We need to reverse some of the damage that we have caused to our state.	No. This should have happened long ago; we are more educated and informed now about the damage that dams and structures like this cause. Restore the rivers!	Thank you for your consideration. Please consider these reasons for eliminating this outdated and destructive obstruction.
10/9/2021 3:34	Hillsborough		Yes	No				Wildlife viewing	Remove the dam, open the river to wildlife to move freely from springs. Restore the river & aquifer to allow natural processes to function & flow- for fish, manatee, all wildlife habitat & for every person who lives in & depends on this river watershed. Tear down that dam (WALL) President	Mass manatee mortality, fish kills, Red Tide. Piney point hazardous waste with heavy metals pumped directly into Gulf, & still "releasing". Lack of environmental oversight & accountability. Inability of the state & companies to clean up the holding facilities & infrastructure we have. Look at the underfunded Florida's state parks, & the critical needs. In a broader context, the writings on the wall if we don't make major changes to protect our dwindling resources- 1 billion species have become extinct (1/8th of all species on earth) in the last decade.	Mass mortality events rendering the river an inhabitable dead zone. I'm concerned that we'll see more frequent & catastrophic environmental events like red tide, mass fish kills, manatee mortality, destroying the many lives & livelihoods that depend on the river. Manatees have less access to springs & warm water sources than ever, & no way to escape when ecological disasters occur.	Short of removal, create tunnels or openings in dam as a wildlife corridor... like panther crossings, elephant underpasses, salmon locks, etc, large enough for manatees.	
10/9/2021 4:37	Alachua		No	No					restore the Ocklawaha River connect the river to the St. Johns River	The movement of aquatic life has been blocked.	Water quality would continue to degrade.	Could the process of restoring the river be done in stages?	
10/9/2021 5:36	Putnam		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing Other: Photography	Because the history from the 1800 s so rich and was a life blood of Palatka, to see the Ocklawaha restored so citizens and visitors can relive the magnificent beauty and wildlife of north Florida and the excitement touring the river.	History and visitor logs from the 1800s	Continuation of smothered springs in the pool and degradation of water quality and fishing	Do know untitled suggestions are presented	Let's bring the river back to life!!!
10/9/2021 6:04	Brevard		No	Yes			1 time	Canoeing / kayaking Boating Wildlife viewing	Breach the dam	Research on unfinished waterway	Loss of habitat and use	No	
10/9/2021 6:07	St Johns		No	Yes			2-5 times	Canoeing / kayaking	The dam should be removed to restore the natural waterways	The dam serves no purpose and was part of a failed/abandoned cross Florida canal plan and it disrupted springs, wildlife habitat	The entire ecosystem of Silver, Ocklawaha and St Johns Rivers would remain unnaturally damaged	No. The dam must be removed to restore the natural ecosystem	
10/9/2021 6:36	Pinellas		No	Yes			1 time	Fishing Canoeing / kayaking	removed	prevents water from freely flowing	more pollution and more weed growth	no	
10/9/2021 6:58	St Lucie		No	No						Get rid of the dam.	Nature loses out.		
10/9/2021 7:33	Escambia		No	Yes		1 time		Fishing Canoeing / kayaking	See the damn removed	Was part of a failed project of cutting canal across Florida that isn't going to be completed and the damn hinders the natural river flow.	Aged infrastructure that is getting worse. Damn stops natural fish migration and spawning. Annual cost of maintenance is going up.	No just remove the damn and save on annual maintenance that will ultimately benefit the environment.	
10/9/2021 7:37	St Johns		No	Yes		1 time	2-5 times	Fishing Wildlife viewing	Science says it must eventually come down. But the POLICY decision as to when and how is the question.	From eels to stripers to the effects of water pulses to the St. Johns.....it's all science.	It's not a question of the dam coming down but of how it is accomplished, both the physical means and the social & political adjustments that must be part of it.	Probably.....but again.....logic says it will come down.....the question, the policy decision is when and how.	Ultimately the most telling and difficult thing for decision makers will be how to leave everyone whole once the dam is down. There are 2 generations of people in this area for whom the dam/reservoir are a asset that with its removal will be taken from them. We must be cognizant of and sympathetic to that. Heretofore the zealots of both sides have held sway, on the one side ignoring the science and the benefits of restoration and on the other a demand for it to come down with no etched in stone plan for compensating those who are truly losing. This is not acceptable as a way to accomplish things. There needs to be projects already underway, funded, funded such that the funding can not be eliminated, to provide launches and docks and other forms of enhanced public access such that those who use the resource will continue to have access once it is drained. And this "access' is not just in the area of Rodman but on the river proper and on area lakes such that the shore fishermen have increased and replaced access. So too with the commitment to open up the restored floodplain to recreation (hunting).....that needs to be enshrined in the documents such that it does not get yanked away. If it takes a bit of patience, a bit of extra time and effort to put into place plans and processes such that we make as whole as possible those who feel they are losing while still moving forward with the ultimate removal that is not a bad thing. In fact, in a free society, one where being kind and polite and leads better outcomes,.....well.....think about how to make a many people feel as least damaged as possible as we do this. Do not let the zealots, the now or nevers drive us to accomplish by a improper means a proper thing.
10/9/2021 7:49	Putnam		No	Yes			2-5 times	Wildlife viewing	Get it rid . Let nature return to a natural state.	Future of Florida's fresh water springs is being destroyed.	The destruction if Florida's springs.	Do not repair or replace the dam.	
10/9/2021 7:58	Duval		No	No					Removal of the dam		Environmental impact	Building something to allow fish and other wildlife to traverse the dam	
10/9/2021 8:07	Broward		No	No					I would like to see the damn removed, allowing the Ocklawaha to flow freely.	Manatees are experiencing a marked die-off and opening up the Ocklawaha River would expose many additional springs where they could seek warmer water in winter, including Silver Spring.	I am concerned that additional funds will go to maintaining a dam that is harmful to manatees and the overall health of the ecosystem.	no	
10/9/2021 8:16	Highlands		No	Yes			1 time	Other	This I'll conceived project needs to be dismantled and the river allowed to be restored as closely as possible to it's natural state.	We have an opportunity to restore and preserve a piece of natural Florida.	The reservoir will continue to degrade and tax money will be be wasted trying to preserve this boondoggle.	No	
10/9/2021 8:19	Alachua		No	Yes		1 time	More than 5 times	Fishing Canoeing / kayaking Wildlife viewing	I would like the dam removed and the reservoir area restored as much as possible.	The money spent maintaining the dam would be better spent restoring the natural flow of the river and surrounding environment.	Money would continue to be wasted on a project that should never have been done in the first place.	Whatever knowledgeable environmentalists would suggest as a good solution.	I realize the environment surrounding the river can not be completely restored, however, continuing to dam the river seems a poor environmental and fiscal option.
10/9/2021 8:32	Nassau		No	Yes			1 time	Other: None	Remove the dam to restore the natural flow of the Oklawaha River.	Restoration of the natural flow of water that has affect on the flora and fauna of the area, help protect against salt water intrusion into our water table.	Loss of wildlife and erosion of water table quality.	no	
10/9/2021 8:33	Putnam		No	Yes	2-5 times	More than 5 times	More than 5 times	Boating	I would like to see actions taken to have the Ocklawaha River restored to as close as possible to its natural state. Use monies required to maintain the dam to restore the river's natural flow.	My wife and I boat on the Kissimmee River quite often. Watching the Army Corps of Engineers and the south Florida water management District restore many miles of the river to its natural state has been a beautiful process. We now can enjoy it's curving path and abundance of wildlife and bird life. I think this also would be the result if the Ocklawaha River is restored to its natural state. There would be a period of adjustment, but nature has its way of recovering.	In the 1960s, a large mistake was made to channelize the Ocklawaha river. If there is an opportunity to restore this beautiful waterway, it would be a plus for Florida and it's natural beauty. It would be a shame to see that not happen.	I'm not sure I have been presented with multiple options to make this decision, but a natural flow is my desire.	Why spend millions of dollars to repair and maintain a structure that was a mistake in an era that looked to damage Florida's natural beauty. This is your chance to right a wrong. Look at the Kissimmee as a great example.
10/9/2021 8:34	Alachua		No	Yes			1 time	Wildlife viewing	Let the river run	Scar on the environment	Dead manatees	No free	
10/9/2021 8:40	Highlands		No	Yes			2-5 times	Wildlife viewing	Restore to natural flow for everyone benefits as in my home state of Missouri we found out	As Missouri has done we learned that it's better to let the rivers flow. Saves wildlife and money	That the water level is lowered at least	No I'm positive that having Dams are destroyed for the better	Not just Manatees need the more open waterways but all of the rivers need to be opened
10/9/2021 8:49	Marion		No	Yes	1 time	1 time	2-5 times	Canoeing / kayaking Wildlife viewing	How much dynamite can we get?? would like to see the dam leveled and normal flow of the ocklawaha restored	The cost of maintaining this boondoggle vs the impact on the environment.	That Florida's natural environment will continue to be degraded and destroyed for the sake of a couple of hundred jobs.	Not really	
10/9/2021 8:56	Duval		No	No					Remove the Rodman dam. The dam is harming water quality and wildlife throughout the Great Florida Waterway.	100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier	The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	No. Removing the dam is critical to restore the river systems. Dam safety and water quality can't wait.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. It just makes sense at this point in time to remove the failed Rodman dam to restore cleaner water systems and springs.
10/9/2021 9:01	Alachua		No	Yes			More than 5 times	Fishing Boating Wildlife viewing	Maintain it	Past history of sustainability	NA	NA	
10/9/2021 9:05	Marion		No	No									
10/9/2021 9:07	Volusia		No	Yes		2-5 times		Wildlife viewing	Immediate restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.
10/9/2021 9:10	Palm Beach		No	No					After witnessing the Elwha River restoration it gives me hope that these antiquated dams can be removed for the betterment of our state. Saving our springs is vital, giving manatees a path to warm water is vital, better chances for fish is vital.	If all comes to tourism. We can't invite tourists to see algae filled waterways. And dwindling fishing areas. Restore the River. Save our Springs!	Seeing Florida continuing down the path of destruction of our the last areas where nature can heal if we get out of the way.	Giving the manatees their natural path back is achievable by removing the dam. Give them a chance, and it gives the river a chance to heal.	The salmon are running again on the Elwha River again, and that was a much more complicated dam removal. Success is making this dam disappear for both animals and anglers.
10/9/2021 9:11	Palm Beach		No	No					The dam serves zero purpose. Cost MONEY to have. Tear down that dam (WALL) President	Artesian springs Public should blow up that DAM	Time to fire and replace with people who can DO THEIR JOB!	A waterfall	Let the water flow
10/9/2021 9:11	Outside of state / other	Long Island, New York	No	No					Removal of the dam to help the restoration of the Ocklewaha river.	Removal of the dam would assist in the restoration of the Ocklewaha river and related natural springs due to increased natural water flow.	If the dam is not removed the water quality will continue to decline and the opportunity for increased recreational use and flood protection, as well as the potential for increased wildlife habitat will be missed.	No, as has been seen with the removal of numerous dams across the country, the return of natural water flows will result in increased water quality and natural habitat.	Thank you for your consideration of my concerns.
10/9/2021 9:20	Pasco		No	No					Remove the dam and restore the natural flow of water.	Environmental havoc caused by building the dam in the first place.	Another piece of natural Florida destroyed forever	No compromise. Get rid of the dam NOW!	
10/9/2021 9:33	Putnam		No	Yes			More than 5 times	Fishing Canoeing / kayaking Boating Wildlife viewing	Restore the natural river by removing the dam.	Because I don't like all the spraying in the reservoir. If the dam was removed you would not need to spray poison.	To much spraying poison, what a waste of time and money. No, the dam needs to be removed to allow it to flow properly.	Quit spraying.	There is no reason to maintain the dam and lock. It costs a lot of money to keep open. You could fish the river without the dam. The fish aren't going anywhere.
10/9/2021 9:52	Dade		No	No					As a life-long Floridian and former volunteer at a native wildlife rehab and rescue organization, I support restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. With the dam in place, harm is done to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.		If the outcome is not achieved, we could well see even greater decimation of our manatee population and of their nourishment.	No. We are at a critical juncture. Wildlife cannot wait another year, much less another 50 years that they have waited already.	Our gentle manatees are iconic to Florida. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future.
10/9/2021 9:55	Marion		No	Yes		2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Removed	To allow the river to go back to a more natural state	We will continue to keep flooding the forest that would come back if the damn was removed.		
10/9/2021 10:21	Clay		No	No					Remove it	Environmental impact of restoration of natural flow	Same old, same old.	Perhaps a five-year plan of removal?	
10/9/2021 10:23	Broward		No	No					we need water reservoirs around the state to collect rain's water, plus any water being drained from any lakes.	Palm beach county and Broward county are talking about a reservoir now to hold excess water. And not draining it to the Atlantic ocean, in case of hurricane activity.		Keep the ideas in mind for the future.	
10/9/2021 10:33	Putnam		No	Yes		More than 5 times		Fishing Canoeing / kayaking Boating Wildlife viewing	Restore the Oklawaha to it's natural original state.	Ongoing maintenance with the vegetation extraction, manatee safety and feeding grounds and 3.5 million tax payer dollars for repairs.	Maintenance and long term future cost, environmental impact on natural aquatic life, maintee survival.	Poor judgement in a canal system mentality. I guess drain the lake Oklawaha every two years for natural removal of vegetation instead of chemical spraying.	Unfortunately the future folks have to pay for a bad decision 50 years ago. Thank goodness three women had the foresthought to protect the Oklawaha river, the aquifer and natural springs which supplies all of Florida's drinking water and the st. John's river.

10/9/2021 10:34	Santa Rosa		No	No				Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife.	Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway.
10/9/2021 10:38	Palm Beach		No	No				Reopen the river	help for the ecosystem	Destruction of the ecosystem	no		
10/9/2021 11:02	Sarasota		No	Yes			flooding	Breach the dam and restore the natural water flow.	Return of native fish and manatee populations and migration routes to prior historic levels and range.	Continued degradation of natural habitat for endangered species; potential cost of flooding for residential areas downstream of the dam.	No. The dam should be breached as soon as is practical.		
10/9/2021 11:03	Dade		No	Yes		1 time	boating Wildlife viewing	I would like to see the ocklawaha river restored to its historic levels, in order to revive the springs feeding it.	The Rodman dam is mainly in use to appease boaters and fishermen, especially bass fishermen. This is not as important as restoring an ecosystem and potentially generating money for tourism.	I would be concerned that a decision to maintain the dam will pave the way for more decisions in Florida that do not take ecological value into account.			
10/9/2021 11:08	Hillsborough		No	Yes		2-5 times	Wildlife viewing Other	Breach the dam to restore natural flow for economic and environmental reasons. Do not waste money on an old dam in need of repair	The dam is no longer functioning as originally intended. Florida's riverways need to be restored to their original flow for multiple reasons.	Continued loss of habitat for wildlife and dampened economic growth in the area, as well as money wasted to fix an aging, no longer relevant dam.	No		
10/9/2021 11:22	Duval		No	No				Get rid of the Rodman Reservoir/Kirkpatrick Dam. Let the Ocklawaha River flow freely.	For me it is the resulting increase in habitat for manatees and the vital increase in daily flow into the Ocklawaha and St Johns.	Again it is the stress on manatees from loss of habitat and the loss of a needed increase in natural water flow into the two rivers.	No.		We protect ourselves when we protect our environment and wildlife. Manatees are suffering die-offs. Toxic algal blooms are increasing. We must do better. Restoring our rivers is a solution to these and other problems.
10/9/2021 11:29	St Johns		No	Yes	1 time		Wildlife viewing	The dam is impeding the flow of water to the Ocklawaha River.	The dam is blocking the movement of aquatic life and degrading water quality.	More manatees will die. The river is already endangered.	no		
10/9/2021 11:41	Martin		No	Yes		1 time	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. John's rivers and 50 springs are restored.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat) and the dam is unsafe.	No. Breaching the damn is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.		As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of that Great Florida river way to ensure a bright future for our state's people and wildlife. The great Florida Riverway is a 217 mile system of rivers and springs that flows north from the green swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River Estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies and ecosystems all along the Riverway. This exciting restoration will improve water quality and flow by generating an additional 150 million gallons per day of fresh water into the Saint Johns River and estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency and counter salt water intrusion for the benefit of many species of wildlife, aquatic vegetation and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefiting water quality through enhanced biofiltration. Thank you for your consideration.
10/9/2021 11:48	Putnam		No	Yes		1 time	Other: Sight seeing	Breach and reunite our rivers. Restore.	I live here!				
10/9/2021 11:50	Sumter		No	No				Restore the water as it was before for wildlife.	We must be protectors of our earth.	Penalties for wildlife, growth, natural habitats.	no		
10/9/2021 11:55	Broward		No	No				Connect the ocklawaha River to the other rivers and get rid of the obsolete Dam to help fish, wildlife and water quality improve	Benefit to wildlife and water supply	Continued degradation of water quality and decline of FL wildlife and fish			
10/9/2021 12:07	Palm Beach		No	Yes		1 time	Boating	Removal of the dam	We need to restore the flows of the St John's, Silver, and Ocklawaha rives. we need to avoid flood damage due to uncontrolled dam breach. Restore wetlands and habitat for native species. Increase recreation facilities for people to enjoy.	Native species of fish decline. Exotic species of fish increase. restore forests and creat opportunities for wildlife to flourish and for people to enjoy them for generations.	Breach the dam in a controlled way. and improve the water quality and quanity naturally.	The time to act is now.	
10/9/2021 12:31	Lake		No	No				I would like to see the Rodman/Kirkpatrick Dam breached to reunite the natural connection of Silver Springs, Ocklawaha & the St. Johns River.	The science supports restoration. Studies by federal and state agencies have clearly demonstrated that restoration of a free- flowing , connected system is cost effective and will provide significant ecological benefits to the St. Johns, Ocklawaha and Silver Rivers, as well as Silver Springs. Historic fish migration patterns and essential Manatee habitat will be reestablished.	We miss a historic opportunity to stop the ongoing ecological degradation caused by the dam and finally reunite the natural flow of rivers. Breaching the dam would restore the natural flow of 150 mgd of fresh water, improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. A free-flowing Ocklawaha will reestablish >15,000 acres of forested wetlands and fortify downstream submerged grasses from Welaka to Jacksonville in the St. Johns River that are critical to river health and fish habitat.	No. Breaching the dam and restoring the Ocklawaha are 50+ years overdue. Dam safety issues and improved water quality, wildlife habitat, and recreational opportunities can't be ignored or delayed any longer.	This must be done now. State and federal funds are available and public interest is high. Please, let's do the right thing for us and our cherished wildlife.
10/9/2021 12:38	St Johns		No	Yes		More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / Kayaking Boating Wildlife viewing	Nothing should stay the same	The amount of money we spend for lodging at food etc would be gone.	I won't be back	No		
10/9/2021 12:44	Bradford		No	Yes		1 time	2-5 times	Canoeing / Kayaking Wildlife viewing Other: Birdwatching and photography	I would like to see the dam removed immediately.	It has harmed the Ocklawaha river system. It was built as part of the failed cross Florida barge canal and it stopped the natural flow of the river and flooded thousands of acres of forest and covered 20 springs. It blocks migration movements of wildlife including manatees. It's a waste of taxpayer dollars to repair a dam with zero purpose and it's cost the state $1 million to maintain.	The biggest concern is that it's a waste of taxpayer dollars and a March 2021 article said that it's a high hazard structure in danger of being breached. The DEP has ignored structural weaknesses for five years. There would be damage to homes in the amount of approximately 50 or $60 million if this damn breaches.	No. Only the removal of the dam. This has been an issue too long without resolution.		realize that many freshmen think that this is a great place to fish but the consequences of keeping this outdated and aging structure are far more dangerous than having a place for fisherman to fish. there are other places they can fish
10/9/2021 12:56	Duval		No	Yes			1 time	Wildlife viewing	When a man made object has a drastic effect in a defined way: The benefits need to be reevaluated and make the appropriate adjustments. We must remember that when God's creations are lost. We can never get them back because of our short sightedness	The cascading effects that lead to the starvation of manatees. And the loss of environmental water and wetlands that protect our state	The loses that grow and keep growing over the years to come. My grandchildren not being able to enjoy nature		
10/9/2021 13:04	Levy		No	Yes			2-5 times	Canoeing / Kayaking Wildlife viewing	Restore waterway	Restoration of the ecosystem	Further destruction of the ecosystem	Not sure	
10/9/2021 13:07	Brevard		No	Yes			2-5 times	Wildlife viewing Other: To view the condition of the dam structure	Remove the damKeep	Restoring the natural flow of the river and restoring natural habitats.	: The lake will fill up with sediments prevenmting the natural dispersment of those sediments.	None that would be economically feaseable or practicle.	Vote Green!
10/9/2021 13:16	Pinellas		No	No				Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide unimbibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No		
10/9/2021 13:32	Marion		No	Yes			1 time	Other	Remove the dam.	Return it to its natural state.			
10/9/2021 13:47	Seminole		No	No					Preserve it!	It provides water management for recreation, beauty, and peace for many Floridians.	Losing natural beauty. Money being diverted to projects but just make the rich richer, rather than serving the community health and welfare.	Not sure.	
10/9/2021 13:49	Alachua		No	Yes			1 time	Wildlife viewing	The river should run free. It was the start of a failed idea,; a canal across Florida. It was a ecological fiasco and a financial boondoggle.	Since 1971 numerous studies have supported the return of the Ocklawaha River to it's natural state. There are 20 springs that would be restored.	The dam has serious cracks and the possibility of failure would result in dire damages to surrounding areas. It has suffered from years of neglect.	No.	
10/9/2021 13:58	Clay		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Hunting	It needs to stay for recreation purposes	Recreational activities	It would stink	No really	I grew up hunting fishing and camping and are taking my grand kids there
10/9/2021 14:01	Putnam		No	Yes		More than 5 times		Fishing Other	Keep it the way it is!!	Lots of positive things come from it!!	Taking it out could bring a lot of negative things to the st.johns water shed!!	No	I can't believe people actually think it would be a positive move to take out Rodman Dam!!
10/9/2021 14:06	Sarasota		No	No				REMOVE THE DAM AND RESTORE NATURAL FLOW	ADDITIONAL FEDERAL FUNDING WHICH IS DESPERATELY NEEDED!	CONTINUED PROBLEMS WITH THE RIVER AND RESVOIR	ABSOLUTELY NOT!		FLORIDA IS SLOWLY MAKING HEADWAY IN RESTORING OUR WETLANDS AND NATURAL FLOWS; THIS IS VITAL TO HELPING AND PROTECTING OUR WATER SUPPLIES.
10/9/2021 14:10	Duval		No	Yes			1 time	Wildlife viewing	I would like to see permanent breaching of the Rodman/Kirkpatrick Dam in order to restore the Once beautiful and Thriving Ocklawaha River.	Restoration of the OCKLAWAHA WOULD: 1) renew 20 "lost" springs 2) provide natural water flow of the Ocklawaha River To enhance Silver River and St Johns River quality 3) provide habitat for manatees and diverse native Fish and wildlife populations. 4) provide more recreational opportunities and Economic opportunities for Putnam and neighboring counties 5) PRESERVE ONE OF FLORIDA'S FAST DWINDLING UNIQUE NATURAL SPACES 6) Offer opportunities of linking with Marjorie Harris Carr Cross Florida Greenway. 7) IMPROVE THE GENERAL HEALTH OF FLORIDA'S WATERS AND ITS NATURAL ABILITY TO WITHSTAND HURRICANES and other natural phenomena.	WATER QUALITY IS OF GREAT CONCERN IN THE STATE OF FLORIDA- uncontrolled development, salt water intrusion into the St Johns, algae growth, manufacturing spills and hurricane FLOODING, loss of natural springs and concern for the Floridan aquifer. FLORIDA CITIZENS SHOULD BE DOING EVERYTHING WE CAN TO PRESERVE THE HEALTH OF FLORIDA WATERS!!! Rodman Dam is expensive to maintain and obsolete.	NO! I will be very disappointed if the Ocklawaha River is not restored. As a 4th generation Floridian, I remember boating the Ocklawaha as a child with my family. What a beautiful river. In 1969, FL scientist and environmentalist Marjorie Harris Carr founded the FL Defenders of the Environment in order to halt construction of the Cross Florida Barge Canal and breach the Rodman Dam, which after several years , was causing more damage to the natural environment than anticipated. Mrs Harris inspired garden club members all over the state to protest loss of the Ocklawaha. My mother Dolly Day along with other women like Mimi Adams and Helen Lane from Jacksonville protested in 1971 at the Rodman Dam. Protectors of the Ocklawaha will not be silenced. Whitey Markle, the FL folksinger who died recently, made restoration of the Ocklawaha one is his last missions. It is time to consider NATURAL FLORIDA, not just the Army Corps of Engineers and bass fisherman.	As a stakeholder (business owner) who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoration will increase water quality and flow by generating an additional 150 million gallons per day of fresh water into the Saint Johns River and estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency and counter salt water intrusion for the benefit of many species of wildlife, aquatic vegetation and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefiting water quality through enhanced biofiltration. Thank you for your consideration. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/9/2021 14:10	Pinellas		No	Yes	1 time		Wildlife viewing	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. It is our fault that manatees are endangered.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide unimbibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	Not sure. The dam needs to be removed and river flow corrected. We need to think about the next hundred years, not just the income of some fishing guides.		
10/9/2021 14:10	Pinellas		No	No				Dam removal	Dam removal environmentally preferred. The cost of dam maintenance is too high to warrant continuing a poor environmental option.	Leave it to the science. Is it better environmentally to financially support this dam for our grandchildren, and their grandchildren?	Not aware of other options besides supporting the maintenance or removal of the dam.		I love bass fishing so I understand why there would be supporters of dam maintenance. But creation of the dam has widely been deemed a mistake. Rodman will always be considered a mistake. Some generation will decide to correct it.
10/9/2021 14:15	St Johns		No	Yes		2-5 times	2-5 times	Wildlife viewing Other: Passing by	I would like to see the dam breached. Building the dam 50 years ago was a huge mistake.	The dam has been a detriment to water quality and wildlife habitat for decades.	Breaching the dam at this time is a once in a lifetime opportunity to turn environmental degradation around. It would be a huge disappointment, to say the least, to pass up this opportunity.	Not other than breaching the dam. Do it to it.	Restoration of the water flow would allow the return of manatees, fish, and other wildlife. Manatees are dying throughout Florida at an alarming rate. Increased habitat for wildlife would be an absolute treasure. The dam has been here fifty years too long.
10/9/2021 14:18	Citrus		No	Yes		1 time		Other: check it out to see if would fit our bill	Open it up and let it flow freely	use of pesticides to keep channels clear, absolutely horrible			Good luck getting anything done with this problem.
10/9/2021 14:22	Pasco		No	No				The dam needs to be removed. Too many rivers and creeks were screwed up by dams and channel changes. There is no need for the dam and reservoir	The natural flow of water should be restored where it has been changed. Better fishing and wildlife access.	Things will remained screwed up in Florida as usual.	I do not know of any.		
10/9/2021 14:35	Alachua		No	Yes		2-5 times	More than 5 times	Canoeing / Kayaking Boating Wildlife viewing Other: PHOTOGRAPHY	Restore the river, bring down the dam.	I used to paddle the river before the dam was put in place. It was beautiful, fishing was great and there was lots of opportunities for recreation and fishing.			
10/9/2021 14:38	Escambia		No	No				Restoration of the Ocklawaha River. The Rodman / Kirkpatrick Dam needs to be breached. The dam harms the economy, water quality, and wildlife in the Great Florida Riverway.	100s of manatees gain warm springs that are essential for them survive.	Millions in taxpayers' money are unnecessarily spent to repair the dam. This dam does not provide protection, power, water supply or other broad public benefit.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Thank you for making this happen!	
10/9/2021 14:39	Hillsborough		No	No				Removal of the damn and restoration of the River way and springs.	Scientists and environmentalists have been fighting for decades that removal of the damn will revive 20 lost springs and Silver Springs ecosystem.	The continued degradation of the Ocklawaha and springs throughout the area. With every day that passes the damn continues to impede the health of the River and the ecosystems upstream.	No. This fight has gone on for too long and we know that there is no other solution short of full removal.		As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy. We must act with haste to restore one of the most valuable habitats in Florida. Free the Ocklawaha.
10/9/2021 14:40	Outside of state / other	MD	No	No				Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected benefit has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.		
10/9/2021 14:52	Palm Beach		No	No									
10/9/2021 15:01	Duval		No	No				Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.		As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway
10/9/2021 15:05	Putnam		No	Yes			2-5 times	Canoeing / Kayaking Wildlife viewing Other: Spiritual renewal in the outdoors - one of the many intangible values of this rare waterway.	Remove the dam and Free the Ocklawaha. Then monitor the recovery of native wildlife, vegetation and the lower 26 hidden springs.	Florida has the most unique water resource in the Eastern United States, it's Springs. Beautiful, clear, cool water. Just ask Nestle who steals it from us, then bottles it and sells it back! That's NOT what I'm talking about. The beauty of this wild river and its diverse ecosystem. It's the stuff that brought travelers to this exotic, wild wonderland in the first place. Is this not what Putnam County is all about - the beautiful outdoors. Free the Ocklawaha!!	The biggest concern is that it's a waste of taxpayer dollars and a March 2021 article said that it's a high hazard structure in danger of being breached. The DEP has ignored structural weaknesses for five years. There would be damage to homes in the amount of approximately 50 or $60 million if this damn breaches.	No. We already approved the funding to do it! It is the will of the majority.		We have already paid for the Rodman Dam to be removed. It is a useless relic of a time when our precious water resource was viewed as a commodity.
10/9/2021 15:09	Leon		No	No				Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Historic fish and manatees return as breach opens creating a free-flowing river.	A storm event triggers a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.		
10/9/2021 15:10	Broward		No	No				let the river run, take down the dam	https://www.freetheocklawaha.com/	demise of flora and fauna that need the free flowing river, particularly manatees at this moment	no		I would like to honor the memory of Whitey Markle
10/9/2021 15:11	Alachua		No	Yes			1 time	Other: It is a barrier to activities I would pursue.	It's removal, restore the river to normal flow.	Personal observation over fifty years of the environmental wreckage created by the construction of the dam and the barge canal.	As a native born Floridian, I view keeping the dam as another attack on the unique environment of Florida.	Not sure. The dam needs to be removed and river flow corrected. We need to think about the next hundred years, not just the income of some fishing guides.	I hope, after half a century, the right thing gets done!
10/9/2021 15:15	Broward		No	Yes			More than 5 times	Canoeing / Kayaking Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	20 lost springs and Silver Springs ecosystem are restored Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. A storm event triggers a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees lose the opportunity to access essential warm water winter habitat.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.		2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. (characters: 521)
10/9/2021 15:16	Alachua		No	No					Breach the Rodman/Kirkpatrick dam	20 drowned springs and historic routes for migratory fish/manatees that are essential to the health of Silver Springs would be restored. Hundreds of manatees would gain access to much-needed habitat at this time of critical need. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs and restoring the Ocklawaha River is the most cost-effective springs protection project in Florida today.	Missing an opportunity that is not likely to occur again. This is the best Chance/timing to accomplish this important springs/manatee protection which is so critical at this time. Not taking advantage of federal funding available . It would be a terrible waste to spend tax payers $ in an attempt to repair the dam instead	No		
10/9/2021 15:27	Duval		No	Yes			2-5 times	Fishing Boating	I'd like to see it taken down and have the natural flow of the St Johns river restored, so fish like striped bass can make their way to their natural spawning grounds in the springs. The damn was formed in the 70s for the Cross Florida Barage Canal, that never even went in. So why are we not restoring Florida back to its natural state?	https://www.freetheocklawaha.com/coastal-angler/	Gov't agencies will continue to ruin Florida's natural waterways just to make a dollar. Instead of cherishing what our state gives us unlike any other state, we destroy it. The Rodman dam has blocked the most important part of the striped bass' life cycle, spawning. They need to enter the Ocklawaha to spawn.	They do nothing		
10/9/2021 15:33	Seminole		No	Yes			1 time	Wildlife viewing	I'd like to see the state reallocate the money needed to repair the dam to restoring the Ocklawaha River. Although the recreation provided is nice, we have a responsibility to see the bigger picture and act in favor of the future if this state. We have an obligation to restore and protect out natural resources. Clean water will become a crisis in this state in the near future. Natural flow promotes clean water, healthy ecosystems for human and wildlife benefit, and the recharge of our aquifer. Let's put politics aside and do the right thing. No more short sighted decisions based on popularity.	Science versus political popularity . The science unquestionable supports a free flowing river system and the natural wetlands it will support.	The loss of the ecosystem services the Ocklawaha river system provides.	A gradual restoration of the river via continued increases in the total volume of water released through the dam.	Set the river free!
10/9/2021 15:56	Manatee		No	Yes			2-5 times	Wildlife viewing	Restore the Ocklawaha River--breach the dam. Wildlife harmed by dam and so is water quality.	150 as it is past it's life expectancy. I do not want the state to spend more money on the dam. million gallons a day natural water flow restored. The dam needs repairs	While state and federal funds are now available, do it now. Do not miss this opportunity to restore some of natural Florida. This will restore springs lost because of the dam.	no I am worried about potential catastrophe from dam failure.	Restore the great Florida waterway--tourism will be enhanced along with wildlife--especially manatees.

10/9/2021 16:02	Roy		No	No				Would like to see the dam fully removed and the free flow of water and wildlife restored.	The fact that at least 20 springs have been lost and the hydrology of Silver Springs impaired.	Much state money would be wasted on repairs to this unneeded and unwanted dam.	No. Full removal is necessary.		
10/9/2021 16:18	Outside of state / other	Texas	No	No				Save the manatees.	It's always the money that speaks. Not the animal cruelty.	Manatees goes extinct.	Relocate the manatees.		The United States has a kill mentality with anything that swims, walks or flies. I.e., wolves, horses, almost wiped out the buffalo
10/9/2021 16:20	Union		No	Yes		2-5 times		I am not sure at this time what the best thing to do is.	Fishing	I'm trying to return it to its natural state after this long would hurt or help.			
10/9/2021 16:24	Osceola		No	Yes			1 time	Other: Do not use the reservoir	The dam needs to be dismantled, breached, removed.	Florida Defenders of the Environment FB page; too many documents to choose from. It is a well known fact that the Rodman Dam serves no purpose and that it stems natural flow to the springs.	Okiawaha River restoration, continued degrading condition of springs	Breach the dam.	The dam serves no functional purpose--at a cost we cannot afford.
10/9/2021 16:28	Putnam		No	Yes			1 time	Fishing Boating Wildlife viewing	The barm needs to be breached and the Ocklawaha set free.	This should not be an either or position politically. Breaching the dam is, in fact, the perfect compromise. It will allow for fishing and a return to the river's natural state. An additional benefit is the uptick in ecotourism that will most certainly occur when the historical 4-day steamer trip from Palatka to Silver Springs can be recreated. Additionally, the largemouth bass fishing in the lower Ocklawaha is excellent during the winter months, and there's no reason this wouldn't be the case if the old river channel was restored. I think it's a false argument that Rodman Lake brings in substantial revenue to Putnam County. Half the people fishing there never pass through Palatka. They take the back roads through west Putnam and spend little to get there. I was a game warden for 30-years and like to think I know something of the area.	Having been a game warden for 30-years and been exposed to various eco travesties committed to many of Florida's water courses throughout the state, I think it's about time we begin undoing some of the harm done.	Either you breach the berm or you don't.	
10/9/2021 16:35	Indian River		No	No				restore the Ocklawaha River by breaching the damn on the Rodman Reservoir please	Creating a migratory route for fish and manatees improving water quality	loss of warm water, impeding water flow. degrading water quality	taking it back to it's natural flow		we shouldn't change nature, it's time to restore the Ocklawaha River
10/9/2021 16:35	Duval		No	No		2-5 times		Remove the dam and allow the water to flow. Restore the estuary.	Other: Out for a drive to see the scenery.	I am concerned about the salinity of the St. Johns River moving further in from the Maxport area. Especially as they want to dredge and that will remove the natural barriers to this making ocean water flow in.			
10/9/2021 16:52	Outside of state / other	Massachusetts	No	Yes			1 time	Wildlife viewing	Remove the dam or do whatever is necessary to restore the Ocklawaha River	The blockage is preventing the passage of manatees from the Atlantic to warm waters for the winter. It also prevents the passage of fish and shellfish, is flooding forested wetlands which could be home to migratory birds, black bears, Florida panthers and more. It would increase visitors to the area to watch the wildlife.	Animals are going to die. Manatees are already dying at an alarming rate. This is now one of America's most endangered rivers and is having a large negative impact on multiple ecosystems.	You must provide a safe passage for manatees and other wildlife to pass through uninhibited		I support the Save The Manatee Club and their stance on this issue
10/9/2021 17:08	Volusia		No	Yes			1 time	Canoeing / kayaking Other: I would kayak the entire Ocklawaha River if the dam was gone.	Removal of the dam and restoration of the Ocklawaha River to it's original condition.	Water quality and quantity for flows into the St. Johns would be improved.	Further degradation of the St. Johns from reduced flow.	I haven't studied any half proposals.	
10/9/2021 17:11	Seminole		No	No			1 time	Canoeing / kayaking	I would love to see the dam destroyed and the Oklawaha to be free flowing again	That so much wildlife would benefit from this, manatees,fish, birds, turtles etc which benefits me when I go canoeing or kayaking as I get to enjoy the wildlife	Sad that we spend lots of money on repairs up keep etc when it would be so much more economical to break the dam and reap the benefits of the money that would come in from eco tourism and fishing etc	Not really	Just do it!!! We have been trying to this for years. The dam serves NO purpose!!!
10/9/2021 17:15	Outside of state / other		No	No				Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As someone who cares deeply about the environment, and who frequently travels to see birds and other wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for Florida's wildlife. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/9/2021 17:42	Duval		No	Yes		2-5 times	More than 5 times	Other: I don't. Just go to see the old river channel on the way to hiking in the ONF	I would like to see the Oklawaha river restored to its former flow. To one day take a boat from The St Johns river up the Oklawaha to silver springs again. To restore the Striped bass spawn up the Oklawaha river as in past times. To reintroduce manatees to the silver river without fear of being crushed in the locks. To visit the 20 freshwater springs currently submerged by the dam being in place.	Ecotourism will quadruple local economies income by people visiting a restored Oklawaha river. Putnam county could have people coming in and staying in hotels, eating and buying consumables for their trip to a restored Oklawaha. These conditions will far outweigh the current fishing licenses as a revenue source. To visit the submerged springs, to reintroduce stripped bass spawning from the St Johns river. People from all over especially surrounding counties will come in spending money. Boat trips from the St Johns to visit Silver Springs. Kayakers coming to see the 20 submerged springs and wildlife. Plus the St Johns river needs the natural flow from a restored Oklawaha to help dilute the pollution and algae blooms.	Tax payers supporting a failed project that has gone on for far to long. To cut a canal across the state was one of Florida's biggest blunders to agree with and support. The dead plant matter on the bottom of the reservoir waters is continuously building from constant weed spraying. Millions of gallon of weed killer is sprayed each year for nothing. Today's eyesore can be tomorrow's reclamation to a former glory that put Palatka on the map.	I guess permanently keeping the dam fully opened and never closing it again. But maintenance costs will still be needed.	Free the Oklawaha River. The restored Oklawaha river has unlimited potential for revenue and enjoyment. Ecotourism and visitors from the St Johns river by boats far outweigh the economic impact of the few fishermen who use the dam. Who knows, maybe someone will build a replica steamer or two and take people from Palatka on a cruise to retrace the past voyages. Serving lunch and dinner, teaching about the past early 1900's cruises to Lake Harris and Leesburg. Restoring the Oklawaha just make Sence.
10/9/2021 18:14	Marion		No	Yes	More than 5 times			Fishing Wildlife viewing	The Rodman Reservoir needs to be taken down. It serves no purpose environmentally.	Too many fish have died from the damn. The manatees can not swim freely up the Ocklawaha River.	We will lose more manatees and the fish population will decline to serious levels.	No the damn needs to be open and kept open and restored to its natural habitat.	The damn serves no purpose. We do not use it for electricity. It hold back the river to flow freely. It will restore springs that have been stagnant because of the damn.
10/9/2021 18:34	Leon		No	No					The dam should be breached.	Breaching the dam will restore the natural flow of three rivers and revitalize numerous springs. Water quality will improve and wildlife will benefit.	Money will be wasted on maintaining this dam and the environmental damage will continue.	No.	The time to breach the dam is now while funding is available and public support has been mobilized. Breaching the dam is long overdue.
10/9/2021 19:07	Brevard		No	Yes			2-5 times	Other: Curiosity	Remove the dam completely and restore the river, as close as possible, to what it was before the Cross Florida Barge Canal (CFBC) was attempted.	It, the CFBC, was already determined to be such a bad idea that it was abandoned. Just a couple of examples of precedent are the Upper St John River Basin Project and the partial fix of the Kissimmee River.	We will lose an obvious chance to do the right thing for the environment.	I can't think of one except maybe removing discrete sections of the levee containing the structure to allow free flow and using the remaining "islands" as habitat for wildlife, e.g. bird rookeries.	This project was an anathema to the birthing of the environmental movement and should be dealt an erasure blow. Just do the right thing. I would even vote for a tax increase to compensate folks that can't figure out how to make a living without the status quo.
10/9/2021 19:18	Alachua		No	No					Restore the Ocklawaha River by breaching the dam	The dam has impeded the river's flow for more than 50 years, blocking the movement of aquatic life and degrading water quality.	The continued decline of the manatee due to the loss of warmer water habitats such as the natural springs submerged due to the dam.	No, but I'd be open to ideas that make sense.	The environmental health of the whole river system is at stake. Removing the dam will improve the river system.
10/9/2021 19:24	Clay		No	Yes		More than 5 times		Fishing Canoeing / kayaking Wildlife viewing Other: camping at the damn since 76	damn removed	Nature old enough to be born before the damn	not a natural Florida springs stay submerged under the Rodman pool water	no	
10/9/2021 19:42	Outside of state / other	care deeply about the waters there	No	No					The dam should be removed, period.	The dam destroyed 7,500 acres of forested wetlands, 20 springs and 16 miles of the river. Half a century later, the dam still blocks the river route for fish, manatees and boaters, from Silver Springs to the Atlantic Ocean.	Florida's waters are doomed to toxicity and exhaustion.		Restore the wetlands, the springs and the river
10/9/2021 19:46	Outside of state / other		No	No				Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/9/2021 19:59	Marion		No	Yes			1 time	Other: Sight seeing and camping	Restore the river. Remove the damn	Restoration of the Ocklawaha river. The river is a vital part of our ecology. And part of keeping our planet healthy is restoring our river to what it once was.	Our springs will continue to be suffocated under the weight of an artificial "lake" Species will die, and the environment will continue to be degraded	No	Restoration of the Ocklawaha river is crucial to our local environment .
10/9/2021 20:02	Broward		No	Yes		2-5 times	More than 5 times	Fishing (shoreline/structure) Canoeing / kayaking Wildlife viewing		The dam is old and outdated, will cost millions to fix. It is much more desirable to have a free flowing Ocklawaha River as natural state. The fishing will be better, and it will be much better for the Manatee population.	Manatees are in big trouble. They need a free flowing Ocklawaha River to reach Silver Springs	Absolutely not-it is time to tear down the dam!!!!!	
10/9/2021 20:12	Seminole		No	Yes	1 time	2-5 times	2-5 times	Canoeing / kayaking Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway. Open up the rivers to the manatees!	Financial - $4-14 Million in dam repairs saved on a dam past its life expectancy. $57 million in potential flood damages avoided to downstream property owners	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/9/2021 20:17	Palm Beach		No	No					Removed to restore the freely flowing river as it was originaly	Information from groups in the area that support improved water quality.	Poor water quality.	Prefer to see the original flow of the river reestablished.	
10/9/2021 20:21	Marion		No	No					I would like to see the reservoir drained to restore the Ocklawaha River.	I have long been hearing about the problems created by the dam, and about the benefits to Florida wildlife if the river were to be restored to its natural flow. A recent editorial in the Ocala Star-Banner inspired me to send you my comments.	The affected wildlife.		
10/9/2021 20:40	Alachua		No	No		2-5 times		Other: don't use it at all	Would like to be able see/experience the springs that are, in essence, in a drowned condition.	Research from the Florida Defenders of the Environment.	I mourn the continued loss of habitat for manatees. Loss of wildlife, trees and acreage as it was naturally is not being nice to Mother Nature. The reservoir is an unnatural appendage.	Get rid of the dam. What good would getting rid of half of the dam do? Get rid of the dam. Nature will heal itself, and then we can talk about messing with it again.	
10/9/2021 20:50	Columbia		No	No					Please free the river and remove the dam, open the water ways.	Free our waterways	Land and animals	Get rid of the dam	Thank you for listening
10/9/2021 21:04	Pinellas		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	I would like to see the dam removed and the Ocklawaha River and the natural floodplain restored. There is no valid reason to keep the dam in place. It is costing taxpayers money to keep it and it benefits only a small number of people.	Taxpayers would be spared spending an estimated $14 million (measured in 2006 dollars) in unnecessary repairs to a dam that has exceeded its life expectancy and never fulfilled the purpose for its construction in the first place. Even accounting for revenues generated by increased recreational usage, a cost-benefit analysis determined restoration would produce a cumulative net benefit of $47.2 million over the first 10 years, versus a cumulative loss of $5.3 million with repair and maintenance of the dam. Development has fragmented wildlife corridors, making it harder on animals that need to move about to find sufficient food and mates. Draining the Rodman Reservoir would remove the single greatest barrier to plant and animal movement along the Ocala to Osceola (OOO) Wildlife Corridor by replacing the open water expanse of the Reservoir with a restored floodplain forest, to the benefit of many listed plant and animal species native to the region. Three river systems - the Ocklawaha, Silver and St. Johns - would ALL experience significant environmental improvement from restoration. At least 150 million gallons a day of additional natural flow, and potentially much more, would be restored to the Lower St. Johns River, improving water quality and increasing resiliency of the entire St Johns/Ocklawaha River system by impeding the salt water intrusion resulting from sea level rise. And finally, $57 million in potential flood damages to downstream areas around the community of Welaka would be avoided in the event of a dam failure.	Taxpayers will perpetually be on the hook for repair and maintenance of this white elephant, and will continue to be liable for any loss of life or property damage that would result from a dam failure. Restoration of the river and floodplain will not happen, water quality will continue to deteriorate, and the economic and environmental benefits that would result from the dam removal and restoration will not be realized.	No. The dam needs to go. It was never needed in the first place and it is not needed now. The Ocklawaha River needs to be restored. The economic and environmental benefits of removing it far outweigh any alleged benefit to keeping it in place.	Ecotourism and wildlife habitat would be enhanced by dam removal. Those who enjoy hiking, biking, kayaking, birding, and other outdoor activities far outnumber bass fishermen. Improving the water quality in the river would enlarge the ecosystem. The economic and environmental benefits of removing it far outweigh any alleged benefit to keeping it in place.
10/9/2021 21:21	Martin		No	No				removed	Florida's free flowing rivers are its greatest asset. We have caused too much harm to our land and residents by damming and straightening our rivers.	no improvement in the state of our waters	no		
10/9/2021 21:23	Volusia		No	No				I want to see the dam breached in a controlled fashion, allowing the free flow of water to return to its natural level. This would reunite the three rivers (Ocklawaha, Silver, and St. Johns) of the Great Florida Waterway.	The dam and reservoir were originally constructed as part of the Cross-Florida Canal, which was abandoned over 50 years ago, The project was, in part, cancelled to environmental concerns. The dam should have been breached when the canal was cancelled, in order to avoid ecological damage.	If the aging Kirkpatrick Dam fails, then there could be major property damage for people who live along the St John's River.	No.	
10/9/2021 21:34	Dade		No	No					Restoration of the flow prior to the dam being built in 1968.	The future of the health of the Everglades is contingent on an uninterrupted flow of water into the wetlands.	More of the same is not working.	none that I am aware of	
10/9/2021 21:39	Orange		No	Yes		2-5 times	2-5 times	Canoeing / kayaking Wildlife viewing	The dam must be breached to restore the free flow of the Ocklawaha, Silver and St. John's Rivers.	Free flow of the Ocklawaha will restore a great river system involving the Ocklawaha, St. John's and Silver rivers, restoring a healthy ecosystem, providing endangered manatee habitat, restoring 20 lost springs and healthy wetland forests, and providing diverse recreational needs and associated economies.The dam serves minimal purpose and posed a significant danger while needing extensive expensive repair to protect the area from overflowing and the possibility of catastrophic dam failure.	Loss of the opportunity to restore a great river system, vast areas of natural habitat and diverse recreational potential with associated economic benefit, while facing expensive dam repair and danger of dam failure.	The dam must go - the cost benefit analysis is very clear.	
10/9/2021 22:17	Brevard		No	No					Breach the dam	Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Breaching the dam saves $4-14 Million in dam repairs	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No. Breaching the dam is 50 years overdue.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
10/9/2021 23:15	Osceola		No	No					If this project was not concluded 5 decades ago, and nobody cared about the wildlife and surrounding areas.	The political mentality of just a few money movers that only think about investments and not conservation or Global Warming.	I will continue protecting until am heard and listened.		
10/9/2021 23:19	Alachua		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	I would like to see the dam removed and the river restored to its natural state.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored, along with 20 lost springs and Silver Springs ecosystem. Historic fish and manatees will return to the free-flowing river, with 100s of endangered manatees gaining essential warm water winter springs habitat.	Water quality would decline further, fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Restoring these issues is critical, as the state of our waters in so damaged, and continuing to deteriorate. The time for this is NOW.	The situation is already critical. Dam safety, improved water quality and wildlife can't wait.	
10/9/2021 23:25	Escambia		No	No					RESTORE this important waterway!			NO	
10/9/2021 23:26	Alachua		No	Yes			1 time	Other: I do not approve of the dam; have gone there to observe its build-up of exotic weeds and blockage of manatees	The dam must be breached within the year and the Ocklawaha allowed to once again run its natural course and the flooded springs restored.	The well-researched data provided by Florida Defenders of the Environment supports my request that the dam be breached, not repaired.	The continued decline of the Ocklawaha river system; the continual herbicide spraying of Rodman Reservoir & its negative impact on the environment.	No, the breaching of Rodman Dam is past over-due. It's time to let the Ocklawaha run free again	
10/9/2021 23:37	Lee		No	No					bake it down and restore the river to its original connections	a free flowing river system will benefit all of florida and the asuilers.	shat the water supply will be jeapardized	no, takw the damn dam down	we all know the best course of action. enough endless talk. just do it already
10/10/2021 0:51	Palm Beach		No	No									
10/10/2021 2:57	Pinellas		No	No					I would like to see the access returned for the benefit of the wildlife	Wildlife rights should outweigh man's profit	Harm to wildlife	Not familiar with the area	
10/10/2021 5:45	Alachua		No	Yes			1 time	Wildlife viewing	Please remove so springs flow freely. Would improve non-human fish habitat. It is foolish to spend more money on this dam. Remove it	Natural habitat would be restored	Further destruction of springs and wildlife	We have waited long enough to restore it	
10/10/2021 5:53	Collier		No	No					Treated as the most valuable asset in the county. What flows to and from each body of water becomes it and continues to the next body. Treat water as it is your most valuable asset.	Toxic water poisons the land making it uninhabitable then flows to the next.	Florida will be a wasteland. A land left for oil mining and Cyanobacteria biofuel production.	Compared to a half baked cake?	I'm sending along a copy of our book "What's Killing Florida ". I hope your vision is that each part is of the whole and that good water is priceless. Please read our book.
10/10/2021 5:56	Alachua		No	Yes			1 time	Other	The dam is a decaying structure that should be removed. It has outlived its useful life and spending additional money on its repair/upkeep would be a waste of taxpayer money.	The dam interferes with the river's free flow and diminishes the important ecosystem services it offers.	The ecological destruction caused by the dam would continue.	No. The river has been replaced by a reservoir for over half a century. The time for compromise is over and the dam must be removed.	Remove Rodman Dam!
10/10/2021 6:41	Volusia		No	Yes			2-5 times	Wildlife viewing	removed	That its lake is choked with weeds and suffers from oxygen depletion.	We will fail in undoing the harm of the wasteful and environmentally destructive Cross-Florida Barge Canal project resulting in further degradation of our lates beautiful natural ecosystem.	Just taking the next step and removing the dam would be wonderful.	The answer in removing the dam which supports a canal which will never be used is silly. Bass fishing is fun, it is not a sufficient reason to keep this ecological misstep going. Budget the funds and remove it. You will be serving the greater good along with a clear majority wanting it removed.
10/10/2021 7:27	Sarasota		No	No				Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.		15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs.	The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of r-natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This exciting restoration will improve water quality and flow by generating an additional 150 million+ gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
10/10/2021 7:42	Duval		No	No					Restore the Ocklawaha River by breaching the dam on the Rodman Reservoir	The dam has impeded the River's flow, blocking the movement of aquatic life and degrading water quality; current situation threatens manatees and fish by impeding their migratory route; breaching the dam would improve environmental health and increase tourism in area increasing demand for local environmentally sensitive businesses	Continued degradation of the environmental health of the whole river system and increased health threats to both wildlife and humans	No	
10/10/2021 7:46	Sumter		No	Yes	2-5 times	More than 5 times	More than 5 times	Boating	Breach the dam and return to natural flow	Manatee migration and restore the lost springs	Continued issues with our springs	No. Why spend money on a dam that does nothing bit harm the environment	
10/10/2021 7:56	Alachua		No	Yes			1 time	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	$50+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers. Also, it saves money in dam repairs and still creates recreational opportunities and jobs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. It's a ridiculous dam and waste of money.	Thank you for the opportunity to provide feedback.
10/10/2021 7:59	Volusia		No	No					Unite two rivers	Info from environmental groups			
10/10/2021 8:13	Volusia		No	No					I would like it to be opened and the waterway restored	The dam serves no useful function.	The Oklawaha will not be restored	Part of the structure could be preserved.	The river has great historical significance as a navigable route from Palatka to Silver Springs. I believe it would be a present day recreational resource if this pathway was restored.
10/10/2021 8:33	Dade		No	No					Get rid of the dam and unite the rivers already.	The dam has been ecological damage for over 50 years.	Environmental damage to the area of course.	No.	
10/10/2021 8:38	Marion		No	Yes			1 time	Fishing	Remove the Dam, the reservoir is so difficult to navigate do to stumps and vegetation it's not worth using. The Ocklawaha River would be so much healthier and could actually be better navigated with the dam removed.	Usability and Health of the River	The river will continue to be hurt by the prevention of the natural flow .	No the rodman dam needs to go and restore the Ocklawaha natural flow	
10/10/2021 8:42	Pinellas		No	Yes			1 time	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water springs habitat 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers $4-14 Million in dam repairs saved on a dam past its life expectancy Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. $57 million in potential flood damages avoided to downstream property owners	State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/10/2021 8:57	Volusia		No	Yes				Wildlife viewing	Remove the dam and restore the Ocklawaha River to its historic/natural course.	I don't understand this question	The catastrophic failure of the dam	No	Restoration of the Ocklawaha River to its natural course is long overdue.
10/10/2021 9:17	Bradford		No	Yes			1 time	Other: Don't use the damn. Stopped to look at it in disgust…waste of money to build and maintain	Breach the damn and get the river flowing back the way it should	Environmental impact	Excitment to the environment	No	
10/10/2021 9:12	Volusia		No	No					I would like to see the dam removed.	The dam was part of the ill-fated cross-Florida canal project, an endeavor that was abandoned years ago	Continuing environmental damage.	No	
10/10/2021 9:14	Dade		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	remove the dam.	inundation of the riverbed/ecosystem.		I would be pleased to review various scenarios.	
10/10/2021 9:17	Duval		No	Yes		2-5 times		Wildlife viewing	The dam needs to be removed. Now. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	$50+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	There is no completing, logical argument for the dam to remain, nor has there been for 50 years. It is a relic of poor decision making by short-sighted officials spurred on by lobbyists who had no concern for the environmental damage that would result. Let The Ocklawaha flow.
10/10/2021 9:35	St Johns		No	Yes		1 time		Canoeing / kayaking	out back in originality to help the animals fish and manatees	it is a low cost fix to an existing problem	more world goo	none at this time	
10/10/2021 9:41	Volusia		No	No					Remove it and restore Florida's natural ecosystem	The unnatural man made attempt to create a cross state canal has destroyed the natural flow of our water systems and destroyed ecosystems and habitats.	The continued devastation of Florida's ecosystem.	Remove the damn and see if the natural water flow can heal itself without further intervention.	Please stop throwing good money after bad to continue an ill-conceived, politically motivated project. Spend what is needed to reverse the course back to its natural state and let it heal itself. Stop trying to maintain a poorly constructed, environmentally destructive project.
10/10/2021 9:51	Broward		No	No					I would like to see the Ocklawaha River brought back to its natural state. The environmental damage that the Kirkpatrick Dam has caused on the surrounding natural areas and wildlife has created many problems. Which includes inundating 9000 acres of the Ocala National Forest, smothering 20 natural springs, and blocking the historic path of manatees, striped Bass, and multiple marine life. To appease the fisherman over environmental degradation seems to be a common path of political legislation in Florida. Let's stop holding nature hostage and respect the rights of nature and let the Oklawaha River flow in its natural state. I kayak frequently at Silver Springs that has been affected by the dam. Please do the right thing and free up the River!	The degradation of the environment and wildlife affected by the dam. With over 1000 Manatee deaths in South Florida due to the loss of sea grass affected by the algae pollution from Lake Okeechobee which is another dam problem, let's learn to stop manipulating nature to appease profit over what is the right thing to do.	The continued negative impact the Kirkpatrick Dam has on the environment. Natural water flow creates healthier lakes and better fishing. Healthier springs supply clean drinking water. The clean waterways will not happen with a dam that continues to stop the natural lakes water to flow.	No, take down the dam and open the reservoir to allow the Ocklawaha to flow in its natural state. Let nature take its natural course for a change in Florida.	

10/10/2021 9:52	Putnam		Yes	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing Other: Feeding my family	I would like to see the continued operations supporting the Buckman Lock, Kirkpatrick Dam, Rodman Lake and all of the recreational areas surrounding it. This area is a thriving wildlife habitat, with world-class fishing that helps support a largely rural economy.	This area is one of Putnam County's top tourism assets drawing thousands of visitors each year. This asset delivers much needed profitable tourism dollars for our county. Much of the success of soliciting large-scale nationally televised tournaments is due to the presence of Rodman. Rodman Lake is featured annually as one of the top ten bass fisheries in the State and in the top 100 in the United States	Tremendous loss of critical income to an already fiscally constrained County. Putnam County is a designated RAO (Rural Areas of Opportunity) - Defined as a rural community that has been adversely affected by extraordinary economic events or natural disasters	We are unaware of any compromise that could help both sides achieve their desired outcomes. We respectively ask that the fate of Rodman Reservoir be guided by facts and reason, not overwhelming campaigns of misinformation.	SUPPORTING DOCUMENTS/STATEMENTS Florida DEP estimates that Rodman Reservoir supported 307,217 visitor days in 1993, more visits than all but 10 of Florida's 129 state parks. In 1992, the U.S. Army Corps of Engineers estimated there were 376,609 visitor days, more visits than all but 12 of Florida's 129 parks. Florida Game and Fresh Water Fish Commission (GFC) documented the total recreational use of Rodman Reservoir (343,840 person-hours) was 3 times greater than the use of the Ocklawaha River (133,859 person-hours). Florida GFC also documented that Rodman Reservoir supported 32,059 person-hours of recreational swimming, 13,934 person-hours of recreational boating, 6,839 person-hours of canoeing, and 1,195 person-hours of hunting. Rodman Reservoir provided more non-fishing recreational use (62,229 person-hours) than the Ocklawaha River (51,692 person-hours). Florida DEP estimated a loss of 55% of the total recreational use if the Ocklawaha River is restored. Florida GFC concluded the loss of Rodman Reservoir will result in a 63% decrease in recreational use. (Fl. DEP Socio-economic Study, Volume 5-pages 2-40, 3-37, 3-41 & 3-55; (Fl. GFC Recreational Use and Fisheries Report, pages 5,9, & 15) St. Johns River Water Management District documented over 12 different habitat types within the Rodman Reservoir Complex, more habitats than the Ocklawaha River, The Rodman Reservoir Complex includes over a mile of river and flood plain swamp and there is now a greater number of species inhabiting the Rodman Reservoir area than before impoundment. Source: Dr. Daniel E. Canfield compiled these statements from reports from agencies stated. St. Johns River Water Management District documented over 12 different habitat types within the Rodman Reservoir Complex, more habitats than the Oklawaha River, The Rodman Reservoir Complex includes over a mile of river and flood plain swamp and there is now a greater number of species inhabiting the Rodman Reservoir area than before impoundment. St. Johns River Water Management District also found that it is highly unlikely that sediment inflows are a significant problem in retaining Rodman reservoir. It is estimated that it would take about 8,000 years to fill in the reservoir. Source: St. Johns River Water Management District Environmental Studies Concerning Four Alternatives for Rodman reservoir and The Oklawaha River, Volume 20 - Pages 17,18,19,77,94 & Appendix A; Volume 10 Page 137
10/10/2021 9:53	St Johns		No	No					Free the river and open the Kirkpatrick Dam to help the managers survive	Dying manatees, control invasive tilapia,	Continued manatee starvation, poor environmental health of the river	Partial opening of the dam	Please help preserve manatees and Florida's ecological system
10/10/2021 9:56	Putnam		No	Yes			2-5 times		Removal of the Dam	Return to its natural environment. Submerged springs will be able to flow. It's an aging structure that is quite costly to maintain. Would provide warm habitat for manatees.	Missed opportunity to correct, as well as significant costs to maintain aging structure.		
10/10/2021 10:03	Volusia		No	No					The dam should have been removed in 1970.		President Nixon and Fl. Governs Chiles, Bush and Crist knew it was bad for the environment and the cross FL barge canal would never be completed, but could never get support from legislators. It was a failed project long ago, stop spending money to maintain it.	No. Erase the dam and restore your he rivers and creeks	
10/10/2021 10:18	St Johns		No	Yes	1 time	More than 5 times	Canoeing / kayaking Wildlife viewing		Removal	The dam has done nothing economically but has been disastrous for ecology, the spraying poisonous herbicides has only benefited the applicators.	If done right, none.	If not total removal then at least breached.	
10/10/2021 10:25	Hernando		No	No					breach it	Restores it to a healthier status	It's terrible for animals	No	
10/10/2021 10:29	Brevard		No	Yes			2-5 times	Wildlife viewing	I would like to see the dam removed and the waterways restored .	The harm the damn causes in the movement of wildlife, especially fish and manatees.	That animals will be harmed, injured or die without space to travel.	I don't think so.	Thank you for this form so that I have a chance to comment.
10/10/2021 10:34	Dade		No	Yes			1 time	Wildlife viewing	I'd like to see restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, it's harming the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Hundreds of manatees gain essential warm water winter springs habitat	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Oklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/10/2021 10:52	St Johns		No	Yes			1 time	Other: observation	Remove the dam	Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs.	Water quality declines, further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam and restoring the Ocklawaha are 50+ years overdue. Dam safety and improved water quality, wildlife habitat, and recreational opportunities can't be ignored or delayed any longer.	Thanks for taking the time to look at my responses. Please let's move forward to improve the water quality and the fish habitat in the St. John's, Ocklawaha and Silver.
10/10/2021 10:55	Volusia		No	Yes			1 time	Canoeing / kayaking	Restore the Ocklawaha River to its natural state by breaching the Rodman/Kirkpatrick Dam to make the river free-flowing and restore the connection between Silver Springs, the Ocklawaha and the St. Johns River.	Science - Studies by federal and state agencies have clearly demonstrated that restoration of a free-flowing, connected system is cost-effective and will provide significant ecological benefits to the St. Johns, Ocklawaha and Silver Rivers as well as Silver Springs.	If it's not done, the negative impacts to water quality, fish, wildlife, forests and submerged grasses will continue. Restoring the natural flow of fresh water will improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. It will reestablish thousands of acres of forested wetlands and help ensure the healthy continued growth of submerged grasses from Welaka to Jacksonville in the St. Johns River that are critical to river health and fish habitat.	NO there is no other acceptable scenario. This is 50+ years overdue and there's no acceptable reason to wait any longer.	
10/10/2021 10:56	Alachua		No	No					Dismantle the Dam and restore the natural flow of the river system.	The original purpose of the dam was for the cross Florida canal that was never empleted, thus it's existence is superfluous and unnecessary.	The lasting damage to the ecosystem compounds over time.	The dam is either there, or it isn't.	I grew up on the banks of the Ocklawaha River in the Ocala National Forest during the 1980's and 1990's. My family has lived there for over 100 years. My great grandfather James Robert Peebles was involved in the logging industry and transported logs down the Ocklawaha River in the early 20th century. The Ocklawaha River is the lifeblood of that ecosystem. It should be restored to its natural condition for the benefit of the entire river system.
10/10/2021 11:35	Putnam		No	Yes			2-5 times	Other: To see the ugly cesspool	Remove the dam	Fish abd manatee migration	The fight will go on	No	
10/10/2021 11:36	St Johns		No	Yes			2-5 times	Wildlife viewing Other: Bird watching	I would like to see the dam breached so that the river can be restored to its normal flow.	$4-14 Million in dam repairs saved on a dam past its life expectancy	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This exciting restoration will improve water quality and flow by generating an additional 150 million+ gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration. 1characters:
10/10/2021 11:46	Leon		No	Yes			1 time	Canoeing / kayaking	Completely removed and the waterway completely reopened.	Opposition by a small minority of fishing groups thwarts the will of many on this subject.	That the state bows to groups that do not represent the will of the majority of Floridians.	No. The damn must be removed and the waterway opened again.	Remove the damn!
10/10/2021 11:59	Volusia		No	No					I would like to see it taken down and the original natural state returned as much as possible.	To be clear, the value of "original natural state" does not require explanation.	Continued unnecessary and counter-productive degradation of natural waterway.	No.	
10/10/2021 12:05	Marion		No	No					Dam should be removed. We need to restore the Ocklawaha River.	connecting a free-flowing Ocklawaha to the St. John's River would create a migratory route for fish and manatees from the Atlantic Ocean.	A further demise of the manatees. No recovery of the lost springs submerged due to the Dam. The environmental health of the whole river system would not be improved.	If the Dam could it least be breached, this would allow for the restoration of river flow and levels to pre-dam conditions.	American Rivers has listed the Ocklawaha as one of the most endangered rivers in 2020. The dam was to be part of the Cross Florida Barge Canal which was environmentally destructive and was terminated by President Nixon. The dam should have been removed at that time.
10/10/2021 12:20	Citrus		No	No					Kirkpatrick Dam removed.	Manatee access. Springs restored. Land recovered.	Needed habitat for manatees not available.	No.	
10/10/2021 12:31	Seminole		No	No					Let it flow	Environmental impact	River to be vibrant with fish and fowl and living things.	Not sure	
10/10/2021 12:49	Bradford		No	Yes			2-5 times	Fishing (shoreline/structure) Boating Other: Viewing/picnicking	Restored to its original natural state by breeching the dam.	The environmental damage it has caused	Continued ecological, environmental damage, water quality, harm to wildlife.	No	It is long past time to restore the Oklawaha and breach the dam.
10/10/2021 12:53	Pinellas		No	No					Remove dam; restore original configuration		Further damage to surrounding area; further diminution of natural Fl.	No	
10/10/2021 13:07	Indian River		No	Yes			1 time		I would like to see Kirkpatrick Dam decommissioned and restoration begun on the river's floodplain.	I spent three years studying the "understory vegetation" of the Cross-Florida Barge Canal for a report issued by the US Army Corps of Engineers. I visited every intact forest along the Ocklawaha and in the canal path on the St. Johns. I knew the floodplain very well.	My impression is that nitrogen pollution is an increasing problem in Silver River, so I expect that restoration planning would need to examine this problem to determine whether the Ocklawaha can self-clean or whether some kind of diversion into treatment wetlands might have to be devised. The Kissimmee is a very different system, but I suspect that some design experience from that river could be helpful.	The dam appears to be a safety problem; I'm not expert on that. The river seems eminently restorable.	
10/10/2021 13:08	Palm Beach		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Restoring the waterway would improve water quality and uncover lost springs, providing benefits for recreational users of all types as well as wildlife.
10/10/2021 13:24	Lee		No	No					Restore is back to natural habitat.	I am leaving FL because of poor water quality.	That the long term viability of the Florida tourism will be destroyed due to poor water quality.	Any bit of restoration would be better.	
10/10/2021 13:34	Pinellas		No	No					Take into consideration the whole picture - past, present, future environmental impacts.	In general I'm concerned about the present and future impact to plants, animals and humans	Irreversible environmental damage		
10/10/2021 13:35	Broward		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.		Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	Please temporarily draw down the reservoir to 11 or 12 ft. mean sea level until restoration occurs which will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	The year 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Oklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/10/2021 13:37	Volusia		No	Yes			1 time	Other: camping	Removed and restored to natural state.	It blocks the natural flow of the Ocklawaha River.	It would continue the environmental damage as well as waste taxpayer money on upkeep of an unused dam.	Partial removal of the dam to allow water to flow into the Ocklawaha River.	Thank you for the opportunity to voice our opinion. I hope after all these years action will finally begin.
10/10/2021 13:38	Volusia		No	No			1 time	Boating Wildlife viewing	Please drain the reservoir and restore the Ocklawaha	restore Fl natural springs and beauty to the area	Continuing degradation of the Silver River, Ocklawaha River, and Saint John's River systems. Continued environmental and economic losses for the State of Florida.	Best to shoot for full restoration. It will probably never achieve that goal, but that would be the best outcome for our state.	As long term Fl residents, originally living in Alachua county and now living in Volusia,the springs, manatees and nature are the most outstanding feature of central Fl. Please undo harm done in the past
10/10/2021 13:40	Seminole		No	No					Let the river run freely again!	The terrible condition of adjacent waterways.	Continued deterioration and eventual death of an important FL ecosystem.	NO, and I will let this guide my voting.	
10/10/2021 13:44	Lake		No	Yes		1 time	2-5 times	Fishing Boating Wildlife viewing	Remove the dam	Restore natural river flow to St. John's and uncover springs now under water in lake. Improve wildlife habitat especially for manatees	A missed opportunity for restoring the river to a more natural state More money put into a dam that should removed	No the dam removal is the only way to restore the river	
10/10/2021 13:45	Duval		No	No					Remove it	It's harming the wildlife and choking the waterways	More of our aquatic life will suffer and die	I would support removing it and would be satisfied for a tax increase in order to do so.	
10/10/2021 13:47	Broward		No	Yes		1 time		Fishing Fishing (shoreline/structure) Canoeing / kayaking					
10/10/2021 13:56	Volusia		No	Yes		1 time		Wildlife viewing	Reconnect the Oklawaha River with the St. John's in its natural flow.	That the dam is failing	That the dam would fail and cause unexpected damage or that a lot of money would be spent for something that's going to constantly need upkeep	Not sure	
10/10/2021 13:57	Brevard		No	No					My husband and I would like to see the dam breached and water flow be restored between the upper Ocklawaha and the lower river systems.	A multitude of studies show the environmental and economic benefits of this restoration.	Continuing degradation of the Silver River, Oklawaha River, and Saint John's River systems. Continued environmental and economic losses for the State of Florida.	Best to shoot for full restoration. It will probably never achieve that goal, but that would be the best outcome for our state.	Economically this move makes sense for our future in the great state of Florida.
10/10/2021 14:01	Sarasota		No	No					Please restore this to a free flowing river.	We know the damage that dams and reservoirs cause. Across the country rivers are being restored to be free flowing - it will benefit us all in the state.			
10/10/2021 14:10	Pinellas		No	No					Restoration of the Ocklawaha River by breaching the dam and draining the Rodman Reservoir.	The recreational development component included in the restoration plan would benefit nearby residents and expand eco-tourism, and more than compensate for loss of the Reservoir.	Further environmental degradation and continuation of the single greatest barrier to plant and animal movement along the Ocala to Osceola (OZO) Wildlife Corridor.	No as this is the compromise.	
10/10/2021 14:15	Citrus		No	No					Remove the dam to allow the river to flow freely again.	PAPS info about restoring the natural environment.	The dam may fail	Depends what options are proposed.	
10/10/2021 14:19	Brevard		No	Yes	1 time	2-5 times	More than 5 times	Fishing (shoreline/structure) Canoeing / kayaking	I want the dams removed and the river restored to its natural flow. I think that the springs exposed during the draw downs are exceptionally nice places and will promote a broader use than the dams provide. Furthermore, the fishing is better on the river than it is in the reservoir.	I spend far more time on the river during drawdowns. The river is beautiful in its natural state. The reservoir is a far less-interesting place to spend the day. I don't catch fish in the reservoir. I always catch fish in the natural river. Besides, that dams have been ordered removed several times. Why should we still pay to maintain them?	The river will continue to be choked by invasive aquatic plants, and places like Tobacco springs will only be seen occasionally during drawdowns.	I've been fighting this travesty since I was a boy. The project never should have happened at all. Restore it!	Just do the right thing by the citizens, Please! For once, fix it!
10/10/2021 14:24	Dade		No	No						Data provided to me by the Florida Native Plant Society	Loss of natural habitat		
10/10/2021 14:25	Putnam		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing Other: Frog-gigging from airboat	Maintain status quo with lock and dam	Compiled reports of 14 years of field research while working as a fisheries management specialist for the "old" Florida Game and Fresh Water Fish Commission.	The catastrophic loss of an evolved, naturally sustained bio-diverse habitant and recreational treasure	No...to "breach or not to breach" is as decision not subject to compromise	The only real "skin" in this game is Putnam County residents and the multitude of outdoors enthusiasts who actually use the area for various recreational purposes. "Arm-chair environmentalists" have only ego at stake--there is no "greater good" in their argument....
10/10/2021 14:31	Charlotte		No	Yes	1 time			Wildlife viewing					
10/10/2021 14:36	Martin		Yes	Yes			1 time	Fishing Other: I frequent all of the estuaries along Florida's east coast for my profession, both for running trips as a licensed fishing guide as well as digital marketing campaigns for manufacturers in the fishing and tourism industries.	Breach the dam.	Impact of stagnant dams around the country as the prime example of inhibitors to old water flows done with industrial goals which at the time had no perspective on their ecological impact. With the current state of Florida's coastal waters and our statewide battle to protect our estuaries that are already under siege by an abundance of users, warming seas and water quality issues, there is no reason not use this dam as an easy first domino in the right direction. The ecological repercussions of its removal are phenomenal and support ecotourism and eco-recreation that will improve estuary health and bring significantly more money to the region than a stagnant dam does.	If we can't agree on a non-partisan "no brainer" for ecological restoration, we are laying the groundwork for polarized upcoming water management and fisheries management issues that could use this single act as an incredible example to unify public goals. This is time for ecological, non-profit and state entities to show collaborative effort when public interest it as it's peak and to act in a progressive manner.	No. Bring it down. Healthy estuaries ARE Florida. Regardless of race, color, creed, sexuality or political party - we ALL benefit from healthy estuaries.	
10/10/2021 14:36	Orange		No	No					Maintain property as wildlife reservoir & protected lands.		Unscrupulous land developer & Florida politician upset wildlife habitats & pollute local waterways.	Not really	
10/10/2021 14:37	Volusia		No	No					Remove it and restore the natural course of the river	It is way past time for the dam to be removed and stop the negative environmental impact it has. It should have been done back in the 1970s.	That no one listens to state and federal environmental regulators who say the dam kills manatees and prevents fish migration. Environmentalists have tried for years to get the dam taken down and it needs to happen.	No!	The Cross Florida Barge Project was an ill-conceived project from the beginning and spending more money maintaining and restoring an environmentally unfriendly dam built to accommodate it a half century after it was abandoned is jus plain stupid.
10/10/2021 14:38	Palm Beach		No	No					Restore the Ocklawaha River to its natural flow prior to the construction of the Rodman Reservoir and the Kirkpatrick Dam.		Continued destruction and loss of natural habitat in and to the surrounding environment	Nope	
10/10/2021 14:39	Palm Beach		No						Breach the dam to restore the free flowing river.	I Thousands of acres of submerged aquatic plant communities would be able to regenerate in the restored river channel, and in the re-emerged spring run streams that drained into the Ocklawaha historically. I 8,000 acres of stressed floodplain wetland located downstream of the dam would be enhanced. I Imperiled plant species like the endangered Star Anise and threatened Harperigntia, which are native to the banks of this region's spring run streams, could expand their range into the restored spring systems. I Draining the Rodman Reservoir would remove the single greatest barrier to plant and animal movement along the Ocala to Osceola (OZO) Wildlife Corridor by replacing the open water expanse of the Reservoir with a restored floodplain forest, to the benefit of many listed plant species native to the region including the Federally listed Clasping Warea and Scrub Buckwheat. I Three river systems - the Ocklawaha, Silver and St. Johns - would experience significant environmental improvement from restoration. An estimated $14 Million in dam repairs, measured in 2006 dollars, would be saved by avoiding repairs to a dam that has exceeded its life expectancy and never fulfilled the purpose for its construction. I The large expenditures required for herbicide treatments to control the growth of invasive aquatic weeds and to conduct other ongoing maintenance needs, including periodic drawdowns, in a futile attempt to maintain water quality and recreational access in the stagnant waters of the Reservoir, would become unnecessary.	Residents and business owners in areas immediately downstream of the dam would continue to be under threat in the event of failure of a dam that has never, and will never, satisfy the purpose of its construction. The Reservoir would continue to be a barrier to movement by native wildlife and plant life along the length of the OZO Corridor, and compromise the value of Florida's investments in conserving lands like the Etonnah Creek State Forest, and approved Florida Forever projects.	No. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration.	
10/10/2021 14:40	Manatee		No	No									
10/10/2021 14:42	Broward		No	No						I feel it's important to have the Kilpatrick damn removed and the Rademann reservoir drained .	I have kayaked the Ocklawaha River frequently when I lived in Central Florida and I would love to see it maintained its beauty and it's important to remove the dam and drain the reservoir to achieve its natural state		
10/10/2021 14:45	St Johns		No	Yes			2-5 times	Canoeing / kayaking Boating Wildlife viewing Other: hiking					
10/10/2021 14:51	Leon		No	No					Removed the dam allow the water to free flow for the environment.	Dams are environmentally damaging.	Environmental impacts	No	
10/10/2021 14:53	Monroe		No	No					The dam is removed	Natural flow is restored and makes the St. John's Watershed healthier	Manatees would be unable to reach warm winter water	No	Manatees have been dying and we need to replace and renew their habitat
10/10/2021 14:53	Orange		No	No					I'd like to see the dam and reservoir removed.	Florida's natural flow of streams and the resulting natural fish, flora and fauna.	The dam and reservoir never did what they were intended to do, and trying to keep them as is, results in more environmental degradation. Do you really want to spend more taxpayer dollars on repairing and maintaining a mistake?	No. Any compromise merely spends more money on a huge mistake, and this mistake has caused enormous environmental damage to fish, wildlife and plants. Breach the dam and let nature take its course.	I've read about the ridiculous attempts we have made in FL (and elsewhere) to improve on what was here naturally. Please achieve the humility to understand that humans are inherently prone to failure. Leave God's earth alone.
10/10/2021 15:03	Volusia		No	No						I believe it is fiscally and environmentally responsible to return the Oklawaha to its original course by dismantling the earth dam from where the river used to flow.	The dam is reportedly past a point at which its safety can be assured. It was intended to support the creation of the cross-Florida canal, a project that has since been abandoned. The reservoir created by the dam has covered up a series of springs and poses a threat to downstream communities should the dam fail.	Failure of the dam and damage to property and communities downstream.	It seems to me that returning the area to its natural state is the responsible action and the preferred outcome.
10/10/2021 15:03	Highlands		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	The growing body of knowledge clearly demonstrates the need for removal of the dam and human-altering additions followed by complete restoration back to the closest approximation of the natural condition.	Science	Further degradation of natural resources and ecological integrity will continue until we reverse this crime against nature, the environment, and society.	Possibly but given the track history of environmentally engineered projects and politics in Florida, an alternative solution would be best received coming from as best an incorruptible source can be found such as a collective of academic and non-profit professionals not connected to financial or political interests.	
10/10/2021 15:04	Marion		No	Yes			More than 5 times	Fishing Boating Wildlife viewing Other: Every morning I see the lake from our house. It lets me breath and reduces stress...unless someone is trying to destroy it.	The SJRWMD, DEP, Greenways should publically proclaim and support what a great resource the Rodman Reservoir/Lake Ocklawaha is. For too long these organizations have not supported Rodman and have not countered the emotional conversation from those who want to destroy the reservoir to mislead the public. The voices of those who want to destroy Rodman are loud but often misinformed. Again, those voices need to be countered by SJRWMD, DEP and the Greenways. I do not want the lake destroyed!	The Studies funded and done by the legislature were positive about the health and value of Rodman. The Lakewatch statistics over the years also document that Rodman does clean the water of phosphorus and other harmful nutrients before flowing into the St. Johns River. Watching and enjoying Rodman for over 40 years, I see first hand a healthy lake.	The loss for property owners of the value of their property. The loss of a valuable water resource at a time of concerns about the dwindling supply of water and the loss of a unique recreational area.	No. Destroying Rodman Reservoir would be a tragedy and is pointless.	I have lived beside and watched this established ecosystem for over 40 years. Rodman Reservoir is truly unique. The health of the lake is maintained by periodic drawdowns. Manatees can go safely through Buckman Locks. There is ample vegetation for manatee food. The fishing pier and recreational area at Buckman Lock provide free fishing and recreation for many low income families. Fishing along the exposed river bank would never be as popular. Boating on Rodman whether to fish or just enjoy the water and the diversity of the environment is affordable and easily accessible. The cost to maintain Rodman and Buckman Lock has never been excessive. The eastern end of the Greenways corridor begins with a diverse and valuable ecosystem. Managed and publicized Rodman/Lake Ocklawaha will continue to be a valuable recreational area.
10/10/2021 15:10	Volusia		No	No					Restoration of the Ocklawaha River	Damage and degradation of the river caused by the dam.	Continued damage of the Ocklawaha River		
10/10/2021 15:12	Orange		No	No					prioritize natural environment and health	the universe is on fire, literally	legislators being held responsible for crimes against humanity	no	
10/10/2021 15:22	Manatee		No	Yes		1 time		Canoeing / kayaking	dam removed and river returned to original state	natural history.dam does not serve purpose it was put in for.	mine	no.dam was installed for barge canal that was never built,serves no purpose other than that.	
10/10/2021 15:27	Alachua		No	Yes			2-5 times	Wildlife viewing	I would like to encourage you to breach the Rodman Dam and partially restore the Oklawaha River.	nature and the springs			
10/10/2021 15:25	Alachua		No	No					Remove the dam so the river will run free. Restore it to its natural beauty.	Reports by environmental scientists	Continued degradation of Florida's natural resources	No	
10/10/2021 15:37	Volusia		No	Yes			2-5 times	Fishing Fishing (shoreline/structure) Wildlife viewing	Remove the damn and let natural source of water flow an return this area as it should be prior to man's fatally misaligned judgement to cut a canal through middle of florida with salt water on both sides, not very thought through system.	Water quality of the remaining mess in/around an caused by a needless dam.	just that it represents another demolition of natural surroundings by thought less humans and my CONCERN is that it will continue as is which is ludicrous to think about but sure that if not corrected same politicians mine that but dam in place to start with will continue and they will make it another housing project since everything else if dam not removed in time will die.	NO!!!!!!!!!!	Get over it the dam must be removed to restore natural balance in system, how many studies not you need to understand that!
10/10/2021 15:42	Dade		No	Yes			1 time	Wildlife viewing	Preservation of as natural as possible with removal of invasive species. Greater promotion of availability as a natural destination.	I'm disgusted with how supposed leaders in our state disregard the unique natural areas in our amazing state. We should promote Florida for what we have as a natural destination, fund areas better and slow down the destruction of our natural areas by 'development's' for profit of companies that destroy.	What are we leaving as legacy?	I'm not sure.	

10/10/2021 15:45	Brevard		No	No					I would like to see the dam removed so that the previous natural water way may be restored.	The information that the Florida Native Plant Society has provided about the negative impact the dam has on the environment	My biggest concern is the loss of species important to Florida's ecosystem.	No	
10/10/2021 15:48	Orange		No	No					I would like to see the reservoir drained and the dam removed	This would restore the river.	continued degradation of the river	not that I can see	
10/10/2021 15:53	Pinellas		No	No					Breach the dam.	Many positive outcomes. To name a few, Manatees would regain open access to the warm water habitats of the Ocklawaha and Silver Springs. Migratory fish including the Striped Bass, American shad, American eel, and the critically Endangered Atlantic Sturgeon and Shortnose Sturgeon would once again have open access to the Ocklawaha system if the dam is breached. Recreational sport fishing would be enhanced by allowing the Florida strain of the Striped Bass to reclaim what used to be its primary spawning habitat - the Ocklawaha.	More wasted money, more environmental degradation.	No	
10/10/2021 15:58	Seminole		No	Yes			More than 5 times	Fishing Boating Wildlife viewing	Open the dam	Damage to the oklawaha	Environment impact	No	
10/10/2021 15:59	Volusia		No	No					Dam removal and floodplain and wetland habitat restoration				
10/10/2021 16:08	Volusia		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking	Taken down. Bring River back to natural setting.	Brings wildlife back and exposes springs that are now covered up	Dam will brake and cause flooding. Also large amounts of funds needed to repair dam.	No other scenario, dam must come down	
10/10/2021 16:08	Orange		No	No					Restore the Ocklawaha River--breach the Kirkpatrick Dam and drain the Rodman Reservoir				
10/10/2021 16:12	St Johns		No	No					Whatever is best for the environment and the people impacted.	The desire to do the right thing.	Lost opportunity for the environment and well being of Florida.	Always compromise what works best for both parties.	
10/10/2021 16:13	Leon		No	No					Restoration of the Ocklawaha River by breaching the dam and draining the Rodman Reservoir	Biological integrity of intact systems.	Loss of opportunity to make the world a better place	Not that I can think of	
10/10/2021 16:19	Duval		No	No					I would like for the Kirkpatrick Dam to be removed to help our declining population of manatees. I had to save a manatee this past year because it had beached itself in my backyard it was underweight and dying of starvation.	Our manatees need more places to feed to prevent starvation of these historical animals. We need to help them before they are lost forever. Removing the Dam would provide more areas where the manatees can find food.	That more manatees will die of starvation. They will soon be extinct.		
10/10/2021 16:20	Sumter		No	No					The original purpose of the dam is no longer valid. No related purpose can be found. Remove the dam and restore the flow in the Oklawaha	Fishing in the reservoir is artificially maintained. No other form of recreation is even viable.	We tend to abhor change. The only way to convince ourselves that change is worth it; is to hang a price tag on it. We'll make XXXX if this happens, and it will only cost us XS. The people supporting this change have tried very hard to put removing the reservoir in those financial as well as environmental words. If no change is avoided in this matter, it proves that we as humans cannot value environmental change in the same manner as we value housing developments and manmade dams.	Lower the dam so that the water flows in the Oklawaha basin, and the reservoir looks more like a 1 acre sinkhole.	
10/10/2021 16:21	Broward		No	Yes					Restoration of the Ocklawaha River by breaching the dam and draining the Rodman Reservoir - Manatees would regain open access to the warm water habitats of the Ocklawaha & Silver Springs; Migratory fish including the Striped Bass, American shad, American eel, & the critically Endangered Atlantic Sturgeon & Shortnose Sturgeon would once again have open access to the Ocklawaha system if the dam is breached. Recreational sport fishing would be enhanced by allowing the Florida strain of the Striped Bass to reclaim what used to be its primary spawning habitat - the Ocklawaha. At least 150 million gallons a day of additional natural flow, & potentially much more, would be restored to the Lower St. Johns River, improving water quality & increasing resiliency of the entire St Johns/ Ocklawaha River system by impeding the saltwater intrusion resulting from sea level rise. An estimated $14 Million in dam repairs, measured in 2006 dollars, would be saved by avoiding repairs to a dam that has exceeded its life expectancy & never fulfilled the purpose for its construction. The large expenditures required for herbicide to control the growth of invasive aquatic weeds & to conduct other maintenance, including periodic drawdowns, in a futile attempt to maintain water quality & recreational access in the stagnant waters of the Reservoir, would become unnecessary.	$57 million in potential flood damages to downstream areas around Welaka would be avoided in the event of a dam failure. Economic analysis conducted by researchers at UF demonstrate the economic impact from eco-tourists who use the natural portions of the Ocklawaha River is twice that of anglers & boaters using the Rodman Reservoir, & annual use of the Reservoir's recreation sites has been declining since records began in 2004 as water quality & fish production have also declined. When accounting for revenues generated by increased recreational usage, a cost-benefit analysis determined restoration would produce a cumulative net benefit of $47.2 million over the first 10 years, vs. a cumulative loss of $5.5 million with repair & maintenance of the dam. The recreational development component included in the restoration plan would benefit nearby residents & expand eco-tourism, & more than compensate for loss of the Reservoir. 7,500 acres of the lower Ocklawaha's historic forested floodplain, 20 freshwater springs, & many miles of natural river channel that were drowned because of dam construction would be restored. Thousands of acres of submerged aquatic plants would be able to regenerate in the restored river channel & in the re-emerged spring run streams that drained into the Ocklawaha historically. 8,000 acres of stressed floodplain wetlands located downstream of the dam would be enhanced. Imperiled plant species like the endangered and native Star Anise & threatened Panhandlea could expand their range into the restored spring systems. Draining the Rodman Reservoir would remove the single greatest barrier to plant & animal movement along the Ocala to Osceola Wildlife Corridor by replacing the open water expanse of the Reservoir with a restored floodplain forest, to the benefit of many plant species native to the region including the Federally listed Clasping Warea & Scrub Buckwheat. Three river systems, the Ocklawaha, Silver & St. Johns, would experience significant environmental improvement restoration.	A continued decline in preserving Florida's best asset, its habitat, causing devastating environmental and economic impacts. Florida must continue to improve how we care for our habitat, especially as it is such a draw for eco-tourists. We cannot afford to lose that revenue stream, and we cannot afford to be spending good money after bad when it is in our power to prevent this. Taxpayers will perpetually be on the hook for repair and maintenance of the dam and Reservoir, and continue to be liable for any loss of life or property damage that would result from a dam failure.	No. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration. The survey concludes with the option of providing additional comments (at your own discretion if you wish to elaborate on anything or add personal reflections or considerations). Remember that you do not need to be a local resident, or even a Florida resident, to participate in the survey! Take an expansive view of ecotourism and recreational usage by including Silver Springs, the Ocala National Forest, the St Johns River, and important land conservation projects like the Etonian Creek/Cross Florida Greenway Florida Forever project. Ultimately, we all have a stake, environmental and economic, in whether Florida finally restores a free-flowing Ocklawaha River.	
10/10/2021 16:21	Orange		No	Yes	1 time	1 time		Canoeing / kayaking Wildlife viewing	The dam should be removed and the river restored.	The reservoir is nutrient laden, has poor water quality, and negatively impacts wildlife and natural functions of the area.	The natural functions fir wildlife and fisheries will continue to decline, and the opportunity to restore this area will be missed.	No, the dam must be removed.	Maintaining this dam and reservoir is a waste of public funds, and is contrary to the public good.
10/10/2021 16:24	St Lucie		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	Remove the dam and restore the Ocklawaha River	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	We need to restore the natural flow of water to restore important ecosystems that support the natural flora and fauna in the area.
10/10/2021 16:25	Duval		No	Yes	1 time	2-5 times	More than 5 times	Fishing Canoeing / kayaking Boating Wildlife viewing Other	Rodman is a very special place, from the beautiful cypress trees to the abundant wildlife. The last trip a few days ago we saw countless bald eagles, 4 manatees and so much more. It is one of the prettiest places I have ever seen. So much wildlife counts on Rodman to thrive. The manatees are just eating the vegetation all over the place. A beautiful place indeed	I would say the wildlife, in Jacksonville where I live the manatees dont have much to eat due to no food so I have seen them actually crawl out the water to eat peoples lawns. They have unlimited food at Rodman	The wildlife would disappear, the people in the area also count on it for a living because it brings so much money to the area.	No, do not remove the dam	Truly go see it and take a true tour and see how amazing it is
10/10/2021 16:27	Hillsborough		No	Yes			More than 5 times	Canoeing / kayaking Wildlife viewing Other: 15 Years in Lake County. Spent lots of time in Ocala Forest, Fishing and Hunting. Saw the ravages of the reservoir construction, loss of river access, and water quality degradation behind the dam. Please remove it and restore the river system.	Remove the dam and restore the river system.	Water quality degradation in the reservoir, and cost of maintaining the dam.	Lots of natural lakes and recreational opportunities in Central Florida already. It is sad that this has lasted so long, and the river habitat continues to suffer.	NO. The dam either stays or goes. Lets get rid of it and its negative impacts.	We have seen the degradation of water quality in the whole Oklawaha Chain. Impoundments need to be looked at as long term liabilities, not real estate amenities. Algae filled green water lakes filled with shad, gar and mud fish are now being seen as not good for business or real estate values, and its about time.
10/10/2021 16:36	Brevard		No	No					No input to provide.	No input to provide.	No input to provide.	No input to provide.	
10/10/2021 16:38	Collier		No	Yes			1 time	Wildlife viewing	•Remove the dam and restore the Ocklawaha River.	•Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. Dam safety, improved water quality, and wildlife can't wait.	As a retired biologist and land manager, I feel strongly that the dam should go.
10/10/2021 16:40	Putnam		No	Yes	More than 5 times			Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing	I would like it to remain as is.	It is the only place for the handi cap to fish and enjoy the water.	The environment that has been established is thriving and doing well. There would not be a place for family recreation. The handi capped citizens would have nowere to fish and enjoy the quiet of nature.	I don't know I have not heard anything but total distruction of the dam. I feel the damage can not be undone.	My family and I have enjoyed the beauty and quiet of the dam for years. We have camped, fished and boated. We have gone there just to relax. It is a beautiful place to just sit and meditate.
10/10/2021 16:48	St Johns		No	Yes	1 time	2-5 times	More than 5 times	Fishing Canoeing / kayaking	I'd like to see the dam removed allowing the Oklawaha to resume its natural course.	Salinity of the St John's and the ecological benefit of a free flowing river	Continuing ecological damage and elimination of wildlife habitat.	No	The dam serves no useful purpose. It has no hydroelectric function. It's part of the disastrous cross Florida barge canal that was scrubbed in the early 70s. Let nature take its course.
10/10/2021 16:52	Orange		No	Yes		1 time		Wildlife viewing Other: Hiking					
10/10/2021 17:07	Marion		No	No									
10/10/2021 17:11	Pinellas		No	No					Restoration of a free flowing river	Restoration of original ecosystem	Water quality, original ecosystem	No. No compromises. Do the right thing to protect the ecosystem	
10/10/2021 17:13	Palm Beach		No	Yes			1 time	Wildlife viewing	I would like see Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Historic fish and manatees return as breach opens creating a free-flowing river	Historic fish and manatees return as breach opens creating a free-flowing river Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	NO, NO, NO. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration
10/10/2021 17:18	Sumter		No	No									
10/10/2021 17:18	Alachua		No	Yes			More than 5 times	Wildlife viewing	Tear down the dam (it has structural issues) and return the Ocklawaha to its natural state. We the people were amiss to build this dam...let's make it right! The Kissimmee river is doing better; time for Rodman to go! I believe it will help manatees, as well as other native species. Thank you.	Personal experience - knowing that area as a child, and seeing how it has changed for the worse.	That the State of Florida will continue to make poor decisions involving our dwindling wild areas.	No, not that I have seen at this point.	Please do the right thing for Florida
10/10/2021 17:22	St Johns		No	Yes		More than 5 times		Boating Wildlife viewing	Remove the dam & locks permanently I own land in Putnam County near Welaka	I want to be able to visit the Springs that are covered by water due to the dam. The water held by the dam does not allow fish to reproduce & must be stocked each year.	The natural flow of the river will never happen if the dam is not removed. Once it reaches 50 years it will be considered an historical site & that will occure very soon	No for the reason given above.	The land we own allows is to boat on the Oklawaha river up to the dam & lock into the reservoir When working
10/10/2021 17:28	Orange		No	No					Restore it back to its natural state.	Restore it back to its natural state.	Environmental Benefits	Continued environmental hardship on this river.	If reasonable, yes.
10/10/2021 17:31	Orange		No	Yes			2-5 times	Canoeing / kayaking	open the dam	the history of the project	Cynicism about conservation in Florida	I don't know of any	
10/10/2021 17:38	Hillsborough		No	No					Remove the dam and restore the Ocklawaha River	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.	
10/10/2021 17:41	Dade		No	No									
10/10/2021 17:42	Alachua		No	Yes		2-5 times		Canoeing / kayaking	Complete removal.	This was not how nature intended this property to be used in the first place, much less decades later.	That these wetlands be permanently ruined.	Leave the dam open so that the waters, the flora and fauna have a fighting chance.	It is atrocious and repulsive that this state of affairs have continued as long as it has and that it seems this is because of fishing, so that sportsman can have their day.
10/10/2021 17:42	Alachua		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Boating Other: springs research	I would like to see the dam breached to allow the Ocklawaha River free flowing in its original channel.	The health of Silver Springs, the Silver River, and the 20 lost springs of the Ocklawaha will never be restored with the dam blocking the free flow of the river.	The long-term damage to the aquatic resources of the Silver River, the Ocklawaha River, and the St. Johns River will continue to worsen.	No.	
10/10/2021 17:43	Sarasota		No	No					I would like to see the Rodman/Kirkpatrick Dam breached to allow restoration of a free-flowing Ocklawaha River.	The advantages to plant and wildlife by breaching the dam are manifold. Regeneration of the river channel and springs would allow for thousands of acres of diverse submerged aquatic plant communities. Plants and animals would no longer be restricted in movement along the Ocala to Osceola wildlife corridor if the current open water expanse of the reservoir were replaced with a restored floodplain forest. For example, manatees would regain open access to the warm water habitats of the Ocklawaha & Silver Springs. In addition, by creating at least 150 million gallons of day of additional natural water flow, the health of the entire St. Johns/Ocklawaha river system would be improved, enhancing water quality and resiliency against the ever-present threat of salt water intrusion resulting from sea level rise. Apart from the environmental benefits, breaching the Dam would obviate the need for expensive repairs to a dam that has exceeded its life expectancy and never fulfilled the purpose for which it was constructed. There would be no need for expensive herbicide treatments to control invasive weeds in a futile effort to maintain the quality of the stagnant Reservoir waters. Finally, in additional to environmental benefits and cost savings, the project would enhance the eco-tourism potential of the region to attract visitors and residents who enjoy the natural beauty of the Ocklawaha River and environs.	Money would continue to be spent on maintaining a decaying Dam, to the detriment of the environment. The water quality of the Reservoir will continue to decline, creating an even bigger environmental challenge for surrounding communities and the state of Florida. Breaching the Dam saves money, saves plants, and saves animals, and offers new and creative opportunities for surrounding communities. To leave the Dam as it is would be a terrible waste of a unique opportunity to create a model of environmental restoration not only in Florida, but for the entire country.	No	
10/10/2021 17:47	Pinellas		No	Yes				Other: I don't. It shouldn't be there, at all!!	Remove it and uncover all of the springs that were submerged and FREE the Ocklawaha River, once & for all!	All of the various research I've read over the years on this matter.	I'm not going to entertain that notion.	No.	FREE THE OKLAWAHA!!
10/10/2021 17:48	Alachua		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Set back to its original state.	Nature			
10/10/2021 17:48	Alachua		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	I would like to see the dam breached so that the Ocklawaha River and its floodplain can be restored to its natural state.	This is a unique opportunity to right a historic wrong in how we have treated natural Florida. In many cases, the changes that humans have wrought on nature are irreversible. In this case, we can reverse the damage and restore a beautiful natural waterway to its former state. This is a historic chance to recover and restore a unique piece of natural Florida.	I have so many concerns, it's difficult to identify just one! My biggest concern is that a bad decision made 50 years ago is never corrected, and we continue to live with an ugly, altered pool that blocks passage of migratory fish and manatees into the watershed. Many springs have been submerged by the damming and this provides an opportunity to allow them to flow again in one fell swoop. Some will provide warm-water habitat to manatees, which will be crucially important in coming decades as other sources of warm water are expected to disappear or decline.	The dam needs to be breached to restore a free-flowing river and a natural floodplain, but the entire dam structure would not need to be removed if that was too expensive or it served some other purpose.	Although some manatees have learned to negotiate the Buckman Locks, they do not have free passage from the St. Johns River into the Ocklawaha and Silver Rivers due to the dam and lock. That is even more the case for migratory fish, which have declined dramatically at Silver Springs. There are so many environmental benefits of river restoration and that would be much cheaper than the millions required for repair and continued maintenance of an aging dam. This decision would be a win-win for everyone, including for the economy which would benefit from increased ecotourism. Rodman Reservoir is a misnomer because this is not for water storage; a tremendous amount of water is actually lost from the system by evaporation from this shallow pool.
10/10/2021 18:01	Bradford		No	Yes			More than 5 times	Fishing	I would like to see the it stay as it is.	It provides a tremendous amount of recreational opportunities for those who choose to visit it. If the dam were removed, it would be one big mosquito infected mess that would take several generations to recover to what it was. Not sure if it would ever return to the pristine area that it was. The damage has been done. Leave it as it is.	The amount of recreational activities that would no longer be available to the public. As state above, the damage has been done.	No'	
10/10/2021 18:09	Pinellas		No	Yes			1 time	Canoeing / kayaking	Restoration of the ecosystem				
10/10/2021 18:11	Orange		No	No					I would like to see the Kirkpatrick Dam removed and the Ocklawaha River restored to it's historic flow.	The fact that the Kirkpatrick Dam is a remnant of the Cross Florida Barge Canal project that was stopped years ago for environmental reasons.	That Kirkpatrick Dam would continue to be an impediment to manatee migration to the springs in winter and that the dam is an unnecessary expense. If removed, it would free up taxpayer funds.	NO	I am an 83 year old Florida native and a lifelong boater, hunter and angler. I have boated the Ocklawaha, Silver River, Haines Creek, Harris Chain of Lakes. I would like to see this historic river returned to it's historic unrestricted flow. It is a Florida treasure that needs to be returned to a natural state. Please accept this entry instead of the email I sent previously.
10/10/2021 18:17	Broward		No	Yes		1 time		Fishing Fishing (shoreline/structure) Canoeing / kayaking Wildlife viewing	It needs to be removed	Scientific research has shown that removal would greatly benefit habitats in the area.	The destruction of an ecosystem	No	
10/10/2021 18:34	Indian River		No	No					I would like to see the dam breached and the Ocklawaha River restored.	To restore the free flow of the river so that the ecosystem can recover and to support fish and manatee populations.	That the present funding for breaching the dam and the opportunity to save taxpayers millions of dollars in future maintenance of an unnecessary dam will be squandered.	No.	
10/10/2021 18:55	Hillsborough		No	No					breaching the dam and draining the Rodman Reservoir	climate change	climate change	no	restore the Ocklawaha River!!
10/10/2021 19:17	Marion		No	Yes			1 time	Wildlife viewing	breach the dam so that the river can flow normally	I am concerned about the water quality and quantity that would be enhanced by allowing the natural springs to flow more freely. I also support the studies that show that breaching the dam would allow the manatees and the native fish to travel to the whole expanse of the river and reach natural breeding areas. the native and endangered plant species will have a chance to regenerate in the now flooded areas. Finally, the cost! Why spend millions to fix a dam that is not performing the function it was built for when a cheaper solution will make the area healthier to the environment and still allow recreational activities for those people who use the area?	besides throwing good money after bad, I am concerned about the wildlife and plants in the area that will continue to suffer if this situation is allowed to continue as it is now.	No.	
10/10/2021 19:24	Seminole		No	No					I support restoration of the Ocklawaha River by breaching the dam and draining the Rodman Reservoir	Studies done by those I know want to responsibly support the long term health of our unique and sensitive ecosystem			
10/10/2021 19:30	Polk		No	No					Restoration of the Ocklawaha River by breaching the dam and draining the Rodman Reservoir				
10/10/2021 19:34	Lake		No	Yes		2-5 times	More than 5 times	Fishing Canoeing / kayaking Wildlife viewing Other: hiking the shoreline and visiting springs during the drawdown	Keep the dam, make the drawdown more severe each time for make it last for a longer duration.	I've visited the area 2x per year for the last 15 yrs. My family has a fishcamp on the reservoir. I see so many people fishing at the dam that I know it's a necessary food source for many of them. I've also been out on the floodplain when the water is drawn down. I'm a wildlife biologist, geologist and soil scientist. I don't think the drawdown is deep enough or long enough to really solidify the organics on the floodplain. The spring run isn't hot enough to dry/oxidize the organics enough.	If the dam were removed, the floodplain would be inundated with invasive plants and no one has the money needed to manage/remove them to replace them with natives. My MS thesis dealt with reclamation of mined lands. The old floodplain has been damaged beyond reasonable. Bringing it back to where it was pre-Barge Canal will take 6-7-8 figures of dollars. Think of Lake Apopka and the restoration there. There isn't enough money to bring Apopka back to where it was in any of our lifetimes. The diehard conservationists are pure in their thoughts but money pure in reality.	If the decision is to blow the dam, I'd think that SJRWMD would want to impose my longer and more severe drawdown over 5-10 years to study the possible impact of invasives....and or securing a funding program that is reasonably sure of keeping the invasives out as the floodplains are reclaimed.	Nothing is ever as easy at it seems. Bad things happen when we fail to be reasonable.
10/10/2021 19:35	Seminole		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. Restoration will reunite many rivers and benefit communities, economies, and ecosystems all along the Riverway. This exciting restoration will improve water quality and flow by generating an additional 150 million+ gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
10/10/2021 19:40	Volusia		No	No					open water to the state	history of governors failing to open the waterways	more water problems in Florida		
10/10/2021 19:47	Alachua		No	Yes			1 time	Canoeing / kayaking	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam	20 lost springs and Silver Springs ecosystem can be restored	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe	no	
10/10/2021 19:50	Palm Beach		No	No					Removed.wetlands restored	Description of area before dam.	How to help impacted wildlife and native plants.Restoring he flood plain could reduce flooding elsewhere	No	
10/10/2021 19:51	Leon		No	No					I am generally opposed to dams. They take away stream ecosystem, waste land underwater, and cause a possible flooding hazard	History	Since the damn has already been built, I'd like you to do the best you can to solve any negative impacts that have been suffered by people who live near it.		Remove it
10/10/2021 19:55	Clay		No	Yes			1 time	2-5 times	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	100s of manatees gain essential warm water winter springs habitat	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.

10/10/2021 20:11	Pasco		No	No					Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every additional day the dam and reservoir remain in place results in additional environmental degradation.	7,500 acres of the lower Ocklawaha's historic forested floodplain, 20 freshwater springs, and many miles of natural river channel that were drowned as a result of dam construction would be restored. Thousands of acres of submerged aquatic plant communities would be able to regenerate in the restored river channel, and in the re-emerged spring run streams that drained into the Ocklawaha historically. 8,000 acres of stressed floodplain wetland located downstream of the dam would be enhanced. Imperiled plant species like the endangered Star Anise and threatened Harrhehgitha, which are native to the banks of this region's spring run streams, could expand their range into the restored spring systems. Draining the Rodman Reservoir would remove the single greatest barrier to plant and animal movement along the Ocala to Osceola (O2O) Wildlife Corridor by replacing the open water expanse of the Reservoir with a restored floodplain forest, to the benefit of many listed plant species native to the region including the Federally listed Clasping Warea and Scrub Buckwheat. Three river systems - the Ocklawaha, Silver and St. Johns - would experience significant environmental improvement from restoration. Manatees would regain open access to the warm water habitats of the Ocklawaha and Silver Springs. Migratory fish including the Striped Bass, American shad, American eel, and the critically Endangered Atlantic Sturgeon and Shortnose Sturgeon would once again have open access to the Ocklawaha system if the dam is breached. Recreational sport fishing would be enhanced by allowing the Florida strain of the Striped Bass to reclaim what used to be its primary spawning habitat - the Ocklawaha. At least 150 million gallons a day of additional natural flow, and potentially much more, would be restored to the Lower St. Johns River, improving water quality and increasing resiliency of theentire St Johns/Ocklawaha River system by impeding the salt water intrusion resulting from sea level rise. An estimated $14 Million in dam repairs, measured in 2006 dollars, would be saved by avoiding repairs to a dam that has exceeded its life expectancy and never fulfilled the purpose for its construction. The large expenditures required for herbicide treatments to control the growth of invasive aquatic weeds and to conduct other ongoing maintenance needs, including periodic drawdowns, in a futile attempt to maintain water quality and recreational access in the stagnantwaters of the Reservoir,	The broad array of environmental benefits to native flora and fauna, including many imperiled species, that would result from restoration would not be possible. Water quality in the Rodman Reservoir and Lower Ocklawaha/St Johns River system would continue to decline. The economic benefits that would result from increased and enhanced recreational usage would be denied to the surrounding local communities. Residents and business owners in areas immediately downstream of the dam would continue to be under threat in the event of failure of a dam that has never, and will never, satisfy the purpose of its construction. Thousands of acres of submerged aquatic plant communities would be unable to regenerate in a restored river channel and in the re-emerged spring run streams, and 7,500 acres of floodplain forest would not be restored. The Reservoir would continue to be a barrier to movement by native wildlife and plant life along the length of the O2O Corridor, and compromise the value of Florida's investments in conserving lands like the Etonian Creek State Forest, and approved Florida Forever projects. Preserving, conserving and restoring the native plants and native plant communities of Florida. Taxpayers will perpetually be on the hook for repair and maintenance of the dam and Reservoir,and continue to be liable for any loss of life or property damage that would result from a dam failure. 3Imperiled plant species like the endangered Star Anise and threatened Harrhehgitha, which are native to the banks of this region's spring run streams, would be unable to expand their range into the unrestored spring systems.	No. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration.	Ultimately, we all have a stake, and economic, in whether Florida finally restores a free-flowing Ocklawaha River. Please support Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam and helping to restore Florida's natural systems for ours and future generations.
10/10/2021 20:33	Marion		No	Yes		2-5 times		Other: Bait catching	I believe the dam needs to be removed and allow the natural flow of the Ocklawaha. More economic benefits and wildlife benefits would be served with it's removal. Ecotourism would far outweigh the limited funds generated by just fishing.	Numerous studies as well as other states data from dam removal.	Continuation of the destruction ofa natural r iver flow and ecosystem	Partial removal woyld be a start, but the funds to maintain even that would be negligent and full removal would be the optimal solution.	
10/10/2021 20:34	Marion		No	Yes		2-5 times		Fishing Fishing (shoreline/structure) Hunting Wildlife viewing	Leave it like it is! The river was ruined with the construction of the barge canal and has now taken on a new eco system. Users have also changed and adapted to this change. Quite spending good money after bad because it can't be put back like it was without further distruction. These experiments are never better than what God created!!!	If you are trying to bring back what used to be, you must be admitting it was wrong to chang it to begin with. What was there can't be brought back with OUR money.	It would be a tremendous waist of money,time and total distruction of a new and sensitive eco system. Fish, wildlife, flora and economic impact will suffer severely.	No, use some common sense!	One mistake has already been made, don't make it two!
10/10/2021 20:55	Pasco		No	Yes	1 time	More than 5 times	More than 5 times	Fishing	Maintain Rodman Reservoir	Personal experience	Financial hardship for individuals and communities surrounding the Reservoir	Clean up Indian River to restore major manatee habitat. This should be the top priority by Florida government	
10/10/2021 20:53	Hillsborough		No	No					The dam should be removed, allowing the reservoir to drain and the Ocklawaha to run freely.	The river will support wildlife better than a stagnant artificial lake which requires periodic maintenance.	Continued degradation of the watershed.	I'm sorry but no.	I'm looking forward to canoeing a restored Ocklawaha River!
10/10/2021 21:05	Pinellas		No	No									
10/10/2021 21:42	Volusia		No	No					Restoration to the original natural state. The dam should be removed.	Destroying the natural flow of the river has adversely impacted the ecosystem.	Continued degradation of natural Florida	Obviously this restoration will take years. It is important to begin.	
10/10/2021 21:49	Dade		No	No					Restore the Ocklawaha River by breaching the dam and draining the Rodman Reservoir	1. 7,500 acres of the lower Ocklawaha's historic forested floodplain, 20 freshwater springs, and many miles of natural river channel that were drowned as a result of dam construction would be restored. 2. 8,000 acres of stressed floodplain wetland located downstream of the dam would be enhanced. 3. Imperiled plant species like the endangered Star Anise and threatened Harrhehgitha, which are native to the banks of this region's spring run streams, could expand their range into the restored spring systems. 4. Three river systems - the Ocklawaha, Silver and St. Johns - would experience significant environmental improvement from restoration. 5. At least 150 million gallons a day of additional natural flow, and potentially much more, would be restored to the Lower St. Johns River, improving water quality and increasing resiliency of the entire St Johns/Ocklawaha River system by impeding the salt water intrusion resulting from sea level rise.	1. The broad array of environmental benefits to native flora and fauna, including many imperiled species, that would result from restoration would not be possible. 2. Water quality in the Rodman Reservoir and Lower Ocklawaha/St Johns River system would continue to decline. 3. Taxpayers will be on the hook for repair and maintenance of the dam and Reservoir, and may be liable for any loss of life or property damage that would result from a dam failure.	No.	
10/10/2021 21:56	Hillsborough		No	Yes			1 time	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	Restoration of the river that was stopped for a project that was never completed	Nature is out of balance.	No	
10/10/2021 22:00	Pinellas		No	No					Remove the dam and drain the reservoir.	The Ocklawaha has been severely degraded and harmed by the lack of adequate water flow, and it requires full restoration to provide the ecological services we need.	The permanent degradation of the ecosystems and human communities that rely on a healthy, functioning Ocklawaha.	No.	
10/10/2021 22:05	Duval		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Allow the Ocklawaha River to be restored and free flowing and the springs that are underwater be restored. The Silver River is a beautiful place and flows into the Ocklawaha River and would be a GREAT statement of the State of FL to return what should never have been built. South Fl has the Everglade River of Grass Florida Bay salt water issues and lack of flow and we here in North FL have our issue with Rodman Dam and Cross Barge Canel Issue.	The eco system of Florida Forever is exactly what the Ocklawaha River and its enviros are and should be brought back to us. If The State of FL truely wants to preserve the best of Natural Florida, then let us as a State start with this restoration of the Ocklawaha and the springs.	That it would continue as it has been for the last 50 years.A symbol of the desire to have a quicker way for water transport across FL and having experts tell politicians that salt water would impact the fresh water aquifer. Yet it took various costs to complete. From complete removal to some combination of partial actions.	I would hope SJWMD and FDEP have studied the Rodman/Ocklawaha area and have various alternatives available at	Thanks for the opportunity to comment. History says man used the St Johns River and Ocklawaha River for centuries to move by water thru FL and hopefully we will again in the future.
10/10/2021 22:19	St Johns		No	Yes			2-5 times	Wildlife viewing	Remove it to restore the flow to the St. Johns and help restore all the ecological functions lost or degraded because of the dam.	I've studied the St. Johns River as a working environmental scientist for over 10 years and have grown to understand the environmental dynamics that shape the health of the St. Johns and its tributaries and determined the dam has had negative ecological impacts.	That the St. Johns and the Ocklawaha watersheds will continue to degrade as well as the estuarine habitat at the mouth of the St. Johns.	Allowing much more water to flow from the Ocklawaha.	
10/10/2021 23:27	Duval		No	No					Breach the dam which is too old to be reliable and provide the environmental and recreational advantages of new springs, manatee refuge and other wildlife benefits.	The availability of State and Federal funds and the danger of a breach in the dam by extended severe weather	This opportunity will not be likely to come up again soon. We could lose our best opportunity.	Lower the level of the dam that is clearly at some risk and not worth the cost of repair.	This is a special moment for a decision that restores a key environment and recreational water resource to a large portion of the state.
10/11/2021 0:58	Citrus						2-5 times	Other: Camping	Breach the dam	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is overdue.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
10/11/2021 3:13	Sarasota		No	No					Breach the dam and open up the river	Research from the Sierra Club and many other organizations	The river would still be blocked	No	The intended project was never completed and blocked the river and wildlife
10/11/2021 4:35	Outside of state / other	Texas	No	Yes			1 time	Wildlife viewing	Clean up the reservoir and dam.	The wildlife must be protected. This area is their natural habitat and is polluted by humans.	Death of wildlife.	No	
10/11/2021 5:38	Volusia		No	Yes			1 time	Other: Sightseeing	Breach the Dam and restore the Oklawaha channel.	Environmental degradation - lost ecosystem (floodplain forest), manatee and other wildlife habitat, poor conditions within reservoir.	Continued degradation and cost to maintain a degraded system.	Partial restoration	Let's discontinue the expensive folly of the past and special interest politics and unite around righting the environmental wrongs
10/11/2021 5:57	St Johns		No	No					Removed	Need to return Florida to its natural state. We can't continue to pull water from the St. John's and hope for no impact. This is a cost fishing spot but otherwise provides no benefit having the dam.	Continued decline in river health. Continued loss in habitat.	Negative	The sportsman that are against it need to think more globally that the loss of a bass fishing hole. Very short sided.
10/11/2021 6:11	Seminole		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	I would like to see the dams removed and the natural flow of water from the springs restored	amultiple studies on the negative effects of the dams.	That we are destroying the springs	not at this point	
10/11/2021 6:13	Broward		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	Please restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam! Florida waterways need to be connected for those ecosystems to fully work.				
10/11/2021 6:17	St Johns		No	Yes			1 time	Other	Remove it.	Estuaries north of the damn need clean fresh water. Sea grass on the St. John's river is dying as a long term result. Multiple species of fish and wildlife thrive on the St. John's.	Fish and plant life will continue to decrease. As well as individuals using the river for pleasure.	There is no other answer. Remove the failed dam.	
10/11/2021 6:43	Hillsborough		No	Yes			1 time	Other: To evaluate and confirm the need to remove it and restore the river. i wanted to see if there were truly any good ecological justifications for keeping the dam intact. i didn't	Remove the dam and restore the floodplains.	The fact that hundreds of natural springs would be restored and the free-flowing Ocklawaha River would provide much needed additional habitat for manatees and other wildlife.	The taxpayers keep funding the ecological mistake and the wildlife and habitats lose.	Absolutely not.	Can we finally do the right thing here? After 30 years of trying to undo the damage! The opportunity to restore his much habitat, wetlands, floodplains, and wildlife opportunities, cannot possibly compare to some bass fishing opportunities. Its ludicrous that this has gone on this long, and at taxpayer expense!
10/11/2021 6:52	Pinellas		No	No					The dam should be removed.	The purpose of the dam was the aborted barge canal, so there is no continued purpose for it beyond recreation in the reservoir. With all the natural lakes in the area, there is plenty of other natural and free water based recreation available as a substitute.	Continued waste of money to maintain the dam and its continued adverse environmental impact.	No.	
10/11/2021 7:01	Alachua		No	Yes			1 time	Other	return to a natural river				
10/11/2021 7:13	Putnam		No	Yes	2-5 times	2-5 times			Remove the dam and restore the Flow to the St. John's.	Saving the money in maintenance and repairs, and restoring the natural flow of the rivers.	Wasted money and resources to continue repairing a useless dam.	No	
10/11/2021 7:30	Lee		No	No					Restore the river by breaching the dam and draining the reservoir.	Contnuability, restoration of Florida wildlife including plants and fish and animals	Continuation of the damage that has been going on for too many years.	Possibly.	
10/11/2021 7:32	Citrus		No	No					Would like to see it removed	The changes in the environment	Continued maintenance costs of the dam		
10/11/2021 7:43	Volusia		No	Yes		1 time		Wildlife viewing	Rodman reservoir be drained, and the Kirkpatrick dam be breached to restore the Ocklawaha river hydrology and floodplain.	Florida Department of Environmental Protection and the engineering study it commissioned to evaluate the the dam conclude that it is in need of significant repairs to be considered reliable.	The Rodman Dam on the Ocklawaha River is in serious disrepair and could possibly be catastrophically mssoring in property damage in Putnam County. Furthermore, restoring the Ocklawaha River so that it flows into the St. Johns River would mitigate years environmental damage. Otherwise, Florida's flora, fauna and people will continue to suffer the consequences of an ill-conceived and incomplete canal project.	The Rodman Dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration. I could support a sequenced plan to restore the free-flowing River. If this scenario came up short at least others could build on what was accomplished in the future.	
10/11/2021 7:45	Lake		No	No									
10/11/2021 7:49	Alachua		No	Yes		More than 5 times		Fishing Canoeing / kayaking Boating	Revert to the river free flowing	The river was natural, beautiful and supported more wildlife	A continuation of a non contributing lake	No	
10/11/2021 7:50	St Johns		No	No					I would like to see the damn breaches and free flowing water restored.	Returning the River to its natural state, and restoring the Ocklawaha, Silver and St John's River. Science supports restoration. Not to mention it is cost effective for those maintaining the damn to breach it versus spending money to maintain it	There would be a missed opportunity to restore critical ecosystems in this area and would affect critical populations of fish and manatees	No. The damn needs to be breached and the Rivers and springs restored	We have an opportunity to restore these ecosystems to their natural habit for no additional cost. To keep the dam and bring it up to current safety would be costly and negatively effect the ecosystem. To me, I see no reason to oppose this change.
10/11/2021 7:51	Orange		No	Yes	1 time	2-5 times		Wildlife viewing Other: Wildflowers					
10/11/2021 8:06	Broward		No	No									
10/11/2021 8:07	Escambia		No	No									
10/11/2021 8:08	Escambia		No	No									
10/11/2021 8:13	Putnam		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing Other: Swimming & picnicking	Let water flow naturally, restore the river	Useless dam, bad canal, and the argument that the dam creates a sportsman locale is stupid. Restoration would EXPAND recreational fishing, duh!	As our waters diminish, the reservoir will hog the water	No	There are very influential cliques of deciders around here. Get at them
10/11/2021 8:15	Pinellas		No	No					Restore with limited development opportunities for high impact corporations likes Nestle and or other, water bottling companies	Un-checked development in most environmentally sensitive regions of Florida. Rainbow River reduced water flow due to bottling company.	The further erosion of Natural Florida , clear water impact for Florida residents and no, accountability for the ensuing devestation.	Florida residents should be paid dividends by bottle watet companies much like Alaska residents have received oil dividends.	
10/11/2021 8:16	St Johns		No	Yes		1 time	2-5 times	Fishing Canoeing / kayaking Wildlife viewing	Preserved	Birds	Extinction	Conservation	Please please. These nuggets of the natural world are fewer and farther between. 7 generations. Thankyou
10/11/2021 8:18	Lee		No	No					Let the water flow freely.!		Environmental health	No	
10/11/2021 8:23	Sarasota		No	Yes			2-5 times	Wildlife viewing	I would like it removed or at least breached.	It costs too much to maintain. the dam and it is not good for the environment--adversely affects water quality, does not help with flood control and keeps fish and wildlife (manatees) from using habitat.	We would lose out on the cost savings for maintenance of the dam and the benefits to fish and wildlife and water quality would also be lost.	No - it's long overdue and makes economic sense.	Florida is a vacation and outdoor sports state - lots of revenue is generated by these activities, removing or breaching the dam will be a shot int he arm economically and will also have tremendous benefits to fish and wildlife and water quality.
10/11/2021 8:23	Sarasota		No	Yes			1 time	Wildlife viewing Other	Thx Dam should be removed/opened up to return to natural free flowing river.	My common sense	No progress	NBD.	Why bother.
10/11/2021 8:23	Pinellas		No	No					the river flow freely again	it will benefit the wetlands and people	severity of drought increases	no	
10/11/2021 8:23	Orange		No	Yes			2-5 times	Boating	Remove the dam and return the Ocklawaha to its natural flow	I have lived in Orange County since 1964. I saw the St John's river for the first time that year as a 12 year old. Since then I have enjoyed boating on the river countless times, and I have traversed it's full length that my boat can navigate, from Lake Hellen Blazes to the mouth at Mayport Naval Air base (many times). I have been to the dam many times, and every time I am reminded of the irresponsible decision makers who pushed forward with the idea of a cross Florida canal. I am familiar with many of the environmental problems caused by the dam, including water quality, manatee and fish impacts, etc.	Continued degradation of one of the most beautiful river systems in the world	Take out the dam.	
10/11/2021 8:23	Marion		No	Yes			1 time	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Having 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers would save $4-$4 Million in dam repairs and $57 million in potential flood damages avoided to downstream property owners	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years.	No. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	We cannot miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.
10/11/2021 8:25	Outside of state / other	South Park, PA 15129	No	Yes			2-5 times	More than 5 times	Wildlife viewing	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam	Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier.	The 300-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs.
10/11/2021 8:27	Lake		No	Yes			1 time	Wildlife viewing Other	A free flowing River system	Water that moves supports a wider variety of life. The more we have, the more stable an area is for humans as well. And the most precious commodity human beings have is fresh water.	Look at Lake O and the Caloosahatchee.	Removing the dam instead of spending so much money to repair it is just a beginning, and my "desired outcome"-of reestablishing a natural waterway -might not happen in my lifetime. It takes time.	"Don't throw good money after bad" was one smart thing my Papa taught me. Common sense seems to be in short supply, but try it.
10/11/2021 8:31	Alachua		No	Yes			2-5 times	Boating Wildlife viewing	THE DAM REMOVED AND THE SPRINGS RESTORED	ALL STUDIES THAT HAVE BEEN DONE, INCLUDING INITIAL WORK BY MANJORIE	added damage to th esprings and waterway.	NO	pLEASE KEEP ME INFORMED
10/11/2021 8:35	Orange		No	No					Reverse the dam	Saving endangered and threatened species. 700 manatees dies in St John river since Jan 2021. This would allow access to warm water and food for them.	Destruction of environment	No	
10/11/2021 8:39	Palm Beach		No	Yes		1 time		Canoeing / kayaking Wildlife viewing	Breach the dam and restore the flow	A documentary I saw about the negative affects of the dam	Continued degradation of the area and its affect on the local wildlife	not really	Please get rid of this unnecessary dam, they all eventually silt up anyway
10/11/2021 8:39	Duval		No	No					Removal of the dam and reservoir, and restoration of river original flow, so that folks can enjoy the river and springs.	To offset cumulative impacts of development and dredging and restore the ecosystem as outlined in the annual Health and State of the St. Johns River Reports 2008-2021.	Further degradation of St. Johns River grass beds due to increased calmity from years of dredging, construction of bulkheads, and destruction of wetlands. Loss of manatee and fish nursery habitats.	No, the expenses of maintenance and damage to the environment are too costly.	Restoration of this river system enhances the ecology and will increase economic benefits. This is the best investment going forward in terms of cost/benefits, and the bass fishing will still be very good.
10/11/2021 8:40	St Johns		No	No									
10/11/2021 8:45	Broward		No	No									
10/11/2021 8:45	Lee		No	No						Preserved	Conservation	Polluted waters	
10/11/2021 8:51	Citrus		No	No						Deconstruct the dam and restore a normal, healthy waterflow to the riverway.	Other than supporting a failed concept, the dam is a waste of money that mars the health of a major Florida waterway.	Water quality of Florida's greatest natural resource will continue to degrade; throw-needless dollars down the drain and take water quality, healthy wildlife populations and tourist dollars with it.	Only a temporary drawdown prior to complete dam removal and stopping any more funding for dam maintenance	We have to stop funding past mistakes on Florida's waterways. The resultant cost to wildlife, public safety, water quality and tourist dollars is too great.
10/11/2021 8:51	Hillsborough		No	No					Whatever is best to restore predevelopment ecosystem, rebuild and protect habitat for native animals and vegetation and minimize pollution.	Downstream habitat restored, maybe? lots of competing and important factors.	Lose a great chance to repair / rebuild an important Florida River	Life is full of compromises however I do not support damming rivers for recreation or economic purposes	Good luck!
10/11/2021 9:01	Collier		No	No					free flow	making ff even more conservation conscious and protecting the Everglades et al	not good	making sure sw fla and e coast in general protected like east coast and Central fl w equal consideration and fl together in commitment to preservation	
10/11/2021 9:02	Alachua		No	Yes		1 time	1 time	Wildlife viewing	remove	natural resource managing--ensuring rivers have enough flows for springs and Florida conservation	Low river and spring flows, and decreased tributaries	no	
10/11/2021 9:05	Marion		No	Yes	1 time	More than 5 times	More than 5 times	Boating Other: I operate a pontoon boat charter service. Only during water drawdown levels that reveal some of the lost springs do I get any requests to go north from Eureka. Wildlife viewing is limited at best due to no walkable floodplain for anything to be in. No deer, turkey, raccoons, bears etc.	I would like the State's partial restoration plan to be funded to breach Rodman Dam. This river does not need to be listed again as one of the top most imperiled river in USA. How embarrassing for Floridians and politicians!	Loss of economic opportunities. Flowing visible springs and large schools of large migratory fish species brought people to this once great sweet river. This is a State park named after Marjorie Harris Carr! So called Greenway! The fake lake created by the dam has heavily herbicides applied.	As a land owner on the Ocklewaha for 5 generations I may move away as the deteriorating lost floodplain and fish is depressing.	Nothing short of breaching the dam will restore the migratory schools of fish or give manatees access. But by lowering the pool levels as much as possible will get some cooler water flow from the springs.	All of the major economic businesses surrounding the immediate area have died out. No bait and tackle stores, restaurants have closed, no boat rentals, no motels. Campgrounds have been closed. Ramps have deteriorated and closed. Those in existence are dilapidated or blocked by invasive vegetation. We really needs a restored park to help create nature oriented job opportunities. The few Bass tournaments participants still being held from Kenwood are documented locking out to the St. Johns river to fish! This loss of fish hurts the economy in the entire area. The dam has costs us the loss of the only river on the east coast capable of natural spawning of striped bass! Sadly there are generations that are not even aware migratory fish in large numbers are missing! On my tours on the Silver River I never get to show the huge channel and white catfish! Not even one at the springs. The glass bottom boats at Silver Springs once famous for catfish fish shows are famous for what now? No one swims in the Rodman pool area! Herbicides are in such great use we fear being in the area let alone eating the fish. Other locals I am in contact with on the river ask me when they will remove the dam?. Please encourage and support making Florida proud of a restored great Florida Riverway by funding the shovel blueprint permit ready very affordable already accepted restoration plan. Let's allow the huge migratory schools of fish back in and give Florida back a white sand bottom river of springs. Don't turn your back on our river in this session. This funded river restoration project will get national attention for all elected officials that get this river restored as the American Rivers Organization will publicize the process and success. Thanks for your time today and for all the hard work you put in to make Florida a great place to live and visit.
10/11/2021 9:09	Duval		No	No					Remove the dam to restore the Ocklawaha River. We need to be sensitive to the people who live in the area and are dependent on the current dam and revenues from fishing. The restoration needs to take them into account in the transition. The water from the Ocklawaha will enhance the flow of the St Johns River. We need to leverage the Ocala Natl Forest in conjunction with river restoration to create eco tourism opportunities that will benefit the people in that area.	I have been observing the issue for years.	Environmental opportunities lost, cost to maintain the dam.		

10/11/2021 9:10	Indian River		No	Yes			1 time	Canoeing / kayaking	Demolish the dams. They are just bad for the planet and stop fish species and animals from migrating and finding food.	The dam itself.	How could it not be achieved?	They need to breach all dams in this state that is run by the most ignorant people and voters on the planet. The Indian River and Tampa Bay are basically dead, due to run off containing pesticides and fertilizer. The grass necessary for the whole system in the river has basically died off to the point where fish are absent in the river. Manatees are feeding off peoples lawns adjacent to the river and I have seen this phenomena myself. It is the saddest thing I have seen since I have moved to Florida thirty years ago. All fish populations are declining locally and worldwide. We are in the middle of a mass extinction and over development and over population is the culprit.	Here is a quote I recently read about the river system: "The dam, in their view, ensures the health of Rodman Pool and the plant and animal communities that, over the past 45 years, have tried to find a niche in the man-made system despite multiple fish kills that have left more than 11 million fish dead and a never-ending, repetitive necessity to drain, or "manage," the pool. "
10/11/2021 9:11	Hillsborough		No	No									
10/11/2021 9:11	Pasco		No	No									
10/11/2021 9:13	Seminole		No	No					Breach it. This dam serves no purpose and is a relic of an incomplete project. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Reunification of the rivers, wildlife and eco systems. $4-14 Million in dam repairs saved on a dam past its life expectancy Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. $17 million in potential flood damages avoided to downstream property owners	Eco system in disarray, pad wrong not undone, The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	This is in sync with other projects around the country. Dams do more damage in the short and long run.
10/11/2021 9:14	Alachua		No	Yes		1 time	2-5 times	Other: Visitation	Gradually fully open the sluice gates to draw down the reservoir and then "Let it Be."	Riverine environments are healthy ecosystems which dams destroy.	Taxpayer monies CONtinuing to be used not just wastefully, but harmfully.	Keeping the drawdown permanent.	Let the land reemerge
10/11/2021 9:14	Marion		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	100s of manatees gain essential warm water winter springs habitat	We would continue to lose manatees until record numbers	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration
10/11/2021 9:17	Pinellas		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing Other:	As a 6th generation Floridian whose family has lived in central Florida since 1853, I would like to see things restored to the way they used to be before this fragile ecosystem was torn apart so that a few could make some big money!	History! How many "projects" have raped Florida's natural environment and have caused irreparable damage to our ability to survive in this state. This 6th generation Florida Cracker feels that things should be restored to the way that God intended them to be before politicians and folks out to make a quick buck got together while the rest of us suffer the consequences!	The Florida that my family has lived on since 1853 will become a concrete jungle with spreading "Villages" and we will have to buy our water from corporations like Nestle while they lol all the way to the bank!	?	
10/11/2021 9:17	Sarasota		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing Other: hiking	Dam removed completely	Restoration of natural rivers	a precedent for not taking care of our water and natural resources	Any portions of the dam removed to restore natural flow and riverine habitat	
10/11/2021 9:17	Pinellas		No	No					As I understand it was built to support a project that was not completed and it has had a negative impact on water levels and the natural ecosystem, restoration makes sense.	Restoration of habitat and natural springs necessary for species we are driving to extinction	We need to stop imposing human desires on the rest of the world without adequate consideration for the impact of what we do. As someone who is in the process of landscaping my home with native plants to reduce my use of resources while providing support for pollinators, I believe we need better balance.	No	See above. We have overbuilt to the point where support is becoming unsustainable. Let's start restoring habitat where possible and begin to undo the destruction of the ecosystem upon which we all depend.
10/11/2021 9:22	St Johns		No	No					Breach the dam and restore the ecosystem		Ecosystem destruction continued	No	
10/11/2021 9:23	Lake		No	No									
10/11/2021 9:25	Lake		No	No									
10/11/2021 9:27	Hillsborough		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait	
10/11/2021 9:28	Broward		No	Yes			1 time	Canoeing / kayaking	Remove them	Restoration of natural floodplains and river flows are crucial to a healthy ecosystem.	The continued degradation of natural floodplains.	The removal of portions of the dam, or restoration of a portion of the natural waterflow.	
10/11/2021 9:28	Hillsborough		No	Yes			2-5 times	Fishing Canoeing / kayaking Boating Wildlife viewing	I would like to see it removed carefully	I would like to see a return of historic species to their former range. I would like to see thousands of acres of floodplain forest return and the forgotten springs restored. I would also like for invasive water plants to be made more manageable.	Money will need to be spent on dam repairs that could be better spent on conservation.	Hard to say. I would need to see proposals. My mind is open.	I have good friends on both sides of this issue. If the dam is removed there should be some sort of consolation or boon for the sportsmen who love fishing that reservoir.
10/11/2021 9:29	Brevard		No	Yes			1 time	Wildlife viewing	Go away with them		The area will continue to go downhill as a wildlife area	No	
10/11/2021 9:30	Hillsborough		No	No					Restore the river				
10/11/2021 9:33	Lee		No	No					Destroyed, so that the river and ecosystems that flourish by the natural flow of the river are restored	The reservoir and dam limit the biodiversity of plants and animals	It's yet another example of poor decision-making for the health of the river	Can't think of one	
10/11/2021 9:34	Alachua		No	Yes			More than 5 times	Canoeing / kayaking Boating Wildlife viewing	The dam needs to be removed and the Ocklawaha River restored! It's high time this happens.	Restoring a beautiful natural river system to allow migratory species to move in and out of the Ocklawaha and Silver Rivers.	The expense to taxpayers. Maintaining the dam is very costly. Why keep it for a small group of users when a natural river system can take care of itself.	No.	
10/11/2021 9:36	Leon		No	No					I would like to see the Oklawaha restored and the dam dismantled. Wild Florida needs this restoration for its recovery and survival.	The Oklawaha, St. Johns, and Silver Rivers as well as 50 springs will be restored to their natural flow; positively impacting the entire ecosystem in a vital portion of Florida.	Continued degradation of water quality, further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Also flooding of down river areas.	No, breach the dam now. If it continues, it will cost millions to rebuild for more negative returns to water quality and the environment in general.	As a 70 year old lifelong Floridian, I can remember the initial building of the dam and the "straightening" of the river, and the prospect of cutting Florida in half via the Cross Florida Barge Canal. Thankfully, at least a portion of the ill-gotten notion was halted. Now it is time to right the former wrongs and return this area to the lovely Natural Florida waterways that once existed. It's not too late. Do the right thing, now.
10/11/2021 9:40	Hillsborough		No	Yes		1 time		Fishing (shoreline/structure) Canoeing / kayaking Wildlife viewing	Restoration of pre-alteration river flow.	Historical data.	Continued loss of natural systems.	There's either a dam and reservoir or there's not. I'm not sure there's a halfway point.	Thank you for reviewing.
10/11/2021 9:45	Indian River		No	No					The dam should be demolished and the river restored.	The natural habitate should be restored for the environments health.	A continued decimation of wildlife statewide.	No sure	
10/11/2021 9:45	Putnam		No	Yes		More than 5 times		Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing	Remove the dam and return the river to its natural course.	Ecological studies from UF and IFAS.	The river will continue to diminish while more and more money is pumped into the failing dam structure that serves no purpose.	I don't see how there's a middle point between removing the dam and not removing it, but if there is - halfway is better than nothing.	
10/11/2021 9:46	Alachua		No	Yes			1 time	Wildlife viewing	Remove the dam and let nature take its course.	The constant reports of detrimental effects of continued restriction of the River	Once again an unnatural dam will continue to degrade the surroundings	I do not think so.	To continue to obstruct the free flow of the river is just not supported by a majority of folks. The bass fishermen can still fish but perhaps not just as easy for them.
10/11/2021 9:53	Brevard		No	No					"FREE", that is, open up the natural water flow. Remove the dam.	I am an environmental scientist-geologist. My knowledge of waterway health and service to humanity (Florida citizens especially) clearly indicates a reversal of human folly in restricting the system.	We will continue to witness a loss in water quality/quantity will decreased biodiversity.	Always willing to consider good, scientifically-sound options.	This issue and others like it DTe re-establishment of Everglades system function; the proper care of the Lake 'O' with reduction in contamination and less polluting of the east and west channeling, etc.Jare Florida's prime concerns for the future.
10/11/2021 9:59	Sarasota		No	No					So restore the Ocklawaha River and 15,000 acres of floodplain forest that were lost or damaged when the river was dammed !	The restortion of the natural habitat and wildlife to this area. Also to restore the natural waterway and water flowing paths that nature intended.	Once again man put his own needs and ideas ahead of nature. Man's plans are not as good as natures and when we disturb it. there are always unintended consequences. Let the wildlife and plant life return to the natural state.		
10/11/2021 10:00	Volusia		No	Yes			1 time	Canoeing / kayaking	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	$4-14 Million in dam repairs saved on a dam past its life expectancy	Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/11/2021 10:00	Volusia		No	Yes			1 time	2-5 times	Restore the natural course of the river and release the springs that have been covered up.	Listen to Mother Nature.	We "residents of Florida" will miss this opportunity to correct a wrong. Time runs short to help, please make sure it works this time.	Why do half measures?	This is critical, please get this on the front burner and get it done. Saundra Gray
10/11/2021 10:03	St Johns		No	Yes	1 time	2-5 times	More than 5 times	Boating Wildlife viewing Canoeing / kayaking Wildlife viewing Other:	Total removal and restoration to natural state	Heal of our rivers, the increase of ecotourism, the reduction of the economy drain to keep it working. The fact that it was supposed to be removed when the cross stat canal was removed.	Continue a wound in our natural resources. Toxic waters that have to be empty every so often. Waste of money to stalk fish. Access to 20 springs where ecotourism would bring in money to our state. The list goes on.	Draw down permanently and allow the dan to break on it own	Plenty more to say, happy to speak about it. 904-477-5669
10/11/2021 10:04	Alachua		No	Yes			2-5 times	More than 5 times	Fishing Boating Wildlife viewing	No question at all. KEEP Rodman and the Dam just like they are now.	Having the reservoir is a great asset for north central Florida. Great fishing. Great boating for all size boats from large to small. The water level can be controlled to fit the needs of the season and weather. Full pool can be maintained even in times of drought when area natural lakes can get very low. Rodman is a nationally known fishing destination. This helps tourism for the area. Wildlife including bald eagles, ospreys, and a multitude of other birds live there. Fish and other wildlife thrive in and around the lake. The size of Rodman, about 13,000 acres, lets boaters spread out and have some peace and quiet. If the dam was removed, only a small river would remain. Few boats could comfortably travel up and down the river. The area has many rivers available for people who like to use small boats, canoes, kayaks, etc. Something like 11 miles of the Ocklawaha remain after the dam for such use. Keeping Rodman, as it is, is best for the most people. Going back to the small river would benefit a few and hurt many who enjoy Rodman for its many benefits.	All of the benefits of Rodman would be lost.	No.	
10/11/2021 10:07	Brevard		No	Yes			1 time	Wildlife viewing	Remove it	Environmental organizations	Concern about impact to water quality	No	
10/11/2021 10:07	Sarasota		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	Dismantle the dam and allow natural condition.	Extensive research	Lack of crucial manatee habitat		
10/11/2021 10:08	Alachua		No	Yes			2-5 times	2-5 times	Save Rodman forever!!!!!!!!	Rodman is a great boating, fishing and wildlife viewing destination. A lot of visitors come to the area because of Rodman's reputation as a great fishery.	I would lose a place that I love to visit. Area fishing people would lose a great place to go.	Not at all.	Keep Rodman open!
10/11/2021 10:08	Alachua		No	Yes			1 time	Other: Just looking	If it is better for the environment, than "yes" remove it!	save for the wildlife	Concern for the wildlife affected by the damn	I would have to assess the suggestions	
10/11/2021 10:10	Flagler		No	No					Remove the dam and restore the river.	The dam kills manatees and prevents fish migration. The lake is choked with weeds and suffers from oxygen depletion. The dam should of been removed 50 years ago.			
10/11/2021 10:13	Alachua		No	Yes			1 time	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing	Change nothing. Keep Rodman and the dam. Don't listen to the small group of people who want to destroy it. Way more people want to keep Rodman open for fishing and everything else.	Rodman has many benefits that are unique to this area. A lake where the water level can be controlled. A lake where drawdowns can keep the fishing excellent and control weeds. A long shoreline where all types of wildlife live. A large area where many visitors can come and not be on top of each other. So many more people enjoy Rodman compared to how many would visit a small restored river.	A local treasure would be lost.	No.	Keep Rodman Reservoir.
10/11/2021 10:17	Orange		No	No					Please breach the dam and restore the river to its historical course.	Wise stewardship of natural resources is vital to the preservation of the earth as a viable place to support human life. We all depend on sources of replenishment of fresh potable water and insect and birds who pollinate food crops. The benefit of the dam and the reservoir it forms to local businesses and sport fishing has diminished over the years and pales in comparison to the benefit to the environment, to the mental and physical health of the people that would accrue with the restoration of this important natural place.	Continued degradation of the local area and the state as a whole.	No	
10/11/2021 10:18	Indian River		No	Yes			2-5 times	Fishing (shoreline/structure) Wildlife viewing	Remove the dam so the river can flow freely and the springs can be visible again.	Science	No improvement of anadromous fisheries	No	
10/11/2021 10:18	Alachua		No	Yes		1 time	2-5 times	Fishing Canoeing / kayaking Boating Wildlife viewing	Keep Rodman Reservoir and obviously the dam also.	Its very good to have a reservoir in the area instead of only natural lakes. The local lakes almost dried up several years ago and many boat ramps where not even useable. During this time Rodman was fine because the lake can be kept full for easy access by visitors. Good fishing. Great wildlife viewing. Great boating by all types of watercraft.	The only reservoir (controllable) in the area would be gone. The many benefits of having Rodman would be lost.	No.	Rodman should stay as it is now.
10/11/2021 10:22	Leon		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife. 100s of manatees will gain essential warm water winter springs habitat.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River. Thank you for your consideration.
10/11/2021 10:23	Hillsborough		No	No					We need to restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Historic fish and manatees return as breach opens creating a free-flowing river	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	Absolutely NOT. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a longtime resident who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/11/2021 10:23	Broward		No	No					I'd like to see the dam removed and moved back to its original condition.	It will build tourism and wildlife.	The river will be blocked as before.		
10/11/2021 10:27	Marion		No	Yes	1 time	More than 5 times	More than 5 times	Canoeing / kayaking Boating Wildlife viewing Other: I enjoy the numerous springs during drawdowns	The reservoir needs to be drawn down immediately until the dam structure can be removed and the river finally restored.	The overwhelming scientific evidence that the environmental will be improved from Silver Springs to Jacksonville , recreation will be inhanced and the local economy will be improved.	The dam will fail causing significant loss of life, property damage and an environmental disaster.	A permanent draw down.	Restoration of the river is long overdue. The old dam presents a significant safety hazard and the reservoir is an abomination.
10/11/2021 10:28	Pasco		No	Yes			1 time	Wildlife viewing	Remove the dam	Restore original habitat		No	
10/11/2021 10:33	Pinellas		No	No					restore the riverway	current situation impedes natural processes and flow of water	damage to wildlife and environment	don't know	
10/11/2021 10:33	Broward		No	No					Take down the dam and proceed with the Complete restoration of the Ocklawaha River				
10/11/2021 10:34	Palm Beach		No	No					After completing the Florida Master Naturalist Program over a decade ago, I am of the opinion that restoring the natural hydrology is in the best interest of the state of Florida.	Disrupting the natural hydrology with man-made systems always proves to be a decision that becomes outdated as new information comes out. This is well documented all over the planet. In addition. these man made systems degrade over time and create more problems. Humans must learn to work with the natural environment, not trying to bend nature to our will.	It would be a decision that caters to a few over the welfare of the land and water.	Not sure.	
10/11/2021 10:38	Sarasota		No	No					I believe that the dam should be done away with, allowing the waterway to return to its natural state.	I feel that breaching the dam will. in the long run, be a boon to wildlife.	The continued disturbance of the balance of nature. And for what - a canal that never happened?	No. It's a black and white issue.	
10/11/2021 10:40	Duval		No	No					Breach the Rodman/Kirkpatrick Dam.	The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue. It's time to do right by the taxpayers and the wildlife your decisions effect.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
10/11/2021 10:41	Pinellas		No	No					Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam	Three river systems - the Ocklawaha, Silver and St. Johns - would experience significant environmental improvement from restoration. Manatees would regain open access to the warm water habitats of the Ocklawaha and Silver Springs. The recreational development component included in the restoration plan would benefit nearby residents and expand eco-tourism, and more than compensate for loss of the Reservoir. Draining the Rodman Reservoir would remove the single greatest barrier to plant and animalmovement along the Ocala to Osceola (O2O) Wildlife Corridor by replacing the open water expanse of the Reservoir with a restored floodplain forest.	Water quality in the Rodman Reservoir and Lower Ocklawaha/St Johns River system would continue to decline. The economic benefits that would result from increased and enhanced recreational usage would be denied to the surrounding local communities. Failure of the dam that has never, and will never, satisfy the purpose of its construction. Taxpayers will perpetually be on the hook for repair and maintenance of the dam and Reservoir, and continue to be liable for any loss of life or property damage that would result from a dam failure.	NO. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration.	
10/11/2021 10:41	Orange		No	No					I would like to see the reservior drained and the natural flow of water restored	Repeated studies of down-stream impacts of Dams across the united states shows the dam and reservoir effect has a negative impact down stream on aquatic species that may live and breed in the river. Plant material also suffers displacement from flooding at the reservoir and diminished water resources down-stream.	Threatened species would become endangered or extinct in the area, water quality downstream may be diminished, water quantity will be compromised for down stream uses.		
10/11/2021 10:42	Wakulla		No	Yes			1 time	Other: don't visit anymore.	I would like to see the dam removed and natural flow restored to the Ocklawaha.	This dam was originally constructed as part of the Cross Florida Barge Canal project, which was abandoned for a variety of good reasons. The Ocklawaha is one of North Florida's premier spring-fed rivers, removing the dam will allow the natural river channel to be restored. Yes, it will take a while. There will be recreational opportunities lost by eliminating Rodman Reservoir, but there will be many gained as well from those who will canoe, kayak and fish the river.	That we are once again unable to recognize mistakes from large public works projects and rectify them. Other than recreation, there is no benefit from this dam.	Not really.	
10/11/2021 10:42	Citrus		No	No					Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam as soon as possible to prevent further deterioration of the environment.	The documented improvement for water quality in the Rodman Reservoir and Lower Ocklawaha/St Johns River system would benefit not only mankind but the botanical and animal kingdom as well. It would be a progressive solution to avert a further decline to the environment and a potential financial hardship for Florida.	Where to start - my biggest concert is if the restoration of the Ocklawaha River is not the outcome I desire, the catastrophic results would include not only the continues demise of our precious environmental resources, including all living creatures and organisms, but the negative financial repercussions would be evident and a burden for generations.	No. There is no compromise as the damage is already severe and our action to this restoration needs to be swift and clearly stated to preserve our environment and not be a detrimental financial decision.	Thank you for the opportunity to be a part of this survey.
10/11/2021 10:42	St Johns		No	Yes			1 time	More than 5 times	Canoeing / kayaking Wildlife viewing	Removal	The dam has done nothing economically but has been disastrous for ecology, the spraying poisonous herbicides has only benefited the applicators	If done right, none.	If not total removal then at least breached.
10/11/2021 10:45	Marion		No	Yes			1 time		draw down and remove the damn open up silver river. The damn has been a disaster for Silver Springs	Damage to the springs by far!	Springs will not survive	Not really	
10/11/2021 10:46	Clay		No	Yes			2-5 times		I'd like to see the dam removed.	Reopening of the passageway for native manatees and fish species.	The continued growth of invasive fish and plant life.	No. Either the dam is there or it's not.	
10/11/2021 10:48	Pinellas		No	No									
10/11/2021 10:51	Outside of state / other	Texas	No	Yes			2-5 times	More than 5 times	Other: I don't use the reservoir, I'm on the river kayaking and viewing wildlife. What wonders of nature lie beneath the reservoir?	1. Get rid of the dam - it's a boondoggle!	2.Getting rid of the dam will restore the river and springs and give manatees and other wildlife another chance to survive their onslaught.	3.A lost opportunity to make things right. Now is the time to bring down the dam and cut costs.	NO!!!! Get rid of the dam!

10/11/2021 10:52	Alachua		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	I would like to see the dam removed and the Oklawaha River flow unimpeded into the St. Johns River.	The amount of money that is required to maintain the dam does not justify the local economic impact that is created by having it in place. The springs that are covered by the reservoir should not be unnaturally inundated and fish species should be allowed to migrate to Silver Springs again. The bottomland forest should be allowed to return to the flooded basin.	That the springs would continue to be flooded and migratory fish populations would no longer be able to be a component of the Silver Springs and Oklawaha systems.	The dam should be removed or no longer maintained.	
10/11/2021 10:59	Seminole		No	Yes			2-5 times	Wildlife viewing	Return the river to its normal flow	Natural functioning of the eco system has been altered.	The river system continues to be perverted by a disastrous engineering project that died decades ago!	Not at this time	
10/11/2021 11:00	Sarasota		No	Yes					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Historic fish and manatees return as breach opens creating a free-flowing river and 20 lost springs and Silver Springs ecosystem are restored	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait!	This exciting restoration will improve water quality and flow by generating an additional 150 million+ gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. WATER IS LIFE! Thank you for your consideration.
10/11/2021 11:01	Alachua		No	Yes		More than 5 times	Other: Reviewing what a cess pool it has become.		Breach the dam to restore the functioning of the river and floodplain.	Every credible scientific report that has ever been done describes the enormous ecological benefits that would accrue to fish and wildlife habitat, water quality, recreation, the economy and public safety.			Governor DeSantis has the opportunity to do something good for the environment. Get on with it.
10/11/2021 11:01	Duval		No	Yes		1 time	Wildlife viewing		Breach the rodman - kirkpatrick dam	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	Absolutely not.	The manatees deserve so much better than the violent neglect we've given them.
10/11/2021 11:10	Columbia		No	No					The Roman Dam should be removed in order to restore the natural waterways that the Dam has stifled.	Wildlife and ecosystems are suffering greatly because of the dam. Manatees, especially, have become so challenged by mankind that they're dying off at a rate never seen before.	Florida is dying. The natural beauty and diverse wildlife that it's known for is being choked off from habitat, poisoned, and paved over. This will only help to speed the demise of our great state.	We really need to act now. The time for incremental steps is already behind us.	
10/11/2021 11:11	St Lucie		No	No					Restore natural flow as much as practical in balance with public safety	Wildlife habitat is constantly shrinking and becoming isolated parcels. Here is a chance to reverse it.			
10/11/2021 11:14	Alachua		No	Yes		2-5 times		Canoeing / kayaking Boating Wildlife viewing Other: Botanical study	I would like to see complete removal of the dam and restoration of the Ocklawaha River.	The burdensome costs to taxpayers of maintaining the dam. The fact that they dam is no longer needed and has been essentially decommissioned by all responsible agencies. The fact that nature recreation and bank fishing and small boating are economically beneficial activities for the surrounding counties. The fact that a number of beautiful springs are flooded by the waters behind the dam, as well as the natural vegetation that keeps trying to return to the flooded areas each time the water is drawn down. That manatees and migratory fishes can no longer make their way into the upper reaches of the Ocklawaha River.	That the costs will continue. That the dam will fall into disrepair and eventually be silted in or breached by nature. That the springs will not be allowed to flow and that the natural river -- with all of its wildlife and vegetation -- will not be allowed to flow.	I might be willing to support a partial restoration scenario, although it is not a desirable outcome.	Let's get this costly albatross off of our necks!
10/11/2021 11:14	Flagler		No	No					I would like to see the dam removed to allow the springs to flow naturally again	This is native habitat for manatees and migratory fish, the springs are nice activity spots but they are first and foremost part of nature.	My biggest concern is the continuing effect on natural flora and fauna. As more development is brought into Florida, we have less and less habitat for the wildlife that makes Florida great. Removing this dam will restore multiple habitats.	No, just remove the dam.	Stop spending money on pointless projects. Remove the dam means not having to spend money on repairing it anymore. If tourists can't handle fish in the springs or swampy areas when they visit then maybe one of our lovely inside attractions are better for them.
10/11/2021 11:19	Palm Beach		No	No						Restore natural flows	We've learned a lot about ecological impacts in the last several decades. Let's get on with restoration		Do the best you can
10/11/2021 11:25	Pinellas		No	No						Demolish it and allow the river to resume it's natural path	Fish and manatees are restricted in their natural migratory paths and access to food	That their populations would continue to decline and the river would slowly die	No
10/11/2021 11:26	Volusia		No	No						That both the Kilpatrick Dam be dismantled and removed and that the reservoir be drained and the natural land formations, flollage, and waterways be restored to as near original flow as possible.	That the Kilpatrick Dam is nearing the end of it's useful life and rather than devote funding for it's repair / refurbishment I would prefer to see it dismantled. The dam and reservoir were built in support of a project cancelled years ago and should have been dismantled at that time.	That as the reservoir's condition will continue to degrade and pose a hazard to the aquifer and wildlife.	No	ask that the St. Johns Water Management District set an example for the stewardship of Florida's water resources by supporting the demolition of the dam and to begine the restoration of the normal flow of the Ocklawaha River.
10/11/2021 11:29	Martin		No	Yes		2-5 times		Wildlife viewing Other: Photography	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damage from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/11/2021 11:29	Seminole		No	No					Restoration of the Ocklawaha River by letting the Rodman/Kirkpatrick Dam and breaching it. We are learning that dams by humans harm the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	20 lost springs and Silver Springs ecosystem are restored. I am a 3rd generation Floridian and to see how our water has become sullied over the years is heartbreaking.		Not really. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	And I say "this can't wait" because as more and more people move to Florida, it is imperative we do what we can to restore what we can and keep natural all we can. The native beauty of Florida is truly what makes it livable. We do not want to be another California.
10/11/2021 11:32	Manatee		No	No					Breach the dam and drain the reservoir	Restore the natural flow of the river	Loss of natural water source and decline of wildlife		
10/11/2021 11:33	Okaloosa		No	No					Remove the dam	Opening our springs and manteas	Depletion of clean water sources and nature being harmed negatively.	Protest	
10/11/2021 11:37	Pinellas		No	No					River and wildlife habitat restoration	The dam is way past it's life and too expensive to maintain	More manatees dying and millions in wasted money repairing the dam	Not really	
10/11/2021 11:38	Pinellas		No	No					focus on interests surrounding the dam's environmental and economic impact.	The environment is a primary concern	The environment	Only if there was no negative impact on the environment	No
10/11/2021 11:42	Outside of state / other	asheville, NC	No	No					I support the restoration of the Ocklawaha River by breaching the dam and draining the Rodman Reservoir.	Returning Florida's waterways to their natural, healthy state and ending environmental degradation	loss of plant and animal life	none	n/a
10/11/2021 11:43	Leon		No	Yes		1 time		Canoeing / kayaking Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	The Ocklawaha works best in its original natural condition.	Ecological destruction	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/11/2021 11:44	Sumter		No	Yes		1 time			Return to way natural flow of water was before dam	Return to way natural flow of water was before dam			
10/11/2021 11:46	Putnam		No	No						Restore Ocklawaha River to its natural state	Waste of funds for studies to redirect nature -hence 1960s in 1993.	Florida springs impact is not healthy	
10/11/2021 11:56	Outside of state / other	Indiana	No	No						Give more manatees a safe place to live.	I visited Crystal Springs Florida a couple of years ago and had the pleasure of swimming with the manatees. It was an incredible experience and I would love to be able to do it again. Since I had that opportunity, I have a new love for these guys.	More manatees will die.	Please save the manatees.
10/11/2021 11:56	Hillsborough		No	No									
10/11/2021 11:57	Alachua		No	Yes		1 time		Canoeing / kayaking Wildlife viewing	The dam should be breached and the river allowed to run free to improve and restore habitat for wildlife.	* 15,000+ acres of the Florida Wildlife Corridor restored or enhanced for people and wildlife. * 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers. * Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs.	A storm event could trigger a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages.	No scenario short of fulfil achieving the stated outcomes is good enough.Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/11/2021 12:02	Orange		No	Yes		1 time	Other: Just to see it.		Tear it down.	Environmental concerns.	Continued damage to our rivers and general eco system.	Nope.	Tear it down and restore natural Florida.
10/11/2021 12:10	Bay		No	Yes		2-5 times	Canoeing / kayaking Wildlife viewing Other						
10/11/2021 12:14	Alachua		No	Yes		1 time	Other: Observe		I want it removed.	Decline in numbers and variety of fishes, but mostly the overall degradation of the river.	The Ocklawaha River would die.	No.	It's time for the dam to come down and let the river be free. Please!
10/11/2021 12:15	Orange		No	No					Restore the free-flowing Ocklawaha River. Breach the Kirkpatick Dam.	Draining the Rodman Reservoir would restore thousands of acres of forested floodplain, many freshwater springs and miles of river channel. This would permit the movement of plant and animals along the Ocala to Osceola Wildlife Corridor, benefitting many species. Acres of wetland downstream of the dam would be enhanced. The Ocklawaha, Silver and St. Johns Rivers would experience significant environmental improvement. Migratory fish would once again have access to the Ocklawaha system. Manatees would regain access to the warm water of the Ocklawaha and Silver Springs. Recreational fishing would be enhanced by allowing fish access to Ocklawaha spawning habitat. Millions of dollars in dam repairs would be avoided for a structure that never was needed. Potential flood damages to downstream areas in the event of a dam failure would also be avoided. Restorstion of the Ocklawaha would produce increased recreational usage and generate revenues, benefiting residents and eco-tourism industry in the area. Clearly, restoration is economically better for the state.	We would miss an opportunity to correct an ill-planned, environmentally poor human intervention in the Florida ecosystem. The restoration of habitat, improvement of water quality, enhancement of recreational usage, and improved movement of native wildlife were considered insufficient rationale by elected officials. Taxpayers would continue to foot the bill for an ill-advised dam's maintenance and repair. A waste of resources. Failure to restore the free flowing Ocklawaha River would suggest that the St Johns River Management District and other Florida officials are not following published science or listening to the input of the citizenship.	No. There is no compromise measure that would achieve even a fraction of the environmental or economic benefits that restoration will.	
10/11/2021 12:16	Dade		No	No					Remove dam to allow free flow of water	Dam prevents free flow of water-leftover relic of Cross Florida Barge Canal	The SJRWM's complete lack of science driven policy for the good of all Floridians.	No	
10/11/2021 12:18	Volusia		No	No					Remove the Kirkpatrick Dam incrementally and allow Rodman Reservoir to empty completely.	The dam was built to support the Cross-Florida Barge Canal, which is no longer going to be completed/used.		None.	
10/11/2021 12:19	Duval		No	No					I would like to see natural spaces restored whenever possible.	Restoring the area would help manatees	That a tiny group of sport fishing/hunting advocates always seem to get their way, when public opinion favors restoring these areas to their natural state	You'd have to explain more	
10/11/2021 12:22	Hillsborough		No	Yes		2-5 times		Fishing Fishing (shoreline/structure) Canoeing / kayaking Hunting	Removed	Constantly having drawdowns to control aquatic overgrowth	Continuing aquatic spraying and drawdowns	Perhaps keeping damn gates open to increase flow and lessening drawdowns and spraying	
10/11/2021 12:22	Hillsborough		No	No						yes			
10/11/2021 12:28	Lake		No	Yes		1 time		Boating	Put things back to how they were in the 60's		Environment will still be impacted.	Not sure	
10/11/2021 12:32	Brevard		No	No					I would like to see the river system restored to it's natural state. Humans need to stop trying to micro-engineer nature. It ultimately does more damage than good.	Ongoing degradation of the ecosystem & decrease in the number of plants & animals.	Continued loss of habitat & the animals who depend on these areas. Continued messing with the ground water recharge cycle, as well as the natural surface flow of water & flood mitigation.	No	We have to stop sacrificing the planet for profit.
10/11/2021 12:32	Citrus		No	Yes		1 time	Wildlife viewing		Removal of the dam.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored.	Waterway degradation in whole watershed.	No.	Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait any longer.
10/11/2021 12:34	Duval		No	Yes		1 time	Wildlife viewing		The dam needs to be removed to allow the free flow of the river	Manatees are kept from navigating to the spring	Migration of manatees and fish continue to be blocked as well as the cost resigned to keep the dam operational	No	
10/11/2021 12:39	Suwannee		No	Yes		2-5 times	More than 5 times	Canoeing / kayaking Boating Wildlife viewing Other	Breach the dam so that migratory fish and other marine life can utilize the free flow of the Ocklawaha River the way nature intended. Especially the Manatee which need this area for future survival. Restoration of the forest and what a great time to include educational material for our native Flora & Fauna. The free flowing river would also help with the invasive aquatic weeds that are blocking various channels and boat ramps. The continued use of herbicides to correct this problem is heart breaking. I know sometimes herbicides are necessary in land areas but to be using it in aquatic situations is just plain wrong. The dam is no longer safe in it's condition and to invest in rebuilding it would make absolutely no sense. Our state's population has really proven to be devastating on our native wildlife. Please give wildlife a better chance at survival.	We need a healthy river! While I don't think it should be about economics until we put our lakes and rivers in the position to be healthy we will never win.	A continued decline in a once pristine ecosystem.	My parents owned property at Lake Hewitt in Orange Springs where I grew up enjoying not only Orange Springs which is now where a private water bottling company sits but we spent many weekends enjoying trips down the Ocklawaha River all the way up to Silver Springs. That was truly something to cherish and I hope our vision for the state can bring back some of this once thriving marine life.
10/11/2021 12:39	Dixie		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing Other: Native plant viewing, birdwatching	I would like to see the dam removed.	There is no longer any need for the dam to be there.. To maintain it for ONE group of people (fishermen) is selfish It should be removed for the benefit of all including the wildlife/fish.	Th	The trees and other vegetation that would need to be removed before the dam is removed. Water quality!	Please, it is time for the wrong of the past to be fixed and time for the dam to be removed!
10/11/2021 12:42	Okeechobee		No	No					Remove and return river to natural course.	The proposed reason for damming the river was never completed and serves no purpose	Whatever is decided should help the river and area be more environmentally pristine.		
10/11/2021 12:44	St Johns		No	No					Restoring the free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam to allow Silver Springs, the Ocklawaha and the St. Johns River to be connected.	Science and studies prove that restoring the Ocklawaha River will provide significant ecological benefits to the St. Johns, Ocklawaha and Silver Rivers as well as Silver Springs.	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	No. Breaching the dam and restoring the Ocklawaha are far overdue. Dam safety issues and improved water quality, wildlife habitat, and recreational opportunities can't be ignored or delayed any longer.	
10/11/2021 12:46	Citrus		No	No					The dam should be removed, sooner rather than later.	It has been necessary to draw down the dam periodically to remove overgrowth and debris since the dam was built.	continued environmental damage to the land surrounding the reservoir	No, the dam should be removed.	This dam has done so much damage to the environment of the area, both in terms of the water but also animals and the plants. Some studies suggest that removing the dam will actually increase the fish populations and therefore will improve fishing as well.
10/11/2021 12:46	Hernando		No	No					I would love to see man's interference with nature overturned by breaching the dam and returning waters to where nature intended them to be.	Florida has for 50 years been exploited by developers and state/county planners who place profit above our natural resources. At least 15,000+ acres of lands would be returned to the Florida Wildlife Corridor when the dam is opened.	Florida will continue to suffer loss of habitat as well as loss of the return of fish and other wildlife that are mainstays of tourist industries and recreational users.	none in the least.	This is an unprecedented opportunity to do the right thing for a state that has suffered tremendous loss over this last century.
10/11/2021 12:46	Pinellas		No	No					Removal, in order to open the waterway as nature intended for fish, animals and humans !!!	The natural river flow was impeded by the man made dam - needs to be removed.	Continued disruption of natural flow by a dam that makes absolutely no sense !	No	
10/11/2021 12:53	Osceola		No	Yes		2-5 times	Wildlife viewing		Draw down the reservoir and remove the Kirkpatrick dam	The is a loss of over 20 natural clearwater springs and winter hangouts for manatees	Taxpayer expense to upkeep the dam and loss of animal habitat		Please restore natural Florida habitat and water flow.
10/11/2021 12:58	Pinellas		No	No					If it has a negative impact on the environment, it should be demolished.				It is the only thing that makes sense.
10/11/2021 13:02	Marion		No	Yes		1 time	Wildlife viewing		Take the dam away and let the river flow freely, like it is supposed to.	Water levels of the Silver River	The habitat for native animals and plants is not as beneficial as it should be. Water Levels of the Silver River are much lower than they should be.	Greatly reduce the size of the reservoir, to restore most of the water flow.	
10/11/2021 13:05	Outside of state / other	Wisconsin	No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	$57 million in potential flood damages avoided to downstream property owners	The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/11/2021 13:07	Pinellas		No	No						Harm the rivers	environmental damage	environmental damage	no
10/11/2021 13:08	St Johns		No	No	1 time	2-5 times	More than 5 times	Canoeing / kayaking	I would like to see Rodman drained and the Ocklawaha River restored	all			no
10/11/2021 13:09	Gadsden		No	No					Restoration of the natural river system.	It is the right thing to do	A continuing degradation of the ecosystem.	Probably not, but I am always willing to listen to options.	Florida is a very special and unique ecosystem that deserves and requires diligent stewardship.
10/11/2021 13:14	Orange		No	Yes		1 time	Wildlife viewing		taken down. Free the Ocklawaha!	To restore the original flow to protect them natural ecosystem in once supported and the many fish and wildlife that depend on the river flowing freely.	a failed natural ecosystem as nature created it.	no	
10/11/2021 13:16	Duval		No	No					I would like to see it removed	Hinders the natural flow of the river	That we continue to destroy native Florida plants and critters	Not at this time	
10/11/2021 13:21	Putnam		No	Yes			More than 5 times	Fishing Fishing (shoreline/structure) Wildlife viewing Other	Removed	The drawdown.	Water quality all the way through to lake apopka.		
10/11/2021 13:22	Duval		No	Yes		2-5 times		Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway. It has lots of potential to be an even more amazing waterway if it were to be restored back to its former state.	3 rivers and 50 springs would be restored, habitat for manatees and many fish would be restored, the rivers will be healthier, 4-14 million dollars would be saved in dam repair and maintenance costs, and the risk of flood damage to nearby people and businesses would decrease while increasing recreation opportunities and wildlife habitat.	The continued harm to our communities, both human in the economic detriment of risking damage to nearby homes and businesses and the environmental harm of depriving fish and manatee of vital habitat that could help keep them from going extinct.	No. The dam is already well past its life expectancy and breaching it will provide many influential benefits for people and the environment.	I urge you to please fully weigh all the amazing benefits of breaching this old, dangerous, and expensive dam. The money currently used keeping it running could be used to restore the area for wildlife and people to explore. The restoration projects could give people jobs. The water quality would have a chance to improve. The benefits are numerous and wonderful, as well as economical.
10/11/2021 13:25	Escambia		No	No									
10/11/2021 13:26	Marion		No	Yes		More than 5 times		Wildlife viewing	Removal and return area to original state	Loss of aquatic life	Pro-dam people become more entrenched	Like what?	Get DeSantis moving on this
10/11/2021 13:27	Dade		No	No					Keep it ok and safe of green algae so manatees could swim with no fear	The state of disgusting horrible toxic algae nothing done by this inept governor	The toxic water is what concern me since this governor is a crook		
10/11/2021 13:28	Hillsborough		No	Yes					Remove them and restore the Ocklawaha River and springs to their historical flow.	The cross-Florida canal was a boondoggle and an environmental disaster that destroyed this segment of the Ocklawaha and drowned important springs so that they no longer flow. When the project was abandoned these waters should have been restored so that the wildlife and environmental systems could thrive.	Detrimental impact to the fish and manatees that cannot cross through the dame.	Drain the reservoir and remove at least a section of the dam to allow the Ocklawaha to flow through and the springs to run again.	
10/11/2021 13:35	Broward		No	No						All the springs it covered would return.			
10/11/2021 13:35	Levy		No	No					I would like to see the dam removed and the Ocklawaha River returned to its natural flow.	The St.Johns/Ocklawaha/Silver River systems have suffered comprehensive ecological decline since their natural flow was disturbed.	That the health of The St.Johns/Ocklawaha/Silver River systems will continue to decline until their are very few native fish left and the water quality and flow becomes becomes irreversibly damaged.	Probably not but I would be open to compromise depending on the arguments of all stakeholders.	The Cross Florida Barge Canal was a short sighted, ill conceived and ecologically devastating project. The Ocklawaha and Withlacoochee River systems have suffered ever sense. Historically, these rivers were considered to be the "Amazons" of North America. These rivers had some of the biodiverse populations of plants and animals on earth. They also had some of the purest water on earth. Even in my lifetime I have seen the populations of native fish, wildlife, and plants decline drastically. I have seen the quality and quantity of their flows diminished severely. I believe that the preservation and conservation value of the Ocklawaha River System will be far superior once the river is restored to its natural flow. Hopefully the Withlacoochee River System will be restored soon as well.
10/11/2021 13:36	Pinellas		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	I am in favor of reuniting and restoring the Ocklawaha, St. Johns, Silver Rivers and Silver Springs and 50 spring ecosystems. Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam will save taxpayers $4-14 Million in repairs costs past the dams life expectancy. Creating a free-flowing river where 100s of manatees gain access to warmer water habitat during the cold winter season. Restoration of 15,000+ acres of the Florida Wildlife Corridor creates more diverse recreation opportunities, increases local tourism and strengthens the local economy.	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss, and reduce saltwater intrusion. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.
10/11/2021 13:39	Marion		No	No					Restore the waterway to it's natural state.				
10/11/2021 13:40	Alachua		No	No					Removal of the dam and restoration of the Oklawaha River's natural flow.	Restoration of approximately fifty lost springs and 15,000 acres of the Florida Wildlife corridor.	There have been continuous efforts over the years to remove the dam and restore the natural flow of the Oklawaha River, but THIS is an exceptional opportunity because state and federal monies are available.	No.	This should be an environmental issue, not a political one. We should postumously honor the resolve and wisdom of Marjorie Carr by taking this commonsense action.
10/11/2021 13:46	Hillsborough		No	No					Remove the Kirkpatrick Dam to help restore the eco system leading to and including the St. John's River.	Restoration of the Ocklawaha River is mandatory. Attempts to "Build Florida" by draining the swamplands, destroying the Florida aquafor, and preventing marine life from natural migration has done devastating damage to Florida and we need to stand togethter to help heal Florida.	Sad that the fisher people who enjoy catching fish in Rodman Reservoir "sucked" will not be able to enjoy the sport of catching wild and much healthier/tastier fish.	No, please understand, the longer people abuse the land/water that provides us with food and drink, the worse our provisions will be.	
10/11/2021 13:53	Hillsborough		No	No					That damn dam should be REMOVED !	Common Sense .	FL water resources and wetlands will continue to suffer the negative impacts of the natural flow blockage created by the Rodman Dam.	NO !	

10/11/2021 14:03	Clay		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Free the river! No more dam	The detriment to wildlife, especially manatees, who are faced with so much environmentally	Restoration denied	No	This dam is a potential problem in the future! Let's get rid of it now!!! Save the manatees
10/11/2021 14:10	Volusia		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the watery of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.
10/11/2021 14:14	Alachua		No	Yes			1 time	Canoeing / kayaking Wildlife viewing Other: Keeping track of this decades long horrible dam and its destruction of habitats and wildlife.	Get rid of it immediately. This easily starts with a "drawdown", which already happens regularly to reduce the aquatic plant buildup. Instead of closing the dam's gates after the drawdown reaches its lowest water level, remove the dam instead, including the structural gates, the lengthy earthen portion, and the road on top of these structures.	The free flowing Oklawaha River, as present before this disastrous construction, was far better in every way to the present situation. Of course, not only the Rodman Dam must be removed. The Eureka Dam must also be removed upstream. There are also several earthen partial dams in the Rodman Pool between Rodman and Eureka dams which also must be bulldozed out of existence.	The inability of manatees, shad, sturgeon, etc. from making their historic migrations upstream into or almost into the headwaters of the Oklawaha River and the head springs of the Silver River.	No. The Cross Florida Barge Canal Project will never be completed. The Rodman Pool is the last part of this disaster to be dismantled and it is long overdue. It costs taxpayers millions to maintain Rodman Pool for a few diehard fisher people, as a direct subsidy for their personal amusement, when removal of the dams and pool will provide much better fishing for all, swimming in presently unavailable springs, and wildlife observation and hiking in some 9,000 acres of quickly restored riverine forest.	A tiny minority of Florida legislators, lobbyists, and bass fisher people have successfully stonewalled democracy for far too long in Tallahassee. The vast majority of Floridians have long tried to get rid of this monstrosity now called the George Kirkpatrick Dam, etc. and lived instead in constant frustration, approaching totally unnecessary anger. Our state government and even our federal government (part of the Rodman Pool is on federal land) have both failed the vast majority of its citizens, because politicians are so incredibly stupid about basic ecology and wildlife biology, give in over and over to local interests rather than vote for the total state interest, the needs of the vast majority of Floridians now numbering well over 20 million.
10/11/2021 14:25	Clay		No	Yes		2-5 times		Fishing Boating	I would like to see the dam removed, and the natural flow of the river restored.	The condition of the springs that are flooded over, and the condition of the St. Johns River downstream of the Ocklawaha.	Primarily that the quality of both the Ocklawaha and the St. Johns will continue to decline. Secondarily that the dam will eventually fail, or require millions in repairs.	I think removal is the only answer, although I suppose some sort of partial breach might help restore the flow, but then there still would be maintenance issues. I think the right answer is complete removal and try to get the river back as close to it's natural state as possible.	I have been fishing and boating on the St. Johns River for more than 50 years and have seen the degradation and salt intrusion in the lower river. Now is the time to remove this holdover from a failed project. It will still be a sportsman's paradise up the Ocklawaha.
10/11/2021 14:29	St Johns		No	Yes		1 time	More than 5 times	Canoeing / kayaking Boating Wildlife viewing	I would like to see the dam removed and the free-flowing Ocklawaha restored.	The damn has surpassed its useful life and it now a liability. Rather than spend money to repair obsolete infrastructure, the state needs to remove it and reconnect the hydrology of the Ocklawaha system.	I am concerned that the dam may fail due to its age resulting in dangerous conditions and that the environmental impacts of the dam will continue to worsen if it is left in place.	No	
10/11/2021 14:31	Putnam		No	Yes		2-5 times		Wildlife viewing	I would like to see the dam removed. I used to be a proponent of save Rodman, until I realized the detriment that monstrosity is causing to the environment from a failed project. The fishing recreational benefits are miniscule compared to the other recreational potential for eco tourism,. The dam is not in good shape, the cost to maintain far outweighs any benefits it could provide. Removing the dam and letting the river run it's natural course would benefit the wildlife and fisheries. Not to mention allowing striped bass and manatees the ability to migrate through their previous natural areas. Fishing opportunities would also be increased by giving access to the shoreline.	Environmental impact statements by Jenny Carr	Continued environmental impacts on the river and wasted tax dollars	At least partial restoration	Please realize the Rodaman resevoir/ kirkpatrick dam is a needless and wasted expense of taxpayer monies. Free the river and let ecotourism bring in more money and jobs thanis currently provided by the reservoir.
10/11/2021 14:32	St Johns		No	Yes		1 time	More than 5 times	Fishing	I would like to see it preserved and maintained.	It provides a clean pristine water source. Abundant vegetation filters water coming from upstream. Also, the St. Johns River downstream from the barge canal has been devoid of grass since Hurricane Irma.	That an outstanding waterway would be destroyed. I also do not understand the constant attacks on the reservoir by people that have never been there. It would make no more sense to destroy it than it would by destroying Lake Lanier in Georgia or TVA Lakes to the north of us.	No.	
10/11/2021 14:44	Marion		No	No					I would like to see the restoration of the Oklawaha River with the removal of the Rodman Reservoir and Kirkpatrick Dam.	I would like to see the minimizing of manatee deaths from the loss of warm water habitat and starvation from sea grass loss. I believe that it is important to restore a migratory route for fish and manatees from the Atlantic Ocean. Connecting a free-flowing Ocklawaha to the St. John's River would improve the environmental health of the entire river system.	The economics of the revenue from bass fishing and tourism income will be more important to the Florida government than the restoration of all the river flow to pre-dam conditions. Money will be more important to our state government than protecting our state environmental treasures for years to come.	If it is the only alternative, I would be forced to accept a breaching of the dam. I do believe that the reservoir should be drained and the river restored to its pre-dam levels	This is an issue that has been debated too long and has continued to lose to money interests instead of environmental concerns in the state. Climate change is real. Species are dying and our most precious resource in Florida, our beautiful water, is being traded for economic enrichment for the few. Please save our state, our world, for all.
10/11/2021 14:47	Lake		No	No					Restore the river by breaching the dam.	Restoration of native species that were displaced when the dam was built in 1958, removed of barrier to free movement of plants and animals, creation of different kinds of recreational areas, possible return of more manatees, and no more liability from possible flooding.	continued loss of native habitat	No, positive results require freeing the river	
10/11/2021 14:57	Volusia		No	Yes		1 time	2-5 times	Other: break from motorcycle ride	Removed of dam and river flow restored	On-line and newspaper articles about this situation since moving here 32 years ago	Restoration of the Ocklawaha River for natural florida land and water quality. Exposure of natural springs for warm havens for the manatees. River quality and flow for fish and manatee.	Breaching if complete removal of the dam is not approved.	Water quality is a major issue in Florida, especially since more people are moving here each year. I understand bass fishermen's concerns - but the big picture needs to be considered. Many forms of tourism will grow in this area once the dam is gone.
10/11/2021 15:04	Seminole		No	No					Go back to where they were all joined.	What you have provided.	I would be, yet again, extremely disappointed in our State government.	No.	
10/11/2021 15:08	Wakulla		No	No					Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every additional day the dam and reservoir remain in place results in additional environmental degradation.	7,500 acres of the lower Ocklawaha's historic forested floodplain, 20 freshwater springs, and many miles of natural river channel that were drowned as a result of dam construction would be restored. Imperiled plant species like the endangered Star Anise and threatened Harhenjithia, which are native to the banks of this region's spring run streams, could expand their range into the restored spring systems. Draining the Rodman Reservoir would remove the single greatest barrier to plant and animal movement along the Ocala to Osceola (O2O) Wildlife Corridor by replacing the open water expanse of the Reservoir with a restored floodplain forest, to the benefit of many listed plant species native to the region including the Federally listed Clasping Warea and Scrub Buckwheat. Manatees would regain open access to the warm water habitats of the Ocklawaha and Silver Springs. Migratory fish including the Striped Bass, American shad, American eel, and the critically Endangered Atlantic Sturgeon and Shortnose Sturgeon would once again have open access to the Ocklawaha system if the dam is breached.	The broad array of environmental benefits to native flora and fauna, including many imperiled species, that would result from restoration would not be possible. The broad array of environmental benefits to native flora and fauna, including many imperiled species, that would result from restoration would not be possible. Thousands of acres of submerged aquatic plant communities would be unable to regenerate in a restored river channel and in the re-emerged spring run streams, and 7,500 acres of floodplain forest would not be restored. Taxpayers will perpetually be on the hook for repair and maintenance of the dam and Reservoir, and continue to be liable for any loss of life or property damage that would result from a dam failure.The Reservoir would continue to be a barrier to movement by native wildlife and plant life along the length of the O2O Corridor, and compromise the value of Florida's investments in conserving lands like the Etonian Creek State Forest, and approved Florida Forever projects.	No. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration.	
10/11/2021 15:11	Hernando		No	Yes	1 time	2-5 times	More than 5 times	Wildlife viewing	Remove the Kirkpatrick Dam.	Environmental information	Continued decline of water resources	No	
10/11/2021 15:11	Volusia		No	Yes			1 time	Other: never	Dismantle the dam. Restore the Ocklawaha River.	The cross-Florida barge canal was one of the worst ideas (for Florida) in the 20th century. We are all lucky that it was never completed.	The Ocklawaha River and Silver Springs must be restored. Our ecosystems are near collapse. We must act!	We must do everything possible to end the degradation of our natural springs. I am open to suggestions.	We must protect our springs (and aquifer). Commercial bottling of our springwater for export to all points of the globe must end!
10/11/2021 15:14	Palm Beach		No	No					Remove the dam and locks. Return the Oklawaha River to its original path and allow the ecology of the area to remain natural.	To preserve the natural beauty of the river, allow the endangered manatees to follow their natural paths and survive. Nature will heal itself. Have you looked at Google earth at the whole Oklawaha flood plane? Needs help.	Endangered manatees. It is not nice to fool mother nature. Destruction of the ecosystem. You cannot control the rivers. The cross-Florida barge canal was a bad idea to begin with.	Totally remove all man made structures along the Oklawaha and allow her to flow free.	The SFWMD has screwed up South Florida and the Everglades. Please dont screw up north/central water ways, just for profit. We need our NATURAL resources natural.
10/11/2021 15:21	Marion		No	Yes	1 time	2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing	Torn. Wasting money on a dam that does not provide electricity.	The dam will only cost more and more. Cut our losses.	Continued stagnation of the rodman reservoir.	A free flowing Ock.	
10/11/2021 15:21	Marion		No	No					Remove the dam to restore 9,000 acres of the Ocala Forest to hopefully return the 20 natural springs to a natural state so the manatees, striped bass and other marine life will return as well keeping a rising sea level from returning the adjacentSt. Johns salty. Two former governors (one Democratic and the other Republican) vowed to do this. Legislators failed to provide funding.	These is not one specific piece. There are many starting as early as the '70's when it cut into the Florida acquirer, the need to drain the reservoir, the extensive development, U.S. Forest Service excess water off federal land, St. John's Water Management study about pollutants not causing irreparable damage downstream, a revitalization similar to Dead Lakes in the Panhandle per State Fisheries biologist, etc. Water is natural resource that FL needs to protect. Climate change and environmental issues are impacting Floridians lifestyle.	The impact on water, wildlife, and lifestyle.	It needs to be presented, discussed in an open forum with input from all parties. This is a challenge for the State of Florida to accomplish these days.	Thank you for giving me this opportunity.
10/11/2021 15:30	Duval		No	Yes			1 time	Fishing Canoeing / kayaking	I would like to see the dam breached to restore the natural flow of the Ocklawaha.A river so it may become a winter haven for the Florida manatee.	Studies that show manatees could benefit from a natural flowing river with access to multiple springs including Silver Springs.	My concern is that the dam will eventually burst on its own due to its age and cause damages due to flash flooding from water being released all at once instead of gradually.	If the full outcome is not achieved there should be a way for manatees to pass through the dam that is safer and more reliable than the lock system that is currently in place.	All businesses affected by this change should be fairly compensated.
10/11/2021 15:30	Clay		No	No					The dam is failing. We should not spend good money after bad. Remove the dam and restore the environment!	Disney and theme parks have seen their day. The future for Florida is ecotourism. The more natural habitat we have to offer, the more economic impact we will see. Tourists come to Florida's east coast for the beautiful beaches, and to the west coast for the manatees. The rivers, lakes and springs have been largely enjoyed only by Floridians. We have the opportunity to promote the awesome ecological diversity that makes up our state and to become as much a tourist destination as Yellowstone.	If the dam remains, water quality will continue to decline. The dam was a mistake, and we have the opportunity to set it right. Restoring the river will restore natural springs and will recharge the aquifer by filtering the water. Restoring the river will restore forest land, providing flood protection, wildlife habitat, and opportunities for timber management and recreation. It is also the most cost-effective solution.	NO! The Rodman dam is a money pit. Let nature work her healing on the land, and spend the money on other failing infrastructure, like bridges!	Thank you for asking for public opinion. Overall, I believe the St. Johns River Water Management Department does a good job protecting Florida's irreplaceable natural resources. I am sure you will lead the fight to do the right thing.
10/11/2021 15:38	Pinellas		No	No					I want the damn removed	That the damn is detrimental to the health of the river & manatees that get stuck in the locks & die.	Dumb question!! I'm a 5th generation native Floridian extremely concerned about the deteriorating environment because of failures by the bureaucrats in Tallahasee	No!	
10/11/2021 16:01	Broward		No	No					I am in support of restoring the Ocklawaha River by breaching the dam and draining the Rodman Reservoir. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St Johns Rivers, and 50 springs are restored by breaching the dam. Additionally, 20 lost springs and Silver Springs ecosystem are restored and historic fish and manatees return as breach opens creating a free-flowing river	Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.State and federal funds are available; public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This exciting restoration will improve water quality and flow by generating an additional 150 million+ gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
10/11/2021 16:06	Putnam		Yes	Yes		More than 5 times		Boating Wildlife viewing	Remove the dam	When the last drawdown was in place, hundreds of fishermen crowded the banks fishing. Birders were able to access the river, and many more people were able to use the river. I took photos of them as I was boating on the river.	That the vegetation overload gets worse and fewer and fewer people can use the river	No	Please, it's time, just remove the dam and let the river resume its natural course. You will be surprised at how quickly it comes back
10/11/2021 16:12	Outside of state / other	Mansfield TX	No	No					I don't know	That manatees are getting killed	To help save manatees		
10/11/2021 16:15	St Johns		No	Yes	1 time			Canoeing / kayaking Wildlife viewing	Removed	Wildlife	More manatees will die	Nothing	
10/11/2021 16:21	Duval		No	No					Breach the Rodman/Kirkpatrick Dam.	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No because it really would be a wasted opportunity to do good for the environment and the wildlife that would so greatly benefit from breaching the dam.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Manatees are wonderful creatures and one of mine and my moms favorite animals and it would break our hearts and millions of others if we didn't do everything we could to save them so please make the right decision, thank you for your consideration.
10/11/2021 16:23	Putnam		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Wildlife viewing	leave the Reservoir as is and support maintenance to the Dam.	This is a major economic boost for our community...man people visit Putnam County to fish the reservoir.	That we will lose a great ressource for our community and $$$ to our Community from visitors that spend money on fishing and lodging.	no...base the decisions on facts not wild unfounded information	
10/11/2021 16:24	Pinellas		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	$50+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/11/2021 16:34	Hillsborough		No	Yes		1 time	2-5 times	Other: Biking	It should be removed.	It is an unsustainable, artificial structure that disrupts what was and would be a large forest and historic free-flowing river. It obstructs free flow of manatees and other creatures and requires regular drawdowns just to keep the aquatic weeds from choking off boating.	Wasted money on an unnecessary artificial system that preempts free-flowing river and a vast area of ever-more-rare natural aquatic and terrestrial habitat.	Simply opening the dam and the lock system to let the river flow would be better than the status quo.	This structure was a mistake that we do not have to perpetuate. By removing the aging dam, we have a tremendous opportunity to correct that mistake.
10/11/2021 16:36	Broward		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	Restoration of the Ocklawaha Rive by reaching the dam.	reaching the dam restores natural water flow to the lower Ocklawaha and St Johns River	Continued decline in water quality, harm to manatees and fish, waste of tax payers money to repair a dam that is not necessary.	No.	
10/11/2021 16:44	Pinellas		No	No									
10/11/2021 16:45	Nassau		No	Yes		1 time		Canoeing / kayaking	Breach the Rodman/Kirkpatrick Dam. There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	
10/11/2021 16:46	Duval		No	Yes			2-5 times	Canoeing / kayaking Boating	Breached and natural flows restored	it will improve health of this stretch of water allowing return of fish and manatees and will, resultingly, improve the quality of user site visits	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	No. This should have happened decades ago.	This exciting restoration will improve water quality and flow by generating an additional 150 million+ gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
10/11/2021 16:53	Citrus		No	No					I support the proposal put forth by the Florida Native Plant Society of a partial breach.	The information from FNPS regarding the positive impacts the breach would have re-instating the river to its natural state. By restoring the natural flow native species could rebound, it would cut down on salt water intrusion,it would save money,and it would increase ecotourism.	That the river and it's flora and fauna would eventually die out.	No. Partial breach appears to be the most environmentally sound approach.	
10/11/2021 16:58	Lake		No	No						N/A	N/A	N/A	None
10/11/2021 16:59	Volusia		No	No						I just want what's best for manatees and the ecosystem in general.	That this is needed for manatees normal functioning and health, according to their nature.	My biggest concern that we could lose manatees as species.	
10/11/2021 17:02	Volusia		No	Yes			1 time	Boating					
10/11/2021 17:03	Hillsborough		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Breach the Rodman/Kirkpatrick Dam and restore the Ocklawaha River.	Three rivers -- the Ocklawaha, Silver and St. Johns Rivers -- plus dozens of springs would be restored, allowing the return of fish and manatees in a free-flowing river.	Millions of dollars in taxpayers' money would be wasted to repair a dam that harms the environment and does not provide flood protection, power, water supply or other broad public benefit.	No. Breaching the dam is 50 years overdue.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway.
10/11/2021 17:03	Broward		No	No									
10/11/2021 17:04	Dade		No	No					I would like to see the restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Having the Ocklawaha River restored will prevent additional environmental degradation. Enough damage has already been done for 53 years of this ill-fated Dam.	Thousands of acres of submerged aquatic plant communities would be able to regenerate in the restored river channel, and in the re-emerged spring run streams that drained into the Ocklawaha historically. Imperilled plant species like the endangered Star Anise and threatened Harhenjithia, which are native to the banks of this region's spring run streams, could expand their range into the restored spring systems. Draining the Rodman Reservoir would remove the single greatest barrier to plant and animal movement along the Ocala to Osceola (O2O) Wildlife Corridor by replacing the open water expanse of the Reservoir with a restored floodplain forest, to the benefit of many listed plant species native to the region including the Federally listed Clasping Warea and Scrub Buckwheat. Three river systems - the Ocklawaha, Silver and St. Johns - would experience significant environmental improvement from restoration. Manatees would regain open access to the warm water habitats of the Ocklawaha and Silver Springs. 7,500 acres of the lower Ocklawaha's historic forested floodplain, 20 freshwater springs, and many miles of natural river channel that were drowned as a result of dam construction would be restored. 8,000 acres of stressed floodplain wetland located downstream of the dam would be enhanced. At least 150 million gallons a day of additional natural flow, and potentially much more, would be restored to the Lower St. Johns River, improving water quality and increasing resiliency of the entire St Johns/Ocklawaha River system by impeding the salt water intrusion resulting from sea	The broad array of environmental benefits to native flora and fauna, including many imperiled species, that would result from restoration would not be possible. Water quality in the Rodman Reservoir and Lower Ocklawaha/St Johns River system would continue to decline. Imperilled plant species like the endangered Star Anise and threatened Harhenjithia, which are native to the banks of this region's spring run streams, would be unable to expand their range into the unrestored spring systems. The Reservoir would continue to be a barrier to movement by native wildlife and plant life along the length of the O2O Corridor, and compromise the value of Florida's investments in conserving lands like the Etonian Creek State Forest, and approved Florida Forever projects. Thousands of acres of submerged aquatic plant communities would be unable to regenerate in a restored river channel and in the re-emerged spring run streams, and 7,500 acres of floodplain forest would not be restored. The economic benefits that would result from increased and enhanced recreational usage would be denied to the surrounding local communities. Residents and business owners in areas immediately downstream of the dam would continue to be under threat in the event of failure of a dam that has never, and will never, satisfy the purpose of its construction. Taxpayers will perpetually be on the hook for repair and maintenance of the dam and Reservoir, and continue to be liable for any loss of life or property damage that would result from a dam failure.	No. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration.	Although I am not an area resident, I am deeply committed to the preservation of our beautiful State of Florida native environment, it's diverse flora and fauna. It is a moral obligation to maintain and preserve such natural gifts of this State for our present enjoyment and the enjoyment of our future generations. Once restored, I will visit the Ocklawaha River area to enjoy its natural beauty.
10/11/2021 17:22	Volusia		No	No					Restoration of the Ocklawaha River by breaching the dam and draining the Rodman Reservoir	MyFS research	Environmental impacts	No	
10/11/2021 17:17	Alachua		No	Yes					Preservation of the natural environment.	Restored to its natural state.	A few are robbing our state of important resources.		
10/11/2021 17:24	Orange		No	Yes	1 time	2-5 times	More than 5 times	Fishing Wildlife viewing	It's a beautiful location, but dams are too damaging to the local environment. I'd like the dam to be breached.	Environmental studies of the Florida "river of grass" and of the local Kirkpatrick dam	The sustained mismanagement of the regions natural resources.	No. Dams are a failure of the previous generation - their ignorance of the results of the damn for local ecosystems are now our problem to solve.	None.
10/11/2021 17:27	Pinellas		No	No									
10/11/2021 17:30	Outside of state / other	MS	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/11/2021 17:32	Duval		No	Yes		2-5 times	More than 5 times	Fishing	Don't have opinion one way or another.				
10/11/2021 17:43	Volusia		No	No					Dismantle it and restore natural river flow.	The dam is killing natural Florida habitat.	We,re letting Florida continue to get sold out to special interests.	No.	Juust do the right thing and stop the politicians from continuing to sell us out.

10/11/2021 17:43	Clay		No	Yes	1 time	2-5 times	More than 5 times	Wildlife viewing	The Dam needs to come down.	Dams across the country have been successfully taken down to the benefit of the environment and the economy.	Toxic algae blooms behind the dam.			
10/11/2021 17:52	Wakulla		No	Yes		1 time	2-5 times	Canoeing / kayaking	remove it	nature	loss of natural habitat permanently		no	
10/11/2021 17:56	Outside of state / other	Lawrenceville, GA.	No	Yes			1 time	Wildlife viewing	I would like to see the Ocklawaha River restored.	I am very concerned about the dire situation of the inhabitants of this area -- the manatee are particularly in danger -- we've often viewed manatee and have been alarmed about the state of these creatures. I was born and raised in Florida and was proud of the care given to wildlife. Other species need this also.	Manatees will die...the other inhabitants (bobcats, white-tailed deer, black bears, panthers, etc.) will ultimately suffer as the result of the River not being restored.		Our planet is slowly being taken over by people who do not worry about the state of our natural areas -- constant threats are coming from commercial interests all over the world. We need to start to take seriously issues like this. No, this has to be done; and we have to start somewhere.	
10/11/2021 18:01	Pinellas		No	No				Restoration of the Ocklawaha River by breaching the dam and draining the Rodman Reservoir.	Global warming and the loss of natural wetlands in Florida.	Loss of natural habitat that cannot be recovered.			No	
10/11/2021 18:03	St Johns		No	No				Removed	Need to return Florida to its natural state. We can't continue to put water from the St. John's and hope for no impact. This is a cool fishing spot but otherwise provides no benefit having the dam.	Continued decline in river health. Continued loss in habitat.			Negative	The sportsman that are against it need to think more globally that the loss of a bass fishing hole. Very short sided.
10/11/2021 18:15	Seminole		No	No				Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.		No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/11/2021 18:23	Orange		No	No										
10/11/2021 18:27	Hillsborough		No	Yes		1 time		Wildlife viewing	Restore the area by eliminating the dam	Vintage photos, visible evidence of negative changes, natural river flow	Lack of water where there was sufficient water flow previous to the dam being put in.		Probably not	
10/11/2021 18:29	Charlotte		No	No					Make sure the resource is preserved to ensure any wildlife either on land or in the water survive	I don't want to see areas get to the point that they can not be enjoyed by future generations	Loss of either an land or in water wildlife		Would want to see plan before commenting	
10/11/2021 18:40	Alachua		No	Yes			1 time	Other: I don't use the dam. I do all of the above on the Oklawaha River, which has been weakened by that dam.	Breach the dam. Stop paying millions for maintenance of the supporting structure. Tear down the supporting structures and restore what you can of the natural ecosystem.	The interruption of wildlife corridors and the reduction of the flow of the Oklawaha River.	would have to live with the fact that politicians will never care about the predictable devastation brought by that 1960s boondoggle, and that they would rather continue paying millions to maintain that dam.		Just breach the dam without removing the whole boondoggle.	Rodman reservoir is a travesty. Why should taxpayers support stocking a pool for well-heeled bass fishermen?
10/11/2021 18:43	Lee		No	Yes		1 time								
10/11/2021 18:44	Hillsborough		No	No					Remove the dam and restore the river to what it used to be.	The river would be a better choice over what we created.	A continuation of a bad choice on our part(mankind)		No	
10/11/2021 18:49	Pinellas		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored. 20 lost springs and Silver Springs ecosystem are restored. Historic fish and manatees return as breach opens creating a free-flowing river. 100s of manatees gain essential warm water winter springs habitat. 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier. 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife. 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers. $4-14 Million in dam repairs saved on a dam past its life expectancy. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. $57 million in potential flood damages avoided to downstream property owners.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	This needs to be done now. There's no good excuse not to. Vital aspects of our environment and wildlife will greatly benefit.
10/11/2021 18:50	Marion		No	Yes	1 time	2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Wildlife viewing	Keep it	Sportsmans reasure and draw for tourism	Lost of resourse		No	
10/11/2021 18:50	Putnam		No	Yes		2-5 times		Wildlife viewing	Restore the natural River. Take out dam.	Fish and manatees need to be able to migrate naturally.	Death of fish, manatees and wildlife eco systems being seriously damaged irreversibly. Extinction, etc.		NO. Let the waters flow please.	Headwaters of everglades is being restored. This should be too.
10/11/2021 19:11	Dade		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	100s of manatees gain essential warm water winter spring habitats.	Hundreds of manatees lose the opportunity to access essential warm water winter habitat.		No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of sea grass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/11/2021 19:17	Duval		No	No					Take down the dam and restore the Ocklawaha and return its flow back to the St Johns River.	it's the right thing to do both ecologically and economically.	Pollution of our rivers , streams, and springs will continue unabated, with disastrous results.		Any return to the natural flow of our fresh water would be an improvement.	
10/11/2021 19:18	St Johns		No	No					Breach the dam to restore the river ecosystem	The manatee are dying off and breaching the dam would provide a better ecosystem for them to thrive and bring back fish species.	The extinction of the manatee		Making the manatee an endangered species until a better environment is provided for them to thrive.	
10/11/2021 19:21	Monroe		No	No					Get it back to the way it was		More devolopment.			The whole state keeps squeezing out natural areas. Then blame it on climate change.
10/11/2021 19:22	Putnam		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Boating Wildlife viewing Other	Tear it down & free the river	Species rehab! Free the springs covered like when I was a boy! HELP FLUSH THE ST. JOHN'S!	You will see more destruction caused by man. THE RIVER WILL DIE!		Tear it down & free the river	Free the river
10/11/2021 19:25	Brevard		No	No					Remove the dam	Wildlife	Wildlife		No	
10/11/2021 19:31	Okaloosa		No	No					Let more manatees in	Manatees	Disappointed			
10/11/2021 19:48	St Johns		No	Yes		2-5 times		Fishing Canoeing / kayaking Wildlife viewing	Restoration of the flow of the River and the springs underneath the dam and reservoir.	I understand there is some loss of bass fishing. However, the flow of the river would improve fishing in the St. Johns, help provide grasses for manatees, and improve kayaking and canoeing on the river and it's side tributaries.	Wasting more money on fixing the damn, and missing an opportunity to restore wetlands and spring flows. The St Johns has so many stresses and we need to help it get healthy by letting the Rodman Dam go away.	Nothing makes sense accept letting this 1920s mistake go away.		
10/11/2021 19:50	Duval		No	Yes			1 time	Wildlife viewing	Demolished	Restoration of water flow to St Johns River	Further increased salinity		No	
10/11/2021 19:52	Leon		No	Yes			More than 5 times	Fishing Wildlife viewing	Return to the Oklawaha, remove the locks	The river prior to the reservoir was a stunning natural resource with tremendous biodiversity that has been converted to a large lake..	A missed opportunity for millions of Floridians.		No	I grew up going to the Oklawaha and spent many days there prior to the creation of Rodman Reservoir.... What has become of it pales in comparison to what the river was...
10/11/2021 19:55	Outside of state / other	Suffolk County, New York	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer. I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat.	What would be your biggest concern if your desired outcome is not achieved? Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatee population has been eradicated. Please do everything in your power to protect and support these beautiful creatures from further harm and destruction. Thank you.
10/11/2021 19:58	Levy		No	No					Restore the Ocklawaha River by breaching the dam on the Rodman Reservoir. The dam has impeded the river's flow for more than 50 years, blocking the movement of aquatic life and degrading water quality. Manatees in particular would benefit from breaching the dam. More than 940 manatees have died in 2021 alone due to factors such as starvation from seagrass loss. But their greatest longterm threat remains the loss of warmer-water habit such as natural springs, which they need to survive the winter. Connecting a free-flowing Ocklawaha to the St. Johns River would create a migratory route for fish and manatees from the Atlantic Ocean. Manatees would be able to travel to the Ocklawaha's "lost springs" that were submerged due to the dam and Silver Springs, and the environmental health of the whole river system would be improved. American Rivers named the Ocklawaha one of America's most endangered rivers in 2020, citing decreasing biodiversity and poor water quality due to the dam. A recent report by the Howard T. Odum Florida Springs Institute found that blue tilapia, an invasive fish, now dominates Silver Springs. Restoring a free-flowing Ocklawaha would bring back native species that compete with tilapia and control their population. For years bass fishing enthusiasts have fought to keep the dam intact, with the backing of Putnam County officials who value the tourism it generates. But a restored Ocklawaha would attract more outdoor recreation than the reservoir's declining fishery, economists have found. The Free the Ocklawaha Coalition, which includes 50 environmental, business and community groups, proposes for the dam to at least be breached. The plan would restore the river flow and levels to pre-dam conditions while limiting the alterations needed to be made to land and structures. Gov. Ron DeSantis would burnish his environmental record by being the governor who finally drained the reservoir and restored the river. Doing so would bring environmental as well as fiscal benefits, generating tourism while ending the expense of paying for the state dam's maintenance and upkeep.	The Ocklawaga Rive is one of the most endangered rivers and breaching the dam would increase biodiversity, help protect the manatees and improve water quality	The our wildlife and water would be in jeopardy		Have the politicians sit down with the Free the Ocklawaha Coalition and negotiate what could be done that would restore the most to water quality and native wildlife.	With the real threat of climate change upon us, we can not afford to endanger our current wildlife and need to preserve our water.
10/11/2021 20:09	St Johns		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Historic fish and manatees return as breach opens creating a free-flowing river	The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.		No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	This exciting restoration will improve water quality and flow by generating an additional 150 millionn gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefiting water quality through enhanced biofiltration. Thank you for your consideration.
10/11/2021 20:12	Putnam		No	Yes	1 time	2-5 times	More than 5 times	Fishing Boating	Preservation of the Dam	Fishing	Dredging of the river and ship traffic		No	
10/11/2021 20:14	Palm Beach		No	No					Restored to the river's original condition.	The dam is not functional, so should be removed	That the wildlife along the river's path will not recover.			
10/11/2021 20:24	Broward		No	No					open the damn to let the water flow	the current state hurts the environmental health of the area	changing the ecosystem			
10/11/2021 20:33	St Johns		No	No					Get rid of it	Restoration of water flow for the springs and wildlife	Money will be wasted reobirving a useless man made structure while natural springs will suffer and wildlife will die		I don't know. Partially removing it? Enough to restore the water ways.	
10/11/2021 20:46	Sarasota		No	Yes			1 time	Fishing Canoeing / kayaking Wildlife viewing	Dislodge the dam and let the water flow	The Cross Barge Canal project did not happen	not enough fresh water			
10/11/2021 20:55	Duval		No	No					Restoration of the flow of the 3 rivers	Reclaiming the natural water flow that supports the springs and estuary.	Manatees and other wildlife. More springs will be lost.		No. It should be fully restored.	
10/11/2021 21:08	Lee		No	No										
10/11/2021 21:11	Lee		No	No					Dam removed, and returned to original state	Human don't usually make nature better, they destroy it	Fish, manatees,and other wildlife would be further stressed		Not sure	
10/11/2021 21:26	Pasco		No	No					Clean up	What I just read	Manatees		Na	
10/11/2021 21:29	Citrus		No	No										
10/11/2021 21:36	Pinellas		No	No					Would like to see it breached	More habitat to support manatees and provide more food for them	Continued risk of manatee deaths or injuries from the lock system and lack of crucial habitat for manatees		No	
10/11/2021 21:37	Gadsden		No	No					I would prefer that the dam be breached and the reservoir be allowed to return to its natural state before the waterway was blocked. This major remediation will greatly improve the health of Florida's water quality and wildlife habitats which disappear every day.	Historic fish and manatees will return as the breach opens creating a free-flowing river. Hundreds of manatees will rediscover essential warm water winter springs habitat. The hundred mile St. Johns River Estuary from Welaka to Palatka to Jacksonville will become healthier. Over 15,000 acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife. All of this is important to me.	Florida will miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. A storm event triggers a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling camps, and recreation benefits. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	Definitely NO. The breaching of the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 150-mile lower St. Johns River. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/11/2021 21:44	Orange		No	No					Breach it to allow easy access for the manatees to travel through	No new sitings of Manatees	The well being of our states beloved Manatees		NA	
10/11/2021 21:52	Seminole		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife.	Of Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed riverway.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklewaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/11/2021 21:56	Wakulla		No	No					I would like to see the dam breached and the Ocklawaha River restored so normal wildlife patterns can resume.	Historic fish and manatees can return to the free flowing River.	The state would continue to invest money on maintenance for a dam that is not needed and does environmental damage and threatens to increase flooding risk.		No. A drawdown alone does not provide the necessary remediation.	As a fisheries biologist, I am distressed at the reluctance of the state to breach the dam and restore the free flowing River with its unmeasurable benefit to the fish populations. It is my understanding that many of the recreational fishermen would support this action, even many of those participating in the tournaments. Most politicians, with a few notable exceptions, support the breach. Thanks you for offering this survey and considering this action.
10/11/2021 22:13	Wakulla		No	No					I support breaching the dam and restoring the free flowing River to its natural state.	I live on the St Marks River and fully the appreciate the value of a free flowing spring fed River to fish populations and manatees. This year FL has seen record breaking manatee deaths, but we have a chance with this action to restore these springs and increase the manatee habits. It has the potential for bringing more tourists than the fishermen who use the reservoir and would not use a free flowing River. I cannot believe there are many of them.	Habit destruction is already a problem in FL so it is difficult for me to understand why we would invest $$ in maintaining a dam that does more harm than good to the environment and doesn't make economical sense. Only a few state and local politicians and maybe a few fishermen who use the reservoir and would not use a free flowing river oppose this action.	I don't think so. I support compromise in many situations but a partial mitigation would not provide the desired outcomes. This project has a lot of support from a diverse group of individuals and organizations so it is the appropriate time to act.	Thanks you for offering the survey and exploring options to correct an environmental and problem.
10/11/2021 22:14	Volusia		No	Yes		More than 5 times			Restore back to its natural beauty before the Dam. It's the right thing to do.	Look at the result of this Dam. It should not be there and never should have been built.	Continuing to lose our springs and all the critters that call it home.		No	
10/11/2021 22:15	Alachua		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing Other: Visit springs during the drawdowns	Remove the dam and allow the rivet to return to its natural ecology, which includes wonderful springs.	Science! - lots of it supporting the positive ecological impact of removing the dam. And economic studies that show how ecotourism would benefit the local economy.	Continued degradation of the river, loss of habitat, wildlife, eco- tourism and economic potential.		Can't think of any.	The dam should have been removed years ago! Its an ecological disaster that can be remedied quite easily.
10/11/2021 22:34	Orange		No	Yes		1 time	2-5 times	Boating Wildlife viewing	The dam removed	Springs restored	Lost flow of water to the St. JOHN'S river		No	Over 50 years, we need to get this dam removed for better water quality and fish and game habitat.
10/11/2021 22:42	Orange		No	No										
10/11/2021 22:47	Orange		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	Restoration of the Oklawaha River	Restoration of these important waterways and springs for the environment.	Decline in water quality		No	This dam should have never been built!
10/11/2021 23:11	Hillsborough		No	No					Restore the rivers and breach them! It will help our ecosystem and the manatees of that region thrive.	Based on 2021 data from the Clearwater Marine Aquarium Research Institute, only 102 unique manatees currently use the Ocklawaha River system. To access the Ocklawaha, and the Silver River beyond, manatees must navigate through the Buckman Lock, which has to be manually opened for them by a human operator. While the lock tender recorded 437 manatee sightings in 2018 (the most recent available verified statistic), many of these were repeat sightings of the same 100 or so manatees who have learned to navigate the lock system. Breaching the dam will give many more manatees open and safe access to the Ocklawaha and Silver Rivers without the gauntlet of the lock system; experts estimate that a restored river would be able to support hundreds of manatees and provide restored springs for winter refuge and restored vegetation diversity for the food that they need.	Making/keeping it difficult for manatees to not just survive but thrive! Our Floridian waterways are to be enjoyed by not just people but for the wildlife!	Anything that gives manatees easier access through the waterways. Lets stop being barriers for other species!	
10/11/2021 23:13	Orange		No	No					Reunite the river to original flow!	Animals depend on a united river, as well as people having capacity to fish, travel, and enjoy the beauty of the river	It will continue to stagnate and deteriorate the ecosystem.		No	Restore the ecosystem of the entire river and life in it
10/11/2021 23:51	Lake		No	Yes			More than 5 times	Fishing Other: Camping	Leave it alone. It's great just the way it is.	I come there from Milford Ohio. I have been doing this for over twenty years. Rodman is the only thing that gets me there. I fish at the Dam as I don't have a boat. Its one of the few places you can fish fresh water without a boat.	I suposa i will not be back in Fl . I will have to find someplace to spend my winters.		No.	
10/12/2021 0:15	Bradford		No	Yes	1 time		2-5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing	The Ocklawaha needs to be set free to restore the springs and rivers it has always fed. The river is sick because of the damn Dam.	You simply have to go and look at the rivers and springs to see what a horrible debacle the dam was to our environment.	The river will keep getting sicker and so with the St. Johns, and the springs.		Not really.	This has gone on too long. The District needs to restore the Ocklawaha and remove the dam so future generations can enjoy the river and our springs.
10/12/2021 1:39	Duval		No	Yes	1 time	2-5 times	More than 5 times	Fishing	Iff possible more boat ramps but most important the lake remain as is except for removal of logs etc that endanger vessels.	My many,many visits to the lake since it was created including guide trips when I was younger (now 80) and my knowledge of the lake including having been accepted as an expert witness by USDistrict Court on the fishing there in one of the first cases in an effort to remove the dam. Luckily that judge used his wisdom to keep the lake from the bottomsies given as he was from out of state.	That all the desired eco systems would be destroyed including the loss of life for many wild creatures such as the manatees which are in danger of extinction. The loss of inclome for the communities surrounding the lake including Putnam County which is one of if not the poorest counties in the state. The loss of all the water being stored which could be used by humans in the event of a disaster.		No.	It might have not been a good idea to build the reservoir in the first place but now that it has been there for so many years and supporting so many things it would be an even worse idea to destroy it. It would leave nothing but mud flats for many, many years and the local and federal courts tied up with law suits over land grabbing etc. It would be a was of so much money and time for so many reasones.
10/12/2021 2:07	Brevard		No	No										
10/12/2021 4:47	Osceola		No	Yes			2-5 times	Wildlife viewing	I would like to see the Kirkpatrick dam completely removed in order for the river to run naturally. The reservoir is an eyesore and an unnatural ecological mess.	All of the destruction to the river system this dam and reservoir has done for many, many years.	My biggest concern is that my state of Florida is not committed to the environment and cannot admit when a decades long mistake needs to be made right.	No there is not.		I am a wildlife viewer and would love to visit the Ocklawaha river basin more often but the dam and the Rodman reservoir is such an unnatural site it is hard to look at.
10/12/2021 5:01	Alachua		No	Yes		2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	The dam safely removed	the stunning river prior to the dam with the fish and mammals that could be experienced using the river	that it might never happen		no	

10/12/2021 5:31	St Johns		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing Other: Exploring	Maintenance, keep it open.	Family fun and recreation, it's a beautiful place	Fishing and recreation would be ruined, the place would be ugly also.	Not that I'm aware of.		Please keep Rodman the way it currently is. Great fishing, boating, exploring. Fantastic family recreation and it brings a lot of fishermen from all over the U.S.
10/12/2021 5:37	Polk		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	±5,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.		Please do the right thing for Florida.
10/12/2021 6:05	Duval		No	Yes		2-5 times	Fishing		Open it up	That it will help restore the river and grass	The river is dying there is no eel grass and more silt mud bottoms than usual sand area	No		
10/12/2021 6:23	Dade		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Historic fish and manatees return as breach opens creating a free-flowing river	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.		This exciting restoration will improve water quality and flow by generating an additional 150 million gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced bio-filtration. Thank you for your consideration.
10/12/2021 7:06	Seminole		No	No					Breach the dam for the manatees please. Thank you.	The relatively low number of manatees that have learned to navigate the lock system	Restriction of manatee freedom of movement and habitat	No		
10/12/2021 7:17	Orange		No	No					Removal for safe passage of manatees.	Hundreds of manatees have died this year due to lack of food source and with winter upon us they could use more safe access to warm waters than the over crowded blue and three sisters springs. Cold stress is another main cause of death for manatees so this combined with the vegetation should be enough reason to remove the dam.	The fate of the manatee population in Florida.	No.		Please do the right thing, especially this year when we've lost so many manatees already.
10/12/2021 7:31	Duval		No	Yes		1 time	Fishing		Dam removed to allow free flow of the river.	Restore area for manatees and fish to thrive as previously available. End spending money on a useless dam. Take advantage of the opportunity to restore a "free flowing" river as nature intended.	Health of the St. John's river and adjoining waterways.	No		
10/12/2021 8:01	Alachua		No	Yes	More than 5 times	More than 5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	I would love to see a full restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Manatees and fish desperately need it to continue their survival in Florida.	Manatees continue a march towards extinction, and historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase.	No. It is urgent that we breach the dam and return Florida waterways to a more natural flow.		Please breach this dam, and thank you for considering my comments.
10/12/2021 8:01	Polk		No	No					Protection for the plants, animals, and natural habitat	Loss of manatee population being recorded	Loss of another beautiful species			
10/12/2021 8:21	Clay		No	Yes		1 time	Boating		I would like to see the original flow of the Ocklawaha restored.	I live on the St. Johns River and am deeply concerned about the health of our river and springs. Restoring the flow of the Ocklawaha would improve the health of that river, the Silver River, and the St. Johns and the springs that feed them.	Water quality due to overpopulation, nutrient runoff, waste, and dredging will continue to cause decline in the St. Johns River system. Habitats for manatees and other wildlife will continue to shrink. Money will be poured into maintaining a pointless and failing piece of infrastructure that was never needed.	No, the dam impacts river ecology and serves no purpose.		
10/12/2021 8:45	Duval		No	Yes		1 time	Other: I have only observed it while starting a kayak trip down the Ocklawaha.	I would like to see the dam removed or breached so that water can flow freely from the submerged springs and to improve the flow of water in the St. Johns River.	Information presented by the St. Johns Riverkeeper and recently an article by Dr. Quinton White in the Florida Times-Union (Oct. 5).https://www.jacksonville.com/story/news/environment/2021/10/05/ocklawaha-river-rentar-it-consider-kirkpatrick-rodman-dam/5984682001/	We continue to suffer from the ecological damage caused by the dam, including reduced flow to the St. Johns that is exacerbating the algae problems in the summer.	Perhaps partially demolishing the dam would work, but it's not clear to me that this would restore the natural flow of the Ocklawaha.		
10/12/2021 8:49	Alachua		No	Yes		1 time	Other: Have visited to look at it, but do not use it		The ecological and economic value of the Silver Springs, Silver River, Ocklawaha River are greater than that of the Rodman Reservoir. Uncovering and restoring springs would be of great value to future generations.	Right now there is a lot of restoration funding available. This funding may not always be available, so lets take the opportunity now.				The water management districts have been proving their ability to restore ecosystems in the work being done on Kissimmee River, the Everglades, Lake Apopka and other locations. I am very optimistic that the Ocklawaha and its springs could be restored. Springs are very popular, and as Florida's population grows, the demand for springs and ecotourism will continue to grow. This would be a wonderful legacy project that our children and grandchildren will thank us for.
10/12/2021 8:50	Orange		No	Yes		2-5 times	Canoeing / kayaking Wildlife viewing		remove the dam	It would be wonderful to canoe up to the covered springs.	Waste of money!!!!			
10/12/2021 9:00	Pinellas		No	Yes		1 time	2-5 times	Canoeing / kayaking Wildlife viewing	Breaching the Rodman/Kirkpatrick Dam	As a member of American Rivers for many years, I've learned a lot about the negative impact made by dams installed along freshwater rivers throughout the U.S.. The Kirkpatrick Dam ruined 15,000 acres of precious forest floodplain. It also degraded habitat for threatened migratory fish and native plants.	Manatees are dying at an alarming rate. We need more spaces for them that are not constantly being destroyed. Their main food sources are dwindling so we need to allow them to move into greater areas to forage. There is no public benefit to the dam, but there are detriments to having it!	No, this is an extremely overdue ask. The dam should've been breached a long time ago.		The greatest threat to manatees is losing their winter-time refuge warm waters. With major seagrass die-offs in the last year, we are seeing major population decline. This change would help reduce another great threat to their existence.
10/12/2021 9:02	Citrus		No	Yes		1 time			Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.		As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/12/2021 9:04	Palm Beach		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam	Manatees return as breach opens creating a free-flowing river	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue.		
10/12/2021 9:05	Alachua		No	Yes		More than 5 times	Fishing Canoeing / kayaking Wildlife viewing		I would like to see the dam permanently removed.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.		Please consider restoring and protecting the precious springs along the river.
10/12/2021 9:13	Manatee		No	Yes		1 time		Canoeing / kayaking Wildlife viewing	Changes to help better support the local wildlife .	Manatee access to maintaining and living in the river	Destroying natural habitats if the manatee	Continued live support assisting manatee up and down the river way		Please help our environment and wildlife to maintains gods natural ecosystem and beauty
10/12/2021 9:18	Orange		No	No					Return to natural function.	Media	Further misuse.	Any suggestions?

Research from the Springs Institute and advocacy for the habitat as a warm water refuge for manatees!	The continued effects of the dam on the flora and fauna of the ecosystem.	Nope.		
10/12/2021 9:30	Brevard		No	Yes				Wildlife viewing	removed	nature	endless costly maintenace for a man made fishing area	no		After dam is removed set aside the funding to improve fishing and fishing acess in the area.
10/12/2021 9:34	Outside of state / other		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	I love manatees with my whole heart and need you to protect their lives, their waterways, their food sources. If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.		As an integral ecologist who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/12/2021 9:36	Sarasota		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.		2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/12/2021 9:36	Osceola		No	No					I'd love to see this unwanted. un-needed, reservoir and dam turned back to how it used to be.	the need of use for native wildlife.	but disappointment at local. regional and state politicians.	no		
10/12/2021 9:37	Pinellas		No	No					Removal of the existing dam and complete restoration of the free flowing Ocklawaha River.	The dam was built for a project which was later abandoned. The existing dam is in very poor condition and is not worth investing any money to rebuild. Most importantly, the need is to restore the area to its natural state! The restored areas would allow our state's native plants the opportunity to revive in the area, including some imperiled and listed plants. Also animal movement would benefit from the restored river systems and land in the area of the dam and southward.	My biggest concern is the overall detrimental impact on the land, rivers, plants and animals. The lost opportunities for reviving the natural state of the affected area, including native plants and aquatic plants would be vast. Plus the estimated costs for restoring the area to its natural state is far less than the dam rebuild costs. Rebuilding the dam would be a waste of money.	No, the removal of the dam is 100% the right thing for the state of Florida. It's a waste of money to rebuild it and the impact of this dam has been detrimental for our land, animals and plants for over 50 years. It's time to get it right and remove the dam forever!		
10/12/2021 9:40	Marion		No	Yes	2-5 times	2-5 times	More than 5 times	Fishing Canoeing / kayaking Wildlife viewing	I would like the dam to be removed and to see the river go back to it's natural state.	Rodman Dam should never have been built. It serves no purpose in and of itself. Without it, you could still fish, canoe, watch wildlife. It simply interferes with the natural flow of a beautiful river.	That taxpayers continue to have to support an outdated, useless dam that is destructive to a natural waterway. The effects of habitat destruction continue on the Ocklawaha.	Not really. What is the benefit of maintaining an out of date, environmentally damaging dam. When are we going to learn from our mistakes and try to fix them?		I see environmental destruction every day. Most people do. Trash on the side of the road, dumping tires, vehicles, and every king of junk. I worked on a river clean-up once and someone had thrown a TV in there. We need to demonstrate to people the importance of taking care of nature by correcting our past mistakes and doing all we can to keep natural places natural for all to enjoy.
10/12/2021 9:43	Leon		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.		2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/12/2021 9:44	Clay		No	Yes	1 time	1 time		Wildlife viewing	Please breach the dam for manatee welfare.	The data shows we can help this basically endangered species so we should. It is not our place to contribute to species extinction.	I don't want to live in a world without manatees. We can't let them keep declining. They're the reason I live Florida.	No		
10/12/2021 9:49	Volusia		No	No					I would like to see the Kirkpatrick Dam removed and the Ocklawaha River restored.	As a member of American Rivers for many years, I've learned a lot about the negative impact made by dams installed along freshwater rivers throughout the U.S.. The Kirkpatrick Dam ruined 15,000 acres of precious forest floodplain. It also degraded habitat for threatened migratory fish and native plants.	That a lot of money would be spent to repair this unnecessary dam.	Breaching the Kirkpatrick Dam to allow for drainage of Rodman Reservoir would be acceptable.	Any effort to restore and preserve Florida's natural resources is welcome and needed.	
10/12/2021 9:53	Palm Beach		No	Yes			1 time	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Florida's manatees would regain a necessary warm water habitat, for their winter migration.	The continued decline in water quality begins a vicious cycle of algal blooms. Every algal bloom that occurs makes it more likely for another, larger one to occur. These not only kill the local flora and fauna, but stink up the entire area and decrease the quality of resident's life.	Absolutely not. For Florida's water management system to have any chance of lasting our lifetimes, rivers must be restored to their natural flow and level. This must be done.		
10/12/2021 9:57	Duval		No	No					I don't want the dam to stay.	Save the other wildlife and river	Destruction of wildlife	Not really.		
10/12/2021 10:02	Pinellas		No	Yes		2-5 times	More than 5 times	Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing	Keep it as is.	Personal use and observation and reading multiple studies that indicate the environment is long stabilized and healthy.	Loss of a great environmental and recreational resource.	NO - the dam is either there and functioning or not.		
10/12/2021 10:04	Putnam		No	No					Return the environment to pre 1960.	Nature.	Extinction of species and resources like drinking water.	Doubtful.		
10/12/2021 10:06	Alachua		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that is past its life expectancy.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality, and wildlife can't wait.		Please do the right thing and protect wild florida! We're seeing it slip away with new development and thoughtless growth every day, Florida needs our help.
10/12/2021 10:08	Osceola		No	No					Remove the dam.	Our children deserve to see and enjoy the outdoors," from sea to shining sea".	Fifty years and the dam has not provided a great benefit, get rid of it and allow nature to take it's course.	Draw down, study and remove the dam.		
10/12/2021 10:09	Dade		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	20 lost springs and Silver Springs ecosystem are restored. $4-14 Million in dam repairs saved on a dam past its life expectancy	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No.		Let's do this.
10/12/2021 10:11	Alachua		No	No					I would like to see the dam breached to restore the natural habitat.	The fish and manatees would be able to return.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.			
10/12/2021 10:12	Pinellas		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Decades ago research was undertaken by Dr. George Reid that made clear the damage by this dam. It is time to listen to what has been known for so long. 1. Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 2. 20 lost springs and Silver Springs ecosystem are restored 3. Historic fish and manatees return as breach opens creating a free-flowing river 4. 100s of manatees gain essential warm water winter springs habitat 5. 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 6. 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife 7. 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers 8. $4-14 Million in dam repairs saved on a dam past its life expectancy 9. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. 10. $57 million in potential flood damages avoided to downstream property owners	1. We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. 2. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. 3. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. 4. A storm event triggers a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages. 5. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. 6. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. 7. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. 8. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. 9. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. 10. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.		Again, we must take seriously our responsibility to land stewardship and the environmental future for all Florida citizens.
10/12/2021 10:19	Outside of state / other	Tennessee	No	No					Removal of this 50-year-old dam would present an outstanding opportunity to recover not only a river but many large springs currently buried under a reservoir.	I want to kayak from Silver Springs to Jacksonville. Unfortunately, this dam blocks the migration of Endangered Manatees, Atlantic Sturgeon, Endangered Shortnose Sturgeon, several species of shad (Genus Alosa), and other native aquatic species.	That time is running out to help the at-risk species.	Yes, dam removal!		
10/12/2021 10:22	Broward		No	No					Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every additional day the dam and reservoir remain in place results in additional environmental degradation.	Manatees would regain open access to the warm water habitats of the Ocklawaha and Silver Springs.	The Reservoir would continue to be a barrier to movement by native wildlife and plant life along the length of the COO Corridor, and compromise the value of Florida's investments in conserving lands like the Etonah Creek State Forest, and approved Florida Forever projects.	No. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration.		This is a historic moment for our great State. Let's make the right decision to restore the Ocklawaha by breaching the Kirkpatrick Dam. Thank you.

10/12/2021 10:25	Marion		No	Yes		1 time	2-5 times	Wildlife viewing Other: Access to hiking trails	Please remove them	Restoration of down river geology, geography, and habitat.	That Florida will continue to be unnecessarily damaged by the restrictions caused by the dams. The costs to properly maintain the dams will never properly be allocated or utilized. Future Floridians will never know what these water ways would look like or how they should operate as nature intended.	Not that I can think of	I think it unfair and counter productive that a small group of people who support the damn for their personal economic gain should hold sway over all of the Floridians and tourists who would benefit from their removal. The dams' original purposes were long ago changed and they should no longer be used for their past or present purposes. It is a change that is long overdue.
10/12/2021 10:25	Outside of state / other	Louisville, KY	No	Yes		More than 5 times	More than 5 times	Fishing Canoeing / Kayaking Boating Wildlife viewing	Keep it as is, do not remove the dam.	The Reservoir is helping save the manatees because it is one of the few places that still has vegetation.	Removing the dam would do harm to the current ecosystem in place.		
10/12/2021 10:30	St Johns		No	No					Please breach the Rodman/Kirkpatrick Dam.	restoring the Ocklawaha River will provide 350+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	My biggest concern is the loss of more manatee lives. Manatees are dying in alarming numbers and we need to do all we can to protect this gentle giant. People visit Florida for our beaches and tourist areas. People live in Florida for all of the amazing natural resources we have. Manatees, pelicans and the abundant fishing are the reasons my family is here. We need to do what we can to protect it. The dam provides no public benefit. It needs to go to give manatees a chance.	No, there have been too many compromises on our ecosystem already (Nestle raping us for water for example). The wildlife and ecosystem can't handle much more. The dam has to go. No more compromises.	My vacations revolve around the manatees. In the summers we visit southwest Florida. In the winters I make frequent trips to Blue Springs or Crystal River. The rest of the year, we go boating and are thrilled with the sight of a manatee swimming by. No, breaching the dam is not the only solution to the problems we have, but it's a start. Do something now before it's too late. The environment and protecting it is my single most important decision factor in how I vote.
10/12/2021 10:30	Outside of state / other	New York	No	No					More wildlife thriving. Remove the dam to let the biodiversity return				
10/12/2021 10:31	Outside of state / other	Louisville, Kentucky	No	No					Yes				
10/12/2021 10:34	Putnam		No	Yes		2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / Kayaking	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait	
10/12/2021 10:40	Outside of state / other	Oregon	No	No					It is critical that the dam be breached and the Rodman Reservoir drained, for the health of the ecosystem.	In 1999, SJRWMD deems that additional water quality studies are needed. Studies were completed showing that restoration benefits outweighed any short-term water quality impacts related to restoration.	Damage to floridjdam hydrology has negative consequences for the people of Florida. Completing this project shows care for the community, which is much larger than the vocal bass fishing folk. Make the right choice for the great state of Florida.	Breach the dam and restore the river system.	Thank you for asking for input.
10/12/2021 10:43	Outside of state / other	Baton Rouge, Louisiana	No	No					We would like to see the Dam dismantled and open up the Rodman Reservoir.	I have a great concern for the Manatees and att other wildlife that could use free flowing water. To get more natural movement of water would bring in better plants and oxygen without having to rely on any man made solutions going forward. My husband and I plan to visit the area in the coming years to check on and volunteer with Manatees. This would be a great environmental success story for everyone to come and enjoy!	More invasive species of plants clogging the water. Possibly an unusable area.	None that would have a truly desired result.	Thank you for taking my comments into consideration.
10/12/2021 10:43	Pinellas		No	Yes		1 time		Wildlife viewing	Disassemble it & let the Ocklawaha River flow freely for the benefit of springs, wildlife and people .	Allowing regained access to manatees & migratory fish. Increased water flow to the Lower St. Johns River, will improve water quality and increase resiliency of the entire St Johns/Ocklawaha River system by impeding the salt water intrusion resulting from sea level rise.	The Reservoir would continue to be a barrier to movement by native wildlife and plant life along the length of the COD Corridor, and compromise the value of Florida's investments in conserving lands like the Etonian Creek State Forest, and approved Florida Forever projects.	No. This is a time when we should be supporting everything to do with putting the natural world back in place to lengthen our possibility of continued survival on the planet.	Taxpayers will perpetually be on the hook for repair and maintenance of the dam and Reservoir, and continue to be liable for any loss of life or property damage that would result from a dam failure.
10/12/2021 10:54	Orange		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Canoeing / Kayaking Boating Wildlife viewing	Persevere nature	Mother Earth must be protected	The planet is dying	No	The
10/12/2021 10:55	Alachua		No	Yes	1 time			Canoeing / Kayaking Wildlife viewing	Habitat Restoration	Dam costs $$ and provides no benefit	Riparian health	Not really, either the dam is there or it isn't	
10/12/2021 11:05	Outside of state / other	New York	No	No					Remove the Dam! I want to see the natural ecology of this area revitalized.	This dam significantly impacts the livelihood of wildlife and native aquatic species that bring major ecological benefit to region	the 50 springs whose water quality is directly impacted by the dams existence... This removal is 50 years overdue!!!	No! the dam needs to be removed and is 50 years overdue!!!	
10/12/2021 11:19	Duval		No	Yes			1 time	Fishing	Breach the Dam.	20 drowned springs will be restored from this project as well as giving manatees more room for refuge in a time when they are in danger.	Manatees could become an endangered species with less places to refuge in the winter as well as the taxpayers paying to repair a dam that is harming the ecosystem.	No, breaching the dam is way overdue.	2021 has been the deadline year for manatees on record. If this dam is breached so many manatees could have warm water refuge during the winter. Breaching the dam will uncover 20 springs that will help with the restoration of Silver Springs, this bringing even more money to the conservation of our Florida parks and springs as well as the need to preserve the precious aquifer that lies beneath us.
10/12/2021 11:23	Citrus		No	No					Protecting manatees should be priority.	Manatees are dying at high rates. They will be endangered again soon.	Fate of the manatees.	No	
10/12/2021 11:30	Pinellas		No	No					Removal of the dam and the restoration of the area to a Florida native wilderness		The land is sold to a developer and apartments or storefronts are built on the site.	A park is built around the wilderness, resembling what was done at Lettuce Lake Park in Hillsborough County	
10/12/2021 11:31	Leon		No	Yes		2-5 times		Canoeing / Kayaking Wildlife viewing	I would like for the dam to be removed and the river basin restored.	Benefits to wildlife are by far the most compelling reason to remove the dam.	The continued cost to the state to maintain a useless dam and the continued harm to wildlife.	Not really. You can't remove a dam part way	
10/12/2021 11:33	Seminole		No	Yes		2-5 times		Canoeing / Kayaking	Complete restoration to the natural state of the waterway. Until I had seen the area on a kayaking trip, I had not appreciated the actual issue.	Florida is losing so much in natural and water resources, preservation and restoration of the natural flow of the Ocklawaha River is essential for future health of the natural habitats in that area.	Not completing the restoration of the Oklawaha River would result in continued degradation of the wild natural assets that still exist.	No. Full restoration is essential to reversing the damage that has already been done.	
10/12/2021 11:34	Lake		No	Yes			More than 5 times	Wildlife viewing	Allow it to disintegrate and system to return to its natural condition.	The historical flows and systems which would help protect Silver Springs, Harris Chain of Lakes and even St. Johns River.	We will poor millions of taxpayers $$$ into maintaining a failing dam system that doesn't function. Even fishing has deteriorated on this system.	No	
10/12/2021 11:41	Lee		Yes	Yes	2-5 times			Canoeing / Kayaking Wildlife viewing	Restore the natural flow of the river to help wildlife and ecotourism. The dam has created environmental harm in the Florida Riverway.	the potential flood issue downriver will cause property damage as well as inhibit migration of animals that rely on the river flow. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed riverway.	Ecotourism is one of the largest growing industries as people who desire more natural spaces. Covid has shown that Florida residents, as well as tourists, wish to see the beautiful aspects of wild Florida. Manatees are being considered as a candidate for the endangered list again and other local wildlife need places to migrate and call home. If the dam fails there will be massive property damage downstream, as a Floridian I would not like to see million spent in making repairs to a structure that goes against what makes Florida so special.
10/12/2021 11:42	Duval		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Other: camping	Continue to maintain it , it is the best lake in the southeast USA.	Look at the true history it out their of all to read.	The lost of your civilization as we know it !!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!	NO !!!!!!!!!!!!!!!!!!!!!!!!!!!!	Look at the water quality in rodman as to the rest of the state.
10/12/2021 11:43	Marion		No	No					Dismantle the dam and restore the original flow.	It would benefit manatees and countless other wildlife/local ecosystems.			
10/12/2021 11:54	Hillsborough		No	No					Remove the dam and restore the free flow of the Ocklawaha River				
10/12/2021 12:11	Pinellas		No	No					Remove the dam and reservoir and let the Oklawaha River return to its original, unfettered, flow.	The dam was built as a component of the Cross-Florida Barge Canal, which was never completed. It is not performing as originally planned (as a component of the canal) and should accordingly be removed.	The continued erosion of the natural habitat along and around the river.	A partial restoration of the river's flow.	
10/12/2021 12:13	Putnam		No	Yes			More than 5 times	Canoeing / Kayaking Wildlife viewing	Remove the dam and restore the flow to the Ocklawaha River.	The site can so much more than just a fishing spot. The natural flow of the river will be restored and with that will come improved movement of aquatic animals and a regeneration of the natural aquatic system. Any money spent on maintaining the dam is money wasted.	If the dam is not removed the County and Silver Springs would lose out on the economic benefits of restoration. Furthermore, water quality would continue to decline and ecological services would continue to be denied to wildlife and downstream communities.	The only satisfactory scenario is removing the 50 year-old dam.	
10/12/2021 12:20	Hernando		No	Yes	2-5 times			Fishing Fishing (shoreline/structure) Canoeing / Kayaking Boating Wildlife viewing	I would like the maintenance provided on it it is necessary to make it sustainable. It is a valuable asset to the area environmentally but also economically. As typical of government agencies and government they do not spend the money to do maintenance on their facilities. This facility should be upgraded and maintained to provide for the amazing environmental impact it has but also the economic impact	Rodman Reservoir is not a dying, weed-choked reservoir; it is a complex ecosystem that supports a wide variety of native plants and wildlife, including many species that are currently threatened in Florida. St. Johns River Water Management District documented over 12 different habitat types within the Rodman Reservoir Complex, more habitats than the Oklawaha River. The Rodman Reservoir Complex includes over a mile of river and flood plain swamp and there is now a greater number of species inhabiting the Rodman Reservoir area than before impoundment. St. Johns River Water Management District also found that it is highly unlikely that sediment inflows are a significant problem in retaining Rodman reservoir. It is estimated that it would take about 8,000 years to fill in the reservoir. (St. Johns River Water Management District Environmental Studies Concerning Four Alternatives for Rodman reservoir and The Oklawaha River, Volume 20 - Pages 17,18,19,77,94 & Appendix A; Volume 1D Page 137) Rodman Reservoir supports over twice as many bird species and greater densities of birds than the Oklawaha River. St. Johns River Water Management District documented 115 bird species at the Rodman Reservoir Complex versus 45 bird species on the Oklawaha River. Of the 45 species found along the river only 8 species had a higher relative abundance on the river than the reservoir complex and only 4 species were found only on the Oklawaha River. Of the 115 species found at the Rodman reservoir Complex, 74 species were observed only at the Rodman Reservoir Complex. (St. Johns River Water Management District Environmental Studies Concerning Four Alternatives for Rodman Reservoir and The Oklawaha River Volume a 1-0 - Pages 33, 34, 35, 36, 37, & 38) Rodman Reservoir does not block the upstream movement of manatees and could be used more safely by manatees than a restored Oklawaha River. St. Johns River Water Management District documented in 1994 the upstream and downstream movement of manatees through Buckman Lock studies have repeatedly reported upstream and downstream movement of manatees through the locks, but a bubble device is now used in the lock to discourage manatee use. Rodman Reservoir with its aquatic plants offers manatees excellent habitat, but some are concerned that the lock and dam pose unacceptable risk. Since 1976 there have been 1 0 manatee mortalities recorded in the Rodman area but only 7 of the deaths were attributed to the operation of either Rodman	The environmental impact it will have on the many species that rely on the reservoir.	No there's not you can't partially take the damn hold obviously I called myself a true environmentalist because my folks on the resort and a restaurant and we relied on the environment for our survival. These individuals that want to rip these dams out and tear down other structures have a personal Agenda that isn't back by the true facts. The damn needs to remain intact.	The bottom line is the reservoir creates a sanctuary for many species of fish,birds and other wildlife. Also has a great impact for the environmental uses that it provides for individuals. The economic impact is also great for the area.
10/12/2021 12:26	Orange		No	No					Restore the Ocklawaha river, breach the Rodman dam. The dam is damaging the water quality and wildlife of the area.	Need to restore manatee and fish populations, and give manatees access to warm waters. And the cost of maintaining this old dam is much too high.	Water quality declines further /more issues with blue green algae /more loss of fish. Plus taxpayers money wasted in maintaining the old dam, which cannot hold up against the way storms are now (stronger, faster).	Possibly a temporary drawdown, until dam can be breached fully. Something better than nothing. Some fish species and manatees saved at least.	
10/12/2021 12:26	Marion		No	Yes	1 time	2-5 times	More than 5 times	Fishing	Take the dam down and let natural flow happen as it was intended. Fill in the canal.cross Florida canal was cancelled.	Cross Florida canal was canned. Return the Oklawaha to its complete natural state. Better for all and manatees too.	Extinction of the Manatees and our natural river flow. Lets get the man made stuff out of the scope for a true natural Florida.	No. People will still be able to fish only naturally and not by having a man made fishing hole or trapped area.	Try doing the right course of action for a change and return our natural resources back to nature.
10/12/2021 12:28	Hillsborough		No	No					restoration of the Ocklawaha River by breaching the dam and draining the Rodman Reservoir.	Migratory fish including the Striped Bass, American shad, American eel, and the critically Endangered Atlantic Sturgeon and Shortnose Sturgeon would once again have open access to the Ocklawaha system if the dam is breached. At least 150 million gallons a day of additional natural flow, and potentially much more, would be restored to the Lower St. Johns River, improving water quality and increasing resiliency of the entire St Johns/Ocklawaha River system by impeding the salt water intrusion resulting from sea level rise. The large expenditures required for herbicide treatments to control the growth of invasive aquatic weeds and to conduct other ongoing maintenance needs, including periodic drawdowns, in a futile attempt to maintain water quality and recreational access in the stagnant waters of the Reservoir, would become unnecessary. Three river systems - the Ocklawaha, Silver and St. Johns - would experience significant environmental improvement from restoration.	The broad array of environmental benefits to native flora and fauna, including many imperiled species, that would result from restoration would not be possible. Thousands of acres of submerged aquatic plant communities would be unable to regenerate in a restored river channel and in the re-emerged spring run streams, and 7,500 acres of floodplain forest would not be restored. The Reservoir would continue to be a barrier to movement by native wildlife and plant life along the length of the COD Corridor, and compromise the value of Florida's investments in conserving lands like the Etonian Creek State Forest, and approved Florida Forever projects.	No. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration.	
10/12/2021 12:30	Marion		No	No					Breach the dam and let the river run freely.	Other local rivers have been restored and are doing much better.	continuing pollution and algae growth, invasives, lack of free passage for manatees	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	
10/12/2021 12:33	Pinellas		No	Yes		1 time		Wildlife viewing Other: Ta see the remains of the infamous Cross Florida Barge Canal infrastructure.	I would like to see it permanently removed.	information that dam is covering up springs and obstructing movement of water and wildlife	More fish will die, more manatees lose habitat, further degradation of water resources	No.	Doesn't look too well maintained
10/12/2021 12:35	Flagler		No	No					Save the Manatees by clearing up these places.	Over abundance of Manatee deaths.	Higher levels of Manatee deaths.	No!	Please institute a plan for saving the Manatees and other aquatic wildlife.
10/12/2021 12:38	Martin		No	Yes				Wildlife viewing	I am generally in favor of removing dams, but in particular dams that impede migration of endangered species and change natural flowways for critical natural systems water supply should be removed and conditions that preceded their mistaken installation should be reestablished.	The Florida barge canal was a mistake, and the engineering done to establish that effort must be removed in order to reestablish natural and beneficial natural systems hydrology.	That development and agriculture will be too well established and the flow-ways will never be reconnected.	no	
10/12/2021 12:38	Marion		Yes	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / Kayaking Boating Wildlife viewing	The dam needs to be removed. Either open the doors so the river can go to normal levels, or reroute the river so it can flow normally.	As a fisherman, I can tell you first hand that the variety and sizes of fish above the dam have GREATLY decreased. I can't even get my boat on the river due to all of the water lettuce! Pesticides that are used to kill aquatics Cost an unhealthy amount of money - its just not sustainable, and only needed when the dam is closed. I'm sure it's soaking into our ground water...into my well. Yo will see 20ks the amount of people enjoying the river during draw downs than any other time. This dam is crippling our outdoor lifestyle.	have read scientific reports that the structure is compromised due to its age and not being maintained. I am very concerned about this, as I drive over it everyday. I am pretty upset that my boat can't get through the water lettuce right outside my house. This is such a waste. I cant even shore fish due to the loss of bank and the muck. The fish we do catch are not the same as even 10 years ago. The variety loss is astounding, as is the size - we have a treasure here that we have been killing for no good reason at all.	Just open the dam. Let the water levels return to normal and let the river run free.	The dam is a complete waste of taxes and resources.
10/12/2021 12:41	Dade		No	No					Remove all obstacles to the restored flow of the Ocklawaha River.	Sierra Club emails.	The river route for fish, manatees, and boaters will remain unnecessarily blocked.	No, although I recognize that river restoration cannot be done overnight.	
10/12/2021 12:48	Orange		No	No					Remove it- let the water flow as it should	Here are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	This is a critical time with our environment and 2021 we had record numbers of manatee deaths. We need to reconnect the springs and take care of the environment for the fish and manatees	No	
10/12/2021 12:53	Palm Beach		No	No					restore the natural water ways	The natural course was always the proper decision, how can uninformed lawmakers think they know more than good ole mother nature. It's happening all over the world. If this project can be reversed, the by all means correct the wrong. Learn from our mistakes.	same as above, uninformed lawmakers think they know more than they actually do, leave nature alone	as stated earlier, the natural world is irreplaceable, why screw with it. We are already seeing huge mistakes made by man, dead coral, algae blooms, climate extremes. It's in our face, why does no one see it?	Think before we bulldoze for gods sake
10/12/2021 12:58	Seminole		No	No					Breaching of the Kirkman Dam and draining of the Rodman Reservoir to restore the free flow of the Ocklawaha River.	Restoration of the floodplain and corresponding return of native plant and animal life. Allow movement of plants and animals along the Ocoseka to Ocala Wildlife Corridor. Millions of dollars that will be saved by not having to do repairs to the dam.	The environmental benefits from restoration and removal would not be realized continuing the issues that are being fixed now.	No, there is no compromise would achieve the environmental and economic benefits breaching the dam and draining the reservoir.	
10/12/2021 12:59	Orange		No	No					I'd like to see the restoration of the Ocklawaha to a free-flowing river by breaching the Rodman/Kirkpatrick Dam. Each day we delay results in additional environmental damage.	There would be immense benefit to countless animal and plant species. There are endangered plant species which would gain new areas in which to expand. Animal species such as the manatee, striped bass, American shad, and others, would regain open access to historic migratory routes. Terrestrial animals would benefit from the resulting connectivity of an intact wildlife corridor. Also, as much as some people hate to admit it, we are a part of the environment and depend on fresh water and air for our survival. With so much of the state falling under development pressure, we need to restore and preserve as much of the natural systems as possible. The restoration of the Ocklawaha is also supported by economic analyses conducted by researchers at the University of Florida which demonstrate the economic impact from eco-tourists who use the natural portions of the Ocklawaha River is twice that of the anglers and boaters using the Rodman Reservoir, and annual use of the Reservoir's recreation sites has been on a downward trend since records began in 2004 as water quality and fish production have continued to decline each year. The restoration of the Ocklawaha to a free-flowing river system is the best thing to do for the environment which we all depend upon for our survival and the quality of life we desire.	Climate change is the biggest threat to life as we know it. We must begin immediately to reverse the course we are on and restore the natural systems that ameliorate the effects of over-development and subsequent loss of canopy. The restoration of 7500 acres of floodplain forest is an opportunity not to be missed.	No. The dam should never have been built and there is no way to justify the $14 million price tag (estimated over 15 years ago) for repairing it. There is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration of the Ocklawaha River to a free-flowing system.	
10/12/2021 12:59	Outside of state / other	Virginia Beach, VA	No	No					Make a safe place for the manatees.	They are endangered	We will lose them	N/a	N/a
10/12/2021 13:11	Marion		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / Kayaking Wildlife viewing	Removed or breached so water can flow	Barge canal was aborted dam no longer needed Free the several springs that are made inert by dam Bring wildlife bio diversity back and gives manatees and native species routes for traveling SO some environmental groups in Florida agree. I belong to several of these group Money is wasted on repairs that will only cause further damage to our delicate Florida environment	The reverse of the above and degradation of our water	Breaching instead of removing	Thank for your concern
10/12/2021 13:12	Alachua		No	Yes			2-5 times	Canoeing / Kayaking Boating Wildlife viewing	Tear dot the dam !	Bring the environment back to the way God created it.	Wildlife will suffer	No	
10/12/2021 13:19	Marion		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / Kayaking Wildlife viewing	Remove the dam, restore historic Ocklawaha channel.	50 years observation of river becoming an increasingly degraded, snag-filled, weedy pool.	Continued degrading of the river, more chemical "management" of vegetation.	Not likely	

10/12/2021 13:32	Dade		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	20 lost springs and Silver Springs ecosystem are restored	Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As someone who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. This exciting restoration will improve water quality and flow by generating an additional 150 million+ gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration
10/12/2021 13:39	Putnam		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Hunting Wildlife viewing	Leave it as is.	The fishing, hunting, wildlife, camping and recreation available.	That it would disappear amid shopping centers and housing developments and you wouldn't be able to have access to it.	None	If it isn't broken don't try to fix it!
10/12/2021 14:06	Dade		No	Yes	1 time	1 time	1 time	Canoeing / kayaking Boating Wildlife viewing	For it to be taken away.	Wildlife and the ecosystem suffer from this unnatural infrastructure. It was a big mistake to begin with.	That the rivers does not flow freely and the surrounding people are disappointed with leadership.	No.	
10/12/2021 14:07	Hernando		No	Yes	1 time			Wildlife viewing	Keep the dam just as it is. No sense destroying the ecosystem that was created when the dam was built.	No sense destroying the ecosystem that was created when the dam was built, plus it would be a huge waste of money.	Removing the dam would be a Colossal waste of money and wildlife habitat.	Nope.	
10/12/2021 14:09	Volusia		No	Yes		2-5 times		Wildlife viewing Other: Annual birding field trips	Restored to pre Florida Barge Canal days	Aging and upkeep of maintaining that pre historic relic and opening up the springs that feed the St Joshn's River	Diverting state funds to "benefit" a few	No, not really, considering it is long past time to put this issue to bed. I rallied in early 90's, and here we are hashing the same thing, pointing out the environmentally destructive project, ill conceived a half century ago and beyond foolish then and now.	
10/12/2021 14:16	Outside of state / other	Utah	No	Yes		2-5 times		Wildlife viewing	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/12/2021 14:17	Putnam		No	Yes	1 time	2-5 times	More than 5 times	Other	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. 10/12/2021 14:21	Palm Beach		No	No					Yes	The work was never completed and it's not in our environments best interest to work against nature	Who is responsible for the damage done in order for it to be restored to it original form n	Hold people responsible	
10/12/2021 14:41	Duval		No	No					knock down dam to restore water to river and hopefully decrease salinization.				
10/12/2021 14:48	Dade		No	Yes		1 time		Canoeing / kayaking	Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	- No. Breaching the dam is 50 years overdue.	In this state we rely on a healthy eco-system and natural environment for our livlihood, drinking water and storm damage mitigation
10/12/2021 15:01	Orange		No	No					I would like to see the reservoir drained, the dam removed and the Oklawaha River and its historic floodplain restored to its natural condition.	The dam and reservoir never fulfilled their original mission, supporting the Cross Florida Barge Canal. All taxpayers in the District have been paying for a dam that doesn't improve water quality or availability and benefits only a small group (would this small group still call for repairing the dam and maintaining the reservoir if a special taxing district was created and they had to pay 100% of the cost of repair and maintenance as well as maintaining flood damage liability should the dam fail). In addition the restoration of the free-flowing river, the largest tributary of the St. Johns, would immensely benefit the environment and wildlife (manatees, fish, birds, animals and plants) and the quality and quantity of the water of the St. Johns River and Water Management District. The dam has exceeded its lifespan and is a threat to life and property of those living downstream.	The continued economic burden to the District, the continued damage to the environment, the continued degradation of the water quality and quantity of the Oklawaha and St. Johns rivers and the threat to life and property downstream should the aged dam fail.	NO!	For the greater good of the St. Johns Water Management District and the environment the Kirkpatrick Dam and Rodman Reservoir must be removed and the Oklawaha River be restored to its natural, free-flowing state. Manatees, Sturgeon, shad, bass, eels... need unfettered unimpeded open access to the Oklawaha and its springs. The taxpayers of the St. Johns River Water Management District should no longer be burdened financially with the cost of repairing and maintaining this obsolete structure as well as having the liability hanging over our heads should the dam fail. The benefit to the environment goes far beyond the flooded lands drowning under the reservoir as the restoration of the river, springs, forest, floodplain... will restore critical habitats and wildlife corridors for plants and animals throughout the state.
10/12/2021 15:08	Leon		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing Other: Botanizing	I would like to see the system restored to a more natural ecosystem reflective of the historic lower Ocklawaha River , which includes removal of the Kirkpatrick Dam.	The current Rodman Reservoir/Kirkpatrick Dam system is not only expensive to maintain, from both a financial and ecological perspective, but it is not a sustainable system. Restoring the Ocklawaha River will require initial input of finances and expertise, but that work will result in a sustainable and resilient riverine ecosystem.	My primary concern is that a realistic restoration opportunity that would be beneficial to the St Johns River ecosystem would again be overlooked. One major concern is increasing negative ecological impact due to herbicide treatment necessary to "maintain" this artificial waterway. This kills native species (in addition to the invasive exotic species), impacting the myriad species that are dependent upon those primary producers, increases the detrital load to the system which results in a higher nutrient level, and sets up the system for increased cover by invasive species.	Various analyses and scenarios have been considered through the years, including those in an application from FDEP in the 1990's for the removal of the dam. One of those scenarios was a partial removal of the dam which would allow for some water flow management, should it be necessary under severe storm conditions. However, I do not know if that scenario is still viable given what we have learned of climate change since then, the structural condition of the dam, and the increasing pressure on aquatic species including the West Indian manatee.	Please do the right thing - RESTORE THE OKLAWAHA!
10/12/2021 15:09	Putnam		No	Yes		2-5 times		Canoeing / kayaking Boating Wildlife viewing Other: hiking trails					
10/12/2021 15:15	Palm Beach		No	No					Yes I think it's extremely important to preserve natural spaces & riverine hydrology in Florida & throughout the planet.	Comparable case studies and best learned practices from all stakeholders perspectives with the focus on maintaining natures integrity	NA	NA	NA
10/12/2021 15:22	Putnam		No	Yes	More than 5 times		More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing Other	Keep it the same	All of the wildlife is thriving	Significant loss of habitat for wildlife	No	
10/12/2021 15:23	Broward		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every additional day the dam and reservoir remain in place results in additional environmental degradation.	The need for Clean water, clean air and savings are my three concerns. As our population increases, the need for clean air and water increases. Removing the dam is a cost effective measure to help restore a damaged eco system to support our staggering environmental quality needs. Thousands of acres of the lower Ocklawaha's historic forested floodplain, 20 freshwater springs, and many miles of natural river channel would be restored. Migratory fish including the Striped Bass, American shad, American eel, and the critically Endangered Atlantic Sturgeon and Shortnose Sturgeon would once again have open access to the Ocklawaha system. At least 150 million gallons a day of additional natural flow, and potentially much more, would be restored to the Lower St. Johns River, improving water quality and increasing resiliency of the entire St Johns/Ocklawaha River system by impeding the salt water intrusion resulting from sea level rise. An estimated $14 Million in dam repairs, measured in 2006 dollars, would be saved by avoiding repairs to a dam that has exceeded its life expectancy and never fulfilled the purpose for its construction. The cost of and environmental hazards of herbicide treatments to control the growth of invasive aquatic weeds and to conduct ongoing maintenance needs in a futile attempt to maintain water quality and recreational access in the stagnant waters of the Reservoir would end. $57 million in potential flood damage costs for downstream areas around the community of Welaka would be avoided in the event of a dam failure.	Keeping the dam means loss of fresh water, native plants and animals. It would lead to increased pollution. Increased recreational use would not occur. The state would continue to pour good money into a failed system missing an opportunity to improve quality of life and environment at an affordable price. Taxpayers will perpetually be on the hook for repair and maintenance of the dam and Reservoir.	No. There is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration. We see all around us the effects of climate change. Here is an opportunity for us to make a difference.	
10/12/2021 15:30	Outside of state / other	North Carolina	No	No					I would like to see a breach in the dam to restore the Ocklawaha River, providing more water space for manatees.	I spend about 3 months in Florida every year to see wildlife, primarily kayaking. I have seen so much damage in the Keys to manatee habitat that I believe that as much as possible should be restored.	Continued reduction of manatee population.	Yes, but it's hardly likely to happen.	As kayaking and paddleboarding increase in popularity, preserving natural areas for wildlife viewing can only help in bringing in more visitors and their cash.
10/12/2021 15:30	Bradford		No	Yes			More than 5 times	Fishing Canoeing / kayaking	Remove the dam and the raceway. Dredge it out to the level of the bottom of the river, make islands with the tailings	When I was a kid I went to Silver Springs, it was full of all kinds of fish. Went there a year ago and didn't see hardly any. They migrate up the river but now they can't.	I wouldn't be surprised.		
10/12/2021 15:37	Putnam		Yes	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing	I would like to see the continuation of the buckman locks and the kirkpatrick dam. I would like to see the repairs that are needed for the damn to be done and kept in place to continue the Rodman Reservoir at its current state. I would like to see the boat ramps fixed and the road to Kenwood Landing paved with the camp ground at kenwood landing reopened.	I own a bait and tackle shop up the road from kenwood landing as the narvsir is my primary source of income for my business. I meet hundreds of visitors from out of state coming down to fish rodman reservoir. and hundreds of florida locals that stop by my shop going to go fishing at rodman.	I have 2 big concerns if the dam was removed. my biggest concern would be the wild life loss. the habitat that has been created that so many animals now call home would be gone in turn would be the loss of wildlife in the area. if it was removed I would lose my bussiness I would lose everything that I have worked hard to get. im not sure what I would do I would lose everything!!!!! it would be a total loss of revenue for me and this community	I personally do not see any good outcome by removing the dam.	
10/12/2021 16:05	Bradford		No	Yes		2-5 times		Fishing Wildlife viewing	let the manatees and migratory fish back in!				
10/12/2021 16:09	St Johns		No	Yes				Fishing (shoreline/structure) Wildlife viewing Other: Haven't visited in 20+ years	I would like to see the dam eliminated in order to provide unlimited access for manatees and other wildlife.	Current data suggests that the manatee population is dwindling and the main cause is starvation. Removing the dam would provide more possibility for survival by allowing the manatees access to vegetation.	I'm concerned that the manatee population will be unable to recover and we may not have these creatures in the future.		vegetation restoration efforts in the waterways might help or eliminating the use of all lawn and agricultural fertilizers because they runoff into the waterways and cause harmful algae blooms, which cover the surface, consume oxygen, and make it impossible for sunlight to reach grasses.
10/12/2021 16:14	Hernando		No	Yes		2-5 times		Fishing	LEAVE IT ALONE!!!!!!				
10/12/2021 16:16	Sumter		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Wildlife viewing	Leave it as it is now. Beautiful wild life, great fishing and a lot more manatees than in the past.	The manatees need the food sources that are now available in Rodman.	There would be a loss of manatee and other wildlife habitats and the animals themselves.	I would have to know what that alternative is.	Rodman is a beautiful resource as it is now. Please don't change it's character.
10/12/2021 16:22	Outside of state / other	Connecticut	No	Yes		More than 5 times		Fishing Boating Wildlife viewing	Please leave as is. Rodman Reservoir provides life sustaining vegetation to help the manatee population.	Seeing the manatees thrive	Devastation of the manatee population	No	Rodman Reservoir is vital to the ecology of the ST John's river
10/12/2021 16:23	St Johns		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing	Do nothing. It supports a huge eco system of wildlife and serves as a place for manatees to feed since all the grass is not available in the Saint Johns river.	All the wildlife that will be destroyed as well as all the water that is filtered by the negotiation in the lake will pollute the Saint Johns river	Changing the waterway and all the structure and recreation it orovides	No leave the dam alone	
10/12/2021 16:25	Clay		No	Yes			2-5 times	Fishing Fishing (shoreline/structure) Boating	Leave it as is. It has been there so long that the environment has settled and is comfortable with what is currently there. By changing rodman and tearing down the dam would cause a huge environmental impact on vegetation, wildlife, and humid ability to use this area. Please leave the area as is.	I have read about some old Florida GFC studies, I have also read about some new FWC studies that support what I said above, though at this time I cannot cite them chapter and verse for you. I'll answer your question with a question, how long has The rodman dam been in place? I know that it has been there for as far back as I can remember and I moved to Northeast Florida in 1981. I know that there have been bass tournaments as well as other recreational doings on the rodman reservoir yearly for a very very long time. I also know and currently have friends that use the area substantially more than I do on a monthly and yearly basis. Again by changing the dam, there will be a huge environmental impact including impacts to vegetation, wildlife, and human use. What would be the impact of fish that uses reservoir as a safe haven?	My biggest concern? Definitely to the environment! I personally think that if the state of Florida is seriously considering doing this, that a current environmental impact study of at least a minimum of 24 months should be conducted regardless of what the court of public opinion says. But honestly think that you will find with an environmental impact study that removal of the dam will cause a great environmental impact to the area and definitely not in a good way.	I'm not sure of any other scenario that could be achieved. According to some of those that are very very loud and voicress about removing the dam that is the only way to go. If there is another scenario please present it.	
10/12/2021 16:30	Seminole		No	No									
10/12/2021 16:33	Duval		No	No					I would like to see the dam gone so that rivers can be restored and water can move where it's supposed to move. This will help connect springs and ecosystems that have been greatly changed for the worse since this dam has been in place.	So much supports my position on getting rid of this dam. The manatees can find more springs to go to in the winter! Our manatee population is decreasing at an alarming rate and the cold winters don't help. Springs are SO IMPORTANT to manatees. Having the natural flow and restoration of water through the St. John's river and to springs is also extremely important. For plants, animals, and for people. It will create healthier water and healthier habitats.	That so many plants and animals continue to suffer from a dam that is purposeless and blocking the natural flow of water. That people too will suffer from a breach of the dam when it happens, cause it very will could given its state of disrepair.	No just freakin do it already. You have the ability to do so. We're currently restoring natural water flow in the Everglades why the heck can't we do this too? It's a dam that's old, that's dangerous, that is purposeless, that does nothing but harm to every living thing. It needs to go.	Please remove this dam! Help the manatees. Thank you
10/12/2021 16:35	Seminole		No	Yes		2-5 times		Fishing	Keep it open		Lots of people fish it and I love fishing it when on the St. John's river.	It would keep lots of people out of rodman	
10/12/2021 16:36	Alachua		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Boating	I would like for it to stay the same	It is a great fishery may be the best in the state	It would be an devistating loss of an awesome Florida water way	No! No! No!	This reservoir is a very established ecosystem for eagles and all other type of animals. Save Rodman
10/12/2021 16:39	Pinellas		No	No					I would like to see the dam opened and let the rivers flow as they should.	The water is needed downstream.	That we would lose our chance to restore the rivers for water and for recreational use. But it has to be done in the best environmental ways.	I don't know.	
10/12/2021 16:41	Duval		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	I would like to see the dam breached and the natural flow of the Ocklawaha river restored	The negative effects of the dam on critical wildlife species and a fragile ecosystem should be enough to convince anyone but add to that the actual benefits to these animals and landscapes by removing a very expensive and dangerously outdated dam, it's a no-brainer. If you think fishing is the most important piece of this issue then consider the benefits to the Ocklawaha, the springs, and other river systems that are impacted by the dam. Lots of wonderful places to fish sure sounds better than one place in my opinion.	The continued economic burden to the District, the continued damage to the environment, the continued degradation of the water quality and quantity of the Oklawaha and St. Johns rivers and the threat to life and property downstream should the aged dam fail.	Our manatee population would be at risk, the health and safety of our waterways would be at risk, we'd be throwing more money at a defunct dam system, and it sends a terrible message to the citizens of Florida who care very deeply about the legacy we leave future generations.	
10/12/2021 16:44	Outside of state / other	Saint Louis, Missouri	No	Yes		1 time	More than 5 times	Fishing Wildlife viewing	It's a great fishery and a wildlife sanctuary. The many birds and manatees are a sight to behold. To me, although smaller, it's in the same class as Okeechobee and The Everglades.	Where will the hundreds of manatees go to survive?	Aside from the impact on the wildlife, the impact on the businesses and individuals whose livelihoods depend in large measure on Rodman.	None I can think of.	How can it be possible that the benefits of losing the lake are comparable in any way to a person with a rational point of view?
10/12/2021 16:48	Outside of state / other	Kingsland Georgia	No	Yes	1 time	2-5 times	More than 5 times	Fishing					
10/12/2021 16:56	Outside of state / other	South Carolina	No	Yes		2-5 times		Fishing Wildlife viewing	Please leave it alone. It's a wonderful natural resource for all the creatures that live there.	Anyone who spends any time on the reservoir understands all of the diverse wildlife that lives there. Anything disturbing the environment that currently exists is doing a great disservice.	Destruction of a beautiful ecosystem.	No	
10/12/2021 17:04	Orange		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	I support restoration of the Ocklawaha River by breaching the dam and draining the Rodman Reservoir.	7,500 acres of the lower Ocklawaha's historic forested floodplain, 20 freshwater springs, and many miles of natural river channel that were drowned as a result of dam construction would be restored.	Residents and business owners in areas immediately downstream of the dam would continue to be under threat in the event of failure of a dam that has never, and will never, satisfy the purpose of its construction.	No. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration.	
10/12/2021 17:14	Duval		No	Yes		2-5 times		Fishing	Leave it as it is. Great fishing and nature preserve.	Flow from Oklawaha helps prevent pollution.	Wildlife decline, injury to natural resources and conservation.	It needs to be left alone.	I hope to be fishing there for years to come.
10/12/2021 17:14	Clay		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing	Remain in tact	Wildlife attraction	Lots of natural wild life disappearing including the many manatees-large mouth bass fishing which supports the local economy would fade big time-I have fished the lake since inception in 1969	Shut down lock usage	Many small businesses involved in fishing/camping activities would go out of business
10/12/2021 17:14	Alachua		No	Yes			More than 5 times	Fishing Boating Wildlife viewing	Leave it alone.	It supports multiple species of terrestrial and aquatic flora/fauna including manatees, black bear, and bald eagles, just to name a few important species. Of course, it has also become one of the premier large mouth bass fisheries in the nation. Recreational opportunities on Rodman Lake abound.	Damn removal will create environmental problems--it will not remedy anything.	My scenario costs the taxpayers nothing. My scenario will not potentially create an environmental disaster for years to come. Rodman Reservoir is one of the great environmental sanctuaries in the state of Florida. The best thing that can be done to protect this sanctuary is both the easiest and the cheapest (no costs to taxpayers) solution. LEAVE IT ALONE. Please don't try to fix something that's not broken.	
10/12/2021 17:15	Duval		No	Yes	2-5 times			Fishing Boating Hunting Wildlife viewing	Nothing, I love it just the way it is	Growing up going there to fish and hunt with my dad	The entire ecosystem is destroyed by draining it and killing the only source of water hyacinths for manatees from south of Lake Georgia to Mayport	No	

10/12/2021 17:18	Alachua		No	Yes			1 time	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs.	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm-water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/12/2021 17:24	St Johns		No	Yes	More than 5 times		Fishing Boating		Nothing, I would like to see it left as is.	Its one of the premier bass fishing lakes in country.	Continued loss of our fisheries; especially with the continued over-spraying of grass in the St Johns for private gain.	No	
10/12/2021 17:52	Alachua		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Hunting Wildlife viewing	Keep it !!! It's a great resource for the area. It brings in lots of money to the local economy and quite a few people fish Rodman to feed their family	Lots of wildlife including nesting Bald Eagles Great fishing and Kayaking	With all the issues Florida is having with invasive vegetation it would be a terrible loss of a waterway that is manageable because of the dam . Rodman is also a great source of water if it was ever needed in an emergency.	No. Keep the reservoir as is !!!	It is sad that Rodman is still a political issue rather than standing on its own as a very established ecosystem. It's a great source of water during droughts and over 60 times the useable water recreational area.
10/12/2021 18:09	Polk		No	Yes			1 time	Wildlife viewing	I want to see the restoration of free-flowing water from the Ocklawaha River flowing through the Rodman/Kirkpatrick Dam become reality by breaching the outdated unsafe Rodman/Kirkpatrick Dam.	A restored natural river channel, many fresh water springs, floodplain wetlands and forested floodplains all brought back to an environmentally positive equilibrium with taxpayer savings and economic advantages.	Water quality. Water is life for people, plants, animals and our well being. The natural flow of this resource would suffer without supporting this restoration. Maintaining the Rodman/Kirkman Dam as a barrier restricts the flow of plants and animals and allows salt water intrusion from the sea.	No, the environmental and economic benefits of restoring the dam by breaching it clearly override and out weigh any alternatives.	
10/12/2021 18:28	Seminole		No	No									
10/12/2021 18:31	Outside of state / other	Louisville, KY	No	Yes		1 time	More than 5 times	Fishing	Keep them as they are!	While it can be debated about the merits of damming the river in the first place, there is no doubt that Rodman provides a vast new ecosystem for all kinds of wildlife, as well as an incredible place for fishing and recreation. I have seen golden eagles, bald eagles, sand hill crane and many other animals on my annual visits to Rodman.	That we would lose this amazing resource that so many birds, reptiles and fish have come to call home.	No, we must save the dam and lake.	My family and I come to north central Florida a couple of times a year from Kentucky to enjoy freshwater fishing and the outdoors in general. We love the incredibly unique ecosystem that is Rodman Reservoir! There is no good reason to take this comparatively tiny piece of land back to its original state when something new and amazing was created as a byproduct of man's folly.
10/12/2021 18:35	Seminole		No	No					repair the dam and make necessary upgrades	the decline of natural resources if the issue is not dealt with in the near future	more destruction of Florida's natural resources which can be averted	no, not really.	other than the financial considerations, this should not even be up for debate.
10/12/2021 18:49	Outside of state / other	Portland, Maine 04104	No	No					RESTORE the Ocklawaha River for the manatees!!!!! Protection for manatees by providing the warm water habitat that is essential to their survival!!!!! Preferably totally REMOVE the dam's destructive blockage!!!! Or at minimum breach it so as to provide plenty of water flowing through the river system. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow MANATEES to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam!!! Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees!!!	RESTORING rivers and essential warm water winter habitat for manatees!!! Restoring the Ocklawaha River which is at the heart of the Great Florida Riverway, will provide that essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, Florida WILL CAUSE more die-offs in the future!!! 2021's manatee crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees!! The greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. The 217-mile Great Florida Riverway system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit manatees and also communities, economies, and ecosystems all along the Riverway!!! MOST IMPORTANTLY it will RESTORE MANATEE WINTER HABITAT!!!! This restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife!!!	MANATEE EXTINCTION!!!!! The UNCONSCIONABLE EXPLOSIVE INCREASE IN DEATHS OF MANATEES (JUST AS SEEN IN 2021) LEADING TO THEIR INEVITABLE EXTINCTION caused entirely by the detestable human arrogance of Floridians that is due to the state of Florida's CONTINUED SEVERE destruction of manatee habitat with dams, destroying land for agriculture and development and Florida's poisonous discharges from agriculture waste, including pesticides, and from you badly planned and managed waste treatment plants!!!!!!!	NO!!!! I want the manatees' habitat restored AND PROTECTED!!!!! If that dam is not breached manatees will DIE!!!!!!! Manatees are MORE IMPORTANT than whatever "humans" gain from dams!!!!	1 fight for Florida's MANATEES against their human enemies in Florida and Florida's government, just like I fight FOR TOTAL PROTECTION FOR NORTH ATLANTIC RIGHT WHALES in Maine and New England!!!!!!!!!! I fight FOR MANATEES IN FLORIDA, just like I fight AGAINST the arrogant whale killing Maine lobstermen (who have had three decades, 30 years, to go line-free and STOP using old style lobster traps with lines) and who LIE thru their teeth, just like TRUMP LIES!!!! Lobstermen's BIG LIE is that they claim they don't cause right whale deaths---THOUSANDS OF WHALE DEATHS which they HAVE CAUSED FOR DECADES!!!!!! I fight AGAINST Maine's entire congressional delegation and Maine's state government who have ALL WRONGLY sided with the LOATHSOME WHALE KILLING LOBSTERMEN in trying to WEAKEN new NOAA protections!!!!! AND THOSE NEW NOAA PROTECTIONS ARE NOT EVEN STRONG ENOUGH TO SAVE THE FEWER THAN 360 REMAINING RIGHT WHALES FROM EXTINCTION---NEW "PROTECTIONS" ONLY PROPOSING CUTTING BACK THE WHALE DEATHS BY 60%!!!!!!! My motto for Right Whales is SAVE THE WHALES!!! DON'T EAT LOBSTER!!!!! That's right do NOT eat ANY Maine lobster AT ALL until ALL RIGHT WHALES ARE TOTALLY PROTECTED!!!! For Florida I would say, SAVE THE MANATEES, NO MATTER what it costs the humans!!!!!!!!
10/12/2021 19:15	Marion		No	Yes		2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	it's thriving and beautiful the way it is	Go give it a look and it's self explanatory.	Animals lacking food dew to changes of the water way or chemical spraying plants	Yes	
10/12/2021 19:33	Clay		No	Yes		More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / Kayaking Boating Wildlife viewing					
10/12/2021 19:41	Brevard		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking	The dam removed and the ocklawaha returned to it's natural beauty.	The harm that the man made intrusion has created for the ecological well being of the river.	Returning the river back to it's original state should not be an option. My biggest concern is for the manatees being able to navigate the river freely	No. The Fed's built the dam and tax dollars should be made available to remove it at the very least. Please return the river back to it's original state.	Thank you to all of the people behind returning a very important part of Florida back to it's original state.
10/12/2021 20:02	Pinellas		No	No					Remove the dam. Open the water way. Restore the fresh water to the area.	The facts. The pure obvious effects the last of fresh water has had on the states water and fishery. I've seen it first hand and it is devastating.	Continued decline in the water quality	If there is an option that restores the flow of freshwater.	
10/12/2021 20:06	Marion		No	No					Save the manatee!	They are dying!	Extinction!	Maybe	
10/12/2021 20:17	Duval		No	Yes		1 time	Other: Was in the area for a family reunion		Remove the dam and let the Ocklawaha flow freely again. Until the pandemic closed down our bed and breakfast of 16 years, many of our guests were eco-tourists who came to Florida to experience the Real Florida. Many came from outside the USA. They did not come to see a dammed up river with an unhealthy lake behind it. Removing the dam would also help ameliorate the damage caused by the new dredging of the St. Johns at Jacksonville.	Info from the Florida Times-Union and the St. Johns Riverkeeper	In addition to the continuing environmental degradation, I am worried that we might have to spend serious money on ongoing maintenance/repair of the dam itself.	Can't really think of such a scenario.	While the Rodman has a reputation for being a good bass fishing spot, remember (if you are old enough!) that the free flowing Ocklawaha was long famous for bass fishing and canoeing.
10/12/2021 20:28	Bradford		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / Kayaking Boating Wildlife viewing	I would like to see the area become a Wildlife Management area or preserve for protection of all wildlife species and fisheries.	The Rodman Dam and Lake Ocklawaha have provided years of evolved ecosystem in N Central Florida. This Ecosystem supports life cycles for fish, reptiles, amphibians, mammals and birds and provides a vast area to allow all to enjoy these in a natural habitat. Reduction or elimination of the area known as Rodman Reservoir would eliminate hundreds of acres of habitat as well as accessible areas for outdoors enthusiasts to enjoy.	My biggest concern is that reduction of flooded areas and current wildlife habitat would be sought out as developable land and expansion of human inhabitation.	I could support leaving the reservoir and keeping the area as a natural ecosystem without becoming a fully protected wildlife management area.	
10/12/2021 20:33	Seminole		No	No					It is my belief that as much as possible, we need to restore our rivers and streams to their natural state, this would include the Rodman Reservoir and Kirkpatrick Dam.	Natural movement of water benefits our ecology and as a result benefits the public.	Degradation of our waterways will continue.	Is there any scenario short of breathing?	I am not familiar with all the history of this area, but I grew up in Palatka, and remember the beginning of this Soondoggle then touted as a cross-state mi-ami. We know so much more now about the importance of our water resources, and I believe we should rethink and reverse these bad ideas.
10/12/2021 20:43	Alachua		Yes	Yes		2-5 times		Fishing Boating Wildlife viewing	Keep it as is	Provides one of the largest clean, clear pools of water in Florida. One day soon we will need all the clean water we can get.	Seriously reduced opportunities for anglers.	No	The vast majority of "Free the Ocklawaha" people are only repeating what they are told to say. Very few have ever visited --- or will ever visit --- the river or Rodman Reservoir. They are votes without minds of their own. Rodman is as important as any other Florida lake...
10/12/2021 20:45	St Johns		No	No					I would like to see it go away so that the Ocklawaha River can be returned to it's original free flowing state.	I'm a big naturalist. I believe removing the dam and reservoir would provide better habitats for native plants and animals, including manatees who have seen a record amount of deaths this year.	Loss of vital species and the continued expense to tax payers for infrastructure that could cause huge environmental and economical losses if it isn't kept up properly.	no	
10/12/2021 20:54	Gilchrist		No	Yes	1 time	2-5 times	More than 5 times	Fishing Boating Wildlife viewing	Maintaining for optimal performance	Keep damn in place	Jobs for locals and fishing would tank	No	Love coming to fish and enjoy the wildlife
10/12/2021 21:03	Orange		No	Yes			1 time	Other: Camped nearby with my family.	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway	Wouldn't it be wonderful to restore many natural 50 springs and improve the Ocklawaha, Silver and St Johns Rivers! Good for nature, recreation and the economy! Big improvements to water flow for fish, aquatic plants and wildlife! Limits flooding downstream. No more dam to keep repairing.	Now is the time. We wait, we lose federal funds. People want this and its critical for water quality, fish and plant life. We would have many acres of forest restored . . . . Let's not miss this opportunity.	I don't think so. We've waited 50 years. We need to restore nature. We don't need the expense of keeping up a dam that is now aging and harmful for our ecosystem.	Please bring back a great Florida river system and its many springs. This will be a gift to future generations providing clean water at the proper level and lessening salt water intrusion at the coast which will support important estuaries for fish and shellfish. Plus it will improve the wildlife corridor and provide healthy recreation for Floridians and visitors, which will strengthen local economies. Thank you for taking our concerns seriously. This a great opportunity now for Florida to do right by the environment and our citizens.
10/12/2021 21:14	Duval		No						Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam to reunite the natural connection of Silver Springs, the Ocklawaha and the St. Johns River.	The science supports restoration. Studies by federal and state agencies have clearly demonstrated that restoration of a free-flowing, connected system is cost-effective and will provide significant ecological benefits to the St. Johns, Ocklawaha and Silver Rivers as well as Silver Springs. More information to consider: Three rivers, Ocklawaha, Silver and St. Johns, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish migration patterns and essential manatee habitat are reestablished 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of forested floodplain wetlands within the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs	We miss a historic opportunity to stop the ongoing ecological degradation caused by the dam and finally reunite the natural flow of these rivers. Breaching the dam would restore the natural flow of 150 mgd of fresh water, improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. A free-flowing Ocklawaha will reestablish 15,000 acres of forested wetlands and fortify downstream submerged grasses from Welaka to Jacksonville in the St. Johns River that are critical to river health and fish habitat. More information to consider: We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs, and invasive fish like the Blue Tilapia increase. Water quality declines, further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam and restoring the Ocklawaha are 50+ years overdue. Dam safety issues and improved water quality, wildlife habitat, and recreational opportunities can't be ignored or delayed any longer.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.
10/12/2021 21:25	Levy		No	Yes			1 time	Wildlife viewing	to see a complete removal	Pre-white intervention	Too many people	Question about the Eaton/Mud Creek connection to Mud Lake; was it there before the dam? Or was there no connection or swamp between the two originally; hence the separate names? In answering your ques.- A complete drawdown of the Oke may sever this connection thereby making it impossible to see some of the last unlogged cypress. That is all.	
10/12/2021 21:36	St Johns		Yes	Yes	2-5 times			Fishing	Leave it alone.	it's great for wildlife and fishing for thousands.	That the wildlife would be at risk including but not limited to eagles and recreational fishing would be ruined for us. LEAVE THE DANG RESOVIOR ALONE.	NO	Remember we are taxpayers and Voters.
10/12/2021 21:50	Outside of state / other	Middletown NAu	No	No					Keep it clean and save the wildlife		Loss of life		
10/12/2021 21:54	Orange		No	Yes	1 time				Protect the damn and the nature				
10/12/2021 21:55	Duval		No	Yes	2-5 times			Canoeing / kayaking Wildlife viewing	I would like for the dam to remain, due to the ecosystems that live there now that way their home won't be destroyed!!!!!!	Opening up everything to the river puts all the wild life at risk	The wildlife		
10/12/2021 22:05	Putnam		No	Yes	2-5 times			Fishing Wildlife viewing	Left alone. Displacing wildlife and destroying land is ridiculous.	Common sense	Loss of a Florida Landmark as well as what little wild land is left	Leave it alone	Put forth your efforts farther South where over fertilizing and mass water consumption is creating the Bloody algae blooms
10/12/2021 22:36	Alachua		No	Yes		2-5 times	More than 5 times		I would like to see it destroyed so the river can run free.	The drowning of springs and cypress trees	It will never get get to see the springs of the Ocklawaha.	No	
10/12/2021 22:55	Sumter		No	Yes		2-5 times		Fishing	leave it just the way it is	the amount of time spent fishing those waters especially for bass and crappie	if the dam is taken out then the recreation of sport fishing will be gone	no leave the dam in place	
10/12/2021 23:16	Seminole		No	No					Restore its natural ability to sustain what is how it was)				
10/12/2021 23:20	Alachua		No	Yes		2-5 times		Fishing Wildlife viewing	Preserve the reservoir as it is. This is an important wildlife refuge, which has taken years for nature to make as refuge for many important Florida species. Also, it is now a well known refuge for the close to endangered Florida Manatee. This is a place of beauty. The dam serves to preserve the wildlife, allow it flourish, whilst allowing the water systems to become more healthy. Better maintenance of the dam would also help to preserve this natural wilderness.	Just observing the magnitude of the wildlife at the reservoir proves to me that this is nothing short of a nature reserve and as such should be preserved and allowed to flourish.	Removal of the dam would be detrimental to the wildlife sustained by the waters of the reservoir. This would have devastating consequences for the local area - the water would be gone, as would the trees and the wildlife.	Never. The dam should remain in place for the good of the wider community, the locals, the wildlife and the folk who make a living off the reservoir, and have done for generations.	
10/12/2021 23:39	Pinellas		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.
10/13/2021 0:05	Seminole		No	No									
10/13/2021 1:27	Outside of state / other	Albany, California	No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait	
10/13/2021 5:13	Seminole		No	No					BREACH THE DAM!!!!	Fewer and fewer manatees are passing through and a free flowing system would provide a more natural habitat and provide a vast amount of vegetation for them to feed on.	The loss of manatees accessing that area all together.	Finding a way to give them better access to that area.	
10/13/2021 6:10	Marion		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing	I would like to see better boat ramps built and better infrastructure including camping areas for the public added	It's one of the best wildlife habitats in the entire country, and the bass fishing is world-class	That it would be drained and not used	No	Save Rodman!!!!!!!!!
10/13/2021 6:22	Brevard		No	Yes			1 time	Wildlife viewing		It was built for a purpose that no longer exists		No	
10/13/2021 6:30	Gilchrist		No	Yes		1 time	2-5 times	Fishing Canoeing / kayaking Wildlife viewing	Removal of the dam to restore natural water flow	The dam has impaded the river's flow for more than 50 years, blocking the movement of aquatic life and degrading water quality. Manatees in particular would benefit from breaching the dam. More than 940 manatees have died in 2021 alone due to factors such as starvation from seagrass loss. But their greatest long-term threat remains the loss of warmer-water habit such as natural springs, which they need to survive the winter. Connecting a free-flowing Ocklawaha to the St. Johns River would create a migratory route for fish and manatees from the Atlantic Ocean. Manatees would be able to travel to the Ocklawaha's "lost springs" that were submerged due to the dam and Silver Springs, and the environmental health of the whole river system would be improved.	Continued death of ecosystem including plants, birds, fish, and manatees.	Possibly	
10/13/2021 6:31	Marion		No	Yes			2-5 times	Fishing	Demolish the dam and "rehabilitate" the river	Decline of the river environment	Further damage to the environment	No	
10/13/2021 6:50	Marion		No	Yes			2-5 times		Free the Ocklawaha river	Numerous environmental studies and cost to maintain aging structure	Further degradation of the environment	No	The time is NOW.
10/13/2021 7:12	Orange		No	Yes			1 time	Other: Geocaching	Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. In addition, springs are a major tourist draw in Florida, as we have more springs than anywhere else. Restoring the Ocklawaha would restore a bit of that Old Florida, drawing ecotourism to the area.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Whatever out of town tourism the dam brings for fishing would be supplanted by those seeking to view the restored wilderness.	No. Breaching the dam is 50 years overdue.	The dam is a relic of an age where Florida's environment was an afterthought. There is no cross Florida barge canal and therefore no need for the dam. There are plenty of places in Florida to fish, and there is no reason to continue to cause harm to the natural environment because of it. A restored ecosystem would bring other tourists seeking to escape our increasingly urbanized state for a bit of the wilderness.
10/13/2021 7:13	Marion		No	Yes			1 time	Fishing	Remove the dam.	We benefit to nature. The continual degradation.	the continued degredation of the river system. No		
10/13/2021 7:18	Marion		No	Yes		1 time		Other: outing into nature walk	FREE the river/ restore it to it's natural state of being	Nature's God given right to flow unimpeded. It serves no purpose.	Manatees lives	no	Stop wasting tax dollars on this extinct project
10/13/2021 7:20	Seminole		No	No					Breach the damn	Restore natural water flow supporting the rehabbing of 20 springs	Continued destruction of natural habitat including manatee habitat	No, it was a mistake from the beginning	Economically also the best use of tax payer money instead of continued maintenance
10/13/2021 7:20	Orange		No	No					Remove it and let nature do its thing!	Florida just keeps taking more open, green land and building more infrastructure on it. Bring some balance to this lovely place we call home - there seems to be no benefit to the dam anyway. Look at what we've done with the Kissimmee - a bad idea then has cost us billions to fix. Let's move on from this project	Another loss for Florida's natural resources and beauty. Give something back!	Not particularly.	
10/13/2021 7:24	Seminole		No	Yes			1 time			Breached	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.		Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam
10/13/2021 7:27	Leon		No	Yes			1 time	Canoeing / kayaking	I'd like to see the dam breached.	The breach could restore a number of springs, all of which contribute to Florida's outdoor recreation and tourism base.	The loss of up to 20 natural springs.	No, the only solution to spring renewal is a breach.	
10/13/2021 7:58	Marion		No	Yes			2-5 times	Wildlife viewing	The dam needs to be removed	The overall cost of maintaining the dam	increasing costs and damage to the river	no	
10/13/2021 7:59	Marion		No	No					Remove the dam to return the river to it's original state.	The Cross Florida Barge Canal project is dead. This dam was built to provide a section of that canal. Continuing to maintain and repair this vestage of a dead project is a waste of money. If you are going to spend money here, spend it to return the land and water flow to it's original state.	The wildlife which once used this river for survival will continue to be blocked from using it.	Just knock a big hole in the dam. Don't remove it completely. Just remove enough to return the original water flow.	
10/13/2021 8:00	Lake		No	Yes	1 time	More than 5 times	More than 5 times	Canoeing / kayaking Boating	Remove the dam and restore the river to it's natural, historic state.	The purpose of this dam was for a barge canal project that was abandoned fifty years ago. The existence of the reservoir and dam is killing Silver Springs and has buried twenty others.	Florida will lose a beautiful and significant treasure. The pumping of water from the aquifer by Big Water is bad enough, but the existence of the dam exacerbates the decline in fish populations and water quality even more.	No! Remove the dam. Restore the river. Compensate economically impacted business for their lost revenue and relocation costs.	As a boy in the 1960's, I spent many days on the Ocklawaha, camping canoeing, fishing, and boating. I earning my Scouting Merit badges in canoeing and motorboating on the river. I hiked along it's banks and fished it's winding turns. I imagined seeing paddlewheelers from 120 years ago, carrying passengers up and down the river from Palatka. The reservoir is killing the river and it's largest spring, Silver Spring. The benefits of breaching the dam and restoring the Ocklawaha to it's natural course are many, and the cost-to-benefit ratio is much lower than other environmental projects. As we move further into the 21st Century, climate change and population growth will place a premium on a supply of clean fresh Florida water. Removing the dam will only help meet that demand. Restoration of the Ocklawaha will return the river to it's "belle epoque".
10/13/2021 8:06	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Hunting Wildlife viewing	Nothing, leave it in place to keep the beautiful reservoir in place.	Protecting the wildlife and lake.	Losing the wildlife and great fishery for myself, my kids, and grandchildren.	No	Removing the Damn shouldn't even be a question, it's in place doing it's job.
10/13/2021 8:17	Alachua		No	Yes			1 time	Boating	I would like to see the dam removed and the river returned to its natural state.	The natural flows supports native fish and manatee protection.	Further damages to our native Florida environment. The water mgt districts are too political and hand picked by the republican governor. So very sad that people close their eyes to science!	No. Mistakes were made when it was permitted. Stand up and help protect Florida.	
10/13/2021 8:18	Brevard		No	No					Breach the Rodman/Kirkpatrick Dam	Manatees would gain access to much needed habitat at a time when they are experiencing the deadliest year on record. There are also 20 drowned springs that would be restored by this single project making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in FL	Millions of taxpayer's money are unnecessarily spent to repair the dam, hundreds of manatees loose access to warm water habitat	No, breaching this dam is overdue	
10/13/2021 8:19	Lake		No	Yes			More than 5 times	Boating Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor.
10/13/2021 8:26	Hillsborough		No	No					Remove the damn to allow the Ocklawaha to flow freely again.	Manatees and other endangered flora and fauna would once again have access to the Ocklawaha system and the benefits of natural flow. By protecting natural habitats such as this, we also protect Florida's eco-tourism industry.	The reduced quality of natural systems will economically impact surrounding communities and tourism. Reduced tourism affects the lives of all Florida residents.	No compromise would achieve the same impact and benefit of restoration of the natural system.	
10/13/2021 8:29	Marion		No	Yes			1 time	Wildlife viewing	Torn down	The damage the reservoir has done to the environment	More environmental damage	No	
10/13/2021 8:32	Alachua		No	Yes			1 time	Wildlife viewing	I have long believed that the dam should be taken down and the river restored to its previous condition. I believe this now more than ever.	Restoration of the river would be advantageous to wildlife and water supply, and ultimately add opportunities for recreation and tourism, including hiking, wildlife viewing, boating, kayaking/canoeing.	Continued stagnation of the reservoir, further limitations on Florida's clean water supply.	No.	

10/13/2021 8:33	Outside of state / other	Eighty four Pennsylvania	No	Yes	2-5 times			Fishing Fishing (shoreline/structure) Wildlife viewing Other: We stayed at Rodman campground	The dam should remain. The vast area provides habitat for a huge population of wildlife. To lose it would displace the wildlife and wildlife viewers.	Spending just one day on the reservoir we were able to observe manatees gliding freely in the waters and watching the numerous birds including bald eagles was spectacular. Losing such beauty would be a crime.	Loss of habitat for the wildlife. Also the recover time of the entire would take decades. The complete drainage basin would be inaccessible as it will be a muddy swamp for 50 years	Don't know if there is any middle ground.	
10/13/2021 8:34	Putnam		No	Yes	1 time	2-5 times	More than 5 times	Wildlife viewing	Remove the dam.	The reports by St. Johns Water Management and environmentalists over the YEARS.	Reduction of natural habitat and decrease in community participation.	No	
10/13/2021 8:34	Marion		No	Yes		1 time	More than 5 times	Canoeing / kayaking Other: We only use it during drawdowns. It's just a big toilet when the water is high!	Remove it	It's preventing us from enjoying the river and springs . It prevents the natural cleansing of the river and springs.	The river will continue to degrade, our children will never know what the river is supposed to be like.	Open the dam and do a complete draw down then leave it down for five, or 10 years to give people a chance to see what it would be like. then redo this survey.	Doing those things would improve the economy of the small towns along the river by drawing more people to camp canoe and enjoy a natural river experience. Fishing would be better too.
10/13/2021 8:37	Seminole		No	Yes			2-5 times	Fishing Canoeing / kayaking Boating Wildlife viewing	I would like to see it thriving just the way it is	The manatees	You'll be killing the ecosystem	Leaving it alone	
10/13/2021 8:38	Pinellas		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	Clean it up to its natural state God gave us these waters for nature & enjoyment & the beauty Don't take that away	Manatees & other sea life dying	We are losing all our natural springs & wildlife. We need to start now to keep the natural state of the river & beauty for the future. People are destroying what God gave us!		Make Florida beautiful & natural again
10/13/2021 8:40	Leon		No	No					Please breach the dam to help restore the waterway and aid Florida wildlife.	Breaching the dam will help restore habitat for manatees and aid with the quality of Florida springs. As a lifelong Florida resident, visiting a spring (#1) and trying to observe a manatee (#2) are my top recommendations to out-of-state visitors.	Taxpayer money should not be spent to maintain an environmental disaster.	No, breaching the dam should have been done long ago. Please remove the dam to help wildlife, improve water quality, and in the long-term, save money.	Florida springs need help , and breaching the dam will help some of them. Uncovering just the springs that have been covered by the existence of the dam would be worth it. We have just had one of the deadliest years on record for manatees, this will help some manatees. Florida has been having terrible algae blooms, restoring the flow of fresh water will help prevent some of those blooms. These reasons alone make breaching the dam seem like an obvious choice.
10/13/2021 8:42	Alachua		No	Yes			1 time		The dam should be removed.	Environment of the river	Continued environmental destruction.		
10/13/2021 8:46	Orange		No	No					remove the dam and let nature return to normal!!!	i care deeply about the environment overall and as a Floridian, care about our wonderful springs.	drying up springs, hurting flora and fauna	take away the dam!!!	take away the dam!!!
10/13/2021 8:56	Lake		No	Yes			1 time	Other: Nothing	If it returns the Ocklawaha to a navigable condition tear it down.	No	No	No	
10/13/2021 9:02	Alachua		No	Yes			2-5 times	Canoeing / kayaking	It is time to dismantle it and let the river flow naturally.	Robert Knight's Florida Springs Institute reports on the benefits of restoring the river flow.	That this fetid reservoir was allowed to fester for all time. It is truly gross.	No. The dam and reservoir deserve to die.	That stretch of water would be truly magnificent. It is wide, it is clean, and restoring the river flow would provide many opportunities to boat, kayak, paddle board, canoe, etc thus making up the lost revenue from bass fishing. There is plenty of bass fishing elsewhere but the last time I went, there were weeds and logs choking up the spillway. My fishing friends tell me they rarely eat the fish they catch from the reservoir!
10/13/2021 9:06	Orange		No	No					Have the dam removed	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	Environmental stagnation	No	
10/13/2021 9:21	Alachua		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	I would like to see the removal of the Kirkpatrick Dam and the restoration of the area that has been covered by the impoundment of the water.	It is the right thing to do. It would allow the Ocklawaha River to flow naturally to give us the natural beauty and benefits the Potano people of long ago enjoyed. This restored area would be a shinning example of how the state of Florida can do something beneficial for the Earth as well as being of huge benefit to its citizens and wildlife.	That destruction of nature wins again.	No	Simply put: Everywhere in open countryside, in farmland, in urban regions, and in cities and towns, the tasks are the same: protect what survives; repair what's been damaged; connect places that have been severed; collaborate as never before; and make the whole effort personal by bringing the natural world back into peoples lives wherever they are.
10/13/2021 9:22	St Johns		No	Yes	1 time	More than 5 times	Fishing		Remove it & restore the Ocklawaha	I love to fish the Ocklawaha & St Johns. I have a place in Welaka. Return it to it's natural beauty so we can all enjoy the river & let the Striper + other fish species return to their natural spawning grounds. Save $$ operating the Dam / Locks & The Welaka fish nurseries	More salt water in the St Johns river	Just open to river flow 1st. Remove dam & lock system	
10/13/2021 9:26	Orange		No	Yes		2-5 times		Boating Wildlife viewing	Please remove the dam and allow the natural flow to return.	I have lived in central FL for my entire life and have seen the decline of our springs. Changes must be made immediately before it becomes to late and to expensive to fix.	My children will not be able to experience the natural experiences of FL the way I did growing up. Irreversible damage to our state is inexcusable.		
10/13/2021 9:27	Marion		No	Yes			1 time	Other	Remove the Kirkpatrick Dam and restore the Ocklawaha River,	My memory of the beautiful river before the dam was constructed. I wish my experiences on the original Ocklawaha River could be shared with my grandchildren in my lifetime.	Continued cost to maintain the dam and the reservoir.	No. I never considered the barge canal or the reservoir needed nor necessary.	
10/13/2021 9:30	Orange		No	Yes			1 time	Fishing Canoeing / kayaking Wildlife viewing	Listen to the advice of our river and spring advocates. This dam should be removed and leave the river unfampered with.	Advocates and scientists, from what I've read, seem to all agree on the removal of the dam	If the state waits to long to fix this issue, the springs may never heal	NO	
10/13/2021 9:31	St Johns		No	Yes		More than 5 times		Fishing	Leave it alone.	Wonderful place to fish.	Loosing the wildlife.	Take out the stumps in the barge canal as well as removing floating logs.	
10/13/2021 9:33	Brevard		No	Yes	1 time			Fishing Wildlife viewing	Tear it down! Restore the Ocklawaha to its natural flow! I am a native Floridian and have spent the last 40 years boating on the Ocklawaha and Silver Rivers. I have a small cabin I lease from the National Forest in Ocklawaha and my family loves taking our bay boat the "Bay Dreamer" down the Ocklawaha. We put in at Moss Bluff and run North to the Silver River multiple times each year. Over the last 40 years I watched the color of the Ocklawaha turn from a semi brackish color to a dark brown like a pot of dark coffee. I've watched the fishing deteriorate and much of the wildlife vanish. Don't get me wrong this is still one of the most biodiverse rivers I have boated in the entire state and on any given day you can see more wildlife than you would believe like gators, eagles, otters, manatees, snakes, herons, egrets, turtles, and more. From the intersection of the Ocklawaha River and Silver River North to Rodman Dam used to be semi clear for miles, now at that intersection the water goes from Crystal Clear Silver River to Dark Brown Ocklawaha. There is no benefit to the Rodman Reservoir/KirkPatrick Dam. It needs to be removed. I invite you to join me one day on a boat ride at my expense down the Ocklawaha. I can pick you up at the Moss Bluff boat ramp. I promise you it will be one of the most memorable boat rides of your life. I would wait another month of two as I was just up there and the mosquitos have been horrendous but by mid-November through March it will be perfect boating season. I invite Ron Desantis to join us.	I have personally witnessed this river get darker and darker every year for 4 decades. Restore the flow!	Further darkening of the water and loss of habitat.	NO, restore the flow. Man cannot fix what nature was intended to do. Let nature do its work. This is Gods country, let the land heal itself.	I am being serious about taking you for a boat ride, call or text me at 321.795.5162. I love the Ocklawaha and its my favorite boat ride in the entire state. Better than the Keys, Crystal River, St. Johns, or Mosquito Lagoon. I spend most of my winters in Ocklawaha and am a valuable resource on the river and local flora and fauna.
10/13/2021 9:34	Orange		No	No					To remove the dam.	Manatee habitat and restore drowned springs.	The benefit of the dam is almost nonexistent while the damage is causes is significant.	No--removing the dam is necessary.	The natural environment for native species is needed for future generations. We need to protect it now in order to have a chance to save many that are dying unnecessarily. The dam does not serve any vital need.
10/13/2021 9:36	St Lucie		No	Yes			2-5 times	Fishing (shoreline/structure) Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat	The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Restore Florida to a more natural state!
10/13/2021 9:41	Marion		No	Yes		1 time	2-5 times	Canoeing / kayaking Boating Wildlife viewing	Free	manatees	continuing ecological issues		
10/13/2021 9:43	Orange		No	Yes		1 time		Fishing Wildlife viewing	I'd like to see it breached.	As an avid portfisher I have seen the declines in fishing, not to mention the unprecedented amount of manatee deaths in the state this year.	More spring die off, more fishing decline, more manatee deaths.	No. It's been past due. Breach the dam.	I'm a fourth generation Floridian and I'm so tired of the state turning a blind eye to environmental missteps. The dam is one of them. It's time for it to go.
10/13/2021 9:47	Alachua		No	Yes		2-5 times		Wildlife viewing Other	Removal of dam	The preservation of springs and the possibility for more manatee habitats.	The unnatural stifling of natural springs	No	
10/13/2021 9:56	Broward		No	No									
10/13/2021 9:58	Seminole		No	Yes		2-5 times		Canoeing / kayaking	Breaching the dam is 50 years overdue.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	- No.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation.
10/13/2021 10:01	Marion		No	Yes			1 time		The dam should be removed to restore proper flow to the Oklawaha river	Environmental studies have shown over and over the negative impact the dam has on the river and the wildlife that depend on it for survival.	The river continues to degrade until it is an environmental wasteland and becomes just another chapter in the large book of mistakes Florida has made regarding our environment	Partial removal of tge dam to increase flow of the river	While removing the dam and the resulting affect on the Rodman reservoir may have short term impacts on sport fishing, the longterm benefits to the river, wildlife and properties abutting the river are too important to not support taking the dam out.
10/13/2021 10:16	Marion		No	Yes		2-5 times		Canoeing / kayaking Other	Remove the Kirkpatrick Dam	Environmental impact reports	Negative impact to environment	No	This should have been done years ago.
10/13/2021 10:17	Broward		No	Yes			1 time	Wildlife viewing	Get it free and let nature regenerate				
10/13/2021 10:20	Alachua		No	Yes		1 time	2-5 times	Wildlife viewing Other	I would like to see the dam and related locks removed to allow a more natural flow of the River	The waste of resources to maintain the facilities, the expected surge in visits to the area for hiking biking canoeing and paddling and the restoration of a previously natural setting.	Continued drain of resources and reinforcement of a backward looking public policy making.	None that I am familiar with or heard about.	Thank you.
10/13/2021 10:20	Brevard		No	No					I would like to see the Rodman dam removed/altered to allow the natural flow of the river. This will allow the once thriving wetlands to rejuvenate from 50 years of degradation.	The reports generated by the scientific community.	The continued loss of wetlands.	No	
10/13/2021 10:21	Marion		No	No					I would like for the Dam to be removed and the River restored to it's original condition as much as possible.	I remember the pristine state of Silver Springs in my youth and I believe it's current deterioration is in large part because of the Dam obstructing the natural flow of the river.	Continued deterioration of Silver Springs and the Ocklawaha.	I cannot think of any.	
10/13/2021 10:23	Seminole		No	No					Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every additional day the dam and reservoir remain in place results in additional environmental degradation.	There is a broad array of environmental and economic benefits that would result from restoration i.e 1. Draining the Rodman Reservoir would remove the single greatest barrier to plant and animal movement along the Ocala to Osceola Wildlife Corridor creating a restored floodplain forest that would benefit many native plant species - including the Federally listed Clasping Warea and Scrub Buckwheat; 2. Manatees would regain open access to the warm-water habitats of the Ocklawaha and Silver Springs. 3. Migratory fish including the Striped Bass, American Shad, American Eel, and the critically endangered Atlantic Sturgeon and Shortnose Sturgeon would once again have open access to the Ocklawaha system; 4. Recreational sport fishing would be enhanced by allowing the Florida strain of the Striped Bass to reclaim its primary spawning habitat - the Ocklawaha. 5. At least 150 million gallons a day of additional natural flow would be restored to the Lower St. Johns River, improving water quality. 6. An estimated $14 million in dam repairs (2006 dollars) would be saved by avoiding repairs to an obsolete dam. 7. The large expenditures required for herbicide treatments to control aquatic weeds and other maintenance would be unnecessary. 8. The recreational development component included in the restoration plan would benefit nearby residents and expand eco-tourism, which would more than compensate for the loss of the reservoir.	Taxpayers will perpetually be on the hook for repairs and maintenance of the dam and reservoir instead of reaping environmental and economic benefits outlined in response to previous question.	No. Breaching the dam is 53 years overdue and there is no compromise that would achieve the environmental and economic benefits of restoration.	The benefits outlined in previous responses are not limited to residents local to the Rodman Reservoir and Kirkpatrick Dam.
10/13/2021 10:25	Marion		No	Yes			1 time		Remove the dam	Help recover damage to flora and fauna	Continued degradation of the environment.	No	
10/13/2021 10:28	Pasco		No	Yes			1 time	Fishing	Free flowing . improving water flow and quality on complete run.	water flow decreases stagnant water. Also fights salt water incursion.	Everything below restrictions will deteriorate and possibly never recover.	Not at this time.	
10/13/2021 10:37	Duval		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced to a more natural and sustainable state for the benefit of people and wildlife	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, cooling canopy, and recreation benefits, and most important to humans, natural flood protection.	Temporarily drawing the reservoir down to 11 or 12 ft. to meet sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	The time is now for draw down and restoration to begin.
10/13/2021 10:37	Sarasota		No	Yes			1 time	Fishing Canoeing / kayaking Wildlife viewing	Remove the dam	increase in water flow back to its natural state	continued poor water quality		
10/13/2021 10:40	Seminole		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	Remove the dam and restore the Ocklawaha.	Loss and extruction of the natural flow of the river and disruption of springs and aquifer.	Removal will never occur because funding may never be available again.	NO.	Experience and history have shown that such massive alterations of the environment have always had massive unexpected impact, and are always more expensive to repair the longer we wait.
10/13/2021 10:43	Hamilton		No	Yes			1 time	Wildlife viewing	I think the dam needs to be removed and the river allowed to return to its natural course. This will allow water and land wildlife free and more natural movement which is a healthier ecosystem.			Not sure	
10/13/2021 10:46	Orange		No	Yes			2-5 times	Fishing Canoeing / kayaking	Breach it, take it down	It serves no useful purpose and would restore the Oklawaha and Cannon Springs	Continued abuse of our waterways and springs, especially by big-money corporate interests	Nope	
10/13/2021 10:46	Santa Rosa		No	Yes			2-5 times	Wildlife viewing	Restore the natural flow	Dam not needed	Don't have any	None	Return to natural Florida
10/13/2021 10:47	Alachua		No	Yes	1 time	1 time	1 time	Other	let the water flow free for nature's sake	Allow the wildlife to thrive	Death of the manatee	not really	I drove t the dam this weekend. It is time to let the area return to nature.
10/13/2021 10:52	Duval		No	No					Remove the dam	Why did man mess with nature.	Man messed up again when he/she had a chance to undo his/her mess.	No	
10/13/2021 11:02	Alachua		No	Yes		2-5 times	More than 5 times	Fishing	Take down the dam and let the river and springs flow as nature intended.	I have seen the river before it was destroyed	degraded conditions for wildlife and springs.	Open the locks and let the water flow.	
10/13/2021 11:04	Orange		No	No					Breach the Rodman/Kirkpatrick Dam	Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	none	SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
10/13/2021 11:13	Alachua		No	No					Remove the dam to restore the river	restore the river to natural environment	The need to support the dam and provide additional resources to reach the preferred outcome	no	
10/13/2021 11:18	Lake		No	Yes	More than 5 times			Wildlife viewing	Open or remove the dam and let the river flow free again.	The canal project is obsolete; costly to maintain for a few fisher people and few residents that live on the lake. Consider the great good for nature and the tax payer. Opening the river again would allow free flow and movement of fauna and flora that once depended on migration up and down the river.	More wasted money on constant maintenance forever for nothing. Why keep a pink elephant perpetually? Migratory animals would return to Silver Springs and Lake County, like before.	The dam must be either opened for a normal free flow, or remove the dam.	I know there will be plans to plant back species of native plants. That is nice, but just walk away, leave it along and the entire drained lake will re generate native species, as nature does very well on its own.
10/13/2021 11:31	Alachua		No	No					I want to see the dam removed!!	Restoring the natural beauty and water quality of the region impacted by the dam resulting in the restoration of 20 drowned springs, fish populations and migratory routes, and manatee habitat	Continued losses of animal habitats and deterioration of water quality. Continued waste of funds on a structure that never should have been built in the first place.	No. Removing the dam is the only acceptable outcome.	Florida must do what it can to reverse environmental destruction, especially in the face of the climate crisis. The horrible deterioration of our state's waters is unacceptable!
10/13/2021 11:45	Pinellas		No	Yes			1 time		Breach / remove the dam	It would provide restoration of much-needed manatee habitat	millions of taxpayer dollars are spent repairing this unneeded dam, and it endangers the outlook for manatees	no, the dam has to be breached	its the right thing here, for the environment, for animal life, and for the state's people
10/13/2021 11:46	Palm Beach		No	No					Dismantle the dam and initiate projects to restore impacted ecosystems to their former state.	We are facing imminent ecological crises in this state due to anthropogenic activities, which will bleed into human well-being and quality of life for Florida residents and visitors alike.	Further and irreversible degradation of natural habitats and the species contained within.	Unlikely.	As the Florida population continues growing, we must champion, protect and restore damaged natural areas to ensure our continued reliance on the state's crucial , and interconnected , ecosystems!
10/13/2021 11:54	Lake		No	No					Restore the Oklahowah River	Environmental history	That lawmakers are not serving the interests of their constituency.	No	Oklahawa River was a lifeline throughout Florida History. Riverboats, teeming wildlife and amazing network of springs that keep our aquifer healthy. Only bass live in the dam now; the sport fishing would be so much more diverse without the dam. Restore the river.
10/13/2021 12:02	Volusia		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	I would like to see the waterways restored to their original condition.	I think that the population pressures on our State require us to do our best to be stewards of our beautiful natural resources. The "Real Florida" is disappearing at an alarming rate, which is a trend that needs to be reversed.	That the natural habitat for wildlife and flora will be gone forever.	Not really, even though the cost may seem prohibitive, the alternative is way more costly in the long run.	
10/13/2021 12:04	Lake		No	Yes		1 time		Fishing Wildlife viewing	* Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	$4-14 Million in dam repairs saved on a dam past its life expectancy	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	
10/13/2021 12:04	Jefferson		No	No					Breach the dam and restore the natural flow of the river.	Restoring the river will bring back 20 lost springs and restore habitat for manatees and fish. In addition the new springs will create recreation and ecotourism opportunities.	The state would continue to maintain an aging dam that is harming the environment.	No.	It's a good idea to breach the dam and restore the flow of the river.
10/13/2021 12:09	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Please leave it as it is! One of the few great bass fishing areas in FLORIDA	The Kirkpatrick dams and Lake Rousses dams were built at about the same time. Why is it so important to some to have only one dam done away with? Seems like the squeakie wheel syndrome is in play got to ask why is it ? I'm 72 years old and hope my grandchildren will be able to experience the satisfaction of being on that body of water as much as I have the last 40yrs. Thank you for your consideration.	Where is every boater going to go?	No	
10/13/2021 12:12	Lake		No	Yes	2-5 times	More than 5 times	More than 5 times	Wildlife viewing Other: Photography	Remove dam and restore natural river flow	Restoration enables fish and wildlife more natural migration	Loss of fish and wildlife viability and degradation of watery quality	No, the river must be restored	
10/13/2021 12:16	Alachua		No	Yes			2-5 times	Boating Wildlife viewing	A place that would support manatees & other water creatures. A place that folks could kayak, canoe & have a picnic. I would it to be a sanctuary for all of nature & human kind. C	Columnists in The Gainesville Sun. I would like the Ocklawaha River to flow naturally & free the springs (20) & allow migration of fish & manatees.	It will cause more deaths of manatees. Also there will be further destruction of the natural habitat. We need to be more cognizant of the environment around us & this is degrading the environment. I	I am not sure how to answer this question...sorry.	We need to be more respectful of nature/environment in general. I think in FL power & greed have taken over all systems in FL including environmental issues & public health.
10/13/2021 12:17	Alachua		No	Yes			1 time	Canoeing / kayaking	The environment needs to open up and breath by removing the dam!	We need to protect the manatees and the migration of fish.	The increasing volume of manatee deaths.	No. We have to stop choking a wonderful Florida River.	
10/13/2021 12:22	Citrus		No	No					Whatever it takes to preserve the wildlife of the region	Deoxygenation of water, killing of fish and manatees, expense of upkeep	Environmental	Not that I've heard of	
10/13/2021 12:23	Alachua		No	No					The Dam should be tor down to allow the restoration of the Ocklawaha River and many springs.	It was determined in the early 70's that there were grave environmental concerns related to the ridiculous idea of a cross-Florida canal. Even Richard Nixon was smart enough to see the potential damage when he shut down the construction.	Water quality will continue to decline. Restoration of conservation lands would not proceed.	No. We have already waited far to long to fix this mess. We need to stop procrastinating and get going on restoration of the environment.	
10/13/2021 12:24	Levy		No	Yes		1 time		Wildlife viewing	Restored to its natural flow.	Florida waterways had developed themselves as they needed throughout history. Man's tampering with waterflow has been very detrimental to every single plant and animal that touches it throughout the state. Consequently, many places and species have suffered from this damage to the natural state. Restoration of every natural spot would go a long way toward helping the state survive the onslaught of humanity.	Decimation of species who rely on this type of waterway.	Can't imagine what they could do other than restore the natural flow. Nature is powerful. Nature is necessary for the health of our planet. The healthier the natural areas, the healthier the planet.	
10/13/2021 12:25	St Johns		No	Yes		1 time		Fishing	Leave it alone	Thriving wildlife	Loss of essential habitat	None	
10/13/2021 12:36	Lake		No	Yes			1 time	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Historic fish and manatees return as breach opens creating a free-flowing river and 100s of manatees gain essential warm water winter springs habitat	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits and the 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/13/2021 12:42	Okaloosa		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	100s of manatees gain essential warm water winter springs habitat	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.

10/13/2021 12:51	Marion		No	Yes			2-5 times	Fishing Boating Wildlife viewing	Take it down and restore the river to origins	Watching the springs suffer through the years	Continuing destruction of our waters in the state and the expensive of maintaining a mistake	No	
10/13/2021 12:58	Santa Rosa		No	No					Simply put, REMOVED Completely!	Water Quality and habitat restoration to the river system.	The continued loss of endangered species and water quality and the continued growth of algae.	None.	No.
10/13/2021 13:01	Alachua		No	Yes			1 time	Fishing Canoeing / kayaking Wildlife viewing	Remove the Dam and allow fish to spawn freely. Restore the native natural habitat. Increase boating and fishing by canoe and kayak. Improve manatee habitat and safety.	Cost of maintaining Dam is not worth it and is never ending. Much more valuable recreation would be available with restored river. Striped bass, sturgeon and other fish could once again spawn and migrate.	Loss of ecological health and opportunity to restore. Waste taxpayers money on futile efforts to maintain dam.	No.	
10/13/2021 13:03	Leon		No	Yes			2-5 times	Wildlife viewing	Remove that damn dam!	Nature had it right in the first place.	Ruination of our beautiful world class aquifer, among other concerns.	No	
10/13/2021 13:15	Alachua		No	Yes		More than 5 times		Fishing Boating	The sooner the better..	Great fishing. Habitat to wildlife			
10/13/2021 13:20	Marion		Yes	Yes	1 time	2-5 times	More than 5 times	Fishing Boating Hunting	It is best said in a Quote from freetheocklawaha.com: Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Florida of all places on earth has been devastated by so-called development. Most of it planned out before WWII. Here are many items that this addresses: Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers $4-$14 Million in dam repairs saved on a dam past its life expectancy Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. $57 million in potential flood damages avoided to downstream property owners	Florida suffers from so much over development that WE cannot accept anything less than RESTORATIONS OF OUR WETLANDS.	NONE	A Floridian born and bred in Tarpon Springs I only see this as a first step to saving what is left of my Home State.
10/13/2021 13:22	Sarasota		No	No					Returning the water way to it's natural state.	Allow wildlife to live and multiply in natural surrounding with proper natural food source and environments.	Continue decrease in manatee population.	No, waters need to flow naturally, unpolluted at best, provoding a location for wildlife to exist.	Old dams are issues for leakage, breaking and flooding as they deteriorate. A costly danger to humans and wildlife.
10/13/2021 13:26	Duval		No	Yes	1 time	1 time	More than 5 times	Fishing Canoeing / kayaking Wildlife viewing	Please remove this dam. It was never meant to be in place once the canal was stopped. Bass Fisherman are important, but bass are everywhere and we can grow bass anywhere. Please restore this River and all of the Springs.	The history of the politics and the environment for decades...the studies have been done...do not waste any more money.	Continue to waste money on new dam, new public meetings, etc...This is a no brainer and has been for many FL Governors		
10/13/2021 13:42	Miami-Dade		No	No					I would like to see the reservoir be kept as natural as possible.	Wildlife depends on this natural reservoir.	The only man made changes should be if there is something wrong and we can improve the problem.	No	
10/13/2021 13:45	Duval		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking	remove the dam	Freeing up the oklawaha	reduced flow to lower basin	don't know	thank you for your consideration
10/13/2021 13:48	Marion		No	Yes		2-5 times		Canoeing / kayaking	Remove it immediately	Studies by Mr Knight	Continued deterioration of one of nature's jewels the ocklawaha River	No, all or nothing	
10/13/2021 13:56	Pinellas		No	Yes		2-5 times	More than 5 times	Canoeing / kayaking Other: Inspecting the damage caused by the flooding, aquatic weed control, etc. Mostly during the drawdowns to observe wildlife returning to the floodplain, visit the uncovered springs, and the revegetated floodplain	I would like to see the dam removed (partial restoration). Blue Springs (in Ocala NF) should be restored and developed for public recreation. Other natural springs impacted by the Rodman impoundment should be restored as needed for public use. Deep Creek should be reconnected to the original Ocklawaha channel. Buckman canal east of the lock should be developed for fishing/boating access to the StR, and perhaps a tournament fishing facility developed there.	The fact that the dam/lock is degrading the chemical, physical and biological integrity of the Ocklawaha River (above and below the dam), Silver Springs state park, the St Johns River, the flooded swamp forest and springs. The impoundment also denies public access to significant portions of the ONF and other public lands that were purchased for the CFBC for paying, hunting and othe public recreation. The impoundment also negatively impacts significant Native American archaeological sites.	The partial restoration option is already a compromise position. The Eureka lock and dam are not causing any ongoing ecological damage, and should remain because the restoration costs are not justified. The partial removal of Rodman Dam should be the minimal amount needed to restore River flows back to the original channel and which will restore the historical movement of manatees, fish and other species to the upper River and springs complex. Any other scenario that would accomplish this result could be considered, buy I have followed this issue for decades, and I am not aware of any scenarios that would restore River flows to the original channel, and thereby allow for unfettered access of manatees, fish and other species to the upper River and springs.	We have made great progress in successfully restoring other River and aquatic ecosystems in Florida, such as the Kissimmee River and the "River of Grass," the Everglades. We know that we can also successfully repair the other major Corps of Engineers ecological disaster that was the CFBC. The economic and ecological benefits of restoring the Ocklawaha River have been well documented. The cost of restoring the Ocklawaha would be a bargin when compared to what has been spent on Everglades restoration. I have heard estimates of $10-25 million to restore the Ocklawaha. You can't put a culvert in the Everglades for that amount! Considering the amount that would need to be spent upgrading the dam and lock for structural integrity, added to the annual costs of operation, maintenance and inspections, aquatic weed control, drawdown expenses - all of which would need to be spent in perpetuity - makes the cost of restoration a real bargain. Because once the Ocklawaha is free to run, it is virtually free to run ...
10/13/2021 14:01	Pinellas		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Breach the dam so that the free flow of the Oklawaha will resume.	There are 20 drowned springs will be restored to their formel glory. The dam has deferred maintenance and repair costs that can be better used to remove the dam. Restoring historic routes for migratory fish will make Silver Springs more healthy.	Water quality will continue to decline fueling invasive weed blockages, blue-green algae blooms and fis kills.	No. The dam provides no public benefits, it is obsolete, and this should have been done 40 years ago.	Breaching the Rodman/Kirkpatrick Dam to restore the Oklawaha River is the most cost-effective springs protection project that we could do in Florida today that would have the single biggest impact because it would uncover 20 springs submerged by the waters of the dam and is fey to restoring Silver Springs. Also, with the alarming number of manatee deaths, restoration will provide essential warm water habitat for hundreds of manatees in the Oklawaha's drowned springs and allow them access to Silver Springs. Please take this step forward to restore Florida's natural beauty and viability.
10/13/2021 14:04	Marion		No	Yes	1 time	1 time	1 time	Boating	Remove it	There is no reason for it to be there. No barge canal was ever built	The river would not flow naturally	No	
10/13/2021 14:05	Duval		No	Yes		2-5 times	2-5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing	Stay the same. It's a thriving ecosystem	Amazing quality fishery	It is one of the best fisheries I have ever seen. Produces some of the biggest bass in the nation	None- don't touch it.	
10/13/2021 14:06	Alachua		No	Yes			1 time	Wildlife viewing	Letting the river go back to nature.	History of damage to the ecosystem.	Sadness	Not that I'm aware of at this time.	
10/13/2021 14:07	Brevard		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	Free the Ocklawaha. Restore it back to it's natural state.	The Kissimmee River is an example of the harm man does when he tries to out smart Nature and what can happen when you restore waters to their original state. It will save the taxpayers millions of dollars too.	The decline and total loss of Florida's springs.	No	
10/13/2021 14:09	Bay		No	No					Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every additional day the dam and reservoir remain in place results in additional environmental degradation.	Three river systems - the Ocklawaha, Silver and St. Johns - would experience significant environmental improvement from restoration.	Water quality in the Rodman Reservoir and Lower Ocklawaha/St Johns River system would continue to decline.	No. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration.	
10/13/2021 14:18	Alachua		No	Yes		2-5 times		Fishing Canoeing / kayaking Wildlife viewing	Removal of the Rodman dam and restoration of the Oklawa river.	Millions of dollars of taxpayers monies spent on an aging dam. Loss of springs and river ecosystem.	Continued and increased expenditure on an aging dam. Continued loss of Florida springs and river ecosystem that diminishes the economic value to the state.	Not really, even drawdown do not provide unobstructed waterway and subsequent ecosystem recovery of plant and animal diversity.	The dam removal is long overdue and has even created federal and state agency discord.
10/13/2021 14:22	Marion		No	Yes		2-5 times		Fishing (shoreline/structure)	We have a serious problem with cass pools and contaminated water supply. This dam was halted in 1971. It kills Manatees and prevents fish migration, it scars the landscape and state. It is long past the time to eliminate this antiquated idea and let the water flow freely as nature intended.				
10/13/2021 14:33	Indian River		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	100s of manatees gain essential warm water winter springs habita	Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/13/2021 14:42	Pinellas		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	For us, for our children, for our grandchildren, please do the right thing and breach the Dam - thank you!
10/13/2021 14:46	Marion		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating	Leave it like it is.		A premier fishing destination would be destroyed.		
10/13/2021 14:48	Jefferson		No	No					Breach the Dam.	Historic fish and Manatees return.	We miss the best opportunity to do this.	No, the Dam must be breached.	Breach the Dam
10/13/2021 14:49	Hartford		Yes	No		2-5 times		Fishing	Take out the dam and the locks and anything that keeps the Ocklawaha River from flooring naturally and restore the springs	The land was altered by man. It is not in a natural state.	Continuing to allow freshwater springs to be reversed and not flowing freely and having an altered ecosystem	No	
10/13/2021 14:56	Alachua		No	No					Take the dam down and free the Ocklawaha River	Environmental damage	Continued environmental damage and further loss of fish species and manatees	No	
10/13/2021 15:13	Seminole		No	Yes		2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Remove the damn.	The obvious scar on the landscape that is the reservoir.	Continued deterioration of the dam requiring repair or replacement at great taxpayer expense.	I am concerned about the agricultural chemicals that may be contained or mitigated by the reservoir & think a comprehensive plan includes looking at & limits to those contaminants as part of the removal.	
10/13/2021 15:17	Volusia		No	Yes			More than 5 times	Fishing	Keep the Dam	I have see. Manatees while fishing and its a very good habitat .	Will loose the best fisheries in Florida and habitat		
10/13/2021 15:17	Lake		No	Yes			1 time	Other: river passage	It needs to be removed	It should have been removed in 1971 when the construction of the Cross- Florida barge canal was halted.	Rodman Reservoir will continue to be choked with weeds and suffer from oxygen depletion causing the death of manatees and bass while preventing fish migration which is expensive to maintain .	NO	YES ..... Stop issuing cheap permits to water companies so they can rape our valuable Florida springs. If any of you are not willing to save our environment, feel free to resign before Governor DeSantis fires you.
10/13/2021 15:23	Alachua		No	Yes		1 time	1 time	Other: I don't use it. Just want to see what it consists of	Return river to natural state as I remember it from my youth. A beautiful river.	Pictures of it before it was dammed and pictures sod it now.	That more good money would be wasted.	No. Just remove it	
10/13/2021 15:28	Orange		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	100s of manatees gain essential warm water winter springs habitat - this is absolutely essential as manatees are dying in record numbers due to habitat loss.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized and subvert the eventual dam failure or overtopping that will cause long-term damage.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/13/2021 15:35	Palm Beach		No	Yes		1 time	1 time	Wildlife viewing	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide unimbibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	So many species will not have their needs met and therefore will freeze and starve--whichever comes first. Manatees already suffer enough habitat destruction and have few and far between options. This issue affects everyone and I would hate for the world to realize that there needed to be action when it is too late.	No. This project is overdue and without it, there will be chaos and death. I do not support such things. The species at risk are at risk because of the dam; therefore, the solution is removing it from the equation.	I want to see humanity do right by the world. It has been a while since I have.
10/13/2021 15:45	Alachua		No	Yes	1 time	1 time	2-5 times	Canoeing / kayaking Wildlife viewing	I would like to see the Ocklawaha River run free, offering connectivity for both the freshwater communities and the wildlife corridor up the Florida peninsula.	The dam and its reservoir no longer serve the now defunct Cross Florida Barge Canal, so let's restore the natural environment while still offering abundant recreational activities.	That the citizens of Florida would be deprived of seeing how magnificent the natural environment of our state is and can be.	I think the compromise proposed would serve everybody well.	
10/13/2021 15:55	Brevard		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide unimbibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.	No time to waste
10/13/2021 16:03	Outside of state / other	South carolina	No	Yes		2-5 times		Fishing Canoeing / kayaking Boating Wildlife viewing	leave it alone	leave it alone. it's a thriving ecosystem that supports tons of animals and tons of manatees. It also purifies the polluted ocklawa River. It saves the starving manatees, so much vegetatoofee them in that area	Habitat destruction of the manatees, and a recreational area for kayaks, fishing and boats g	No	
10/13/2021 16:12	Hillsborough		No	Yes		1 time		Fishing Fishing (shoreline/structure) Canoeing / kayaking	Maintain as a fishery, manage for wildlife	Global warming, native species dying	Global warming	No	Stop taking wildlife habitat for corporations
10/13/2021 16:16	Putnam		No	Yes			2-5 times	Other: I've helped in cleanups.	I want it removed.	Wildlife habitat.	Less fresh water & less wildlife ecosystem balance between the waterways.	Greater flow of water thru the dam.	
10/13/2021 16:17	Pinellas		No	No									
10/13/2021 16:18	Alachua		No	No					Remove the dam, drain the reservoir, and restore the river	The blocking of migratory fish and other river life from accessing the river	Continued flooding of forest land and lack of access by river life	Partial breaching, if it will accomplish all of the above. This plan has been approved for far too many years without action!	
10/13/2021 16:19	Marion		No	Yes			1 time	Fishing Canoeing / kayaking	Removoed & river restored.	To allow manatees, mullet, catfish, striped bass & other species to freely swim up the ocklawaha again. Have lived near Silver Springs all my life and witnessed the river & springs before the dam and after. The amount of species we have lost is alarming. Restoration is much more critical than bass fishing in Putnam Cty.	That the whole eco system along the ocklawaha will continue to degrade every decade that goes by. Even the bass fishing in the reservoir isn't the same quality as 40 years ago.	No the dam should have never been built in the first place.	
10/13/2021 16:19	Duval		No	Yes		2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	I would like to see it left alone. It provides a lush, thriving habitat for so many different animals.	Rodman's Reservoir provides a nutrient rich environment for our manatees. I saw 6 manatees my last trip to Rodman's and they were eating healthy.	My biggest concern would be the manatees that would lose this safe haven with plenty of food.		
10/13/2021 16:21	Duval		No	Yes		2-5 times		Fishing	Leave it alone	It is a beautiful place the way it is and I pay to fish there because of the beauty and quality of fish	That we decide we can do something better and it creates bigger problems. See big sugar and Everglades for an example	See answer above	
10/13/2021 16:25	Pinellas		No	No					Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs will be reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Sincerely Sandra Chiappetta
10/13/2021 16:27	Duval		No	Yes			1 time	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	I would like for the Reservoir to be left alone. I saw so much wildlife fish jumping, manatees, numerous different waterfowl, alligators, otters. It is teeming with wildlife.	The habitat was full of nutrient rich vegetation for the surrounding wildlife. That's why we could observe so much nature.	I'd be concerned for the animals that would lose all this habitat.	No	
10/13/2021 16:30	Charlotte		No	Yes			2-5 times	Canoeing / kayaking	Restoration to the natural river flow	Personal observation and experience paddling on the river	Continued deterioration of the natural river channel		The canal may have been a good idea at the time, but since its objective was not achieved, it's time to restore nature to its original state. I believe the local and state economy will benefit from increased tourism attracted by the natural restoration of the entire Ocklawaha River corridor. Let's do this!
10/13/2021 16:38	Duval		No	Yes		2-5 times	2-5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	I would like to see the dam left alone.	It is a thriving ecosystem that supports a wide-variety of animals. We see very lively wildlife there and it is a joy to see fish with fat bellies. We fish other lakes in Florida like Lake Santa Fe, Alligator Lake, Crescent Lake, and the fish in Rodman's Reservoir seem to be so much healthier.	The wildlife wouldn't have sufficient food supply.	No	Please, leave it alone.
10/13/2021 16:42	Outside of state / other	Lexington, KY	No	No					Breach the dam and restore the river!	The dam blocks many species from completing their migrations. This is especially unsafe because it threatens many species' survival. The manatee may not be on the endangered species list, but that incorrectly represents their current situation. By not allowing these animals to migrate, they cannot get to the proper environment for the time being where they can be inhabitable temperatures and have access to food. Also, by cutting off the fish and other aquatic prey, predators who are expecting their food to make it to one place will have a more scarce availability. The dam is also causing a saltwater intrusion, making it undrinkable for humans and unlivable for freshwater species. As humans, we have caused devastating pain and suffering to the environment. So, we should be doing all that we can to support what is left and help it replenish. If making steps towards a safer world for all living things is not of concern to whomever it concerns, then maybe saving taxpayers will be. It has been calculated to be more costly to fix the dam than to breach it.	So many species will not have their needs met and therefore will freeze and starve--whichever comes first. Manatees already suffer enough habitat destruction and have few and far between options. This issue affects everyone and I would hate for the world to realize that there needed to be action when it is too late.	No. This project is overdue and without it, there will be chaos and death. I do not support such things. The species at risk are at risk because of the dam; therefore, the solution is removing it from the equation.	I want to see humanity do right by the world. It has been a while since I have.
10/13/2021 16:43	Marion		No	No					Breach the Rodman/Kirkpatrick Dam.	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the most fatal year on record. Also, there are 20 drowned springs that would be restored by this project.	The lower St. Johns, Ocklwaha, and Silver Rivers, 20 lost springs of the Ocklawaha and Silver Springs (one of largest artesian springs in the world) are not united and restored. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills, and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your time and consideration.
10/13/2021 16:52	Lake		No	No					It should be dismantled and the natural river allowed to return, allowing fish to migrate and eliminating a mucky lake full of weeds.	The reservoir is the last vestige of a disastrous environmental idea that should've been eliminated 50 years ago.	The state will have to waste precious funds to maintain the reservoir and probably have to rebuild the dam.	No	
10/13/2021 16:57	Alachua		No	No									
10/13/2021 16:58	St Johns		No	Yes		2-5 times		Fishing	leave as is	it is already there !	loss of fishing	no	
10/13/2021 17:03	Putnam		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Canoeing / kayaking Wildlife viewing Other: Manatee research	Leave it as ia	Manatee food surce	Manatee and wildlife death	No	This is a fine area pls leave alone

10/13/2021 17:03	Outside of state / other	Georgia	No	Yes			2-5 times	Fishing Canoeing / kayaking Boating Wildlife viewing	Keep it as it is. It is absolutely a wildlife sanctuary for both aquatic and terrestrial species of all types. Amazing bio diversity and bio mass. It would be difficult to produce such ecological diversity under any other management strategy	Water purity and water quality are the only things that would support such a cross section of wildlife and vegetation. We frequently see all sorts of fish species i. High abundance, manatees are migrating through the system through big on the vegetation which does not exist in other areas of the region. They are actually starving in adjacent systems and are moving to the sadowa system for the forage abundance. Eagles are commonly seen along with many other birds of prey. They do no thrive in impure systems they go as their prey goes, they are effected by pollution that they consume. There are many many eagles and ospreys good indicators of environmental health.	All of these species could no longer be supported. What is a perfect system for ecological diversity would no longer be supported.	I don't think so. In addition to the environmental devastation of species. The costs to begin any sort of mitigation or change would not serve the community or tax payers of Florida with a beneficial return only costs.	Thank you for the opportunity to comment.
10/13/2021 17:06	Outside of state / other	Michigan	No	Yes		1 time		Fishing Canoeing / kayaking Boating Wildlife viewing	I'd like to see the Rodman reservoir and Dam stay as they are and maintain them. It is a wonderful piece of the North Florida area that is home to many water birds numerous Manatees as well as a great fishery for Floridians as well as tourism. Rodman is one of the most beautiful places I've ever seen and the area it is in could use the added tourism to help local businesses with tourist dollars.	The most important fact of my opinion is that the manatees are living in the reservoir because there is forage for them and the numbers are stunning. It is also a fact that the reservoir helps clean polluted waters from nearby rivers	Loss of wildlife habitat as well as tourism dollars for the area.	None	Save Rodman Reservoir
10/13/2021 17:09	Marion		No	Yes		1 time		Wildlife viewing	I would like to see the reservoir and dam removed so the river could get back to its natural state.	I cross the river most every day and it is now a sluggish, murky relic of the clear, swift moving river it once was when I was a kid.	The environmental damage to the river would continue and animals such as manatees, stripped bass, and others will continue to be blocked from entering areas where they use to roam free.	No.	Just before the river was dammed, I went fishing with a friend where the reservoir is today. I inadvertently dropped my dad's rod into the river. Fortunately, the river was running free and crystal clear and we were able to locate the rod and retrieve it in about ten feet of water. If a kid dropped his dad's rod in the water today, he would be in big trouble.
10/13/2021 17:11	Outside of state / other	South Carolina	No	Yes	1 time	1 time	2-5 times	Fishing	Leave it alone	Tons of wildlife will be displaced and the natural filtering of the river will be damaged. Just as they are doing in SOuth Florida!	Loss of wildlife and increase in damage from pollutants	No	
10/13/2021 17:12	Charlotte		No	Yes		1 time		Fishing	Save the resource as it is	The resource is alive and well and flourishing	No	No	Save what little of Florida's wildlife we have left. This place is being decimated daily.
10/13/2021 17:12	Outside of state / other	Illinois	No	Yes		2-5 times		Fishing Boating Wildlife viewing	Keep it to protect wildlife	The lush vegetation is supporting the manatee population	The manatee population dying out	Nk	
10/13/2021 17:14	Orange		No	Yes		1 time		Other: Geocaching	Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. In addition, springs are a major tourist draw in Florida, as we have more springs than anywhere else. Restoring the Oklawaha would restore a bit of that Old Florida, drawing ecotourism to the area.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Whatever out of town tourism the dam brings for fishing would be supplanted by those seeking to view the restored wilderness.	No. Breaching the dam is 50 years overdue.	The dam is a relic of an age where Florida's environment was an afterthought. There is no cross Florida barge canal and therefore no need for the dam. There are plenty of places in Florida to fish, and there is no reason to continue to cause harm to the natural environment because of it. A restored ecosystem would bring other tourists seeking to escape our increasingly urbanized state for a bit of the wilderness.
10/13/2021 17:15	Volusia		No	Yes		2-5 times		Fishing	Leave it alone	Leave it alonenless of natural habitat for Manatee and bass			
10/13/2021 17:15	Marion		No	Yes		2-5 times		Fishing	Torn down	Waste of taxes.	Wasting taxes	No	
10/13/2021 17:16	Marion		No	Yes			More than 5 times	Wildlife viewing					
10/13/2021 17:25	Clay		No	Yes			More than 5 times	Fishing Boating Wildlife viewing	Remove the dam.	To see it go back to it's natural form.	Stressing the natural resources.	No	
10/13/2021 17:26	Marion		No	Yes			2-5 times	Wildlife viewing	Remove the dam and let the river flow again.	Seeing the damage to the environment this dam has caused.	Further damage to environment	no	The fact the this dam has been held hostage by a few short sighted business people/politicians is a disgrace. The State of Florida should be looking at eco-tourism with this restored area as a show piece. Look at what the Greenway has done especially in Marion County with the bike paths, etc.
10/13/2021 17:29	Duval		No	Yes	2-5 times			Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing	leave it alone	my personal observation	destruction of manatee habitat	no	leave this area alone. it is perfect the way it is
10/13/2021 17:31	Lee		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	100s of manatees gain essential warm water winter springs habitat	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today.
10/13/2021 17:33	St Johns		No	Yes	1 time	2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing Other: Attracting friends and relatives to tour or live and experience the wildlife at this special waterway!	I want the damn left as is !! Keep it in place! Do Not Destroy this Special Lake!	This is one of the most beautiful animal preserves in all of Florida and an important safe haven for the survival of many fish, gators and more than 700 Manatee alone! Anyone who has not been on this huge beautiful lake has no idea what awesome nature exists in Florida! If you remove that dam you are going to kill hundreds of thousands of fish, birds and other wildlife species that depend on this lake for their survival and that chain of events will be devastating! I have properties in several states and can tell you that on one of my farms I have over 200 acres and cannot and will not disturb a 1/4 acre wetland in my property... let alone destroy a 27,000 acre "Live Waterway"!	The death of so many species and individual animals that rely on the lake to survive! Myself and others would stop visiting and supporting Florida's wildlife and tourism sectors because people with no idea of true conservation are running the show! Also many I know would Not vacation in Florida anymore because of the loss of a major fishery that has even set state records in the past.	Actually, No	VISIT THE WATERWAY AND EXPERIENCE IT WITH YOUR FAMILY BEFORE YOU VOTE TO DESTROY MORE OF AMERICA!
10/13/2021 17:35	Alachua		No	Yes	1 time			Fishing Boating Fishing	Leave it alone!!!!	Fishing, sanctuary, jobs	No concern if it stays	No	
10/13/2021 17:39	Flagler		No	Yes		2-5 times		Fishing (shoreline/structure)	Leave it alone so our children can enjoy the fishing and wildlife in the future.				
10/13/2021 17:41	Alachua		No	Yes		2-5 times		Other: Just checking out a raggedy old relic with no useful purpose	Get rid of the dam. It's fifty years old and is in rough shape. Putting money into it for upkeep is like buying oats for a dead horse. I know that the bass people are going to cry but this is Florida. You can catch bass anywhere. Rodman is an artificial lake with no useful purpose other than to mess up the natural course and flood plane of a major tributary to the St. Johns river.	Just go to the useless reservoir during a drawdown. Helen Keller and Stevie Wonder could see what is beneath that stagnant pond that the dam creates.	Water will be one of the most important concerns for man in the future. Might as well keep screwing up everything.	Absolutely not. There is a fishing tournament held on every mud puddle in this state. Eco tourism will support the surrounding counties as well as Tribeno or Red Man. Economic impact arguments on this subject is moot. Putting dollars into the upkeep of the dam is stupid. Letting it fail when fully charged will be a disaster and heads will roll. Draw it down. Get rid of the antique. Move forward.	
10/13/2021 17:49	Hillsborough		No	Yes		More than 5 times		Fishing Canoeing / kayaking Wildlife viewing	To continue being a thriving ecosystem. Stricter pollution fines.	At least 700 manatees alone this year have found safe haven in these waterways. Where high number of manatees are dying they find refuge in Rodman Reservoir.	Destruction of another beautiful Florida waterway.		Please keep Florida wildlife and waters safe for us Floridians who love our state.
10/13/2021 17:51	Hillsborough		No	No					I would like to see the Oklawaha River restored to its orginal condition as much as possible.	Environmental concerns.	The environment in the area would be negatively impacted.	Make sure that the dam is functioning properly.	
10/13/2021 18:03	Marion		No	Yes		2-5 times		Fishing Fishing (shoreline/structure) Boating	blow it up. take it down. open up the rivers.	drought. diminishing river flow.	continue to communicate how bad the dam is.	no	
10/13/2021 18:11	Volusia		No	No					I would like the River restored to its natural state and remove the dam.	The manatees are again having a rough time surviving in the current state of the waterways in Florida. Let's bring it back to the natural state to give them a chance.	That the manatee becomes extinct.		
10/13/2021 18:24	Alachua		No	Yes		2-5 times		Wildlife viewing	The dam should be removed and the river restored to its natural flow.	The reservoir serves no purpose beyond a few fishermans' enjoyment. Reclamation of the river would result in a dramatic increase in the diversity and health of wildlife in the area as well as dramatically increased ecotourism which can be very very profitable for the State.	The reservoir will continue to be,essentially, a large cesspool.	No. It is clear that the removal of the dam is the correct solution.	
10/13/2021 18:36	Putnam		No	Yes	2-5 times			Fishing	a more consistent water level	the variation of up to 4 feet keeps the water dirty	the spawn will suffer greatly	not really	I guided and fished Rodman since 1984 and have had many great days there when it is taken care of it may be the best fresh water fishery in the state
10/13/2021 18:38	Santa Rosa		No	Yes		2-5 times		Fishing Boating Wildlife viewing	Leave alone				Leave Rodman alone
10/13/2021 18:44	Lee		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Not to mention the colossal waste of tax payer money to repair a dam that is not needed.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait.	I'm relatively new to FL and seeing manatees suffering is heartbreaking. I'm a registered republican, but it disgusts me that disregard humans have shown for both manatees and other native wildlife for...I'm not sure what reason. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/13/2021 18:45	Marion		No	Yes	1 time	2-5 times	More than 5 times	Fishing Canoeing / kayaking Wildlife viewing	LEAVE IT ALONE! IF IT AIN'T BROKE, HOPING YOU KNOW THE REST!				
10/13/2021 18:48	Alachua		No	No					I would like to see the dam/reservoir removed, so the Ocklawaha River can be restored to its original, natural, healthier ever-flowing version of itself.	I saw the Rodman reservoir, it the best place I have been to in FloridaWe	We could lose this beautiful place as it is.	NO	
10/13/2021 18:49	Outside of state / other		No	Yes		More than 5 times		Fishing Wildlife viewing	In any amount of research, there lies true, key elements to validate the reality of things. To you, it may not matter, but to the environment, the wildlife, the activists, the advocates, nature, the continued efforts to protect and preserve the land that once was, it matters. To Earth, our gracious life force, it matters a great deal.	My biggest concern is for the continued detrimental damage that is being forced upon the environment. In no way has life been this cruel to our forgiving planet than it has been in the past 100 years or so, there is no more time to waste, we are the ones who need to change how we act upon the outside world that we plunge ourselves into on a daily basis. Today, we can change a little area of the world for the better (dam/reservoir), tomorrow we can tackle bigger, more widespread issues that hinder all ways of life.	I mean, there are always going to be the exceptional few that feel like the go-getters are beating a dead horse. In recent discussions, yes, there is a lot that stands in the way of accomplishing things that will eradicate and erase the hardships that the government implements to kill off any natural beauty that is left to experience. It really is a pitiful thing to witness. The more you educate yourself on the problem, the more willingness you desire to become a part of the solution.	
10/13/2021 18:50	Duval		No	Yes	2-5 times			Fishing Fishing (shoreline/structure) Boating Wildlife viewing Other: Visiting Rodman is like catching a preview of what Heaven is like	Leave it alone	My opinion!	I WOULD BE VERY DISAPPOINTED THAT I WOULD NO LONGER HAVE A PLACE OF SOLACE,CONTINTMENT AND PEACE IN THIS F...UP WORLD	No	You morons should crawl back in your hole.Manatees are dying because they have nothing to eat thanks to the state and FWC with their spraying assault on the natural vegitation which along with the St Johns dredging will kill this river basin forever.Tearing down this dam will create a "black hole" and destroy a beautiful estuary.Once and for all you people need to find another source of entertainment and leave Rodman alone
10/13/2021 18:54	Marion		Yes	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Hunting	Leave it standing.	By taking down the dam, only the main river channel would be left meaning less area for fish to repopulate, marsh and swamplands would be ruined because they rely on the reservoir.	Fish repopulation would drop. Businesses would be harmed.	No. It needs to stand.	
10/13/2021 19:00	Outside of state / other	Virginia	No	No					Conservation	Wildlife conservation	Conservation		
10/13/2021 19:07	Nassau		No	Yes			1 time	Canoeing / kayaking	I'd like to see Rodman Dam removed. It is a yearly drain of taxpayer money to keep it functional. It serves no purpose. It would be a boon for river traffic. It would free a magnificent body of water to be and do what God created it to do.				
10/13/2021 19:11	Miami-Dade		No	No					Restore,remove dam	Historic fish and manatees return as breach opens creating a free-flowing river	e miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait	This is long overdue.
10/13/2021 19:14	Marion		No	Yes			1 time	Canoeing / kayaking Other: I used to visit it often, to hopefully see, this thing sprung for a leak and then a torrent. since 1980 when I moved to the Ocala 'M', I'd say I'd visited it occasionally for recreation-kayaking, mostly for due to job duties, i.e. to draft to fill engine, at least 100 times	tear it down	waste of water through evaporation, water volume into St John's River is not what it used to be so not as fresh as it should be for wildlife and fisheries	continued denial of what is right environmentally	nope	the dam should have been tore out 20+ years ago. the Forest Service took way to long to decide to say it should be removed. perhaps some of the buried springs might one day start flowing again, if not at the same spot where they were but somewhere close. let the bass fisherman find somewhere else to go. this "money pit-Rodman Reservoir" needs to go.
10/13/2021 19:18	Alachua		No	Yes		1 time		Wildlife viewing	Remove the dam. The cross-FL barge canal failed 50 years ago.	Restoration of the Ocklawaha River will provide free flowing water for fish, manatees, wildlife and recreation.	Another 50 years of inaction.	No	
10/13/2021 19:22	Outside of state / other	California	No	No					Open it to provide a resource for manatees.	Saving manatees	How to save manatees.		I will be mowing to Martin County in January and have visited Florida numerous times. Please save these beautiful creatures.
10/13/2021 19:27	Alachua		No	No					Return to pre dam days.	Climate change is here and everything will help.	Action will no longer be worked for to solve problem.	No, I don't see one.	
10/13/2021 19:39	Brevard		No	Yes			More than 5 times	Canoeing / kayaking Wildlife viewing	I strongly support the partial restoration of the natural flow of the Ocklawaha River. So often, when humans alter nature , undesirable consequences result. The Rodman Dam clearly has created many such consequences. Blocking the manatees from freely swimming to Silver Springs is just one of thos. I have brought friends and paddled the Ocluwaha during the past three drawdowns. I love the natural beauty of Cannon Springs exposed only during the drawdowns. If the river could be retored to natural conditions, this and other springs would be paddling destinations throughout the year.	Many scientists have indicated that restoring the natural flow of the Ocklawaha River will benefit the ecososystems from Silver Springs to Jacksonville. I strongly support this position.	I understand that the Rodman Dam is showing signs of aging and could fail in a severe storm. Spending the money to rebuild a stronger dam seems senseless because the harm to nature connivus.	I want to see a free flowint Ocklawaha that can be traveled by manatees and other wildlife. Perhaps the initial restoration could be less complete that the proposed plan.	So much science indicates that the Ocklawaha will benefit greatly from the dam removal. Let's follow the recommendations of the scientists and start the dam removal as soon as possible.
10/13/2021 19:42	Volvsia		No	No						Environmental impact	Money wasted	No	
10/13/2021 19:43	Alachua		No	Yes			More than 5 times	Fishing Wildlife viewing	Maintain status quo.	Contrary to some of the "nature lovers" and "environmentalists" out there wanting to remove the dam, removing the dam would do mare harm to our environment than leaving it in place. A whole new natural environment has evolved around the reservoir and it in itself should be maintained. Those who claim that the dam prevents manatees from using the reservoir are also mistaken in that manatees regularly enter the reservoir through the locks and, occasionally, congregate in the reservoir in great numbers. Additionally, Rodman reservoir helps to clean the water that enters it from upstream before it ultimately enters the St. Johns river.	Harm to the current environment.	None	
10/13/2021 19:50	Lee		No	No					I would love to fish your dam and catch giants	That this dam is the land of the giants	Nothing just move on	No sir !	Invite me out to stay basi pleasesee!!!!
10/13/2021 19:50	Pinellas		No	No					Take it down, there are not any good dams anywhere; rivers are designed to flow to the sea, it is part of the natural cycle of the life of continents. Wildlife need the water near them to flow, not stagnate.	I am from Oregon originally and dams out west are making Pacific salmon extinct; fish ladders do not work and there is no way to keep the fingerlings out of the turbines that generate power. Dams eventually silt up and have to be taken down. Do it now.	The damn dam is going to silt up, be over topped in a big hurricane and those down stream will not have adequate warning to evacuate before such an event. This & Lake Okachobee are disaster waiting for a Cat 5 cyclone to set their waters free.	NO	Give it a rest! No dam in Florida benefits the public; only privileged minorities benefit and they do not care about those that will be flooded out in the next Cat 5.
10/13/2021 19:53	Putnam		Yes	Yes	1 time	2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing	It is beautiful as it is. Can not imagine changing anything.	Have been fishing, boating, canoeing and enjoying the wildlife for 50 years. Absolutely one of the most beautiful places in the state of Florida.	Destroying the dam would in effect totally devastate Lake Rodman, the wildlife, birds, fish and everything that it represents.	Hydroelectric	Lake Rodman has been such a vital part of my childhood as well as adulthood. I can not imagine the devastation that removing the dam would create!
10/13/2021 19:56	Outside of state / other	Charlotte NC	No	Yes			2-5 times	Fishing Canoeing / kayaking Boating Wildlife viewing	I would like to see them preserved.	It is one of the most beautiful places on earth, teaming with wildlife	Lost Opportunities for generations to come.	No	
10/13/2021 20:09	Marion		No	Yes			2-5 times	Wildlife viewing Other: Observation	Please remove the Dam and return the Ocklawaha to its natural state.	Natural flow	The continued degradation of the Ocklawaha and especially Silver Springs.	No	The barge canal has been defunded, there is no need to spend money to preserve part of that defunct project. The Ocklawaha river in its natural state is much more valuable an asset to the entire state of Florida, it's residents and visitors.
10/13/2021 20:17	Citrus		No	No						Restoration of the 20 springs currently unable to flow naturally.	Further decline of water quality and the effects on the environment.	No.	This is the most cost effective springs restoration project. Repairing or upgrading the dam will cost millions that could be better spent elsewhere.
10/13/2021 20:49	Outside of state / other	Frederick, Maryland	No	Yes	2-5 times			Fishing Boating Wildlife viewing	Maintain Rodman Reservoir,KirkPatrick Dam in its current state	Thriving ecosystem that supports amazing wildlife, including Manatees. Maintaining the dam provides for filtering of pollutants flowing in the Oklawaha. Worried, that existing wildlife will not survive if dam is removed	Worried that Manatees will not survive and displacing existing wildlife including endangered birds	No	Maintain the dam in its current state. Tourism willbe impacted. If the dam is removed, I would have no reason to visit the area. I spend approximately 30 days each year on Rodman Reservoir.
10/13/2021 20:54	Outside of state / other	Michigan	No	Yes	1 time			Fishing Wildlife viewing	I plan on continuing to visit the Ocala area which means I will continue to visit the Rodman reservoir. The fishing and beautiful landscape brings us back each time we visit. I pray the Rodman reservoir continues to stay in its natural state so the wildlife can thrive in their natural habitat, so the men and women that work so hard to bring locals and visitors on scenic/fishing tours can stay in business and so it's one less thing that has to change because god knows so much has changed over the last 2 years. We have been through enough please don't take the peaceful serene beauty of the reservoir away!!	That I am from the other side of the country and I visit the small town of Ocala so I can fish the reservoir. Just me alone supports many small businesses such as car rental, hotels, restaurants, fishing tours and many other places. Why risk the tourism aspect of the reservoir for other reasons. I didn't come to Ocala and stumble upon the Rodman reservoir, I came to Ocala because of the Rodman reservoir.	The wildlife!!!!!! I can find other places to fish and see wildlife but where will the wildlife go?! The reservoir is enormous and from what I saw when I was there in July the wildlife wouldn't survive if it were displaced.	No	Please don't drain the reservoir it a a gem and i would never take it for granted if i lived there or the reservoir was in my hometown. In these days the next generation can learn so much from our generation and visiting a place like the reservoir is exactly what we need to help our kids understand how important places like the reservoir are. It teaches them so much about life, habitats, tourism, engineering, ecosystems and so much more. Don't take that away from the next generation especially when they live in such a technology driven world.
10/13/2021 20:54	Pinellas		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored.	The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 150-mile lower St. Johns River.
10/13/2021 20:56	Hillsborough		No	No					Removal of the Dam and restoration of Ocklawaha River.	Ocklawaha River restoration would increase freshwater flows in the Lower Ocklawaha and St. John Rivers by millions of gallons a day due to less evaporation off the artificial pool and uncovering of more than 20 springs flooded by the Rodman Dam.	I'm concerned for the fish, manatees, and the health of the water in that area if this is not achieved. It seems like this is the best time for following through on this.		
10/13/2021 21:06	Outside of state / other	Dayton, OH	No	Yes		1 time		Fishing Fishing (shoreline/structure)	It's absolutely beautiful the way it is now.	I traveled to Florida specifically to fish Rodman with a friend. It's so beautiful that we are bringing our dads back with us next spring to experience it with us. I'm not sure what it would look like if the dam was removed, but we saw an incredible amount of wildlife and the fishing was amazing. I was blown away when I saw manatees off the back of the boat. I vacation in SC and saw a manatee there - which was apparently happening more and more as they search for safe places that have available food (away from Florida). Maybe the river system would provide a similar refuge, but Rodman seems like a great place for them to live (but I'm no expert). I would travel to Florida annually to fish this spot if it remains the same. Relaxing the dam would probably "ruin" that piece. I don't live in Florida, so it's not "my fight", but I absolutely fell in love with it as it is. If I had to choose one place in the US to fish for bass - Rodman is it. Not your other more southern lakes, but Rodman. It's that special. Just my two cents. I wouldn't mess with it. I know the initial canal project was driven by greed and put a dam on a river (which technically isn't cool) - but the "lake" is absolutely gorgeous and the wildlife seems to have a thriving safe space.	That the real motivation behind getting rid of the dam is driven by money...	No - keep it like it is. I want to bring my sons there when they are old enough.	I can't wait to visit Rodman in April!
10/13/2021 21:20	Flagler		No	Yes			1 time	Wildlife viewing	take it down. don't repair it. restore the Ocklawaha river	how much it would cost to repair how the springs, and lower Ocklawaha river as well as the St. Johns river will have their natural flows restored.	water quality will continue to degrade. diverse recreational activity will not occur,	No. The dam should be removed.	We need so much about the impact of intense development on Florida's waters. - manatees starving to death, algae killing natural habitats, etc. Here is an opportunity to restore waterways to their natural state, benefitting wildlife and aquatic life.

10/13/2021 21:40	Clay		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	1. 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 2. Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 3. 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife 4. $57 million in potential flood damages avoided to downstream property owners	1. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. 2. We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe. 3. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River. Thank you for your consideration. Karen D. Meyer
10/13/2021 21:42	Outside of state / other	5 N. 43rd Place Cave Creek, Arizona 8	No	No					Whatever is wrong with Rodman Reservoir should be fixed immediately, and area's in both the dam and reservoir should have signs and be roped off so boats with motors can't injure or kill the Manatee's while grazing or playing with their young.	I read an article about a past Governor by the name of bush who wouldn't lift a finger to help these harmless animal's even when the boats were running over them and creating much damage or even killing these harmless animals.	I haven't thought about that yet.	no 1None	NONE
10/13/2021 21:54	Outside of state / other	Zachary, Louisiana	No	No					Please break the dam so manatee and fish can migrate more easily.	Newspaper	A fifty year old project that should have never been started continues to cause problems for fish.	Perhaps work with bass fisherwomen if their desires as well as the needs of migratory fish can both be met.	
10/13/2021 21:55	Alachua		No	No					Take down the dam so the river can flow freely	The springs and overall water quality has been greatly harmed	My grandchildren will not get to see and enjoy the beautiful springs	The dam needs to come down	Please save our springs
10/13/2021 22:04	Orange		No	No					Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/13/2021 22:06	Alachua		No	Yes			2-5 times	Canoeing / kayaking	Rivers are a gift to humanity. This masterpiece should be restored.	Paddling thru ancient cypress trees remnants -when the water is low- inspires a sense of awe in how beautiful the river was.	Future generations are impoverished without this beauty	Sure	
10/13/2021 22:19	Palm Beach		No	Yes		1 time		Fishing Boating Wildlife viewing	I would like to see the Rodman Reservoir left alone & the agenda driven politicians disguised as conservists to pack up and leave.	The fact that the locals are not split on this issue.	An imminent death to wildlife.	More investments into the reservoir and surrounding communities.	N/A
10/13/2021 23:13	Broward		No	No					Save our Springs	Decline in Springs	Over crowding at other Springs	No	The Springs are one of the last good things of interior Florida. Disney is a disappointing money pit.
10/13/2021 23:14	Hillsborough		No	No					Breach the dam	Information from the Florida Springs Council	Loss of needed manatee habitat	No	Please don't spend any funds to repair the dam. Open it up and restore the natural flow of water
10/14/2021 0:05	Duval		No	Yes			2-5 times	Fishing	Clean it up	That it will help restore the river and grass	The river is dying there is no eel grass and more silt mud bottoms than usual sand area	No	
10/14/2021 1:43	Citrus		No	Yes			2-5 times	Wildlife viewing	Restoration of ocklawawa river	Information from Audubon society	Wildlife	No	
10/14/2021 1:51	Alachua		Yes	Yes			1 time	Other: never	Removed to alow the natural flow to the river.	Seasonal fish migrations have been tremendously reduced as a result of the dam.	Further degredation of the system will will occur.	That's like asking a blind person, what part of blindness could you support?	
10/14/2021 4:43	Putnam		No	Yes			More than 5 times	Boating Wildlife viewing	Remove,immediately	It has killed Silver Springs	Same shit as last 50 years	No	I grew up in Ocala in the 1960 s ,at that time you could swim at Silver Springs ?We would ride our bikes there and spend the day it was beautiful.About 2 years ago I took my 36 year old daughter & and her son there to ride the World Famous Glass bottom boats to see the beautiful fish that had always been there,there were only a few and they were small.I was sadden and sickened by what had happened to the Beautiful Springs .The consensus was Rodman Adam I have never been an environmental nerd ,but the older I get the more I appreciate nature.I don't know if removing the dam will eventually restore the Springs but I'm damn sure leaving it there wont
10/14/2021 5:26	Volusia		No	No					Breach the Rodman/Kirkpatrick Dam	The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No. Breaching the dam is 50 years overdue.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. If the dam is not breached, Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years.
10/14/2021 5:36	Lake		No	Yes			1 time	Fishing	Removed	Save or springs research	Springs are dying	No	
10/14/2021 5:43	Orange		No	No					Remove the dam or remove the obstructions to the natural flow of the waterway.	The level of devastation the dams have caused to the environment and wildlife. Manatees, fish, springs, wetlands, pollution, have all been impacted by these dams.	More deterioration of the things mentioned above.	No. Remove the dam.	I have been a Florida resident since 1969 and have enjoyed the many things that the environment of Florida has to offer. I hate to see them decline so the future residents and visitors won't get to share the same experience.
10/14/2021 6:15	Putnam		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing Other:	Maintained and allowed to continue to be a very viable wildlife sanctuary.	Having worked as a National Park Ranger for many years, I was blessed to be able to live in our country's National treasures. Rodman reservoir is a very important area to wildlife. It is vital that Kirkpatrick dam is maintained and left in place to insure that native wildlife continues to have this beautiful area to be used as a nursery.	The loss of a very important wildlife / bird nursery.	No. The removal of Kirkpatrick dam will devestate this wonderful bird sanctuary.	The maintenance of Kirkpatrick dam and allowing Rodman reservoir to remain as it is also insures that future generations will have the opportunity to enjoy this great area.
10/14/2021 6:36	Seminole		No	Yes			1 time	Canoeing / kayaking	Remove the Rodman Dam	The money is available and the Oklawaha River is vital to our springs.	I'm very concerned about the increase in manatee deaths this year. We need to do everything we can to restore our waters and habitats for manatees and the rest of Florida wildlife.	No	
10/14/2021 6:51	Marion		No	Yes			2-5 times	Fishing Fishing (shoreline/structure)	Restoring the river	Many studys that have been done.	The death of mutible springs	Not really	
10/14/2021 6:57	Orange		No	No					Success in this endeavor.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	continual loss, destruction of habitat...	Saving/preserving what is LEFT of our environment in Florida and other communities.	We can do this!
10/14/2021 7:10	Marion		No	Yes	1 time	1 time	2-5 times	Fishing Wildlife viewing	Breach the dam, restore our springs. Spring are a naturally filtering freshwater source and should be considered a lifeline in the state and have continually been overlooked when it comes to preservation. I am no scientist but I have lived here 30 years and am increasingly disheartened by the state of our springs. There are plenty of naturally occurring bodies of water to fish, do business and recreate around. This dam is one of the few remaining remnants of one of the worst environmental project (ft barge canal) proposed in Florida history.	I grew up in marion county, silver springs, rainbow springs, juniper, Scott spring, all beautiful once, all getting lower or over contaminated. I worked in seminole/ orange county for years. Welkwa springs sad & disappearing	The state will continue to waste tax dollars on solutions that don't really work and don't equate in terms of cost. Those that argue to keep a dam that should have never been there in the first place for the benefit of maybe a few hundred or few thousand even though we as a state voted in droves to have our environment protected and restored. Getting a bit tired of the putting of politics and profits over people and our environment	Look at California. Look out west. Do you want to start rationing your freshwater? Those selfishly opposing the removal of the dam are not concerned with Florida's future	
10/14/2021 7:10	Duval		No	No					Complete restoration of natural flow reconnecting the three rivers as nature intended.	Loss of habitat for wildlife loss of diversity in fish the healthy influx of clean water to reduce salt water incursion restoration of habitat for our beleaguered manatees also economic benefits but really ecologically sound to restore health of our beloved Florida waterways.	Continued decimation of manatees shore line destruction more algae blooms blocked flow continues to damage the rivers	No	I see no benefit to maintaining this obstruction to the natural flow. My beloved native home this beautiful Florida is being destroyed by developers loss of habitat and greed. Please restore this wonderful waterway for the benefit of wildlife and Florida folk who care about our greatest natural resource...clean water.
10/14/2021 7:10	Putnam		No	Yes		More than 5 times		Fishing	I would like to see the damn removed and the natural flow restored because the ocklawaha is the single most source of fresh water to the St. John's which then feeds into the saltwater estuaries that I fish inshore. The water flow is crucial to the survival and future of the spartina grass as well as other native grasses along the St. John's. We have already seen such a decline due to all the building and nutrient run off from development, if the dam can be removed and restore more of that natural flow it would help flush the system of those nutrients.	Captains for clean water flow of restoration plan. St John's River keeper various studies. Personal observation from being on the water over 250+ days a year.	That with the development occurring and run off taking place without the proper grass and water flow in place we will begin to experience major algae blooms just like in Tampa and other various parts of the state. Those chemicals from lawn fertilizer and such are a super charger to the algae blooms and have significant impact on the fishery from the plant life to the actual fish. It's happening all around the state and we have a chance to fix it in this area! People come to Florida for the water, period. It's what brings revenue to this state, if we ruin the water quality there is no reason for people to want this to be their travel destination	I don't see another logical option that has been presented at this point	
10/14/2021 7:21	Orange		No	No					I would like to see it removed in order to restore the springs and surrounding wetlands.	This landscape is not native. River flows have been interrupted for years along with the fish, manatee, birds and other wildlife movement in and along the river. The springs in this area are suffering. The wildlife populations are suffering. Replacing/maintaining the reservoir is expensive compared to the cost of removing it.	Money that could be better spent on other infrastructure projects within our state is spent to repair a "reservoir" that does not offer benefits typically associated with the use of the word: flood protection, power, or water supply.	No. My hope is that those fishing this lake will be equally passionate about fishing the restored Ocklawaha river and protecting said fishery.	I love my state and in particular its natural places. When friends visit me from out of state they cherish the glimpses I provide of "natural Florida" I provide along with the "Disney Florida" they well enjoy. My goal for my grandchildren is a growing system of greenways in and around the state that allows our native wildlife to move and thrive around us. Removing this man made structure would be a step toward that dream.
10/14/2021 7:21	Orange		No	Yes			1 time	Wildlife viewing	Breach	It is not useful, it is the greatest environmental impact for the dollars spent, provide manatee habitat	Loss of more habitat for wildlife	No	
10/14/2021 7:40	Duval		No	Yes	More than 5 times			Fishing Fishing (shoreline/structure) Boating Hunting Wildlife viewing	Leave it alone. Great ecosystem along with future needed water shed.	Over 35 years of usage. My eyes, ears and senses can see that this ecosystem is working. Plenty of manatee thought the system.	You will create a bog mud bog that will take another 50 years if ever to correct itself. Mother nature repaired it once. Leave it be!	No!!	
10/14/2021 7:40	Manatee		No	No					Keep it natural, do not alter for mankinds benefit, be mindful of other species living in and around area that will be negatively affected/effected by mankinds selfish interference.	Love, care, and protection of the Natural environment from mankind.	Minimizing the harm to the life sustained by the Natural environment.	No.	Educate mankind on the overwhelming damage caused by their actions PRIOR to them taking action.
10/14/2021 7:46	Seminole		No	Yes	1 time	1 time	More than 5 times	Fishing	Breach it	save money in repairing the dam plus open up habitat for the manatees	more wasted money	i do not think so	
10/14/2021 7:47	Pinellas		No	No					I'd like to see it opened.	It would support an enhanced ecological habitat downstream, with multiple benefits to the environment	We would continue to starve and deplete resources that are already dying.	No. Let industry figure out how to 'innovate' a solution that does not deplete the environment in the process.	
10/14/2021 7:49	Seminole		No	No					Removal of the dams and natural restoration of the river and springs environments.	Published articles on the project that state improved river habitats.	Continued decline of springs.	No.	
10/14/2021 7:59	Lake		No	No					Remove it .	It will restore the Ocklawaha River , which is drying up in Lake County, and restore 20 springs.	The death of the Ocklawaha River and 20 springs.	Removing the dam. Which single county does DeSantis need that will be getting the new wastewater plant? That county, like my own, should not be receiving funds that were designated to protect our environment. The state would be charged with misuse of funds.	Use the voter approved funds for the purpose given in the amendment, not as a pet project for the Governor to stay in office
10/14/2021 8:01	Duval		No	No									
10/14/2021 8:16	Brevard		No	Yes		1 time	1 time	Other: Happened upon it by accident looking for a alternative route to Gainesville.	Remove the dam and restore natural flow of the river.	It would restore the natural flow of the Ocklawaha River, revive badly needed wetlands and expose 20 hidden springs.	Continued degradation of the wetlands and springs affected by the dam.	No.	Removing the dam is a simple solution that will allow nature to do the remaining work of restoring the natural state of the river.
10/14/2021 8:16	Orange		No	No					Breach the dam.	The dam doesn't help, it hurts. The money is available to breach.	The dam doesn't help, it hurts. The money is available to breach.	No.	
10/14/2021 8:18	Flagler		No	Yes		1 time	Wildlife viewing		Remove the Dam	Nature is natural state as much as possible.	Decrease in available water with detrimental effect on the environment.	Of course, good science can lead to a reasonable compromise.	
10/14/2021 8:20	Lake		No	Yes		1 time	Other: Driven by it many times in last 25 years		I'd like to see this area restored back to its natural beauty	The restoration will allow the rivers, streams, etc to flow the way they should and that will benefit nature and people who want to enjoy nature.	That we will lose out on the benefits for the environment by the restoration.		
10/14/2021 8:20	Seminole		No	Yes		1 time	Fishing Wildlife viewing		Remove any and all sections that inhibit the natural flow rate	The obvious damage to down stream wetlands and streams.	The wet lands continued decline. They are part of the filtration system that clean the water which supports the wildlife in Florida	They may be able to keep parts of the dam for future use if needed.	We made a mistake building the dam. It's now recognized . Just to to fix the mistake , it's not that hard .
10/14/2021 8:25	Orange		No	No					Breach the Rodman Dam	It would help restore springs and wetlands	Continued degradation of Florida's natural resources and quality of life.	No. This is 50 years late.	
10/14/2021 8:33	Marion		No	Yes			More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing	Please leave it alone. Several hundred manatee are known to use the water way as is as well as other wildlife.	Florida game and freshwater fish division.	Government intervention ruins another Florida gem.	What are you suggesting?	
10/14/2021 8:38	Orange		No	Yes			1 time	Other: Enjoying Florida's natural scenery	I would think that we should remove the dam, opening up the real possibility to allow nature to restore itself, giving us Floridians even more natural habitat to enjoy.	Living in Miami and fishing the Everglades for twenty years between 1980-1995 taught me how much damage we can do via good-intentioned structural change, (South Fla's canal system), and how we can get out of the way of nature to restore our beautiful state.	Like the previously voted for restoration of the land south of lake Ockechobee (which still hasn't happened); I don't wish to see another area doomed to pollution and lack of habitat because of our previous actions, and now, our inaction.	If there is a cheaper and better use of our fund, I would support that. It is my understanding that the money to purchase the land south of lake ockechobee is already in an account. Let's use it, and use the money it would take for the Ocklawaha, too.	
10/14/2021 8:39	Marion		No	Yes		1 time		Canoeing / kayaking Boating Wildlife viewing	Remove the damn dam.	Mother nature has proven to know best.	The poor Manatees!		
10/14/2021 8:56	Lake		No	Yes		2-5 times		Boating Wildlife viewing	remove the dam	restore natural water flow to help restore wetlan preservation	My grandchildren	No bad idea originally. The legislation had the guts to accept and stopped the canal, We should do so now. Comlete removal	There will still be sufficient fish in the area for the local fisherman when the dam is removed
10/14/2021 8:59	Marion		No	No					Torn down	Seeing the Ocklawaha that I grew up fishing in and boating on virtually being destroyed.	The river and springs would eventually die.	Only if we had an authentic plan to restore the river and springs.	My Friends and neighbors, led by Rock Goldaway and his Save Silver Springs groups, fought for one year to do this until we were sold out and the state took over.
10/14/2021 9:00	Orange		No	No					Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We'll miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No. Breaching the dam is 50 years overdue.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
10/14/2021 9:08	Orange		No	No					Breach the Rodman/Kirkpatrick Dam	Restoring historic habitats for fish which in turn supports other wildlife.	Further degradation of wildlife habitat and water quality.	I don't think modifying the dam is necessary, the best solution is removal.	"Let nature takes its course." Remove the man-made structure and let nature repair the damage that has been done to the fish, the springs, and the surrounding area.
10/14/2021 9:12	Palm Beach		No	Yes			2-5 times	Canoeing / kayaking Other: Walking, picnicking	Dam removal	Dam removal will result in river restoration and estuary restoration. Benefits to wildlife and people recreation.	Continued degradation to aras rivers , water quality and wildlife. FWC is looking for ways to increase manatee habitats - golden opportunity here.	People are quite adaptable and clever, but we can't beat Mother Nature . The natural system should be restored for the greatest benefits tithe greatest number of systems and people.	
10/14/2021 9:12	Orange		No	No					Breach the Rodman/Kirkpatrick Dam and restore the natural flow of the Ocklawaha River. It's the right thing to do; it's the smart thing to do; it's the most cost-effective thing to do.	There are 20 drowned springs that would be restored by this single project, not to mention increasing fish, manatee and other wildlife habitat, and making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years.	No. Breaching the dam is 50 years overdue and continues to be a shining example of the ineptitude, ignorance and foolhardiness of legislators in Tallahassee. Be smart, do the right thing for Florida.	
10/14/2021 9:17	Hillsborough		No	Yes	1 time	1 time	More than 5 times	Canoeing / kayaking Boating Wildlife viewing	Complete removal and freedom for the Ocklawaha river!	The dam serves absolutely no purpose seeing as it was constructed for a project that was never completed.	Nature and the natural order of ecology continue to suffer.	Not really.	
10/14/2021 9:25	Orange		No	Yes		More than 5 times		Fishing Canoeing / kayaking Boating Wildlife viewing	Keep it like it is	If is a great fi. treasure			
10/14/2021 9:35	Escambia		No	No									
10/14/2021 9:36	Orange		No	No					Remove the dam and restore to its Natural habitat.	Loss of fish and gaining manatee habitat	Collapse of the ecosystem	No	
10/14/2021 9:40	Alachua		No	Yes			1 time	Boating Wildlife viewing Other: Was only able to do this during drawdow.	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway. This is the first, highly essential step in the restoration fo the Great Florida Riverway.	100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier.	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait. My understanding is that this has been approved, and just needs funding. Doing this now, will reduce economic , environmental and human costs later on.	My early experience of Nature was one of overflowing abundance of Life. It was rich and powerful. Nature was never "other". I retired to Florida for the blue skies…the clear, blue water of the springs, lush, green foliage year round, the always amazing wildlife. In the short time I have been here, I have witnessed silence at various springs and on the Ocklawaha where I should have been greeted by a delightful cacophony of wildlife songs. An observation platform has been closed to the public, and possibly dismantled. Florida and its Great Riverway have so much to offer its citizens….the nation….and the world. Without restoring the Great Florida Riverway, we will only have postcards, memories, and deadzones to leave our children, and our children's children. Perhaps when we long for our carefree youth, what we really long for is the feeling of flow, we experience when we are surrounded by Nature. The feeling of unconditional belonging, of being part of something magical, miraculous, that is greater than ourselves. Sheer joy, deep gratitude,Peace, serenity, renewal, connectedness and awe…. Life celebrating itself; this is the gift that Florida can give the world.
10/14/2021 9:51	Orange		No	Yes			1 time		Remove it.	Natural environment restoration.	Continued environmental dagradation.	No	
10/14/2021 9:56	Polk		No	Yes		1 time	2-5 times	Canoeing / kayaking Wildlife viewing	Remove the dam to restore the upstream springs and to enhance wildlife habitat restoration.	Destruction of habitat.	Continued degradation of the local environment as human population pressure increases.	Not that I can think of.	Natural Florida has continued to give up ground at a high rate. The Florida Wildlife Corridor Act was a small step in the right direction, but our states health is in severe decline.
10/14/2021 10:01	Hillsborough		No	No					Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every additional day the dam and reservoir remain in place results in additional environmental degradation.	Draining the Rodman Reservoir would remove the single greatest barrier to plant and animal movement along the Ocala to Osceola (O2O) Wildlife Corridor by replacing the open water expanse of the Reservoir with a restored floodplain forest, to the benefit of many listed plant species native to the region including the Federally listed Clasping Warea and Scrub Buckwheat. Manatees would regain open access to the warm water habitats of the Ocklawaha and Silver Springs. Migratory fish including the Striped Bass, American shad, American eel, and the critically Endangered Atlantic Sturgeon and Shortnose Sturgeon would once again have open access to the Ocklawaha system if the dam is breached.	The Reservoir would continue to be a barrier to movement by native wildlife and plant life along the length of the O2O Corridor, and compromise the value of Florida's investments in conserving lands like the Etoniah Creek State Forest, and approved Florida Forever projects.	No. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration.	
10/14/2021 10:08	Alachua		No	No					The dam should be removed and the river restored.	The dam needs extensive and expensive repairs and ongoing maintenance. The cost of maintaining the dam is not good use of taxpayer dollars.	Loss of bio diversity and loss of many fish species. Continuing expense of maintaining the dam.	Breach dam and drain lake even if dam is not fully removed.	
10/14/2021 10:11	Putnam		No	Yes		1 time	2-5 times	Canoeing / kayaking Wildlife viewing	I would like to see the dam removed and the restoration of Rodman Reservoir begin.	The reservoir is not needed for it's original purpose of the Cross Florida Barge Canal and it is going to become very expensive to maintain the locks and the dam as they have not received regular and needed maintenance for many years.	My biggest concern is the funding that will be necessary to maintain the dam and locks for a very limited number of users.	Just breach the dam and abandon the locks and let nature take it's course in the restoration of the reservoir.	
10/14/2021 10:18	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Hunting Wildlife viewing	Left alone	The amount of manatees that reside here an the large amount of fish haven	Wildlife and fish damage	Not really	I think the whole river system should be left alone
10/14/2021 10:20	Orange		No	No					Do whatever is needed to make it beautiful and help the manatees.	Every breathing individual deserves a good life. Let's help those who are unable to help themselves.	No more manatees in this world and a break and downward spiral in the ecosystem.	Whatever it takes to save the manatees and provide them with a happy life.	SAVE THE MANATEES!!!! NOW!!!

10/14/2021 10:22	Lake		No	No					Breach the Rodman Reservoir and Kirkpatrick dam.	It would restore 20 drowned springs, help fish, manatees and other wildlife gain more of their natural habitats and food sources.	We would miss our best opportunity to do this; we have the funds to do it; current environmental needs are critical; the dam is unsafe, and it is ridiculous to spend millions to repair a dam that its useless.	No. Breaching the dam is 50 years overdue, and the situation is dire.	It should be a complete no-brainer to breach the Rodman/Kirkpatrick dam, a useless, costly environmental hazard. We need to do all we can to preserve our beautiful and valuable Florida environment. PLEASE breach the dam, and thank you so much for your consideration in this important matter.
10/14/2021 10:26	Orange		No	No					remove it to restore the natural flow of waters to save our springs.	This just in the Orlando Sentinel: Tearing down Rodman Dam an excellent investment in the environment	Commentary https://www.orlandosentinel.com/opinion/guest-commentary/os-op-ocklawaha-dam-rodman-breach-springs-20211013-s3fbdaxqkfcjpnjt3ctrqzq4ie-story.html	Further degradation of FL waters, esp Silver Springs	
10/14/2021 10:28	Alachua		No	No					Would like to see the dam go.	The fact that the dam is stopping the movement of fish and manatees up the river.	That our Florida legislature is ignoring the environment and the views of the residents.	NO	
10/14/2021 10:29	Marion		No	Yes			1 time	Fishing	Way past Time for the Rodman dam to go. I'd much rather fish and boat down a healthy river than a basin	There are many springs that no longer have a connection with the dammed river. Manatees need access to these springs. A free flowing Ocklawaha river would be the best choice environmentally for many species and people.	Spending more money to repair the Rodman dam than the cost to remove it. The Rodman reservoir is useless	No absolutely not! Getting rid of the Rodman dam is 50 years overdue	Please use the money earmarked for something actually environmentally useful
10/14/2021 10:29	Alachua		No	Yes			2-5 times	Wildlife viewing	Removal (breaching) of the dam and return of the Ocklawaha River to its unimpeded, natural flow.	I keep a boat in Palatka on the St. Johns. Restoration of closer-to-natural flow Welaka north to Jacksonville would be a crucial improvement in maintaining the river's health in the face of multiple environmental threats.	We, as taxpayers, would end up paying for the maintenance of a dam that doesn't generate power, provide flood control, or aid commercial navigation. Instead, as it ages, it increasingly becomes a safety threat. Concern about dislocation of fishing businesses that have grown up on the reservoir could be addressed by systematic buyout, which would be much cheaper.	Not really. Drawdowns are temporary, leading to uncertainty for all concerned.	Beginning in 1973, I have sailed on the St. Johns, as far south as just north of Deland and as far north as the entry to the Atlantic Ocean. I know the river very well. I have canoed on most of the streams in the Palatka - Ocala region. The Rodman Dam was a bad idea from the start, but once the barge navigation purpose was eliminated, the dam lost any real purpose. Improvement of St. Johns flow is important, especially in the face of sea-level rise and resulting salinity. The sport fishery on the reservoir easily will be sustained if the Ocklawaha is restored to natural flow and the improvement for manatees as well as canoing and kayaking will be a real benefit.
10/14/2021 10:29	Duval		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Left alone. maintain current operations.	The failure of any organization to demonstrate that that there will be no unintended consequences of placing the Ocklawaha back in the state it was in in say, 1960.	Bureaucrats backed by politicians using the removal of the Rodman dam to further an environmental agenda.	Opening the flood gates of the Rodman Dam to the usual drawdown levels and leaving there and monitoring the area for adverse affects both economic and environmental for at least two years.	
10/14/2021 10:30	Seminole		No	No					Removal or opening of the dam to allow the natural return of the water course.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
10/14/2021 10:33	Orange		No	No					Breach the Rodman Dam and restore the flow of the Ocklawaha River	The health of our Florida springs is getting worse and worse. A free-flowing Ocklawaha could naturally restore many endangered springs. Florida's springs are one of our finest natural resources; it's important to save them.	Dead and dying springs and loss of wildlife such as manatees. Waste of taxpayer dollars trying to clean up the mess when nature can do it if allowed.	Nope	This problem started MANY years ago with the "Ditch of Dreams," the Cross-Florida Barge Canal. Many people, including Marjorie Harris Carr, worked tirelessly to halt that "economic boondoggle." She would likely be surprised it has taken so long to remove the last vestiges of the dam and restore the Ocklawaha. Let's finally get it done!
10/14/2021 10:33	Outside of state / other	Georgia	No	No					Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Animals and other wildlife will suffer as will plant life	Leave the wild places wild	
10/14/2021 10:33	Leon		No	No					In the interest of restoring the Ocklawaha River, which would be best for the environment, I would like to see the dam removed.	Removing the dam would restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Improved water quality and wildlife can't wait. The dam should have been breached decades ago.	
10/14/2021 10:34	Monroe		No	No					Removed and the waterway restored		The loss of mor species, animals and plants, degradation of habitat and loss of fresh water	No	
10/14/2021 10:35	Outside of state / other	Nevada	No	No									
10/14/2021 10:35	Orange		No	No									The Great Florida Riverway needs to be restored to help manatees survive. It will help manatees and other wildlife who need the habitat to survive
10/14/2021 10:36	Leon		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Help the manatees and other wildlife to thrive!
10/14/2021 10:36	Outside of state / other	Arizona	No	No							All animals including manatees are going to die		
10/14/2021 10:36	Outside of state / other	California	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife.
10/14/2021 10:36	Pinellas		No	No					preservation of wetlands and wildlife				
10/14/2021 10:36	Brevard		No	Yes		1 time	2-5 times	Canoeing / kayaking Boating Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.

10/14/2021 10:41	Outside of state / other	New York, NY	No	Yes			1 time	Wildlife viewing	The restoration of the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No	Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/14/2021 10:41	Outside of state / other	Bloomington, Indiana, USA	No	No					It would be great if the dam could be breached to restore the Ocklawaha River for the manatees and other wildlife.	I am told that the 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like manatees, Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	That manatees (and possibly other wildlife) will go extinct because they will be deprived of this much needed habitat.	No. The manatees and other wildlife are in desperate need.	I'm also told that in addition to providing much needed habitat for wildlife, breaching the dam and restoring the Ocklawaha River will be helpful to the human population as well by improving water quality and the environment in the area.
10/14/2021 10:41	Outside of state / other	New York	No	Yes			1 time	Boating Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer. Many people like me visit Florida to enjoy natural areas.
10/14/2021 10:49	Pasco		No	Yes			2-5 times	Wildlife viewing	I think the Kirkpatrick Dam should be breached in order to restore the Ocklawaha River.	Restoring the Ocklawaha River will preserve and support Florida's precious wildlife.	We will see the end of some of Florida's most precious wildlife--including our famous manatees.	No. I believe Florida's wildlife is in a very dangerous condition. If we don't restore the Ocklawaha River, we will see species become extinct.	My family has a special fondness for our manatees. Such gentle, beautiful creatures. We would be heartbroken if you allowed them to go extinct because you didn't maintain the environment they need to survive. Please help them and Florida's other precious wildlife by restoring the crucial Ocklawaha River.
10/14/2021 10:50	Outside of state / other	Niagara Fall, NY	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer. Not to mention, restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor. Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees, unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/14/2021 10:50	Outside of state / other	Port Townsend, WA	No	No									
10/14/2021 10:50	Duval		No	Yes			1 time	Wildlife viewing	Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat The Ocklawaha River is the heart of the Great Florida Riverway, which, if restored, could provide essential warm water habitat for hundreds of manatees in the winter. Manatees have already reached a record number of deaths this year - and if we don't restore additional areas of their natural habitat, we could lose even more manatees in the future.	Even while manatees are still struggling with starvation from seagrass loss, the greatest long-term threat to these animals is the loss of warm water habitat that manatees need to survive the winter. Right now, 60% of Florida's manatees depend on power plant outfalls to keep warm and survive the winter - an unsustainable and unnatural situation.	We need to make sure we breach this obsolete dam, otherwise manatees and other wildlife will die off from habitat destruction and pollution. The recovery of manatees has been a conservation success story until now - we can't let this progress backslide on our watch.	No	
10/14/2021 10:51	Outside of state / other	NC	No	No					I would like to see restoration of the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. In addition, because 15,000+ acres of the Florida Wildlife Corridor would be restored or enhanced, this action would also benefit species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	My greatest concern about keeping the Ocklawaha dammed is that it deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Additionally, keeping the Ocklawaha dammed keeps 7,500 acres of forested wetlands flooded by the Rodman Reservoir and would continue to negatively impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Restoration will reunite rivers and benefit communities, economies, and ecosystems all along the Riverway. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as someone concerned about Florida's people, environment, and wildlife.

10/14/2021 10:58	Seminole		No	No					The Kirkpatrick dam needs to be breached to restore the Ocklawaha River	By restoring the Ocklawaha River, it will help restore the manatee habitat and provide essential warm water winter habitat for hundreds of manatees. It will also restore 15,000+ acres of the Florida Wildlife Corridor which will benefit species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the river dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future as well as keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Wildlife and water quality cannot wait any longer. Breaching the dam is 50 years overdue.	I care a bout Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Restoration will reunite the Great Florida Riverway and benefit communities, economies, and ecosystems all along the Riverway. Restoration would provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees and unless their natural habitat is restored tere will be more die-offs in the future. Restoration will allow hundreds of manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam as well as revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor that will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Restoring the Great Florida Riverway is critically important to me as an animal lover and will greatly benefit Florida's people, environment and wildlife. Thank you.

Before more for extinct . When we lose other life, we've lost parts of our own Please help save manatees and other wildlife by returning the River to its native essence .
10/14/2021 11:04	Outside of state / other	Los Angeles	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/14/2021 11:06	Outside of state / other	Upstate, New York	No	No					The USA is mismanaging many indigenous lands that were stolen by colonialists. Florida actually belongs to the Seminole tribe and other indigenous tribes. Colonialists are causing the death of many species of wildlife, more than 20 species extinct in the USA, and less than 300 panthers are in the wild in Florida.	Please help protect clean water, clean air, and biodiversity. According to Defenders of Wildlife, "Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat."	More extinct species, damage to the ecosystem.	The USA needs to stop mismanaging indigenous lands and causing death, destruction, pollution, ruining of healthy ecosystems.	Please help protect clean water, clean air, and biodiversity.
10/14/2021 11:08	Washington		No	No					I think that the Kirkpatrick Dam needs to be breached.	The dam holds back the Ocklawaha River.	The Manatees will die, if they cannot access warm waters. Releasing the river, by breaching the dam, will allow the Manatees to access warm waters.	I do not know if any such scenario has been presented.	Thank you for allowing me to have input.
10/14/2021 11:08	Orange		No	No					Remove the dam	This would restore 20 natural springs, fish populations, and manatee habitat.	Loss of the opportunity to correct major harm to the Okleawha system would cause continued deterioration of this this important part of natural Florida.	No.	
10/14/2021 11:07	Lake		No	No					Remove the dam to restore the free flow of the Ocklawaha river	evidence that the free flow will benefit the fish, wildlife and human needs in the area.	Loss of opportunity, forestry, die off of wildlife	No - funds are available now to do it and the dam is deemed unsafe.	Please do this now. It will be a benefit to our country and the wonderful area we live in. Thank you

This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/14/2021 11:13	Outside of state / other	Clarkston, WA	No	No					The reservoir drawn down and the dam breached.	Access to warm water sorings for manatees and and improved wildlife corridor for migration.	Difficulty for panthers to migrate. Inability for manatee to access springs.	No. Dam breaching is the only means of improving this area as a wildlife corridor.	
10/14/2021 11:13	Jefferson		No	No					Whats best for the marine life	I think that all the worlds natural wonders from rocks statues gravestone forest should be left to enjoy for generations to come. There are so many man made things from centuries about and I see them being destroyed & my philosophy is like the one Boy Scouts have 'Leave nothing behind and take only memories' so that things dan be enjoyed forever. Where wildlife is concerned to amazing how theyve evolved. But humans can't just look and not touch & it's even hard to study these animals especially marine life bc we can't exactly live with them in the sea to observe behavior & they bring in & cage these things destroying what God left for us to be in wonder at these majestic creators yet we (humans) are destroying them & their ability to breed & populate even interfering w/ their migration floe food so a few more decades od human involvement these majestic animals will join the dinosaurs if we don't stop them now.	That many majestic creatures & even land wildlife will become at best endangers but st the rate humans interfere it could be sooner than that what would have been centuries of left alone. It could be decades or it could be let than that due to human interference & before we know it they're endangered & the cure r rate it won't take much longer for them to be ex's tinder all together. It doesn't just hurt the animals or even wildlife or plants but it will have a devestating affect on our ecosystem which will cost us all before we relize it & once we realize the mistakes that. We're made even though we know what could kill them off and how to stop them but those who don't care can't see past their own nose & when what we've warned them about comes to fruition they'll wish they had listened to us. Without them even the human raise is doomed. WE ALL HAVE A PART IN THIS PLANET AND RESPECTING OUR OWN & species unlike us is the only way to insure that we will also be able to continue to populate but it's entirely possible that one they ruin the ecosystem it won't take any time before we are existinct too:	I don't understand the comments I only know I can be an ally and be a voice	
10/14/2021 11:13	Outside of state / other	California- San Mateo	No	Yes		1 time		Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/14/2021 11:14	Pinellas		No	No					I would like to see the dam torn down.	I support the positions of environmentalists and wildlife experts.	More harm to wildlife and the environment	No	
10/14/2021 11:15	Outside of state / other	MD	No	Yes		2-5 times		Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	1. Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 2. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	1. Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. 2. 10/14/2021 11:26	Lee		No	Yes		2-5 times		Wildlife viewing	Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat. That is what I would like to see happen. No more dead manatees.				
10/14/2021 11:26	Outside of state / other	New Jersey	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.

10/14/2021 11:29	Outside of state / other	Cypress texas	No	No					Destroying habitats for the manatee is a bad decision.	Saving manatees	Death of manatees		
10/14/2021 11:30	Outside of state / other	Michigan	No	Yes			1 time	Wildlife viewing	Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	The huge numbers of deaths of the Manatees that are occuring.	The extinction of the gentle and important Manatee.	NO	Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.
10/14/2021 11:31	Outside of state / other	Virginia	No	Yes			1 time	Wildlife viewing	change it so manatees can reach warm water areas in winter	the knowledge of so many manatee deaths in the past year	Further destruction of animal lives and habitats	somehow bypassing the dam to allow manatees passage	
10/14/2021 11:31	Outside of state / other	Maryland	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breeching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.

Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/14/2021 11:47	Outside of state / other	Staten Island, NY	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. It would also keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No - wildlife and water quality cannot wait any longer.	Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. 10/14/2021 11:55	Orange		No	No					Breach the Rodman/Kirkman Dam.	Millions in taxpayers' money is unnecessarily spent to repair the Rodman/Kirkman Dam; a dam that does not provide flood protection, power, water supply or other broad public benefit.	Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs.	No. The dam should have been breached when the Cross Florida barge canal was canceled.	It is time to breach the Rodman/Kirkman Dam.
10/14/2021 11:55	Outside of state / other	Illinois	No	Yes			2-5 times	Fishing	To keep these ecosystems alive and well. They're beautiful places that offer great fishing and boating opportunities, it would be a shame to see them gone. I'm 28 now and started fishing the Save Rodman tournament when I was 8. Haven't been able to make it every year as we live about 1000 miles away, but have fished it several times. I feel like the fact we'd drive that far to fish a tournament to support the saving of this place should speak for itself	As stated above, I don't live in Florida, but we have many friends who do and who have fished Rodman their whole lives and they're dedicated to the saving of the lake as it's good for the fishing and hunting opportunities but also for the ecosystem in the area, it's ability to help control water levels and also to help keep good water quality. To me there's not any negatives listed there.	For the ecosystem obviously, revenue for businesses in that areas and also, as stated for the benefits the lake makes for the river system. I also would want to know a legitimate reason as to why it would be a good thing to drain the lake...sounds like something politically driven somehow to me.	No.	As mentioned above,. From Illinois, where we don't have lakes and rivers that's are cared for and managed like you all have. To think that there is even consideration to drain this lake to me is absurd. You all don't understand the gem you have down there with that lake. Take it from someone who had nothing but silt filled mud holes to fish...keep the dam.
10/14/2021 11:56	Outside of state / other	Austin texas	No	No									As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	
10/14/2021 12:08	Duval		No	Yes			1 time	Wildlife viewing	Return the Oklawaha River to its natural state by breaching the Rodman/Kirkman dam. The dam harms wildlife and water quality.	20 lost springs will be restored and millions of gallons of natural water flow returned to the Oklawaha and St. Johns rivers. Plus, millions of tax dollars saved by not repairing or replacing the existing dam.	Possible dam failure. Lost opportunity to restore wildlife habitat and save fresh Florida spring water.	No! Breaching the dam is the only option to improve water quality, restore natural habitats and prevent dam failure.	Potable water is a major concern for the future of humanity. Florida should do everything possible to care for our natural springs by protecting these sources and maintaining the natural ecosystems surrounding them.
10/14/2021 12:08	Palm Beach		No	Yes			1 time	Other	Protect it so it may continue to be used by man and all living things.	Manatees have been around for thousands of years so we need to make sure they are around for thousands of years in the future.	They would become extinct.because of our lack of concern and protection.	NO!	
10/14/2021 12:09	Outside of state / other	New Jersey	No	Yes			1 time	Canoeing / kayaking Other: Photographer	Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	Pls see below	Manatees have already reached record numbers of deaths this year due in part to starvation from seagrass loss. The greatest and looming long-term threat to the manatee is loss of natural warm water winter habitat. We can make a difference by restoring the Ocklawaha River, the heart of the Great Florida Riverway!	No	Even while manatees are still struggling with starvation from seagrass loss, the greatest long-term threat to these animals is the loss of warm water habitat that manatees need to survive the winter. Right now, 60% of Florida's manatees depend on power plant outfalls to keep warm and survive the winter - an unsustainable and unnatural situation. Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.
10/14/2021 12:10	Outside of state / other	Lima, NY	No	No									Stop killing the Manatees. They were there first and they are gentle creatures who should not be harmed.
10/14/2021 12:11	Brevard		No	Yes			1 time		Remove the damn	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	More decline if the manager and other wildlife.	No, get rid of the dam	Prioritize the environment over business
10/14/2021 12:11	Outside of state / other	Austin, Texas	No	No					I would like to see the Ocklawaha River restored, by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Keeping the river dammed deprives essential warm-water winter habitat for manatees. Moreover, keeping the river dammed means that 7,500 acres of wetlands will remain flooded, hampering migration through the Florida wildlife corridor for Florida panthers and black bears, bobcats, and white-tailed deer.	Breaching the Kirkpatrick Dam is a project that should have been undertaken years ago. There is no reasonable scenario other than a full restoration of the Olawaha River.	2021 is the deadliest year on record for manatees. We must do everything possible to continue to protect these unique creatures, including restoring the Ocklawaha River, which is at the heart of the Great Florida Riverway. Although I don't live in FL, I have family who are long-time Floridians. They have taken me to see manatees in the St. John River. I am very concerned about these creatures and all Florida's wildlife. Thank you for the opportunity to comment.
10/14/2021 12:11	Outside of state / other		No	No									
10/14/2021 12:12	Polk		No	Yes		More than 5 times		Fishing Boating Wildlife viewing Other	Preservation for the reservoir and dam. For wildlife and visitors and there children to enjoy.	The revenue from anglers and visitors catering to local motels, restaurants and other businesses.	The reservoir would be drained and or homes would be built all and the reservoir , wildlife would greatly suffer.	NO	I Visit lakes all Over Florida and Rodman Reservoir is by far the most unique ecosystem in the state. With its wildlife, Bald Eagles included. And in all it's beauty. It needs to be saved at by all means necessary.
10/14/2021 12:13	Broward		No	No					Finally restoring the natural waterway	All the reports from environmental groups	Backsliding, as usual	no	
10/14/2021 12:13	Outside of state / other	CA	No	No									
10/14/2021 12:13	Outside of state / other	CA	No	No					The Dam needs to be breached to restore the Ocklawaha River habitat.	The manatees need a warm water habitat for the winter and restoring the Ocklawaha River by breaching the Dam will restore the manatee habitat while also restoring forested wetlands currently flooded by the Rodman Reservoir that negatively impacts species like the Florida black bears and Florida panthers.	It would have a big impact on the survival of the manatees because the Kirkpatrick Dam prevents manatees from having the warm winter water they need.	None that I'm aware of.	Even though I'm from out of state, the decline in the manatee population really worries me. I've visited Florida and the manatees and other Florida wildlife are a big draw for me and my family. Breaching the Dam and restoring natural warm water for the manatees' winter habitat will go a long way towards helping their population survive amid all the environmental challenges they face.

Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	NO!! Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/14/2021 12:35	Outside of state / other	San Diego, CA	No	No					I would like to see the Ocklawaha River restored by breaching the Kirkpatrick Dam.	First, 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer. Also, the Ocklawaha River is the most impactful manatee habitat. The restoration project in the state will provide essential warm water winter habitat for hundreds of manatees.	Of concern would be keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. An addition, keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	Absolutely not, breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. 10/14/2021 12:43	Manatee		No	No									
10/14/2021 12:43	St Lucie		No	No									Please protect Manatees and wildlife!
10/14/2021 12:43	Alachua		No	Yes		2-5 times	More than 5 times	Canoeing / kayaking Other: education		Dam to come down & river to flow freely	The book Ditch of Dreams (which I co-wrote with David Tegeder)	The continued degradation of the dam leading to its breaching	A slow removal of the dam that allows some sort of compromise	A free-flowing river would be an economic boon to Putnam County- the argument needs to be couched in those terms- not political or environmental
10/14/2021 12:43	Outside of state / other	Connecticut	No	No										
10/14/2021 12:43	Outside of state / other	LA, CA	No	No							If restored, could provide essential warm water habitat for hundreds of manatees in the winter	death of manatees		
10/14/2021 12:45	Columbia		No	No						I'd like to see restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	This would restore the ecosystem of 20 lost springs as well as Silver Springs. It would also save up to $14 million for repair of this ancient dam. Last, but not least, it would provide warm water for 100s of manatees.	We'd lose thousands of acres of forests that could be restored, which could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/14/2021 12:45	Outside of state / other	Baltimore, MD	No	No					Restore the Ocklawaha River for Florida's wildlife	Loss of many manatees and a loss of river ecosystems would be restored if rivers flows freely.	Loss of manatees and other wildlife.	If the dam reservoir can be reduced or modified so the river could flow more freely with an increase in its volume allowing for its ecosystem to flourish, this could be a successful compromise between nature and industry's needs.	The design o dams, reservoirs, canals should always take a river's ecosystems into account.
10/14/2021 12:46	Sarasota		No	No									Manatees deserve protection and they need healthy clean food and clean water and safe places to live and raise their young. Whatever it takes to provide these is what must be done. Florida needs to restore whole unpolluted habitat for all its native species, get rid of invasive species such as pythons and clean up its act for the health and well being of ALL who live there.
10/14/2021 12:46	Miami-Dade		No	Yes			1 time	Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer. 10/14/2021 12:51	Citrus		No	No									DON'T VOTE FOR BUSINESS OVER THE ENVIRONMENT !!!
10/14/2021 12:54	Orange		No	No					I would like to see the dam removed to allow the Ocklawaha River to flow like nature intended it to. Just because this dam was put up at a time when people thought it was a good idea does not mean that it still a good idea.	The areas that wildlife used around this area have been hurt by the damming of the river and the subsequent drying up of surrounding areas used by wildlife.	That Florida is not following the science which shows that the environment would be better off without the dam.		
10/14/2021 12:54	Outside of state / other	Nevada	No	No					Human so-called mystic "improvements" have damaged natural ecosystems leading to the environmental degradation from which the planet's balance now suffers. We did not know better in the past when we developed such anthropocentric habits. We DO KNOW BETTER know and must learn to respect and successfully co-exist with the natural systems that support planetary health. Dams and reservoirs are not part of such necessary respect. In particular, Florida's whole hydrology has been drastically impaired and polluted by short-sighted profit oriented "progress". We need NEW holistic HABITS. Taking care of where one lives is NOT a low-low situation but a win-win for humans and all other beings.	I have been teaching environmental science since 1981 and have of course learned a LOT about Florida's mounting problems from non-holistic over-development.	YOU who live there, along with all other forms of flora and fauna will suffer.	This is about taking the right new direction now. Continued actions that are holistically oriented will slowly but surely restore health for ALL.	
10/14/2021 12:54	Citrus		No	No									STOP ENDANGERING THE MANATEES FOR SUGAR AND BIG BUSINESS !! WE DON'T NEED THE SUGAR !
10/14/2021 12:54	Monroe		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. 10/14/2021 13:00	Outside of state / other		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	The manatees need the warm water and sea grass to survive	The manatees survival!		
10/14/2021 13:01	Palm Beach		No	No					Restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor. Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/14/2021 13:01	Outside of state / other	Midlothian, VA	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation.
10/14/2021 13:03	Outside of state / other	Virginia Beach	No	No									
10/14/2021 13:03	Orange		No	No					Restore manatee habitat!!	Even while manatees are still struggling with starvation from seagrass loss, the greatest long-term threat to these animals is the loss of warm water habitat that manatees need to survive the winter. Right now, 60% of Florida's manatees depend on power plant outfalls to keep warm and survive the winter - an unsustainable and unnatural situation. Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	Extinction!	No	
10/14/2021 13:04	Outside of state / other	United States New Jersey	No	No					restore the river	common knowledge	extinction	no	please be humane, for Petes' sake
10/14/2021 13:05	Miami-Dade		No	No					Breach the Kirkpatrick dam	Restore free flowing waterways for riparian and wildlife. Manatees would especially thrive in a clean un encumbered river.	Continued dwindling numbers of wildlife. Wildlife is a huge part of Florida's attraction, brings tourism to our state and allows our reputation for natural beauty. We need to take great care of our wildlife.	Continue to monitor fertilizer and algae bloom everywhere .	
10/14/2021 13:08	Outside of state / other	Argentina	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/14/2021 13:08	Outside of state / other		No	No			1 time	Wildlife viewing	The Kirkpatrick Dam must be breached to release the Ocklawaha River.	We must do everything we can to protect manatees and give them more habitat during the winter months.	Even more manatees dying due to lack of habitat and starvation	Providing other protected areas for manatees and more rules for boaters and swimmers	
10/14/2021 13:08	Alachua		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	I would like to see that Ocklawaha River fully restored. Doing so would provide manatees a safe and warm place to breed in the winter, as well as a place for them to find appropriate amounts of food, as they are starving as it is now, and are dying in record numbers, due to anthropogenic causes. We as a society should do what is necessary to ensure the safety of the gentle and majestic manatee, as we have taken their natural environment, changed it, and made it our own for far too long. This has made it exceedingly difficult for manatees to survive. Therefore, please fully restore of the Ocklawaha River and let the manatees thrive once again.	The ongoing and great loss of manatees as each year goes by.	The Extinction of the wonderful and majestic manatee species.	No.	
10/14/2021 13:10	Outside of state / other	28792	No	No					Protect the wildlife	Nature	Death	No	
10/14/2021 13:10	Outside of state / other	MI	No	No					please preserve this to help save sealife and the manatees	statistics show manatees are dying are increased rates, and we need to help preserve their warm water winter habitat	more manatees dying and being affected, this will upset the the local ecosystem	possibly	
10/14/2021 13:12	Outside of state / other	CA	No	Yes					I find solutions to share this natural area better with manatees	the death and injury to manatees by human causation	more loss of a valuable species	Unfortunately, No	Thank You
10/14/2021 13:12	Miami-Dade		No	Yes		1 time		Wildlife viewing	Please see to it that this Kirkpatrick Dam is breached.	Breaching the dam would enhance wildlife habitat and help protect Manatees and birds.	That Manatee populations would suffer.	No.	Please see to it that this wonderful area is preserved for future generations. Breech Kirkpatrick Dam and help make Rodman Reservoir a prime and healthier spot for all wildlife. Thank you.
10/14/2021 13:12	Outside of state / other	OK	No	No									This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife.
10/14/2021 13:13	Outside of state / other	Sacramento CA	No	No									
10/14/2021 13:14	Marion		No	Yes	1 time	More than 5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	I would like the dam to be breached/removed to restore the natural flow of the Ocklawaha river.	It will restore the natural flow of the rivers and the springs that have been lost due to the dam. This will benefit the fish and manatees that historically took advantage of the natural river habitat.	It will continue negatively impacting the natural ecosystem and continue to cost taxpayer money for upkeep of the dam.	No	
10/14/2021 13:14	Outside of state / other	Mass	No	No					Re restored	Vast interest for environment	A number of negative outcomes	No	
10/14/2021 13:15	Brevard		No	Yes			2-5 times	Wildlife viewing	Long overdue restoration of the natural flow of Ocklawaha, Silver and St. Johns Rivers would be major step in restoring natural areas -- and waterways -- of real Florida. I remember how clear the waters of Silver Springs once was in the 1950s.... springs in the region are now sadly degraded, lower water flow and pollution.... we have numbers of springs like nowhere else in the world! We should remove the Rodman dam and restore the region to extent possible while it can still be accomplished.	Restoration of the natural flow of Ocklawaha, Silver and St. Johns Rivers is the most important 'piece of information.' The area is a natural gem which we as a people have allowed to degrade.	Continued degradation and eventual collapse of Real Florida, and the unfortunate and unavoidable loss of 'quality of life' .... we are building toward environmental disaster in Florida, pollution of every body of water. We should restore the Ocklawaha, Silver and St. Johns Rivers -- but it will not happen if we don't remove Rodman Dam.	Do you mean to ask: what level of pollution and environmental degradation is ok with me? Would I object to floating down a slimy natural spring-fed river, like elsewhere in Florida? I am extremely disappointed (a kind way to phrase it) in the failures of Florida's leadership in failure to protect Florida's special environment. No, I do not support what we are doing -- we MUST do better.	I remember clear, unpolluted waters teeming with fish, shrimp, crabs -- almost anywhere in Florida in my childhood. Lakes that today are almost pea soup were once crystal clear and teeming with life. Small excuse here, small excuse there, bit by bit it has been transformed. Who speaks for CLEAN and unpolluted water? Free flowing unpolluted springs? Who among Florida' so-called 'leaders' speaks for restoration of natural areas and wetlands instead of more golf courses and shopping malls and sprawling development and highways thru what should be preserved while it's still possible? We are a failed people. We should be really really ashamed of what we have allowed to happen in Florida. We should not even be having this pitiful 'comment' exercise which will likely do little. RESTORE THE OCKLAWAHA and all that means!!!! Period.
10/14/2021 13:17	Putnam		No	Yes	1 time	2-5 times	More than 5 times	Fishing Boating Wildlife viewing	Maintain both the reservoir and the dam.	Now a viable ecosystem. Loaded with birds and fish. The reservoir is a filter system for dirty waters flowing in from the south. Very similar to systems which have been built and maintained at tax payers expense at Lake Apopka and Lake Griffin, among others. All the waters flowing into the reservoir flow out cleaner at the dam, less minimal evaporation losses.	Loss of a magnificent, viable ecosystem. Loss of birding grounds, duck migration area, and reduced fish population.	No	If the dam is removed and the lake is drained and you attempt to restore the original river system polluted waters from upstream will not be adequately cleaned and will degrade the waters of the St. Johns River. Also, if you think this would be doing the right thing then you should also do the right thing and return lands to their pre-canal project land owners or their heirs.
10/14/2021 13:18	Clay		No	Yes			More than 5 times	Fishing Fishing (shoreline/structure) Wildlife viewing	Preserved and kept clean its beautiful	Wildlife support	Loss of wildlife

10/14/2021 13:23	Outside of state / other	NYS	No	No					Whatever is necessary to preserve habitat.	Climate change	Further planetary damage.	Can't think of any	
10/14/2021 13:24	Pinellas		No	No					protection for wild life and especially manatees that are soon to be endangered.	manatees are an iconic gentle animals that are part of Florida cultural heritage. We must save each and every one of them form development			
10/14/2021 13:24	Broward		No	Yes			1 time	Canoeing / kayaking	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees	Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer	
10/14/2021 13:27	Leon		No	No					We need to remove the dam to restore the Ocklawaha River.	This is essential in order to restore adequate warm water habitat for manatees to be able to recover and thrive. Doing so would also enhance the habitat and restore the Florida Wildlife Corridor for many wildlife species. such as Florida panther, etc.	Survival of manatees is at stake.	No. We have lost too many manatees already due to pollution and loss of habitat resulting in starvation.	The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway.
10/14/2021 13:28	Marion		No	Yes			1 time	Fishing (shoreline/structure)	Keep it as is	Too much of our nature is being destroyed. I was born and raised here, and our way of life is disappearing.	Our legacy and natural beauty will be gone.	We must keep our natural resources from disappearing. Generations to come should be able to enjoy the natural resources of this state.	
10/14/2021 13:29	Palm Beach		No	No					Please help the manatees they are in danger!	Manatees are starving and dying at alarming rates.	The manatees will die	URGENT Please support the survival of the manatees.	
10/14/2021 13:30	Putnam		No	Yes			1 time	Other: None	Remove the dam. Restore the ecosystems natural flow of H2O. Humans and our greed hasdestroyed the state of Florida.	The scientific data that supports the proof of damage to the environment that this under-used and failed project has caused.	The # 1 concern It is the Continued demise of the ecosystems here and detrimental affects throughout the State. There is no more earth available to draw from or use up. We HAVE to protect this ONE TIME gift that we have been given. There are no "do overs"?	No, remove the rumbling dam. Restore the natural order.	No amount of money or tourism dollars are worth causing further destruction to an environment with an ecosystem as fragile as ours here in Florida
10/14/2021 13:30	Outside of state / other	North Carolina	No	No					Yes	The need to protect Manatees as they have died in record numbers this year due in part to poor habitat / food supply	increase in endangered status of this animal	helping improve the lives and habitats of these animals ultimately makes the world more liveable. so anything helps.	
10/14/2021 13:30	Outside of state / other	Edgewood, Maryland	No	No									
10/14/2021 13:30	Jackson		No	No					Preservation of the manatees is important to me.	Manatees are in distress and unnecessarily. Humans have caused this situation; we must fix it.	Greater distress for manatees. Balance in ocean biodiversity will be adversely affected, domino chain style.	We must take the withering conditions of the ocean biosphere seriously as species here are in distress and headed for extinction.	It's not just fossil fuels degrading the ecosystem. It's animal flesh consumption. Massive amount of documentation on this. So much easier to point a finger at corporations than it is to change one's personal habits. The responsibility does not lie solely with industry. People can choose to change themselves, also. Please advocate for those changes. Thank you.
10/14/2021 13:35	Marion		No	No					restore the Great Florida Riverway	F. Manatees have already reached a record number of deaths this year - and if we don't restore additional areas of their natural habitat, we could lose even more manatees in the future.	we can't let the progress we made be in danger of a backslide.	The manatees are still struggling with starvation from seagrass loss, the greatest long-term threat to these animals is the loss of warm water habitat that manatees need to survive the winter. Right now, 60% of Florida's manatees depend on power plant outfalls to keep warm and survive the winter - an unsustainable and unnatural situation. We must take measures to ensure their survival.	
10/14/2021 13:36	Duval		No	No					The breaching of the Rodman dam to restore the natural flow of the Ocklawaha River.	There is science to back up the position that restoring the free flowing Ocklawaha River would rejuvenate habitats for water dwelling animals like manatees and restore fish migrations that would better the ecosystem.	My biggest concern would be these habitats dying out and not being restored to levels they are capable of. The fear is that we would not be able to repair the already intense and ongoing ecological degradation of our waterway in the region - one that is so important to both animals and people.	No, there is not.	

10/14/2021 13:37	Miami-Dade		No	No					Restore the great Florida Riverway to support local wildlife (like manatee) habitat	Manatee deaths are at record highs the past two years, destruction to our local habitat is well documented. Poor environments also reduce tourist traffic and/or the desire of people to live here.	Human encroachment and detrimental impact on Florida's native flora and fauna	Phased approach to reducing water in the dam to historic levels at minimum	
10/14/2021 13:37	Pasco		No	No									
10/14/2021 13:41	Outside of state / other	Milwaukee, WI	No	No					Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	Even while manatees are still struggling with starvation from seagrass loss, the greatest long-term threat to these animals is the loss of warm water habitat that manatees need to survive the winter. Right now, 60% of Florida's manatees depend on power plant outfalls to keep warm and survive the winter - an unsustainable and unnatural situation.	I love manatees. I would be heartbroken if they disappeared from Florida waters. They are unique and interesting animals, and MUST be protected and encouraged to thrive!	I haven't seen a good alternative suggestion for their protection and safety, so...no.	
10/14/2021 13:42	Outside of state / other		No	No									
10/14/2021 13:43	Outside of state / other	Kingman Arizona	No	No					Preserving and managing usage of the reservoir and dam.	The need for management of the reservoir and dam.	Flooding and or water shortages.	Widespread water shortages and or flooding.	
10/14/2021 13:44	Outside of state / other	Durham, NC	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.

The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for considering my comments.
10/14/2021 13:45	Alachua		No	Yes	1 time	2-5 times	Canoeing / kayaking Wildlife viewing		I would like the Rodman/Kirkpatrick Dam to be breached. It will save millions of dollars and restore a free-flowing Ocklawaha River	The state of Florida will be spending billions of dollars to combat the effects of climate change. From a purely monetary point of view, an estimated $1B million in dam repairs would be saved by avoiding repairs to this failing dam which could be much more effectively spent. Further, as more people move inland, and the demand for wild places continues to grow, a restored Ocklawaha River would become an economic boon to the entire area. Economic analyses by researchers at UF found that the economic impact from eco-tourists who use the natural portions of the Ocklawaha River is twice that of the anglers and boaters using the Rodman reservoir. Further, water quality and fish production have continued to decline year after year since records began in 2004. When accounting for revenues generated by increased recreational usage, a cost-benefit analysis determined restoration would produce a cumulative net benefit of $47 million over the first 10 years, as compared with a cumulative loss of over $5 million with repair and maintenance of the dam. It's just good economic sense to stop paying for this failed project.	Taxpayers will perpetually be called on to pay for repair and maintenance of the dam and Reservoir, and continue to be liable for any property damage or loss of life resulting from a dam failure. In this time of increasingly powerful storms I feel this is a real concern.	No.	I loved canoeing the Free-flowing Ocklawaha for years in the 1960's. It was the most beautiful river of the many I have paddled in our state. The wildlife was extraordinary, and it is a natural gem I would greatly love to have back for the benefit of not only plants and animals, but also we humans, who are desperately in need of the beauty and peacefulness of our declining pieces of wild Florida.
10/14/2021 13:46	Outside of state / other	bayonne, new jersey	No	No					it's time to restore the Ocklawaha River for Florida's wildlife!	Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	Manatee starvation from seagrass loss, and the greatest long-term threat to these animals is the loss of warm water habitat that manatees need to survive the winter.		Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.
10/14/2021 13:46	Outside of state / other	CONNECTICUT	No	No					Protect manatees!	We all need to protect the environment	The danger to the environment- we won't have a second chance!	NO	
10/14/2021 13:46	Marion		No	Yes	2-5 times			Wildlife viewing	Remove the dam and restore the the river	Overwhelming scientific evidence	The dam will fail	Permanent draw down	
10/14/2021 13:47	Outside of state / other	CA	No	No					All natural habitats need to be preserved for the animals who inhabit them!	Manatees have already reached record numbers of deaths this year due in part to starvation from seagrass loss. The greatest and looming long-term threat to the manatee is loss of natural warm water winter habitat.	Manatees would no longer exist in Rodman Reservoir	Preserving areas of the reservoir for manatees	
10/14/2021 13:47	Outside of state / other	Sheboygan County, Wisconsin	No	No					Preservation, improvement and monitoring of all habitat, water quality and wildlife.	Restoring natural food supply and water quality for Manatees.	Disappointment in another governmental failure to act for the greater good of all of our natural earth.		I want all governmental agencies to stop turning their backs on the importance of monitory and reversing damage to every square inch of the earth.
10/14/2021 13:48	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking	I would like to see better options for fish and other wildlife to be able to access the ocklawaha river. I understand that there are businesses that do rely on the reservoir however I do believe that the original flow should be restored if not naturally then with a man made solution which hopefully can appease everyone.	There are a multitude of real world examples of dams being removed and rivers naturally restoring themselves and wild life flourishing. Edwards dam in Maine https://www.nationalgeographic.com/environment/article/lessons-from-the-field-edwards-dam-removal-maine Elwha dam https://www.nps.gov/olym/learn/nature/elwha-ecosystem-restoration.htm There are so many to list that show positives to local wildlife after a dam removal. That being said, the dam removal must be gradually and safely as there are consequences for rushing the removal such as sediment build ups. This is why I believe restoring the natural flow is important for not only our fisheries but also local wildlife. I do believe that there way to restore natural flow without the loss of the reservoir.	That both fish populations being to decline in both number and overall size of fish.	I believe increasing the flow speed of the the bypass between the rodman reservoir to the saint johns may entice migration fish species to follow the current and have better access to the Ocklawaha river.	
10/14/2021 13:48	Alachua		No	No					Restoration to it's natural flow and continuity.	The incredible success of the Kissimmee River restoration project.	Continued interruption of the natural flow and the potential HAB's associated with stagnant water now a major problem elsewhere as well as the loss of habitat for the Florida Manatee.	Even if the flow through the dam were increased this is an impediment to aquatic and marine life in the river.	The Rodman dam was a part of an ill-conceived project from the beginning that altered the natural watershed this river had experienced and negatively impacted many aspects of life both in and around the river.
10/14/2021 13:49	Outside of state / other	delaware	No	No									
10/14/2021 13:49	Volusia		No	Yes		2-5 times	Canoeing / kayaking		Remove it.	Manatee deaths and environment damage. And the cost of maintaining the dam.	That the people in charge do not care what they leave to future generations. And they couldn't manage a one car funeral.	No	I have heard that the damn does not provide the fishing that it once did. And continues to cause harm to the manatees and the environment. So why hasn't it been taken down all ready?
10/14/2021 13:50	Outside of state / other	Gaithersburg, Maryland	No	No					Restore the Ocklawaha River by breaching the Kirkpatrick Dam	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a person who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.

Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/14/2021 14:13	Duval		No	No									
10/14/2021 14:15	Outside of state / other	Cherokee County, Georgia	No	No					Restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River would have the the most impact for manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefiting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/14/2021 14:16	Outside of state / other	MA	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/14/2021 14:59	Orange		No	No									

10/14/2021 15:00	Outside of state / other	Oregon	No	Yes			1 time	Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.Restoring the Ocklawaha	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. 10/14/2021 15:26	Outside of state / other	California	No	No					I feel that there some very talented people and Engineers that can come up with a stellar plan to preserve the area and maintain the integrity of the area for the Manatee's life. Possibly bypassing, rerouting. To be honest there is always something that can be done to preserve habitat. Florida has the only Manatee population, it is very special. I know the State of Florida will rise to the occasion on this problem. Respectfully, Elaine Morgan	Warmth of water and flow. It also supports their natural diet.	Loss of another water habitat that supports another endangered aquatic animal. I would think that the loss of 'Manatee habitat" and then the animals would be a huge loss to Florida tourist draw. I would hope that the powers that be will focus on the animals and their needs. Sometimes compassion should trump $$'s.		None at this time. I wish Florida the very best. Thank You for allowing my comment. Respectfully, Elaine Morgan
10/14/2021 15:29	Orange		No	Yes			1 time	Fishing Boating	Please remove the dam and let the River flow.	The fact that so many wetlands will be expanded and so many springs will be revitalized.	Continued erosion of Florida's natural resources and continued funding support for far less important efforts.	Not aware.

10/14/2021 15:49	Outside of state / other	colorado	No	No					The full restoration of the Ocklawaha River by breaching the Kirkpatrick Dam	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees, a species iconic to Florida, which needs more protection. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. The recent loss of manatees is shocking, and this is an opportunity to directly aid in the survival and sustainability of the species. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	I have family who lives in Florida, and we all care about Florida's environment. The state's natural habitats and wildlife are its most valuable asset. I am asking you to restore the Ocklawaha River, to ensure a bright future for the state's wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me and my family and will greatly benefit Florida's people, environment, and wildlife.
10/14/2021 15:54	Palm Beach		No	No					Protect it.	The future of manatees.	Loss of manatees.	No.	
10/14/2021 15:54	Outside of state / other	California	No	No					I would like to see it restored for wildlife and people.	I've read articles about the manatees struggle with cold stress syndrome. We changed their habit and now it's time to give it back!	That manatees will be lost forever.	Only if it helps the manatees.	
10/14/2021 15:55	Pinellas		No	Yes			2-5 times	Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. 10/14/2021 16:46	Outside of state / other	Georgia	No	Yes	1 time	1 time	2-5 times	Fishing Wildlife viewing	PLEASE keep Rodman as-is!	The wildlife is incredible. There is a huge amount of fish diversity, birds, alligators, and manatees. I was fishing there for pleasure (catch and release) and have never enjoyed fishing as much as I have at Rodman. I plan to go often in the future. During my visit, I saw osprey, bald eagles, blue herons, egrets, and many other birds. We heard alligators growling and saw several manatees.	These animals would be almost completely wiped out. Most of the reservoir would turn into muck and mud and everything would die. Manatees and alligators couldn't handle the river current and would die or disappear. The gorgeous trees would die and mosquitoes would be everywhere. It would be horrible for decades.	No. All I want is to keep the gorgeous property as-is. That is best outcome for the wildlife and makes the most economic sense.	
10/14/2021 16:47	Outside of state / other	Virginia	No	No				Restore the Ocklawaha River by breaching the Kirkpatrick Dam to allow endangered manatees to access the Ocklawaha's natural springs.	The health and lives of endangered manatees, as well as species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer who will benefit from this restoration, as well.	The survival of manatees who are cut off from warm water during winter, as well as the other species whose access to this natural habitat is greatly restricted by the dam.	No. Dams across the country have had notoriously dangerous impacts on natural habitats, wildlife, the environment and even humans.	
10/14/2021 16:48	Outside of state / other	New York	No	No				Please breach the damn and allow the Ocklawaha River to flow.	Breaching the dams, and allowing the Ocklawaha River to flow will help hundreds of manatees by allowing them to access additional warm water habitat.	manatees and other wildlife will be in danger of becoming extinct.	I'm afraid not.	Please help hundreds of manatees, and other wildlife by allowing them to access additional warm water habitat.
10/14/2021 16:48	Outside of state / other	MS	No	No				Save manatees	Need clean warm water habitat, without it manatees are in danger	Manatees could become extinct	Not sure	
10/14/2021 16:49	Pinellas		No	No								
10/14/2021 16:50	Outside of state / other	California	No	No				Conservation	I don't know	Extinction of species	N/A	N/A
10/14/2021 16:51	Outside of state / other	Atlanta, Fulton Co., GA	No	No				I would like it cleaned up and made safe for all Flora and Fauna	Manatees and other species are becoming dangerous close to extinction.	The fate of the manatees.	No	
10/14/2021 16:52	Putnam		No	Yes		1 time		Boating Wildlife viewing	I would like to see it removed.	I am a fiscal conservative. I would prefer to spend money once to remove what began as a bad idea, than to continue spending to maintain it.	That we waste money maintaining an old pile of junk that never should have been put in place.	No. It was a bad idea to begin with, it will be a bad idea until we tear it down. If some local power brokers will miss their cut, pay them a one time quality of life benefit to stop screwing the place up for the rest of us.	
10/14/2021 16:52	St Johns		No	Yes			2-5 times		Breach the dam now!	Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.Hundreds of manatees lose access to essential warm water winter habitat. Water quality declines further, fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. The Rodman dam should have been breached 50 years ago.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
10/14/2021 16:56	Duval		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing	Leave it alone! It's part of our states history! I've been fishing there since I was a kid and I'm 36 now!	I've been fishing at Rodman since I was a child with my father! Now as an adult I take my kids there. This is an amazing piece of history. Also the manatees that live there and are protected are in danger.	The manatees, who are already endangered.	Not at all.	
10/14/2021 16:56	Outside of state / other	New York, NY	No	No				We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	
10/14/2021 16:57	Orange		No	No				Breach the dam and allow water to be restored to the springs	Desperately needed now to save wildlife habitat, improve water quality. Money is available and it will only get more expensive and habitat and quality will get worse.	Loss of quality water and habitat that supports Florida ecosystem.	No	We have watched Florida waterways and habitat deteriorate for decades. This is the most cost effective solution with immediate positive results for manatees (having their worst year ever), fish, restoring sea grass, improving water quality and quantity to our state. This is the most cost effective solution. We cannot wait.
10/14/2021 16:57	Indian River		No	No				Remove the dam.	Fish populations need to be able to breed and sustain a natural population.	Fish extinction, loss of quality of life near Florida rivers, springs, and streams.	Remove the dam.	
10/14/2021 16:57	Outside of state / other	Maryland	No	Yes		1 time	2-5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Leave it just as it is.	It's a thriving ecosystem that supports tons of animals; including manatees. It also purifies the polluted water coming down the Ocklawaha River.	I'm worried about displacing all of the wildlife in the area.	NO	Please consider my thoughts, and not touching Rodman Reservoir. It is so critical to our environment!
10/14/2021 16:59	Outside of state / other	CA	No	No				We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	
10/14/2021 16:59	Polk		No	No				We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/14/2021 17:01	Baker		No	Yes		2-5 times	More than 5 times	Fishing	Leave the dam as is.	Rodman reservoir is one of the best fisheries in the state.	Amazing wildlife habitat and fishing will be destroyed in addition to the economic impacts.		
10/14/2021 17:01	Outside of state / other	Albuquerque, New Mexico	No	No					You must protect the wildlife relying on the manways and the dam. The poor gentle giant manatee is especially vulnerable. Those in my family have been fascinated and protective of them for years. When visiting Florida we always seek them out. PLEASE don't let them all die!	Wildlife are dying when the riversystem doesn't support them.	Manatees and other wildlife will disappear!!	cleanup would help	
10/14/2021 17:02	Outside of state / other	Ga	No	Yes	2-5 times	2-5 times		Fishing Fishing (shoreline/structure) Boating Wildlife viewing	I would like to see it left it alone. Why would you ever want to change it. Rodman is an escape for me. Where I can really connect with my higher power	My own experience	You would destroy a beautiful body of water	Nope	
10/14/2021 17:03	Flagler		No	Yes		More than 5 times		Canoeing / kayaking Wildlife viewing	I would like to see the Ocklawaha river restored to a free flowing river by removing the Kirkpatrick dam.	My experience with spending time in the Ocklawaha during the drawdown and viewing the area on multiple occasions while the reservoir was drawn down is what supports my decision. I have seen what an entrapped river looks like, stagnate aquatic plants, manatee getting blocked, trapped or worse killed by the locks in the river.	The continued decline of the ecosystem surrounding the Rodman reservoir.	No	
10/14/2021 17:03	Outside of state / other	Honeoye, NY	No	Yes		1 time	2-5 times	Fishing Other: Camping	Leave the reservoir as is.	Fishing for large mouth bass and the multitude of wildlife it supports.	Environmental impact, not just on fishing, but the entire ecosystem in that area.	No.	
10/14/2021 17:04	Alachua		No	Yes			1 time	Wildlife viewing	The Ocklawaha needs to be restored and the water put into a controlled release. As a native of FL I have spent my life (>70 years) watching this state be devastated from poor ecological practices - fertilizers, river paths devastated, over building and water consumption- the entire State needs serious ecological oversight.	The dam was a mistake from the beginning and the Canal was stopped because of that. It continues to be a mistake with a possible very damaging outcome when it fails, besides the change in water flow and the ecology of the region that has been so negatively impacted.	The dam fails so there is no controlled return of the river's flow. Continued ecological disruption with drowned fresh water springs, interrupted fish/wildlife migrations, backlog of organic muck, and fragmented habitats... the only winners are the fishermen. The canal was stopped because it it was realized it was a threat to the integrity of Florida's water.. The dam not being removed is a mistake.	Let me know one. A controlled opening of the dam is imperative with normal river flow and allowing habitats to return. This is a 50 year boondoggle... be smart and brave and act on the right thing to do. Gradually return the water flow. If the dam fails, there will be an even more catastrophic outcome.	Florida is imperiled by poor ecological decisions that date back decades. The salt water is going to rise (it is too late to save the Everglades due to climate change), the aquafer will continue to be threated by north FL cattle faming, fertilizer pollution in the rivers has caused a huge imbalance in the water/wildlife quality and more development keeps coming... along with the increased frequency and severity of hurricanes - what will it take to cultivate a long healthy ecological view and try to save this delicate and beautiful state?...
10/14/2021 17:04	Outside of state / other	PA	No	No									Manatees have already reached record numbers of deaths this year due in part to starvation from seagrass loss. The greatest and looming long-term threat to the manatee is loss of natural warm water winter habitat. Right now, 60% of Florida's manatees depend on power plant outfalls to keep warm and survive the winter - an unsustainable and unnatural situation. Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.
10/14/2021 17:08	Outside of state / other	70 Old Route 212, Saugerties, NY 124	No	No				We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam. 10/14/2021 17:24	Orange		No	No									I want to replenish our springs and help the manatee population!
10/14/2021 17:32	Bradford		No	Yes		More than 5 times		Fishing Fishing (shoreline/structure) Wildlife viewing	Remove the Dam and restore the natural flow of the Okiawaha River. I have noticed over the many years that I have fished there, that the fish population has dwindled, especially the Striped Bass migration., and the catfish which were part of my annual fishing trips. Over time, I know for me, that it has reduced my trips to the area. Not to mention that because of the destruction of natural water flow,is damaging the aquifer in central Florida, which is highly detrimental to the health of all of the waterways even to the north.		Some of the species which depend on the river being unobstructed, will continue to dwindle and become extinct.		
10/14/2021 17:32	Outside of state / other	GA	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.

10/14/2021 18:06	Outside of state / other		No	No									The Ocklawaha River is the heart of the Great Florida Riverway, which, if restored, could provide essential warm water habitat for hundreds of manatees in the winter. I urge you to restore the Great Florida Riverway.
10/14/2021 18:07	Palm Beach		No	No					The Kirkpatrick Dam needs to be breached in order to bring back and preserve the health of the Ocklawaha River.	We urgently need to protect the manatees during the cold winter months by protecting the manatee shelter and habitat provided by the Ocklawaha River. Overall, we need to restore this Florida Wildlife Corridor area that supports many Florida species.	I really cannot think of Florida without thinking of manatees- it has been tragic how many manatees we have lost this year. We need to do all that we can to protect them and ensure their survival if we are going to keep fighting the effects of algae blooms and red tides killing them off. The entire ecosystem will inevitably be affected if we lose even more manatee and keep this wetland area cut off from wildlife.	No. There have been too many man-made effects damaging our environment and we are urgently running out of time to correct all the harm that we have done. It needs to be done now before we find ourselves looking back regretfully for not taking action earlier, as we are currently finally now doing, panicking too late after all the decades of human action contributing to climate change.	Please stop doing what is best for certain tiny groups of loud and influential people's selfish interests and start doing what is right for the majority of Floridians as well as for the animals and nature. Humans need to stop thinking that they are the only important thing on the Earth and start selflessly acting for the best of all life on earth.
10/14/2021 18:10	Union		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam. 10/14/2021 18:11	Alachua		No	Yes	1 time	2-5 times		Fishing Canoeing / Kayaking Boating	Breach or dismantle the dam and let the Ocklawaha flow without restriction to allow the natural flow of fish and manatee movement , springs , riverbanks and swamp to reestablish itself to it's previous natural state.	I have been on the Ocklawaha river during the drawdown and have seen the springs lost to us and the devastation to the natural experience of the river. Manatees need unrestricted access to the silver river, and the whole river system from the Ocklawaha and the Silver and the Saint Johns River will benefit.	The Dam is old and in need of repair...for what? I like to fish, but I do not expect anyone to build me a fishing hole and maintain it for me for years at their expense. And if you don't pour a ton of my money into it,(which, as a taxpayer I do not want), one day, for whatever natural reason or storm, it will breach and cause unknown consequences and lawsuits for which we, the taxpayers, will bear responsibility.	NO...It is over...This is 50 years overdue. Do the right thing and breach the Dam. Figure out an attribute of the river or spring system or ecosystem to name after the late Senator Kirkpatrick, who was, after all, an outdoorsman and enjoyed our natural Florida outdoors.	I have been on the river during our obstructed flow and also during Drawdowns. There have always been plenty of fishermen pulling in lots of fish regardless. And having a good experience. The health of our river systems, our state treasure, should not be sacrificed. Our fishermen will always have a place to fish, and local businesses should see an influx of natural tourism from a return to a natural river system and the business opportunities that accommodate these people.
10/14/2021 18:11	Marion		No	Yes		More than 5 times		Fishing (shoreline/structure)	Breach it and let the river flow.	Invasive aquatic plant build up.	Dead river		
10/14/2021 18:17	Outside of state / other	Chicago Illinois	No	No					Restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer. 10/14/2021 18:19	Brevard		No	No					Moving forward, I would like for the dam to be breached which would allow the Ocklawaha River to be free-flowing once again.	There are so many reasons why the dam should be breached and the reservoir drained that it is hard to choose what would be the most important one. To me, the most important and basic one is that when we try to thwart nature, we are fighting a losing battle, and when we cooperate with what is naturally in place, we reap unending benefits in every area of our lives. This truth has been proven over and over in Florida and around the world. Certainly, a grave mistake was made when this dam was built, but we can now undo that error. Thus, if we restore the natural flow of the Ocklawaha River, there will be innumerable advantages to our great state! The first obvious benefit will be to our state's ecology. A free-flowing Ocklawaha will allow all the native plants and animals to return where they belong. This will eliminate the need for labor and herbicide costs to kill harmful aquatic plants which the reservoir currently battles. Also, the population of the many native fish species in the river will dramatically increase. This is good for those who need the fish as a source of food and for the sport fishing industry. Since the reservoir currently drowns 20 freshwater springs, a return of the river to its original course would restore these much-needed sources of fresh water for people and animals, especially manatees. The natural floodplain would be restored which would further improve the water quality of not only the Ocklawaha River, but also of the Silver River and the St. John's River. This is of far-reaching and long-lasting health and economic importance to the entire State of Florida. Currently, the state spends millions of tax dollars to maintain the reservoir including draw-downs, herbicide application, dredging, etc... All of that is just to try to maintain a useless, manmade problem. After the initial costs to restore the river, the state will gain huge, ongoing revenues due to the many different types of ecotourism and related industries which will blossom as the river system returns to its rightful location. To continue to waste money on an unneeded boondoggle when instead the state could be increasing revenues every year is not an option. Let's make the best, most intelligent decisions for our great state both now and for our future!	My biggest concern is that Florida Taxpayers will be forced to waste millions upon millions of dollars to maintain this failed and harmful dam project and that Florida's already damaged ecology will continue to deteriorate when a simple solution could reestablish its former glory and increase economic growth.	No, because nothing short of breaching the dam will benefit the State of Florida and right the many wrongs that have been caused by building this dam in the first place. It's time to restore our great State of Florida!	I love Florida! Please save my state! Please do the right thing: breach the dam and allow the Ocklawaha River to flow naturally where it once did. Thank you.
10/14/2021 18:20	Outside of state / other	St Louis	No	No					Remove the Dam so the Ocklawaha River can free flow again.	This is one of the most fruitful ways to aid the survival of manatees, and benefit other wildlife trying to survive in Florida.	Not removing the Dam is a continuing threat to the survival of manatees and a blow to other species that need the land presently underwater at a time when the Earth's resources are destroyed by man.	This is a simple but very important action that would benefit much of Florida's wildlife, but nothing else is as likely to save the manatees.	I am hoping to travel again as the Pandemic fades, and it is the natural habitants of Florida that draw me there, especially to see wildlife,unlike where I live.
10/14/2021 18:22	Outside of state / other	new hampshire	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/14/2021 18:31	Glades		No	Yes		More than 5 times		Canoeing / Kayaking Wildlife viewing	I want to see protections placed on the wildlife and the riparian ecosystem restored to a more natural & sustainable state	Wildlife populations, including that of the manatees, continues to plummet. If balance is not restored, we will lose more of our essential species, resulting in the destruction of this delicate ecosystem	Further extinction and habitat loss - irreparable damages		
10/14/2021 18:31	Broward		No	No					The ver needs to be restored and the dam destroyed.	Manatees, along with other seriously endangered native Florida wildlife are more and more threatened and this project could create a vital "safe place" for them.	Species will become extinct. If we don't go ahead with this project . The thought of having had a chance to save manatees, Florida black bears, Florida panthers, and done nothing to save them is horrifying.	No	We should protect what is left of these aaging animals. People should care.
10/14/2021 18:32	Outside of state / other	New Jersey	Yes	No					Protect the wildlife and natural habitat!	The more destruction to the ecological balance, the more we are unbalancing all life on the planet!	If we don't protect and preserve biodiversity the entire planet will not continue to support life, ultimately ANY life!!!	NO	Our Officials need to do their job, not look for ways to satisfy the greed, corruption and short-sighted profit of the grifters at the expense of the planet!

10/14/2021 18:35	Outside of state / other	Massachusetts	No	No				I would like to see the Ocklawaha River restored by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state of Florida and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, which will benefit beautiful species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, which harms their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to negatively impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	I don't believe so. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer, and I hope they will not have to wait long.	As a stakeholder who cares about Florida's environment, I am asking you to please restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for Florida's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River should provide essential warm water winter habitat for hundreds of manatees. Sadly, 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter. This is not sustainable. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for beautiful creatures, including Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for considering my comments. Restoring the Great Florida Riverway is critically important to me as a stakeholder and lover of Florida's beautiful wildlife. Have a wonderful day.
10/14/2021 18:35	Duval		No	Yes			More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking	I would like to see the area left as is	I've enjoyed the dam area and see no need for changes	Alot of people enjoy the dam and surrounding areas. This needs to be preserved. Many local businesses depend on the income generated by folks that visit		
10/14/2021 18:36	Citrus		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam, thereby helping manatees and other wildlife.	Restoring the Ocklawaha River is the state's most impacting manatee habitat restoration project and will provide essential warm water winter habitat for hundreds of manatees. More than 15,000 acres of the Florida Wildlife Corridor will be restored or upgraded, benefiting species such as Florida black bears, Florida panthers, bobcats, eagles and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, jeopardizing their chances of future survival. Keeping the Ocklawaha dammed would keep 7,500 acres of forest swamps inundated by the Rodman Reservoir and would continue to impact species such as Florida panthers, Florida black bears, bobcats and white-tailed deer that cannot easily travel through this vital section of the Wildlife Corridor of Florida.	No. The dam failure is 50 years late. Wildlife and water quality can't wait any longer.	As a Florida environmentally concerned stakeholder, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially fish. ox. This restoration will also improve water quality and flow, support coastal resilience and strengthen a vital wildlife corridor. Thank you for your attention to this important matter. Restoring the Great Florida Riverway is extremely important to me as a stakeholder and will enormously benefit Florida's people, environment and wildlife.
10/14/2021 18:44	Broward		No	No					minimize	manatees	manatees decline	no dam	no dam
10/14/2021 18:47	St Lucie		No	No									
10/14/2021 18:47	Brevard		No	No					I would like for the dam to be breached which would allow the Ocklawaha River to be free-flowing once again.	There are so many reasons why the dam should be breached and the reservoir drained. When we try to change nature, we lose, and when we cooperate with what is naturally in place, we win. This fact has proven to be true not only in Florida, but around the world. Certainly, a terrible mistake was made when constructing this dam, but we can now undo that error. Thus, if we restore the natural flow of the Ocklawaha River, there will be innumerable advantages to our great state! The first obvious benefit will be to our state's ecology. A free-flowing Ocklawaha will allow all the native plants and animals to return where they belong. This eliminates labor and herbicide costs to kill harmful aquatic plants which the reservoir currently battles. Also, the population of the many native fish species in the river will dramatically increase as they return to their historical breeding waters. This is good for those who need the fish as a source of food and for the sport fishing industry. Since the reservoir is covering 20 freshwater springs, a return of the river to its original course would restore these much-needed sources of fresh water for our citizens and our wild animals, especially manatees. The natural floodplain would be restored which would greatly improve the water quality of not only the Ocklawaha River, but also of the Silver River and the St. John's River. The health and economic importance of this applies to the entire State of Florida. At present, our state spends millions of tax dollars to maintain the reservoir including draw-downs, herbicide application, dredging, etc... All of that is just to try to maintain a useless, manmade problem. After the initial outlays to restore the river, the state will receive ongoing and ever-increasing revenues due to the many different types of ecotourism and other industries which will flourish as the river system returns to its rightful location. To continue to waste money on an unneeded, unsightly project when the state could be increasing revenues every year is not a logical option. Let's make the best, most intelligent decisions for Floridians and tourists both now and for our future!	It would be very concerning if Florida taxpayers are forced to waste additional millions of dollars to maintain this failed and harmful dam/reservoir project. It would be horrible if Florida's already damaged ecology should be allowed to continue to deteriorate when a simple solution could reestablish its former glory and increase economic growth.	No, because nothing short of breaching the dam will benefit the State of Florida and right the many wrongs that have been caused by building this dam/reservoir.	Florida is a special place to live! Please save our state! Please do what's best for everyone: breach the dam and allow the Ocklawaha River to flow naturally where it once did. It's time to restore our great State of Florida! Thank you.
10/14/2021 18:49	Outside of state / other		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer. Peaceful place to visit and enjoy the outdoors	That people would not be able to behold the beauty of this wonderful place like I enjoy doing. I've brought my family here many times	No	Please also consider the safe haven the the reservoir provides for the manatees
10/14/2021 19:01	Outside of state / other	Maryland	No	No					Manatees are in real peril. Please protect habitat for manatees and other wildlife by restoring the Great Florida Riverway.	Manatee mortality data	Manatee mortality	no	
10/14/2021 19:02	Outside of state / other		No	No					Breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	Even while manatees are still struggling with starvation from seagrass loss, the greatest long-term threat to these animals is the loss of warm water habitat that manatees need to survive the winter. Right now, 60% of Florida's manatees depend on power plant outfalls to keep warm and survive the winter - an unsustainable and unnatural situation. Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond.	The Ocklawaha River is the heart of the Great Florida Riverway, which, if restored, could provide essential warm water habitat for hundreds of manatees in the winter. Manatees have already reached a record number of deaths this year - and if we don't restore additional areas of their natural habitat, we could lose even more manatees in the future.		
10/14/2021 19:05	Outside of state / other	Illinois	No	No					you must be mindful of taking every effort to protect ALL wildlife in your area.	it's obvious -- this planet will self-destruct because of uncaring politicians.	Realizing politicians are only interested in their own gains -- not Mother Nature's.		
10/14/2021 19:05	Outside of state / other	Westborough, MA 01581	No	No									
10/14/2021 19:08	Outside of state / other	Island Heights, NJ 08732	No	No					Allowing a natural unjodylted passage for sea creatures.	Dams block the natural flow of water	Manatees would become extinct.		
10/14/2021 19:11	Outside of state / other	Arkansas	No	No					I want to see the Ocklawaha River restored by breaching the Kirkpatrick Dam.	The river provides habitat, including warm water, urgently needed by Florida's manatees. The manatees are already dying in record numbers this year. Please do not make matter's worse. To lose this rare and special species would be a tragedy. Over 15,000 acres of the Florida Wildlife Corridor would be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	The loss of Florida's Manatees would be tragic. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor. This would be a further tragedy.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife.
10/14/2021 19:12	Seminole		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	I would like the dam to be dismantled and let the river basin return to its natural flow.	The dam was only built for the canal. The canal was terminated. There is no further need for the dam/reservoir.	Continuing to ruin the natural environment.	No	
10/14/2021 19:12	Outside of state / other	Santa Barbara, CA	No	No					Do whatever it takes to Protect Manatees!!!	good science and morality	we lose the manatees, or they continue to be injured, chopped up alive by boaters and others, and killed by various toxins, insufficient water and space.d	?	just do what it takes to Protect Manatees, and other animals and the Earth, for that matter.
10/14/2021 19:13	Sumter		No	Yes	2-5 times	2-5 times		Fishing Fishing (shoreline/structure) Boating Wildlife viewing	I would like to see Rodman Reservoir and Kirkpatrick Dam stay as it is now.	Rodman Reservoir and Kirkpatrick Dam we're built in 1968 , 53 years ago. The reservoir it's self has become a complex ecosystem over the years and home to many species of animals especially birds.	To remove the Dam would destroy the ecosystem which the reservoir has become. It would also destroy the flood plain swamp which supports more habitats than the Ocklawaha River did before impoundment.	No	Keep the Dam. The ecosystem it has created is thriving.
10/14/2021 19:17	Outside of state / other	Hawaii	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $17 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	We need to save these harmless creatures, and if we don't do it now, we may never be able to! If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide unimbibed passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe.	NONE whatsoever. How can you compromise on a life or death issue? It's either life for manatees or death to manatees.	Please search your conscience, and it will tell you to save these animals before it's too late.
10/14/2021 19:19	Alachua		No	No					restoring the Ocklawaha River to ensure the survival of manatees and other wildlife that are damaged by the dam.	research by the defenders of wildlife and other conservation advocates	the future of our wildlife, the beauty and health of our environment and our tourism will be permanently impacted	no	It is time to do all we can to reverse the damage done by the dam and over development in our state
10/14/2021 19:19	Outside of state / other	Connecticut	No	No					I urge you to restore the GREAT FLORIDA RIVERWAY	Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. ☆ One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	The survival of manatees and other wildlife will be in great peril. These decisions we are making now are critical to the survival of a healthy ecology, thriving wildlife and a promising future for our new children and our country.	We need to restore our riverway. We need to think long term.	Thank you for your consideration.
10/14/2021 19:21	Outside of state / other		No	No					Ideally, we'd breach the Kirkpatrick Dam so that we can restore the Ocklawaha River.	Restoring the Ocklawaha River would be the most impactful manatee habitat restoration project in the state and provide essential warm water winter habitat for hundreds of manatees--that are so desperately in danger. Additionally, 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefiting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer. A win-win-win-win.	Keeping the Ocklawaha dammed would prevent the manatees from reaching winter habitat, further endangering their chances for survival. It would also keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact all of the aforementioned species as they would be unable to travel easily through this vital section of the Florida Wildlife Corridor.	Unfortunately, no. Breaching the dam is 50 years overdue, and our wildlife and water quality cannot wait any longer if we hope to maintain our precious biodiversity and the integrity of our natural resources.	Thank you for the opportunity to comment and for doing all you can to ensure we safeguard our natural spaces and all the precious species that call them home.
10/14/2021 19:22	Outside of state / other	Hawaii	No	No					Even while manatees are still struggling with starvation from seagrass loss, the greatest long-term threat to these animals is the loss of warm water habitat that manatees need to survive the winter. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/14/2021 19:52	Monroe		No	Yes	1 time	1 time	1 time	Wildlife viewing	Removed to reinstate natural water flow.	Environmental impacts of altering natural flow	Environmental impacts to native fisheries and spring health	No	
10/14/2021 19:54	Duval		No	No					I would like to see the area restored to what it was like pre-damming		The detriment to natural resources	No	
10/14/2021 20:00	Outside of state / other	Monterey, Ca.	No	Yes		1 time		Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation.
10/14/2021 20:00	Washington		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	
10/14/2021 20:01	Outside of state / other	Virginia	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/14/2021 20:01	Putnam		No	Yes			2-5 times	Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing	I would like to see the dam removed and the reservoir drained	Manatee survival. This project has killed how many Manatees so far? Getting caught in the locks, the loss of natural springs, which is their home, the ability to freely navigate the Silver River/St John's corridor.	That fish stocks in the Silver River system would continue to decline, that Manatee populations would be more difficult to get on the upswing	I don't think there is a suitable "in between" outcome. I have followed this issue since the 70's and have yet to hear, or see one proposed.	We have the money and the time. Almost any cost/benefit study proves this out. The beauty of a restored Ocklawaha River compared to the blight of the current reservoir only reinforces the removal of this dam.
10/14/2021 20:05	Outside of state / other	Alaska	No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam. No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	I lived in Jacksonville, FL for 2 years when I was in the service. Just about every year I visit FL for 2 weeks to see my baby sister who recently retired from the Air Force. Most of our traveling is to nature and historic sites in Florida and its State Parks. I would like Florida to maintain and even improve upon its natural heritage. I am a monthly contributor to Florida Fish & Wildlife.
10/14/2021 20:07	Outside of state / other	California	No	Yes			1 time	Wildlife viewing	As a native of Key West,Florida I would demand that manatees are not only protected but must have areas where no motor boats are allowed.	Manatees are gentle kind creatures and people in their motor boats are not native to the rivers and inland water meat .	The likely hood that manatees would go extinct.	No	
10/14/2021 20:08	Orange		No	No									
10/14/2021 20:10	Pinellas		No	No					I would like to see it removed to restore the natural river system. I would like to see the springs covered by the reservoir revealed. I would like to see the restoration of spawning striped bass as a sport fishery.	I've read several articles on the subject and consistently see social media posts highlighting the issue.	The continuing alteration of the water shed and a striped bass population that relies completely on stocking to sustain it. I like the idea of sustainable and diverse fisheries.	If it's possible, allow a way for striped bass to proceed far enough upriver with enough current to successfully spawn.	
10/14/2021 20:10	Outside of state / other		No	Yes	2-5 times	2-5 times		Fishing Boating Wildlife viewing	Leave it as it is.	The massive amounts of wildlife that make that reservoir home. I've never seen so many healthy manatees in my life as I've seen in Rodman the last couple of years. They are healthy in that lake and dieing in others.	I feel a lot of wildlife would suffer as well as a lot of folks losing their source of income. Not to mention all the folks that would lose such a gem of placefor recreation.	No. Leave it be.	
10/14/2021 20:10	Lake		No	Yes		More than 5 times		Fishing Boating Wildlife viewing Other: Wildlife photography	It is one of the very few remaining untouched natural habitats in the state. It's natural oxbows, ever changing pathways, and water quality is pretty much unmatched. The fishing is trophy quality year round, and the reservoir is known around the country as a pristine body of water.	For me it is personal. I took my grandson there when he was 10 years old to fish for a personal best. It was a guided trip. My grandson and I caught and released 32 fish in a four hour period, with two trophies and dozens of amazing mid size fish. I spent $700 on that weekend and have done it again and again since and I am but one of hundreds, thousands who refer to Rodman as the home of the next world record.	All one needs do is review the genius work on the Kissimmee River. The "best and brightest" destroyed a premier body of water and turned Lake Okeechobee into a phosphate and nitrogen polluted nightmare.	I'd have to hear ideas before I could honestly answer the question. But I'm always willing to listen to fresh ideas.	
10/14/2021 20:11	Putnam		No	Yes	1 time			Fishing Other: Also fish where they join St. Johns River	Enhance the bass habitat.	Since the eel grass has died off in St. Johns River, bass fishing has decreased and Rodman is a good option to go to.	Bass fishing decrease in the area.	No	Don't destroy the bass habitat like has been done to St Johns River.
10/14/2021 20:12	Broward		No	Yes	1 time			Canoeing / kayaking Wildlife viewing	Maintain them	Manatee destruction			
10/14/2021 20:14	Outside of state / other	Rapid River, Michigan	No	No					Making sure the water is clean for the environment which includes any living thing.	Seeing waste being filtered in with clean water and animals perishing because their food source is very limited.	Pollution in the area which is contaminating the environment.	To begin with, stop allowing companies to destroy natural beauty on earth.	When one sees too many animals dying off, that tells you something is wrong.
10/14/2021 20:15	Duval		No	Yes		1 time		Fishing Wildlife viewing	preserve the fantastic fishing industry! preserve the amazing wildlife and ecosystem of the Rodman Reservoir.		that a large sum of money is again wasted when there are so many better uses for those funds.

10/14/2021 20:39	Marion		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing	Leave them alone. It will ruin this areas water, fishing,tourism,camping. Main issue is the low water levels that will destroy our river.	Look at the draw down that happens to control vegetation. Horrible. It helps with kill the vegetation but leaves the waters in horrible shape.	Ruining our river and all waters affected. It would stop us from fishing, camping, canoes.	Zero. Leave the dams alone!!		We need our fish to eat. We are pour out here and rely on out water for recreation and food.
10/14/2021 20:40	Orange		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing	Leave it as is.	I travel there twice per year and always catch and release trophy bass. Plus I see many ospreys, eagles, alligators and many manatees.	The whole ecology of the lake would be destroyed. I stay at a hotel in Silver Springs, hire a guide, shop and eat in the area while there. So the whole economy of the area will suffer. I'm afraid if the dam is removed hundreds of manatees will die.	None		I live in Illinois and travel there twice per year for the fishing in Rodman. I spend a considerable sum in the area each year. If this fishery is destroyed I will go to a different state to fish.
10/14/2021 20:40	Broward		No	No					Protect Manitees	protect manatees	another pet rich quick scheme has been approved by politicians	yes, do not build another dam		
10/14/2021 20:43	Pinellas		No	No					Get rid of it	The riverway is obstructed and this affects manatees and other wildlife badly.	Manatees and wildlife put at greater and greater risk.	No		
10/14/2021 20:47	Outside of state / other	Charleston sc	No	Yes	1 time	2-5 times	More than 5 times	Fishing Boating Wildlife viewing	Is like to see it stay the same as it is. Rodman holds great large mouth fishing. Removing this dam would ruin the reservoir for fishing.		Bass fishing not being the same. Wouldnt return to area.			Think of the money the bass fishers bring in and bring to the local economy.
10/14/2021 20:49	Putnam		No	Yes			More than 5 times	Fishing Boating Wildlife viewing	Restoration of the Ocklawaha River for all sea life especially manatees. ♡	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees	More destruction from climate change.	None as this River this is long overdue for restoration and clean up.		Please help nature as soon as possible thanks.
10/14/2021 20:53	Outside of state / other	currently Salt lake City formerly CA	No	No					abandoning this money making scam	past history of destructive dams in the west	Loss of wildlife.	yes, do not build another dam		study past history of bungling dams and their destruction of the environment.
10/14/2021 20:56	Lake		Yes	Yes	1 time	1 time	1 time	Wildlife viewing	Environmentally friendly Viewing.	Love wildlife there.	Loss of wildlife.	No. The Protection of wildlife must be complete or it doesn't count.		
10/14/2021 20:57	Collier		No	No					Please restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam! Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Give manatees their essential warm water winter springs habitat	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait!!!		
10/14/2021 21:01	Outside of state / other	Dunlap, TN.	No	Yes	1 time			Fishing	I would like it to be left as is. There is a lot of wild life that needs to be left alone. The fishing is great so it needs to stay that way. I enjoyed my visit there the wea it is.	My experience I had while being there. It was enjoyable being there for the first time. I like to see it stay the way it is.	The wild life being affected and fishing being diminished.	It just depends on what is going to happen.		Do not mess up a good thing.
10/14/2021 21:06	Broward		No	No					Restoration of the Ocklawaha River by breaching the Kirkpatrick Dam.	Just look at all the dead manatees state wide ! Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	More dead manatees or they become extinct and the ecosystem in Floridsh collapses!	No !		Save the manatees ! Restore the Ocklawaha River by breaching the dam !
10/14/2021 21:09	Outside of state / other	California	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife cannot wait any longer.	Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation.
10/14/2021 21:12	Outside of state / other	Englewood Co	No	No					That it be removed, unless doing so would cause harm to human populations in the area. Perhaps the Dam could be removed & they could retain the Reservoir if needed?	Research into the problems the manatee is facing due to loss of habitat, diminished range of sea grass available for them to eat, the reality that human interaction with manatees has some times been destructive for the manatees, and climate change could bring new challenges to the life of the manatees as well. Reading the info provided by Floridaswater farmstack.com regarding the issue of the Rodman Reservoir & Kirkpatrick Dam is been true of so many dams and other reservations of natural streams worldwide that have broken natural migrations of fish and wildlife, and some times people need the realize that there are times when we need to rethink our actions and make better choices to step into the future with better consequences. Joan Sawtelle	That the manatee and other creatures that would use the rivers would lose one more habitat they desperately need and have always deserved. The manatees are starving. They are already endangered. One of my biggest concerns in this matter is the survival of the manatees.	As mentioned above, maybe a compromise of sorts. Perhaps the dam could be removed and keep the reservoir. Although I don't know of the engineering involved, if that would be possible. Are the two connected?		Ultimately, I think it would be wise for those involved in making this decision to consider the long term ramifications of their choice. Opening the rivers could return habitat for species who need it to live. As pointed out in your info, it could also open up areas for river activities for people, although it might be advisable to portion some areas as a wildlife refuge & prohibit hunting of the manatees and other endangered species. Require fishing permits and place limits on catches. Returning the rivers to their homes will mean a lot of change, and all people who will be affected by the decision should be able to have a vote on this matter. I don't live there, but I love the manatee and all of nature, so I offer my opinion from this perspective. At the same time, I hope that people who are most affected by the choice can have a vote on the matter, that their voices will be heard. I don't know if the dam and reservoir are essential for these folks, but if so, perhaps they can find an answer to benefit both the wildlife and the people.
10/14/2021 21:13	Duval		Yes	No					Keep it the same	Tourism	Lose Tourism	No		I participated in a meeting that had two Water management District directors in city hall in Jacksonville. The St. Johns Riverkeeper was present. Dr. Shortelle had a handout listing the reservoir as a positive benefit. I believe that position and concern exists today as an emergency water source.
10/14/2021 21:14	Outside of state / other	Santa Cruz, CA 950 60	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat harming their chances of survival in the future.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.		
10/14/2021 21:14	Outside of state / other	CT	No	No					Taken down.	The severe, damaging effects on wildlife when structures are imposed on waterways.	The extinction of manatees.	No.		Just stop destroying the wildlife.
10/14/2021 21:16	Marion		No	Yes		2-5 times	2-5 times	Canoeing / kayaking	Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue.		2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/14/2021 21:17	Calhoun		No	No										
10/14/2021 21:21	Jackson		No	Yes	1 time		1 time	Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawah River is the most impactful manatee restoration project in the state and would provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No.		The state of Florida is not doing enough to save the manatee population.
10/14/2021 21:21	Putnam		No	Yes		2-5 times		Other	I think it needs to stay as it is.It is a god sourceof rash water for the county. Returning it will only destroy the current ecosystem. It will take more than a 200 years to return it to somewhat it use to be be, In the meantime we may need the water and then is a live and growing ecosystem prevnt there now. No guarantee that the old eco system would return.	North Florida is growing and fresh drinking water is going to be a premium Central Florida is already drawing watr from our area to take care of its current residents. Taking it away will only increase the burden.	Loss of fresh drinking water for North Florida. It is great to be concerned about the animals, birds and etc but not over people	no		
10/14/2021 21:25	Orange		No	No					Open the Rodman/Kirkpatrick Dam and restore the normal flow of water Florida was mean to have.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No		
10/14/2021 21:32	Broward		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.		Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife.
10/14/2021 21:33	Marion		No	Yes			More than 5 times	Fishing	I would like to see it dismoed.	Declination of wildlife population.	Declination of wildlife.			
10/14/2021 21:36	Alachua		No	Yes			2-5 times	Fishing Canoeing / kayaking Wildlife viewing	I would like to see the dam breached and the reservoir drained.	The loss of habitat for fish and manatees due to the river's impoundment is unacceptable in this age of rapidly declining species.	The tragedy of keeping the lost springs lost.	No. The dam has served no purpose and needs to come down.		
10/14/2021 21:38	Outside of state / other	NY	No	No					Protect the manatees		They will die off.			
10/14/2021 21:38	Broward		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful endangered manatee habitat restoration project in the state. In addition 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.		Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/14/2021 21:52	Lake		No	No					For someone who does not fish, but kayaks and enjoys wildlife observation opportunities, I have had no incentive to visit Rodman Reservoir/Kirkpatrick Dam. I am familiar with the damage that the continued existence of this dam presents. Moving forward I would like the dam be breached and the reservoir allowed to return to a natural river flow. This would attract my patronage, enjoyment and support.	The most important piece of information (aka fact) is the deterioration of the dam structure, danger of its failing due to the age (50 yo) and impacting negatively the landowners by flooding. It is time to remove the structure and not waste taxpayer money on its maintenance.	My biggest concern is the continued impact on manatees that have gotten killed by the structure, are prevented from benefitting from the submerged springs and prevented from traveling safely along the river.	Drawing down the reservoir 11-12 ft to allow the submerged vegetation to reestablish forested wetlands and springs to reemerge that can benefit the manatee population. BUT I believe that the time is right to fully implement the desired outcome to remove the dam and allow the river to flow freely.	Because of the environmental damage that the construction of the dam and creation of the reservoir has wrought, I and many nature enthusiasts have not visited. For me it has been about the manatee deaths that I have known about for the 20+ years I have lived in this area. I don't want to support this unnatural and destructive structure. People who fish for recreation have decreased while people who partake in wildlife observation, paddle, paddle board, and birdwatch have increased. The conversion of the dam and reservoir would provide a boost to the local economy by opening up opportunities to construct a nature center, paddle outfitters, boat ramps/pavilions, and nature observation areas. This part of the state has had a long history of depressed economy, look at Palatka to see that it is not a big destination, but opening up the recreational opportunities would benefit Putnam County in new and more modern ways. Thank you for giving citizens like me an opportunity to speak on this important issue.
10/14/2021 21:56	Hillsborough		No	No					Breach the dam	Declining fish population and the gaining of increased habitat for manatees	Disappearing wildlife	No

No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	I do not have to live in Florida to demand that the government start taking care of one of the nation's natural treasures. How is this even up for debate? As an elementary school teacher, it sickens me every time I have to tell children that, yet, another species, which is a wonder to behold, is in danger due to greed and corruption. Who would ever want to visit your state, with their tourist dollars, when it has lost all its intrinsic beauty? Do the right thing for once. Take care of your manatees, other wildlife, and your water.
10/14/2021 22:26	Baker		No	No						As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.				
10/14/2021 22:27	Outside of state / other	San Jose,CA	No	No					Have the river restored.		The plight of the manatees.		
10/14/2021 22:28	Marion		No	No					Unleashing 20 springs		Wasted money. for a project that should not have been done	No	
10/14/2021 22:28	Duval		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing	I would like it to be preserved for the outdoors men	it's beautiful and Florida is being too touristy	A disconnect from nature	No. Why change something that's not broken	
10/14/2021 22:34	Outside of state / other	PA	No	No									
10/14/2021 22:34	St Johns		No	Yes			1 time	Wildlife viewing	Restored to a naturally flowing river by breaching the dam.	The Cross-Florida Barge Canal was a bad idea to begin with and negatively impacted Florida's natural resources.	That the Oklawaha River remains compromised and impaired.	Not really.	Thank you for the opportunity to comment
10/14/2021 22:37	Alachua		No	No					Allow the natural water flow that once was to allow a more natural ecosystem.	Rodman Dam, near Palatka, is completed closing off flow of the Ocklawaha River, flooding more than 7,300 acres of forested wetlands, 16 miles of river and at least 20 springs, and blocking upstream migration of many fish and aquatic species impacting the ecosystem from the St. Johns River to Silver Springs and beyond. Additionally, it prevented boats from navigating the entire river system.	We are inhibiting nature from its natural course and having to do things like " stock fish" that would otherwise flourish without the dam.	No	
10/14/2021 22:39	Outside of state / other		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. Plus, 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. And, Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. 10/14/2021 23:58	Hamilton		No	No					Restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Don't you want to do whatever is possible to save these manatees? Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Thank you for your attention to this important issue. Restoring the Great Florida Riverway will greatly benefit Florida's people, environment, and wildlife.
10/15/2021 0:07	Outside of state / other	Colorado	No	No					Conservation efforts to support a healthy, sustainable and ongoing Manatee population.	Increasing losses to the Florida Manatee population.	Ongoing loss of Manatee as a result of poor stewardship by humans... which are in fact the most destructive invasive species on earth.	Given the potential proposals thus far, NO!	
10/15/2021 0:18	Outside of state / other	Cincinnati, OH	No	No									
10/15/2021 0:27	Outside of state / other	Ohio	No	No								that manatees are protected	
10/15/2021 0:32	Manatee		No	No					Remove or breach the dam to restore the natural river flow.	More than 100 manatees will gain access to essential warm water winter springs habitat. Manatees are wonderful creature and drive a lot of tourism. Plus they help restore wildlife habitat.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Thank you for working to restore Florida's waterways. Birds, wildlife and people all benefit from a natural environment.
10/15/2021 0:34	Miami-Dade		No	No						We cannot lose our native animals.	We cannot lose our native habitat.		
10/15/2021 0:40	Jackson		No	No						yes	our wildlife species are going extinct Someone who lives in Jackson County Oregon and works for animals.	I can't accept this, protections for the Manatees must be promoted in ads, on computers, and publicly	I can sign petitions.	I live in Oregon, and work hard for wild horses, marine creatures, and much more. Will forward this email to Floridians.
10/15/2021 1:10	Outside of state / other	Wisconsin	No	Yes			1 time	Wildlife viewing	Please breach the dam and allow the natural springs to return	Rarely is there an opportunity to do so much good (restoring fish spawning grounds, improving manatee habitat, improving water quality) while reducing long-term maintenance costs.	The opportunity will be lost	No	

10/15/2021 1:14	Outside of state / other	Russia	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/15/2021 1:35	Outside of state / other	9 Albion Street, Sydney NSW, Austral	No	No					Manatees have already reached record numbers of deaths this year due in part to starvation from seagrass loss. The greatest and looming long-term threat to the manatee is loss of natural warm water winter habitat. We can make a difference by restoring the Ocklawaha River, the heart of the Great Florida Riverway!	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat or these wonderful marine animals will die.	No	
10/15/2021 2:27	Marion		No	No					That it be removed.	The Manatees need a warmer area to live in during cold weather. The waters are being depleted. Fish are dying.	The natural springs will be destroyed, poisoning the drinking water for millions of people and animals	No. The dam has outlived its usefulness.	
10/15/2021 2:49	Outside of state / other	Albuquerque NM	No	No					What ever will help safeguard the manatees!	News reports that manatees are in trouble!	Manatee will be closer to extinction.	Anything that will protect them, using high tech or whatever.	Seeing manatees was the highlight of our trips to Florida in the past. .They are a tremendous tourist draw.
10/15/2021 2:51	Outside of state / other	McDonough, GA	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water habitat for hundreds of manatees	Keeping the Ocklawaha dammed deprived hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	
10/15/2021 2:55	Outside of state / other	Nevada	No	No									
10/15/2021 3:03	Outside of state / other	McDonough, GA	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced,benefitting species like Florida black bears, Florida panthers,bobcats,bald eagles, and white-tailed deer	Keeping the Ocklawaha dammed deprived hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	
10/15/2021 3:05	Outside of state / other	United States	No	No									
10/15/2021 3:24	Broward		No	No					We should restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River will be the most impactful manatee habitat restoration project in the state. It will provide essential warm water winter habitat for hundreds of manatees. Also, 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. 10/15/2021 5:50	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing	We own property in Hog Valley. Please leave it alone.	The Ocklawaha River is the most beautiful & pristine river in the world . Please don't mess with it. Pretty soon there will be nothing left in this world except concrete jungles. 😭😭😭	We would not be able to use our property at all, as it backs up to a canal that leads to the Ocklawaha. We would then own useless swampland if the River dried up. Please just leave it for recreation & relaxation. In this stressful world, people need SOME place to get back to nature. Please!	Property owner.	
10/15/2021 5:53	Duval		No	Yes			1 time	Wildlife viewing	Breach the Kirkpatrick Dam to restore the natural flow of the springs and rivers	By breaching the Kirkpatrick dam the springs and rivers will be restored helping natural populations of fish and our beloved manatees.	The manatees have suffered tremendously.	No, the dam needs to be breached. This will help restore nature, the fish populations and the manatees.	It will also save millions of dollars in repairs of the dam. Tourism will increase in the spring areas, and natural fish populations will restore.
10/15/2021 6:09	Seminole		No	Yes	1 time	2-5 times	Canoeing / kayaking Wildlife viewing	Restore to natural flow					
10/15/2021 6:31	Hillsborough		No	Yes	1 time	2-5 times	Canoeing / kayaking	Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves 54-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	No. Breaching the dam is 50 years overdue.	SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
10/15/2021 6:32	Outside of state / other		No	Yes	1 time	1 time	Wildlife viewing	restore the Ocklawaha River for Florida's wildlife!	the fact that manatees are dyying from pollution and starvation	manatees will die and the area will be made a no mans land	no	
10/15/2021 6:37	Lake		No	No					Remove the dam and restore the free flowing river	The floodplain. freshwater springs that have be en drowned would be restored	Water quality will continue to decline		
10/15/2021 6:45	Outside of state / other	Baltimore MD	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam. MD recently removed the old Wade Dam in Howard County and restored the natural flow of the river. This has increased wildlife, the flood resiliency of the area, and the use of recreational space by the community. While it's a big investment, it pays off in many ways over the long term.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species additional like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. I've visited Florida many times to experience the beauty of wild spaces, but have stayed away in recent years due to mismanagement of natural resources leading to the Red Tide near Sanibel Island. Maintaining wildlife and natural spaces is key to a vibrant economy and opportunity for the community.
10/15/2021 6:50	Marion		No	Yes	1 time		Fishing	Continued the way it is	Avid fisherman	Fishing a rv hunting would be greatly affected	No		
10/15/2021 6:51	Dixie		No	Yes	1 time		Canoeing / kayaking	Remove the dam to restore the Ocklawaha to its natural state.	Seeing the hidden springs in person during a draw down.	The lost of one of the most beautiful places to kayak in the world.	No		
10/15/2021 6:59	Pasco		No	No				restore manatee habitat		extinction			
10/15/2021 7:03	Madison		Yes	Yes		2-5 times	Fishing Canoeing / kayaking	Dismantled to restore the river.	The water source is a major thoroughfare and home to many species not limited to manatees per environmental scientists.	Continued to see Florida's manatee population dwindle.			
10/15/2021 7:27	Marion		No	Yes		2-5 times	Canoeing / kayaking Wildlife viewing	Remove the dam.	It destroyed the natural flow of the River, submerged many Springs and destroyed the migration of fish and manatees into the Silver River and Silver Springs. It would support the survival of many manatees at this time when their population is being threatened and decimated.	That this opportunity would be lost forever and many supporters would be discouraged and lost.	No		We are losing so many beautiful, natural gems in Florida due to progress and corporate greed. This is an opportunity for us to restore one of the most beautiful and productive Rivers in Florida and we should seize this opportunity.
10/15/2021 7:40	Washington		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.

10/15/2021 7:49	Lee		No	No					A choice between removing or rebuilding an aging structure that serves no vital purpose is at hand. The investment of taxpayer dollars in a dam restoration folly versus the human and environmental benefits of freeing the river is a no-brainer. Removal is the only option that makes total inarguable sense.	Letting the three rivers run free again will: •cleanse the river of algae-contamination with the dissolution of the Rodman Reservoir •provide sorely needed water to downstream communities •grow the greenery critical to fighting our planet's rising temperatures through absorption of carbon dioxide and the cooling effect of shady forests •offer flood protection from waters that will surely rise as the root systems of green biomass stitch together binding the soil •create shallows for fish nurseries •provide critical habitat for Florida's beloved manatees and the vast array of birdlife for which our state is known.	The dam disrupted the natural flow of a three-river system that fed some 50 springs; provided habitat and migratory routes for fish, birds, and manatees; and nourished thousands of acres of floodplain forests. That critical loss would be continued.	No	This issue is not local. It impacts decision-making throughout the state and beyond our borders. Work with Nature or, ultimately, lose to her.
10/15/2021 8:07	Outside of state / other	Louisville,Ky	No	No						Restore manatee habitats	The manatees are dying	Manatees will be extinct	Caring about manatees, and doing something	Help restore habitats
10/15/2021 8:11	Alachua		No	No						Let the river flow free.	Benefit for wildlife and water	further environmental degradation	A compromise that allows both fishing and environmental improvement	
10/15/2021 8:35	Outside of state / other	Georgia	No	Yes			More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing		A paradise for all animals . It was destroyed once. Don't do it again. I have spent years in and around this area camping and fishing. I know if it is destroyed, all wildlife will be effected in a bad way. I have thousands of photos willing to share if needed of this beautiful and safe haven for wildlife. Leave it be.	A perfectly balanced piece of nature. Not often does nature heal from our mistakes, but this one time she gave us a chance. Please leave it alone.	A wasteland of weeds and mud and devastation. Death to many animals. Please look at the bardge canal as well.....it has it's own ecosystem dependent on the dam. There is too much to lose from breaching the dam.	NO	Please leave the dam as it is.
10/15/2021 8:36	St Johns		No	Yes			1 time	Other: Wanted to see it to know what exactly it looked like and what it did	I'd like to see it breached/removed.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. Truly there is no legitimate reason to keep this dam in place.	No. Breaching/destruction of the dam is the only feasible outcome in this situation	I am a sixth generation Floridian. My children are 7th. I grew up in Marion County where I enjoyed a childhood full of visits to all of the Springs. I spent my teenage years on Lake Weir, where my parents still live. I'd like to see the natural Florida I love around for my young children and their children to enjoy! So little is left of a truly wild Florida. Here in the central and northern part of the state, we have the opportunity with this project to restore some of our lost wilderness and prevent the outrageous destruction of nature seen in South Florida. The data on the breaching of the Rodman Dam speaks for itself- the money is available for the project and the benefit for the natural world- which also equates to benefits for we humans is truly immeasurable. Please carry out this project!!! As someone whose family traces its roots back to the early settlers in this State, I take great pride in the beauty that is Florida. I'd like to see that beauty preserved and protected for future generations. Thank you for your consideration. -Kate Houston, descendent of the Alderman and Rauderson clans- cattlemen, orange grove owners, Crackers.
10/15/2021 8:38	Outside of state / other	Warwick, RI	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer. Additionally, restoring the Ocklawaha River would be the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor. It would also deprive hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No. Wildlife and water quality cannot wait any longer. Breaching the dam is 50 years overdue.	
10/15/2021 8:40	Seminole		No	No						Restoring the water	Seminole county has seen a decline in manatees, also. It's important to protect our lands and animal	Manatee deaths	No	
10/15/2021 8:40	Duval		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. You guys do a great job at offering the beauty of nature to residents throughout your management area. Many of the trails you guys offer for recreation are gorgeous and important. I know you all as an organization understand the value of Nature. Let's make this area part of that collection of amazing sites!
10/15/2021 8:51	Broward		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Manatees are dying in record numbers. Restoring the Ocklawaha River will provide warm water winter habitat for hundreds of manatees. And 15,000+ acres of the Florida Wildlife Corridor will be restored, benefitting Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation.
10/15/2021 8:56	Outside of state / other	Arizona	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	
10/15/2021 8:56	Sarasota		No	Yes		1 time	2-5 times	Fishing	Please leave this wonderful fishing and beautiful wildlife refuge alone.	It provides a habitat for native Florida animals and vegetation and an outstanding site for our residents and families to fish.	The ruination of a wildlife sport area and death of many many fish.	No	Please do not let a small group destroy a part of nature in our state that is enjoyed by so many
10/15/2021 9:03	Polk		No	Yes		1 time	2-5 times	Fishing Boating Wildlife viewing	To leave the dam alone	The wildlife are doing just fine they will be displaced by destroying the dam	The wildlife will be displaced from this thriving ecosystem		
10/15/2021 9:05	Outside of state / other	Round Hill Virginia	No	Yes			1 time	Wildlife viewing	Restore the Ocklahawa River so that manatees may access additional warm water habitats.	The severe loss of manatees.	Even more manatees will die - perhaps to extinction		
10/15/2021 9:24	Orange		No	No					Breach Kirkpatrick Dam to restore the Ocklawaha River	over 15000 acres of wildlife corridor will be restored, which would benefit manatee, bears, bobcats, eagles, deer and panthers	it would be most harmful to manatee who are already struggling to survive and whose #s are decreasing	no. Wildlife cannot wait. This project is overdue	restoring the Great Florida Riverway would benefit the people, environment and wildlife of Florida.
10/15/2021 9:25	Putnam		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Would like to see it continue to be used as it is. Allow the hydroplane and other grasses continue to grow to provide a nursery for all species in ROMAN. RODMAN IS HOME TO MANY SPECIES OF BIRDS, REPTILES AND EVEN MANATEES. The Ocklawaha will never be the same as it was. I would like to see it promoted more.	It is home to many species of animals and fish. I love to watch the the eagles, ospreys, alligators and manatees in Rodman.	Probably loss of revenue to the county. People come to this area to fish and visit RODMAN. They spend money in the local community	My position is to keep RODMAN in tact. Nothing other than that is acceptable too me.	Rodman is an awesome place to fish and to just go and watch the wildlife. I wish the vegetation control could be done mechanically not with chemicals.
10/15/2021 9:27	Clay		No	No										
10/15/2021 9:29	Outside of state / other	Morgan County, Alabama	No	No										
10/15/2021 9:40	Leon		No	No					I would like to have the dam removed	It would improve the water quality and enhance ecotourism in the area	Further degradation of the aquatic ecosystem	No	As outdoors person who is a FL native I have paddled the area Please restore the natural flow
10/15/2021 9:40	Marion		No	No					Dam should be removed imo.	We all know the science supports the removal and only entrenched business interests of a few powerful people is holding it up.	That we continue doing this wrangling for the next 50 years and our ecology gets worse because we're too lazy/tires/corrupt to do the Right Thing and remove this boondoggle.	Nope.	
10/15/2021 9:44	Orange		No	Yes			1 time		Breach the dam.	Breaching the dam will restore many springs, bring back fish, and help manatees. It is the best thing to do to restore the ecosystem.	Springs will not be restored. Habitats will not be restored, and manatees will not be helped.	No	Breach the dam
10/15/2021 9:46	Lake		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	Please remove the dam. It would be good for manatees and the environment. Economically it would be a boon for tourism. Manatees at Silver Springs? Bring them on!	Restoring the environment.	Continued degradation of Florida's natural lands and waters.	The time for delays are over.	
10/15/2021 9:53	Alachua		No	Yes		1 time	2-5 times	Canoeing / kayaking Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	Breaching the dam will restore dozens of springs, providing much-needed warm water winter habitat for manatees and recreational swimming for humans. These springs can be protected by the state park systems and enrich local and state economies.	Loss of access to warm water habitats during the winter for manatees, not to mention the cost to the taxpayer of dam maintenance and repair, for a dam that does not provide any public goods (flood protection, power, etc).	No, breaching the dam is long overdue.	I am a Floridian, born and raised, who has always enjoyed the natural beauty of our state. I am an avid kayaker, springs-visitor, beach-goer, and hiker. We must do everything that we can to enrich our state's natural resources and protect the delicate ecosystems they support, which we also depend on. The rapidly declining manatee population is deeply troubling to me, the once-third-grader who founded a "save the manatee club" in the mid-90's. When I learned that 20 lost springs could be uncovered by breaching the dam, I was absolutely astonished. This could be an incredibly valuable resource -- not just for the manatees who desperately need winter habitats, but for us who love to splash in the springs! Even before the pandemic, the springs had been growing in popularity for day-trippers. But lately, every time I go to Rainbow, Gilchrest Blue, or others nearby, they are full to capacity. The addition of 20 springs would be an incredible boom to the local economies. So long as they will be protected by the State (or National) Parks system and not sold out to private investors to be bottled by Nestle. Like Marjorie Kinnan Rawlings once said, "... the earth may be borrowed but not bought. It may be used but not owned. We are tenants, not possessors, lovers and not masters."
10/15/2021 9:54	Marion		No	Yes	1 time	1 time	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	I want it to stay! Leave it alone!	It is a thriving ecosystem! It is a refuge for manatees, bald eagles, ospreys, and many other species!	Wild life would suffer and it could detrimentally injure the manatee population.	No	
10/15/2021 10:00	Duval		No	No					Remove the dam do not waste money repairing it let the river go back to its natural flow.	Restore the springs that have dried up and then after that it would naturally follow that the fish would come back to Silver Springs manatees would have a place to go natural grass would flourish and provide food for the manatees. I use to go up to Ocklawaha all the way into Silver Springs as a child what a beautiful natural waterway with so many things of nature to enjoy man has destroyed it with that Rodman dam.	That we will run out of water we will lose our fish & our manatees we will lose so many natural habitats of the river that we things will become extinct and a lot of them already have total disaster Rodman dam was just a money maker and now that that is not the prime thing don't waste money on Rodman tear it down and bring nature back to where it should be where people can enjoy it once again and wildlife can flourish.	No because it's ridiculous to try to restore something is broken down that ultimately destroyed what used to be there get rid of Rodman Dam.	I am well-aware of all the wonderful waterways near Putnam County I grew up on the weekends in that area we were go up to Ocklawaha and you could go all the way up to the without going into the actual spring and you can see the fish everywhere we snorkeled we swim it was amazing. When we didn't go down for the entire weekend and spend the weekend at our lake place at Pomona Park we will go to Crescent Lake go up there Ocklawaha Silver Glen and other wonderful places. Rodman took away the natural flow and it ruined everything the fish died off the grasses died it is nothing like it used to be I happen to go in there recently this is not just memory from a childhood and the difference is so so sad please save the Ocklawaha once that water is restored the dams down it will naturally bring the grasses back the fish back in the manatees will have a place to go as well as perhaps what has been destroyed what's left people can enjoy and see all the beautiful nature that I saw as a child but it will take a long time to recover. take action now while the funds are available.
10/15/2021 10:00	Leon		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway. Please restore the Great Florida Riverway.	Historic fish and manatees return as breach opens creating a free-flowing river	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. If we don't jump on this now, that's just one more failing to the community, to the wildlife, to Florida as a whole.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway. But honestly, if we can't get this done with there is the money and public interest to do so, what are we doing here?	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/15/2021 10:01	Hillsborough		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing Other: Not harming wildlife by boating, hunting or fishing.	Consionable env practices, more conservation	Wildlife is beautiful and I want it to thrive despite human civilization sprawl.	Wildlife areas will continue to be separate for no reason	No	
10/15/2021 10:03	Hillsborough		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	This exciting restoration will improve water quality and flow by generating an additional 150 million+ gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
10/15/2021 10:03	Outside of state / other	PA	No	No					The Kirkpatrick Dam needs to be breached to restore the Ocklawaha River.	15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and especially manatees, who will benefit from warm water winter habitat available if the dam is breached.	Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor. Worse still, it would diminish rare and beautiful wetland that makes Florida special.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife.
10/15/2021 10:13	Outside of state / other	Massachusetts	No	No					Restore the Ocklawaha River by breaching the Kirkpatrick Dam	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, highly endangered Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	Absolutely not. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Florida's fragile ecosystems must be protected for the wildlife, including manatees, that live there. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/15/2021 10:32	Duval		No	No					remove the dam and restore the area to its pre-construction condition	expert analysis about the harmful impact resulting from the dam's continued presence	continued degradation of the area, as well as detrimental impact on key tributaries to the St Johns River.	no	
10/15/2021 10:39	Orange		No	No					Breached. To restore springs	Climate damage	rings	No	
10/15/2021 10:44	Orange		No	No					I would like to see the dam breached and torn down allowing the much needed natural flow to return.	The dam is run down, in need for costly repairs that would cost the taxpayers for a useless dam. Breaching would also allow for the return of natural striped bass to repopulate the area and use the whole river to travel to other springs for summertime refuge.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No, breaching the dam is the only answer, other than spending millions to fix a useless dam or keep a useless dam up and keep hurting the natural ecosystem.	
10/15/2021 10:50	Miami-Dade		No	No					I would like to see it opened as opening the dam can help manatees find shelter	If the dam was opened then it would reveal springs in the bottom that trap heat, manatees rely on these springs to stay warm	That it could be a danger to manatees as manatees go into shock when in water around under 67 degrees		
10/15/2021 10:58	Hernando		No	Yes			More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Please leave our lake alone	It is a thriving eco system that supports alot of fish wildlife and mantees and birds	All the polluted water coming from the ocklawaha river !	Worried about displacing all the fish and wildlife	
10/15/2021 11:00	Seminole		No	No					I'd like to see the restoration of the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the river will provide necessary habitat for hundreds of manatees, which are now dying at alarming rates.	Keeping the dam will harm the chances of survival for manatees.	No. Wildlife and water quality cannot wait any longer for anything less than removal of the dam.	
10/15/2021 11:07	Citrus		No	Yes			2-5 times	Canoeing / Kayaking Wildlife viewing	Remove the dam	Allow the ecosystem to recover by allowing fish species to pass freely, etc. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs and the river.	The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	No	

10/15/2021 11:12	Outside of state / other	KY	No	Yes		2-5 times		Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam. This is imperative to help the manatees.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. 10/15/2021 11:22	Lake		No	Yes		2-5 times		Wildlife viewing	It be removed/breached	Natural flow restoration allows for wildlife to naturally breed. Ex. Striped bass	Manatee, fish and other wildlife die off. Previously usable springs unusable	No		
10/15/2021 11:23	Alachua		No	Yes		1 time		Canoeing / kayaking	ELIMINATED...DETHRONED...	CRITICAL NEED for Environmental RESTORATION, impact on natural springs, water supply, Manatees, ALL WILDLIFE and WOODLAND SUSTAINABILITY!	UNNECESSARY" financials for repair and maintenance. Loss of CRUCIAL time for RESURRECTION of ESSENTIAL INDIGENOUS BALANCE!!!	ABSOLUTELY NOT...		It is an ESSENTIAL time to put our PRIORITIES on this Precious EARTH for the balance of Humanity...and Live in alignment...
10/15/2021 11:40	Marion		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. It's important to protect this now dying species from further destruction. In addition, 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	As stated above, keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. also, keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor. This habitat is crucial to protecting many species and it is our duty to see that it done.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer. If we truly care about Florida and it's unique delicate eco system, we will stand firm in demanding breaching the dam NOW!	
10/15/2021 11:41	Lake		No	Yes		2-5 times		Wildlife viewing	The Ocklawaha River should be restored to the extent possible by breaching or removing the dam.	The damage the dam caused to the ecosystem and wildlife coorridor.	Continued and irreparable damage to the ecosystem.	No. The dam needs to be removed.		Any state funds allocated for the area should be to remove the dam rather than to try to improve or upgrade it.
10/15/2021 11:46	Lake		No	Yes	1 time	2-5 times	More than 5 times	Wildlife viewing Other: Hiking	Breach or remove the Rodman dam	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman dam the most beneficial and cost-effective springs protection project in Florida, in addition to saving up to 14 million dollars in repair costs to the dam.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe while providing no benefit to the public at large.	No, removing the dam is long overdue.		There will be no better time to restore this area. The springs will recover, providing habitat for wildlife and a chance for the public to enjoy a beautiful area of our wild and natural Florida once again. Fresh water will only become more scarce and precious in the future, and this is a tremendous opportunity to greatly improve our water quality. Plus, the money saved by not making repairs to an unnecessary project can be better used to benefit our citizens as a whole.
10/15/2021 11:48	Gadsden		No	No					Restore the Florida waterway					
10/15/2021 11:50	Alachua		No	Yes			1 time	Canoeing / kayaking	Restoration of natural waterways and water systems and reduction of economic impacts via Dam removal and other mitigation and even penalties.	The ongoing and worsening climate crisis and the importance of healthy ecosystems and waterways in decades to come.	future generations will curse our shortsightedness	A lot of money for mitigation, imposition of fees and penalties on businesses to pay		
10/15/2021 12:00	Outside of state / other	Westchester Co New York	No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing Other: Relaxing in nature	We need to breech the Kirkpatrick Dam and restore the Ocklawaha River. We have already caused enough unnecessary harm, it's absolutely time to do whatever we can to allow this magnificent area to recover.	Restoring the Ocklawaha River will provide the warm waters needed for winter habitat for hundreds of manatees. This would be the most impactful manatee habitat restoration project in Florida. In addition, 15,000+ acres of the Florida Wildlife Corridor would be restored, which will benefit many other species as well -- such as Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer. THIS IS HUGE! Just imagine all of these beautiful creatures thriving right there!	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. How can we possibly continue justifying this dam when we now understand how dramatically these vulnerable creatures can benefit!? Keeping the Ocklawaha dammed means that 7,500 acres of forested wetlands will remain flooded by the Rodman Reservoir. Why would we continue to harm Florida panthers, Florida black bears, bobcats, and white-tailed deer, to name a few, that cannot easily travel through this vital section of the Florida Wildlife Corridor.	Wildlife and water quality cannot wait any longer, breaching the dam is 50 years overdue! So, my answer is a resounding NO.	As stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for both people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/15/2021 12:07	Sarasota		No	Yes		1 time	2-5 times	Canoeing / kayaking Wildlife viewing	I would like to restore this River way for people and wildlife while fortifying the 100 mile St. John's River. It is a fisherman's paradise and an important ecosystem for many plants and animals. It is old Florida and needs to be preserved.	The history alone since 1968 shows how important it is to at least do partial restoration but the current legislature has not allotted any funds for that. It can be be done at a lower cost this way to restore river and floodplain hydrology.	Drawdowns will continue and the dam may just burst down the road.	Partial restoration is the answer after all the years and years of trying have come to naught. The water management and Florida legislature should be on board with this proposal and move forward. It has been way to long.		
10/15/2021 12:07	Marion		No	Yes			2-5 times	Fishing	REmove the gate and let the water flow. If later it is decided otherwise the gate can be restored. As it stands now the fishing gets worse year by year and the exotics are a real problem that periodic lowering of the reservoir are inadequate to address.	The decline in bass fishing and particularly plus ten pound trophy bass is readily apparent to anyone who has been observing the last forty plus years.	we will spend alot of money to repair the locks and dam and conditions will only continue to deteriorate.	I already said that removing the gate and letting the water flow would be my suggestion. I attempted years ago to sell the idea but both the save Rodman side and the Florida defenders opposed it. Even if it was returned years later the reservoir would be much cleaner with less exotics and in a few years with much b etter bass fishing like it was in the early years of the impoundment.		I have wondered if south Florida has designs on the water like building a pipeline to supply them with cheap fresh water because little Putnam county and the bass fishermen alone could not have stalled the restoration of the free flow of the river by themselves.
10/15/2021 12:09	Lee		No	No					To restore the Ocklawaha river and breach the Kirkpatrick dam	Restoring the Ocklawaha river is so important for manatee habitat and provides warm water for the manatees in the winter 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefiting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. 10/15/2021 12:13	Outside of state / other	Oregon	No	No					Dams need to be removed to restore the area and free flowing water	The ecosystem. keeping the water cool and the lives of the manatees and other marine life	Extinction of the manatees, collapse of the ecosystem	No		Please please return the area to it's natural state and help save the manatees and the whole areas ecosystem
10/15/2021 12:16	Outside of state / other	El Segundo, CA	No	No							Please protect the wildlife/manatees.	No		
10/15/2021 12:19	Outside of state / other	OREGON	No	No	Yes		1 time	Fishing Fishing (shoreline/structure) Wildlife viewing	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife.	I fear the Manatees will die off if we don't do something to help them now! If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/15/2021 12:21	Pinellas		No	No					I would really like to see restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. The dam choles up our springs and is hurting our Florida environment. Every day that the dam is in place, harm to the economy. water quality, and wildlife is inflicted throughout the Great Florida Riverway.	The dam serves no purpose. It was built as part of the cross-Florida canal and that project was stopped years ago. Why keep something that serves no purpose, requires maintenance, and harms wildlife?	The state of our wild and scenic rivers (and associated forested banks) in Florida will continue to erode, including loss of significant freshwater flow into the St. John's estuary..	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife have to be considered. Are taxpayers funding an expensive bass fishing lake for the select few? At what cost to Florida residents and wildlife?		Glad that you are considering wide input. Given what I know, it seems overdue that a benefit/cost analysis that includes all of the impacts doesn't point assertively to breaching the dam and restoring the Oklawaha.
10/15/2021 12:39	Outside of state / other	Maricopa County, AZ	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles and white-tailed deer. Danger / loss to wildlife & Mother Nature. Dangerous pollution .	No	All the wildlife kingdom, all the animal kingdom on land in the air &sea; are God's children too & they deserve life, respect ,safety &love .
10/15/2021 13:41	Outside of state / other	Pw. ny	No	Yes			1 time	Wildlife viewing					
10/15/2021 13:41	Outside of state / other	gon, but have vacationed MANY time	No	No					Breach the dam and restore the river. Tourism dollars lost from fishing will easily be replaced by tourism to view wildlife (manatees, bird watching, etc.) and other forms of recreation (canoeing, hiking, camping).	It is the right thing to do. The dam should not have been built in the first place. With climate change and habitat loss, we must restore the river and watershed for the animals that are suffering there and for the future of people that will need clean air and good water quality.	Heartbreaking, irresponsible loss of endangered species (manatees, Florida panther), etc. that belong to our nation.	I would be willing to hear options, but the benefit to more should outweigh the benefit to the few. I'm sorry for the loss of bass fishing opportunity, but the benefit of a restored watershed to native animals and all people, in the form of habitat, clean air and clean water should be worth removing the dam.	While I am not from Florida, I have many relatives there and have spent many years visiting and contributing to the Florida economy. Florida has such special resources and endangered animals that do not live anywhere else but Florida. The manatees in particular are likely to go extinct without more habitat - which breaching the dam would provide. A Univ. of Florida study showed that the recreation dollars that from a restored river system would more than offset the loss from the bass fishing. Sustenance fishermen could also learn to fish from a healthy, restored river. Thank you for the opportunity to comment. save our planet
10/15/2021 13:48	Outside of state / other	Illinois	No	No									
10/15/2021 13:50	Outside of state / other	Murfreesboro TN	No	Yes		1 time		Wildlife viewing	See the water cleaned of toxins.

Also a kayak launch.	The minimal cost to maintain vs the millions of dollars to attempt to turn back time. The river will NEVER be what it once was and now it's a wonderful ecosystem where birds, reptiles, fish, and people in Airboats, jonboats, kayaks and canoes can all appreciate.	Pollution that is currently cleaned will go directly into the St John's. The water table will drop significantly for surrounding residents.	I don't believe the dam should ever be removed until the pollution(nitrates) can be effectively removed upstream. At this point there are many other water quality issues in central and South Florida where our tax dollars would be better spent.	
10/15/2021 14:01	Outside of state / other	Arizona	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/15/2021 14:03	Outside of state / other	California	No	No					Restoration of habitat and a manatee reserve.	Removal of the dam would restore the local and state habitat balance and help our planet survive.	Our Earth planet will not survive any further destruction.	No.	Every effort made to support a healthy Earth will, hopefully, help it to survive...
10/15/2021 14:04	Broward		No	No					I would VERY MUCH like the Kirkpatrick Dam to be breached in order to restore the Ocklawaha River! Please...this is crucial!! Thank you!	Restoration (returning it as it used to be and should be!) of the Ocklawaha River is the MOST IMPACTFUL! manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. Plus...15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer. SO...RESTORATION is beneficial to Florida residents, wildlife, the ecology and environment!	The needless, intentionally cruel, deaths of NATIVE, valued and endangered manatees... hundreds of them by depriving them... of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor. PLEASE...stop interfering with the survival of these species by STOPPING the damming of the water!!	ABSOLUTELY NOT!! Getting ridof the dam is 50 years overdue. It is ESSENTIAL that wildlife and water quality NOT wait any longer. Stop the madness.	As a stakeholder who cares about Florida's environment, I am pleading with you to RESTORE the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees!! This will also IMPROVE water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. This will ALSO benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored! IN ADDITION...the project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor! Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife. It is a "no-brainer"!!
10/15/2021 14:13	Marion		No	Yes		1 time		Fishing (shoreline/structure)	I want to take down the dam and restore the flow of the river.	Quality of the Ocklawaha River and health of fish.	Having to spend tax dollars to repair the dam and continued degradation of fish numbers.	No	
10/15/2021 14:16	Orange		No	No					To have it breached in order to prevent spending a ridiculous amt of $$ to repair it, and to restore natural springs, water flow, and migratory passageways.	Currently, this Dam doesn't provide flood protection, power, water supply, or any other broad public benefits. Plus costing FL Taxpayers millions of dollars.	The increased loss of Manatees , springs, and expense to the FL Taxpayers.	No	Please tell me why this Dam needs to be restored?
10/15/2021 14:16	Putnam		No	Yes	2-5 times	More than 5 times	More than 5 times	Canoeing / Kayaking Boating	I would love to see it gone and the original river restored and allowed to flow freely.	The aquatic weeds that accumulate, requiring periodic and extensive use of pesticides to clear. I often can't even use two boat ramps near my home...Orange Springs and Kenwood, due to them always being clogged with aquatic vegetation. During the drawdown, I finally get to experience several springs that are covered over and appreciate their beauty.	The continued loss of the use of PUBLIC boat ramps due to the vegetation, and the continued applications of pesticides to kill the vegetation.	I do not know an alternative unless the county or state wants to foot the bill to keep all public boat ramps usable to boaters, by keeping the ramps and water access free and clear of the accumulated vegetation.	
10/15/2021 14:17	Orange		No	No						I would like to see the river returned to it's natural flow.	I would be concerned if habitat for native plants and pollinators is not prioritized.		
10/15/2021 14:27	Brevard		No	No					Remove the dam	Record numbers of manatee deaths this year	Continuing deaths of manatees in the Indian River lagoon and central Florida area	No	
10/15/2021 14:27	Pinellas		No	No					Hebbine it so manatee can have food.				
10/15/2021 14:28	Marion		No	Yes			1 time		The dam should be taken down so that the downstream rivers can renew to their pristine selves				
10/15/2021 14:30	Lake		No	Yes		1 time		Wildlife viewing	Clean-up	The litter around the Reservoir.	Lack of a place to find serenity, and to the maintenance of wildlife habitat.	Clean water Act, and electing the best possible governance.	Do a major clean-up of this beautiful piece of land/water
10/15/2021 14:33	Duval		No	Yes			2-5 times	Wildlife viewing	Please preserve the wildlife habitat.	Global Warming and environmental decay.	Biosocial loss and consequences.	NO	
10/15/2021 14:35	Seminole		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway. Seriously, if we harm our natural environment, we harm our ability to entice and profit from tourism. It is that simple. You like money and tax revenue? Restore the river!	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife. Again, see above about our natural environment directly linked to our tourist dollars.	Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait. We have put these measures off for far too long (perhaps as a gamble by the older generations that were sure to be deceased before reaping what they have sown) and we are at the point of necessitating dire and immediate action.	Think about your money, think about your family. If you do right by either of those virtues, you will Restore the River!
10/15/2021 14:39	Duval		No	No					I'd like for the Dam to be breached and to restore the normal flow of the Ocklawaha River.	The environmental benefit and the economic benefit to this area. I know the area. My in-laws had a place on a canal in Georgetown for many years. It was their weekend home. If there were more recreational opportunities, it might have provided a better resale when they decided they were "too old" to keep it.	That the dam will regard expensive maintenance	Breach the dam--restore the river.	
10/15/2021 14:42	Flagler		No	No						The natural area restored to the benefit of fish and the whole ecosystem.	Other dams have been removed to show scientifically that doing so restores a better natural environment.	Continued ecological degrading.	fish ladders?
10/15/2021 14:51	Outside of state / other	Tulsa. OK	No	No						Taken down. removed	Critical wildlife habitat is being destroyed.	Loss of entire species.	No
10/15/2021 14:57	Flagler		No	No					Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/15/2021 15:00	Sumter		No	No									Please clean up the pollution of Florida's lakes and rivers. Those algae blooms, fertilizer run offs, etc are bad for our wildlife, our tourism, and our residents.
10/15/2021 15:16	Outside of state / other	CA	No	No					Its time to preserve the manatees and do everything possible to help them	Saving the manatees	The manatees will become extinct	Save the manatees and other endangered species. Limit boats from maiming (or worse) them	The manatees and other vulnerable species are a tourist attraction and need to be helped.
10/15/2021 15:23	Lake		No	Yes			1 time	Boating	Have the water levels lowered.	Having water levels lowered would be better for fishing, viewing of wild life and a cleaner waterway system in the Oklawaha. St. John's Water Management an Silver Springs area.	I think it would cost more money in the future to fix any damage done if it were not done now.	I would support any project to make this river system better.	
10/15/2021 15:23	Alachua		No	Yes			1 time	Wildlife viewing	I would like the dam torn down and the Ocklawaha river made free flowing again.	Eliminating the dam and reservoir would improve water quality, springs, and the aquifer, with enhanced fishing and recreational canoeing and kayaking.	Important Florida waterways will continue to deteriorate.	No. The dam needs to go.	It is unfortunate that this issue has been so politicized. The expense of tearing the dam down and restoring the Ocklawaha is much less than the continuing costs of maintaining the dam and reservoir. A few fishermen have held this restoration up while the legislature has ignored the voice of most citizens.
10/15/2021 15:27	Lee		No	No					I would like to see the Kirkpatrick Dam removed and the Oklawaha River restored to a free-flowing state.	The economic benefits of clean water, expanded habitat for imperiled wildlife, and riverine recreation provided by a free-flowing river would be greater than the recreational value provided by Rodman Reservoir. Businesses reliant on the Reservoir could realign to an ecotourism recreation business model and may stand to make more profit, supported by the beauty of a restored Oklawaha River.	I am concerned that the reservoir will stand for at least another 50-60 years, depriving Floridians of the opportunity to benefit from a naturally free flowing river.	I don't know if there is a scenario short of dam removal/river restoration that I would support. There may be depending on the scenario presented.	I appreciate the SJRWMD collecting broad public comments and I hope that common ground between people with opposing visions for the Reservoir can be found.
10/15/2021 15:35	Leon		No	Yes			2-5 times	Fishing Canoeing / Kayaking Boating	As the dam degrades and reaches the end of its structural lifespan, it should not be rebuilt or reinforced. Instead the dam should be removed- allowing the restoration of the Ocklawaha River ecosystem.	The dam has a finite lifespan.	A waste of money rebuilding a ecologically damaging dam. Ecotourism dollars would replace bass fishing economics. Leave No Trace.	A complete drawdown slowly implemented. 5 feet per year. 6 inches per month roggerdless of rainfall. The dam may remain standing- made into a mural and raptor nesting structures.	
10/15/2021 15:35	Outside of state / other	Kenton County, KY	No	Yes		1 time		Fishing	I would like to see it remain in its natural, pristine state.	This is home to one of the most desired species of black bass. We catch and release to preserve this desirous bass population.	Annihilation of the natural habitat for fish and fowl. I have witnessed the destruction of similar natural habitats by our well-meaning government agencies. Once it's gone it's irretrievable.		
10/15/2021 15:36	Lake		No	Yes	1 time			Wildlife viewing	Open it to help improve the water and wildlife in the area.	Past wildlife are being spotted in areas, that they don't belong, because their homes are being taken away	someone will build houses in that area, instead of keeping nature in tack	no	save FLIIIII Keep it natural!!!
10/15/2021 15:42	Walton		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/15/2021 15:42	Marion		No	Yes				Boating Other	Restored to its original flow. No more dam dam.	Health of the St John's and Oklawah. Critically endangered species like the Manatee could really find long term survival if this is done	Our River s and aquatic ecosystems will continue to decline.	NO only way is restoration!	
10/15/2021 15:44	Alachua		No	Yes		1 time		Wildlife viewing	The Kirkpatrick Dam should be permanently breached, and the Oklawaha River and flood plain restored to its pre-barge canal/dam state	Millions of taxpayer $$ to maintain a degraded dam that shouldn't have been built in the first place	An eventual storm event (storm event? in Florida?) could trigger a dam failure that would cost millions to downstream properties, along with the millions already spent on a failed project.	No. The Oklawaha ecosystem needs to be restored to its natural state	the Rodman Reservoir is not "a natural ecosystem with unique flora and fauna"; it is an artificially created environmental disaster that has disrupted the natural ecosystem, and is so organically polluted that it has to be drawn down periodically. It's been a boondoggle of the first order.
10/15/2021 15:46	Okaloosa		No	No					I would like to see the Kirkpatrick Dam breached allowing the restoration of the Ocklawaha River.	Restoring the Ocklawaha River will provide warm winter habitat for hundreds of manatees. Not only are the manatees endangered, but their continued health is important to the image of the state of Florida as a state where wildlife is protected.	Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to negatively impact wildlife like Florida panthers and black bears.	No - breaching the dam is long overdue and should NOT be postponed any longer!	
10/15/2021 15:49	Collier		No	Yes			2-5 times	Fishing	Removed as many dams have to restore original environment	Fresh water species migration and reproduction and subsequent improvements of flowing environments result from dam removal	Less flowing habitats for endangered springs	No, either a dam is removed or not. Fish ladders not feasible for migrating manatees	

10/15/2021 15:54	Manatee		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15 000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/15/2021 16:01	Alachua		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing Other: Photography	I would like the dam and reservoir to be maintained as is.	The natural offering of the reservoir are numerous and breathtaking. I grew up in Orange Springs and Interlachen. That entire area around the dam reservoir, upper Ocklawaha and dam to the St. Johns offer so many opportunities to see wildlife - migrating fowl, eagles, osprey, alligators, manatees. The fish are so numerous you can almost always have a good day on the water. This area holds a place in my heart. We canoe Orange Creek from Orange Springs to the Reservoir and then down to Kenwood. We would lose half the trip in the future if the dam was removed.	That there will be a land grab, and tourists numbers will explode to levels that will make the area just another overcrowded playground for rich people.	Build a canoe/kayak slew near the damn that would connect the reservoir with the river a bit downstream of the gates.	I would hate to see this area destroyed for some person's vision of a river that is never going to go back to what it was pre 1800. This river was manipulated by man for a century before it was ever dammed. It will also take 50 years or more for the are to turn back into some semblance of a forest.
10/15/2021 16:07	Orange		No	No					Restored and protected.	Manatees are dying in large numbers. They need this sanctuary.	More manatee deaths.	no	
10/15/2021 16:21	Orange		No	Yes	2-5 times	More than 5 times		Fishing Boating Wildlife viewing	Leave it as is.	I travel there twice per year and always catch and release trophy bass. Plus I see many ospreys, eagles, alligators and many manatees.	The whole ecology of the lake would be destroyed. I stay at a hotel in Silver Springs, hire a guide, shop and eat in the area while there. So the whole economy of the area will suffer. I'm afraid if the dam is removed hundreds of manatees will die.	None	I live in Illinois and travel there twice per year for the fishing in Rodman. I spend a considerable sum in the area each year. If this fishery is destroyed I will go to a different state to fish.
10/15/2021 16:24	Alachua		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Boating Wildlife viewing Other: Photography and videography	I'd like to see the River at least partially restored and free flowing, and the reservoir turned into wildlife habitat.	The requirements for continued intervention in managing the waterways and the dam, including the spraying of herbicides, the monitoring of levels and the continued cost of maintenance to an aging structure that has not been adequately maintained.	Loss of critical habitat for increasingly endangered species including manatees, game fish like the striped bass, and other less well known species. A continued degradation of water quality and damage to benthic organisms do to spraying and biomass accumulation.	Maintaining a fully open dam with water levels along the Ocklawaha being allowed to fluctuate naturally and at levels found before the dam was built.	The positive economic impact of removing the dam cannot be overstated. Allowing this spring fed River to return to something close to its former state would spur national and international attention and bring much needed economic development into one of our poorest counties.
10/15/2021 16:28	Orange		No	Yes		More than 5 times	More than 5 times	Fishing Boating Wildlife viewing	Stay as it is. Best fishing in Florida.	Check the trophy catch information from Florida fish and wildlife.	Totally destroy the fishing and economy in the immediate area.	No	
10/15/2021 16:34	Suwannee		No	No					Breach the Rodman/Kirkpatrick Dam.	Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs.	Hundreds of manatees loose access to essential warm water winter habitat	No. Breaching the dam is 50 years overdue.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
10/15/2021 16:34	Seminole		No	No					Take it down!		Keep petitioning	None.	
10/15/2021 16:35	Palm Beach		No	No					Breach The Dam!	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	No. Breaching the dam is 50 years overdue!	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. SAVE THE MANATEE!!
10/15/2021 16:42	Seminole		No	No					breach the Rodman Reservoir andKirkpatrick Dam	I understand more than 20 springs in Florida would be revived if the dam is breached. this will be an important thing because that would also affect the flora and fauna of these natural habitats downstream.	The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	NO. I understand breaching the dam is 50 years overdue.	Water is one of the most important issues today in Florida, the lack thereof, that is. It is a precious asset and the springs need the water to be restored. These springs serve so much of the Florida eco-system, it is sad to see we can do something about it and we don't. Manatees are also dying left and right, hundreds dying this year (2021) because the water quality and their environment is also dying. Breaching the dam will let the water flow. Let it go.
10/15/2021 16:45	Outside of state / other		No	Yes		More than 5 times		Fishing Wildlife viewing	Please maintain what is currently there it is a great fishery. The wildlife around the reservoir is incredible to watch.		Lose of a great fishery. Lose of habitat for wildlife	No leave it alone	
10/15/2021 16:48	Outside of state / other	Arizona	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm-water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/15/2021 16:52	Flagler		No	No									As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. 10/15/2021 16:54	Outside of state / other	Jefferson County, KY	No	No					Restore the Ocklawaha River to original / natural flow - before the Kirkpatrick Dam.	Restoration of the Ocklawaha River would allow for an essential warm water habitat for the struggling manatee population - allowing for a strong restoration project to move forward, creating a more natural habitat. This would also help other species under stress such as the Florida panther, black bears, bobcats, bald eagles, white tailed deer - providing a wildlife corridor for their safe passage.	Further loss of numerous animals and endangering the long term survival of various species - especially the manatees. It would prevent the use of the currently flooded wetlands caused by the damm as a wildlife corridor - again threatened the survival of various animals.	No. Wildlife don't have more time - every day is precious.	As a person who deeply cares about the environment and the future of our earth, its incumbent on those in positions of power to make wise choices for the planet's future to do so now based on strong scientific facts. Not only would restoration of the river provide a needed support for the manatees but improved water quality, resiliency for the coastal areas, and a safe wildlife corridor for numerous other animals. Now is the time for action before it is too late. Our children and grandchildren deserve to have an inhabitable planet which without our animals and their natural habitats being preserved won't survive. We are all interconnected in the web of life.
10/15/2021 17:10	Alachua		No	No					I would like to see it taken down for the good of the environment.	Reading the science information about what is happening to the water in the dam and how the dam is hurting the environment	The continued damage to the environment of the dam and surrounding area.	Yes, I would support doing away with the dam.	
10/15/2021 17:36	Outside of state / other	Idaho	Yes	No					Restore the Great Florida Riverway	manatees' survival	loss of habitat for manatees' survival	No	We owe these creatures their lives.
10/15/2021 17:39	Brevard		No	Yes	1 time			Canoeing / kayaking	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Historic fish and manatees return as breach opens creating a free-flowing river	Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This exciting restoration will improve water quality and flow by generating an additional 150 million gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 65% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River. Thank you for your consideration.
10/15/2021 17:41	Outside of state / other	Muskegon, Michigan	No	Yes			1 time	Wildlife viewing	I would like to see the free flow of the river restored to what it was like when I was a frequent visitor as a child and young adult.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	So much of Florida's ecology has been destroyed. Rodman Dam was a mistake from its inception. Not freeing the river just hastens the day that Florida becomes a parking lot with a few potted palms.	No	
10/15/2021 17:45	Lee		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored	The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored	No, Breaching the dam is 50 year's over due.	
10/15/2021 18:01	Outside of state / other	NJ	No	No					Protect the manatees.		Losing beloved animals.		
10/15/2021 18:12	Outside of state / other	NJ	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer. 10/15/2021 18:25	Pinellas		No	No					Have it safely removed rather than spending more money to maintain a structure that continues to harmfully impact the river ecosystem.	Once the cross Florida canal project was finally cancelled, there was no good reason left to maintain this dam.	Florida will miss an opportunity to restore the Ocklawaha River at a time when public interest is very supportive and funds are available. Our communities have lost beautiful springs as a result of the dam and the animal ecosystem of the river has barken adversely impacted. It is time to fix this damage, not perpetuate it.	No. There is no reason to keep spending money on impact studies, or repairs to the dam. It is time to get rid of it.	
10/15/2021 18:27	Outside of state / other	USA, manhattan	No	No									
10/15/2021 18:30	Pinellas		No	Yes			1 time	Fishing (shoreline/structure)	I would like it to be breeched	It is impeding the natural flow of the river and ecosystem. . It has no purpose, is past its life expectancy and would cost millions to restore for no reason.	Millions of dollars wasted on rebuilding a dam that harms the natural ecosystem.	No	
10/15/2021 18:37	Orange		No	Yes	1 time	1 time	1 time	Other: Visiting wildlife	Open it up!	Stop killing manatees	That you needlessly are killing animals for profit	Whatever saves wildlife	Absurd that these questions have to even be answered. Do better.
10/15/2021 18:49	Palm Beach		No	No					Breach it and let the water flow return to the Oklawaha!	As one of the most important historically free-flowing rivers in the State of Florida, to return it to its original state and allow this once might River reclaim its former glory would be one of the most beneficial things possible for the entire watershed.	We continue to hold back water and allow the accumulation of sediment and toxins upstream.	NO...!!!!	
10/15/2021 18:51	Palm Beach		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	Restoration of the Ocklawaha River by breaching the Kirkpatrick Dam.	15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	None. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/15/2021 18:53	Hillsborough		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4.14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breech has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe.	Get others of like mind on board	Please consider restoring nature....it was not wrong
10/15/2021 18:57	Orange		No	No						I do not believe in dams	Native wildlive dying		
10/15/2021 19:00	Volusia		No	Yes			1 time	Wildlife viewing	Breach the dam and let the Ocklawaha return to its natural state	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No, this action is way over due.	
10/15/2021 19:02	Alachua		No	Yes		1 time	2-5 times	Wildlife viewing	Remove the dam	The ongoing ecological damage and taxpayer expenses	Lost opportunity after years and years of destruction of environment	No I will keep supporting removing dam	
10/15/2021 19:43	Outside of state / other	Santa Clarita, CA	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	I care about Florida's environment and wildlife. I'm asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for the state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/15/2021 19:49	Pinellas		No	No									
10/15/2021 19:56	Outside of state / other	San Francisco, California	No	No					I would like to see the Kirkpatrick Dam breached.	It is important to restore the Ocklawaha River by breaching the dam, thus providing essential warm water winter habitat for hundreds of manatees.	Manatees have suffered a record number of deaths this year, partly from starvation from sea grass loss but the greatest threat to manatees is the loss of natural warm water winter habitat. My concern is that manatee numbers will continue to decrease alarmingly if my desired outcome is not achieved.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Restoring the Ocklawaha River and the Great Florida Riverway would also benefit species like the Florida panther, Florida black bear, bobcats, bald eagles and white-tailed deer. Communities, economies, and ecosystems all along the Riverway would benefit as well.
10/15/2021 20:05	Polk		No	Yes		1 time	1 time	Canoeing / kayaking	I would like to see the dam breached and the river restored.	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	Hundreds of manatees lose access to essential warm water winter habitat.	No.	Nearly 1000 manatees have died this year and they will perhaps be moved back on to the endangered list. Breaching the dam and restoring the river and springs systems would provide unrestricted access to warm water habitat for hundreds of manatees.
10/15/2021 20:07	Alachua		No	Yes			2-5 times	Fishing	Remain as it is. A valuable fresh water recreational resource.	Recreational usage in the area would plummet.	Without the dam the reservoir would disappear along with its recreational industry.	No	
10/15/2021 20:11	Hillsborough		No	Yes			2-5 times	Wildlife viewing Other: driving across	Remove it immediately	Blocking a natural waterway. Impedeing manatee aces to warm water. Overwhelming 20 springs. Many more reasons..	loss of habitat for fish reproduction. Stopping manatee migration.	not really. Get it removed ASAP!	
10/15/2021 20:14	Hillsborough		No	Yes		1 time	2-5 times	Wildlife viewing	Have it removed so the Oklawaha can be returned to historic flow.	Observations and research.	Water quality in the river basin and watershed will continue to be impaired.	Removal of dam and the Rodman reservoir is necessary. Nothing short of this.	
10/15/2021 20:53	Seminole		No	Yes			More than 5 times	Boating					
10/15/2021 20:57	Lee		No	No					Free the river for this important ecosystem	The entire water-system will work much better with the free-flow river	A stagnate area without freely flowing water		
10/15/2021 20:59	Sumter		No	Yes		2-5 times		Fishing Boating	Breach the Rodman Reservoir and Kirkpatrick Dam	30 lost springs, manatee support, Silver Springs fishery!	Natural habitat would not be restored in Silver Springs, Oklawaha River, and the 30 lost natural springs.	No	Breach the Rodman Dam, so nature can restore the can restore the natural habitat for fish and manatee and restore Silver Springs Fishery.
10/15/2021 21:05	Orange		No	No					Remove the dam, let the water flow free, let the fish thrive and let the manatees have a place they so desperately need!!!	Saving the manatees and there's literally no purpose for this dam!	More manatees will needlessly die	The is either a dam or there isn't so I don't think there's another scenario but always willing to listen	For the manatees, take down the dam, and soon!!
10/15/2021 21:06	Pinellas		No	No					Breach the Rodman Dam and return historic flow to the Oklawaha River	Breaching the dam could be the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	Springs not protected. Further decline in Manatee population.	No	When this dam was being built, I was an activist against the project and actually had a bumperstcker that said "US Army Corps of Engineers- Building America or Digging it Up!"
10/15/2021 21:12	Hillsborough		No	No						The problem starts from the top, Corporations and somehow becomes a huge impact on an ecosystem using the foundations of the Business that make the politicians wealthy. When such devastation in our ecosystem and natural habits occur for Florida's Mammals, the Manatees in a record breaking number of deaths, something must be done.	If we do not act now, we will regret this because the next generation will not be able to survive without our rivers.	Florida's most important environment of our ecosystem is the only way to avoid the crucial demise of our Natural Springs, Rivers and oceans. We must not lose our Manatees!	Speak with our Government officials, go as high as needed in order to support this cause.	
10/15/2021 21:25	Sarasota		No	No					Do what the Natives would do and Stop destroying the Wildlife, Land, Water and Air.	Look.	All is lost.		
10/15/2021 21:37	Duval		No	Yes		2-5 times		Fishing	Preserve this waterway	Fantastic fishery	Destruction of wildlife		
10/15/2021 21:38	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Hunting	Save the dam!	The abundance of life that is already in the reservoir. Manatees can access through buckman lock. That seems to be everyone's focus. There are more manatees in that river in the past 2 years than ever before.	My biggest concern would be people catching all the fish and keeping them, because it's basically like fishing in a fish bowl, it's hard not to catch one on every cast. Also the cypress trees in cypress bayou would die from lack of water. And the shrimp that migrate to lake George would likely not come that far anymore due to all the freshwater. The value of people's waterfront property will go down tremendously, because all they'll be left with is a mud flat.		Safe Rodman Reservoir!!
10/15/2021 21:39	Pinellas		No	Yes		1 time		Canoeing / kayaking	Protect the manatees! Do More to save them!	Highest number of manatee deaths in years just occurred. Protections must be put in place to protect the manatees.	That more manatees will be killed and eventually become extinct.	No	
10/15/2021 21:40	Leon		No	Yes		1 time	2-5 times	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Restore multiple springs and manatee habitat,	Potential for catastrophic dam failure, continued harm to the natural ecology of the Ocklawaha river	Maintain reservoir drawdown indefinitely.	
10/15/2021 21:57	Putnam		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing Other: Girlfriend likes to draw wildlife on the paddle board, while I kayak fish not to far ahead.	With concerns regarding destroying the dam; draining the lake side. If a healthy medium cannot be reached. I would prefer to keep it the way it is. Potentially charge a fee to fish the damn side specifically from the wall. And stricter enforcement of limits and littering.	My positions are all my opinion like everyone else's. With a basic knowledge of wild life etc. The wild life has already adjusted to the damn. Destroying would not be beneficial in the short term- eventually stabilizing again.	Is the accessabilty of the okawaha- over growth, launch, would affect how much I visit. I love going out there.	If there was a possibility to achieve somewhere between. Adding a second spill way not nessisarily a full sized dam- in hope the water level might go down - but not drastically. A creative solution. That also might draw more people.	This seems to be an On and Off issue that keeps arising; by who? Or separate entities?
10/15/2021 22:02	Orange		No	No					Remove the dam and restore the natural flow of the river.	This dam serves no purpose and interferes with the functioning of the natural ecosystem. Fish populations, Manatees' survival and the restoration of wetlands all play into the evidence for returning the river to its natural flow. It happened with the Kissimmee River and it should happen on the Ocklawaha	Continued mismanagement of nature to its detriment at ridiculous and unnecessary cost to the taxpayers.	None comes to mind.	
10/15/2021 22:05	Brevard		No	Yes		2-5 times	More than 5 times	Canoeing / kayaking	Bring it down. I can still kayak most of the river. It would be nice to kayak with manitees.	The dam is an eye sora. I would gat far more enjoyment on the river without the portage in the middle of the run. For now it has to be the beginning or the end of the trip.	Not just the manitee deaths, but the potential extension of the species. Because I promise you, broward county isn't going to do shit about the st. johns.	Manitee pass through. They need warm water and I would like to-by pass the motorized traffic near the damn.	Eco tourism. It makes alot of money. This is a good chance to save a species and make money for local outfitters.
10/15/2021 22:07	Broward		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	100s of manatees gain essential warm water winter springs habitat	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/15/2021 22:43	Outside of state / other	Oakland, CA	No	Yes			1 time	Wildlife viewing					I of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/15/2021 22:48	Washington		Yes	Yes	1 time	2-5 times	2-5 times	Wildlife viewing	protect habitat for manatees and other wildlife by restoring the Great Florida Riverway!	protect habitat for manatees and other wildlife by restoring the Great Florida Riverway!	protect habitat for manatees and other wildlife by restoring the Great Florida Riverway!	protect habitat for manatees and other wildlife by restoring the Great Florida Riverway!	protect habitat for manatees and other wildlife by restoring the Great Florida Riverway!
10/15/2021 22:51	Clay		No	Yes			1 time	Fishing	Open the waterway to natural course	Effect on natural habitat	Loss of natural habitat	No	
10/15/2021 22:53	Putnam		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing	Leave it alone!	Thriving fisheries along with the only food source for manatees. I live on the St. John's. There is absolutely no food for manatees or feeding areas for bass like it used to be	Another wasted waterway like the river has become.	No	
10/15/2021 22:54	Hillsborough		No	No					It needs to be breached so that manatees can thrive again.	The deaths of many manatees in the low temperature waters provoked by the dam's presence.	The extinction of a beautiful and iconic heirloom species of wildlife unique to Florida.	Unless the dam is breached and the springs are allowed to re-emerge, then no.	Please, think of the future of this state and it's inhabitants as you consider whether or not to breach this dam. We are tired of losing our wildlife to legacy mistakes that can be easily fixed.
10/15/2021 22:55	Palm Beach		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/15/2021 23:00	Outside of state / other	Pittsburgh	No	Yes			2-5 times	Wildlife viewing	kept as natural as possible	common sense	will not visit again		
10/15/2021 23:02	Okeechobee		No	Yes	2-5 times	More than 5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	restore the Ocklawaha River by breaching the Kirkpatrick Dam.	5,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	no	Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees.
10/15/2021 23:12	Seminole		No	Yes			1 time	Wildlife viewing	Remove it	Largemouth bass fishing is not a Pugh of a reason to continue with mankind's intervention with nature	Florida may already be doomed, but this certainly helps us March towards that doom if the dam is left.	Nah	
10/15/2021 23:17	Alachua		No	No					I would like to see it removed.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No.	We are losing so much habitat in Florida to huge developments. We need to restore lost habitat, help the manatees, help bring back springs, help our water quality. It is a no brainer to get rid of this dam.
10/15/2021 23:18	Duval		No	No					Destroyed	reinstate the natural flow of waterways			
10/15/2021 23:23	Outside of state / other	Clifton nj	No	No					I would like it fixed so manatees have a place to be	Manatees must be protected	That manatees would go extinct	The manatees have to be protected they must survive	Please save them fix the waterways don't let them die
10/15/2021 23:41	Outside of state / other	Youngstown, Ohio	No	No					This useless relic has to be torn down.	The manatees and other creatures need this waterway to maintain a healthy ecosystem, restore natural springs and keep the St. John's River from becoming salty. Many dams have been torn down out west and the return of the eco culture has been astonishing. Flowing water is far better than stagnant water in both directions. That a handful of self interested people have held this dam removal hostage is pathetic.	That "stupid" wins again. A small group of people with self interest would benefit when the greater good is not served.	No. It was ill advised in the first place. Is a marginal fishing hole at best. And it needs to go.	Manatees are a keystone species a position which needs must supersede the wants of people with limited mentality and less foresight. Please, the many benefits of returning the flow of this waterway will become evident when you do the right thing and the ecosystem revives. My daughter lives nearby and the actual thinking caring community can't wait to enjoy the return of this waterway. Thank you.
10/15/2021 23:44	St Johns		No	Yes			1 time	Canoeing / kayaking	The Kirkpatrick Dam needs to be removed as it was ordered removed decades ago when the cross Florida Canal construction stopped. The reservoir should immediately be drawn down so the springs can flow free and then the dam should be removed to reestablish the natural flow of the river.	The health of the St Johns river along with its wildlife need the natural flow reestablished, the springs that are covered need to flow freely to aide in the declining health of the St Johns River. The structure is declining and places lives in danger if the dam should break and flood the downstream towns.	The continued decline of the St Johns River due to pollutants and lack of fresh water from the springs upstream of the dam. This harms the wildlife and will negatively affect the livelihoods of fishermen, shrimpers and the entire tourist industry that Jacksonville needs to remain a vibrant city.	The only scenario is pulling the dam down before it collapses and takes lives downstream. Why not take it down in a controlled fashion, let the springs flow and give the St Johns some first aide. The City of Jax needs the river to sustain tourism and vibrant growth all along it's banks.	I have lived on the river for over 15 years and sample the water regularly, it is not as healthy as it was even a decade ago. You need to free the Oklawaha. The springs need to flow free, there will be plenty of fishing on the river if that is what the Fisherman demand. There is so much salt my dock has barnacles. Please act, take down the dam!
10/15/2021 23:49	St Johns		No	No					It seems like allowing the area return to its natural state would be reasonable and beneficial to the ecosystem.	Word of mouth and a few online articles. Granted, I haven't researched this a lot but I trust the conservationists involved.	Impact on Local fauna like the manatee population	I'm not sure.	I wish I were better informed on this topic, so I'll admit freely that my opinions are not very firm or based on in-depth research.
10/16/2021 0:11	Outside of state / other	uville-Buncombe County, North Caro	No	No					I wish to see fragile ecosystems and their endangered wildlife already under attack be restored and PERMANENTLY protected - with fact-based media representation alerting countless Americans to the dangers the environment faces and necessities - mandatory to its protection carried out - while safer alternate methods of clean, green energy are utilized!!!		Irreversible damage to the ecosystems and species within - including extinction of subspecies - that will eventually spell vast, irreversible repercussions for other ecosystems near and far!!!		
10/16/2021 0:44	Duval		No	No					Removed	Newspaper articles over the years	More algae blooms, starving manatees	What are options, not on the table. Dams need to be removed.	

10/16/2021 0:48	Outside of state / other		No	Yes	2-5 times			Wildlife viewing	We need to restore the OCKLAWAHA RIVER by breaching the Kirkpatrick Dam.	Restoring the OCKLAWAHA RIVER is the most impactful Manatee habitat restoration project in the state and will provide essential warm water habitat for hundreds of Manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water.
10/16/2021 0:54	Outside of state / other	Ogden Utah	No	No					We need to restore the ocklawaha river by breaching the Kirkpatrick dam.	Restoring the ocklawaha river is the most impactful manatee habitat in the state and will provide essential warm water winter habitat for hundreds of manatees. 15000+ acres of the Florida wildlife corridor will be restored or enhanced,benefitting species like Florida Panthers ,bobcats,bald eagles and white tailed deer.	Keeping the ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat,harming their chances of survival in the future. Keeping the ocklawaha dammed would keep 7500 acres of forested wetlands flooded by the rodman reservoir and continue to impact species like Florida Panthers,Florida black bears ,bobcats,and white tailed deer that cannot easily travel through this vital section of the Florida wildlife corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment I am asking you to restore the ocklawaha river to ensure a bright future for people and wildlife especially manatees. This restoration will also improve water quality and flow,support coastal resiliency and strengthen a vital wildlife corridor.
10/16/2021 1:04	Miami-Dade		No	No					Breach the dam. Let's support the manatees that this state prides itself on.	If providing more habitats for manatees helps them thrive. there is no excuse not to.	That I could possibly never see manatees in the future.	If there are any options to providing more habitats to manatees, then let's do it. If not, this seems like the best option.	
10/16/2021 2:50	Outside of state / other	Dallas, Texas	No	No					I am closely aware Florida-wide developing has changed the environmental outlook and as climate change grips the state to burning red and so I am deeply concerned at the future potential of conservation in every way as this is an all-involved effort and it will not be easy. I haven't explored any other channels yet of seeing from state initiatives what there are of tackling these issues but it definitely affects us and going ahead. Florida's vulnerability in the immediate Atlantic impact zone is as serious as it gets. Dear all as we turn attention to the collar-chafing, belt-pressing issues of this time and ones that define the future in every way and these issues are as easily illustrated in Arizona as reflect on the in-society issues there and how divided in ground-moving manner the country has become: Arizona is located in other EPA SuperFund sites, the first to mention today is a Hayden, Arizona ASARCo site that made its impression on the surroundings and at the confluence of water of the Hola and San Pedro Rivers and a state where water is a critical but exploited resource and infrastructure that has unquestionably still jeopardized and paralyzed society. There's another one in Arlington, Arizona and 10 miles west of Buckeye where the 1979-1980 where hazardous wastes were contaminating the ground and into the inner coil and water, and the 1992-1994 resolutions were air stripping pumped water, and a state that the 18 month operations amid another turn of the 1970s and 1980s US history. A scene of that exact oil crisis that the Big Numbers result in of 3.28 million gallons of liquids and 4,150 tons of solids on this Hassayampa as named, site and the original 1994-1996 soil vapor extracting system removed 3,700 pounds of these VOC materials and since 1994 the other water treatment system has removed 700 pounds of contamination, and the soil extracting system has, as of 2006 afterwards removed 223,000 pounds of VOCs. Once again in an area where crisis is a constant presence and with the suicide statistics and where it was previously illustrated this affects all demographics and including the aftermath effects of those as has the pandemic itself. There's another one afterward with the Scottsdale, Arizona and into Tempe and this is to briefly revisit that all major areas of Arizona have a SuperFund presence, Glendale, Phoenix, Tucson, etc and this one is no different or the history of the fact itself, pre-environmental regulations far from today	Hearing detailed plans how soon we can achieve on those potential conservation initiatives in hoping to secure a climate safe future.	I am heavily concerned by all current events ongoing and go out of my way to seek development projects across the country and there are some in Atlantic neighboring states that have had large swathes of land changed because of this.	None yet.	I have become closely concerned with the 1620s virgin forestry map available online of pre colonial forestry and how comparing this to today compares what still exists but is also a constant battle. Another examination is the July 2019 The Guardian article of potential new forestry from South Texas to Ohio. Another is all of the above meaning there is national need for conservation and new opportunities.
10/16/2021 3:27	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Remove it.	Wildlife growth.	Wildlife deterioration.		
10/16/2021 4:51	Brevard		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 300-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood-damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breeching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water-quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/16/2021 5:30	Volusia		No	Yes	1 time			Wildlife viewing	Tear it down	the 20 springs sail burned to build a damn that does nothing	That sail will fuck it	No. TEAR THE DAM OUT	
10/16/2021 5:59	Outside of state / other	Southington, Ohio	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	We cannot continue to place our interests above those of the manatee and nature. It must be remembered that humans can and will find alternatives while the animals impacted by our decisions cannot. Extinction is forever.
10/16/2021 6:43	Seminole		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife.	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/16/2021 6:52	Volusia		No	No					Remove the dam to allow natural free flow again				
10/16/2021 6:56	Sarasota		No	No					Let the fish swim and survive in their natural habitat	No more potolution and greed our Florida waters	Very much our narrative coming to a complete end as we know it on planet earth	Water should be clean and available for our future and our children that is clean and drinking water	Let our nation know we are in need of betterment in our presence and future generation after ours
10/16/2021 7:01	Outside of state / other	TN.	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("OOO") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
10/16/2021 7:05	Duval		No	No					I would like it removed.	Ecological science for the health of the St Johns river.	Reduce water quality in the St Johns.	No	
10/16/2021 7:06	Volusia		No	Yes	1 time			Canoeing / kayaking Wildlife viewing	breach the dam	studies supporting returning to the natural ecosystem	continue to adversely affect all rivers in that part of the state	no	
10/16/2021 7:13	St Johns		No	Yes		1 time			Remove it	Improve the ecology	Destroyed ecology	No	
10/16/2021 7:15	Volusia		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	Removal of the dam to restore the 20 lost springs.	Twenty springs are lost due to the dam.	Taxpayer money being spent on a dam that provides no flood protection, does not produce energy and blocks the natural flow of water and fish from Silver Springs to the St. John's River.	This dam was built for a project that was canceled 50 years ago there is no reason for it to remain in place.	
10/16/2021 7:21	Orange		No	Yes			1 time	Other: Enjoying Florida's natural scenery	I would think that we should remove the dam, opening up the real possibility to allow nature to restore itself, giving us Floridians even more natural habitat to enjoy.	Living in Miami and fishing the Everglades for twenty years between 1980-1995 taught me how much damage we can do via good-intentioned structural change, (South Fla's canal system), and how we can get out of the way of nature to restore our beautiful state.	Like the previously voted for restoration of the land south of lake Ockeechobee (which still hasn't happened), I don't wish to see another area doomed to pollution and lack of habitat because of our previous actions, and now, our inaction.	If there is a cheaper and better use of our fund, I would support that. It is my understanding that the money to purchase the land south of lake ockeechobee is already in an account. Let's use it, and use the money it would take for the Ocklawaha, too.	
10/16/2021 7:25	Duval		No	No					Blow it up	St. John's riverkeeper recommendations	Silver springs		Thank you
10/16/2021 7:26	Alachua		No	Yes			2-5 times	Canoeing / kayaking	The dam removed, the reservoir emptied and the river restored to its original course	The Dam destroys the migration patterns of fish and manatees. The reservoir is an unhealthy, relatively static body of water.	An unhealthy, unnatural and expensive alteration to a wonderful waterway would persist for no good reason.	No! The Dam either stays or it goes. The choice is binary.	A forest should return to the site, springs should be uncovered and restored. The river would return to its natural beauty, health and function. A useless expense would be eliminated.
10/16/2021 7:27	Clay		No	Yes					Breach the Kirkpatrick Dam to restore the natural flow of the Ocklawaha River.	Science based studies that support aquifers, springs, manatees, forests and wildlife. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs	Florida residents and tourists miss an opportunity for improving water quality, restoring fish and wildlife habitat, and reducing saltwater intrusion.	No. Breaching the dam and restoring the Ocklawaha are 50+ years overdue. Dam safety issues and improved water quality, wildlife habitat, and recreational opportunities can't be ignored or dilateed any longer.	The dam is old and needs expensive repairs that would divert badly needing funding from preserving Florida's natural beauty and a healthy environment.
10/16/2021 7:32	St Johns		No	Yes		2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	I would like to see the dam breached and the river restored to its natural flow	Reading Ditch of Dreams then keeping abreast of various news articles from The Riverkeeper to local newspapers to national publications.	Economically, the geographic area/watershed wouldn't capitalize on its greatest resource, and, longer term our state's most important resource (water) could be compromised.	None that I've heard proposed but I'm open to new information	Thanks you for soliciting public opinion - as an avid kayaker and organizer for a group of kayakers I greatly appreciate what the District does to manage and support our waterways.
10/16/2021 7:33	Duval		No	No					Restore the free flowing River	Science!	This is a chance to restore the free flowing River and help the environment	No	Please tear down the dam
10/16/2021 7:56	Duval		No	Yes			2-5 times	Other	Remove the dam		Continued disruption of the natural habitat	No. Dam needs to go.	
10/16/2021 7:45	St Johns		No	Yes		More than 5 times	More than 5 times	Canoeing / kayaking	Remove the dam.	Uncover the many springs under the reservoir for better water quality downstream.	Continuing degradation of water quality on the river.	No.	
10/16/2021 7:50	Duval		No	Yes	1 time		More than 5 times	Fishing Boating Wildlife viewing	Save it as it is	It is a outstanding fishery When I fish a tournament it is where I'm going for well over 20 years.If there is some reason it's not open for a tournament (like on draw downs) don't fish,Rodman is where I'm going)	Ruining what it is now and how long it would take to be back in its natural state.where would all the fish,birds and manatees go?	Not really,I would love it to remain as it is	I wish they would help it some by not killing all the vegetation,fish need it manatees need it.It's been awhile since we have seen hydrilla ,it helped filter the water too
10/16/2021 7:52	St Johns		No	Yes		2-5 times		Canoeing / kayaking	Remove dam.	History books explaining that it should not have been built.	Silting of the lake. River not allowed to naturally flow.	No	
10/16/2021 8:02	St Johns		No	No					Remove the dam and restore the river	The ecological damage that has been done	Further ecological damage that may not be reversible in the future	No	
10/16/2021 8:03	Putnam		No	Yes			1 time	Other	Remove it	Nature	Further deterioration of tributaries of Ocklawaha		
10/16/2021 8:05	Duval		No	Yes			1 time	Other	It needs to be restored to its natural state.	Science. The st Johns River needs the spring to help with water quality along with all of the other benefits like mainted habitat and wetland restoration.	The continued demise of the St. John's River and habitat surrounding it.	No.	
10/16/2021 8:06	Flagler		No	Yes		1 time		Fishing (shoreline/structure) Canoeing / kayaking Wildlife viewing	Breach the dam	Free the waters all the way to Silver Springs including nearby spring heads	Manatee decline, more grass access and fish movement	No	Do not put money into repair
10/16/2021 8:07	Gilchrist		No	No					I would like to see the dam removed and restore the river to its original beauty and purpose. There are hidden springs I've never seen, manatees would fare better, and Mother Nature is a much better steward of the resources than man has ever been.	The fate of the manatees and the recovery of springs. Knowing the dam is man made and was put there for a foolish purpose in the first place, shows it doesn't need to stay in place. Saving millions of dollars on restoring is foolish.	That the state would waste important tax dollars on such a catastrophe.	No.	
10/16/2021 8:09	Clay		No	Yes			1 time	Fishing Canoeing / kayaking Boating Wildlife viewing	Remove the dam and restore the river	No need to change the natural flow	Vote out those against restoring	No	
10/16/2021 8:11	Polk		No	Yes					Remove damn restore River	Rodman reservoir is not natural. What's important is what's best for Mother Nature not man.	Continued damage to the eco system	Leave the damn in place and open it fully let the River flow	I grew up in south Putnam county. My whole life this has been an issue to restore the natural Ocklawaha River. The damage man has caused to every water shed and River in Florida is slowly killing natural Florida. Algie blooms, red tide, fish kills, wetland destruction, damage to wild life. We have a chance here at Rodman with minimal cost to right a past wrong, what are we waiting for ?
10/16/2021 8:18	St Johns		No	Yes		1 time	More than 5 times	Wildlife viewing	I am of the opinion that a dam without a purpose is a dam that should not be there. I would like to see this area restored to its former pristine life.	Water running freely is healthy. Water in an impoundment leads to death, siltation and decomposition.	Time will eventually take out the dam and return the river system to its natural flow. My biggest concern is seeing the dam upgraded taking tax dollars to attempt to extend the dam and present reservoir.	I do not support seeking to maintain the un-natural impoundment of this water.	
10/16/2021 8:23	Duval		No	Yes		2-5 times		Fishing (shoreline/structure) Wildlife viewing	Removal	Science	continued loss of springs and flow	No	
10/16/2021 8:31	St Johns		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing Other	Restore and free the Ocklawaha	Ecological and economic benefits	Diminished quality of the St John's River and all it provides to the environment	No	
10/16/2021 8:31	Duval		No	No					Make the river free flowing	The science	The continued bad impact on the environment	No	Long overdue
10/16/2021 8:32	Duval		No	Yes			1 time	Canoeing / kayaking	It's time to remove the dam and restore the river to its natural flow	Fishing will still be good for anglers...little is lost in this way	Allowing the free flow is essential maintaining a healthy environment.	I haven't seen a compromise solution that creates an unobstructed waterway.	It's time! I've been in reading about this for the 25 years I have been in Florida. At first I thought it not important but I've come to the conclusion that the damn wasn't necessary without the canal and Florida and central Florida especially will be blessed with a restored river that will be used by folks who enjoy the river and there will be better fishing experiences without the dam lake.
10/16/2021 8:32	Duval		No	Yes		1 time		Wildlife viewing	I would like to see the Dam removed to restore to original conditions. It was built for a project that was abandoned and it too should be abandoned. There is no need for it.	Ongoing information reported by St Johns Riverkeeper and others in the media.	I have read that the dam could fail and affect people living downstream.	I don't know if there is a middle ground on this issue.	
10/16/2021 8:36	Lake		No	Yes			More than 5 times	Wildlife viewing Other: Walking	All Florida waterways open and flowing So that water wildlife can move about for their livelihood and health	So that water wildlife can move about for their livelihood and health	We have already seen a huge decline in the Manatee that's only the tip of the surface	We have already seen a huge decline in the Manatee that's only the tip of the surface	Our waterways need to be open and flowing naturally and we need to have conservation to protect habitats
10/16/2021 8:39	Alachua		No	Yes			More than 5 times	Fishing Canoeing / kayaking Wildlife viewing	Stop paying for an aging piece of infrastructure that costs millions in maintenance	Public records	We are impacting the ability to access wildlife and contributing to unnecessary taxation of future generations	No	
10/16/2021 8:47	Alachua		No	No					Return to natural state & protect the springs	Condition of the springs is steadily declining and need to be protected throughout the state	Springs become polluted which will affect the fish, reptiles, birds and mammals that depend on it	Must protect the springs and rivers	Protect the springs, rivers and natural waterways.
10/16/2021 8:51	Duval		No	Yes		2-5 times		Canoeing / kayaking	Tear it down	Restore the original river	Lost opportunity to fix ecosystem and recreate huge ecosystem for public	Drain the reservoir	This was a boondoggle to begin with, please end it
10/16/2021 9:03	Citrus		No	No					Question: If bales of hay were put in the water could the manatees eat and live off of it?				
10/16/2021 9:04	Duval		No	Yes			1 time	Wildlife viewing	Removed	Restoration the river	The affect the dam has on the river and southward	No	
10/16/2021 9:09	Brevard		No	No					Remove the Kirkpatrick Dam	The negative results to the St Johns and other rivers from the un-natural restriction of flow.	Continued negative effects on water quality and damage to wildlife.	Major diversions that provide the same flow rate as if there were no dam and measures that would enable all aquatic and non-aquatic wildlife to navigate from one river to another.	Thanks for the opportunity to express my concerns.
10/16/2021 9:11	St Johns		No	Yes			1 time	Canoeing / kayaking	Remove the dam and restore the river's natural flow	There is a deep body of research that indicates dams impact healthy rivers, fish populations, and water quality. As we see more and more algal blooms in the St John's River, better water flow can only improve that quality. Nature is the best healer - man made efforts usually have unintended consequences. Please return the river to its natural state.	Increased algal blooms, poor water quality		
10/16/2021 9:11	Putnam		Yes	Yes			2-5 times	Fishing Boating	keep the dam in place	Great fish and wildlife one can enjoy with out having to deal with pleasure boaters	great fish an wildlife habit will be lost a place where one can enjoy nature with out dealing with crabbers large boats pleasure boaters and can be accessed by roads or water through the lock system	no	
10/16/2021 9:51	Duval		No	No			1 time	Wildlife viewing	Drain the reservoir, remove the dam and let the Oklawaha River flow freely.	The environmental benefits far outweigh the perceived (but incorrect) perception that fishing is somehow better with the dam.	The water quality will be further degraded, a diversity of fish species will never be achieved and the dam and reservoir will cost more and more each year to maintain.	No.	
10/16/2021 9:20	Putnam		No	Yes			1 time		Knock it down	My grandfather telling me how it was before the dam	More decay of the River systems	No	
10/16/2021 9:25	Duval		No	No					Taken down and allow the water to flow naturally	The condition of the St. John's River	The St. John's River continues to decline	I don't know	
10/16/2021 9:28	Marion		No	Yes			1 time		Removal	How it has negatively effected our environment for years and costs millions to maintain. It's cheaper to remove it AND will restore the ecosystem that is part of the National Forest	My wasted tax money to continue ruining our water ways and surrounding environment	No	It should have been removed when the ridiculous barge canal project was cancelled.
10/16/2021 9:28	Putnam		No	Yes		1 time		Canoeing / kayaking Wildlife viewing	Recreational activities	"great Florida River waterway" booklet & presentations	Same ole same ole good ole boys regime & taxpayer expense to operate instead of user fee	Use the canal & lock for a man made whitewater rafting & kayaking venue similar to Charlotte's National whitewater center	Needs to be a win/win. Guess I don't really understand
10/16/2021 9:31	Broward		No	No					remove it, free the fish, and help Nature be Natural.	helping reconnect Florida's natural river and allowing fish to breed	loose an opportunity	partial removal, enough for fish to pass freely	The oppositions position
10/16/2021 9:31	Palm Beach		No	No					I want it to survive the corporate greed that seems to be everywhere.				
10/16/2021 9:33	Collier		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 30 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/16/2021 9:34	Glades		No	No					Remove dam. As a "snowbird" Florida wildlife is a major attraction for my months long visits to Florida. Can't wait to see the states lawmakers forward further protection of its environment. Many thanks!				
10/16/2021 9:34	Alachua		No	Yes		More than 5 times		Boating Wildlife viewing	Dump the dam	Letting the river flow	That we continue with a total disaster	NO	Just do it

10/16/2021 9:34	Palm Beach		No	No					Remove the dam and restore the Ocklawaha River.	If you got rid of the dam you can restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	Absolutely not. It should have been done years ago. Dam safety, improved water quality and wildlife can't wait.	
10/16/2021 9:34	Lake		No	Yes		1 time	Wildlife viewing		Remove the dam .	Environmental	Loss of wildlife and fish	No	
10/16/2021 9:36	Outside of state / other	Maine	No	No					The environment needs to be protected for these special birds!! Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	I used to live in Florida for 30 years and man is destroying the environment and more needs to protect what God created it all for the wildlife. Look at the Manatee's they are dying and what is the state doing ????
10/16/2021 9:37	Broward		No	No					Remove the dam. Free up the River.	Let nature control the natural habitat.	Continuing to spend taxpayer money and resources on a failed water control project makes no sense.	No	
10/16/2021 9:38	Putnam		No	Yes		1 time	More than 5 times	Other: Boat up-to-it, but am blocked from further travel	The dam has never served it intended purpose. The damage ecologically to the springs and the river can be reversed if our government would take the bold step and remove the dam. The cost to maintain a relic of the past is a waste of everyone's money. I am in full support of breaching the dam so nature can be restored.	Dams by and large are damaging to the wild areas they attempt to tame. The simple blocking of the water is so detrimental to the springs, wildlife and ecology.	Continued negative effects to the waterways being blocked to include the prevention of manatees, fish and other wildlife.	No-The dam must go	
10/16/2021 9:39	Palm Beach		No	No					Remove the dam	Bring back the natural flow of the rivers	Costs for the maintenance of the dam will continue to increase	Not really	
10/16/2021 9:39	Sarasota		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	We must work to preserve as much as possible of our native Florida from developers.
10/16/2021 9:40	Volusia		No	No					remove the dam. restore the land to what it used to be.	15,000+ acres of forested floodplain wetlands within the Florida Wildlife Corridor are restored or enhanced for people and wildlife	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	NO! RESTORE THE LAND AND WATERWAYS.	Look at the progress being made at the Tamiami Trail. It can be done!!! Restore the land! Let nature do it's thing. It's the best thing for humans and wildlife alike.
10/16/2021 9:40	Miami-Dade		No	No					Remove the dam	Concern wildlife			
10/16/2021 9:41	Palm Beach		No	Yes		2-5 times	2-5 times	Canoeing / kayaking Wildlife viewing	Restore natural flow - remove the dam!	Destruction and pollution downstream	Humans are terrible stewards of our planet. In my lifetime the destruction seen has brought us past the tipping point!!!		
10/16/2021 9:42	Outside of state / other	DOVER, DE, USA	No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/16/2021 9:43	Pinellas		No	Yes		2-5 times		Canoeing / kayaking Boating Other: We camped and biked as well as kayaked and used our small boat.	Remove the damn. Restore the area to its natural habitat.	The reservoir was pointless. It was a breeding ground for invasive plants like the hyacinth. The water is shallow and full of submerged trees and branches making it hard to even kayak. What is the point in preserving an expensive damn and canal that serve no purpose?	Spending money on something that does nothing to preserve our natural environment but does the opposite.	No	
10/16/2021 9:44	Suwannee		No	No					Removal of the dam will ensure habitat for birds and other wildlife and an opportunity for tourism. By far the most economical solution to the aging dam is to remove it.	Audubon press releases	Loss of potential habitat, increased state budget.	No	There is no good alternative to removing the dam; it makes no sense to spend precious state resources on rebuilding.
10/16/2021 9:45	Broward		No	Yes			1 time	Canoeing / kayaking Boating Other: Photography , video	Fix the river. The river and the wildlife. Clean water is good, essential but the most important thing is maintaining the balance of nature and the ecology of the region. I lived in Gainesville 4 years.	Research for documentaries done about threats to ecosystem and wildlife habitat	You will have a concrete jungle and a dying environment for both animals and people	s think it's time to make the choice for life, in harmony with our environment.	
10/16/2021 9:45	Charlotte		No	No					Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.		
10/16/2021 9:46	Highlands		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	It is time for Florida to have our few remains precious reserves returned to their natural life. Humans have interfered and attempted to control nature for far too long and look at the mess we're in now as a result.
10/16/2021 9:47	Orange		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Dam safety, improved water quality and wildlife can't wait.	
10/16/2021 9:47	Seminole		No	Yes		1 time		Wildlife viewing	No more of my taxes should go to repair this environmental disaster. Take it down.	The great damage to animal populations with the damming of the river.	More springs destroyed.	no	
10/16/2021 9:48	Bay		No	No					Restore the Ocklawaha by breaching the Kirkpatrick Dam.	It is the most impactful restoration of manatee habitat providing essential warm water sites for manatees to survie the winter.	Manatees further threatened by loss of habitat	No. Breaching the dam is overdue to protect wildlife, especially manatees, and water quality.	Habitat will be created for many wetland species like panthers, bobcats, bears and bald eagles.
10/16/2021 9:49	Collier		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	The dam's got to go! Needs repair and does no good, just harm to the natural environment that brings us life.
10/16/2021 9:50	Polk		No	Yes		1 time		Fishing Fishing (shoreline/structure) Canoeing / kayaking Wildlife viewing	Remove it to restore the springs	We lost 20 springs	Water quality getting worse	No	
10/16/2021 9:50	Brevard		No	No					Deconstructed and removed restoring natural waterways.	Worthless failed infrastructure destroying natural migratory ways and water flow, flooding springs and overall stupidity.	We are completely failed as a species. We are doomed	No	How stupid can the legislators be to repair a useless and harmful structure!
10/16/2021 9:54	Duval		No	No					Take the dam down	Science	More of the same	No	None
10/16/2021 9:55	Seminole		No	No									
10/16/2021 9:55	Duval		No	Yes		1 time		Canoeing / kayaking Other: Hiking	Take it out, return to the wild river	Nature rules! Let it do its job	Nature can't do it job	Not interested	I want to kayak on a wild river
10/16/2021 9:57	Duval		No	No						The waterway is in danger which should alarm all Florida residents!	The ecosystems peril.	Clean up our waterways. Keep pollutants out.	
10/16/2021 9:59	Outside of state / other		No	No					Remove the dam and restore the Ocklawaha River	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/16/2021 10:00	Outside of state / other	Columbia, SC	No	No					I would to see it dismantled and the area revert to as close to its natural ecosystem as possible.	The loss of bird and other wildlife habitat	An even further decline in wildlife populations	Anything that helps restore habitat is good.	
10/16/2021 10:01	Duval		No	No					I'd like to see the damn breached and the water systems returned to their natural state. This will help Silver Springs and the St Johns and provide 150 million gallons of fresh water to our ecosystem.	Studies have shown that restoring the Ocklawaha can reduce algae blooms and support a resurgence in the manatee population.	That we miss the opportunity to undo this mistake that has been allowed to sit for 50 years.	No. Breaching the dam is what is right for the delicate Florida ecosystem.	
10/16/2021 10:02	Hillsborough		No	Yes		2-5 times		Fishing Canoeing / kayaking Wildlife viewing	Breaching the damn and restoring the river habitat	Restoration of the warm water for the winter habitat of manatees and other wildlife that depend on the water	Extinction of manatees, panthers, bears and other wildlife in Florida. These animals are essential to the diversity of Florida and attract tourists and money into the state	No. Water and water quality is essential for the life of these animals	I spend 6 months a year in Florida. I have snorkeled with manatee. It is essential to maintain the Florida wildlife corridor and protect the natural beauty of Florida. It's what makes Florida special. Without the natural diversity Florida becomes just like any other state. Protect your communities and rivers and the economy that natural beauty and diversity brings into florida
10/16/2021 10:03	Orange		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Please remove the dam.	The Dam serves no purpose and valued funds could be used to address restoration of the waterways. Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow.	If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. This is the critical step to restoration of the waterways	Florida's natural environment is under threat of overdevelopment and our natural resources continue to be negatively impacted. It his time to step up and do the right thing by removing the Dam to restore the waterways.
10/16/2021 10:06	Volusia		No	No					Restore the dam	Breach the dam	It can help at least 20 other springs in Florida	NO	
10/16/2021 10:08	Lake		No	No					Remove the Kirkpatrick Dam and restore the Ocklawaha River	The springs that are covered should be allowed to flow as nature designed.	The stagnation of this and nearby rivers which will not be able to support the fish and other wildlife.	manatee & fish health as well as the health of all the water in those springs!	It is hard to understand why we took manatees off the endangered list when we lost the most ever this year! they need our help! and so does the spring water and fish! please remove this unnecessary dam!
10/16/2021 10:09	Pinellas		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	Dam removal to restore the natural flow of the river	Science, common sense, and the large majority of the people vs. the small minority of fishermen.	Continued degradation of an artificial, stagnant environment	No. This dam is reaching a point of marked degradation and is not worth one dollar to restore. Its time has come, and gone.	Although I currently live in Lake County, I lived in Marion County for 14 years and visited the area at that time. The wildlife and fish are important to the residents of Florida.
10/16/2021 10:09	St Johns		No	Yes		2-5 times		Canoeing / kayaking	Some sort of an alteration to the dam that would allow for a significant amount of free flowing water	It appears that a number of ecologically centered groups with a pot more knowledge than I have determined that through extensive studies that this would benefit Several Florida river ways.	The health of several Florida rivers will deteriorate further as will the habitats they support and, selfishly, some recreational activities such as kayaking will diminish as well.	We should be open to any "science backed" solution but my faith remains with the St John's River Keeper and I would look to her for guidance on whether any solutions are not necessarily optimal, but at least feaseable.	Thank you for taking the time to solicit opinions from the public
10/16/2021 10:10	Lake		No	No									
10/16/2021 10:10	Clay		No	No	Yes		1 time		Canoeing / kayaking Boating Wildlife viewing	Destroy the dam to restore the Ocklawaha, St Johns and Silver Springs Rivers and restore the springs	Science - destroying the dam restores 3 rivers, many springs, 15000 acres of floodplain and the rivers regain their natural flow. Stop playing God.	Not doing this stops the ongoing ecological degradation caused by the dam	No, consider the dam safety issues, and correct and improve water flow must be restored to improve the quality of the waters.	
10/16/2021 10:11	Pinellas		No	No						Return river to normal. Dismantle dams	Ya news paper internet	Not good for Environment	None
10/16/2021 10:11	Manatee		No	No						See it removed and the rivers allowed to flow naturally	The damage to the environment, and the distraction of natural water ways to wildlife that have occurred by the building of the damn.	The damage to wildlife and natural flowing water and water Ways that wildlife need to migrate and live	No, the dam needs to be removed and the waters need to flow naturally
10/16/2021 10:12	Orange		No	Yes		2-5 times		Boating Wildlife viewing Other: Viewing wildlife and peace and tranquility	Removing all manmade restrictions..period Serves no dam purpose	The river site it's self ,YOU SCREWED UT UO ,,,YOU FIX IT BACK TO NATURES STANDARDS ,AND THEN LEAVE THE ....S.O.B. ALONE,YALL HAVE SCREWED ENOUGH UP ALL READY	That the water district s are crooked as hell ,your on agenda ,not natures agenda AND STOP SELLING OUR DAMN spring waters to NESTLES OR ANY Other Company's AND RANCHES	No,,,we are tired of your STUPID DECISIONS AND LEAVE OUR WATER WAYS ...PRESTEEN...PERIOD!	
10/16/2021 10:13	Charlotte		No	No					Eliminate the dam and bring the river back to its natural state.	I have witnessed the waste of money that is the Cross Florida Barge Canal.	My concern is always the wildlife and the waste of taxpayer dollars.		
10/16/2021 10:15	Columbia		No	Yes			2-5 times		Wildlife viewing	Remove dam, restore reservoir land	All results of the many researches done about this.	The "good ole boys" have too much power.	
10/16/2021 10:15	Putnam		No	Yes		2-5 times		Canoeing / kayaking Boating Wildlife viewing	The dam should be breached to allow the free flow of the Ocklawaha River The damage the dam has done over the past 50 years is an example of the negative effects that occur when man tries to re-engineer the environment.	Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam to reunite the natural connection of Silver Springs, the Ocklawaha and the St. Johns River.	The priceless St Johns River, the outstanding Ocklawaha River and numerous springs continue to be impaired and one day it will be too late to save them. I grew up in Jacksonville and experienced first hand the negative effects of industrial and residential pollution on the SJR. Today it is trying to recover and we need to protect it as MUCH as possible. I have retired and live on the shore of the SJR in Putnam County and feel a personal obligation to take a stand to protect this amazing River.	No Not that I am aware of - the NATURAL flow needs to be restored.	Fishermen go into St Johns River in tournaments. The continued spraying of pesticides to control blooms is dangerous. Manatees wouldn't be killed in locks. The boat tours to Silver Springs from Jax and Pataka could resume using the beautiful river in it entirety
10/16/2021 10:18	Marion		No	Yes		2-5 times		Fishing	Remove the dam.	The dam serves no useful purpose and adversely affects wildlife and the St. John River ecosystem. If the Ocklawaha flowed freely it would reduce the salinity of the St John.	Rodman Reservoir will eventually silt up and be totally useless.	Partial dam removal	
10/16/2021 10:19	Outside of state / other	Woodbridge, VA	No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Far too often man interfered with what nature put in place much to the detriment of wildlife, vegetation, and the natural flow of our valuable water resources. And human life typically ends up suffering in the long run, too.
10/16/2021 10:19	Leon		No	No					The dam needs to be removed to allow nature to prevail as it had for millions of years before the dam was built.	Protecting the environment needs to be prevail especially in this case of perpetuating a lost cause.	More animals and plants will be harmed or destroyed in an environmentally sensitive area.	No.	The dam needs to be removed as soon as possible.
10/16/2021 10:20	Marion		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Our springs provide us a source of water and support an important ecosystem in Florida. Removing the dam will preserve this gift for future generations.
10/16/2021 10:22	St Johns		No	No					Breach the dam and restore the naturalflow of water.	Ecological damage causedby the dam.	Longterm death of natural eco system.	st show up with a shovel to help. No we mustyt restore the system.	
10/16/2021 10:23	Hillsborough		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/16/2021 10:24	Martin		No	No					Remove the dam	The knowledge that the springs and rivers would be restored by the removal of an unnecessary dam.	Further destruction of natural habitat in a state losing it faster than any other. Let's save the little bit we have left.	No	
10/16/2021 10:24	Outside of state / other	UGA	No	No									
10/16/2021 10:25	Seminole		No	Yes		1 time		Canoeing / kayaking Wildlife viewing	I'm in favor of having the dam removed.	There is plenty of science based studies which show the benefits of removing dams. This has already occurred many times throughout the United States.	None.	None come to mind.	
10/16/2021 10:26	Marion		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	treasure our wildlife, trees and vegetation. It is of the upmost importance to restore Florida to its natural state! Please make this happen.
10/16/2021 10:28	Citrus		No	No					Dam removed and natural flow retury.	Environmental issues	Continue water flow damage	No	
10/16/2021 10:28	St Johns		No	No					Remove it to restore the natural Ocklawaha river flows.	The damn has been very destructive to the springs and rivers in the area and provides little value. Restoring the rivers would greatly help the ecology of the area including flood plains and the flow of several rivers.	The continued decline of wildlife, including the manatee, and the natural ecology of the area. This is a great opportunity to use available funds and remove the dams and we may not have another opportunity like now in the future.	No. Full restoration of the Ocklawaha River is needed after 50 years.	I enjoy paddle boarding on the Springs and restoration of the Ocklawaha River would greatly enhance recreational activities in the area.
10/16/2021 10:30	Monroe		No	Yes	1 time	2-5 times	2-5 times	Canoeing / kayaking Wildlife viewing	Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	I've lived and worked in Florida since 1975, and I've seen a HUGE amount of degradation in it's ecology and environment in general and it makes me angry! The Florida legislature seems to have only $$$$$$$$$ on it's mind and the current Governor is The DEVIL Incarnate.
10/16/2021 10:31	Manatee		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait. It is critically important to be good stewards of our natural wildlife and create systems that enrich habitat and enrich the beauty of the landscape for Floridians and visitors.	As a Florida resident, I cherish the natural beauty and incredible wildlife and Bird species that rely on habitat in Florida. Restoring natural systems that support wildlife enriches people lives as well, and it is so important to protect ecosystems that support wildlife, much as is being done in the Everglades. We all depend on nature to sustain us. Please allow this river system to be restored. Thank you.
10/16/2021 10:31	Duval		No	Yes			1 time	Wildlife viewing	It should be removed to restore the river.	The health of the St. John's river and Florida springs.	The health of the river, springs, and needless expense of maintaining the dam.	Can't think of any.	
10/16/2021 10:31	Lake		No	No						Have it preserved	The climate	The climate	
10/16/2021 10:34	Pinellas		No	No					I'd like to see the damn removed and the whole area restored, including three rivers and all the attendant wildlife.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	Wasted money and loss of a great opportunity to restore natural flows of rivers and springs.	Absolutely not. As the old saying goes "mother nature knows best". Good intentions often have unintended consequences, as we saw in the straightening of the Kissimee River and subsequent restoration.	
10/16/2021 10:38	Brevard		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	To save the Manatees and wildlife, we did this to them now we have to save them.	We lose all our manatees and wildlife. we need help to save manatees and other wildlife from habitat destruction and pollution Even while manatees are still struggling with starvation from seagrass loss, the greatest long-term threat to these animals is the loss of warm water habitat that manatees need to survive the winter. Right now, 60% of Florida's manatees depend on power plant outfalls to keep warm and survive the winter - an unsustainable and unnatural situation.	Yes restore Ocklawaha River any means necessary to save the gentle giants the Manatees and the wildlife.	The Ocklawaha River is the heart of the Great Florida Riverway, which, if restored, could provide essential warm water habitat for hundreds of manatees in the winter. Manatees have already reached a record number of deaths this year - and if we don't restore additional areas of their natural habitat, we could lose even more manatees in the future.
10/16/2021 10:41	Osceola		No	No									
10/16/2021 10:41	Alachua		No	Yes		1 time	2-5 times		Breach the dam.	Restore the natural environment as it was 50 years ago and allow wildlife to restore back to their old habitats.	This is a great opportunity to undo the environmental damage and harm done to wildlife populations. Not too late to right a wrong.	No. Needs to be breached. The proportion of people that would benefit from this vs. people that want to keep it is astronomical. Seems to me the only people that want to keep it are a few handful of bass fisherman.	
10/16/2021 10:41	Duval		No	No					The project is dead, so no need for the dam. It should be removed.	The questionable health of the St. Johns River and need for all its tributaries.	Indolence and the uncaring attitude toward the destruction of the natural rivers of our state would lead to more unfortunate tampering with nature.	Building a whole lot of fish passages in and out of the reservoir that still wouldn't accomplish a lot.	
10/16/2021 10:43	Collier		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	There is so much development in Florida, and short term financial gains are foolhardy. Natural places are critical and integral to the health and beauty of Florida. Tourism is a huge portion of the income for the state and when Florida gets uglier, fewer and fewer visitors will spend time and money here. Let's be part of making Florida beautiful and functional again. Reverse the damage done to Florida land, water and wildlife by breaching the dam. Save lots of money by NOT trying to make an old structure safe for the future. Thank you.

10/16/2021 10:44	St Johns		No	No					Removal of the obstacles to natural flowing rivers and surrounding areas	All of the studies that I have seen indicate the restoration of the e-natural flow will benefit all the surrounding ecosystems.	Further degradation of the natural flow age patterns.	Partial restoration	
10/16/2021 10:48	Palm Beach		No	Yes			2-5 times	Wildlife viewing	Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/16/2021 10:49	Broward		No	No					Breach the dam and bring back the river. Restore the migratory routes for fish and aquatic mammals and reunite the river's	Environmental stewardship, return to a forest floodplain, reunite the rivers.	Environmental degradation and lost economic opportunities for visitors.	NO! Water quality, dam safety and wildlife have walked too long already.	Do the right thing.
10/16/2021 10:50	Collier		No	Yes		2-5 times		Wildlife viewing	Please remove the dam. Restore the land.	Impact on wildlife	More devastation to the wildlife	No	
10/16/2021 10:52	St Johns		No	No					We want the dam to be breached to restore free-flowing water to the springs and St. Johns River. When we moved to Florida 10 years ago, seeing and learning about the mighty St. Johns River was part of our education as new Floridians. What a resource it is! Taking this step to restore the watershed will result in better water quality and habitat.	Science is the key here. All of us are becoming more aware of the preciousness of our natural resources, so this is the time to act on that belief and work to reverse the stoppage of the flow of water that nourishes the fertile springs and river areas.	Continuing degradation of the springs and rivers will continue. We can't afford that!	Since I'm not a hydrologist, I can't really provide an alternative. I am a believer in clean, clear-flowing water, so I support the breaching of the dam. I can't imagine what a lesser alternative might be.	We have an opportunity now to do something that will benefit the environment on which Florida tourism depends. That it is also a chance to mitigate years of impeded water use and refresh, restore, and rehabilitate our water resources is an opportunity we don't want to miss!
10/16/2021 10:53	Palm Beach		No	Yes			1 time	Wildlife viewing	Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 58 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/16/2021 10:54	Volusia		No	Yes			More than 5 times	Boating Wildlife viewing	remove and return the river to its natural flow	the loss of natural wetlands with the growth and encroachment of development	future generations will miss out on the natural state that I have enjoyed for the last 67 years as a 3rd generation Floridian	no this boondoggle is 50 years to long	
10/16/2021 10:56	Palm Beach		No	No					Tom down to allow nature to return to its original splendor and potentially help save us from climate change by providing pathway for the natural waterways to reunite, providing regrow the of flora adding oxygen to the air and removing CO2 from the air, and restoring habitat for birds and other wildlife.	Climate change is going to be the demise of the planet.	Climate change will destroy the planet.	I am not a scientist, just an older woman who has seen much change on Earth since I was aware of what our footprint has damaged everything. I do not see how not achieving all our goals would help.	Don't keep asking for money in every email. It makes me loathe to open any of them.
10/16/2021 10:56	Duval		No	No					I would like the dam to be dismantled so the Ocklawaha River can return to it's former state.	Evidence that it would help restore sea grass in Manatee habitats.	Even higher Manatee mortality rates	No	
10/16/2021 10:58	Volusia		No	Yes			2-5 times	Canoeing / kayaking	Restore ocklawaha by breaching dam, and reconnecting St. John's, ocklawaha, silver river. Restoring the many springs in these rivers. Ecological river health!	Restoring health of springs thus the aquifer	Continued degradation of the rivers, springs	No	
10/16/2021 10:59	St Johns		No	Yes			1 time	Wildlife viewing	Remove the dam to restore natural rivers.	Better for economy, people & natural Florida! Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	Drain on the economy!!! And further destruction of natural Florida!!! If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No.	
10/16/2021 11:03	Citrus		No	No					We need to remove the dam and restore the rivers! Restore the migration if the manatees, birds, and fish!! Please!! This dam does nothing. Why pour money into it???? It doesn't make sense. Please remove the dam and restore the river!!	How the dam has negatively affected the wildlife and natural lands.	Continued destruction of the land, the springs, and continued blocking of manatee and fish migration	No	There are many places to use our taxpayers money that would help our people and our economy. Repairing this useless dam is not one of them.
10/16/2021 11:05	Orange		No	No					Please remove the dam and let nature restore the natural course of the Ocklawaha River.	We are at a crossroads and the need to preserve Florida's natural resources and beauty is pressing. This is a unique opportunity that may never occur again. Removing the old dam will allow some of Florida's springs and rivers to be restored to their natural flows so that wildlife, plants, birds and waters can return. This dam is not needed.	Continued degradation of Florida's unique springs and beautiful rivers.	No. The correct answer is to remove this old structure. It is foolish to waste money repairing something that is not needed.	Florida's springs are unique. Restoring them is one piece of added value that could encourage eco tourism—a very popular and financially beneficial thing. Please remove this old thing so that we can leave a better Florida for not only our enjoyment, but for the future.
10/16/2021 11:08	Lee		No	Yes			1 time	Fishing Wildlife viewing Other	Restore natural flow	Science. And it's the way it's naturally supposed to be.	Apart of the demise of Florida's water quality.	Yes, fix the 500 other water quality issue contributing factors.	
10/16/2021 11:08	Outside of state / other	UK	No	Yes			1 time	Other: Vacation	The Ocklawaha River is essential to the long-term survival of manatees. The Kirkpatrick Dam must be breached with the utmost urgency. This will also benefit a huge range of other species, from Florida panthers to bald eagles, who, in turn, will naturally help to maintain a healthy ecosystem.	Manatee death records were sadly broken in the first six months of 2021, with at least 841 individuals dying. They need access to warm habitats above 68 F during the winter to survive, and to ensure an adequate supply of seagrass - their primary food source. This can only be achieved by restoring the Ocklawaha River and the associated 15,000+ acres of the Florida Wildlife Corridor.	More manatees will inevitably die because of our failure to remove man-made structures. Manatees have very little winter habitat available to them. They need the areas we are depriving them of, and the optimal conditions within them, more than ever. Removing the Rodman Reservoir and dam would also open up 7,500 acres of forested habitat, that is currently flooded. The dam and reservoir is essentially a wall, when it could be transformed into a wildlife corridor, allowing currently cut off populations to integrate and strengthen their numbers and genetic diversity.	No. People have been fighting for this for 50 years. Manatees and other threatened species can not wait any longer.	Who wants to risk seeing dead or starving manatees? It is truly distressing, bad for tourism, and is the very real culmination of an intentionally degraded (because we know how to fix it) ecosystem. As a tourist, I do not see any downside to the restoration of the Ocklawaha River. Manatees are a huge draw for wildlife lovers. Residents will benefit hugely from the increase in land and nature; much of which will be threatened; whilst local water quality will undoubtedly improve, once the river is allowed to flow naturally. It is exciting to think that springs and rivers will once again be interconnected across a 217-mile stretch of currently degraded waterway. The number of communities that will be positively affected will be huge. The area can be promoted as a green destination, promoting many outdoor pursuits, to the economic benefit of the entire region. Most importantly, manatees will be saved from starving or freezing to death, whist seagrass is a huge carbon store. The restoration of manatee habitat will therefore save the state money in the long run as a means to mitigate climate change. Freeing the Ocklawaha River to flow as nature intended is a win-win situation, but time is of the essence. No one wants to see more manatees die when we know there is a simple solution. Please breach the dam now.
10/16/2021 11:13	Manatee		No	No					We must try to return it to a more natural ecosystem.	That Florida must try to protect and enhance natural diversity and ecosystems.	Degradation of our air and land.	No	This is long overdue.
10/16/2021 11:13	Alachua		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	Take down the dam	Environmental impact of the dam	Continued impact on wildlife, ecosystem and water	No	
10/16/2021 11:15	Pinellas		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	The removal of Rodman Reservoir/Kirkpatrick Dam will restore the Ocklawaha back to life	Many springs have been lost. Also the financial burden of repairing the outmoded dam would be prohibitive.	The magnificent Silver Springs, a Ft. institution, wd. continue to be degraded, & many forests that cd. have come back wd. not be able to	No! Our flora, fauna, waterways cannot wait anymore.	Please do the right thing, and overcome the historic misguided history of the Fla. Barge Canal.
10/16/2021 11:17	Alachua		No	No					The Dam MUST be removed for the sake of all of Florida and the environment. This was a monumental mistake to begin with, and the longer it is allowed to remain, the longer restoration is delayed.	•Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	Restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	•No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/16/2021 11:22	Sarasota		No	No					Remove the dam. Let nature take its course and let the rivers flow.	The dam has no purpose here and removing it helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. The area will have a tremendous amount of money and water will be restored where it should be.	According to the National Audubon Society, if the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more. Water is no a renewable resource. We need to do all we can now to preserve it.	No. Improved water quality and wildlife can't wait and is this is long overdue.	Although I don't live in this area or have visited the area, I do know that dams are no longer what we need. We need to work with nature and stop destroying it. Breaching the dam is a step in the right direction.
10/16/2021 11:25	Outside of state / other	El Sobrante, Ca	No	No					It is clear that the Rodman Reservoir/Kirkpatrick Dam, has NOT provided the results that are benefiting the environment. All across the country, dams are being removed, as it had been determined that they are really an impediment to the free movement of aquatic animals, and the water quality. Additionally, Removing the Dam will improve the economic viability of the area. Helping the construction industry. Increased visitation, and with it hospitality jobs to the region.	Removal will be better for the environment	Decreased water quality.	At this point in time, NO!	
10/16/2021 11:29	Collier		No	No					Remove the dam and restore the Ocklawaha River.	Information provided by the Audubon Society and various online publications on websites such as Radefenders.org	Loss of the opportunity to restore some of Florida's most beautiful wildlife habitat. And wasted tax payer dollars on upkeep of the dam.	Partial Restoration as proposed by the DEP and described here https://fladefenders.org/blog-greenway-management-plan-2017-2027/	
10/16/2021 11:30	Pinellas		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Known down the damn dam. Restore the natural flow of water for the ecosystems to flourish .	The fact that GOD intended for the water to flow which is evident by the destruction the f****** damn caused	Animals and plants that our ecosystem depends on will not be able to live there. Stocked fish are f****** garbage. Biodiversity is a good thing.	No. Knock down the fuckin damn.	I'd be real curious what the average IQ is of the average person who wants to keep the dam in place.
10/16/2021 11:31	Orange		No	No			1 time	2-5 times	Wildlife viewing	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. This is an environmental home run based on the numerous benefits at a relatively low cost.	MANATEES: 2021 is the deadliest year on record for manatees, unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
10/16/2021 11:31	Monroe		No	Yes			1 time		Regarding Rodman Reservoir and Kirkpatrick Dam: Remove the dam and restore the Ocklawaha River. Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose. If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Canoeing / kayaking Wildlife viewing	If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation and more.	I can't think of one. This needs to happen/	
10/16/2021 11:37	Pinellas		No	No					Remove the dam and restore the Ocklawaha River. Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	Florida relies on tourism for a huge chunk of its economy. We are killing off our ability to attract tourists in the future with the massive environmental destruction. We must act. If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	Massive loss of tourist dollars in the near future and massive spending of government dollars to mitigate disaster caused by the dam remaining	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Please stop short-sighted policy. The future is important. Remove the dam now.
10/16/2021 11:41	Seminole		No	No					Remove Dam and restore Oklawaha River.	Costly repair costs for the aging dam would be better spent on permanently restoring the Real Florida instead of maintaining a reservoir.	If the restoration of the Oklawaha it's not addressed now, Florida misses an opportunity to make a lasting improvement in its natural habitats which are fast disappearing due to population growth and development.	Reduction of the size of the reservoir. If feasible, might be an option.	
10/16/2021 11:49	Hillsborough		No	Yes			2-5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/16/2021 11:50	Highlands		No	Yes			2-5 times	Wildlife viewing	Removed - return to original habitat	Natural system is best. Wildlife needs the original River for better habitat and food source.	Lack of suitable habitat for birds and other creatures.	Don't believe so	
10/16/2021 11:51	Seminole		No	No					matching up with each area			no	
10/16/2021 11:54	Lake		No	No					Free the Ocklawaha and dam the Kirkpatrick Dam! Stop wasting taxpayer dollars and damaging future water & wildlife.	The 56 million dollars estimated (so we know it will cost much more), to keep it.	If the dam is kept....the future damage to our water & wildlife.	No.	
10/16/2021 11:55	Taylor		No	No					Remove dam	Studies that show benefits of removal	Continued environmental mess	Not really	Cross FL barge canal was a horrible idea 50 years ago but just like draining everglades it takes a long time and greater awareness for all to realize. Read "A Time to Remember" and "The Swamp"
10/16/2021 11:56	Putnam		No	Yes			1 time	Other	I would like to See it breached to set the water free to its natural state.	the lack of fish diversity, manatees, and endangerment to water supplies.	Lack of recreational use for everyone and lack of species of fish and wildlife because of harbicide use that is necessary now.		
10/16/2021 11:57	Outside of state / other	New Rochelle. New York	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Manatees have already reached record numbers of deaths this year due in part to starvation from seagrass loss. The greatest and looming long-term threat to the manatee is loss of natural warm water winter habitat. We can make a difference by restoring the Ocklawaha River, the heart of the Great Florida RiverwaylAs a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("COO") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam.
10/16/2021 12:01	Brevard		No	No					Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	The world is watching. Florida should be LEADING the nation, not dragging it down.
10/16/2021 12:04	Pinellas		No	No					Restoration of the natural habitat	Scientific evidence!	Loss of wildlife.	NO!	
10/16/2021 12:06	Duval		No	No					I would like to see it opened. The cross-Florida canals system was short-sighted and this dam just further aggravates that. While I appreciate the fishing opportunity, I don't see that area growing at all. It becomes a "private" club to the detriment of the majority. It was not intended to be blocked. Our springs and other areas need it to be opened and provide a far larger economic opportunity in the long term	the peril the springs are facing and the manatees	this dam will founder and then just sit there. deteriorate and not be of any benefit.	opening the dam regularly for refreshment? not sure I know the subtleties enough.	the landscape and nature and weather and water are what make Florida so awesome. it should not be limited by prior poor short-term decisions. we need to think LONG term. if we are a state bound by water, we need to allow it to flow in all its forms. Not bottle it up.
10/16/2021 12:07	Duval		No	Yes					Restore the flow	it is the natural state of the river, changed only by a failed project. I am a native Floridian and am the most interested in preservation of this beautiful state.	Continued human interference with nature	No	Thank you for your support in restoring Florida to greatness
10/16/2021 12:09	Outside of state / other	Maryland	No	Yes			2-5 times	More than 5 times	Fishing Canoeing / kayaking Wildlife viewing	Nothing	The loss of all the manatees that come into Rodman Reservoir to feed on the all the vegetation that it holds. If the damn we're removed we would lose that vegetation	No	
10/16/2021 12:09	St Johns		No	No									
10/16/2021 12:09	Palm Beach		No	Yes	1 time	1 time	More than 5 times	Fishing Fishing (shoreline/structure) Wildlife viewing	The dam breeched	Updates from environmental agencies	Detriment to manatees, fish, and wildlife	No	No
10/16/2021 12:10	Hillsborough		No	Yes			More than 5 times	Wildlife viewing	Remove if it would benefit wildlife.	Love of birds	Damage to current eco systems	Need to read about it before I can make a decision.	
10/16/2021 12:12	Seminole		No	Yes			2-5 times	Wildlife viewing Other: Enjoying the area	Please breach the dam.	Support of Audubon Soiety	Wildlife will suffer	Not aware of one	Preserving natural habitat is extremely important to me and my husband and the wildlife.
10/16/2021 12:14	Broward		No	No					PLEASE Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Please, I am a FLORIDA Native, born and raised here and want to preserve what I Remember of this great wilderness (what is left of it) for my children and grandchildren

10/16/2021 12:16	Pinellas		No	Yes		1 time	Wildlife viewing	breach the dam	The dam does not support wide public benefits and is crucial to wildlife populations and the health of our rivers and springs. It would restore 20 drowned springs on the Ocklawaha River. It would also provide safe winter habitat to our endangered Florida Manatee.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No the dam should be breached it is 50 years overdue and crucial to our Florida ecosystem	2021 has been the deadliest year on Record for the Florida Manatee who are dieing at alarming rates due to water pollution and lack of vegetation for food. The restored flow of the river could be key to their survival.
10/16/2021 12:16	Escambia		No	No									
10/16/2021 12:21	Pinellas		No	No				Damn removed	Ecosystem back to working order.	Ecosystem not back to working order.			
10/16/2021 12:21	Orange		No	No				removal	the success of the Kissimmee River restoration	Continued degradation of Silver Springs, Ocklawaha and St. Johns Rivers	I dont think so.		We owe it to future generations to preserve and protect the natural heritage of Fla. And we aren't doing a very good job, are we?
10/16/2021 12:23	Outside of state / other	Kentucky	No	Yes		1 time	Wildlife viewing						
10/16/2021 12:30	Lake		No	No				I would love to see the Rodman/Kirkpatrick Dam breached, and the Ocklawaha River returned to it's original natural state.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	I grew up enjoying the Ocklawaha River in it's natural state, and it was so much better that way. My parents also used to take me through the Ocklawaha River all the way to the St. John's River and out to the ocean. It's very difficult to do that nowadays, especially from Silver Springs to the St. John's River, because it's not being maintained any more. I think since it's so difficult, many people have just given up on even trying to get through there anymore, which is a shame, because it used to be a beautiful section of the river. MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation fromher loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
10/16/2021 12:35	Lake		No	No				Get rid of the Dam so the waters can flow naturally like God made it.	There are several reasons, including 20 springs that will be restored, but most importantly to me are the manatees. They will have more locations to visit warmer water in the winter, which they need to survive.	Environmental needs that are critical and won't be met, especially for our wildlife.	There is none.		Restoration needs to be done for many reasons, including future enjoyment of the natural springs for our grandchildren.
10/16/2021 12:37	Clay		No	Yes		More than 5 times	Fishing	Remove it!	A vast improvement in water quality for the St. Johns River	Even more environmental problems in the St. Johns due to the changes upstream and the deepening of the Jacksonville Port with the further invasion of salt water upstream.	Have not seen one so far.		During the 1990's I served as the chairman of the Environmental Advisory Committee of the South Florida Water Management District and the Southwest Florida Water Management District simultaneously for a period of time. Also I have qualified as an expert witness in water resources and ecological systems in a variety of court cases.
10/16/2021 12:45	Broward		No	No				Remove the dam and restore the Ocklawaha River.	Removing the dam helps restore 50 springs as well as the Ocklawaha, Silver, and St. Johns Rivers. The Lower Ocklawaha and St. Johns Rivers will receive 150+ million gallons a day of restored natural flow. $4-14 million will be saved on a dam that both is past its life expectancy and serves no purpose.	If the dam remains, Putnam County and Silver Springs will lose out on $47 million in economic benefits over 10 years; restoration is needed to bring increased visitation, construction, and hospitality jobs to the region. If the dam remains, water quality will continue to decline, causing invasive weed blockages while contributing to blue-green algae events, fish kills, and submerged aquatic vegetation loss. If the dam remains, Florida will lose out on thousands of acres of forests that could have been restored, providing water storage and filtration for downstream communities, flood protection, wildlife habitat, recreation, and more.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
10/16/2021 12:45	Leon		No	No				Get rid of the dam. Restore the Ocklawaha river, and the springs and wetlands.	Removing the dam restores the springs that were drowned by the reservoir and restores the Silver and St Johns Rivers	If the dam is not removed, Putnam County and Silver Springs will lose out on $47 million in economic benefits. Restoration will bring many needed jobs to the area. If the dam remains, water quality will continue to decline and algae blooms will continue to rise in frequency and severity.	No. The dam has to go.		Restore Florida's natural beauty. That's what brings visitors and jobs to the area.
10/16/2021 12:48	Sarasota		No	No				Remove the dam, restore the river.	Stop wasting money on a dam that serves no purpose.	Continued waste of money, continued degradation of water resources.	No. The dam needs to go. Stop wasting money on this.		
10/16/2021 12:50	Seminole		No	Yes		1 time	Wildlife viewing	Original species of fish would be restored		The environment would continue to suffer			
10/16/2021 12:58	Outside of state / other	Berkeley, CA	No	No				Remove the dams.		Restore the environment.	No.		
10/16/2021 13:00	Marion		No	Yes	1 time	2-5 times	More than 5 times	Wildlife viewing Other	Remove and restore the natural flow. Remove any canals etc that were part of the Cross Florida Barge Canal.	Restoring habitat of natural Florida- of all kinds- birds, fish , vegetation, trees. My one fear is that the areas along the restored river would be open to development!	Continued degradation of our water resources and general environment! Question-would the Mosi Bluff dam also be removed as part of the restoration and how would the Lakes below be affected-Lakeharris, Lake Griffin, LakeApopka?- is our current water table sufficient now and coupled with the uncontrolled development going to maintain those lake levels?? I have many questions??	Somehow prevent development from draining Florida's aquifer-perhaps requiring developers to include desalination facilities and impact fees to any new residents to our state. Our Florida is being destroyed!	Please continue to listen to us concerned and native Floridians who remember the way it was and want to hold on to some of it! Seventh Generation Floridian
10/16/2021 13:08	Seminole		No	No				Remove it	It's not needed	The failed Cross Florida Barge Canal Project left environmental destruction and burdensome infrastructure in its wake. The damming of the Ocklawaha River and creation of the Rodman Reservoir has smothered 20 springs, blocked manatee and fish migration, and destroyed thousands of acres of floodplain forest.	no		
10/16/2021 13:10	Seminole		No	Yes		2-5 times	Wildlife viewing	Breach the dam, which is already well past its life expectancy. It is harming water quality and wildlife.	Breaching the dam would restore three rivers and over fifty springs for people and wildlife.	Water quality declining even further, causing fish kills, blue-green algae, blockages of invasive weeds and more.	NO. Breaching the dam is long overdue. Do not spend more money on the dam.		Thank you for listening to environmentalists and ordinary citizens like me.
10/16/2021 13:13	Outside of state / other	MN	No	No				Removal of the dam and restoration of natural water flows and habitats.	Nature is much better at stewarding her resources than we humans. If we are to survive the ecological and climate catastrophe we have to stop damming up natural processes, and instead foster their restoration and learn to live with them.	Continued habitat degradation, local extinction of manatees, etc, and especially that even at this point in time humans still aren't wise enough to do the right thing when it comes to stewardship of natural spaces.	No.		
10/16/2021 13:16	Hernando		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Remove the dam.	Environmental concerns.	Continued degradation of the river.		
10/16/2021 13:19	Brevard		No	Yes		1 time		Canoeing / kayaking Wildlife viewing	get rid of the dam	restore the natural flow for springs	eutrophication	no	
10/16/2021 13:25	Collier		No	No					Return the land to what it used to be.	Every time y'all do some thing, you mess up the ecosystem. You really need to work with the land, not against it.	Do some thing, you mess up the ecosystem. You really need to work with the land, not against it.I would be very disappointed	I would be very disappointed.	
10/16/2021 13:34	Duval		No	No				Please remove the dam. Please reunite the rivers and help the Florida ecosystem.	Removing the dam will restore the springs and rivers. This promotes a healthy ecosystem.	Hurting Florida's beautiful natural environment, including so much wildlife!	No! Breaching the dam is 50 years overdue.	This is a chance to restore Florida's natural and beautiful ecosystem. Don't miss this opportunity!	
10/16/2021 13:44	Alachua		No	No				Restore it as it was to connect habitats and support wildlife.	Florida's growing population over the next few decades is going to cause even more problems for our natural areas.	More biodiversity loss. We're losing it fast, already.	Hard to say. Maybe targeted restoration will help.		
10/16/2021 13:45	Putnam		Yes	Yes			2-5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing Other: Relaxing and mental health	Remove all dams, restoration of the whole area like before the dams	The destruction of habitat fish and fowl, and furbearers	Too many thoughts to separate and keep me out of trouble, I would love to see everything the way it was, all my children are in their 50s and were very sad when I told them what was going on here… They live in the mid west now butlove to come home and bring their children and grandchildren to see the beautiful Florida they grew up in!! RESTORATION OF THE THREE RIVERS, NO DAMS IS THE ANSWER!!!!	None I can think of at this time	
10/16/2021 13:45	Duval		No	Yes		1 time	Wildlife viewing	Get rid of the dam.	Allow the water from the various sources to flow freely.	Continued damage to the creatures that live in the water. Continued poor quality of water, causing toxicity to mammals, plants and humans.	no
