How do you use Rodman Reservoir/Kirkpatrick Dam?	What would you like to see happen with the Rodman Reservoir and Kirkpatrick Dam moving forward?	What is the most important piece of information that supports your position?	What would be your biggest concern if your desired outcome is not achieved?	Is there any scenario short of fully achieving your desired outcome you could support?	Other comments.
9/23/2021 9:46	Putnam		No	Yes			2-5 times	Other: I don't use either. I only go to show others what an terrible impact the dam and reservior are on the Ocklawaha River.	I would like to see the dam removed and the Ocklawaha River flow free.	The dam negatively effects the health of the Ocklawaha River system, the species that depend on it, and the floodplain forest that is drowned by the reservoir.	The public and environment miss out on a tremendous opportunity to restore a free flowing Ocklahwaha River and the economic benefits that come with restoration. It's a win-win for the environment and economy.	No.	The environmental and economic befits of restoring the Ocklawaha far outweigh any benefits of keeping the impoundment
9/23/2021 9:47	Alachua		No	No					I would like to see the dam removed and the natural flow restored	Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Keeping the dam in place is not smart. The dam itself is not safe. We need improved water quality and the wildlife suffers.	This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.
9/23/2021 10:03	Levy		No	Yes		1 time		Canoeing / kayaking	Restoration of the Ocklawaha River by removing the Rodman/Kirkpatrick Dam	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This exciting restoration will improve water quality and flow by generating an additional 150 million gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
9/23/2021 10:09	Gadsden		No	No					The removal of the dam and restoration of the original river system.	The restoration of the original river system is essential to the long term health of the regional environment and will provide a greater variety of economic opportunity.	Excessive expenditures on the repair of the dam.	No, not if that other option would leave the dam in place.	
9/23/2021 10:12	Alachua		No	Yes			2-5 times	Wildlife viewing Other: Kayaking and boating during drawdown to view the springs. It's not an appealing place to kayak outside of drawdown.	Breach it, restore the River.	It's ridiculous to continue to spend money to support a useless dam and to spray for the invasive plants that pile up because of the dam when restoration would bring so much more positives. Ecologically and economically. Migratory fish populations are hurt by the dam, manatee populations are hurt by the dam, few outdoor enthusiasts want to kayak/visit the area except during drawdown.	Manatees would continue to be denied free and easy access to additional habitats, native fish populations will continue to decline, and taxpayers will continue to be burdened with the bill to upkeep a useless dam that few people want.	No.	
9/23/2021 10:13	Hillsborough		No	Yes				Hunting	remove the dam	natural flow	loss of habitat and natural springs	partial removal to allow free flow and boating access	
9/23/2021 10:14	Sarasota		No	No									
9/23/2021 10:14	Leon		No	No					I would like to see the dam breached and the river systems reconnected.	There are many, but the economic case is strong. The dam is past it's life expectancy and repairs will cost taxpayers millions, while breaching the dam and restoring the rivers will bring both direct economic benefit from increased tourism as well as significant indirect economic benefit from the associated ecosystem services, such as better flood protection and improved water quality.	That millions of taxpayer dollars will be sunk into a project that down the road will need to revisited again, costing yet more taxpayer money. Meanwhile, there is a big opportunity cost from not maximizing the ecotourism and ecosystem service benefits that come from restoration.	No. While a short term drawdown could have short term benefits, the dam needs to come down and these riverways and springs need to be restored.	
9/23/2021 10:18	Broward		No	No						Restoring the magnificent original Florix waterways.....	Everything	No	
9/23/2021 10:19	Orange		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	A free flowing river allowing for free movement of manatees and other wildlife - just how nature intended.	Endangered manatees lose the opportunity to access essential warm water winter habitat.	No. The damn has to go - long overdue.	I work in tourism - increased eco tourism is the future for Florida. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration
9/23/2021 10:20	Dade		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers $4-14 Million in dam repairs saved on a dam past its life expectancy Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. $57 million in potential flood damages avoided to downstream property owners	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. A storm event triggers a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.
9/23/2021 10:20	Brevard		No	Yes			1 time	Canoeing / kayaking	Removed	I have read many studies that show the health of the Oklawaha depend on dam removal	The river and the species that use it would continue to decline.	No. The dam must be removed!	
9/23/2021 10:21	Pinellas		No	Yes			1 time	Other	Put back to natural flow				
9/23/2021 10:21	Palm Beach		No	No					I want to see the dam removed and the natural flow restored	It will restore the natural flow of 3 rivers, 20 springs, habitat for fish animals and plants, and help with flood control	Money for dam repair is wasted, manatees and fish populations suffer, water quality suffers; and this opportunity may not come again for a very long time. The natural world is dying! We are a part of it- we are engineering our demise. The more we can do to help restore the environment , the better for all.	no there is not	This is about the greater good, both for the community surrounding the dam, as well as the environment. It is a win-win!
9/23/2021 10:21	Alachua		No	Yes		1 time		Other: I just wanted to see it.	I'd like to see it removed and restored to a natural condition	Waste of money to maintain/repair dam. Better for people and wildlife would be to restore the natural flow which will broaden economic opportunity.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No.	
9/23/2021 10:22	Alachua		No	Yes		1 time	2-5 times	Canoeing / kayaking Boating	Remove the Dam to restore the Oklawaha River. We need to do this to expand the economy, enhance water quality, and protect wildlife throughout the Great Florida Riverway.	We will save money from dam repair, flood damage, and ensure we have safe, healthy waterways for us and our wildlife!	Millions of tax payer dollars wasted that could go to important projects to protect our water and the St. Johns River continues to be deprived of 150 mgd of natural water flow to improve water quality, restore wildlife habitat, and reduce saltwater intrusion for our farms.	NO!	In addition to saving taxpayer dollars by eliminating dam repair, etc, breaching the Rodman/Kirkpatrick Dam is the most cost-effective springs protection project option! The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Also, 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River, which is critical habitat and recharge for our aquifer!
9/23/2021 10:27	Pinellas		No	No									
9/23/2021 10:30	Columbia		No	Yes			1 time	Boating Wildlife viewing	Demolish it.	Bring the rivers back.	Flooding.	Lower water level at the dam.	Keep Florida Wild and Free.
9/23/2021 10:32	Volusia		No	Yes			1 time	Fishing Wildlife viewing	I am for putting things back the way nature intended it to be. Army Corps of engineers did more damage than good in this country.	Finding out what damage these structures have done to out waterways.	That our rivers are going to get even more polluted because they are not getting cleaned out the natural way.	Haven't heard of any.	
9/23/2021 10:33	Alachua		No	Yes			1 time	Other: I don't use the reservoir.	I would like to see the dam removed and the river completely restored.	It is important that the habitat of the river floodplain be returned to its natural condition, but you should also note that the expense of maintaining an artificial body of water is saved.	In 1970 I watched as the dam was being constructed and thought, "This is just such a waste." Now, finally, we as Floridians have an opportunity to put things right. It would be a shame not to restore the river. Fifty some years is long enough!	No, not really. Half measures just allow the few fishermen who like the reservoir to continue to benefit as everyone else's expense.	
9/23/2021 10:35	Orange		No	Yes		1 time	2-5 times	Canoeing / kayaking Wildlife viewing	Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	Hundreds of manatees loose access to essential warm water winter habitat. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No. Breaching the dam is 50 years overdue.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
9/23/2021 10:36	Clay		No	Yes		1 time	2-5 times	Fishing Boating Wildlife viewing	I would like to see the removal of the dam and the restoration of the natural environment that was there before the dam was built.	My feeling that God/Nature knows best and we should not mess with the natural ecosystem. Also the fact that it will save the taxpayer money not having to maintain the dam/system.	That the old ecosystem I knew as a child will never be seen and enjoyed again.	Not sure what the other scenarios would be. Can you just let the water flow through the dam/structure and allow the fish and the manatees to regain access to the river?	As a native Floridian, I always thought that the cross Florida barge canal was a bad idea. I hope we can finally get rid of the last remnants of the failed project.
9/23/2021 10:38	Orange		No	Yes		1 time	2-5 times	Wildlife viewing	Please restore it and remove the damn. I am a kayaker and we often paddle the Silver River, WEkiva River but not Rodman REservoir as it is ugly and needs to return to it's natural state. The damm serves no purpose other than to increase fishing for a few people.	Historic fish and manatees return as breach opens creating a free-flowing river	The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	NO! Remove the damm.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/23/2021 10:39	Alachua		No	No					Breach the dam and restore the natural river flowing river	Lost springs, lost fish and manatee migration, lost recreational opportunities for non-fishermen	Continued environmental degradation, possible dam failure, high cost of maintaining the dam past it's design lifetime	No. The dam must go to restore historic fish and manatee migration patterns	50 years of damage due to a failed barge canal scheme is enough!
9/23/2021 10:39	Broward		No	No					Remove the Dam. It is harming water quality, wildlife and the economy.	15,000 acres of wildlife corridor restored to benefit people and wildlife.	Millions of taxpayer money wasted on a dam that doesn't provide flood protection, power, water supply or broad public benefit.	A draw down alone doesn't provide enough environmental benefits.	For the Great Florida River way
9/23/2021 10:39	Seminole		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing		The loss of natural springs and the flow of the river. These are such unique assets in Florida and they have been covered by an ill-conceived, artificially-flooded reservoir fors too long The Cross-Florida project was recognized early on as a boondoggle, and now its aftermath need to be restored.	Continued emersion of spring ecosystems, degradation of water quality, loss of manatee habitat, etc., in short, loss of environmental resources.	No, this seems like an either/or scenario, and it seems clear to me that the dam should be breached.	I'm glad this issue is front and center this year, and I am hopeful that restoring the river ecosystem can finally be accomplished.
9/23/2021 10:42	Citrus		No	No					Freedom for the waters. Remove dam	Free the springs	Unnatural	No	
9/23/2021 10:45	Seminole		No	Yes	1 time	2-5 times	More than 5 times	Fishing	Take the dam out. If you can't find high ground to build on don't build. Water is always going to find it's way.	I'm 64 and born and raised in central Fla to my life I got to see a lot of the construction to manipulate are waterways. I've fished my whole life and watched water quality decline as a result.	Missing the opportunity to make things right	NO	
9/23/2021 10:45	Volusia		No	Yes			1 time	Fishing	Removal of dam(s) and restoration of free-flowing river systems	Increased wildlife habitat and reduction of maintenance expenses	It may be economically the best time to finally undo the present situation	There does not appear to be a middle ground	Time to stop debating this and remove the dam
9/23/2021 10:46	Polk		No	Yes			2-5 times	Other: Not the reservoir, but the river upstream and downstream for wildlife viewing and photography.	That structure serves no purpose at this time. The river connectivity is broken due to the dam affecting many species of fish and even manatees that otherwise would move up to the warmer waters of the springs.	Many studies supporting environmental impact caused by this structure including a reduction on fish biomass as well as reduced number of species. The constant management for invasive water plants, etc.	If the water is not allow to flow gradually over time, the surges of green algae will increase along the St. Johns River as result of accumulated nutrients that are suddenly released during drawdowns.	I have not seen any other proposal on options that may mitigate the current impact.	I hope the river flow is returned to what used to be before prior to the fruitless Cross Florida Barge Canal. We ought learn from our mistakes, more an more rivers are being restore to ensure quality water and our own survival.
9/23/2021 10:46	Alachua		No	No					Remove the dam; restore to naturally flowing rivers.	The dam has been a huge detriment to the ecosystem	The future maintenance of the dam and its continued ecosystem destruction	No	
9/23/2021 10:46	Pinellas		No	No					Improving the environment				
9/23/2021 10:47	Alachua		No	Yes			1 time	Wildlife viewing	I would like to see it removed and the historic flow of the Ocklawaha River restored.	SJRWMD Technical Publication SJ2016-1 by John Hendrickson - Effects on Lower St. Johns River Nutrient Supply and TMDL Target Compliance from the Restoration of a Free-Flowing Ocklawaha River.	Continued declines in water quality, increased invasive fish populations and declines in native fish populations, and declines in manatee populations due to lack of warm water refuges.	No.	Thank you for taking public comment and your commitment to our state's water quality! I know this is a tough one for stakeholder participation
9/23/2021 10:48	Alachua		No	No					I would like to see the dam removed so the Oklawaha can run free and the Great Florida Waterway can be restored.	This would support natural ecosystems.	We would miss the opportunity to do this, and continue the declines in water quality.	No.	The most wonderful (and priceless) thing about North Florida is its diversity of waterways and wildlife. Removing the Rodman Dam and restoring the Oklawaha would extend and preserve this legacy for generations to come.
9/23/2021 10:54	Flagler		No	Yes			1 time	Canoeing / kayaking	Removed	Restore the Oklawaha	Continued decline of habitat	no	
9/23/2021 10:54	Alachua		No	Yes			1 time		Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	
9/23/2021 10:55	Hillsborough		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	$50+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
9/23/2021 10:56	Marion		No	No					Removing the dam to restore the free flow of water.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	the lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	no.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.
9/23/2021 10:57	Duval		No	No									
9/23/2021 10:58	Alachua		No	Yes			1 time	Wildlife viewing	Tear down the dam and let the river flow				
9/23/2021 10:58	Alachua		No	Yes	2-5 times			Canoeing / kayaking Wildlife viewing	I'd like to see the Rodman Reservoir and Kirkpatrick Dam go away.	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	The dam has closed off flow of the Ocklawaha River, flooding more than 7,500 acres of forested wetlands, 16 miles of river and at least 20 springs, and blocking upstream migration of many fish and aquatic species impacting the ecosystem from the St. Johns River to Silver Springs and beyond. Additionally, it prevented boats from navigating the entire river system. This would help manatees that this year have died in record numbers.	No.	
9/23/2021 10:58	Lee		No	Yes			1 time	Wildlife viewing	Preservation in the interest of Wildlife	Preserving our Florida waterways in their natural state	Compromising wildlife and ecosystem		
9/23/2021 10:58	Wakulla		No	No						restore migratory fish patterns, increase habit for manatees	$million of dollars spent on dam repairs		
9/23/2021 10:59	Pinellas		No	No							Further environmental decline.		
9/23/2021 10:59	Alachua		No	Yes			2-5 times	Wildlife viewing	I would like to see the Kirkpatrick Dam removed and the reservoir return to the Ocklawaha River.	Wildlife and river restoration!	The decimation of the river for fish, wildlife and forest.	Nope	
9/23/2021 11:00	Sumter		No	No					Breach the Rodman/Kirkpatrick Dam	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. NOT doing this is furthering the destruction of our beautiful state.	No!!!!!!!!! Breaching the dam is 50 years overdue.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/23/2021 11:01	Duval		No	Yes			1 time	Canoeing / kayaking	Remove the dam	The environmental reports.	The health of life at John's river and its tributaries.	No. the health of the environment is of utmost importance to this and future generations	None
9/23/2021 11:04	Putnam		No	Yes			More than 5 times	Boating Wildlife viewing Other: ecotours during drawdown	Remove the dam; restore the Oklawaha River to a free-flowing river	Taxpayer cost of maintaining something that is detrimental to the environment (i.e. patching an unsound dam, spraying toxic chemicals into the water)	We miss the opportunity to become central Florida's equivalent of "the Nature Coast," including the wildlife and springs that it would restore and the ecotourism dollars so badly needed here.	NO. This dam has been recommended for removal since it was started! Bring it down and watch the magic occur!	
9/23/2021 11:04	Duval		No	Yes			1 time	Canoeing / kayaking	I would like the Kirkpatrick Dam breached, open or removed so that the natural three-rivers - St. John's, Ocklawaha and Silver Springs could flow naturally like they once did.	Water quality, wild-life habitats, and the release of many natural springs.	Increasing degradation of water quality, including the loss of natural springs, and wildlife habitat loss.	I join with thousands to seek a free-flowing river system that once reigned in northeast Florida. My forebear, Robert Forte, was one of the original ferry operators across the Ocklawaha in the 1850s. I have a vested interest in restoring these river systems to their original and natural state.	I am a proud fifth-generation Floridian whose family has historic roots in eastern Marion County and the banks of the Ocklawaha. We continue to run our family farm near the crossroads of hwy 40 and hwy 17 in eastern Marion County. We care immensely about the natural preservation of our state - wildlife habitat, overall water quality, and the restoration of a free-flowing river system, including the restoration of valuable springs.
9/23/2021 11:05	Alachua		No	Yes		1 time		Canoeing / kayaking Other: restroom facilities	total removal	saving the degradation of the Ocklawaha River and Silver River from lack of species being able to migrate up and down the tributaries	further degradation of the Ocklawaha River and Silver River	No	I often kayak along the Silver River and out into the Ocklawaha. I think it is time to eliminate motor boat traffic within the Silver River. That would reduce the erosion along the banks of the river and reduce interactions between "party barges" and the paddling community. Thank you for the opportunity to comment.
9/23/2021 11:06	Alachua		No	Yes		1 time	2-5 times	Other: Cross thru it	Get rid of it, not needed. It cost money and has no purpose. I would like to see a connected river system, manatees be able to go up there, uncover the natural springs that are smothered. It would like to see the strippers return to fish for them and the catfish.	All the science that has been done the last 50 years.	I have a concern for the ecosystems that depends on a free flowing river. Dams are bad unless there is another purpose like power generation or water supply, this dam achieves none of those.	Draw down with partial restoration is better than where we are now, it that won't work because it would not have the benefits of a full restoration and not be good for any other recreation including the fishing that is now there.	It is time.... The barge canal should have never been started, the dam never built, and the dam should have not stay when the canal was deauthorized. Now it is old and useless, it hurts the St John and the Ocklawaha. It is past it usefulness if it ever had one.
9/23/2021 11:08	Palm Beach		No	No					Taken down-bring Florida waterways back to where they belong. Man has destroyed far too much.	Bringing florida's water flow back to where it belongs. We are borrowing this land and are not doing a good job; especially for our future.	Loss of beautiful wildlife and wild areas. Concerns over our water sources.	No. All or nothing. It is time.	
9/23/2021 11:08	Hillsborough		No	Yes			1 time	Fishing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.		Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.		
9/23/2021 11:08	Pinellas		No	Yes				Canoeing / kayaking Wildlife viewing	I would like to see the dam breached so that the Oklawaha River can run freely.	My own observation, which is from more than then years ago but still vivid in memory, many articles I have read about this in the meantime.	The concern would be, ultimately, that the reservoir water would become brackish in time and cause much die-off of fresh water plants and fish.	No	I realize that I have not seen the river or dam in many years, I but I can't envision a big change other than a slower moving river through the dam area.
9/23/2021 11:08	St Lucie		No	Yes			1 time	Wildlife viewing	Restoration of the Ocklawaha River with improved water quality and habitat for Florida's wildlife.	15,000 acres of Florida Wildlife Corridor restored and enhanced for people and wildlife.	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	No, Dam safety, improved water quality and wildlife habitat can't wait.	This restoration will improve water quality and flow by generating an additional 150 million gallons of fresh water into the St. Johns River and Estuary.

9/23/2021 11:09	Alachua		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	Restore the ocklawaha to a free flowing river.	The decades of scientific study conducted that support restoration from bot an ecological and scientific standpoint	Inability to provide warm water refuge for the threatened manatee (which has had serious deaths this year). Lake of ability for the public to enjoy the springs that are covered by the mucky pool, continual decline of the ecosystem, increased salt water intrusion downstream, dam safety concerns,	The partial restoration plan in the EIS and FDEP permit application	Numerous studies have shown that restoring the ocklawaha to a free flowing river will have significant economic benefits to the area, as well as enormous ecological benefits for manatees and other species, and will provide unparalleled recreational opportunities for the people of Florida. This can be achieved at a modest cost and would save taxpayer money in the long run by eliminating the need for draw downs, herbicide spraying, and rebuilding and maintaining the unsafe dam. Note- I don't visit the dam much because the pool is a mucky unpleasant mess. I kayak and boat on the free flowing river numerous times per year.
9/23/2021 11:09	St Johns		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	removed of course	destruction of springs	loosing all faith in the government of Florida to do the right thing		
9/23/2021 11:10	Pasco		No	No					I would love to see the springs flow normally and not have them drowned out by the dam.	It would be nice to have the natural springs flow.	The springs will be browned out and the spring will not be known about or protected.	No, the springs should be let go	
9/23/2021 11:10	Charlotte		No	Yes			1 time	Wildlife viewing Other: personal psychological benefit during pandemic. Nature heals	Complete a long overdue restoration of the entire system	Very expensive repair costs will go away while adding to value of ecosystem to human recreation and wildlife	Future degradation of water quality and loss of this opportunity to improve water quality, water flow and ecosystem functioning.	NO. Any temporary drawdown is not enough.	Please don't squander this opportunity. 50 years overdue. Once ruined, it is so much more expensive to TRY to repair. Look to the dollar's spent in Everglades restoration as only one example. Look to permanent losses of wildlife, water quality, etc. throughout Florida.
9/23/2021 11:10	Dade		No	Yes		1 time		Canoeing / kayaking	Restore the natural flowt	Fish population decline			
9/23/2021 11:10	Volusia		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Get rid of it, return to natural state	The impact on wildlife and habitats.	Loss of habitat.	No	
9/23/2021 11:10	Duval		No	No					Removed	Free the river for better environmental impacts	Detriment to the ecology and wildlife	No	
9/23/2021 11:11	Orange		No	Yes		1 time	2-5 times	Other: Monitoring damage to the ecosystem .	Remove it as soon as possible	This dam serves no purpose and is an ecological disaster of epic proportions.	More degradation of water quality. Loss of habitat. Death of wildlife. Algae blooms.	There is no valid reason to continue to waste money maintaining this damn dam.	The fisherman will be fine. There will still be plenty of fishing opportunities for them. But why are their concerns more important than freeing up countless drowned springs? Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Then there's the manatee deaths from cold, starvation and blue green algae. REMOVE RODMAN DAMN NOW!!
9/23/2021 11:12	Dade		No	No					Breach the dam to restore the drowned springs	Investigative journalism published by PBS in the documentary Fellowship of the Springs	My kids and I love to paddle the springs and are Florida natives. We are concerned about further degradation to the springs that presently are submerged and to never being able to access or visit these springs in our lifetime.	No	
9/23/2021 11:13	Duval		No	No									
9/23/2021 11:13	Broward		No	No						the initial mistake and opportunity is there to "fix"	opportunity and costs would probably preclude any fix		
9/23/2021 11:14	Marion		No	Yes			1 time	Wildlife viewing	I would like to see it removed	If removed this will restore natural springs that have disappeared from its unnatural placement	The environment would continue to be altered		
9/23/2021 11:14	St Johns		No	Yes		1 time		Fishing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Florida has less and less natural habitats left each day. Restoration of this natural area would be a huge benefit to Florida and it's wildlife.	The continued operation of an unnatural space that requires maintenance which takes away funding that could be used on other areas. Natural areas are less expensive to maintain and support a healthier environment for the plants and animals that rely on natural areas.	No. Full restoration is the only alternative that I am aware of	
9/23/2021 11:14	Alachua		No	No					I'd like to see them removed, to let the Ocklawaha flow unimpeded.	This action would restore healthy ecosystem functions, improving water quality, increasing wildlife diversity, and enhancing flood control.	The decaying dam and reservoir create catastrophes when faced with extreme or even moderate weather events.	No. Florida's water problems are already at a tipping point and our state needs to take all possible action quickly.	Business and recreation would benefit from the dam's removal in many ways. Fishing and boating would expand, workers would find immediate employment in the restructuring process, and new businesses could open on many fronts.
9/23/2021 11:15	Alachua		No	Yes	1 time	2-5 times	More than 5 times	Fishing	Do away with the damn dam and let the river flow as God intended.	Breaking up of the river migration route and adverse effects to wildlife.	Look at the mess! It concerns me that such an insult to nature has been allowed to remain as long as it has.	Just leave it in the draw down configuration and remove the dam a piece at a time.	It was a mistake in the first place and some of the damage can never be put right. Like they say, "Do screw with mother nature".
9/23/2021 11:17	Volusia		No	No					I am very concerned about spring preservation, and in this case, spring restoration. I visit the springs and as a Florida resident, I'm very concerned about further deterioration of our waterways.	The major fact that the damn has blocked the free flow of the river and created an unnatural situation.	Further deterioration of our water.	No	
9/23/2021 11:18	Seminole		No	Yes		1 time		Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Free the 20 buried springs so water will flow to help clean the river and other springs and to enable fish and manatee to migrate	waste of money to spend millions on an obsolete dam with continued damage to the environment and ecosystem as well as water	no	
9/23/2021 11:19	Sarasota		No	No					Allow the river to flow in its natural state	I am a lifetime conservationist and member of American Rivers and many others who advocate returning rivers to their natural and more original form. This has been successful in many places out west and helps the salmon migration and sustainability there. Here I believe that restoring the river would benefit native fishes, manatees and other wildlife and contribute a strong positive effect on the ecosystem.	More and more of Florida is being overdeveloped and paved and taken away from the natural ecosystem which will come back to hurt all wildlife and Floridians.	Hmmm, I don't think so .	I deeply hope the water management decision makers support restoring this river and its effects on the springs and wildlife.
9/23/2021 11:19	Volusia		No	Yes	1 time	1 time	2-5 times	Canoeing / kayaking Other: Camping in the area	Removed, restoring the river, springs and wetlands. This is crucial.	Environmental studies. And common sense. Compare the environment from way before the dam to current day with the dam. It's a no brainer	This important puzzle piece of the environment and our future is lost forever	At least reopening 3/4 of the dam	Let's do what's right for a change. The future of Florida and everybody's children are counting on us.
9/23/2021 11:20	Duval		No	Yes		2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Breach the dam to restore natural flow between Silver Springs and St. Johns River.	Restoring the natural river system will create more recreation opportunities which will increase visitors, increase jobs and boost the local economy.	We will continue to waste millions of dollars to maintain an unnecessary and unpermitted dam.	No, this dam should have been breached a long time ago.	So much good will come from breaching the dam- improved fisheries (striped bass, shad, bass), increased manatee habitat, more recreational opportunities- all which will help this area of Florida. The decision is do you want all that good or to waste money maintaining an unnecessary dam.
9/23/2021 11:20	Alachua		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Retire the free flow river by breaching the dam. The dam is degrading ecological resources, harming threatened species, preventing the public from accessing springs for recreation, and costing taxpayer dollars to continue to do drawdowns, spray herbicides, and do other maintenance	The numerous studies that show the benefits to all the fish and wildlife habitats along the river	The ecosystem will continue to be strangled and will control degrade	Partial restoration that was described in the EIS	Restoration will also benefit the economically challenged communities in the area by improving fishing as many studies show, providing access to springs for recreation, improving manatee habitat which will bring in tourists
9/23/2021 11:20	Duval		No	Yes			1 time	Wildlife viewing	If be released allowing the Ocklawah to run free.	Science.	Destruction of wildlife.	No.	
9/23/2021 11:20	Wakulla		No	Yes			1 time	Wildlife viewing	Breach the Rodman/Kirkpatrick Dam.	fish, manatees, wildlife. We are losing so much of Florida.	Loss of habitat and water quality.	No	Protect manatees, springs and other wildlife in the area for future generations. Thank you.
9/23/2021 11:21	Hillsborough		No	Yes			1 time	Wildlife viewing	Restoration of the St johns , Silver springs ,etc natural water flow.				
9/23/2021 11:21	Hillsborough		No	Yes					take out the dam	it is useless and damages the river	We will continue with a weed- choked river	no	
9/23/2021 11:21	Marion		No	Yes			2-5 times	Fishing Wildlife viewing	Free it's restraints.	improving our aquifer.	Our aquifers.	Increase the flow to bring up the water and wildlife.	
9/23/2021 11:22	Leon		No	No					I want to see it gone! This discussion has been going nowhere for too long.	Letting the River and drowned springs run freely again. Breaching or removing this dam would allow movement for fish and manatees and benefit other wildlife.	We won't have another chance in my lifetime to free this River.	Ha. NO!	Please, I beg you to get this project underway.
9/23/2021 11:22	Manatee		No	No					Breach the Rodman/Kirkpatrick Dam.	20 drowned springs would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	Continued population decline of manatees and fish, & irreversible damage to the ecosystem	No.	It's time to address the wrongs that were created by this damn. Florida has a chance to revitalize its springs and the population (including humans) that rely on it.
9/23/2021 11:23	Alachua		No	No					Breach it	Restoration of wild life and no unnecessary repair costs.	Wasted resources and wasted opportunity to restore the ecosystem.	No	If it's unnecessary and hurting the ecosystem it needs to go.
9/23/2021 11:24	Marion		No	Yes		1 time	1 time	Other: Observation	Remove the Dam!!!!!	To restore the 3 historic rivers to their natural beauty and see the return of manatees and long gone fish and the gorgeous 50+ hidden springs	Decline in water quality	Absolutely no!	I was born in this beautiful area 70 years ago and it breaks my heart to see what has happened to these precious waterways
9/23/2021 11:24	Duval		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Thank you for asking.
9/23/2021 11:24	Brevard		No	Yes			2-5 times	Other: I have hiked across it during backpacking trips but I can definitely plan alternative routes if it is removed as it should be.	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Restoration and recover of springs, expanded habitat for manatees (almost 1000 manatees deaths in 2021 from starvation), supports our endeavors to create a Florida Wildlife Corridor, improves overall health of ecosystems of many rivers wetlands, uplands,	See above reasons. We will continue "as is" with further degradation of natural lands and rivers, and Florida wildlife.	No.	Good and well documented reasons for restoring the Ocklawaha River have been resented to the appropriate agencies for the better part of 50 years. People have dedicated their lives to seeing this river restored. it's time to do it.
9/23/2021 11:24	Pinellas		No	No					Breach the Rodman/Kirkpatrick Dam.	Bringing back the nature of the springs to preserve what is beautiful in our communities.	That all Florida springs will eventually be lost to the greed of politicians and private businesses for their own gain.	No	
9/23/2021 11:24	Collier		No	Yes		1 time	2-5 times	Fishing Canoeing / kayaking Wildlife viewing					
9/23/2021 11:25	Pinellas		No	No					To restore and join the natural flow of the three rivers involved	We have already wasted too many years by not protecting the natural flow of the rivers and springs in Florida.	Florida's wildlife and natural resources will continue to be abused.	No - Now is the time to do what is best for Florida	Our natural resources in Florida are being damaged beyond repair everyday. Most of the damage is due to allowing improper use of our natural resources and a lack of concern for what damage is being done that may not be restored in the future.
9/23/2021 11:25	Indian River		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait. OR	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This exciting restoration will improve water quality and flow by generating an additional 150 million gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
9/23/2021 11:25	Clay		No	Yes		1 time	2-5 times	Boating Wildlife viewing	I would like to see the Dam removed to restore the natural flow of the river.	The dam has seriously affected the natural flow of springs such as Silver Springs. It may affect the fish but they will come back. I remember how beautiful the Oklawaha River was when I was a child. It came be restored and be a wonderful fishing area again.	The steady decline of the health of the springs and the river will continue to worsen.	No	Please bring back the natural flow of the River. This will also help the St Johns River.
9/23/2021 11:25	Duval		No	No					The dam should be removed and the river should flow freely.	The value of a free flowing Oklawaha to both the area of the river and to the St. John's river flow and salinity.	Continued and additional water withdrawals from the St. Johns, increased upstream salinity without the Oklawaha flow and wasted public monies to repair the dam and the ongoing drawdowns to clean the Rodman that would be unnecessary with a free flowing Oklawaha.	I can't think of anything that would produce the needed outcome without removing the dam.	Thank you for your consideration.
9/23/2021 11:25	Polk		No	No					The dam should be permanently breached.	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. The dam needs to go, and the benefits of this vastly outweigh the costs.	
9/23/2021 11:25	Putnam		No	Yes		2-5 times		Canoeing / kayaking	Breach the dam; it is an aging hindrance to wild life and ecotourism	Vegetation clogged mess that's treated with known carcinogens	Wildlife - manatees and migrating fish	I would ideally support full river restoration. Partial breaching is an option	The pool has become a moronic political issue. Financial and ecological growth would be enhanced by river restoration. The politics of mythical fishing and waterfront life on the greenway hurts the common people
9/23/2021 11:26	Manatee		No	No					Breach the Rodman/Kirkpatrick Dam.	20 drowned springs would be restored. Equally important = Restoring historic routs for migratory fish is essential for the health of Silver Springs. Finally, equally important = Breaching the dam saves $4 million to $14 million in dam repairs.	The lower St Johns, Ocklawaha, and Silver Rivers, 20 lost springs of Ocklawaha and one of the largest artesian springs, Silver Springs, would not be reunited and restored.	No. Breaching the dam is 50 years overdue!	Sometimes we simply must do what is 'right'. We cannot continue to ignore the need to restore 20 Florida springs. We cannot keep wasting money on dam repairs. We need to be respectful to manatees by restoring essential warm water habitat for them.
9/23/2021 11:26	Brevard		No	No					This is an old project that like the Kissimmee river was poorly researched, poorly managed and did untold damage to our ecosystem and water quality in Florida. I am a lifelong resident of this state-62, and fed up with mismanagement of our water resources in the name of 'progress'. The dam needs to be breached or opened to maximum flow with some controls to allow natural water flow that will restore the original watershed.	I have seen over 60 years what has been done to our waterways, forests and coastal areas for profit. May I remind our legislators that there are a majority of Floridians who love our natural resources and enjoy sharing them. Opening this mistake of a dam and restoration of springs and habitats brings economic and health benefits as people will have more opportunities to recreate in an ever crowded environment, and our ecosystems will have a chance to recover some of what has been lost.	That we will continue to legitimize destruction of Florida's natural resources and environmentally sensitive areas favoring development over protection of what was here long before any human arrived. We owe it to future generations and removing the dam shows the willpower to do what's right. Do you hear that legislators?	State purchase of large tracts of undeveloped or developed agricultural land along the river and potential flood zones and environmentally sensitive land and waterways in the areas proximate to the dam and its flow. This in hope that eventually the dam will be removed at some point and there will not be development affected by it	Breach the dam, we restored the Kissimmee River, now restore the Oklawaha and the springs.
9/23/2021 11:27	Lake		No	Yes	1 time	2-5 times	2-5 times	Wildlife viewing	Remove the Kirkpatrick Dam and allow the Ocklawaha River to once again run free.	The Ocklawaha River was dammed during a lamentable era of environmental disdain and ignorance. The Kirkpatrick Dam is a remnant of the disastrous Cross Florida Barge Canal project, abandoned decades ago because of severe impacts on land and water resources.		None.	
9/23/2021 11:28	Orange		No	Yes			2-5 times		I would like our community to come together and do the right thing for the native animals who call Florida home. I'd like to see our springs restored to their natural glory as much as possible and if that means breaching the dam, I am 100% in support of breaching it.	The fact that our springs are being choked out, animals are dying at a rapid rate, and over development has destroyed our state.	Our springs will slowly continue to die off until there is no turning back and restoring is no longer possible.	Not if it means putting humans needs 100% above the native wildlife here.	Do the right thing, breach the dam.
9/23/2021 11:28	Hillsborough		No	No					Please breach the dam. Our springs depend on it and it is the most cost effective route to save our springs, wildlife, and natural ecosystems. Florida is beautiful and we are responsible for preserving it.	The low cost of breaching the dam. This is the most cost effective measure to accomplish saving the spring and the wildlife that is down 92%.	The wildlife that will continue to suffer and eventually face extinction.	No. Breach the dam please. Floridians are begging you.	NA
9/23/2021 11:29	Putnam		Yes	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Wildlife viewing	The dam must be removed	It is far to costly to maintain and or replace. Restoring the environment back to its natural state is always the best policy. There is no reason for a dam here. Restoring the environment should be our top priority especially given this unique opportunity to undue decades of disruption.	As a tax payer I am concerned with ballooning costs that I see as excessive and completely unnecessary. Something clearly must be done but I am not in favor of spending more money to retard the natural ecosystem	No	
9/23/2021 11:29	Duval		No	No					Restore river flow	Water quality and quantity	Future of quality of life in Florida	Not with any enthusiasm	
9/23/2021 11:30	Suwannee		No	No					Remove dam		Preservation of the environment		
9/23/2021 11:31	Polk		Yes	Yes		1 time		Wildlife viewing	Breach the dam and restore the river	Florida springs council reports	Manatee populations will continue to decline even further	No - restore the springs	
9/23/2021 11:32	Pasco		No	No					drain the dam allowing the flow of Florida waters to be restored To disable the dam and reservoir and let the rivers flow. Over the years, many things have happened that has degraded our environment. The cross barge canal boondoggle was another in that area. The everglades has suffered the same problems and is taking billions of dollars to fix. The corps of army engineers needs to go home.	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs. The reservoir was built for fishermen and their are plenty of rivers and lakes for them to fish.	loss of vital wildlife and plant life that we will never be able to get back I have been on some of the rivers and have seen some of the water quality has degraded. Not so many birds as before.	Nothing will be achieved unless we restore the flow and drain the dam! I am a native Floridian and if it was possible for me to help in anyway I would with a donation but am not able. I am a longtime member of Florida Wildlife and the Nature Consrvancy whom have both done wonderful things for our state. Also National Wildlife.	The original plan for the damn is the same that destroyed the unique ecological watershed that Florida is and when we shut that flow and stopped natural springs the government should have then and now recognized the mistakes we are making Florida is being pawed over and the land and our water are disappearing.
9/23/2021 11:32	Alachua		No	No					Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 82% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
9/23/2021 11:34	Duval		Yes	Yes		2-5 times			Breach the Rodman/Kirkpatrick Dam	The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs. There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. The springs are Florida lungs and water filtration system. We need them to keep Florida a viable place for life. Especially with our hushed projected human population growth.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 82% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/23/2021 11:34	Dade		No	No					remove	received action alert	sad	no	
9/23/2021 11:36	Duval		No	Yes			2-5 times	Boating	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	The damn never fulfilled its purpose. The pristine river deserves to be restored to its natural state. If there was no damn at present there would be no discussion whatsoever of installing one for the sole purpose of having a fishing pond. It's now at the end of its useful life and represents a potential maintenance and environmental disaster.	Taxpayers money would be wasted to maintain the damn or worse yet it could fail causing an ecological disaster.	No, the river deserves to be restored to its natural state. The lost fishing opportunities would be made up for in spades by the increase recreational activities of a natural and free flowing river.	
9/23/2021 11:36	Alachua		No	No					Removed	To restore the fish population and give the manatees a home	The fish population will be depleted	No	
9/23/2021 11:36	Citrus		No	No					I'd like to see it removed and returned to its natural state.	As a 4th generation Floridian, I hear of stories of how the springs and connecting waterways once were. The numerous studies that have been performed on the environment of Silver Springs and other springs in the area are evidence based studies that support the verbal history.	Further degradation of one of Florida's most valuable resources, the springs and FL natural water.	Full resolution is optimal. Any progress towards the goal is greatly appreciated and will serve generations to come.	

9/23/2021 11:37	Outside of state / other		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for the state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/23/2021 11:37	Marion		No	Yes			1 time	Canoeing / kayaking	Remove the Dam and restore historic flow.	Any of the myriad of studies that have been conducted that say it will benefit water, wildlife and bring more than by restoring flow than the Dam currently generates for the area.	That we will forever lose the chance to make this ecological boondoggle right.	No	
9/23/2021 11:37	Orange		No	Yes	2-5 times	2-5 times	2-5 times	Wildlife viewing	More manatees in the Silver River for the glass bottom boats. A NEW wheelchair accessible boat goes into service 1 Oct	UF Student Showcase https://greatfloridariverway.com/student-showcase/?fbclid=IwAR3FkMta6pR7uSUdabkirF4Bwk5JEfMSXYoF3hQCUVWBOowFA8YGJGn-n3Y	More manatee deaths due to starvation	https://fladefenders.org/fdep-greenway-management-plan-2017-2027/	The Kirkpatrick Dam is at its life end and is in a state of failure. Fully repair to current standards $100million and NO economic impact. Partial Restoration (https://fladefenders.org/fdep-greenway-management-plan-2017-2027/) would allow 500+ manatees, 65+ species of fishes and approx $34m in economic impact to Marion and Putnam Counties
9/23/2021 11:38	Duval		No	Yes	1 time	1 time	2-5 times	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam to reunite the natural connection of Silver Springs, the Ocklawaha and the St. Johns River.	The science supports restoration. Studies by federal and state agencies have clearly demonstrated that a free-flowing, connected system is cost-effective and will provide significant ecological benefits to the St. Johns, Ocklawaha and Silver Rivers as well as Silver Springs. The 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville will be healthier for OUR community when the dam is breached. Historic fish and manatees will return, the 20 lost springs and Silver Springs ecosystem as well as 15,000+ acres of the Florida Wildlife Corridor will be restored, and we will save $4-14 Million in dam repairs. Restoration will create more diverse recreation opportunities for everyone, increase visitation and add supporting jobs.	We will miss a historic opportunity to stop the ongoing ecological degradation caused by the dam and finally reunite the natural flow of these rivers. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. Breaching the dam would restore the natural flow of 150 mgd of fresh water, improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. A free-flowing Ocklawaha will reestablish 15,000 acres of forested wetlands and fortify downstream submerged grasses from Welaka to Jacksonville in the St. Johns River that are critical to river health and fish habitat.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for the state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This exciting restoration will improve water quality and flow by generating an additional 150 million gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River. Thank you for your consideration.
9/23/2021 11:38	Hillsborough		No	Yes		1 time	1 time	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Florida's Rivers.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored The manatees return as breach opens along with many other types of fish	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply Meanwhile it will also be a benefit for the entire local environment.	Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait. It is also such a potential lawsuit if it does fail on its own.	Taking down the dam will infuse the area with better water quality that will be a benefit for over 100 miles of river ways
9/23/2021 11:38	Orange		No	Yes		1 time	1 time	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	No. Breaching the dam is 50 years overdue.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/23/2021 11:39	Alachua		No	Yes		1 time	1 time	Other: Assessing the situation	I would like the dam removed and the river restored	History of the river before the dam	Loss of the springs and river flow	Depends on what it is.	
9/23/2021 11:39	Alachua		No	No									
9/23/2021 11:39	Duval		No	Yes			1 time		Get rid of the dam	A healthier St Johns River estuary	The continued denigration of normal river water flows	No	
9/23/2021 11:40	Nassau		No	Yes		1 time	1 time	Canoeing / kayaking Wildlife viewing	Tear the dam down	The health of the springs & manatees being able to swim from the St. John's all the way to silver springs.	The lives of the manatees	Hmm no	
9/23/2021 11:41	Duval		No	Yes			1 time	Other: I don't go into the area because of the Dam, I just stay on the St. John's River.	I would like to see the dam removed and the river brought back to its original state.	When I was little in the 1950's we use to boat on the Ocklawaha River. It was a beautiful natural resource, the Dam destroyed that whole area of natural springs and river.	It would definitely affect the way I vote if the legislators turn their backs on this issue.	No, what's so hard about tearing an old unused Dam down. Why put money into something that isn't used. I can't believe this is even being debated.	This issue is a no brainer. I can't even believe people wouldn't want multiple natural springs brought back to their original state, not to mention the natural beauty of the Ocklawaha River. There is no prettier area in Florida than that river basin area which is underwater due to the Dam. This should not be hard to figure out or even an issue in my opinion. Also I might add there is outstanding bass fishing throughout our State, all up and down the St. John's River and the many lakes in central Florida. It's time to stop wasting time debating this issue and restore that area. I would think there are much more important problems the State has to worry about. Get this done!
9/23/2021 11:41	St Johns		No	Yes		1 time		Wildlife viewing Other: Hiking	Restore the original river and take out the dam.	Florida is built on limestone and needs the natural flow of its waters to exist. Each waterway serves this purpose directly or indirectly.	Loss of water and wildlife space.	No	Florida is more fragile than other states and its ecosystems need all of its connecting waterways to work properly. The dam has done more harm than good and needs to be corrected.
9/23/2021 11:41	Alachua		No	No					I would like to see the dam breached.	Breaching this dam could restore up to 20 drowned springs, allow decimated fish populations to rebound, and restore the springs' manatee habitat.	The water quality will continue to deteriorate, threatening aquatic species' habitats, promoting harmful algal blooms, and preventing healthy growth.	No.	
9/23/2021 11:42	St Johns		No	Yes	2-5 times	More than 5 times		Canoeing / kayaking Wildlife viewing	breach the dam and restore the natural flow	return the vitality and natural flow to the three rivers and numerous estuaries impacted . Vastly improved habitat for mnla. Improved water quality and manatee habitat.	continued ecological degradation	no	
9/23/2021 11:44	Alachua		No	No					Remove the dam and restore the Ocklawaha River	The return of fish and manatees to a free-flowing river	The loss of biodiversity, clean water, a more natural habitat for a healthy ecosystem	NO! This dam should have been removed over 50 years ago when the Barge Canal was decommissioned!	Manatees have died in record numbers in 2021 from STARVATION because of polluted waters. We need to restore this ecosystem for the health of fish, manatees, and HUMANS, who all rely on clean water for survival. The dam is too expensive to maintain and holds little ecological value.
9/23/2021 11:45	Palm Beach		No	No					I would like to see the dam removed and the natural water flow restored.	More spring habitat is required if the manatee are going to survive. Powerplant outflow provides warmth, but not seagrass to eat.	Many millions will be spent to restore a dam that is past its design life, and downstream populations will still be at risk of flooding from a collapse in a storm.	Drawing down the lake level 12 feet would work as a temporary relief of danger to down stream inhabitants, but would do nothing to return to natural water flows or restore manatee spring habitat.	We have the opportunity NOW to return the Great Florida Waterway to normal with the many positive environmental and economic impacts it will have to manatee habitat, historic fishes, water quality, and kayak access. This is a more reasonable than spending millions trying to restore a dam that is far past its design life. The benefits can be enjoyed by ALL Floridians
9/23/2021 11:45	Palm Beach		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
9/23/2021 11:47	Putnam		No	Yes			2-5 times	Boating Wildlife viewing	Remove the dam. It was built for another purpose that is long since gone. If we didn't have this dam we would not build it. It costs money to maintain the locks and dam. Expense is not proportional to any benefits. There is better fishing in the St Johns River. Rodman pool is an evaporating pool that loses too much water to evaporation. The recreational benefits of a free flowing Ocklawaha can be tremendous. In the 1880's tourists came from all over to stay in Palatka's 3,000 hotel rooms and travel the Oklawaha.	Environmental benefit to removing dam.	Needless expense to maintain dam and lock.	No.	
9/23/2021 11:48	Columbia		No	No					breach the dam, restore the Ocklawaha River and the Lost Springs	An economic impact study done by researchers at the University of Florida has shown that ecotourism on the restored Ocklawaha and Lost Springs would bring more money into Putnam County than the dam and the reservoir. Silver Springs/Silver River/Restored Ocklawaha might then become a national park and a significant economic engine for Marion and Putnam counties and the surrounding areas.	A further impaired Silver Springs and possibly more manatee deaths for want of winter refuge areas.	No.	This aging dam will eventually fail and I doubt that the State of FL will have the political will or budget to replace it. Breaching the dam and restoring the Ocklawaha is the only scenario that makes sense.
9/23/2021 11:49	Marion		No	Yes		1 time	More than 5 times	Canoeing / kayaking	Take out the Dam it is overdue	It would save money by taking it out and not fixing the 50 year old dam. It would allow more continues access for canoeing. Manatee could access this section of river	water quality would continue to be poor.	NO	It is long over due to take the dam out. The cross barge canal obses was a bad idea and is no longer a goal. so lets unite the river with the river system.
9/23/2021 11:49	St Johns		No	Yes	1 time			Canoeing / kayaking	Removal of the dam, so that the Silver River and the Ocklawaha flow freely to the St. Johns River.	Rodman Reservoir is a dying lake, and requires much maintenance for so little use. The original intended use of the barge canal is long past, and the need to return the area to as natural as possible should be paramount. I recall as a young teenager going with my father to fish on the Ocklawaha, prior to the dam. The river was beautiful and flowing as clear as the Silver River, 30 to 40 miles away. We could see the fish down in the river as they would take our bait. Now when we paddle on the river below Silver River and the Rodman Dam, the river is a dark tanic stained brown river. In my opinion, this is because the main water source is now runoff from swamps and smaller tributaries. The major free flowing springs are overwhelmed by the backup of water from the Rodman, creating a water quality issue that shouldn't exist.	I am concerned that if we continue as we have been, the river will continue to degrade. In addition, the St. Johns River will also continue to degrade.	The least expensive option is total removal, and restoration. Possibly there may be a way to allow the river to run free off to the side of the dam, and still keep the reservoir in some areas, but that would be a huge engineering and construction expense.	
9/23/2021 11:49	Alachua		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam which can end the harm to the economy, water quality, and wildlife that is inflicted throughout the Great Florida Riverway.	150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers	The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam is overdue. Dam safety, improved water quality and wildlife can't wait.	
9/23/2021 11:50	Duval		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
9/23/2021 11:50	Duval		No	No					Take it down! Restore the springs!	The wildlife can't be wild with human interference like this dam!	I am confernced that the wildlife population will go down!	Taking down the dam!	
9/23/2021 11:50	Duval		No	No					Breach/Demolish	Negative impact on natural habitat	Further damage to natural habitat	No	Please help restore Florida's natural habitats & wildlife!
9/23/2021 11:51	Broward		No	Yes			1 time	Wildlife viewing	Restore the natural water Flow	Better water flow will give less flooding and better wildlife areas	Less wildlife and poor water quality		
9/23/2021 11:51	Lake		No	No					Breach the dam	Restoring springs	Allow wildlife back into springs	No	
9/23/2021 11:52	Marion		No	No					Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
9/23/2021 11:52	Orange		No	No					Breach the Rodman/Kirkpatrick Dam	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/23/2021 11:52	Orange		No	No					I would like to see the Ocklawaha River restored by breaching the Rodman/Kirkpatrick Dam. We are in a critical situation with regard to wildlife that needs their habitat, and for our own survival as a species.	Because it would restore a natural ecosystem, and springs. This would allow wildlife to return to areas that have been stolen from them. This would make the estuaries and entire ecosystem healthier, which helps other species, and humans as well. We absolutely rely, as humans, on the health of our wetlands. That means we rely on the health of other species. We must not keep extracting ourselves from the equation as if we aren't reliant on the health and well-being of natural systems. They aren't a "resource" for human use. They are the basis of our life blood, and if we are truly "intelligent" we need to begin to treat nature and other animals as vital to our own survival, rather than as expenditures	Manatee, historic fishes, and the health of the ecosystem will suffer greatly. In the long run, that means we suffer greatly as well. We've got to wise up and begin to look at how our actions affect the long term.	Absolutely not. This is overdue. The health of Florida's natural landscape must be of utmost priority. If we look at history, even in Florida, we should be able to ascertain the time connection that times we failed to heed the warnings of nature, and natural disasters. We need to do what is right. Restore by breaching the dam.	
9/23/2021 11:52	Alachua		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	Rivers and springs will be restored, including lost springs	we will miss using state and federal funds to accomplish this and will have to pay millions in taxpayer dollars for dam upkeep and repair	no	this restoration will improve water quality and flow and strengthen the wildlife corridor.
9/23/2021 11:52	Pinellas		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	I would like to see the dam removed and the springs come back. I would visit the area more if that were the case which would in turn add to the local economy.	The dam flooded the springs and the removal of the dam would allow water levels to be restored and allow the springs to return as well.	Ecological collapse of the native fish populations.	No.	
9/23/2021 11:53	Alachua		No	Yes			1 time	Canoeing / kayaking Boating Wildlife viewing	Retire the river by breaching the dam	Reveal the springs that are submerged by brown reservoir water and improve fish populations	Citizens are deprived of the opportunity to boat on a beautiful free flowing river and visit springs	Partial restoration would be sufficient	I feel very strongly that a free flowing river will benefit many citizens whereas the reservoir only benefits a small number of bass fisherman who have power boats.
9/23/2021 11:54	Lee		Yes	No					The dam simply interferes with the natural water flow and Im in favor of the dams removal	The Rodman Reservoir has interrupted the flow of 20 natural springs that provide fresh drinking water to Floridian people and water life	The 20 springs that have been disturbed may never flow again, reducing an essential natural resource	If the dam and reservoir can be modified to restore the natural flow of water and wildlife there would be no reason to destroy it	Thank you for listening
9/23/2021 11:54	Sumter		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Take it down!	Many reasons: 1. There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. 2. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. 3. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. 4. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs. 5. Free-flowing waters will discourage too much aquatic growth.	Total waste of money to repair what serves no purpose.	No. Take it down!	
9/23/2021 11:54	Marion		No	No					Open it up	We need all of our springs to be full especially for the manatees that are dying of starvation!!!	The dying manatee and the fish and wildlife	Not really	
9/23/2021 11:55	Lake		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Wildlife viewing Other: Photography	I would love to see things restored to their natural state, and the dam to be removed so the rivers can all flow freely as they are supposed to. Please remove the damn, from a many generation Florida native! Thank you	I would love to see the 20 hidden springs, and have them restored, and for the manatees to have more opportunities for food	That we will eventually loose all of our precious Manatee	Not so much	There is no use for it, so please remove it!
9/23/2021 11:55	Broward		No	No					Restore the flow	Science			

9/23/2021 11:55	Outside of state / other	Thomasville, GA	No	No					Breach the damn	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No, this breach should have happened years ago and saved tax payer money	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Please make this happen. Thank you
9/23/2021 11:56	Hillsborough		No	Yes			1 time	Wildlife viewing Other: Only visited once	I would like to see the dam removed for the sake of the Silver River and Ocklawaha River in order to bring fish populations and the natural springs back to these rivers respectively.	I attended Florida Springs School put on by the Florida Springs Institute and Dr. Robert Knight approximately 2.5 years ago, and our focus those 4 days were the Silver River and the fish AND MANATEE populations being affected by the dam on the Ocklawaha. I've listened to numerous lectures given by FSI and Dr. Robert Knight attesting to the importance of the removal of the dam to restore springs and wildlife populations that once thrived before the dam was put in place.	Fish and other wildlife populations will continue to decline and Silver River and Ocklawaha will not be able to serve as one of the few remaining wintering destinations for our manatees.	In every lecture I've listen to, nothing short of complete dam removal will help restore these 2 rivers and the vast wetlands.	
9/23/2021 11:56	Seminole		No	No					I would like to see the Rodman/Kirkpatrick Dam breached and the Ocklawaha River restored.	Providing essential warm water springs habitat for manatees.	Manatees would lose the opportunity to access essential warm water winter habitat, which is critical for their survival.	No. Manatees are in trouble in our state and having access to additional winter habitat is critical.	Manatees have suffered the deadliest year on record in 2021. Although this year's crisis was caused mainly by starvation from lack of seagrass, one of the greatest long-term threats to the manatee is lack of natural warm water winter habitat. Many manatees are currently relying on warm water power plant outflows and this is not sustainable. Restoration will provide important (and natural) warm water habitat for hundreds of manatees. In addition, this restoration will improve water quality, which will benefit not only manatees, but other species of wildlife, aquatic vegetation, fish and people. Thank you for consideration of my comments.
9/23/2021 11:57	St Johns		No	Yes		1 time	2-5 times	Canoeing / kayaking Wildlife viewing	The restoration of the river would bring more wildlife habitat to the area and result in a healthy river and more game fish. The cross-Florida canal was a terrible plan and it's time we tried to undo some of the damage. The spring flow would also increase and lead to abundant fish and wildlife -including manatees and other endangered mammals and birds.	for me, the restoration of the river would make kayaking, fishing and wildlife viewing much better in light of the estimated 15,000+ acres of the Florida Wildlife Corridor restored and enhanced through breaching the dam.	Spending millions to maintain a dam which causes so many problems and produces negative benefits to the natural beauty and healthy water systems of our area.	No other plan makes sense to me.	
9/23/2021 11:57	Broward		No	Yes			2-5 times	Wildlife viewing	Breaching the dam	Dam is old and reached end of life, putting nature at risk. Fish and manatee populations would benefit immensely from the removal of the dam. The restoration of several springs!	Spring restoration and further ecological decline affecting massive areas fee years to come.	No, the dam must come down.	it's imperative we use the momentum and attention this issue is getting now to take the correct action for future generations. Florida needs to slowly return to the wonder of the world it was for the benefit of future generations and the animals that inhabit this amazing place.
9/23/2021 11:58	Duval		No	Yes		1 time	2-5 times	Canoeing / kayaking Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	20 lost springs and Silver Springs ecosystem are restored Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat	Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	
9/23/2021 12:00	Seminole		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	the springs and natural ecosystems will be restored	pollution, and damage to the environment	no-it needs to be done and it needs to be done right	
9/23/2021 12:00	Pinellas		No	Yes			2-5 times	Fishing Canoeing / kayaking Boating Wildlife viewing	Breaching/removal	The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	Loss of habitat/wildlife and degradation of silver springs	No	
9/23/2021 12:00	Duval		No	Yes			1 time	Fishing	I would like to see the damn removed	The Florida Department of Environmental Protection's Greenway Plan	The continued decline of the st johns river	No	The damn exists for no purpose. its existence is killing our natural resources. its time to correct course before we see devestation like those in south Florida
9/23/2021 12:01	Alachua		No	Yes			1 time	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	20 lost springs and Silver Springs ecosystem are restored	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River. (characters: 514)
9/23/2021 12:01	Pinellas		No	Yes		1 time		Other	Taken down			No	
9/23/2021 12:01	Duval		No	Yes		1 time		Fishing (shoreline/structure)	Take it down and restore the rivers flow. The St John's needs fresh inflows!	Environmental studies showing we need more fresh water into the St John's	Continued muck needing clean out in the reservoir	Not sure	
9/23/2021 12:01	Marion		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Canoeing / kayaking Boating Fishing (shoreline/structure) Wildlife viewing	Remove the dam or the lock				
9/23/2021 12:01	Orange		No	Yes		1 time		Wildlife viewing	Remove the Kirkpatrick Dam to return the Ocklawaha River to its original configuration.	There is no significant reason to not return the Oklawaha River to its natural flow without the dam.	A continuation of the man-made creation of the Rodman Reservoir which has lost its purpose.	No. It is simply retain the reservoir and dam or remove them.	
9/23/2021 12:02	St Johns		No	No					Removed	Natural springs and Manatees	Manatee population and health of the springs	No	I've seen the springs become over run with algae and Manatee populations dwindling. We need to protect Floridas beautiful natural ecosystems.
9/23/2021 12:02	Alachua		No	Yes			1 time	Wildlife viewing	Remove and restore it back to nature.	We have an endless list of "man improving nature" all of which have had negative impact on everything in its wake. The best thing that man can do is respect nature and leave it alone!! That we	That we learn nothing from our impact (s) on our world. Get special interests groups out of Washington and start governing"for the people".	Bulldozing Mara Lago and creating a protected seashore wildlife area.	While still occupied. (see previous response)
9/23/2021 12:03	Citrus		No	Yes			2-5 times	Canoeing / kayaking	Breach the Rodman Dam and Restore the Ocklawaha River, which would allow 20 drowned springs to flow once again. Restoring the springs and rivers could create new and profitable recreational assets projected at $50mil Net benefit over 10 years.	Removing the dam is essential to improving the health of Silver Springs. It is necessary to restore suffering migratory fish populations. And needed for the hundreds of manatees that could better access Silver Springs and other restored springs along the river, at a time with Florida's manatee population is experiencing unprecedented mortality. Florida already has enough money set aside next year to restore the Ocklawaha fifty times over. Not to mention the economic benefits. I'm from citrus county which benefits greatly from ecotourism. Restoring even 2 of the lost 20 springs are estimated to bring 30k additional visitors annually and $3 million in annual economic impact. This is a big opportunity to restore not only nature, but Florida's rural economies.	That tax payers of Florida will have to pay millions to fix and restore a fifty-year-old mistake instead of restoring 20 springs, 3 rivers, and 7,500 acres of forested wetlands to their natural state and bring meaningful jobs to Florida's rural counties.	No. It's time to fix this issue and do something to benefit Florida's rural economies and give back what we've taken from nature.	The Rodman/Kirkpatrick Dam is past its 50-year life expectancy. Breaching the dam eliminates the risk of more than $57 million in property damages from an unplanned dam failure. The risk can be removed almost immediately and without any cost by drawing the Rodman Reservoir down to 12 feet NGVD, like drawdowns conducted every 3-4 years. This would protect citizen safety in the event of a major storm event or unplanned failure until partial restoration to breach the dam is implemented.
9/23/2021 12:05	Marion		No	Yes		1 time		Wildlife viewing	Breach the Rodman/ Kirkpatrick Dam	There are 20 drowned springs that would be restored by this project.	Wasted tax payers money to repair and maintain this dam. Plus hundreds of Manatees will loose access to these warmer waters.	No. breaching the dam is the only viable answer which is far overdue.	Thank you for listening to the public about this matter and taking it seriously. Florida Springs are such a unique environment that we need to maintain for future generations to enjoy and learn from.
9/23/2021 12:05	Pinellas		No	No					Breach the Rodman/Kirkpatrick Dam.	Fish populations are down 92% in Silver Springs. Breaching the dam would restore historic migratory paths for fish and manatees. This dam is past its life expectancy and would costs tax payers millions of dollars to make repairs.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Many manatees are dying each year, of the dam is not breached many more will continue to perish. Several springs are negatively impacted by this dam, breaching it could restore these springs.	No. breaching the dam is 50 years overdue.	Breaching this dam could be one of the best projects in restoring our springs.
9/23/2021 12:06	Marion		No	Yes		2-5 times			Remove the damn	The algae and invasive species	Algae in the springs	Efforts to restore natural wild life	Tear it down. Way past due.
9/23/2021 12:06	Alachua		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway
9/23/2021 12:07	Outside of state / other	Brooklyn, NY	No	No					Breach the reservoir and dam in order to restore the natural flow of water in the area.	loss of habitat for manatees and fish species and the restoration of drowned springs.	The continuation of loss of habitat for native species and continual disruption of the natural flow of these (once) interconnected waterways.	No, this dam should have never been constructed to begin with.	I have not specifically visited the Rodman Reservoir/Kirkpatrick Dam, but grew up in Florida and have spent a lot of time outdoors in this area. To witness the ecological changes in my lifetime has been devastating and we must reverse the course of outdated and disastrous "water management" in order to restore the flora, fauna, and waterways of the beautiful state of Florida.
9/23/2021 12:07	Marion		No	No					I would like to see the dam taken down to restore the natural flow of water and wildlife.	Tilapia have taken over Silver Springs, native fish populations are dramatically lower than they were before the dam, manatees cannot migrate through the dam and it affects the fish that keep the sea grass healthy. There is no benefit of the dam other than to create a fishing area.	The further collapse of natural habitats and ecosystems and endangerment of native wildlife to include manatee and fish.	The dam needs to go.	The benefit this dam gives one area for fishing does not outweigh the detriment to the areas of Florida down river. We must look at this with a larger lens and focus on the greater good.
9/23/2021 12:09	Pinellas		No	No					I would like to see the dam removed.	The destruction above the dam.	Continued harm to our environment.	Not really.	Long overdue. Free the river.
9/23/2021 12:09	Marion		No	Yes		1 time	More than 5 times	Fishing Fishing (shoreline/structure)	Blow it up	Water flow. Bring fish back to river	Continue decline of river	no	
9/23/2021 12:09	Hillsborough		No	Yes		1 time	1 time		Taken down/ dismantled. Return the water to it's natural flow				
9/23/2021 12:10	Alachua		No	Yes			2-5 times	Fishing Boating Wildlife viewing	Remove the dam to allow the ecosystem to heal.	The dam has degraded the ecosystem and fragmented wetlands	The ecosystem could degrade so far as to not be restored correctly	No	
9/23/2021 12:10	Hillsborough		No	Yes			1 time	Canoeing / kayaking	Remove them and restore the natural habitat and ecosystem.	The water quality and health of species.	The loss of Florida's natural resources…they can't be replaced.	Support for natural ways to support the flora and fauna that exist there and better water quality.	Please do the right thing for Florida's natural resources.
9/23/2021 12:10	Putnam		No	Yes		1 time	2-5 times	Canoeing / kayaking Boating	It needs to go away so River can be let free to join St. John's. Also to let numerous springs come back to be enjoyed.	My experience in the entire river prior to the dam. Seeing the difference in river and the life it supports. So much river life stunted.	That all of the beauty and possibilities of the submerged stretch under the "reservoir " will stay under and unused.	No. Free the Ocklawaha. Best thing to happen.	We visit the reservoir to see how it's doing occasionally. The biggest fishing happens during the drawdowns. Rapidly the shoreline of the sunken river comes back to life. Left alone it will restore itself very rapidly.
9/23/2021 12:11	Orange		No	Yes			2-5 times	Boating	Free the Ocklawaha river	Water quality and conservation of natural resources	Continuing degradation of the St. John's river	No the dam needs to be removed	Thanks.
9/23/2021 12:11	Leon		No	No					What ever is deemed as p positivity for our waterways.				
9/23/2021 12:11	Collier		No	No					Allow the river to run its natural course.	000 years of dam building through the world the often very negative effects.	Continued water degradation and environmental harm.		
9/23/2021 12:11	Leon		No	No					Breach the Rodman/Kirkpatrick Dam.	Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No. Breaching the dam is 50 years overdue	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/23/2021 12:12	Hernando		No	No					Open the dam and bring back area to it's natural state. Save Florida's Springs!	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. This is long over due.	Manatees, Springs, Fish all would be positively impacted by breaching the dam. Let's undo manmade mistakes we made in the past. This is right for the environment and for Florida. Let's do the right thing!
9/23/2021 12:12	St Johns		No	Yes		1 time		Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	20 lost springs and Silver Springs ecosystem are restored	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway This exciting restoration will improve water quality and flow by generating an additional 150 million gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
9/23/2021 12:12	Alachua		No	No					I think we should draw down the reservoir and systematically dismantle Kirkpatrick Dam.	The main argument I've heard for keeping the reservoir is that it creates recreational opportunities (i.e. fishing), but it seems like restoring the whole Silver River ecosystem and uncovering 20 new springs will do that much more powerfully. There will still be good fishing on the Ocklawaha, as well as the many other lakes in our area.	We'll miss an opportunity to use federal funds to restore this spring-fed ecosystem, and in fact have to waste more taxpayer $ in future years repairing this dam that doesn't serve the functions most dams serve (drinking water, flood protection, or power generation).	This seems pretty binary; we either keep the river dammed or we restore free flow. In general I'm open to compromises, but I don't see any here and this has gone unaddressed for way too long.	Kirkpatrick Dam was built as part of a project that was abandoned long ago and will never be revisited. Like some of the engineering around the Everglades, it's an "old school" vestige that now does more harm than good. We should not perpetually pour money into repairing and reinforcing it to keep the area safe. Instead, we should make a one-time investment in restoring the Silver River ecosystem. That will do MUCH more for tourism, recreation, fishing, and the long-term resilience of our region.
9/23/2021 12:12	Walton		No	No					I would like to see the dam breached.	Restoration of flow to 20 springs	That our wildlife and beautiful, natural springs will be forever lost.	No	
9/23/2021 12:13	Pinellas		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Breach the dam and restore the flow of the river.	For springs protection- 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	We would be wasting future environmental restoration dollars having missed this chance. Wasting taxpayer dollars.	No, this is a long overdue project.	This makes fiscal sense.
9/23/2021 12:14	Marion		No	No					I would like to see removal of the dam to restore the the Ocklawaha River back to its former glory which would restore the 20 springs drowned by the effects of the dam. The dam serves no beneficial purpose to the wildlife surrounding and is only causing harm to the land around. Florida is a beautiful state and part of what makes it beautiful is our wildlife. Restoring the river would allow for more manatees to access Silver Springs and restores suffering migratory fishing populations.	We do not have the right to destroy our beautiful state and cause 1000s of animals to suffer because of a dam that serves no purpose to our community. We need to preserve our beautiful state and our beautiful rivers.	That we will cause mantees and other breeds of fish to go extinct. And the dam has already caused terrible effects to the surround forest, if we continue on the damage may be irreversible.	Only if the dam is removed will the desired outcome be reached.	
9/23/2021 12:16	Escambia		No	No					The dam needs to be breached. It's not doing anything productive and maintenance/repairs are costing the government general public money.	I think one of the most valuable things in the state of Florida is our natural resources. Breaching the dam would help the 20ish flooded springs, improve habitat for numerous aquatic species, and provide shelter for manatees in a particularly dire year for their population. Improving natural habitats in Florida leads to an increase in tourism and real estate dollars.	Pointless ecosystem destruction. If there is timeband interest to breach the dam, and if it is costing money while not being helpful in any way, it's concerning that we wouldn't do it. I would be mostly concerned because it shows that our leaders don't value Florida's natural resources, and this lack of care will ruin what makes Florida beautiful.	There's no in between. The dam is seemingly pointless and causing ecological harm. It needs to go.	Thanks for the opportunity to make my voice heard. I hope you are listening.
9/23/2021 12:17	Putnam		No	Yes		2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Take it out and restore the Ocklawaha	The health of the river and wildlife, as well as the danger of the dam condition. In addition, the expense of dam repair is a horrible use of funds. The dam serves NO purpose.	Danger associated with a dam failure on the communities downstream.	NO	Let's get it done!!!
9/23/2021 12:17	Pinellas		No	Yes		2-5 times		Fishing (shoreline/structure) Canoeing / kayaking Wildlife viewing	Remove/breach the dam.	Studies show wildlife has been negatively effected by the dam. Springs are covered, manatees can't swim farther upstream and the repairs to the dam cost too much money.	Fish and wildlife downstream would show a further decrease in population and diversity. There would be a large outlay of tax payer dollars for little to no benefit.	No	
9/23/2021 12:17	Duval		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	I would like to see the Kirkpatrick Dam decommissioned and removed.	If the Rodman/Kirkpatrick dam is removed allowing the Ocklawaha to return to its natural flow then the endangered manatee will have more habitat at a time when more manatee are dying then ever. The fact that there are 50 Florida springs drowned by the Rodman reservoir is the second most important, at a time when our Florida springs are being exploited we need to be able to access and monitor their levels. Also, returning the devastated fish populations to Silver Springs is very urgent. So much of Florida's water is being diverted and consumed and we are offered here with a rare opportunity to return a water system to its natural state.	That we will continue to kick the can down the road and spend millions of dollars on a damn that should have never been built in the first place.	No, the Rodman/Kirkpatrick dam is obsolete and the benefits of removal far outweigh the costs	
9/23/2021 12:17	Dixie		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing					
9/23/2021 12:17	Sarasota		No	Yes			1 time	Wildlife viewing	Breach the Rodman/Kirkpatrick Dam.	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	Hundreds of manatees lose access to essential warm water winter habitat.	No. Breaching the dam is 50 years overdue.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/23/2021 12:18	Marion		No	Yes			2-5 times	Fishing					
9/23/2021 12:18	Citrus		No	Yes			More than 5 times	Canoeing / kayaking					
9/23/2021 12:19	Lake		No	No					Breach the Rodman/Kirkpatrick Dam	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. This is unacceptable! Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. Manatees are dying at an increasing rate and need more habitats. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs. Why would we waste this money when there is a better solution?!	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. We live on the St. Johns River and know the benefits of taking care of our precious environment. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Please STOP wasting our money!!! Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Again, manatee are dying at an alarming rate. We need to take care of our environment! Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Again, we need to take care of our environment now!!!	ABSOLUTELY NOT. This has been overdue by at least 50 years	I have a really hard time understanding why we are supporting a waste of money and killing our environment. This is unacceptable. It is time that the people are heard and our actions are adhered. After all, that is what our governmental foundation is about. Additional information: MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
9/23/2021 12:19	Alachua		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Restore the river to natural flow.	Visiting dam during draw down and seeing original conditions.	Ecological degradation up river.	No. Full restoration is vital	
9/23/2021 12:19	Seminole		No	No					Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.

9/23/2021 12:20	Seminole		No	No				Breach the Rodman/Kirkpatrick Dam.	The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No. Breaching the dam is 50 years overdue.	MANNTEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/23/2021 12:21	Leon		No	Yes		1 time	Wildlife viewing	See the dam removed to restore the river and springs.		Further decline of manatee populations.	No, not really.	This is long overdue. Fishers will be able to alter their recreational habitat to enjoy river fishing. Millions of dollars will be saved by avoiding dam maintenance and repair. And the economy should benefit.
9/23/2021 12:22	Hillsborough		No	Yes		2-5 times	Fishing Canoeing / kayaking Wildlife viewing	I would like to see the dam be taken down to all the flow to return to normal.	The discontinuing of the dam will allow migratory wildlife such as fish and manatee to reach nourishing habitat that can help preserve future populations of these animals.	I'm concerned that if the dam continues to disrupt the natural flow of the river, many species will continue to be harmed by not having access to crucial habitat that helps maintain a healthy population.	No	The environmental health needs to be taken into account over the selfish "wants" of human society.
9/23/2021 12:23	Duval		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking	Restoration of the Ocklawaha River by breaching the Rodman Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Historic fish and manatees return as breach opens creating a free-flowing river.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a kayaker who cares about Florida's environment and wildlife, I am asking you to reunite the Ocklawaha, Silver & St Johns rivers to benefit the communities, the economy, and the ecosystems all along the Riverway. This exciting restoration will improve water quality and flow by generating an additional 150 million gallons per day of fresh water into the St Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
9/23/2021 12:24	Duval		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored	The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. Hundreds of manatees lose the opportunity to access essential warm water winter habitat.	NO. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait. In addition, what can be done about the canal? The Corps of Engineers needs to do undo the damage they have wrought all over Florida.	As a kayaking taxpayer who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 150-mile lower St. Johns River. This exciting restoration will improve water quality and flow by generating an additional 150 million gallons per day of fresh water into the St. Johns. Thank you for your attention to this matter.
9/23/2021 12:24	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Other	Destroy the Dam!! Restore the Ocklawaha!	My family remembers what it was like before the dam. Entire species of fish are gone. Manatees are in danger from the locks. And we have little access to waterways due to vegetation.	The astronomical price of maintaining dam & spraying vegetation. As well as the health of the animals who call this home.	No.
9/23/2021 12:24	Lee		No	Yes		2-5 times		Wildlife viewing	Made to promote the success of wildlife and their environments, water birds, fish, and everything else that calls it home.	That every species is dwindling. They have their homes destroyed for more homes, strip malls, four wheel trails that destroy and interrupt natural behavior, etc. I live in north Cape Coral. Ten years ago this part was very open, we had a healthy population of meadowlarks, saw them everywhere. Now, most of the open land was bought and built on and I haven't seen a meadowlark in more than a year, plus our shrike population has also been brought to zero.	What else, the loss of all wildlife. What kind of place is even worth going to if there is nothing alive and beautiful to watch for?	No. Anymore loss of land and water is unacceptable for the environment, animals, and climate.	
9/23/2021 12:24	Duval		No	Yes		1 time		Other: I didn't get through the lock and into the reservoir	I want to see it breathe and the natural flow to the water shed restored	Mitigation of flooding that will result from the restoration and the beneficial economic outcomes of the expanded recreational opportunities that will create sustainable environmentally sound business opportunities	that the benefits I have cited are not achieved and that a major storm will breach the dam causing significant loss of property and lives	Thats a tough one. I suppose a partial draw down could be helpful though in the long run, the natural flow must be restored.	I cares deeply about Florida's people, environment and wildlife. We must restore the Ocklewaha River, the heart of the the Great Florida Riverway. This Florida treasure is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and restore communities, economies, and ecosystems all along the Riverway. Now is our chance to correct the well-meaning but deeply flawed disruption to that system.
9/23/2021 12:25	Brevard		No	No				Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway.
9/23/2021 12:25	Lake		No	No				I would like to see the dam removed and the natural water flow restored.	The dam was built for a purpose that does not exist. There will never be a Cross-Florida Barge Canal.	Further degradation of Florida's rivers and springs.	No	I have not been to the dam, but have been following news about it over the years. I don't see a reason to invest money into the aging dam when the benefits of removing it are so great. Millions will be saved on dam maintenance, water flow will increase, and lost springs will be recovered. This will benefit manatees and other species. With the dam in its current state, a failure could cause millions of dollars worth of damage. Please drawdown the reservoir and remove the dam.
9/23/2021 12:25	Marion		No	Yes		2-5 times	Canoeing / kayaking Boating Other: Quiet enjoyment, hiking.	Breach it please	Manatees, springs, fish and wildlife are all in jeopardy due to the dam that was built when environmental concerns were not studies and addressed yet. With more knowledge we can be kinder to our environment and protect the beauty for many generations to come	That Florida will be ruined just like many areas already are.	I recently visited Palatka, an ugly example of how the need for environmental care and measures could turn a potentially abomination into a nice city with a great waterfront. I noted some signs there about "saving " The dam. Please provide the population with objective information regarding detrimental effects of saving this dam.....but also couple the info with ways folks can still fish have other recreation a tournament etc.	Please help save our beautiful State of Florida . Remove the dam and free up the reservoir.
9/23/2021 12:26	Duval		No	Yes	1 time	2-5 times	More than 5 times	Wildlife viewing	Breach the Rodman/Kirkpatrick Dam	There are twenty drowning springs that would be restored by this single project. This would not only be cost effective, but very immensely beneficial to our fragile ecosystem. Fish population is down a whopping 92% as a direct result of dam construction. The life of silver springs absolutely depends on restoration. Manatees have experienced their deadliest year yet - this would allow hundreds of them access to habitat, which is essential to their well-being. The dam is far past its life expectancy. Breaching the dam could save up to $14 million in dam repairs.	I cannot emphasize enough how much the life of our springs depends on this. Without this desired outcome being achieved, hundreds of manatees will not have access to to warm water for winter months. The dam is unsafe and does not provide any broad public benefit. Not taking action now will result in millions of unnecessary tax dollars being wasted in damn repair in the future. No taking action now with be costly and DEADLY.	No. Breaching the dam is 50 years overdue.	2021 is the deadliest you're on record for Manatees. Unless their natural habitat is restored, we can expect more die-off in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the Manatee is loss of natural warm water winter habitat.
9/23/2021 12:26	Bradford		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Canoeing / kayaking Wildlife viewing	total removal of the dam	lack of free-flowing river	weed-infested river	no	spend money on restoring the river, not on the dam.
9/23/2021 12:26	Hillsborough		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Wildlife viewing	I would like to see the dam removed and the Ocklawaha returned to it's natural state.	History	Further damage to the water table and disruption to the habits of native species.	Drain it down low enough to allow the natural flow of the native springs and species.	This was a bad idea when conceived. Like the everglades has proved. Mother nature knows best.
9/23/2021 12:29	Orange		No	No				I need to see the damn be breached so that the Springs can be restored and we can continue enjoying them for years to come	Manatee population is 92% down. Nestle is taking our water to be bottled and the damn doesn't produce any electricity or prevent floods	That the taxpayers money allocated for environmental issues is being waited	No this is 50 years overdue	It is nothing sort of shameful that we are letting corporations destroy the very natural beauty that makes us a vacation and retirement destination
9/23/2021 12:29	Orange		No	Yes	1 time	1 time	1 time	Canoeing / kayaking	Please breach the dam so the manatees can have access to the springs	The unprecedented manatee die off and their lack of access to springs for the winter months.	More manatee deaths	The breaching of the dam	
9/23/2021 12:29	Alachua		No	No				We should dismantle the Rodman/Kirkpatrick Dam and let the water run freely	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No I can not imagine a project that allows the water to run freely, while also profiting off of it's movement. Even redirecting some water for hydroelectric generation feels silly since there is not a dramatic elevation difference.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklewaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
9/23/2021 12:30	Seminole		No	Yes		2-5 times	Canoeing / kayaking Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	20 lost springs and Silver Springs ecosystem are restored	Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
9/23/2021 12:31	Putnam		No	Yes	2-5 times	More than 5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Removal of the dam.	Economic benefits	Lettuce	Leave dam open like at the drawdown	
9/23/2021 12:32	Alachua		No	Yes		1 time	Canoeing / kayaking	Breach the dam, save on upkeep and make the whole river open for recreational boating and wildlife.	Cost of dam upkeep	Need for manatee wintering.	Name one!	Give alligator hunting permits to the bass fishermen at a reduced rate, subsidized by the water management district.
9/23/2021 12:33	Duval		No	Yes	2-5 times	2-5 times	2-5 times	Canoeing / kayaking Wildlife viewing	Remove the dam and preserve our wildlife	Wildlife populations	Extinction of local wildlife	Present one and I'll check it out	
9/23/2021 12:34	Orange		No	No				Breach to restore our beautiful springs and habits for manatees and fish.	That the fish population is down 92% since building this dam. Our manatees are suffering enough lately at the hands of humans.	Our fish population and our beautiful manatees continue to dwindle.	No	
9/23/2021 12:34	Alachua		No	No				Breach the Kirkpatrick Dam.	There are 20 drowned springs that would be restored by breaching the dam. It would restore migratory routes for many populations of fish that have dwindling numbers. Manatees this year have experienced the most deaths ever recorded; breaching the dam would allow them access to needed habitat. Breaching the dam would also save millions of dollars of money on dam repairs.	My biggest concern is that the lower St. John's river, Ocklawaha and Silver River, and springs on the Ocklawaha and Silver River would not be restored. Not restoring these waterways would make it harder for already struggling manatee populations to find food. We would also miss a vital opportunity to improve water quality and wildlife habitat. The dam is also considered unsafe and potentially hazardous. Additionally, water quality declines are likely if restoration does not happen, which would further fuel invasive plants, blue-green algae events, fish deaths, and submerged aquatic vegetation loss.	No. Breaching the dam is decades overdue.	2021 has been the deadliest year on record for manatees because of a lack of sea grass. The 20 springs that would be restored on the Ocklawaha by breaching the dam would provide manatees with more areas to find food. Also, manatees seek out the warm spring water when ocean temperatures drop in winter. Restoring the lost springs would give manatees a safe habitat during winter which is critical for their survival. Native fish populations in Silver Springs have declined by 92%, which is partly due to the dam. This has allowed exotic fish to take over and out compete the native species since the migratory route of native fish is blocked by the dam. Restoring these waterways by breaching the dam would allow the native fish species to have a chance to repopulate. Restoring these waterways would also likely foster more economic opportunities for Putnam county since people would have better chances for recreation.
9/23/2021 12:34	Duval		No	Yes			1 time	Fishing Hunting Wildlife viewing					
9/23/2021 12:35	Highlands		No	Yes		1 time		Canoeing / kayaking	Dam removed to bring Ocluwaha back to natural basin	Manatee migration limited.. Natural springs underwater .	loss of fish and manatee migration routes. Invasive plants covering stagnet water	no	Open river to natural basin so can be used above water for recreation and below water for wildlife an fish habitat sustainment
9/23/2021 12:36	Orange		No	Yes			1 time		REMOVE THEM!!!	Common knowledge that it does NOT BELONG there!	Continued massive damage to the environment		
9/23/2021 12:38	Citrus		No	Yes			1 time	Wildlife viewing	Breach the damn	The health if the springs and life they support	? More manatees and fish die off, The river does not flow properly More wasted money trying to repair this fiasco	No The damn must be breaches	
9/23/2021 12:38	Putnam		No	Yes			2-5 times	Canoeing / kayaking Boating Wildlife viewing	Breach the dam to restore the Ocklawaha River and Improve the water quality in the St Johns River	A report from the St. Johns Riverkeeper notes that restoring the natural flow of the The Rodman Dam on the Ocklawaha River is in serious disrepair and could cause catastrophic damage in Putnam County should it be breached. River would improve the ecology of the St. Johns River ecosystem and will help to offset the saltwater infusion from increased dredging. The Rodman Dam is stopping up at least 18 springs and preventing fresh water from entering the river. Additional freshwater into the St Johns River would likely provide a much healthier habitat for a greater variety of fish and for endangered species, like manatees. Furthermore, American Rivers ranked the Ocklawaha as endangered. Lastly, the Rodman Dam is in serious disrepair and could cause catastrophic damage in Putnam County should it be breached.	The water quality of the St Johns River continues to deteriorate, this river is one of the most outstanding natural resources in Northeast Florida and it NEEDS to be protected and restored. It has been neglected for too long.	No, breaching the dam appears to be the only effective solution.	I grew up in Jacksonville, Florida, I currently live on the St Johns River, I have personally witnessed the challenges that the St Johns River faces, including stormwater runoff, industrial pollution, saltwater intrusion. The dam was a huge waste of financial resources and now it is a safety and environmental concern
9/23/2021 12:41	Okaloosa		No	No					Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	- No. Breaching the dam is 50 years overdue.	
9/23/2021 12:42	Seminole		No	Yes	2-5 times			Canoeing / kayaking	Let it flow				
9/23/2021 12:42	Citrus		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Preservation	Other bodies of water have been spoiled by interfering with the delicate ecosystems	Ruining a resource	No	
9/23/2021 12:44	Palm Beach		No	No					Breach the dam	Costly to maintain, and so many positive outcomes. Brings back 20 springs, and gives habitat for manatees and fish	Waste of time and money to repair old dam	No! Get rid of the dam	
9/23/2021 12:44	Alachua		No	Yes			1 time	Wildlife viewing	Breach the Rodman/Kirkpatrick Dam.	The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	No. Breaching the dam is 50 years overdue.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
9/23/2021 12:46	Alachua		No	Yes			2-5 times	Wildlife viewing Other: I fished in the past, but not in the past 20 years.	I would like to see the dam breached and the river restored.	The dam was built as part of the Cross-Florida barge canal, which project was abandoned years ago. We should not be spending money to manage thos old dam, especially since it is not needed for the original purpose!	The continued degradation of the river habitat.	No	
9/23/2021 12:46	Duval		No	Yes	1 time	2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Wildlife viewing Other: Hiking/Camping on nearby trails	It is far past time to breach the dam and restore the Ocklawaha River, but now is the time to act. Through a combination of environmental restoration and economic development projects we have the opportunity to create a better environment and better community for the residents of Marion and Putnam County. Restoring the Ocklawaha will reveal 20 lost springs, provide much needed habitat for manatees, and restore a health ecosystems where wildlife and people can thrive together. Restoration must be accompanied by economic and community development in the area to ensure that a restored river is beneficial for local residents.	Ocklawaha restoration is the most meaningful and cost-effective environmental project in Florida. It would bring twenty lost Florida springs back to life, open up much-needed habitat for Florida's struggling manatee population, restore 7,500 acres of wetland forests, and protect and restore the St. Johns River. And, it will benefit our economy through increased recreational opportunities and natural services. All of these benefits come at an estimated cost of only $26 million; $15 million less than what Florida spent on just legal fees in the lawsuit to restore flow to the Apalachicola River in 2017 and a tiny fraction of what is spent each year on infrastructure projects to restore the Everglades. The Land Acquisition Trust Fund is estimated to have $1.2 billion set aside for environmental restoration projects in 2022-2023, enough to pay for Ocklawaha Restoration 50 times over. Ocklawaha Restoration should be the top priority for LATF funding.	Another 50 years of a useless dam that that is not in the best interest of our environment, local communities, or businesses. If we miss this opportunity, and the dam is repaired, it could be another generation before an opportunity like the one before us comes about.	No, there is no viable reason why the Ocklawaha should not be restored. The focus needs to move from if we should breach the dam, to how we ensure that breaching the dam is beneficial for the local community.	
9/23/2021 12:46	Indian River		No	Yes			1 time	Fishing Canoeing / kayaking Boating Wildlife viewing	Remove the dam. Restore the river.	41 age 70 and having never seen the Oklawaha in it's 'natural' state, the removal of the dam and the restoration of the river - will result in wildlife and habitat changes that will allow us to see what the river is really supposed to look like.	The lack of ecological benefits that would result from a failure to remove the dam and restore the river.	Not aware of any.	
9/23/2021 12:48	St Lucie		No	No				Remove Dam	The Corps of engineers debacle in Kissimmee river basin!	environmental degradation of lands south of dam.	Dathrone dam advocate!!	Have a nice day
9/23/2021 12:48	Marion		No	Yes		1 time		Wildlife viewing	Removal	The obvious impact on the environment present and future	Continued damage to natural habitat	No	
9/23/2021 12:48	Orange		No	No					Breach the dam!	Dam is old and in need of repairs. Breaching would breath a ton of ecological life back into the areas, mainly fish and manatees and create a thriving ecosystem once again. Keep FL wild!	Dumping tax payer money into the maintenance of a dilapidated dam that hurts FL more than it helps. Far more people will come to area and spend $$ if there is a natural beauty to it. Bringing the money in while restoring the area to its natural state is a no brainer to me	Negative	
9/23/2021 12:49	Alachua		No	No									
9/23/2021 12:49	Broward		No	No					Breach the dam in order to begin reversing the damage that was done by it.	I have been visiting springs for 20 years and I have seen the springs decline. The river grass no longer glows in the sun and the clarity of the rivers is no longer spectacular.	Hundreds of endangered manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	Right the wrong that was done. Be a leader in making Florida great again. Our ecosystems are already battling climate change, pollution, development, etc. If you want to do one thing that is right in your life, remove the dam.
9/23/2021 12:53	Dade		No	Yes			1 time	Other: Cycling	Turn the reservoir into a nature preserve	Preserving natural water ways	Losing the ecosystem that make up the Everglades		
9/23/2021 12:53	Alachua		No	Yes	1 time	2-5 times	2-5 times	Wildlife viewing	I'd like to see a breach and restore Florida the way that it is supposed to be. The imbalance affects wildlife preservation.	Manatee migration	Manatees can't migrate!		
9/23/2021 12:57	Alachua		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	Put it back to its natural state so that everyone can enjoy it.	Water quality	Continue degradation of the environment and aquifer	None that I can think of. The dam needs to come down.	
9/23/2021 12:59	Pinellas		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Breach the Rodman/Kirkpatrick Dam and restore the waterways	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No!! Breaching the dam is 50 years overdue.	MANNTEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/23/2021 13:01	Dade		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
9/23/2021 13:01	Palm Beach		No	Yes			2-5 times	Fishing Canoeing / kayaking Wildlife viewing Other	Open it.	It's extremely important for the ecology of the springs and local waters.	I believe it would have severe negative ecological and economical impacts to our state.	No.	Do what's right for the springs in our state.

9/23/2021 13:03	Alachua		No	Yes	1 time	More than 5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Breach the dam and restore the river. The dam has negative impacts on the water, wildlife, people, and the economy.	Breaching the dam and restoring the river would benefit humans, the river, and wildlife. It would allow for a more natural fishing riverscape and allow fishing from the riverbanks, a benefit to lower income people or those without boats. More fishing, more diverse recreation would help the local economy.	Everyone loses if this is not done, including the Palatka economy. And the resources used to prop up this dam are extensive.	Draw the river down until the river is restored.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.
9/23/2021 13:03	Hillsborough		No	No					I would like to see the Rodman Reservoir and the Kirkpatrick Dam breached in order for Florida's natural habitat to return to the pristineness it once was. I would like any manatee, fish, fauna, etc. to not continue to dwindle because of a dam that takes millions of tax dollars to operate/repair when there is no legitimate reason for it to still stand.	The Florida Spring Council's studies on marine life in the area.	My biggest concern would be the extinction of Florida's natural Flora and Fauna that so many from across the globe appreciate.	No.	Florida's aquifer and spring habitat is not hyperbolized when it is described as one of a kind. No where else in the world do these conditions exist like they do here in this beautiful state. I understand monetary decisions to a point but when there is nothing left, who will be there to pick up the wreckage?
9/23/2021 13:04	Orange		No	No					Breach the dam	Breaching the dam would restore many Springs. It would help restore fish populations to Silver Springs.	The springs ARE Florida, they are in need of restoration. Water quality suffers if we do nothing.	None.	Breaching the dam would also restore manatee habitats. 😍 these creatures are central to the beauty of Florida , only we can help protect them.. only we can help protect the habitats..
9/23/2021 13:05	Seminole		No	Yes		1 time		Fishing Canoeing / kayaking Wildlife viewing	Take Rodman down	The dam is deteriorating and so is the river. If the dam goes, the river comes back. Plus, it would help the St. Johns with flow.	That the Ocklawaha River continues to deteriorate.	More draw downs.	Free the Ocklawaha River!
9/23/2021 13:05	Wakulla		No	Yes			1 time	Wildlife viewing	Remove dam	The need for free flowing river to release springs, allow for fish migration and Manatee movement.	continued degradation of ground water, spring sheds and diminished manatee populations	no	We have reached the critical point concerning our water resources.
9/23/2021 13:05	Pinellas		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Canoeing / kayaking Hunting Wildlife viewing	FREE THE 56-MILE OCKLAWAHA-SILVER RIVER BY THE BREACHING OF RODMAN DAM	ALLOW UNLIMITED MIGRATION OF FISH (SUCH AS STRIPED BASS) AND MANATEES BETWEEN MOSS BLUFF DAM, SILVER SPRINGS, AND THE ST. JOHNS RIVER.	FAILURE TO PROVIDE WINTER REFUGE FOR MANATEES, FAILURE TO ONCE-AGAIN ALLOW STRIPED BASS TO NATURALLY REPRODUCE, AND THE ENVIRONMENTAL MESS OF THE MUCK-OOZE THAT UNDERLIES THE LAKE WHERE IT HAS NEVER BEEN DRAWN DOWN.	NO, UNLESS THE FLOODGATES ARE COMPLETELY RAISED AND THE OCKLAWAHA RIVER FLOWS UN-MANIPULATED THROUGH THE FOUR FORTY-FOOT WIDE OPENINGS.	THE HENDRICKSON LITERATURE FROM 2016 SEEMS TO REPORT THAT THE TMDL PROBLEM CAN BE MITIGATED BY LWMMD.
9/23/2021 13:06	Alachua		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This exciting restoration will improve water quality and flow by generating an additional 150 million gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 35,000 acres of forested wetlands, benefiting water quality through enhanced biofiltration. Thank you for your consideration.
9/23/2021 13:07	Putnam		No	Yes		More than 5 times		Canoeing / kayaking Wildlife viewing	Simple remove it and then let nature take its course. Allow loggers in to remove the downed cypress and clean up the destroyed trees. Then move up river removing the snkers and fallen trees blocking the watercourse.	It is artificial and has blocked the natural flow of a once wonderful waterway. Fish species that were once abundant there are no more (sea bass).	The river will remain a fouled cess pool with thousands of gallons of herbicide sprayed in it to control noxious weed growth. I live on the river and do not want this poison sprayed on water we depend on.	Not that makes any sense. Yes one could simply open the dam and disable it for all time.	Why not follow the decrees? On a year when the dam is open things start to return to normal natural state very quickly. Please at a minimum open the dam.
9/23/2021 13:07	Alachua		No	Yes			1 time	Other: I don't. The dam is worthless.	De- commissioned and demolished. Like many other smaller dams that have been decommissioned and removed it has no value. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	The Ocklawaha, Silver and St. Johns Rivers, 50 springs and 20 lost springs and Silver Springs ecosystem are restored For recreational enjoyment which increases the intrinsic value of the whole region.	I have been an advocate of removing the dam for over 40 years. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No. we simply need to remove the dam to restore the Ocklawaha river and other dependent habitats. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe and needs to go.	Restoration will improve water quality and flow by generating an additional 150 millions gallons per day of fresh water into the St. Johns River and Estuary system.
9/23/2021 13:07	Marion		No	Yes	1 time	More than 5 times	More than 5 times	Boating Wildlife viewing Other: I have operate an eco tour business since 1983 on the Ocklawaha and Silver Rivers. The only high demand for trips to the area from Eureka north on the Ocklawaha or from the Kenwood restored old boat ramp is during a drawdown of the lake levels. Passengers are interested in seeing the restored springs and the dead trees in the lost flood plain. So called Old Timers of the area talk about the lost of clearer water and remark about dark sediments on the sand. Everyone misses the large catfish schools. They are no longer seen. I am a native and miss the diversity of fish in my home town of Eureka.	I would like to see the State accomplish its plan to breach Rodman to restore the flows and natural water levels. Thus getting economic repair to this area of Marion County. We have lost all the bait and tackle stores and no paddling outfitters exist in the lake area. People are seeking natural areas to spend their time and money. Breach the dam so that the health and numbers of the lost fish in this system can have the entire river to seek refuge and move freely to the St. Johns and back to reproduce.	Economic impact statement done by U of F. My 4 generations of family memories on the free flowing Ocklawaha and now my experiences. I operated the first pontoon boat eco tour on the Ocklawaha and Silver Rivers starting in 1983 and until present time. Fish creel surveys documenting loss of numbers and species in the river above the Rodman Dam. My late mother and I watched through the years the habitat deteriorate and the large schools of fish disappeared. The beautiful artesian spring dominated sand bottom river is no longer known from Eureka north, ephiliciatus and the majority of the public have the education and knowledge capabilities to know that removing unnecessary dams restores economic growth and fish. All agencies agree that the rivers impacted by this dam need it to be removed for them to be restored.	Keeping a unnecessary dam across my rivers throat! Spending money on this area that does nothing to help the economy to bring in a variety of tourism interests. Through the years the recreational access to the reservoir have deteriorated and or have been closed. The State of Florida not doing what is best for Florida and this once connected great waterway.	The partial restoration is the scenario I can support . This was the States accepted choice of 5 options debated years ago to stop the damage and repair the natural system. A full restoration by removing the entire dam and structures created by the Cross Florida Barge Canal is my only alternative choice/scenario.	This is the time around the world and especially in the USA to remove unneeded and deteriorating dams. Areas in States that have removed dams report immediately the return of fish. I miss the annual sightings of huge schools of catfish going up a visible white sand river bottom to Silver Springs. I want to see commercial fishing boats coming in with the larger Striped Bass their clients caught during the annual spawning run up the Ocklawaha. Striper catches documented in newspaper fishing reports prior to the dam. We now have a large population of Manatees that need warm water refuge all around Florida. I want my home state to use my tax dollars on restoring lost economic recreational opportunities. I want a natural riverine forested flood plain back in my front yard. I don't want my government and agencies to stall on this much needed restoration. Waiting 50+ years I want my river back before I can't enjoy it again. I want to see my passengers excitement when first seeing a beautiful clear strong boiling spring. A river clear enough during low rain periods to see all the fish species. I want the glass bottom boats at Silver Springs to be able to show all these lost species once again. And I don't feel I want too much!
9/23/2021 13:08	Marion		No	Yes		More than 5 times		Hunting Wildlife viewing Other: General nature observation, photography	Breach the Rodman Dam and RESTORE the Ocklawaha River! It is past time for us to restore this incredible river and the species that rely on it to survive.	It is necessary to restore suffering migratory fish populations, to help bring back Silver Springs, and it is critically important for hundreds of manatees that could better access Silver Springs and other restored springs along the river, at a time with Florida's manatee population is experiencing unprecedented mortality. It is also important for forest restoration along the river corridor, and consequently wildlife such as birds.	Continued manatee decline, reservoir filling up with soil, continued fishery decline, springs not being restored. If not now, WHEN? There are so many other places for people to fish, and I firmly believe that businesses will prosper from freeing the river and breaching the dam.	Not really. This is the only pathway to take.	
9/23/2021 13:08	Marion		No	No					Breach the Rodman/Kirkpatrick Dam.	* There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	* We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue.	I was born and raised in Ocala! The springs have forever been the most special part to our community. Having them restored and the wildlife protected is the most important thing for our ecosystem!! We have one of the largest artesian springs in the world! I believe we should do everything within our human power to protect and preserve this incredible resource!!..
9/23/2021 13:09	Alachua		No	Yes		1 time		Other: I prefer the free-flowing river portion of the Ocklawaha. While I have visited the Dam, I'd rather see it gone.	It is definitely time for the State of Florida to remove the dam and restore the river. It will benefit wildlife, save taxpayer money, restore springs, provide habitat to manatees, improve water quality downstream (less herbicide spraying to control aquatic weeds) and encourage resource-based recreation that greatly exceeds what is available in the dying Rodman Reservoir.	I served on the Canal Lands Advisory Committee as an alternate for Marjorie Carr, whose age at the time made it difficult for her to directly participate in this two-year committee process. I know all the ins and outs of the issue and believe it is in the long-term best interest of Florida, including those who live around the river and in Palatka, to restore the river. It's hard to distill all I know about this issue into a "most important piece" but if I had to sum it up I would say the natural, free-flowing river will afford our citizens and wildlife with far more benefits than a derelict dam and weed-choked reservoir that takes great amounts of money and herbicides to maintain even as a fishing spot for a very limited number of people.	Endless expense to maintain the dam and reservoir for the people of Florida, while missing out on the many benefits of restoration for wildlife and recreation. What a dumb and tragic loss that would be.	We are either going to have a free-flowing river or we are not. You can dress it up and put makeup on it (and call it "partial restoration"), but unless the dam is breached, the reservoir drained and the river restored, you are not going to have restoration that provides benefits to fish, manatees and river ecology.	This issue has languished as a result of indecision for decades. State leaders keep punting on the issue because no one has the guts to make a call and do what is right. I get that there is a local contingent that wants to keep their taxpayer-subsidized fishing hole to themselves, but we have seen just how beneficial that has been to the Palatka economy. It's in the dump and it's not going to get any better just because the state maintains a dying, weed-choked reservoir. It's time to restore the river and bring with it the many benefits that even the people of Palatka will profit from (even if they can't see it yet). If Governor DeSantis has the intestinal fortitude to make the call and initiate the restoration of this river, it will be a conservation achievement for the people of Florida that no governors before him could not achieve. He will be forever remembered for that, just as President Nixon still gets great kudos from the conservation community for having pulled the plug on the Cross Florida Barge Canal project. For the love of God, let's get it done.
9/23/2021 13:09	Alachua		No	No					Breach the Rodman/Kirkpatrick Dam	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 82% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/23/2021 13:09	Marion		No	Yes			1 time	Canoeing / kayaking	In favor of the dam being breached, in order to restore the Silver River/Ocklawaha system to its natural state. My wife feels the same way.	The need to perform periodic pool drawdowns, in order to deal with accumulations of toxic silt, and the inability for ocean/fresh water species to access the river as they have in the past. The dam is 52 years old, with a life expectancy of 50 years.	The continued degradation of a natural river system.	No	
9/23/2021 13:09	Pinellas		No	No					As a Florida Native who has visited, canoed and swam these waters all my life (I am 65 yrs old), I support the restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs and 100s of manatees gain essential warm water winter springs habitat.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Breaching the Rodman/Kirkpatrick Damn is in the spirit of the FI Constitutional amendment calling for the restoration of the Kissimmee River and the Everglades and is therefore the will of the people.
9/23/2021 13:09	Marion		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	remain the same	the habitat			
9/23/2021 13:10	Collier		No	No					Remove both'	Return to natural state.	water quality and retentionno	no	Every Corps project has done massive environmental long term damage
9/23/2021 13:10	Lake		No	No					Remove it. Restore natural flow.	Invasive fish	Just another eco system man has destroyed and they (humans) have made more of a negative than positive on air, water, land and all creatures dependent of the purity of the source.		
9/23/2021 13:10	Escambia		No	No					Breach the Rodman/Kirkpatrick Dam.	Humanity has no future without nature. Breach the Dam. Restore nature. There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	The Dam is unsafe, costly to public funds, and will continue to wreak havoc on the local wildlife.	NO. Breaching the damn is 50years overdue.	You have the ability and privilege to move the next generation into the future. We MUST act now, and move into new ways of living.
9/23/2021 13:10	Alachua		No	No					I would like to see it taken down	Fish and manatee population	That the manatee and fish population will die and become extinct in these unprecedented times where we are loosing the majority of our wildlife forever	No	Take down the dam
9/23/2021 13:11	Marion		No	Yes		1 time	More than 5 times	Boating	I would like to see the dam removed and the river restored to its natural course.	Visiting all the affected areas in person by boat and seeing everything from the lack of fish and manatees in the Silver River to the drowned springs in the Ocklawaha which can only be visited while the reservoir is drawn down, to the rotting mats of vegetation and unnavigable stump filled waterways makes it obvious that the area needs to be restored.	That the dam would continue to remain in place preventing the entire area from being able to recover and allowing it to remain a festering sore on the landscape.	I could not support any scenario in which the dam continues to impound the river in any way.	
9/23/2021 13:12	Duval		No	Yes	1 time	1 time	1 time	Canoeing / kayaking	Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	Manatees are literally dying. Manatees, floating sea potatoes are dying from this. As a Florida resident this is outrageous. Manatees should be protected, the springs is their winter home.
9/23/2021 13:13	Leon		No	Yes			1 time	Canoeing / kayaking	Remove the dam	Lack of natural stream flow and riverine habitat			
9/23/2021 13:13	Seminole		No	Yes		More than 5 times		Fishing Canoeing / kayaking Boating	More wildlife and the restoration of Florida's ecosystems	The decimation of our Florida ecosystems	We continue to debilitate the habitats that our Florida wildlife deserve.		
9/23/2021 13:14	Pinellas		No	No					The Rodman Reservoir and Kirkpatrick Dam needs to be breached.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida! Not to mention, many manatees would be saved.	That we miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (water quality, wildlife habitat), and the dam is unsafe. Hundreds of manatees also loose access to essential warm water in winter habitat.	Nope. This has been long overdue.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. I would be incredibly disappointed if this project doesn't happen.. it would be beyond idiotic in preserving some of Florida's greatest treasures.
9/23/2021 13:15	Orange		No	No						Taken down and environment			
9/23/2021 13:16	Leon		No	No					Would like the3 dam removed, let the river flow free and lets the springs have another chance of life.	Detriment to the many springs involved.	As we continue to lose more of the natural Florida and its springs, the affected springs being impacted by the dam will have no chance to become the springs that were.	I do not think so.	time to think differently
9/23/2021 13:17	Alachua		No	Yes						Breaching the dam would allow for manatees and migratory fish to reach their habitat. This is especially important given the mass manatee mortalities of 2021. Conserving aquatic habitats is your duty to the people.	A missed opportunity to breach an old, unsafe, expensive, and environmentally damaging dam! This is your best opportunity to get this done. Public support is high.	Nope!	I appreciate the opportunity to give my opinion. There are many reasons to breach this dam. Please consider this matter with a long-term view. This dam is costly not only to taxpayers but to wildlife and the environment. The breach is many decades overdue. You can do this!
9/23/2021 13:17	Seminole		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Breach the Dam!	We need to have greater awareness to the impacts of climate change not just on human but all wildlife and nature.	Wildlife food sources could be impacted & well as habitats. Furthermore there can be a trickle down impact to impact on clean water ets.	Not really	We need to be better stewards of our natural resources & looking ahead to how climate change and man create unnecessary harm.
9/23/2021 13:18	Orange		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	I would love to see the Rodman/Kirkpatrick Dam breached	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record, Not to mention restoring fish populations in Silver Springs which have declined by 92%, in part due to the construction of the dam.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/23/2021 13:19	Columbia		No	Yes			2-5 times	Canoeing / kayaking	I would like to see it breached.	The restoration of the 20+/- springs and the opening up of migratory routes for fish and manatees is the most important aspect to me.	The loss of habitat and food sources for manatees (which have been suffering greatly in the last year) and the continuation of severely depleted fish populations is unacceptable at this moment in history. There's also the issue that the dam is past its life expectancy and could cost millions in repairs. This would also be a missed opportunity for tourism as the springs have been growing in popularity across the state in recent years	No. This is 50 years overdue. The time is now.	
9/23/2021 13:19	Volusia		No	Yes		1 time	2-5 times	Boating Wildlife viewing Other: Viewing hidden springs during time of drawdown.	I would like to see the Ocklawaha River free flowing again and allow the multiple springs to be exposed and flowing free.	My own observation and listening to the environmental experts and Water Management people who support freeing the river and allowing a natural flow to support the St. Johns River.	Continued degradation of the St. Johns River Basin.	Not really, it seems to be either restoration or continuing damage.	I believe restoring the Ocklawaha will increase environmental tourism and in the long run help the sports fishing industry and the economy.
9/23/2021 13:19	Orange		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	I would love to see the Rodman/Kirkpatrick Dam breached	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record, Not to mention restoring fish populations in Silver Springs which have declined by 92%, in part due to the construction of the dam.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue.	Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/23/2021 13:20	Wakulla		No	Yes	1 time	More than 5 times	More than 5 times	Canoeing / kayaking	Breach the Rodman/Kirkpatrick	Put it back they way it should have stayed, do not mess with our natural Florida.	Politicians are in it for the money not the protection of our outdoor resources.	No, look at Florida and all the damage that has been done like this dam, the draining of the Everglades, and the over development in many counties.	Do what is right for the future of Florida, return things to the way they were.
9/23/2021 13:21	Alachua		No	Yes		2-5 times	More than 5 times	Boating	I would like to see the restoration of the rivers and the 50 springs	The danger to the water and life that is their habitat. The health of our water is in direct connection to the health of humans.	The continued destroying of the life in the water	The goal is the mission of restoring the River and all other bodies of water that is connected. its way past time to do the right thing, not a piece of it.	I just repeat, the humans of Florida are as healthy as its water!!!!
9/23/2021 13:22	Marion		No	Yes			2-5 times		The dam should be removed to allow the free flowing of the Ocklawaha River and the restoration of the natural environment.	There are numerous natural springs that the reservoir has smothered. Allowing them to recover their flows would bring ecotourists from all over the world to Florida, a boon to our economy. It would also bring greater recreational opportunities to Floridians.	The Florida environment will continue to degrade. Water quality will decline and invasive species will flourish.	No. The dam needs to be breached. This outrage has gone on for far too long.	Restoring the Ocklawaha will bring manatees back to the the region, a thrill for both tourists and locals. Reforestation will provide cooling, oxygen, and absorb carbon from the atmosphere.
9/23/2021 13:23	Putnam		No	Yes			1 time	Wildlife viewing	Would like to see it removed.	The waters should be allowed to flow into it local rivers to restore balance and health to the water, to the wildlife, and for people.	The decline of the health of wildlife , water, and ecosystems we cherish now.i	Any improvement upon the current situation would be considered if my desired outcome is not possible.	
9/23/2021 13:23	Alachua		No	Yes			1 time	Boating	I would like to see the river restored, visited the river and otherwise hidden springs during the draw down and was stunned to realize the affect the dam has.	Seeing all the weeds that grew, and the heavy use of chemicals to control them is a problem the dam creates by backing up the water. A flowing river would not have this problem.	The status quo, the way things are now, is a pointless perpetuation of an ill thought idea. The dam is old and it would be a waste to consider rebuilding it, and then justifying maintaining it because it was rebuilt.	More frequent draw downs might help, but letting nature rebuild the ecosystem is the only thing that makes sense to me.	Ecotourism is on the rise, and businesses that rely on the dam could easily be assisted in helping transition with the money that otherwise would be allocated and spent on dam maintenance.
9/23/2021 13:25	Alachua		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Boating Wildlife viewing Other	I would like to see it removed	The wildlife would be able to come back to the waters which will bring an abundance of health to the springs	That the springs will be in detrimental health.		
9/23/2021 13:26	Pinellas		No	No					I would like to see the dame removed or breached.	Protecting our environment is = protecting our environment.	It would be wasted tax dollars and a continued destruction of our environment and our economy. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years.	No. Breaching the dam is 50 years overdue.	Saving and protecting the environment is critical to our health and economy.
9/23/2021 13:26	Pasco		No	Yes	1 time	2-5 times	2-5 times	Canoeing / kayaking Wildlife viewing	Please continue restoration	FLORIDA IS SO important to the southeast waterflow and to the future generations. Keep the restoration going, and complete it so the springs and nature can be safe for years to come!	Our younger generations will not have/or know the beauty of loving life in the fresh waters	no	
9/23/2021 13:26	Alachua		No	No									
9/23/2021 13:26	Alachua		No	Yes			2-5 times	Canoeing / kayaking	Breach the dam to create a free-flowing river	Ecological health of river and floodplain would greatly improve	Catastrophic failure of the dam	no	
9/23/2021 13:27	Duval		No	Yes		1 time	2-5 times	Canoeing / kayaking Boating Wildlife viewing Other: snorkeling / videography	Breach the Rodman Dam and Restore the Ocklawaha River, which would allow 20 drowned springs to flow once again. Removing the dam is essential to improving the health of Silver Springs. It is necessary to restore suffering migratory fish populations. And needed for the hundreds of manatees that could better access Silver Springs and other restored springs along the river, at a time with Florida's manatee population is experiencing unprecedented mortality. Florida already has enough money set aside next year to restore the Ocklawaha	Studies by the Florida Springs Institute ,Dr Knight	More starving manatees		

9/23/2021 13:27	Walton		No	Yes			1 time	Other: I went to the dam to see what affect it had on the drowned springs	Breach the Rodman/Kirkpatrick Dam	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Florida springs are beneficial in their natural state and we need to breach the dam to restore them.
9/23/2021 13:28	Outside of state / other	France	No	Yes			2-5 times	Wildlife viewing						
9/23/2021 13:29	Lee		No	Yes			2-5 times	Wildlife viewing						
9/23/2021 13:29	Outside of state / other		No	No										
9/23/2021 13:29	Duval		No	No					Breached honestly destroy it	Free flowing natural river that allows millions of fish and natural wildlife to return to their natural habitat.	Why wouldn't they do it? The thing is doing nothing doesn't even help with flooding. Allowing it to return to its natural free flowing state will restore many things			
9/23/2021 13:30	Orange		No	No										SAVE THE MANATEE! Like all animals, they are essential to life on this planet.
9/23/2021 13:30	Marion		No	Yes			2-5 times	Wildlife viewing Other	Leave them alone	My opinion	Flooding	No		
9/23/2021 13:30	Duval		No	No										
9/23/2021 13:30	Outside of state / other	Lords Valley, PA	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/23/2021 13:31	Outside of state / other	Marin County	No	No					Support the manatees	Animals are constantly being killed by human beings carelessness. We need to protect the planet of all the species on it.	That we lose another species			
9/23/2021 13:31	Orange		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. 9/23/2021 13:31	Marion		No	Yes			2-5 times	Other: We had Jet Ski's in the Ocklawaha	Mother Nature needs to return to normal - Remove the Rodman Dam	Seeing all of Florida's Springs protected and return to their normal flow.	A continued decline in water quality and increased pollution.	The only reason we have the Rodman Dam is because of the proposed Cross State Barge Cannel - The Cross State Barge Cannel was stopped for good reason, so the Rodman Dam should be removed.	This should have been done years ago!	
9/23/2021 13:31	Outside of state / other	Canaan ME	No	No										
9/23/2021 13:31	Outside of state / other	New York, NY	No	No					Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	We need to restore the Great Florida Riverway while we can still help the wildlife who need this habitat.	Death of the manatees	No because I travel to and vacation in Florida because of my love of the manatees.		
9/23/2021 13:31	Outside of state / other	Tucson, AZ	No	No					These must be restored for ALL wildlife to enjoy and flourish in.					
9/23/2021 13:31	Marion		No	Yes		2-5 times		Fishing (shoreline/structure) Wildlife viewing	Year it down to free the springs in the river and to free the fish and wildlife to travel the river up to the Head waters of the Silver Springs once again.	numerous studies over the years have been done by respectable organizations that come to the conclusion that the dams needs to go.	The cost of maintaining a dams that has no purpose other than imped our river and environment. It truly serves no useful purpose!	If the cost to tear it down is too great than at least leave it open permanently but stabilized to the point that maintenance is unnecessary.		
9/23/2021 13:31	Outside of state / other	Pennsylvania	No	Yes			1 time	Other: I don't						
9/23/2021 13:32	Orange		No	No										Save the manatees! They are essential to life on this planet, like all animals.
9/23/2021 13:32	Lake		No	Yes			1 time	Fishing	The dam really should be removed and the river flow restored. The rivers, lakes and springs have been negatively impacted by th dam.	Findings from the conservation groups studying Florida's water resources.	Continued deterioration of downstream waterways and effects on the aquifer and springs caused by holding this water.	Not really. We have seen in the past that disrupting the natural flow of waters has far reaching consequences. It's time we remove it and allow nature to restore itself.		As an avid sportsman and resident of Florida since 1966 I have seen what happens over time when we alter our rivers and lakes. It has never been a benefit in the long term. Spend our tax dollars for preservation, not the maintenance of unnecessary and outdated structures like Rodman.
9/23/2021 13:32	Outside of state / other	Michigan	No	Yes			More than 5 times	Wildlife viewing			Loss of manatees habitat			Restore manatee habitats.
9/23/2021 13:32	Outside of state / other	Asheville, NC	No	Yes			1 time	Wildlife viewing	I would like to see the dam removed and the river restored to provide wildlife habitat and better water quality for local users.	The Ocklawaha River is vital to the future recovery of manatees. Removing the dam and restoring the river provide vital habitat for this imperiled species.	Continued loss of manatee habitat and declining water quality.	It's past time to address this long standing threat to Florida's environment.		
9/23/2021 13:32	Outside of state / other	Oregon City, Oregon	No	No					In order to restore the Ocklawaha River, the Kirkpatrick Dam must be removed (breached).	Ocklawaha River restoration is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	I don't think so. I live in Oregon where several dams have been removed with great environmental benefit results. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.		
9/23/2021 13:32	Marion		No	Yes			1 time		Breach the dam	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	We have done enough damage to the environment, it's time to start righting some of our wrongs
9/23/2021 13:32	Santa Rosa		No	No										Restoration of manatee habitualle is crucial now and overdue. Please don't wait until it's too late for these lovely gentle giants!
9/23/2021 13:33	Outside of state / other	New Jersey	No	No					Restore the pathway	Nature preservation/conservation	The potential decimation/extinction of Manatees	Restoration in stages

9/23/2021 13:33	Outside of state / other	IL	No	No								Protect the local environment		
9/23/2021 13:33	Collier		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/23/2021 13:33	Outside of state / other	New Jersey	No	No					Protect manatee habitat	Manatees are threatened	Habitat loss	Perhaps

This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/23/2021 13:37	Outside of state / other	Texas	No	No					So restore it to its natural beauty so that wildlife, marinelife and birds can again find refuge there	Manatees have already reached a record number of deaths this year - and if we don't restore additional areas of their natural habitat, we could lose even more manatees in the future.	The increase of manatee deaths and the increase of urbanization, which takes critical habitat away and threatens wildlife.	No	
9/23/2021 13:38	Outside of state / other	Long Island New York	No	No					Restoration to provide safe marine life & habitat	Keeping the natural environment for all aquatic & wild life	Destruction of precious natural resources & the environment	No	Quality of life for all air, land & sea creation is vital to us & the future of our planet
9/23/2021 13:39	Outside of state / other	Massachusetts	No	Yes		1 time	1 time	Wildlife viewing	I wold like the Ocklawaha River to be restored by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees.
9/23/2021 13:39	Dade		No	Yes	2-5 times	1 time	1 time	Wildlife viewing	preserve manatee habitat				

9/23/2021 13:39	Polk		No	No						Am not aware these horrible things going on and if these and other animals, especially those Manatees CANNOT become extinct!!!	There will be many people wanting to send an angry message to our government to do something about it!!! Thanks	We will see...	God bless all animals.. Manatees should NEVER FREEZE in winter.
9/23/2021 13:39	Osceloa		No	Yes			1 time	Wildlife viewing Other: Walking					
9/23/2021 13:39	Orange		No	No					I would like to see that the dam is breached before any more funding goes into it in order to restore life in the springs, and save the state and/or county governments funds for more important matters.	Having been made aware that breaching the dam will help manatee migration and fish populations is the most important piece of information for me.	My largest concern would be the eradication of a fish population and endangerment of manatees if the dam is not breached.	Unless there is another way to achieve the restoration of Silver Springs fish population and manatee migration routes without breaching the dam, then no.	
9/23/2021 13:39	Washington		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. 9/23/2021 13:40	Duval		No	Yes		1 time	2-5 times	Canoeing / kayaking	Breach the dam. Restore the river to its natural flow to restore the health of the Great Florida Riverway. This dam serves no purpose at this point and is negatively affecting wildlife and water quality, as well as the natural landscapes of the state, which provide opportunities for the tourism economy through springs and riverways enjoyment.	Three rivers (Ocklawaha, St. Johns and Silver River) are restored, restoring ecosystems and wildlife flow from Welaka to Jacksonville.	Water quality declines further, fueling weed overgrowth, algae events, fish kills and loss of aquatic plants critical to the well-being of Florida's manatee population.	No. We need to breach the dam and retire the flow. Wildlife, water quality and Florida's natural ecology are under threat from many angles and we can't miss this opportunity and timing. The dam needs work and if that happens instead of breaching it we'll be stuck with this situation for a long time to come.	
9/23/2021 13:40	Marion		No	No					For it to be breached	Breaching the dam would re-emerge 20 drowned springs and re-open migratory patterns for fish and manatees	That manatees would continue to experience higher than average rates of die off as a result of being denied warm water winter habitat that these spring provide. Also that tax payer money will be spent repairing damage to the dam that will inevitably occur.	No the dam must be breached	Breaching the dam and reopening the spring benefits everyone, human and non human
9/23/2021 13:40	Alachua		No	No									
9/23/2021 13:40	Outside of state / other	Los Angeles, CA	No	No					Remove the Kirkpatrick Dam to restore river function and ecological health	This is critical for the recovery of manatee populations. This would also recover the river system, helping other important wildlife species such as Florida Panthers and Bald Eagles.	The continued ecological degradation of the Ocklawaha river system, and resulting negative impacts on all species that live there.	No. This is urgent and needs to happen as soon as possible to prevent further losses to native wildlife.	This restoration project is vital if we are to restore forested wetlands and provide a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife.
9/23/2021 13:40	Dade		No	Yes			1 time	Canoeing / kayaking	Take it down! Preserve and expand manatee habitat!	Large scale losses in the manatee population	Manatees dwindle and go extinct.	Eliminate power boats in manatee habitats	We're the laughing stock of the country right now because of DeSantis and his anti-science approach to COVID-19: Let's do something RIGHT! Preserve and expand manatee habitat!
9/23/2021 13:40	Indian River		No	No					Restore the Ocklawaha River by breaching the Kirkpatrick Dam.	It would help save manatees and other wildlife	Wildlife will suffer	No. Saving our waters, habitat and wildlife is way overdue.	Also water quality, wetlands and wildlife will benefit by breaching the Rodman dam.
9/23/2021 13:40	Columbia		No	Yes			1 time	Other	Drain the reservoir, breach the dam, allowing a free flowing river	The continual and strong suport of environmental groups	The continued use is of chemicals to control the vegetation	No	
9/23/2021 13:40	Outside of state / other	Minneapolis MN	No	No					Save the dam & waterways	Manatee deaths	More manatee deaths		
9/23/2021 13:40	Outside of state / other	Arizona	No	Yes	More than 5 times			Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees
9/23/2021 13:40	Outside of state / other	Berks County, Pennsylvania	No	No									
9/23/2021 13:41	Hillsborough		No	No					Restoration and protection. We must help the Manatee's and other precious wildlife and vegetation in our rivers		That we will loose the Manatee's forever THIS CAN NOT HAPPEN	Any improvement for the river and all that lives in it	We must protect our state s beautiful and special wildlife and vegetation fit the balance of life quit destroying and polluting for GREED
9/23/2021 13:41	Marion		No	No					Breach the Rodman/Kirkpatrick Dam.	The Dam is past its life expectancy, breaching dem dam saves $4-14 Million in Dam repairs, there are 20 drowned springs that would be restored by just this one act, making breaching the dam most beneficial and cost-effective springs protection project. Hundreds of Manatees would gain Access to much-needed habitat, avoiding the manatees becoming extinct. restoring fish population at Silver Springs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), the dam is unsafe. Millions of the taxpayer money is spent to repair the dam, but the dam does not provide flood protection, power, water supply or other broad public benefit. Silver Springs economies lose opportunity for economic growth from increased visitation	NO! Breaching the dam is 50 years overdue.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restore Silver Springs, one of the largest artisan Springs in the world.
9/23/2021 13:41	Orange		No	No					Breach the Rodman Reservoir and Kirkpatrick Dam	There are 20 drowned springs that could be restored through this project making it beneficial to springs protection, in addition to helping manatees gain access to much-needed habitat.	There's only so much time we have to save our natural resources before they're past the point of no return. Between pollution, changing climate, and decrease in water supply if action isn't taken the water quality may continue to decline, seeing an increase in algae events, loss of fish and more manatee deaths. Returning the springs to how they should be also opens opportunity for economic growth in the surrounding areas.	No	Florida is known for its' beautiful springs, help keep Florida beautiful and retain its natural resources. 2021 saw a huge loss in manatee life due to lack of habitat and food. Spring health has been declining over the years, where we're seeing algae growth in springs that used to be crystal clear. Action needs to be taken now to save what we can before it's too late.
9/23/2021 13:41	Marion		No	Yes	1 time	1 time		Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Remove the dam, as hard as it is to lose the fishing spot and some of the bird nesting grounds its not worth the damage.	Numerous environmental education classes and an understanding that if we broke it we need to fix it.	The environmental impacts	Not off the top of my head. Give me some of your possible solutions.	Fishermen vs Environment, I think most would gladly fish somewhere else to help ensure the health of the environment and the diversity of noninvasive species.
9/23/2021 13:41	Bradford		No	Yes	2-5 times	2-5 times	More than 5 times	Canoeing / Kayaking Wildlife viewing	Removal of the dam and active restoration of the Oklawaha River. Re-purposing and retraining for people, business, and equipment that currently rely on the dam.	Improved mammal and waterfowl habitat, reconnection of riparian and aquatic habitats via flows inundating terrestrial areas, and a return the natural temperature range of the river by eliminating a stratified reservoir. All outcomes supported by peer reviewed literature such as Kaufman, J. H. 1992. Shuman, J. R. 1995; and Bednarek, A. T. 2001.	Continued ecological and hydrological disruption.	Free flow through the dam. I.e. eliminating the reservoir without removing the dam structure.	
9/23/2021 13:42	Palm Beach		No	No						preservation of marine animals and ecosystem	death of manatees and other life		
9/23/2021 13:42	Outside of state / other	St. Clair Shores, MI	No	No					Restore the Great Florida Riverway for manatees and other aquatic wildlife.	Florida's manatees are dying in droves. Protecting our beloved manatees will also protect other wildlife and help keep the riverway clean.	The riverway becomes polluted and does nothing to protect wildlife.	No.	If Florida wants to continue to woo folks to see its waterways and wildlife, Florida better step up and protect its resources before it's too late.
9/23/2021 13:43	Outside of state / other	California	No	No					Restore it.	To protect the habitat for hundreds of manatees.	The manatee population is dwindling. These gentle majestic creatures deserve our protection in order to endure. Future generations have the right to observe and enjoy the fun loving manatees. Humans do not have the right to destroy their populations forever.	Only that the habitats are protected, no matter what changes need to occur. The manatee population MUST endure and survive.	
9/23/2021 13:43	Outside of state / other	Missouri	No	No					Improvements to provide better environment for nature	Threatened manatees	Extinction	No	
9/23/2021 13:43	Volusia		No	No					Breach the Rodman Kirkpatrick Dam	The fact that 20 drowned springs would be restored, while simultaneously restoring fish and wildlife populations to the springs is very paramount to my position.	Water quality would continue to suffer causing more harm to the aquatic vegetation and wildlife.	No. Taxpayers dollars are being spent in maintaining this dam that is doing more harm than good.	Please consider the manatee population that is seeing its deadliest year in 2021. Manatees rely on warm water habitat to survive. Currently, 60% of manatees are depending on power plant outfall to stay warm during winter months, Florida's peak manatee season. This is not sustainable, and restoring the springs would provide the natural warm water habitat that manatees need to survive. If we cannot protect the natural species and inhabitants of our beautiful Florida, we are doing a huge injustice to our state and our natural world.
9/23/2021 13:44	Alachua		No	Yes		2-5 times		Wildlife viewing	Remove the dam and let its water flow naturally	Cost & destruction to environment . Quality fishing is no longer found in the area	Continued environmental destruction	No	Legislators should not be so narrow minded but rather should consider the environment for future generations
9/23/2021 13:44	Broward		No	No					Breach the Rodman/Kirkpatrick Dam	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. It would also help restore fish, manatee, and other native wildlife populations.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
9/23/2021 13:44	Franklin		No	No									
9/23/2021 13:44	Orange		No	Yes			1 time	Boating Wildlife viewing					
9/23/2021 13:44	Leon		No	No					Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	The Ocklawaha River is the heart of the Great Florida Riverway, which, if restored, could provide essential warm water habitat for hundreds of manatees in the winter. Manatees have already reached a record number of deaths this year - and if we don't restore additional areas of their natural habitat, we could lose even more manatees in the future.	Loss and/or degregation of ecosystems, and specifically loss of manatee habitat.	Not really.	
9/23/2021 13:44	Broward		No	No									
9/23/2021 13:45	Outside of state / other	win a number of timeshare weeks in t	No	No					The Ocklawaha River needs to be restored by breaching the Kirkpatrick Dam	Restoring the Ocklawaha River will help provide essential warm water winter habitat for hundreds of manatees	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water habitat, harming their chances of survival in the future.	No, breaching the dam is already fifty years overdue. Wildlife and water quality cannot wait any longer.	
9/23/2021 13:45	Broward		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	The continued shyrocketing deaths of manatees!!	No	This is needed not just for manatees but also for much other wildlife. People cannot continue to selfishly destroy the planet at the expense of our environment and wildlife
9/23/2021 13:45	Orange		No	No					Clean water	Thirsti and Manatees.	Manatee Deaths.	Any that will kick out All Republican politicos.	Get the Freaking GOP OUT of Florida.
9/23/2021 13:45	Outside of state / other	Pennsylvania	No	Yes			1 time	Other: I don't use it	Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees.	As a someone who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for your state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation.	Manatees, along with other indigenous species are facing great pressure and in some cases extinction as continued habit and ecosystems get lost and/or compromised by development and pollution from agricultural byproducts.	no	his exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important and will greatly benefit Florida's people, environment and wildlife.
9/23/2021 13:45	Pinellas		No	Yes		1 time	1 time	Wildlife viewing	Breach the Rodman/Kirkpatrick dam to restore the springs!	There are almost 2 dozen springs that are being drowned and/or damaged by the dam. Breaching the dam would restore the springs and also protect the native plants/forest lands taken over by the reservoir.	Water quality decline and the environmental impact. This project would be the best and most cost effective way to address both of these concerns.	NO!!	It makes no sense to continue to spend millions of dollars to repair and maintain this dam when the environmental impact is so negative. NOW is the time to fund this project and breach the dam!
9/23/2021 13:46	Washington		No	No					I would like to see the Kirkpatrick Dam breached.	The action is necessary to release the Oklawaha River.	The Manatees will die, because they will not be able to access warm waters.	I would support any scenario that will help the Manitees. I do not know what other action, apart from breaching the Kirkpatrick Dam, that will do so. If there is any such action, I could support it, if my desired outcome cannot be achieved.	

9/23/2021 13:47	Orange		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/23/2021 13:47	Outside of state / other	Lebanon Junction, Kentucky	No	No					Breach the Kirkpatrick Dam ,and restore the Ocklawaha River to restore manatee optimal environment and restore many more acres to improve habitat for other native species.	the manatees need warm water to survive the winter	manatees will die out	no	
9/23/2021 13:47	Marion		No	Yes		2-5 times		Boating Wildlife viewing Other: We did Canoeing / kayaking on the Ocklawaha since the early '70's but are now restricted to a little Jon boat for health reasons. We don't fish.	Do a one year trial period with the lock gates open and the dam gates raised. This way we can preview the consequences. To remove a section of the dam without doing this first is totally reckless. Don't go off half cocked listening to a bunch of non local fanatics, let cooler heads prevail. Let us locals see for ourselves. We will be the ones that will take losses from flooding in the Ocklawaha River valley every time we have a hurricane come up the east coast like Matthew did in '16. We have protection from this now, once the dam is breached this protection will be gone. This is very worrisome to us.	I've witnessed very shallow water conditions in the Gore landing area of the Ocklawaha during the dry winter months. So shallow I doubt a Manatee could pass. I don't want to exacerbate this problem in the dry winter months with a breached dam.	I have no desired outcome.	I have no desired outcome.	More people need to realize the positive aspect of having the lock and dam structures whenever a major storm approaches off the east coast. The counter clockwise winds can and do fill the St Johns river up substantially. The Lock and dam are very important for our protection from flooding in this scenario.
9/23/2021 13:47	Seminole		No	Yes		1 time		Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam. 9/23/2021 13:49	Alachua		No	Yes	1 time	1 time	2-5 times	Canoeing / kayaking Other: Triathlon in the area	Removal. Avoid maintenance cost. Allow drowned springs to flow. Improved flow in st. John's.	Maintenance cost in the range of $1,000,000/year. Doesn't need to be spent.	Ongoing waste of taxpayers' dollars on unnecessary, harmful structures	Not really.	
9/23/2021 13:49	Citrus		No	No					Remove it	it has a negative impact on the environment.	I think the damn is ruining the environment, which will negatively impact tourism and the economy.	Not sure how, but the solution must be to restore the natural flow, which is important for the ecosystems downstream.	
9/23/2021 13:49	Nassau		No	Yes			2-5 times	Wildlife viewing Other	Remove it!!	Restoring the Ocklawaha.... Natualr iver for manatees, fish passage etc.	Continued Environmental damage. Money wasted on dam maintenance	Remove the dam AND restore theriver channel	
9/23/2021 13:49	Polk		No	Yes			1 time	Other: Observe it's impacted condition	Restore a free-flowing Ocklawaha River at sufficient breach to re-unveil the embayed springs, reforest the drowned bottomlands, fully re-enable seasonal fish passage, and re-establish full access to manatee habitat in the Silver River.	The globally unique aspects of the Ocklawaha River have been greatly simplified and homogenized toward a much more common lacustrine ecology and economy. There are many lakes but far fewer undammed black water rivers and even fewer Florida springs/black water river complexes in the world.	A monumental last opportunity to restore the system's natural functions in a manner that would also invigorate the regional economy by stimulating the kinds of ecotourism people visiting the real Florida wish to experience.	Perhaps, but anything short of returning a free flowing river at the full range of flow variability from base flow to flood pulse is unlikely to meet the critical objectives.	A huge benefit of restoring the hydrology and hydraulics by dam removal could be water quality improvement associated with stream restoration and wetland renegetation.

9/23/2021 13:51	Marion		No	No					I would like to see restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored, 20 lost springs and Silver Springs ecosystem are restored, Historic fish and manatees return as breach opens creating a free-flowing river, 100s of manatees gain essential warm water winter springs habitat, millions of dollars in dam repairs are saved on a dam past its life expectancy.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe - what if a storm event triggers a dam failure or overtopping resulting in potential damages to over 500 property owners and over $50 million in damages.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway.
9/23/2021 13:51	Outside of state / other	Mariposa, CA, 95338	No	No					It is important for a manatee habitat restoration project. 5,000+ acres of the Florida Wildlife Corridor will be restored, which is essential for many wildlife species.		We should not keep 7,500 acres of forested wetlands flooded.	No.	Please restore 15,000 acres of forested wetlands to benefit us all.
9/23/2021 13:51	Outside of state / other	NYC	No	No					Save this now!	We need to be more aware of the alcohol problems taking place in our country and the world	our animals are dying every day--protect them-take action now---	yes--rid your state of DeSantis and save Florida---now!	
9/23/2021 13:51	Washington		No	No					Please breach the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	The greatest long-term threat to these animals is the loss of warm water habitat that manatees need to survive the winter. Right now, 60% of Florida's manatees depend on power plant outfalls to keep warm and survive the winter - an unsustainable and unnatural situation.	Loss of these iconic, beautiful fellow Earthlings.	Thank you.	
9/23/2021 13:51	Collier		No	No					an environmental benefit for people wildlife an all nature		losing our fl ecosystem	no	
9/23/2021 13:52	Outside of state / other	Pittsford, NY	No	No					Safe for wildlife, especially manatees.	We can survive without Nature.	The end of humans on the planet.	Make every effort to conserve.	
9/23/2021 13:52	Alachua		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Canoeing / kayaking Boating Wildlife viewing	I would like it removed to restore the natural river flow	Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs.	The Ocklawaha River continues to be restricted and environmental concerns are ignored.	No, the dam is outdated and needs to be removed	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
9/23/2021 13:52	Outside of state / other	Los Angeles County	No	No						Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	No	
9/23/2021 13:52	Pinellas		No	No					Breach the Rodman/Kirkpatrick Dam.	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe.	None	

9/23/2021 13:52	Alachua		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/23/2021 13:53	Outside of state / other	Louisiana	No	Yes			Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	1. Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 2. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	1. Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. 2. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a person who visits and cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation.
9/23/2021 13:54	Outside of state / other		No	No				Manatees are still struggling with starvation from seagrass loss, the greatest long-term threat to these animals is the loss of warm water habitat that manatees need to survive the winter. Right now, 60% of Florida's manatees depend on power plant outfalls to keep warm and survive the winter - an unsustainable and unnatural situation. Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	Manatees have already reached a record number of deaths this year - and if we don't restore additional areas of their natural habitat, we could lose even more manatees in the future.	We will lose manatees forever.	There isn't one.	Do the right thing.
9/23/2021 13:54	Outside of state / other	Los Lunas NM 87031	No	No				We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	
9/23/2021 13:54	Alachua		No	No				Breach the Rodman/Kirkpatrick Dam.	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 best springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	
9/23/2021 13:54	Outside of state / other	Rock Hill, SC	No	No				Restore the Ocklawaha River by breaching the Kirkpatrick Dam	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. Over 15,000 acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future	No - breach the dam.	Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees.
9/23/2021 13:54	Palm Beach		No	Yes	1 time		Wildlife viewing	Removal of Kirkpatrick dam to restore the flow of the Ocklawaha river	restoring the river and restoring more warm water winter habitat for manatees	deprives manatee warm water winter habitat and leaves 7500 acres of wetlands flooded which continues to impact numerous species like black bear, panther bobcats etc.	no	
9/23/2021 13:55	Alachua		No	Yes	More than 5 times	More than 5 times	Canoeing / Kayaking Wildlife viewing	Revive our springs. Release the water	visual observation. Editorials in the Gainesville Sun.	springs will dry up, polluted waterways	Controlled water release...see how it goes	
9/23/2021 13:55	Broward		No	No								
9/23/2021 13:55	Brevard		No	No				The dam and reservoir should be breached/ removed to restore free flowing water for riparian and all associated species; returning to our wildlife a healthy free water way.	Restore this crucial water way to support manatees, bald eagles, black bears. Florida needs this piece of waterway for our ecosystem, our ecotourism, and the health of our state.	That the dam structure would remain, artificial and unnecessary. The structure inhibits the healthy natural waterway that could support a whole host of wildlife, improving the health and ecology of entire regions.	I'm not sure that any measure short of providing free flow would achieve anything.	Let's be a model for restoring and maintaining natural habitat. It has been done in several other states, and there are proven and decisive ecological benefits to allowing the natural order to repopulate and restore riparian lands.
9/23/2021 13:55	Outside of state / other	Phoenix, Arizona	No	Yes			Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, which would benefit species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	
9/23/2021 13:55	Outside of state / other	California	No	No				Protecting wildlife across the country should be all of our highest mandate. Climate Change, pollution and encroachment on ecosystems where wild animals live is human caused disasters. We can change these and protect wildlife.	Humans have caused wildlife extinction and harm that has reduced the rest of wildlife's ability to survive. We humans are to blame and need to take huge steps to protect all wildlife.	Protection of all wildlife. In this case protection and thriving of the manatee population.	No.	
9/23/2021 13:56	Washington		No	No				We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	NO!!! Remedying the manatee and environmental situation can't wait. Breaching the dam must begin now.	
9/23/2021 13:56	Outside of state / other	Berkeley, Califorria (the Bay Area)	No	No				Save the manatees--that's plenty.	All the poeple who will sign this and agree this needs to be done.	The Conservation impact of this.	I will have to see it when it comes out.	
9/23/2021 13:56	Orange		No	No				reunite the Ocklawaha, St. Johns and Silver Rivers and Silver Springs - the Great Florida Riverway.				
9/23/2021 13:57	Outside of state / other	Arlington Heights, IL	No	Yes	1 time	2-5 times	Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam. 9/23/2021 13:57	Orange		No	No						I would think, how stupid are we? Not to protect what we already have. Who knows how all these animals interlink in the chain of being. Are we cutting off the branch closest to the tree trunk? I don't know.	But I can't breathe any more. I have no good water to drink. I need to move 200 miles inland to survive. Stupidity!	I am answering this bc I just want to see manatees protected. I enjoy seeing them on walks and, as far as I am concerned, every species, variety, phylum, etc. of animals needs to be protected. How short-sighted are we?! We came into being into a world that was full of animals. (And I am aware of evolution and disappearance of species.) Nevertheless, it was a world ready to accept a human form. If we keep degrading this word, we're ruining the very thing that embraced us into existence.
9/23/2021 13:58	Outside of state / other	Ventura, Ca	No	No				We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees.
9/23/2021 13:58	Jefferson		No	No				Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
9/23/2021 13:58	Okaloosa		No	Yes		2-5 times	Canoeing / kayaking Wildlife viewing	Remove Rodman Dam entirely, and restore the Oklawaha's original natural character.	My dad, who grew up in rural Georgia, was a bomber pilot in World War II, and soon after the war's end he brought my family and me on a tour of late-1940's Florida. (--After spending the war shoving Nazis north from Africa, he needed this respite to recover, and regain his peaceful inner stability.) Our trip across Florida began in the Panhandle and took us all across the state to the east coast. I was but a small boy at the time, and much of that trip has faded from memory, but the part that has stuck indelibly with me was the glass bottom boat ride at Silver Springs. --Gators, turtles, and the biggest catfish I have ever seen! In the ensuing 70+ years, Silver Springs has deteriorated in many ways, but the most significant damage was done by the ill-conceived barge canal, blocking the Oklawaha River with construction of Rodman Dam. Please, let's now remove this dam, and allow Mother Nature to do her magic in natural restoration of this beautiful waterway all the way from Silver Springs to the Atlantic. Thank you, Bob Reid	The irretrievable loss to future generations, --not just Floridians, but all persons interested in the Natural World.		
9/23/2021 13:58	Sumter		No	Yes	1 time	2-5 times	Canoeing / kayaking Wildlife viewing	While I enjoy spending time at the reservoir and seeing all that nature has to offer, I believe it is high time to breach the dam and restore the native ecosystem of the Ocklawaha River. Florida's waterways developed over millenia to support an astonishingly complex web of life that we have done much to damage. It's time to reverse that trend, including restoration of the Oklawaha River system.	The most urgent need for restoration is around saving the very imperiled manatees. They are facing so-many threats with pollution and habitat destruction--they need a clean warm water habitat if their numbers are going to stop plummeting. I don't want to live in a Florida without manatees. Also the restoration of the Florida Wildlife Corridor will be a boon to os many of our beloved species: panthers, bobcats, eagles, black bears...	More obstacles for manatee recovery and for wildlife that cannot traverse the land for their maximum benefit. This is 7500 acres we're talking about--a significant acreage that wildlife needs more than we do.	No, this is not a situation that calls for half-assed measures. It's time for the dam to come down. Again, our wildlife needs that restored wildland more than we do.	I strongly support restoration of the Great Florida Riverway. Restoration will reunite, as God intended, this 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. This will benefit countless ecosystems along with local communities and economies. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will most importantly provide essential warm water winter habitat for hundreds of manatees. 2021 has been the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to manatees is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation, particularly if we do the right thing and keep moving towards solar power to protect our climate. Breaching Kirkpatrick Dam will let manatees access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife.

9/23/2021 13:58	Outside of state / other	Iowa	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. £5,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/23/2021 13:59	Marion		No	Yes		More than 5 times	Canoeing / Kayaking Wildlife viewing	I would like to see the Rodman Dam removed. The benefits of restoring the Ocklawaha River far outweigh leaving it in place. It is deteriorating due to lack of care and maintenance. The	If the Rodman is breached the Ocklawaha, Silver & St John plus approx. 50 Springs currently buried in rotting vegetation & silt will be restored. The Springs have been verified during scheduled draw downs at the dam.	We will lose the opportunity to make this happen while public interest is high. State & Federal funds are currently available. Over 400 Manatees have died this year. Restoring their past natural habitat by breaching the Rodman could sustain and even improve their chance for survival.	Breaching the Rodman is 50 years overdue. As it now stands in a time of FL's increasing danger from more intense & more numerous Tropical Storms & Hurricanes, the Rodman which lacks long called for maintenance is unsafe. When it fails, every person is in danger of loss of life and property. Such an outcome can be avoided by breaching the dam.	Breaching the Rodman is a win-win scenario for a majority of Floridians. It reconnects 3 three important rivers, uncovers over 50 springs thereby increasing water quality, boosts recreation opportunities, increases possibility of Manatee survival, increases the viability of fish with increased water quality & areas to breed, plus protect lives & property of citizens downstream from dam failure. The Silver Springs attraction would also benefit from cleaner water. With the news that in South FL is planning a highway through sensitive wetlands, we here have an opportunity to save and greatly improve the natural beauty that is our beautiful springs & rivers by breaching the Rodman Dam. Sometimes you only get one opportunity to do the right thing. I believe that time is now.
9/23/2021 13:59	Outside of state / other	Burlington, NC	No	No					Breach the Kirkpatrick Dam and restore the Ocklawaha River.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. £5,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Protection of Manatees is not solely a Florida issue but one of environmental and conservation that all citizens of America and the world ought to have a say in. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation.
9/23/2021 14:00	Flagler		No	Yes	1 time		Wildlife viewing	The fact that we lost more manatees than ever this year to starvation and lack of sea grass from pollution means that we need more habitat that is clean for the health of the ecosystem.	I would like to have the dam breached and go back to it's natural state to support more space for wildlife and warm spring fed waters for manatees.	It will detrimental to our ecosystem if we cannot restore it to its natural state. We have to do what we can to support our endangered and threatened wildlife. The Florida panther needs room to expand their territory since they are being pushed out by urban sprawl.	No! The dam must be breached. It should have happened 20 years ago.	
9/23/2021 14:00	Broward		No	No					Help the manatees by restoring their protection	I am concerned with their welfare.	The loss of one of Florida's treasures, the manatees?	
9/23/2021 14:00	St Johns		No	No					Breach the Rodman/Kirkpatrick Dam	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Give Manatees a safe, large habitat to thrive & repopulate. Restore fish populations.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. Manatees aren't don't have a safe place for winter.	NO. This has to happen.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future.
9/23/2021 14:00	Outside of state / other	CT	No	Yes	1 time	1 time	Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. £5,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As someone who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/23/2021 14:01	Pinellas		No	No				We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Manatees and other wildlife are the most important pieces of information! Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. 9/23/2021 14:01	Marion		No	No				I would love to see it removed.	Migration of the fishes and manatees. Its a septic tank.	The septic tank getting fuller.	Maybe	Most of the people that want to keep it, had never seen it before the damn shame was put into place. It use to be clear and cool waters. The water on top of the dam is warm water that spills over the dams, and evaporate millions of gallons every day from the pool. When I was a kid you could see catfish as big as I was. Manatees use to be there too. The Army Corps spray tons of poison in the pool every year to keep the grasses at bay. With a free flowing Ocklawaha River, there would not need to spray poison on the grasses.
9/23/2021 14:01	Outside of state / other	Durham, NC	No	No				We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam. 9/23/2021 14:01	Putnam		No	Yes			1 time	Wildlife viewing	I would like to see this dam breached	the incredible springs of our region are not thriving and breaching this dam could restore water to 20 springs. that is huge for the manatees and the ecosystem in general of our area	such a waste of money repairing this dam when if we just got rid of it, the springs, manatees, fish, and people would be so much better off. I am very concerned for the manatees and the loss of our springs.	No, the dam needs to be breached	the manatees need this breach. their population is in peril and they need the springs to survive in. please allow florida waterways to return to their natural state. dams are a thing of the past that have consistently proven to have grave environmental outcomes.
9/23/2021 14:02	Outside of state / other	Montgomery County, Pennsylvania	No	No					We need to ensure that the Florida Waterways are kept free, not for boat traffic but for the wildlife, for example manatees.	Over the last few years, there has been an alarming decrease in numbers of manatees and other manne wildlife. Unlike humans who can move to another part of the state or out of state, they do not have any other place to live; the ocean and waterways are their home. We (humans) are the visitors.	One by one we seem to be destroying wildlife's territory. If we want their existence to continue, it is essential we honor their space. Whether we know it or not, each wildlife creature has a purpose in humans' existence.	Not really, we have been developing areas of Florida that should not be, such as swamp land. We will eventually pay the price, maybe not the older generation but the young people. Global warming is happening.	
9/23/2021 14:02	Okeechobee		No	Yes	1 time		Wildlife viewing Kiteboarding	My family and I would like to see all Manatee habitat restored.	Manatee numbers are in decline.	That Manatees are put at risk due to human disregard and lack of concern.	We support restoration of the habitat for Manatees and other wildlife.	
9/23/2021 14:02	Alachua		No	Yes	1 time	1 time	More than 5 times	Fishing Boating	Nothing needs to change. The damn is well established and has reason to be messed with.	We and my father have fished Rodman reservoir countless times and it has shown to be one of the best lakes in Florida to fish. The ecosystem that is there is home to great species diversity and quality of fish. When the water is drawn down every 3-5 years it creates fresh, new, and healthy bottom structure for grasses and algae to grow. This gives lots of structure on top of the countless flooded cypress tress for new and growing fish to hide and take cover within and around. This proves that the ecosystem there is heavily established.	My biggest concern for the dam being removed is that people will see what nature has to reset after the lake is destroyed. I feel that people do not realize how much work nature has to put in to revert what humans do to the world. Rodman reservoir is proof that nature can adapt to what human change in it but it is too far along and this ecosystem has already been established and but removal of the dam it will cause nature to completely start over.	No the dam needs to stay.	Removal of Rodman dam will cause more harm than good and there is no way that by removing it will help the ecosystem in any way. Being a fisherman and seeing how nature can adapt is amazing but if the dam is removed there will forever be a scar on Florida from where the lake used to be. DO NOT REMOVE THE DAM!!!
9/23/2021 14:02	Pasco		No	Yes			1 time		Removal. The cross Florida barge canal was a boondoggle which only provided profits for the officials overseeing it	We have an economy which relies on healthy ecosystems	Continued adverse environmental impact	No	
9/23/2021 14:02	Pinellas		No	No					I'd like to see the dam removed so natural environmental processes may resume.	Knowing that fish have had their migratory routes destroyed by a man-made feature.	That there will be continued apathy toward the natural cycle of the planet and its water systems.	I don't know. you tell me the possible scenarios.	
9/23/2021 14:03	Franklin		No	Yes		2-5 times		Wildlife viewing	Restore and maintain the lands and water for Wildlife and Sea Animals		Destruction if our lands and Mother Nature		

9/23/2021 14:03	Outside of state / other	jersey city. nj	No	Yes			1 time	Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife.
9/23/2021 14:06	Duval		No	Yes		1 time	2-5 times	Fishing (shoreline/structure) Other: To access the Ocklawaha River via boat or kayak.	The time has come to finally breach the dam and restore the natural flow of the Ocklawaha, the surrounding floodplain wetlands, and the submerged springs. The dam has created an unnatural system that must be maintained and manipulated to the detriment of the Ocklawaha and ecosystem.	The federal and state scientific studies that support the breaching of the dam and the restoration of the Ocklawaha. The ecological, economic, and recreational benefits of restoration far outweigh the costs and limited benefits of keeping the dam in place.	That science took a backseat to politics and a significant opportunity was lost to stop the ongoing ecological degradation caused by the dam and finally reestablish a natural, free-flowing Ocklawaha. Breaching the dam would reestablish natural fish migration patterns and the natural flow of 150 mgd of fresh water, improve water quality and wildlife habitat, restore 5,000 acres of forested wetlands, and reduce saltwater intrusion. Breaching the dam would also provide more opportunities for recreation and economic development. Keeping the dam will require the ongoing and unjustified cost of maintaining a relic of the failed barge canal project and maintaining an unnatural system, such as spraying chemicals and drawdowns to control invasive plants. As the impacts from climate change continue to worsen, so too will the ecological health of the reservoir and the fishery.	No, keeping the dam intact does nothing to restore this degraded ecosystem and only delays the inevitable.	The time has come to stand on the side of science and acknowledge the tremendous value of a free-flowing Ocklawaha to Silver Springs, the St. Johns, the Great Florida Riverway, and the people of Florida by breaching the Rodman dam.
9/23/2021 14:06	Outside of state / other	Pennsylvania	No	Yes		1 time	2-5 times	Canoeing / kayaking	Ideally the damn would be removed and the waterway restored to it's natural state	As the most impactful manatee habitat restoration project in the state, restoring the Ocklawaha River will provide essential warm water winter habitat for hundreds of manatees. Species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer will benefit from the restoration of the 15,000+ acres of the Florida Wildlife Corridor	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No, this is the only outcome that makes sense and is already decades overdue.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/23/2021 14:07	Marion		No	Yes			1 time	Other: to see for myself what a terrible mistake this low quality impounded body of water is, and the damage done to significant wetland resources.	Decommission the dam and restore the Ocklawaha River and the associated forested wetlands and floodplains. Do away with the Reservoir. It serves no positive ecological purpose and only costs Florida tax payers to maintain it.	We are loosng wetlands and water quality within our remaining springs. This will restore 20 lost springs and the Silver Springs ecosystem, historic fish and manatees will return as breach opens creating a free-flowing river. Recreation opportunities will abound and local economies will benefit.	The tax payers will continue to foot the bill for the boondoggle dam and reservoir at the expense of thousands of acres of wetland habitat, springs and natural flowing river. Florida needs more wetlands and aquatic habitats, not more reservoirs!	No.	this has gone on long enough. For 30+ years the local community and statewide organizations have been trying to get the State to do the right thing and restore this vital ecosystem.
9/23/2021 14:07	Volusia		No	Yes		More than 5 times		Wildlife viewing	Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	Even while manatees are still struggling with starvation from seagrass loss, the greatest long-term threat to these animals is the loss of warm water habitat that manatees need to survive the winter. Right now, 60% of Florida's manatees depend on power plant outfalls to keep warm and survive the winter - an unsustainable and unnatural situation.	Manatees will continue to have difficulty finding food and this will ultimately hurt the population totals of manatees.		
9/23/2021 14:07	Broward		No	No									I am not familiar with this waterway nor the specific importance to the state. I am responding in support of those who are informed, concerned and aware of the needs to keep the waterway viable.
9/23/2021 14:08	Washington		No	No					clean it up and tear it down	manatees	injury and daath to manatees	the public and politicians become more responsible and liable	
9/23/2021 14:08	Pinellas		No	Yes			1 time	Other	Open it up		Moving water no more	No	
9/23/2021 14:08	Outside of state / other	Ohio	No	Yes			1 time	Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. It would also keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. 9/23/2021 14:11	Outside of state / other		No	No					Breach the Dam to restore the river environment.	Restoring the habitat of the Ocklawaha River will benefit the manatees.	Manatee survival	No	
9/23/2021 14:12	Marion		No	Yes		1 time	Other: Boat tour during draw down to observe for myself the condition of the reservoir.		I would like to see the Rodman/Kirkpatrick Dam removed to allow the Ocklawaha River to run free again. This would also improve water quality, conservation activities, biodiversity and allow manatees another safe place to eat and winter over.	Restoration of a free flowing river would bring the whole system back to a healthy level providing more and improved recreational opportunities and a healthier ecosystem for humans and wildlife. Everyone and everything wins, even the bass fishermen!	Further degradation of the river and its wildlife. Every day that goes by is a double slap in the face to Florida citizens- we are paying and will continue to pay millions of dollars for a dam that is unsafe and not needed. We are throwing good money after bad and in doing so, we are damaging the river and its wildlife in the process. The citizens of Florida would be asked to continue to pay money to destroy their natural resources- essentially spending money to go into debt!	No. You either have a dam or you don't. This dam has been destroying our river long enough.	I am a native Floridian and have called Marion County home for almost 50 years. I moved to Marion County to find a fresh, wholesome place to raise my family and to live out my life- a place where nature was abundant and people could enjoy a variety of ways to interact with it. However, the rivers, springs and their surrounding ecosystems were and are the "lifeblood" of my decision to call this area home. The springs and rivers refresh my soul whether hiking, kayaking or sitting on the bank in quiet contemplation. When I took a boat tour to see what the Rodman dam had done, my heart sank. The landscape was like a nightmare- dead trees, rotting vegetation, submerged springs. We took a magnificent river system, choked it almost to death and left the corpse around for 5 decades! Wise elders in my youth told me when man tries to improve on creation, he always fails in the long run and creation and its creatures pay a high price. The Rodman dam is just one more in a long line of such attempts in Florida. However, the good news is that nature is standing by, ready to refresh God's creation. Remove the dam and let the water's flow and begin to heal. Thank you for your consideration of my comments.
9/23/2021 14:12	Outside of state / other	United States	No	No					Every thing what manatees need to stay survived. Please see that manatees receive what they need for their needs of survival.	I'm here for manatees' needs of survival that I'm asking u to provide every thing manatees need for their needs of survival.	'I heartwrenching ''I Our Heavenly Father created every different kind of animals on the Earth. We should not neglect what the animals need like manatees need. We need to see that we take good care of manatees so our generations will be inspired watching how beautiful manatees are.		
9/23/2021 14:12	Glades		No	No					Ocklawaha River restored by breaching the Kirkpatrick Dam	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/23/2021 14:14	Outside of state / other	Oregon	No	No					Restoring the Ocklawaha River and breaching the dams	Saving Manatee lives and other marine life and the sea grass	Manatee extinct , sea grass die off , complete breakdown of the ecosystem	No	We can't wait any longer. You must free the river and restore the area back to its natural state in order to bring balance
9/23/2021 14:14	Alachua		No	Yes		2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Removal of the dam to restore a free-flowing Ocklawaha River	Tremendous financial and ecological costs of maintaining Rodman Pool	Loss of the social benefits of dam removal.	Hard to imagine...need to get the river back within its banks and the springs flowing again.	I am mystified about why this problem wasn't resolved decades ago when the benefits of river restoration became clear.
9/23/2021 14:15	Outside of state / other	North Carolina	No	Yes			1 time	Wildlife viewing	For it to be restored	Keep Manatees alive	More deaths of manatees		
9/23/2021 14:15	Liberty		No	No					Kill the dam, we need the water to flow and restore the aquatic habitat.	The positive effect on important wildlife, especially manatees, bears, panthers, etc.	The continued decimation of wild manatees in Florida.	None. Breach the dam immediately.	The Great Florida Riverway is a national treasure and needs to be treated as thus. Securing habitat for our wild manatees is of prime importance to the people of Florida and American in general.
9/23/2021 14:15	Outside of state / other	NC	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	
9/23/2021 14:15	Outside of state / other	California	No	No					Protect the manatees	Save the manatees			
9/23/2021 14:15	Outside of state / other	Dallas, TX	No	No					Protect not only the manatees, but the entire ecosystem.	The red tide and dying off of the manatees food source (sea grass) is causing a RECORD number of deaths!	Seeing the end of manatees in this area.	Not at this point in time. Let's see what the other side has to say.	I had a chance to swim with manatees 4 months ago in Crystal River and it is one of those experiences that will stay with me forever. Let others have that experience too. Save the manatees!
9/23/2021 14:16	Pinellas		No	Yes		1 time		Canoeing / kayaking Wildlife viewing	For it to be breached	Increased Wildlife restoration for Silver Springs. Breaching this damn could help encourage and flourish the springs wildlife population. We need to hold onto as much Florida's green spaces as Florida continues to be developed exponentially.	More work still needs to happen always so one failure should not discourage us from preserving Florida.	Getting people involved in restoration is enough.	I love my home state and I want it to be cherished for all to enjoy.
9/23/2021 14:17	Washington		No	No									
9/23/2021 14:17	Outside of state / other	Santa Cruz, CA	No	Yes			1 time	Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a citizen who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our nation's/state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 9/23/2021 14:21	Outside of state / other	Wilson County Fredonia, Kansas	No	No					Protect the many animals who live there	Animals are dying at greatest rates than in the past	Things go back to normal	protect the animals	
9/23/2021 14:21	Putnam		No	Yes			1 time	Fishing	Removed	I live along the St. John's River across from the mouth of the ocklawaha and have steadily seen the river water quality deterioration over the past decades. Also the threat to property in Welaka should the dams fail.	Continued decline of the St. John's	Breach of the damn to allow natural water flow, increased fish population and cleaner water	A free flowing Ocklawaha river would improve water quality, bring back fish and allowing extended boating and fishing along the river.
9/23/2021 14:21	Dade		No	No					Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	Restoring the Ocklawaha River is critical to ensuring the long-term survival of manatees. This river system, with over 20 connected springs, could provide essential warm water habitat for hundreds of manatees. With the species in crisis and many more die-offs likely if habitat is not restored, we need to do all we can to keep them safe from fatal temperatures.	The drastic decline of manatees		
9/23/2021 14:21	Duval		No	No						Yes	People s misbehaving towards animals rights		
9/23/2021 14:22	Duval		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam. This is well overdue and will help protect the St. John's River from encroaching seawater salinity and assist with climate resiliency.	Manatees are dying in great numbers. The manatee is an iconic Florida animal; it's legendary and beloved. Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. Additionally, 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	There is no SINGLE biggest concern; there are many. First, there are the manatees... keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Worse in some ways, keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to negatively impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	NO. Breaching the Rodman Dam is the only choice; we have the ability to right a wrong that's been 50 years in the making. Florida's wildlife (and the tourism around it) cannot be squandered for a failing fishing hole for a relatively small number of people. Florida's wildlife, especially the precious and beloved manatees need the dam gone and the river restored. Further, the wildlife that will be both protected and increased by restoring the river will be good for Florida tourism and Floridians alike. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	I'm a Floridian and a stakeholder in this state that has such natural beauty. And I vote. There are so many GREAT reasons to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, ESPECIALLY manatees. Far from achieving only a single objective, this restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Coastal resiliency will pay enormous dividends as we see the sea-level rise and increasingly dangerous hurricanes on our peninsula. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the DEADLIEST YEAR on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from the loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is the loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Think of that, TWENTY NATURAL SPRINGS have been covered over for a half-century in a textbook case of initial good intentions being very poorly manifested. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees.
9/23/2021 14:23	Dade		No	No					keep our water and natural habitat but this evil piece of shit republican governor all his emphasis is to destroyed it				
9/23/2021 14:23	Clay		No	No					take it down	more water flow into the river creating a better environment	the health of the river	other options to clean the river such as more artificial reefs	What can I do to help?
9/23/2021 14:23	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Hunting Wildlife viewing	Removal.	A cleaner clearer flowing Ocklawaha river. The return of several species of fish to the river system.	A huge expense for the state if the dam were to fail with age.	There are pluses and minus' with either scenario. I support whatever the state decides.	
9/23/2021 14:24	Outside of state / other	Essex	No	No									
9/23/2021 14:24	Marion		No	Yes	1 time			Wildlife viewing	restored back to natural	ecological benefits of restoration	ecological barriers no movement of wildlife and plants		
9/23/2021 14:24	Alachua		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	
9/23/2021 14:25	Leon		No	Yes	2-5 times			Fishing Fishing (shoreline/structure) Canoeing / kayaking Wildlife viewing	Breach of the dam to let the river flow, save annual management money and restore this once ecological jewel so as to provide more public use	The dam was constructed as part of the long defunct Cross-Florida Barge canal scheme. While periodic fishing tournaments are held on the reservoir, a much more vibrant economic impact could be produced from a more natural river with a wide variety of visitors who may fish the river if they choose. Indeed, wildlife viewing (such as manatees) is an ever increasing activity and revenue producer	Continued ecological debasement of a rare ecosystem that could produce economic benefits for surrounding counties.	A partial breach of the dam could be a possible outcome if it allowed migration of aquatic species.	This is a rare chance to fix something that we have broken. Please take it for ourselves and future Floridians.
9/23/2021 14:25	Outside of state / other	TX	No	No					it is known now that dams are harmful to the Natural order - restore the river	manatees are wonderful and their protection is not even in question	humans continue to ignorantly and arrogantly take take take until the destruction is total	only is enough water is releasing to support the habitats of other living beings right to be here	good stewardship is the goal
9/23/2021 14:26	Brevard		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	
9/23/2021 14:26	Outside of state / other	Bedford, VA	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/23/2021 14:26	Outside of state / other	Fort Bend County, Texas	No	No					Remove the dam and let the river flow.	The Florida manatees need this warm water habitat to continue to live. Other wildlife as well.	The manatee will die off and become extinct.	Remove the dam and let the river flow.	The Florida Manatee is an important part of life. Humans don' t always have to move in and take over everything and every space
9/23/2021 14:27	Outside of state / other	California	No	No					Please restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state, and will provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer	This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. 9/23/2021 14:27	Duval		No	Yes			1 time	Fishing (shoreline/structure)	Remove the dam and restore the river and natural watershed	Rodman has only served the interest of a few. Restoration of the river would provide recreational benefits to many, including the few who use Rodman	Majority is ignored	No	It is time

9/23/2021 14:27	Washington		Yes	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/23/2021 14:27	Brevard		No	No					Take it down and restore the natural habitat for manatees and fish.	Manatees are in desperate need of safe habitat.	Dwindling manatees and migratory fish. Continued algae blooms and negative impacts on the environment.	No	Please don't waste tax dollars repairing a dam that has done so much damage to Florida.
9/23/2021 14:28	Outside of state / other	49820	No	Yes		1 time	Wildlife viewing	100% CLEAN ENVIRONMENT	Mankind is the destroyer of all life with pollution.	In time, mankind will destroy all life on earth with pollution.	MANKIND IS KING OF BEASTS, HIS BRUTALITY EXCEEDS THEIRS.	IF YOU HURT, EXPERIMENT, OR KILL ANIMALS IN ANY WAY, YOU & YOUR FAMILY SHOULD BE TREATED THE SAME WAY. HARMING ANIMALS IN ANY WAY SHOULD BE PUNISHABLE BY LIFE IN SOLITARY CONFINEMENT PRISON WITHOUT PAROL WITH SEVERE HARD LABOR. EXPERIMENT ON YOURSELF, YOU'RE CLOSER TO A HUMAN THAN AN ANIMAL!SAVE THE ANIMALS & ENVIRONMENT - DO IT NOW!!! IF YOU REGARD ANIMALS AS MEANINGLESS, YOU'RE A AMORAL STONE AGE BARBARIAN, NOT FIT FOR .... DO NOT HURT ANIMALS, WE'VE HURT THEM ENOUGH; SAVE THEIR LIVES AND PRESERVE THEIR NATURAL HABITATS. DO IT NOW!!! EXPERIMENTING, ENTERTAINMENT, BLEEDING, CLOTHING, GLUE TRAPPING, RACING, HUNTING AND FISHING, PREFORMING, SEISMIC AIRGUNS ARE NOT SPORTS - THEY ARE PREMEDITATED MURDER!!! EXPERIMENT ON YOURSELF. DO NOT KEEP ANIMALS IN ZOOS. DO NOT BUY FROM CRUEL ANIMAL BREEDERS. WOULD YOU CONDONE YOURSELF TO BE KILLED FOR A TROPHY, EXPERIMANTED ON, OR FOR CLOTHING BY SUPERIOR ALIENS LIKE YOU CONDONE KILLING, OR MISTREATING OUR ANIMALS, OR KEEPING THEM IMPRISONED, EXPERIMENTED ON OR HUNTED? SAVE THE ANIMALS & ENVIRONMENT ~ DO IT NOW!!! STOP POLLUTING NOW!!! SAVE THE ENVIRONMENT FOR ALL.

9/23/2021 14:28	Outside of state / other	Missouri	No	Yes			1 time	Wildlife viewing Other	Restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed means 7,500 acres of forested wetlands flooded by the Rodman Reservoir will continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	It is our responsibility to protect wildlife and our natural resources for future generations.
9/23/2021 14:29	Duval		No	Yes			1 time	Other: Just to see it	Remove it and let the Oklawaha return to natural	Any man made structure will fail and require on-going costs. Plus I hear that when it is drained for maintenance there are more fisherman that show up during that time! I also like the idea of taking a boat from Jacksonville to Silver Springs like in the old days.	on-going costs	not really	
9/23/2021 14:29	Escambia		No	No									Just do the right thing & Help the manatees 🙏🏻
9/23/2021 14:29	Outside of state / other	Hampton	No	No					The dam needs to be breached to restore the oklawaha river.	This will restore manatee habits, gaining more access to natural springs, warmer waters that they need for survival. Also ensure 15000+ acres of wetlands can be restored, benifiting multiple wildlife species.	Manatee numbers will continue to decline as will the hopes of wildlife conservation. These are all integral parts in the Florida ecosystem.	No, the dam is 50 yrs over due of being breached.	
9/23/2021 14:30	Clay		No	Yes			1 time	Fishing Boating	take it back to it's original path without a dam	restoring to a natural state	continuation of the raising and lowering of the water	no	
9/23/2021 14:30	Outside of state / other	Mountain View, CA	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	I believe strongly that all species that depend on our stewardship count on us as we make infrastructure decisions that impact their habitats.
9/23/2021 14:30	Duval		No	No					Now is the time to breach the dam and reconnect the Ocklawaha to Silver Springs and the St. Johns River, restoring a 217-mile network representing some of Florida's most critical waterways and wildlife habitat.	The scientific studies that have been made.	The continuing loss of the health of our waterways and springs that flow in and out of the waters. This includes concern for the creatures that inhabit the waterways like the manatees and fishes.	No. We have been discussing this for too long a time. Public interest and financing exist to do something now. Let's stop this tragedy.	so so many communities along the 217 miles. My son spent years fishing in the River and has watched the quality of the fish he caught deteriorate. Please act now!!!
9/23/2021 14:30	Lee		No	No					To restore the Ocklawaha Riverby breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in Florida and will provide essential warm water to hundreds of manatees.	That the manatees will not be able to survive much longer.	No.	2021 has been the deadliest year for manatees on record, and the continued loss of the warm waters that they need to survive will doom them to extinction.
9/23/2021 14:30	Palm Beach		No	No					Save the Manatees!	Survivor is dependent upon success!	Extinction of the Manteas		
9/23/2021 14:31	Marion		No	Yes			1 time	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	100s of manatees gain essential warm water winter springs habitat	Hundreds of manatees lose the opportunity to access essential warm water winter habitat.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.
9/23/2021 14:31	Outside of state / other	MD	No	Yes			2-5 times	Fishing Canoeing / kayaking Wildlife viewing	Restore to its natural state.	Perpetualization of existing species	Extinction of endangered species	Possibly	
9/23/2021 14:31	Outside of state / other	New York	No	No					Restored to a natural state for wildlife preservation	Wildlife loss	Unsustainable environment conditions. Wildlife loss		
9/23/2021 14:31	Putnam		No	Yes			1 time	Fishing Canoeing / kayaking Wildlife viewing	Removed,River restored	It is the healthiest option for the River and Especially the State of Florida ,it's estuaries , everglades, etc	It's a travesty for the health of state waters and Evo suspens	Not sure if that s possible	
9/23/2021 14:31	Marion		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Removing the dam.	It is believed that removing the dam would open up greater habitat access for manatees. This is especially important now when it seems as though manatee numbers are declining rapidly in Florida.	Habitat degredation continues and manatee numbers continue to drop.	No. Removing the dam and restoring the natural flow to the Ocklawaha seems like the best course of action.	
9/23/2021 14:31	Hillsborough		No	Yes			1 time	Wildlife viewing	I would like to see the dam removed. The river needs to be restored to its natural state.	It's not worth millions of dollars every year so some people can go fishing in an artificial lake that doesn't even have that many fish. If the 20 springs that are not accessible because of the reservoir became assessable many more tourist would visit that area. Have you ever been to a spring on a hot summer day they're packed	That they're horrible abuse of nature would continue. This was a failed project from the beginning. There's no reason for the dam to be there.	No	
9/23/2021 14:31	Putnam		No	Yes			More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	LEAVE IT ALONE!!!!!!!!!	The wildlife flourishes and it is probably the best fishery in the state.	A lot of business will suffer in Putnam County	NO. Leave Rodman alone.	
9/23/2021 14:31	Duval		No	No					preserved.	water and land protection.	destruction of natural resources.	no.	
9/23/2021 14:31	Outside of state / other		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	
9/23/2021 14:37	Outside of state / other	Knox County, Maine	No	No					I want to see manatee habitat preserved.		Habitat reduction for manatees	a partial reserve for manatees might be better than nothing.	Please do what you can to conserve wildlife. This is the only planet we've got.
9/23/2021 14:37	Hillsborough		No	No					Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Also hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
9/23/2021 14:37	Lake		No	No					Breaching of the dam.	This could restore 20 drowned springs and increase resources for wildlife such as fish and Manatees	We lose manatees to extinction due to our careless actions.	No.	
9/23/2021 14:37	Pasco		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	150+ million gallons a day of natural flow restored to the lower Ocklawaha and St. Johns Fivers	20 springs lost including Silver Springs and decline of water quality.	NO.	Return flow of water back to the way nature intended it to be.
9/23/2021 14:38	Duval		No	No					I would like the River restored to its natural flow	We are seeing the flow of springs being decreased and the St. Johns River is being compromised.	Worsening issues with fresh H2O which is the lifeline for humanity.	No	
9/23/2021 14:38	Alachua		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Remove the dam and allow the Ocklawa to regenerate	The reservoir is clogged with muck, dead trees and aquatic plants	Taxpayer funds will continue to be wasted trying to maintain a poorly conceived reservoir. Plus the dam structure is beyond its useful life and require major improvements or replacement to avoid failure.	Not really. You can't half repair the dam or fix the clogged reservoir.	While I live in Alachua County, We've also seen a house on lake Kerr quite near the Ocklawaha. The restoration of the river would improve the fishing stock and be a major asset to marina county.
9/23/2021 14:39	Outside of state / other	Jersey City, NJ	No	No					restore the Great Florida Riverway while we can still help the wildlife who need this habitat.	Right now, 60% of Florida's manatees depend on power plant outfalls to keep warm and survive the winter - an unsustainable and unnatural situation	even while manatees are still struggling with starvation from seagrass loss, the greatest long-term threat to these animals is the loss of warm water habitat that manatees need to survive the winter.		
9/23/2021 14:39	Broward		No	No					Restoring the Ocklawaha River is critical to ensuring the long-term survival of manatees. This river system, with over 20 connected springs, could provide essential warm water habitat for hundreds of manatees. With the species in crisis and many more die-offs likely if habitat is not restored, we need to do all we can to keep them safe from fatal temperatures.	Common sense.	People in the future will look back and ask "Why didn't you do something to prevent the Manatee's from being wiped out?" How will we all be able to live with ourselves knowing we could have saved these wonderful, magical creatures but we did....nothing.	I'm not sure. I leave it up to people who are more informed than me.	I shouldn't have to spend my free time trying to get government and officials to do their job. Which is: Progress while keeping us all safe and the environment healthy. I do my job just fine by myself. Why don't all of you?
9/23/2021 14:39	Marion		No	Yes				Other: I do not use it.	I would like to see the dam dismantled and the Ocklawaha River restored to its natural state.	The dam serves no function. It does not prevent flooding or generate power but was constructed simply because of the defunct Cross Florida Barge Canal. I remember the beauty of the river before the dam. There were huge catfish and bass and bream aplenty. The algae was non-existent and the river clear.	Blue tilapia have taken over the natural fish of the area. 20 springs are "buried" that could be brought back to life. Silver Springs is diminishing in strength and beauty and this would continue.	No.	I am a fourth generation Marion Countian. My father was a fisherman on the Ocklawaha, as was his father and his before him. I can hardly look at the river now as it is so degraded. The huge catfish are completely gone and most of the bass and bream as well.
9/23/2021 14:40	Outside of state / other	Grants, New Mexico	No	No					The Kirkpatrick Dam should be removed to restore the Ocklawaha River	The creation of this Florida Wildlife Corridor is critical to preventing the extinction of many endangered species in Florida, while the restoration of the river will help hundreds of manatees.	The deep impact on many species especially manatees and other woodland animals, making recovery nearly impossible.	I do not see much area for compromise between no dam and removing the dam, which should have been done many years ago.	I may not be from Florida, but I'm an American who wants Florida wildlife to thrive. I would like my son to be able to see a manatee when he is older and to know we did what we could to help this unique and amazing species.
9/23/2021 14:40	Pinellas		No	Yes			1 time	Wildlife viewing	Remove Rodman Dam in order to Restore Oklawaha, Silver and St John's rivers as they were in their natural state. It's not nice to fool Mother Nature.	The dam is unsafe, and millions would have tobe spent to repair it, to keep the area from being flooded. At the same time, there are federal and state funds available to contribute to the cost of dam removal and restoration of natural flow of 3 rivers and 20 springs. In turn, these will support improvement/ expansion of the Wildlife Corridor, additional warm water access for manatees in winter, and increased fish.	Continued reduction in the manatee population; the collapse of the dam and subsequent flooding of surrounding area; and additional decline in animals, birds and fish that formerly inhabited the areas in question.	No	I lived in Marion County when the dam was debated and built. I believed it was a gigantic mistake then, and haven't changed my mind.
9/23/2021 14:40	Outside of state / other	Yonkers, NY	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("OSO") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/23/2021 14:41	Duval		No	No					Breach the dam and restore natural water flow to improve water quality and habitat	science supports restoration	continued ecological degradation	NO	
9/23/2021 14:41	Alachua		No	No					Free the river please.	The damage done to the ecosystem	The damage done to the ecosystem	Are there ways to preserve recreational use of the reservoir while restoring the river to a meaningful degree?	
9/23/2021 14:41	Suwannee		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway	100s of manatees gain essential warm water winter springs habitat	Hundreds of manatees lose the opportunity to access essential warm water winter habitat.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/23/2021 14:41	Martin		No	No					Breach the Rodman/Kirkpatrick Dam	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	- No. Breaching the dam is 50 years overdue.	As a Florida native, the state's unique ecology is extremely important to me. I want the environment to be in good health for my future children. Not only that, tourism in Florida is extremely important to my livelihood and the springs and nature in Florida is a huge attraction for tourists. It is essential to restore as many springs as possible and to keep Florida beautiful and pristine.
9/23/2021 14:42	Outside of state / other	Connecticut	No	No					Do what is MOST environmentally friendly and responsible.	Protection of protected species	Extinction of protected species	No	Many species are already loosing numbers due to environmental challenges. HUMAN CAUSED CHALLENGES can be modified to cause LESS damage to environment and death to fauna and flora in the area.
9/23/2021 14:42	Broward		No	No					Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam to reunite the natural connection of Silver Springs, the Ocklawaha and the St. Johns River.	Studies by federal and state agencies have clearly demonstrated that restoration of a free-flowing, connected system is cost-effective and will provide significant ecological benefits to the St. Johns, Ocklawaha and Silver Rivers as well as Silver Springs. Restoration of lost springs & estuaries, support of our beloved manatees - THE MORE NATURE IN FLORIDA MEANS THE BETTER ECONOMY - TOURISTS.	we loose the natural appeal of FL, we go down the tubes. I'M A REPUBLICAN LAND LORD (I have recently sold a multimillion dollar Self Storage facility in Palatka). If we keep screwing up nature in FL, we all loose.	No. Breaching the dam and restoring the Ocklawaha are 50+ years overdue. Dam safety issues and improved water quality, wildlife habitat, and recreational opportunities can't be ignored or delayed any longer.	As a land owner/stakeholder who cares about Florida's environment and wildlife, I request that you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, AND KEEP THE TOURIST DOLLARS FLOWING TO FLORIDA. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $30 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. The greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. A further benefit, infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration.
9/23/2021 14:42	Outside of state / other		No	No					removal of dam	manatee die off	loss of potential manatee habitat and access to warm water	release of substantial amounts of warm water from reservoir in winter	we need to be proactive in providing sufficient habitat for manatee populations to sustain themselves
9/23/2021 14:42	Outside of state / other	New Mexico	No	No					This dam needs to be breached to allow manatees to survive	The fact that manatees are dying at an alarming rate	The extinction of the manatees	I would have to see what the options are	
9/23/2021 14:42	Flagler		No	No					I would like to see the dam removed and the river restored to it's original site.	Wildlife restoration to the area.	With Florida's ever increasing population more needs to be done for preservation.	No	
9/23/2021 14:43	Hillsborough		No	No									
9/23/2021 14:43	Polk		No	No					Restore to natural conditions	Spring restoration and healthy river habitat. I want to kayak here.	Continued loss of spring access to our residents. We are losing manatees and their habitat at alarming rates. This restoration should focus on both these needs.	No, this is the only and right thing to do.	
9/23/2021 14:43	Marion		No	Yes			1 time	Boating Wildlife viewing	restore the natural flow of the St. John River	Publications by expert biologist and nature conservationist advocating for the restoration disrupted by an ill informed government attempt to build a cross Florida barge canal which would have destroyed the aquifer.	Continued degradation of the environment and wildlife that is dependent upon the natural resources which are directly affected by the river.		Sport fishing is not vital to our economy nor sufficient justification to destroy our natural resources.
9/23/2021 14:43	Alachua		No	Yes			1 time	Wildlife viewing	I would like to see the dam completely removed, beginning with a well designed breaching process that includes the complete removal of the dam and full restoration of the natural hydrology and ecology of the area currently impacted by the dam.	The dam and Cross-Florida Barge Canal are not economically nor ecologically necessary.	The required maintenance costs will continue to be unfunded, thereby leading to a catastrophic unplanned and unsupervised breaching of the dam and significant economic costs to property downstream.	No, the popularly proposed breaching plan does not address the complete removal of the dam structure.	To complete this project will be expensive and take years to complete, so lets get started now, please!
9/23/2021 14:43	Alachua		No	Yes		More than 5 times		Fishing Boating	Leave it alone	It is a tremendous wildlife habitat for all freshwater fish, predator animals like eagles and ospreys that feed in and around water and migratory birds.	We lose a tremendous lake that supports so much wildlife. If drained it will become a mud prairie that will not be suitable for land animals for a long time. All the nutrients in Rodman will harm the St Johns river.	You are asking to drain it and I want to keep it so I feel it's all or nothing.	Stop spraying to kill the good grasses that grow here. Migratory birds feed on the grass, it provides a nursery for baby fish to thrive in and keeps the water very clean.
9/23/2021 14:43	Pinellas		No	No					Breach the fam and restore the natural flow of water	native species depend on Florida's natural water flow to avoid extinction	harming the affected areas may not be able to be restored and species may become endangered	No, the dam must be breached	
9/23/2021 14:44	Lee		No	No					Protect wildlife		Extinction of species and destruction of viable waterways	No	
9/23/2021 14:44	Polk		No	No					Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	No. Breaching the dam is 50 years overdue.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
9/23/2021 14:45	Duval		No	Yes		2-5 times		Canoeing / kayaking					
9/23/2021 14:45	Outside of state / other	Hendersonville, TN	No	No						We are losing species at an alarming rate and I want protections for future generations!	We lose iconic species such as manatees!	We must do everything in our power to protect watersheds, birds and all of the species here on our Earth	
9/23/2021 14:45	Duval		No	No					Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. 9/23/2021 14:48	Highlands		No	Yes					Wildlife viewing	restore Florida's special river and associated biodiversity	we lost a great river, at least most of it and it needs to be restored	no, the dam has to be completely removed, it was and remains a travesty	we had something very special and did not value it, we need to get it back, now more than ever with growth gobbling more and more of our natural areas
9/23/2021 14:48	Brevard		No	No					Restore the Ocklawaha River for manatee & other wildlife habitat.	Restoring the Ocklawaha River to provide a warm water habitat for manatees. Restoring 15,000+ acres of the Florida Wildlife Corridor will benefit Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Once these creatures are gone & their habitat destroyed it is over.	no	We are losing everything special about Florida. We must now protect what is left at all costs.
9/23/2021 14:49	Putnam		No	Yes		1 time		Other: Sightseeing	Permanent drawdown to release more water from the springs. Economic impact from kayaking and fishing would benefit the area and small business.	Past articles I have read that prove my point.	Environmental impact to the surrounding rivers and springs.	No	
9/23/2021 14:49	Outside of state / other	Fond du Lac County, WI	No	No									Just please save the manatees!
9/23/2021 14:49	Nassau		No	No									
9/23/2021 14:49	Outside of state / other	Richardson county, Nebraska	No	No					The eco system as well as the environmental system needs protection.	According to the emails I'm currently receiving, manatees & wildlife are in a crisis. PETA is very concerned & so am I.	Chain of command is the next best step...send letters of complaint & concern to the Florida state senators.	Come back to me later on this question.	None at this time...

9/23/2021 14:49	Outside of state / other	Clifton, VA	No	No					Breach the dam and restore the Ocklawaha River.	More than 15,000 acres of the Florida Wildlife Corridor will be enhanced or restored, improving water quality; providing critical manatee habitat and warm wintering grounds; supporting a variety of mammals (black bears, panthers, bobcats, white-tailed deer) and bald eagles.	The continued damming of the Ocklawaha will maintain the flooding of 7,500 acres of forested wetlands impacting wildlife and depriving the already stressed manatee of an warm winter habitat.	No. Dams are being dismantled around the US, providing improved water quality, enhancing ecosystems and in some cases expanded recreational and hunting/fishing opportunities.	I grew up in Florida and lived there for two decades. The water quality of free-flowing rivers and wildlife were very special to me. As you are aware, the Ocklawaha River is a critical link in the Great Florida Riverway that flows from the Green Swamp through various rivers and springs into the Atlantic. Restoring this link will benefit communities, economies and ecosystems along this 217-mile system. Breaching the dam will provide manatee access to Ocklawaha's springs, the Silver River and Silver Springs - all warm water winter habitats. It will revive 15,000 acres of forested wetlands, strengthening the Ocala to Osceola Wildlife Corridor and providing needed space for Florida black bears and Florida panthers. Healthy ecosystems and abundant wildlife have positive economic impact, attracting tourists, hunters and fisherman. Thank you for considering these comments.
9/23/2021 14:49	Outside of state / other	vancouver canada	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. 9/23/2021 14:51	Outside of state / other	Pleasant valley, NY	No	No					That it not damage habitat that animals such as mannattees need.	Many damns are constructed recklessly so that they damage key, critical habitat.	That mannattees & other animals who rely or use the habitat may suffer, die or go extinct.	Minimize as much harm as possible--if it has almost zero negative effect on the habitat birds, mannattees & some other species rely on. HOWEVER THE ENDANGERED SPECIES ACT should not be disregarded. IT IS ONE OF THE MOST IMPORTANT PIECES OF LEGISLATION EVER PASSED. I want greed to stop undermining its original aim & accomplishments which are being deteriotied for NO GOOD OR REAL REASON WHY TOO OFTEN.	Try to help provide animals if effected with another way to access resources they NEED.
9/23/2021 14:52	Outside of state / other	Georgetown, MA	No	No					Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	Even while manatees are still struggling with starvation from seagrass loss, the greatest long-term threat to these animals is the loss of warm water habitat that manatees need to survive the winter. Right now, 60% of Florida's manatees depend on power plant outfalls to keep warm and survive the winter - an unsustainable and unnatural situation.	Manatees have already reached a record number of deaths this year - and if we don't restore additional areas of their natural habitat, we could lose even more manatees in the future.	No	
9/23/2021 14:53	Outside of state / other	St. Louis, MO	No	No						Environmentally friendly	More environmental damage and the loss of more habitat		
9/23/2021 14:53	Outside of state / other	california	No	No						Safety measures for wildlife, especially endangered manatees.	Florida further ignoring the human altering of the waterways that directly affects wildlife.	Preserving what we have left and making better decisions in the future Breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	Thank you for your attention.
9/23/2021 14:53	Putnam		No	Yes	2-5 times	More than 5 times	More than 5 times	Boating Wildlife viewing Other: Wildlife Photography	Free the River to again have full access to the Ocklawaha River	I made the trip from Welaka to Silver Springs in 1957 in a 15ft Boat with my wife along with a friend and his wife, similar boat. Camped on Silver Springs ground over night and returned to Welaka next day. I would like to see my grandkids and great grandkids make this trip~~Bill Foley Georgetown Florida	I have watched the River these past decades go from about 8mph to almost nothing now, drop a twig in it and it will move but very slowly.	Get the Corp of Engineers to clean up the river from the St Johns to the Dam, The storms have made a mess of it in certain areas. At one time it was maintained for Boat traffic. I still get by on my 20ft Pontoon Boat but very carefully.	I know this would have a large impact on the people living on the shoreline of the Ocklawaha Reservoir and have concern about their well being
9/23/2021 14:53	Manatee		No	No					Breach the Rodman Reservoir and Kirkpatrick Dam so 20+ springs can be restored and marine life can migrate	hundreds of manatees and fish would gain habitat by breaching the dam. This has been the deadliest year on record for manatees and their habitat is declining rapidly. restoring springs would be the most cost effective way to help bring back habitat.	water quality declines further. Resulting in an increase of invasive weed blockages, blue-green algae blooms, fish kills, and submerged aquatic vegetation loss. This renders the habitat unfeasible for many creatures, including manatees, which are protected by Florida law.	No. the damn must be breached. It is 50 years overdue.	restoration of the springs will provide essential warm water habitat for manatees, who have faced the deadliest year on record this far in 2021. 60% of manatees rely on warm water from power plants when they migrate in the winter. However this is an unsafe and unsustainable solution. By breaching the damn and restoring the springs, manatees will have a natural, warm habitat again.
9/23/2021 14:53	Outside of state / other	Juneau-Douglas, AK	No	No					Let the manatees FREE!	Our impeding Climate Disaster!	Organic death around the globe!	Zero population growth!	This is it! If you have any spiritual conviction and not just religious words of prentention, you must know that The Divine only asks that we put the effort in to take the first step in the direction of ameliorating the problem then His Will makes every successive step easier!
9/23/2021 14:54	Putnam		No	Yes	1 time	2-5 times	More than 5 times	Fishing Boating	Open the Dam and let the river flow naturally like before the Cross Florida Barge Canal screw up.	Lack of flow into the St. Johns River needed for rejuvenation, and the many submerged springs in the reservoir where manatees can live during the winter	Stagnation of the St. Johns River watershed in the middle river and loss of manatees.	You could open the gates but that does not help the manatees.	When the Corp of Engineers screwed up the Kissimmee River by straightening and then polluted Lake Okeechobee, they corrected the problem by restoring the natural flow of the river. After the Cross Florida Barge canal was terminated the damage was never corrected and just let undone example of man screwing up nature.
9/23/2021 14:54	Outside of state / other	Athens, Ga	No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	100s of manatees gain essential warm water winter springs habitat	Hundreds of manatees lose the opportunity to access essential warm water winter habitat.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.

PLEASE! Thank you!
9/23/2021 15:01	Orange		No	No					Breach the Rodman/Kirkpatrick Dam	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	The lower St. Johns, Ocklawaha, and Silver Rivers; 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	No. Breaching the dam is 50 years overdue.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
9/23/2021 15:01	Outside of state / other	Quebec	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/23/2021 15:02	Outside of state / other	Minnesota	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. 9/23/2021 15:05	Outside of state / other	Lexington, NC	No	No					Let's free up the manatees		Death to manatees		
9/23/2021 15:05	Outside of state / other	MAryland	No	No					Keep it wild and undeveloped	Even while manatees are still struggling with starvation from seagrass loss, the greatest long-term threat to these animals is the loss of warm water habitat that manatees need to survive the winter. Right now, 60% of Florida's manatees depend on power plant outfalls to keep warm and survive the winter - an unsustainable and unnatural situation. Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	Loss of wildlife		
9/23/2021 15:06	Lake		No	No					The dam should be removed. It would be great if manatees could return to Lake County.	Water evaporates from the dam. The water needs to flow into the marshes, where it can be filtered and returned to the aquafer	Diminished water supply. Harm to wildlife.	I cannot envision one.	Thank you for protecting our water and wildlife.
9/23/2021 15:06	Lee		No	No						Restore as nearly as possible habitat for manatees.	Extinction is forever. Sea grass needs to be restored and water quality maintained or improved.		
9/23/2021 15:08	Marion		No	No						Breach it. Long overdue	Dying springs that should be returned to nature's intentions	No	
9/23/2021 15:08	Citrus		No	No						Breach the damn dam	92% decrease in fish population? What are we doing??	All of the manatees unable to access the warmer water required for survival.. also fish population decrease by 92%??? That's not enough??	Absolutely not this is mandatory for multiple species survival	Financially this would be easy and there really is no reason not to do this. Unless you're inhumane and have zero issue with the wildlife restrictions that you've put into effect consequently endangering many of them.
9/23/2021 15:08	Broward		No	No						Remove it so the river is restored.	We have to think of the health of our environment as well as how Floridians interact with nature. Allowing a free running river would be healthier of the environment, wildlife, and fish. The river would be good for people to enjoy water sports or just to spend time with family and friends in the heart of nature. What would Thoreau done without Walden Pond?	That a damn would continue to impede the free flow of the river and Floridians would miss the chance of having a natural Florida river for their use.	I don't know	
9/23/2021 15:09	Hillsborough		No	No						Breach the dam	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	Hundreds of Manatee lost access to an essential warm water refuge	No. It is decades past due and would be a waste of taxpayer's money to restore.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/23/2021 15:09	Broward		No	No					To improve water quality, uses, local vegetation and animal life.	The beauty of the area	Nature preservation	not at this point	
9/23/2021 15:09	Palm Beach		No	No					Restore the river and help manatees	Research on devastation of habitat of animals, fish, loss of habitat. Overbuilding by developers.	Death of animals, wildlife, flora fauna	None	The exciting restoration project of the Great Florida Riverway will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. 9/23/2021 15:10	Marion		No	Yes		2-5 times	Canoeing / kayaking		Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	20 lost springs and Silver Springs ecosystem are restored.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	This is a no-brainer. Breach the dam, restore the waterways to natural condition, stimulate tourism, enhance the economic benefits.
9/23/2021 15:10	Outside of state / other	Las Vegas NV	No	No					Humanity needs something like an Endangered ECOSYSTEM Act. The planetary debacle we have created from resource "extraction" and pollution clearly demonstrates that our attitudes must progress about learning to successfully coexist with our necessary and beautiful Biosphere. Healthy functioning complete ecosystems are a necessity. The "disneyfication" of the planet by those believing their extreme alterations to their habitats are actually so-called "improvements" must be reined in and ecosystems restored to healthy NATURAL states healthy NATURAL states.	ANY scientist who is NOT paid off by those desirous of myopic so-called environmentally damaging "improvements" and so-called "progress" or "development" provides incontrovertible evidence that we are mangling, often beyond foreseeable repair, our ecosystems. ALL OVER THE PLANET.	It's already happening. Polluted air and water, decaying ecosystems, global warming, more severe weather issues, detrimental changes to food and forest production, species loss, biodiversity loss, etc.	Ecology is a new science. We did NOT know better for the first 3/4 or so of last century that our infatuation with our technologies of all sorts had SO many negative consequences. Goals of individual transportation improved health, "higher" standard of living, etc., are still valid, but we, aided by the smaller local decisions by folks such as you, must find ways to move forward toward these goals but WITHOUT all the collateral damage. Your decisions to so will be one of many examples of the more aware changes we must make, thereby encouraging other positive and healthier choices elsewhere. These are ALL choices. Make a mess through disrespect and myopic self-interest, or help humanity move toward a healthier path.	Increasingly, science has demonstrated that both flora and fauna are not soulless or mindless automatons put here for us to exploit, but instead have remarkable awareness and abilities, although more or less different than our own, worthy of respect from a moral standpoint (eg the growing legal trend around the planet toward the granting of rights to individual elephants or chimps etc) as well as worthy of better treatment and preservation from a human survival standpoint. To save our own existence we need to preserve the webs of species that make up the ecosystems we need for healthy food and water and air. Wellbeing is MORE than just money. One needs to live in a healthy functioning natural environment too, and we have undermined that possibility in ignorance for too long. We CAN DO MUCH BETTER. To positively change our attitudes, and thereby habits, is not a lose-lose situation but a WIN WIN.
9/23/2021 15:10	Duval		No	Yes	1 time	2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating	Remove the dam and restore the Ocklawaha.	The reservoir entails unnecessary taxpayer costs to interrupt a functioning natural system which in exchange provides little to no benefits. I'd rather fish the river below the dam than risk losing an outboard trying to navigate stumps in Rodman	Dam remains, increasing evaporation from greater surface water, reducing downstream flow into the St. Johns, causing more salinity to reach further upstream, especially in combination with the JaxPort dredging.	I've seen a proposal from some planning students at UF which would create a much smaller pool in the northern part of the existing reservoir around Kenwood campground. That would allow an area for people who like lake fishing and duck hunting.	I think it's backwards that allowing this mistaken project to go away is not the default position that dam supporters have to make arguments to convince otherwise . If they can't make the case for keeping it intact, then the presumption should be that it be returned to the way God intended.
9/23/2021 15:10	Lake		No	Yes			1 time		Please remove the dam.	It's vital to helping the manatees!	Manatees! The fate of the entire manatee population is at stake!	No.	No.
9/23/2021 15:11	Clay		No	Yes			2-5 times	Canoeing / kayaking	See the dam breeches & the river restored to its original path.	Research	Continued cost of upkeep & harm to wildlife, fish	No	The research conducted has definitely demonstrated more benefits to the environment & economy would occur by breaching the dam.
9/23/2021 15:12	Duval		No	Yes			1 time	Wildlife viewing	Take down the dam!!	Mother Nature knows best. Restore it to it's natural state! It also would positively affect the O2O corridor the state and other entities are trying to create.	Continuing damage to the various impacted ecosystems, wildlife, etc.	Nope	Please remove the damned dam!!
9/23/2021 15:12	Pinellas		No	No					Restore the Great FL Riverway so Manatees can thrive once again.	Dying Manatees...needlessly	Same as above	No	
9/23/2021 15:12	Outside of state / other	Pocono manor, pa	No	No					please provide protection for manatees.	the way we mess up the natural world is a disgrace	the world will get worse thru our abuse and neglect		
9/23/2021 15:12	Nassau		Yes	Yes	1 time	2-5 times	More than 5 times	Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees and 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Also keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/23/2021 15:14	Outside of state / other		No	No					Breach the dam			No	It's past time to start paying attention to what nature is telling us: stop tampering with rivers and the whole environment. What you have in Florida is special - please restore it - you will help us all.
9/23/2021 15:15	Outside of state / other	Puerto Rico	No	Yes			1 time	Wildlife viewing	cust to be preserved to save manatees and other marine wildlife.	The negative impact on manatees and other marine wildlife.	Extinction of manatees and other marine wildlife.	No comments	None
9/23/2021 15:15	Outside of state / other	Atlanta, GA	No	No									As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/23/2021 15:16	Alachua		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing Other: visiting springs	I would restore the free flow of the Ocklawaha River within its historic channel to allow for regeneration of an extensive ecosystem for which it is a crucial factor. The St Johns, Ocklawaha and Silver River is a unique historic feature of our state and its restoration will provide numerous recreational and related economic benefits.	Free flow would restore populations of endangered wildlife, by improving water quality and balance in this historic waterway	Further degradation of fresh water springs and animal and native plant populations	No. This dam is a left over anomaly of a failed project and needs to end for continued safety and ecosystem restoration - A drawdown represents a failure of citizens to correct a fundamental mistake	I came to Florida for a career in 1968. I have never had a chance to traverse this historic gateway to central Florida's unique springs all the way to Silver Springs, the largest in the world. Restoration will protect Manatee habitat, remove a dangerous structure and allow regeneration of thousands of acres of damaged wetlands and adjacent pine woods.
9/23/2021 15:16	Outside of state / other	Kansas	No	No					Restore manatee habitat	It's the humane thing to do.	Manatees will go extinct.	No	
9/23/2021 15:16	Orange		No	No									Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. A critical step is breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat. We must do what we can to protect the manatees!
9/23/2021 15:18	Pinellas		No	No					Take down the dam & set the reservoir free; I am originally from Oregon & they have killed the Salmon runs as almost every river on the Pacific coast because of dams: they may generate power & hold back water for irrigation, but they silt up eventually & then of what use are they. You can divert water in the Spring flood (or rainy season if you live in Florida) to catchments away from the riverbed and let the river flow unimpeded.	The proven failures of the long term value of dams built for any purpose, from several collapses of the dam structures themselves or the abandonment of the need for irrigation because of the change in need for what is being grown and their differing water requirements. Almost all dams 50 years or older are slated for destruction/removal because of the environmental damages they have caused.	What will happen to those down stream when the dam fails or is over topped in a hurricane (or series of cyclonic storms in one season), but it will not concern me much because I will not be downstream of the dam in all probability if/when it happens. Every dam is no damn good, except for those built by beavers.	Nope, take down the damn dam & find better ways to create water storage except in a riverbed.	How many dams are there in Florida that benefits the state as a whole? None. All of them are applicable to special interest interest groups whose benefits usually are not in the interests of the rest of Florida, like the Bass fisherman & the Cross Florida Barge canal snafu.
9/23/2021 15:19	Marion		No	No					Opened up to allow the springs to fill	We are in a water crisis!	Our springs and rivers drying up, especially if nestle is bottling water from ginnie		
9/23/2021 15:19	Orange		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. In addition, 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. As well as, keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	
9/23/2021 15:20	Volusia		No	Yes		1 time	Wildlife viewing		I would like to see the dam removed and the natural waterways restored.	The artificial manipulation of the natural system has resulted in negative consequences for water quality and wildlife habitat. Of particular concern is the inability of manatees to access a natural warm water refuge.	continued water quality and habitat degradation	I am not sure, but open to alternatives.	
9/23/2021 15:20	Alachua		No	No					My husband and I support restoring the original waterway so that the habitat and water supply are restored to a healthier pre reservoir/dam ecosystem	the facts of the benefits of a restoration project have been supported and established by many environmental advocacy groups like Defenders of Wildlife	That Florida will continue down a path that erodes the sustainable water system that all life in our state depends on	Not really, we don't have time to waste considering the damages that climate change are likely to continue to exert on our state as well as the loss of iconic animals like the manatee	Our tourism industry needs to be able to depend on sustainable practices that don't harm our healthy water supply and all the life that depends on it
9/23/2021 15:21	Sarasota		No	No					Restore the river to protect the manatees	The starvation and death of the number of manatees this year alone	Starvation and death at the manatees	No	
9/23/2021 15:23	Putnam		No	Yes	1 time	1 time	1 time	Other	* Breach the Rodman/Kirkpatrick Dam	* There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost effective springs protection project in Florida. * Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. * Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. * The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	* We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. * The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. * Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. * Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. * Hundreds of manatees loose access to essential warm water winter habitat. * Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/23/2021 15:23	Marion		No	No									
9/23/2021 15:25	Duval		No	Yes			1 time	Other: Do not use	Breech the dam and allow the river to return ti its natural flow.	My memories of canoeing the river in the 1960s with campers from Camp Immokalee.	Failure to let nature be nature.	No	I am a native of Florida and have memories of the Ocklawaha and other waters dating to th 1940s. I am an avid hunter and fisherman. I have supported conservation efforts across Florida and North America for more than 50 years.
9/23/2021 15:25	Leon		No	Yes			1 time	Canoeing / kayaking	I would like to see the dam removed and the river and springs restored.	It would be a boost for ecotourism and native wildlife such as manatees	More of the river being clogged with water lettuce and other vegetation and wildlife such as manatees being affected	A partial breach of the dam	Fishing is very good on the river above and below the dam, so fishing will still be good if the dam is removed.
9/23/2021 15:25	Alachua		No	Yes			2-5 times	Fishing Boating Wildlife viewing	Restore it as nature intended.	We are to take care of our environment.	Manmade disaster made worse.	Not that I have heard at this point.	
9/23/2021 15:26	Alachua		No	Yes			2-5 times	Other: kayak near there	I think the dam should be breached along where the original river flowed, and restore that flow for the Ocklawaha.	That the Ocklawaha St Johns and Silver rivers, and multiple springs, would be restored. This has tremendous positive ripple effects beyond the restoration of a more complete ecosystem. It affects water quality, health of the entire river system for the water, plants, animals and people that all live within it. Improving health is vital to providing better resiliency to climate disruptions, and to a more stable economic benefit to the people in that rivershed.	Loss of sufficient natural water flow throughout the system, with accompanying stresses on the systems dependent on them - the forests, fish, manatee, humans, etc. Declining water flow and quality is a real concern on every level. We must restore and protect water. There is also concern about potential for dam breaking and flooding that would damage property and threaten life and livelihoods.	Not really. The idea of a short term measure to drawdown the water to avoid a property destroying dam breach would be ok as a step in a process, but not as an end to itself.	We know the value of intact ecosystems, whether they be watersheds, wildlife corridors or other interconnected systems. Restoring the Great Florida Riverway (such an inspiring recognition) would provide an amazing educational classroom in addition to protecting water, springs, manatee, forests, biodiversity, healthy water cycles to stabilize and cool, economic benefit etc. I have seen jaw dropping examples elsewhere of the capacity of Nature to heal and explode with biodiversity in even the short time of 1-3 years, of flooding reduced, pollinators and plants appearing. - we desperately need to invest this way. We need to invest in the people as well, to give them the financial and mentoring support to be good stewards of these places that they love. It takes eyes on the ground, and the love of a place to keep it in good health. Breaching the dam, restoring the Great Rivers, will breathe life into the entire system. Please support that investment.
9/23/2021 15:26	Putnam		No	Yes		1 time	2-5 times	Canoeing / kayaking Boating Wildlife viewing	Restore the river as much as possible to free flowing natural state.	First, I think common sense that natural is best; secondly, i believe the science will support the ecological benefits.	Poor water quality, economical/liability impact to maintain/repair the dam,	I don't think half measures would make any sense.	I believe the dam could be breached and the surrounding area could be planned/developed into a magnificent recreational area for residents, tourists, fishing/nature enthusiasts, etc., that would prevent anyone from losing access. It could also be managed to produce income, rather than being an expense.
9/23/2021 15:26	Alachua		No	Yes					I'd like to see it removed	https://www.freetheocklawaha.com/	That the ecosystem will not recover	No	
9/23/2021 15:26	Leon		No	No					Breach the dam! My understanding is that this dam has negatively affected the hydrology & critical habitats in this area. Our springs may be our last chance at maintaining water quality long term. We need to restore this ASAP. Breach the dam!!	If the dam is breached, 20 drowned springs would be restored, along with historic fish migration patterns, along with critical habitat for plenty of other species. Our springs are important & are necessary for our long-term survival. Water is a basic need that must be protected.	If we don't restore connectivity now, I am afraid we will damage the area beyond repair. We have a chance now to restore areas important to endangered species. Let's do it before it is too late! Furthermore, proper connectivity keeps our waters clean.	Absolutely not. We need to breach the dam. Nothing else will provide the necessary solution.	Thank you so much for taking the time to listen to us. We love Florida and only want to see the best for our land and our people, and we know you do too. Please, breach the dam.
9/23/2021 15:27	Duval		No	No					removal and restore natural flow of the river way	science and the studies my husband participated in while at FIT science proves restoration of riverway will return to the natural habitats for many dwindling fish and manatee. Florida is missing the eco environment tourism. Old Florida natural habitats will bring in more than Disney for the State of Florida we have to restore to nature.	loss of our natural species will continue missing the benefit of eco tourism and a chance to teach our youth about preservation for the future and our errors of over development of the past	no	it's a no brain decision return to nature
9/23/2021 15:27	Washington		No	No									
9/23/2021 15:27	Alachua		No	No					Restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. Also, 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. No. Breaching the dam is 50 years overdue. The environment, wildlife, and water quality cannot wait any longer.	As a resident who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a Florida resident and will greatly benefit Florida's people, environment and wildlife. Just seconds
9/23/2021 15:28	Seminole		No	No					Breach the Rodman/Kirkpatrick Dam	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost effective springs protection project in Florida	Hundreds of manatees lose access to essential warm water winter habitat	No. Breaching the dam is 50 years overdue	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/23/2021 15:28	Pasco		No	No					The dam must be breached to help the manatees survive and to restore the ecosystem.	I have paddled the rivers in the area and can see that this is a valuable ecosystem that should be restored.	Environmental degradation and problems for manatees		
9/23/2021 15:29	Sarasota		No	Yes		1 time	2-5 times	Canoeing / kayaking	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees.This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.

9/23/2021 15:29	Lake		No	Yes		More than 5 times	Canoeing / kayaking	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer. 9/23/2021 15:29	Putnam		No	Yes		2-5 times	Fishing Boating Wildlife viewing	Restoring Florida and its native waterways back to the way the were before human impact		Devestation to the natural waterways, fish habitat and population	No	None
9/23/2021 15:29	Volusia		No	Yes		1 time	Wildlife viewing	Get rid of it. It is an ecological, self imposed, disaster.	The fact that every major governmental organization involved with regulating and saving the environment has been recommending its removal for decades.	That once again money speaks louder than facts.	Nope.	If you remove the Rodman dam, more water will flow freely to the St. johns river, and this will help mitigate the damage done by dredging the channel to 50'. At least there will be more back flow to keep the salt water from moving any further south than this new, self imposed, ecological disaster is bringing.
9/23/2021 15:30	Duval		No	No								
9/23/2021 15:30	Duval		No	Yes		1 time	Other	Tear it down		St. John's will continue its decline.	Yes. Quit putting its affluent into the St. John's. Pipe it to the west and create reservoirs.	Fresh water in the river without treated sewage is much more important to Duval than global warming.
9/23/2021 15:30	Alachua		No	Yes	1 time		Wildlife viewing	Restore the Ocklawaha River by breaching the Rodman Dam.	We need the fresh water. All of the eel grass is dead in Duval. We need this grass for manatees and fish. The more fresh water the more eel grass.	The opportunity would be missed to restore a critically important waterway that is dependent on by humans and wildlife alike.	No. The dam should have been breached 50 years ago and we must take the opportunity now.	Breaching the Rodman Dam is one of the most consequential things the state of Florida can do for water quality, which is suffering greatly.
9/23/2021 15:30	Orange		No	No				The dam should be breached	The dam restricts the natural flow of the river, cutting off access to manatees, local fish, and other wildlife that depend on a free flowing river. All of Florida's waterways are connected and this dam is contributing to poor water quality in North Central Florida, which impacts all of us.	Increase manatee warm water winter habitat	No	
9/23/2021 15:30	Duval		No	Yes		2-5 times	Canoeing / kayaking Wildlife viewing	With the dam breached, 7,500 acres of now-drowned forest will have a chance to grow naturally again, providing natural habitat for wildlife like manatees and fish species that cannot easily migrate past the dam. This will enable more wildlife viewing opportunities and other recreational activities like fishing, canoeing and kayaking to be available to more people rather than just folks who have expensive fishing boats. It will make access to this beautiful area more equitable.	Endangered manatees will be able to access critical warm-water wintering habitat, and fish species that historically spawned in the upper Ocklawaha will again be able to do so, resulting in increased fish populations.	Further decline of manatee and fish populations, loss of esonomic opportunity for neighboring areas due to increased visits to the restored springs, tax dollars needed to maintain the dam	No	
9/23/2021 15:31	Duval		No	No				Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	The continued huge expense in taxpayer dollars of having to maintain the dam, which provides no public benefits - no flood protection, no water supply, and no power. It has no function.	No. Breaching the dam is 50 years overdue.	
9/23/2021 15:31	Putnam		No	Yes		1 time		I would like it removed	Restoration of many springs and waterways	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No. Breaching the dam is 50 years overdue.	
9/23/2021 15:31	Dade		No	Yes	1 time		Wildlife viewing	Breach the dam that holds back the Ocklawaha River. Restore the Ocklawaha River for Florida's wildlife	Manatees have already reached a record number of deaths this year - and if we don't restore additional areas of their natural habitat.	At 61 years old, I am afraid that I may never see the dam removed. This dam was a huge mistake. So much of Florida is a concrete jungle. I believe that this great waterway must be restored for the sake of those coming behind me. If	If some sort of emergency flood control system was left in place.	
9/23/2021 15:31	Outside of state / other	Arkansas	No	No				Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	We could lose even more manatees in the future. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling camps, and recreation benefits.	none No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	We need to make sure we use every tool to help save manatees and other wildlife from habitat destruction and pollution. The manatees along with so many other wild creatures are dying due to the lack of natural habitats. Without those creatures, the environment becomes imbalanced. Then disease and invasive species come in a destroy the environment even more. Not only does the ecosystem need each native species to thrive, but so does Florida's economy. People travel from all over the country to see Florida and it's beautiful land. If you destroy its land, people stop coming and then the small business owners lose all of their income.
9/23/2021 15:32	Outside of state / other	Maynard, MA	No	No				We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam. This is the first, and most important step, in returning the Ocklawah River to its natural, sustainable state.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer. These animals need our protection and assistance in restoring and maintaining their habitat!	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor. We cannot risk losing these animals!	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer. This must be done!	As someone who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. These unusual creatures must be protected and encouraged to thrive! This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation.
9/23/2021 15:32	Pinellas		No	No				help the manatees	help the manatees	more death to the manatees	help the manatees	
9/23/2021 15:32	St Johns		No	Yes		1 time	Fishing Fishing (shoreline/structure) Canoeing / kayaking	remove the dam	St Johns Riverkeeper			
9/23/2021 15:33	Outside of state / other	Amelia, Ohio	No	No				I would like to see the dam removed.	The restoration of fish and other wildlife migration, as well as allowing manatees to access their former feeding grounds.	I am concerned about the future for manatees due to loss of their feeding grounds.	No	
9/23/2021 15:34	Alachua		No	Yes	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Remove the dam. Engineer parts of the reservoir to hold water for recreation and business purposes. Develop the sunken springs for recreation and fishing.	Wildlife migration is inhibited by the dam.	The expense of maintaining the dam on tax payers, the continued harm to wildlife species.	Leave the dam open except for flood events. Develop a bypass for manatee and fish.	Please consider more than just fishing and a few influential land owners.
9/23/2021 15:34	Sarasota		No	No				I would like to see the dam removed.	By removing the dam this will not only save the vulnerable manatee, but also reestablish migratory corridors for many species of fish and upland wildlife-and improve water quality flowing to downstream estuaries where sea turtles live.	That the imperiled manatees will perish. They are an important part of the entire ecosystem as well as for Florida tourism.	no	
9/23/2021 15:34	Orange		No	No				Breach it and restore the springs	reversing the damage the dam has done to the naturally-evolved water system and connected ecosystems	Water quality will continue to diminish and wildlife will continue to struggle for survival, putting the ecosystems at even further risk	No	
9/23/2021 15:35	Outside of state / other		No	No				We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer. 9/23/2021 15:36	Marion		No	Yes		1 time	Other: I don't use the Rodman dam but I do kayak the Silver And Oklawaha Rivers	Breach the Rodman/Kirkpatrick dam and open the rivers to their natural state.	There are 20 drowned springs that would be opened , this would open the rivers to the hundreds of manatee that historically used this river as a winter habitat. Fish populations in Silver Springs have declined due to the dam and they could make a comeback. The dam is costing millions of taxpayer dollars to repair and it provides no flood protection, power or water supply. Water quality is declining further with weed blockage , which in turn has to be killed with herbicides - this is not good for anything in the water..	That the lower St Johns , Oklawaha and Silver rivers and the 20 lost springs would not be restored and reunited.	No, it's time to breach the dam and stop wasting time . 50 years is enough.	Florida is such a unique state with all it has to offer. If we don't restore it back and stop killing everything we will lose it. We all know what needs to be done, but do we start putting our environment first before money and selfishness? I believe we a know the answer to that but will we actually do it? I certainly hope so.
9/23/2021 15:36	Palm Beach		Yes	Yes		1 time	Canoeing / kayaking Wildlife viewing Other	Take out the dam and restore the springs.	Many springs will be restored along with wildlife.	We are missing a huge opportunity to do good for the land, environment and people.		
9/23/2021 15:36	Outside of state / other	Ohio	No	No				Remove them	Not sure	Environmental impact	Not sure	
9/23/2021 15:37	Pasco		No	No				Supervision & Maintenance	Environment & Nature need protection W/ continuing oversight	A 100% balanced ecosystem w/constant surveillance by biologists & Locals.	no	none
9/23/2021 15:37	Lake		No	Yes		2-5 times	Fishing (shoreline/structure) Boating Wildlife viewing	I would like to see the dam removed. This dam has been in place for over 50 years exceeding its life expectancy. In that time it has never once fulfilled its original purpose. I am a fisherman myself but I care more about my children being able to witness this free flowing healthier waterway than I do about catching a big bass.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.	The natural ecosystems will continue to slowly decline as they have been since the dam was built.	No there is not. Freeing the Ocklawaha River is the only outcome I support.	Please do this. Do this for the children that will grow up in this beautiful state. Do this for the people who have never had the pleasure of seeing this waterway in its free flowing natural state.
9/23/2021 15:37	Outside of state / other	Jacksonville, NC	No	No								
9/23/2021 15:38	Alachua		No	Yes		1 time	More than 5 times	Canoeing / kayaking Wildlife viewing	That it be removed	Restoring springs and natural water flow to enhance wildlife	This dam will inhibit wildlife to survive and will cost tax payers money in costly repairs to old infrastructure	No
9/23/2021 15:39	Wakulla		No	No					Breach it.	Knowing that the springs could have proper flow again and that Silver Springs would have a real chance at restoration.	How to we move forward, what other steps can we take for this to happen.	I would need more information to answer this.
9/23/2021 15:39	Lake		No	Yes		1 time	Boating Wildlife viewing	Dam removal. Restore the natural flow of the Ocklawaha.	Many of our springs have decreased water flow or have dried up.	The springs would continue their decline along with water quality of all bodies of water affected.	None that I can think of.	We are very active with the preservation of Wakuli a Springs and know how important and vital they all our to our well being and future. The time is right to restore the natural flow of the river. The most cost effective and the most beneficiat to our state's ecosystem.
9/23/2021 15:39	Outside of state / other	United States- New York	No	No				Help the manatees survive !	The manatee are dying due to habitat and human boating traffic !	The extinction of the manatees !	I would support any and all petitions concerning this issue.	Save the manatees!!!
9/23/2021 15:40	Duval		No	No				I would like to see the dam removed in order to regain the connection of Silver Springs, the Oklawaha and the St. Johns River.	The fact that the Oklawaha is named one of America's most endangered rivers. We shouldn't let this opportunity to right a wrong go past.	Continued intrusion of saltwater into the St. John's. Blue-green algae blooms. Shrinking manatee habitat.	No. The solution is right before us. Get rid of the dam and reservoir and help restore the natural resources that make Florida what it is.	
9/23/2021 15:40	Palm Beach		No	No				I would like to restore the natural river flow by removing the dam.	Manatees and other wildlife need this natural river for over-wintering. Currently, the dam prevents them from utilizing this warmer water.	Manatees and other wildlife will become critically endangered then extinct.	I don't think alternatives exist, but if other effective river routes could be created, I might support them.	
9/23/2021 15:41	Alachua		No	Yes		1 time	Canoeing / kayaking Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Historic fish and manatees return as breach opens creating a free-flowing river	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	I cant think of anything that would really be helpful at all.	
9/23/2021 15:42	Outside of state / other	San Jose,CA	No	No							Save environments for the manatees	
9/23/2021 15:42	Outside of state / other	Delaware	No	No				Restore native habitat	Saving manatees	Lose of manitees and native waters	0	
9/23/2021 15:42	Outside of state / other	Kirkland, WA	No	No				We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	
9/23/2021 15:43	Marion		No	Yes		1 time	Wildlife viewing	I favor breaching the dam.	Migratory fish would be able to find further habitat, including Silver Spring	Less habitat for fish and manatees that would flock to old springs that have been covered	Fich ladders, devices to raise manatees.	More habitat for fish and manatees means more fish and manatees. What purpose does the dam serve? Not power or water supply. It is a monument to a 50-year-old boondoggle canal which just interferes needlessly with the natural order.
9/23/2021 15:43	St Johns		No	Yes		1 time	Other	Remove it.	Science shows that the Ocklawaha needs to flow freely.	Continued degradation of the river.	No	
9/23/2021 15:44	Leon		No	Yes	1 time	2-5 times	Wildlife viewing	Return to natural as much as possible.	Old maps and charts	Water pollution	Not really	
9/23/2021 15:44	Outside of state / other	Vancouver, WA	No	No				The area needs to be conserved for the sake of the wildlife that depend on it.	Humans are wiping out wildlife all over the world. We need to be conserving as much as we can to support the wildlife that is left.	The death and extinction of more marine wildlife.	I would support any outcome that supports the wildlife that lives there.	
9/23/2021 15:45	Pinellas		No	No				Tear it down	Saving manatees, environmental impact	Continuing a 50 year mistake	Not tearing the dam down. We need to care most about our environment and the animals that need to sustain life.	Please put earth first.
9/23/2021 15:46	Brevard		No	No				Remove	Remove the dam and let the river flow as it used to do.	Manatees will continue to die off until there are no e left.	No	Rodman dam serves no purpose and should be removed. We need to correct our past mistakes!

9/23/2021 15:47	Outside of state / other	Concord, CA	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	https://act.defenders.org/page/33864/action/1?utm_medium=email&utm_source=engagingnetworks&utm_campaign=092321_Great_Florida_Riverway&utm_content=092321=Great+Florida+Riverway&ea.url.id=989705&forwarded=true#:~:text=Keeping%20the%20Ocklawaha,Florida%20Wildlife%20Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/23/2021 15:48	Clay		No	Yes			2-5 times	Fishing	Remove the dam and restore a free flowing Oklawaha.	The dam has damaged the ecosystem including the Oklawaha and Silver rivers, obstructed the migration of native marine life, and submerged springs. It's time to restore the natural flow.	Further damage to the ecosystem including adverse impact to the St John's River which is already deteriorating rapidly.	No	The entire concept of the cross Florida barge canal was ill conceived with obviously no regard to its adverse environmental impact. It's time to undo the damage and restore this valuable River and ecosystem.
9/23/2021 15:48	Outside of state / other	new york	No	Yes			2-5 times	Boating	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	
9/23/2021 15:49	Outside of state / other	Carrollton, Georgia	No	Yes			2-5 times	Fishing Wildlife viewing Other: picnics	Safer for the wildlife and updated to todays standards. Cleaner! more efficient	Global Warming and the environment	Lives on and around the dam and the water passages and containment problems	NO	
9/23/2021 15:50	St Johns		No	Yes			1 time	Canoeing / kayaking Other: I do not visit the Dam for recreation.	Open the dam to provide clean water to Silver Springs, the St. Johns River, and its tributaries and springs.	Studies that have been conducted for years and I have first hand knowledge because my husband and I camp and canoe on these rivers frequently. We have witnessed the damage to the rivers and springs and wildlife.	More pollution will occur, we will witness more manatee deaths, springs will no longer be thriving and clear, dead fish and threatened wildlife and human sickness from pollution will continue to escalate.	No. It is time to move forward with this issue. It have been debated and studied for years. Now is the time.	
9/23/2021 15:50	Outside of state / other	Texas	No	Yes			2-5 times	Wildlife viewing	I think there is a need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	Not really. Breaching the dam is long overdue as both the wildlife and water need this desperately.	
9/23/2021 15:50	St Johns		No	Yes		1 time		Fishing (shoreline/structure) Boating Wildlife viewing	Open it up get rid of the dam	Wildlife preservation	Lack of sufficient water and clearance of ecosystem	No

9/23/2021 15:56	Leon		No	No									I lived in Ocala during the destruction of the Silver River, 1964-1974. I was privileged to ride down the Silver River before the destruction of that part of the river occurred. I believe in protecting our water ways and forests, esp. our spring fed rivers. That is why I am concerned.
9/23/2021 15:56	Duval		No	Yes			2-5 times	Fishing	remove the dam/	we need to restore the natural flow	poor water quality in the Stjohns	no	It has been way to long.
9/23/2021 15:56	St Johns		No	Yes		1 time		Wildlife viewing	Restoration of a free-flowing Ocklawaha River: Breach the Rodman/Kirkpatrick Dam to reunite the natural connection of Silver Springs, the Ocklawaha and the St. Johns River.	I have seen the benefits of breaching/removing dams in other river systems. The science supports restoration. A free-flowing, connected system is cost-effective and will provide significant ecological benefits to the St. Johns, Ocklawaha and Silver Rivers as well as Silver Springs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe. It is time to correct this mistake that was made to support a cancelled project.	No. Breaching the dam and restoring the Ocklawaha are 50+ years overdue. Dam safety issues and improved water quality, wildlife habitat, and recreational opportunities can't be ignored or delayed any longer.	This kind of reversal has been done in many other river systems with great success. While we lose some benefit to a small group we gain a much larger benefit for the river and for many more people.
9/23/2021 15:57	Volusia		No	No					Breach the dam	Manatees will not have access to warm water for cold winter months.	Manatees will not have access to warm water for cold winter months.	No. This is 50 years over due. Breach the dam!	
9/23/2021 15:57	Outside of state / other		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. 9/23/2021 15:58	Dade		No	No					Restore the Oklawaha River to its historic flow by breaching the dam.	Restoration of multiple natural springs and the Silver springs ecosystem will bring manatees and native fish. Also, restoration of the Florida Wildlife corridor for people and nature.	The St John's River estuary would continue to be deprived of its natural water flow and not allowing for improved water quality, restoration of fish and wildlife habitat, and reduction of saltwater intrusion.	No, breaching the dam is long overdue. The freshwater ecosystem of North Florida must be protected and preserved now.	As a 55 year resident of Florida, I have seen the gradual degradation of our State's beautiful natural resources. We must take strong action now to preserve what's left of our beautiful State for future generations.
9/23/2021 15:58	Lake		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating	Record size bass are caught there ALL the time. This is one of the LAST unpaved areas in Central Florida. It is inside a National Forest, so leave it natural. St Johns Riverkeepers has failed in nearly all their attempts in the Jacksonville river basin, they should stay out of this sacred natural area.	Opening it to the enormous growth in central Florida population will totally eliminate peaceful freedom and destroy all the remaining fish, birds & wild animals. Development has already slowed the flow of water from Silver Springs and the Oklawaha rivers	Convert the eastern Oklawaha lock to an overflow type dam to create more of a flow to prevent trapped vegetation	I have seen St Johns Riverkeepers fail at a lot of important projects around Jacksonville, so just stop the emotional tears - there is not a problem, so don't artificially try to create another one
9/23/2021 15:58	Volusia		No	Yes		1 time		Canoeing / kayaking Wildlife viewing	Remove/breach them	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway. The submerged springs can then be effective.	Missed opportunity and avoidable real and opportunity costs	Substantial permanent drawdown would have some benefit	
9/23/2021 15:59	Outside of state / other	Spartanburg, SC	No	No									
9/23/2021 15:59	Martin		No	Yes			2-5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	RESTORATION IS CRITICAL FOR NOW AS WELL AS THE FUTURE ! Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, PLUS Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	THE ECONOMY AND WILDLIFE AND RECREATION ARE ALL RELATED SO: Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	PREFER RESTORATION _ BUT AT LEAST Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed Riverway.	MY FAMILY AND I ARE TAX PAYING stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. (characters: 479) 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration !!!!!!!!!!!
9/23/2021 15:59	Martin		No	No					Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	I'm a zoologist and this information is known by any wildlife specialist	extinction of the manatees and other wildlife that rely on a free flowing river system	Moving all the people out of Florida and stopping all motorized boats in the coastal estuarine areas so that manatees have a safe place to live w/o being ripped to pieces by propellers. Also, stop letting sewer and ag pollution enter the waterways.	People's trash is also a problem. Repealing single use plastic and other single use packaging would help enormously.
9/23/2021 16:00	Volusia		No	Yes		1 time		Fishing (shoreline/structure) Wildlife viewing	Breaching	It would support the springs	Many of our springs affected		
9/23/2021 16:00	Outside of state / other	Delaware	No	No					No dams!!!	Endangered manatees need the warm water.	Dwindling numbers of manatees.	No.	
9/23/2021 16:00	Outside of state / other	Phoenix, AZ	No	Yes									Even while manatees are still struggling with starvation from seagrass loss, the greatest long-term threat to these animals is the loss of warm water habitat that manatees need to survive the winter. Right now, 60% of Florida's manatees depend on power plant outfalls to keep warm and survive the winter - an unsustainable and unnatural situation. Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.
9/23/2021 16:00	Alachua		No	Yes	1 time	1 time	2-5 times	Other: to see if it is still there and then to wonder why	Dam down, reservoir drained, river returned to its natural state	environment, economics	environment, economics	partial removal of dam. full restoration of river flow	come on... it is time...
9/23/2021 16:01	Outside of state / other	Camp Verde, AZ	No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/23/2021 16:01	Alachua		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Historic fish and manatees return as breach opens creating a free-flowing river.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	A partial restoration of the waterway.	
9/23/2021 16:01	Duval		No	Yes			2-5 times	Wildlife viewing	Breach the dam and restore natural flow.	Save taxpayer money 4-14 million dollars to repair/maintain a dam that is past it's expected design life. Allow fish and wildlife habitat to return to its natural condition. Wintering habitat in natural springs Manatee habitat would be restored.	Continued expensive dam maintenance requirements.	Not really	
9/23/2021 16:02	Outside of state / other	Arizona	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.

9/23/2021 16:09	Jefferson		No	No					That it is restored for wildlife	Manatees starving due to loss of habitat	The death of the Manatees			
9/23/2021 16:12	Marion		No	No					Breach the Rodman/Kirkpatrick dam.	The fish population is down 92%, manatees need the warm water to overwinter, and the dam serves no useful purpose. It is also in need of repair.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee. water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue.		
9/23/2021 16:13	Outside of state / other	Delaware	No	No						Clean it up and keep it clean	the environment and wild life			
9/23/2021 16:13	Outside of state / other	San Diego, California	No	No							saving manatees			
9/23/2021 16:13	St Johns		No	Yes			1 time	Other: passing by enroute elsewhere	The dam should be removed and the river restored.	Fifty plus years ago I went from my home (St. Johns River) to Eustis. I remember the Ocklawaha River and Silver River from this. A few years ago I was in Welaka and noticed how the river had degraded both as to river flow and biodiversity.	Continuing degradation of river flow. absence of grasses, and death of animals that depend on the grasses and bottom condition.	No.		I have lived on and around the St. Johns River for over 70 years. My memories are much nicer than the present. Too many people and too much "improvement."
9/23/2021 16:15	Collier		No	No						I own a condo on Marco Island, Fl with my mother. Though, NY State is my primary residence, I am troubled with the amount of deaths of manatees, Florida panthers and lack of birds. Restoration of all wildlife habitat should be a priority. FULL RESTORATION OF HABITAT. Florida has less and less green space. If wildlife is suffering now, people will soon suffer as well. Florida has become unsustainable for all.	That Florida is on track to perpetuate disasters, without improving the quality of life for all. It should not be a " third world country " of a state.	I want 100% restoration. The degradation to all Floridians including animals is devestating I loath all of the development by humanity for humanity, without considring wild spaces to temain wild for the environment and animals If you don't care anout animals, then you don't care about people.	Do the right thing! Anything,less is unacceptable.
9/23/2021 16:15	Outside of state / other	hite Haven, Pennsylvania, United Stat	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor. 9/23/2021 16:18	Bradford		No	Yes		2-5 times		Boating Wildlife viewing	Please use answer in #1	Please use statement #5.	Please use statement #10.	Please use the statement given: No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.		There is no reason to have a dam on the Ocklawaha. Ecological benefits as well as the economy compel restoration.
9/23/2021 16:18	Marion		No	Yes		2-5 times	More than 5 times	Canoeing / kayaking Boating Wildlife viewing Other: Swimming in the lost springs.	I would like to see the the Reservoir and Kirkpatrick Dam removed and the Oklawaha restored to its historic parameters	The choking non- native vegetation that inhibits all boating except airboats. And, the poisonous spraying of the aquatics. Costing taxpayers unnecessary $. And, all the dead cypress tree snags....ugly!!!	The death of the native aquatic grasses in Silver Springs run is a red flag that the ecology of the river is dying.	NO!!		
9/23/2021 16:18	Outside of state / other	NYC	No	No										Manatees are just one reason people visit your state. They deserve a lot more love than they are getting. Give them priority.
9/23/2021 16:19	St Johns		No	No					Breach the Rodman/Kirkpatrick Dam!	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Not to mention that the dam is past its life expectancy-breaching the dam saves $4-14 Million in dam repairs.	That we miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are CRITICAL (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue.		2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration!
9/23/2021 16:19	Duval		No	Yes	1 time	2-5 times		Other	Breaching the dam to allow full restoration of the Ocklawaha River to its original magnificent and natural state.	There is now full and substantiated scientific evidence of the mass destruction caused by the good intentions of the building of the dam. We have learned there are consequences to altering natural waterways and we should be willing to try to correct this terrible mistake.	That as a seventh generation Floridian, I would be witnessing in my lifetime, the sadness of failing to rectify a serious mistake, however well intentioned it was at the time. We have paid an enormous destructive trickle down affect of as a result of being well intentioned and we have a unprecedentated chance to cure it. Let's do it for our earth and future generations of Floridians!	None		
9/23/2021 16:20	Wakulla		No	Yes	1 time			Canoeing / kayaking Wildlife viewing	Emphasis on protecting wildlife native to the area.	The amount of wildlife that have frequented this area has decreased dramatically since the dam was built.	That the ecosystem of this area would fall apart and that would have a ripple affect on surrounding areas.	No.		
9/23/2021 16:20	Outside of state / other	Lake Hughes, CA	No	No					Reworing the Ocklawaha River	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	A dire situation for manatees	No		Please do what is best for the struggling species.
9/23/2021 16:22	Hillsborough		No	No					Breach the Rodman/Kirkpatrick Dam	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money will be spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.		MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/23/2021 16:23	Palm Beach		No	No										
9/23/2021 16:24	Outside of state / other	Ventura, CA	No	No					Please restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.		Thank You
9/23/2021 16:24	Outside of state / other	AZ	No	No					Undam it! Nature knows what she is doing. Man fluks it all up.	If we've learned nothing about the pandemic, let's at least know SCIENCE here supports restoration.	Water quality declines, further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. More degradation to our Earth.	I really don't see one. Again, nature takes care of its own. Look at where lands are thriving. It's where no man has gone before.		Please, learn from past mistakes!
9/23/2021 16:25	Alachua		No	Yes			1 time	Other: Don't use it	The dam and the locks are a needless expense. The area reservoir is unbelievably ugly; the dam is unnecessary; the system of locks are --pardon the expression--like tits on a bull.	The springs that have been covered by this monstrosity should be released to contribute their water and their beauty to the area.	The dam must go----------	NO		This area could become a lovely linear park, with hiking trails and views of the river.
9/23/2021 16:25	Outside of state / other	Kimmundy, IL	No	No					Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	Manatee refuges & caretakers!	More manatees will die.			
9/23/2021 16:27	Outside of state / other	Russia	No	No					I would like you preserve the flora and fauna of the region	The threat of disruption of the ecological balance	The irreversibility of environmental consequences, as well as regret that people are not listened	The scenario of complete conservation of the nature of the region		

9/23/2021 16:27	Outside of state / other	Berkeley, CA	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	Absolutely not. Breaching the dam is 50 years overdue. 9/23/2021 16:28	Okaloosa		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Remove the dam and restore the habitat	Endangered, imperiled and common wildlife species deserve to utilize the ecosystem properly and the only reason the dam exists is for fishing. right?	To have to keep complaining and we will eventually loose species that depend on the ecosystem.	No	
9/23/2021 16:28	Alachua		No	Yes			2-5 times	Fishing Canoeing / kayaking Wildlife viewing	I would like to see the dam breached to restore the natural hydrology of the area and allow the springs and riparian habitat to recover from the ecological damage caused by the Kirkpatrick Dam.	The Kirkpatrick Dam has led to the impairment of Silver Springs fish populations, has covered several ecologically valuable springs, and has blocked one of the only potential migratory routes for striped bass in the entire state.	My biggest concern is that the impairment of Florida's natural resources would continue and that the natural ecology of the state's unique ecosystems would continue to be lost as time goes on.		
9/23/2021 16:29	St Johns		No	Yes	2-5 times	More than 5 times	More than 5 times	Canoeing / kayaking Other: flying over it	I would like to see the dam deconstructed so that silver springs, and the oklawaha is reunited with it's natural flow ending in the St. Johns River	federal and state studies support the breeching of the dam to restore natural water flow that will positively impact numerous hydrologic systems.	we would miss a golden opportunity to restore natural water flow to multiple systems. this would negatively impact the goal of combating salt water intrusion. restoring the water flow will help to restore numerous other ecological systems.	no	
9/23/2021 16:29	Duval		No	Yes	2-5 times	More than 5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/23/2021 16:29	Outside of state / other	Cumberland, Rhode Island	No	No					The Dam should be breached. All across the country dams are being taken down. Manatees and other wildlife need the warmer waters to survive. We humans have taken away so much from our wildlife. Wildlife are natural resources too and should be protected.	Manatees are dying in record numbers this past winter. They are struggling. They need our help.	Ongoing habitat degradation and dwindling species.	No. Do the right thing. Get humans and greed out of the picture and let nature heal.	
9/23/2021 16:30	Duval		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	20 lost springs and Silver Springs ecosystem are restored	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	This is our best opportunity to correct something that was a boondoggle to begin with. Breaching the dam and restoring the Oklawaha River benefits everyone as well as the wildlife.
9/23/2021 16:31	Sumter		No	Yes			2-5 times	Wildlife viewing	Restore the river to its original flow	The Florida Manatee	Regular flow and access to warm waters by the Manatee.	No. Its time for the dam to go.	Please correct a mistake made many years ago.

9/23/2021 16:32	Alachua		No	No					Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	Putnam County and Silver Springs economics lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years.	- No. Breaching the dam is 50 years overdue.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
9/23/2021 16:33	Marion		No	Yes		2-5 times	Canoeing / kayaking		to remove the dam and to let our fish and manatee population come back to the Ocklawaha river, also to help the springs that are not showing while the dam is in place.	Silver Springs Alliance has done research by the University of Fla that has proven it will help both sides of the dam.	The Ocklawaha River and Silver Springs will not survive in the future. We need these for our children and grandchildren to enjoy.		If we do not take care of this problem for our springs and waterways who will? Our government certainly doesn't care enough to. They seem to only be listening to the big money people who just want to take everything (water) for nothing but a permit. The government is selling the State of Florida's citizen water away.
9/23/2021 16:34	Brevard		No	No					Restoration of the Ocklawaha river by breaching the dam.	100's of manatees gain essential warm water springs habitat.	Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Plus it's a waste of taxpayer money to continue the dam.	No.	I care about Florida's environment and wildlife. 2021 is the deadliest year on record for manatees. Their natural habitat needs to be restored.
9/23/2021 16:35	Orange		No	Yes		1 time	Wildlife viewing		Remove Kirkpatrick Dam to allow the Ocklawaha River to flow	Restoring the natural flow	Continued damage to the environment	Partially remove Kirkpatrick Dam to allow the Ocklawaha River to flow	
9/23/2021 16:37	Alachua		No	Yes		2-5 times	Wildlife viewing		Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Historic fish and manatees return as breach opens creating a free-flowing river	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait. The death of so many manatees this year is only an example of what is to come if we don't restore our waterway.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River. After the additional permit that was granted to Nestle to draw down water in the springs, it is vital that we do all we can to restore the water flow whenever possible and this is the moment to do that.
9/23/2021 16:37	Brevard		No	No					Breaching of the dam and the subsequent restoration of the Ocklawaha River, an important feature of the Great Florida Riverway	We can increase opportunities for recreation and tourism, avoid expensive dam repairs and potential flood damage to property AND give fish and manatees (our state mammal) access to more habitats to help their populations thrive.	Loss of opportunity for economic growth in the area and millions of dollars dedicated unnecessarily to dam repairs and flood damage to property.	No. This is an opportunity to help our economy and our environment.	We can do this! We can do it responsibly. We can make this a win for our economy, our fellow citizens and our environment. We can show the world that we cherish, we honor what makes us special - our beautiful state.
9/23/2021 16:37	Outside of state / other	Brooklyn, NY	No	No					Whatever helps manatees.	Manatees are important.	It would be disappointed if manatees are harmed.	no	
9/23/2021 16:37	Pinellas		No	Yes		2-5 times	Fishing (shoreline/structure) Canoeing / kayaking Wildlife viewing		Breach the Rodman/Kirkpatrick Dam and restore it to its natural state.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs.	The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No. Breaching the dam is 50 years overdue stop wasting tax dollars.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
9/23/2021 16:38	Marion		No	Yes		1 time	More than 5 times	Canoeing / kayaking Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Historic fish and manatees return as breach opens creating a free-flowing river	Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. (characters: 479) SECOND PARAGRAPH OPTIONS This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration. (characters: 517) MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. (characters: 521) WATER QUALITY: This exciting restoration will improve water quality and flow by generating an additional 150 million+ gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration.

9/23/2021 16:38	Clay		No	Yes	1 time	2-5 times	2-5 times	Fishing Boating Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
9/23/2021 16:38	Seminole		No	No					Free the Ocklawaha and restore the natural flow of the river system and watersheds of the Ocklawaha and St. John's rivers.	Saltwater intrusion into the St. John's river is increasing, killing trees within the floodplain of the upper and middle St. John's river. Restoring the flow of the Ocklawaha into the St. John's would allow natural wetlands to survive and filter pollutants, and reduce the effects of saltwater intrusion due to dredging in the St John's riverway.	Considerably more pollutants will increase in the waterways, Salt water intrusion will affect drinking water supplies, major tree die-offs, fish and marine life mortality events will increase, and algal blooms will affect the quality of life for humans and wildlife alike.		The Cuplet Fern Chapter of the Florida Native Plant society stands with other environmental organizations to advocate for the natural resources of Florida's environment. Protect the river systems and restore the flow.
9/23/2021 16:39	Brevard		No	Yes			1 time	Wildlife viewing	Breach the Rodman Reservoir and Kirkpatrick Dam.	The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No. The dam should be breached.	Breaching the dam is not only the most economically beneficial solution, but also the most ecologically beneficial solution. It would save taxpayer money as well restoring some of Florida's beautiful springs and ecosystems. Florida is unique when it comes to our springs and wildlife, and we the people are asking our government to protect that. Do right by us and breech the dam.
9/23/2021 16:41	Marion		No	Yes			1 time	Other: I don't use it, I just wanted to see the monstrosity that is destroying our rivers and environment	Breach it	Save our rivers, springs, fish, manatees, and restore the water as it needs to be.	Money wasted to repair the dam. more damage to the fish and rivers.	No, breach the dam.	There is no reason to keep a dam that has served no good purpose other than hurting the environment.
9/23/2021 16:41	Indian River		No	Yes		2-5 times		Fishing (shoreline/structure) Wildlife viewing Other: exploring, hiking & Birding	Tear the dam down and drain the artificial reservoir. Restore the riparian ecosystem of the Ocklawaha River! Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. Instead of relying on power plant effluent to survive the winter. This will also benefit species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. Also, it will restore 15,000+ acres of the Florida Wildlife Corridor will be enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	•Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor Restoring the connected rivers will provide for many more wildlife species and small business communities than just another artificial reservoir.	No! Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer. Dam removal & river restoration has proven very beneficial for both wildlife & communities in the Pacific Northwest.	The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway.

No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	This exciting restoration will improve water quality and flow by generating an additional 150 million gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
9/23/2021 16:42	Duval		No	Yes		2-5 times		Fishing Wildlife viewing	removal	lack of adequate water flow	stagnation of the Rodman pool	mo	
9/23/2021 16:42	Marion		No	No					shut it down it is making our water crisis worse	reading the various scientific papers on Florida waterways	The waterways would continue to shrink and native species will die.	none	
9/23/2021 16:43	Gilchrist		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	Breach the dam and restore the Ocklawaha River.	The ecological restoration of the Ocklawaha River.	Thousands of acres of forest and wildlife habitat are not restored.	No. Breach the dam.	Additionally restoring the Ocklawaha River is a cost effective way to restore Silver Springs.
9/23/2021 16:43	Outside of state / other	Chino Valley, AZ	No	No									As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/23/2021 16:43	Orange		No	Yes			1 time	Wildlife viewing	restore the Ocklawaha River by breaching the Kirkpatrick Dam	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	NO! 50 years and enough damage has been done. Breach the dam now	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. 9/23/2021 16:53	Broward		No	No					please restore the Great Florida Riverway, for manatees and other wildlife that depend on this habitat thank you	please see above	continued unnecessary loss of manatees and other wildlife	no	

9/23/2021 16:53	Outside of state / other	Brookhaven, GA	No	No					Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Breaching the dam will prevent $57 million in potential flood damages to downstream property owners.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Recreating the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration. (characters: 517).
9/23/2021 16:53	Seminole		No	Yes	1 time	2-5 times	2-5 times	Canoeing / kayaking Wildlife viewing	I would like to see the dam removed as it drains taxpayer dollars and has destroyed the Ocklawaha and covered up many springs, and interrupted the migrations of fish, manatees, and other wildlife.	The knowledge that the river is not meant to be contained in this manner, interrupting many natural processes. The Cross Fl. Barge canal is an admitted environmental disaster, I don't know why we continue to pay for this last part of it.	The negative environmental impacts that will continue as they have for the past 50 years, and the legacy and embarrassment of the Cross FL Barge Canal will continue.	It's really a choice between dam or no dam, there are not any in between options.	The dam is very expensive and a waste of taxpayer dollars. We could be making just as much money from ecotourism as we do from the fishing tournaments. There are plenty of other lakes in FL to fish from that do not require constant, expensive, maintenance.
9/23/2021 16:54	St Johns		No	Yes			2-5 times	Canoeing / kayaking	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Boat access to the Ocklawaha River is often impeded by vegetation overgrowth, requiring spraying of harmful chemicals.
9/23/2021 16:54	Outside of state / other	Oklahoma	No	No					Anything that helps your incredible manatees to survive.	You may take manatees for granted, but those of us who have to travel 1,000 miles to see them do not. They have a hard time surviving cold winters and boating accidents. Anything you could do to restore/improve their habitats would be ideal. Many places in Florida (i.e., the Keys) have been overdeveloped or poorly managed-the very things that tourists come to see are being destroyed. It is too late for Hawaii, but not for Florida! Please restore areas for wildlife that many Europeans and Americans travel far and wide to see! It starts with one area-others WILL follow!	It would be very sad to see the docile, sweet manatees lost forever. A lot is done to preserve the killer gators in Florida. No one seems to fight for these peaceful beings. They have no defense against uncaring humans.	Anything that might slow or outlaw boat motors in the waterways of manatees-no wake zones, paddles, require the raising of motors in the zones, some type of cage or protection around motors to protect wildlife, etc. Surely someone in the boating industry could come up with something?	Please help the manatees, or ship them all out of state to places where we would care for and respect them!
9/23/2021 16:55	Outside of state / other	California	No	No					Restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. AND 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer	The dam deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed impacts species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. 9/23/2021 16:58	Alachua		No	Yes			2-5 times	Wildlife viewing	I would love to see it taken down. The Ocklawaha is my favorite river and I can't wait to canoe the whole thing!	The river and the wildlife that life in it and around it would be much better off if the river flowed free.	That we have to keep fighting to get a damn taken down that should have never been put up and serves no valid purpose.	No	
9/23/2021 16:58	Alachua		No	Yes			2-5 times		I would like to see the dam breached and the river restored.	The dam is past its life expectancy and breaching it will save an estimated $4-14 million dollars in repair costs. Also, the 20 springs covered by the river will be restored, allowing fish and manatee populations to regain habitat that was lost with the building of the dam.	Water quality will decline further with blue-green algae and fish kills expected to increase. State and federal funds are available now and may not be in the future. We should seize this opportunity while public interest is high.	No. Florida needs to breach this dam. It is way past time!	
9/23/2021 16:59	Broward		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No!	
9/23/2021 16:59	Lake		No	No					Removal/demolition of the Dam	Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs.	Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	Partial removal which still allows for natural water flow and fish/Manatee migrations	It has been scientifically proven for decades the amount of damage dams do to their ecosystem and this dam is no different. Now is our opportunity to reverse this damage and restore the waterways to their natural flow. Not only will it save the ecosystem, it will also save the community millions of dollars in repairs and other expenses relating to maintaining the damage.
9/23/2021 17:00	Outside of state / other		No	No									
9/23/2021 17:02	Alachua		No	Yes		1 time		Other	id like to see the Kirkpatrick Dam removed. By cutting off water flow it is endangering the ecosystem. It is also a lesson for colonizers to recognize and take accountability for their lack of understanding how nature and harmony within work. By constricting a dam and "controlling flow" you only harm an ecosystem you never took the time to understand. YOU GUYS MURDERED NATIVES who are the watchers of the land. Please just recognize the reality of living in a post colonized world, You are not native to this land. There are KARMIC consequences to destroying nature, that is how sickness and ignorance occurs when you abuse mother earth. We have everything we need if we just protect her! And open your eyes and do the work of UNLEARNING EVERYTHING YOU KNOW. Look up to and protect natives they are the individuals who intrinsically understand empathy and balance. Please it is not too late to undo but you have to realize that everything you've been taught is a lie and tactic of colonization. Please respect and protect the natural water flow. It is, for a reason.	Migratory fish populations are down 92% since the dam was built back into Silver Springs. Please just protect the water and restore it to its natural flow.	Mass fish populations die offs, algae bloom (which affect bodies of water that are constricted). Murky water, bacteria in water, and potential viruses such as covid, though it might not seem like it, when there is an in balance that is man-made that affects nature, harmony with our planet is out of sync and more often you see strange illness in humans and animals.	Please stop building dams, stop doing construction on springs/near springs, it's so disruptive and has long term damage. Please stop allowing anyone to build concrete near springs, it is not natural and risks killing springs and wildlife which relies on the laws of nature. If the dam is not taken down you might as well curse your self and your family...	LAND BACK. GIVE LAND BACK TO NATIVES. Please recognize how in nature harmony is real. When a beaver builds its dam it serves a purpose in nature and changes the flow of the water. Natives also have a purpose here to protect and live in harmony with nature. And colonizers came here and disrupted their purpose and harmony. Creating artificial dams only causes destruction on a scale that you will never fully understand. IT also erases sacred energy of sites. Please keep our planet sacred. We only have one home, mother earth, protect her.
9/23/2021 17:03	Orange		No	No					Restore original water flow	History	People messing with nature	no	Dam should never have been created
9/23/2021 17:03	Orange		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers $4-14 Million in dam repairs saved on a dam past its life expectancy Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. $57 million in potential flood damages avoided to downstream property owners	CHEAT SHEET: 1. What would you like to see happen with the Rodman Reservoir and Kirkpatrick Dam moving forward? Please use this one or make one of your own. Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway. 2. What is the most important piece of information that supports your position? Please use one or make one of your own: Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers $4-14 Million in dam repairs saved on a dam past its life expectancy Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. $57 million in potential flood damages avoided to downstream property owners 3. What would be your biggest concern if your desired outcome is not achieved? Please use one or make one of your own: We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	With the terrible year manattees have had it is so important to provide them more habitat. Allowing springs to return will help charge the aquifer. We need this. Thank You
9/23/2021 17:04	Seminole		No	No					Restore the area as close to its natural state by eliminating the dam… this will help with native fish populations, allow the decimated manatee population a better habitat , help with elimination of invasive species and save millions in dam repair and maintenance.	Native fish populations are down by some 90% in the springs.	Further clogging by invasive plants and the resulting loss of habitat for native species and the resulting loss of dollars to the local economy resultantly.	No	
9/23/2021 17:05	Orange		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/23/2021 17:05	Duval		No	Yes		1 time		Other: Tourist	Removed	Free the Ocklawaha and Silver Rivers	Concern for wildlife and restricted fish migration	No	
9/23/2021 17:05	Collier		No	No					To restore the Ocklawaha River by breaching the Kirkpatrick Dam	$15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	The deprivation for hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No.	
9/23/2021 17:06	Manatee		No	No					I would like to see the dam breached	Breaching the dam will uncover the 20 springs currently submerged by the dam. Uncovering these springs is essential to restoring silver springs, providing warm water habitats for manatees, restoring migratory fish routes, and improving wildlife and seagrasses.	Loss of springs. Loss of wildlife especially manatees. The misuse of funds and taxpayers money for repair of a dam that has already exceeded nits life expectancy. Further decline of water quality fueling invasive weeds, blue-green algae events, fish kills, vegetation loss.	There is no other scenario. The breaching of Rodman-Formstack dam is not only 50 years overdue, it should never have been built in the first place. The long term impact of dams on fish, grasses, wildlife, water quality is always devastating to natural ecosystems.	Our Florida wildlife, especially manatees, are in crisis ndue to habitat loss, and food loss. This year alone has been one of the deadliest for manatees, fish, grasses due to algea blooms. As citizines of Florida we have a responsibility to ourselves and future generations to protect all our natural resources.
9/23/2021 17:06	Duval		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier	Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	This exciting restoration will improve water quality and flow by generating an additional 150 millionn gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefiting water quality through enhanced biofiltration. Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.
9/23/2021 17:08	Polk		No	Yes			1 time	Wildlife viewing	Restoration of the Ocklawaha river by breaching the dam to restore water quality and wildlife.	150 + million gallons of water per day restored to its natural flow to the Ocklawaha and St. John's rivers.	Thousands of acres NOT restored to nature.	No. It is 50 years overdue!	
9/23/2021 17:09	Clay		No	Yes			2-5 times	Fishing Hunting Wildlife viewing	Remove the dam and restore natural river flow.	The system was historically a riverine system	Missed opportunity to restore a unique River system of which Florida has very few compared to number of lakes.	No	Rodman Dam was a mistake clear and simple and it's time to allow for natural River functions.

9/23/2021 17:09	Franklin		No	Yes			2-5 times	Wildlife viewing	The Ocklawaha River is the heart of the Great Florida Riverway, which, if restored, could provide essential warm water habitat for hundreds of manatees in the winter. We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Even while manatees are still struggling with starvation from seagrass loss, the greatest long-term threat to these animals is the loss of warm water habitat that manatees need to survive the winter. Right now, 60% of Florida's manatees depend on power plant outfalls to keep warm and survive the winter - an unsustainable and unnatural situation. Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer. 9/23/2021 17:13	Outside of state / other	California	No	No					Removing the dam and restoring the Ocklawaha River	Protection of wildlife - this is necessary to protect endangered manatees	Loss of habitat and resulting animal deaths	No	Please take these steps to restore the river and land to natural state. We have so little nature left
9/23/2021 17:13	Outside of state / other	Indianapolis, IN	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a someone who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for the state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor.
9/23/2021 17:14	Seminole		No	No					I would like to see the Kirkpatrick Dam removed and the Ocklawaha to once again flow free. My family owns land walking distance from the Ocklawaha in Marion county and I care deeply about the ecology of that area.	As a biology major and researcher I understand that biodiversity has decreased as a result of this dam by reducing the ability of fish to move freely between the St. Johns River and the Ocklawaha and its upstream springs. This includes the sports channel catfish run and manatee migrations.	Continued loss of biodiversity as well as reduced potential manatee habitat, a species which is repeatedly suffering due to algal blooms and red-tide	No.	
9/23/2021 17:14	Alachua		No	Yes	2-5 times		Canoeing / kayaking Wildlife viewing		Restoring the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm occurs to wildlife, water quality, and the floodplain forests.	Restoring the flow way for fish and manatees to return to Silver River and Silver Springs.	The ecological system comprised of fish, manatees, water quality, floodplain, springs, and other features continues to decline. Horrible use of taxpayer money to keep the dam intact.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	This is the chance for our environmental managers (SJRWMD and DEP) to do the right thing and restore the Ocklawaha River.
9/23/2021 17:16	Alachua		No	Yes	1 time	More than 5 times	Canoeing / kayaking		Remove the dam	Free river flow. Species connections and access. Springs exposed	Continued enviro degradation. Costs of maintaining out of date dangerous dam. Costs of herbicides on the reservoir	Dam needs to b removed to connect water flow corridor	
9/23/2021 17:16	Alachua		No	No					I would like to see it taken down to allow the movement of wildlife and water throughout the area.	My preexisting knowledge of his dams affect the movement of wildlife and my knowledge of the declining water levels in the Florida springs.	I would be concerned that Florida's decision makers do not value the springs and the organisms that rely on them.	No.	Removing the dam would be a cost effective measure to benefit our waterways and wildlife.
9/23/2021 17:17	Outside of state / other	pennsylvania	No	No						Better management to afford wildlife their survival	Dying wildlife	lack of management is the concern	Like I stated before, better management to protect wildlife	Lets face it, climate change is our biggest problem. All the more reason to reassess management of waterways for wildlife and humans alike.
9/23/2021 17:17	Jefferson		No	Yes			2-5 times	Fishing Canoeing / kayaking					
9/23/2021 17:18	Outside of state / other	Philadelphia	No	No					Breach the Rodman/Kirkpatrick Dam.	Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs.	Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue	SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
9/23/2021 17:18	Outside of state / other	Shrewsbury, NJ	No	No					Preserve it for the manatees!	Emails from environmental groups	Manatee population extinguished		
9/23/2021 17:20	Hillsborough		No	Yes	1 time		Wildlife viewing		I would like to see the dam preserved as much as possible. I am a Tampa resident with a degree in biology that understands how important Florida wetlands are to the preservation of our fresh water supply and biodiversity. Please do not sell our remaining springs out.	There is a vast, public history of spring deaths in Florida due to corporate and public exploitation including Sulphur Springs, Hornsby springs, and many others. Springs are becoming stagnant ponds. I believe that Gionie Springs will be next, as fresh water is depleted below the level where salt water can mix with the fresh supply.	Irreversible environmental destruction including permanent pollution and loss of biodiversity.	Florida has already lost too many wetlands due to human expansion. Scientists and environmentalists have been reviving lost wetlands like these for years with the hope of bringing them back to (maybe) 30% of their environmental productivity level.	This is a no brainer. Protect our water.
9/23/2021 17:20	Duval		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway	100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier	The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This exciting restoration will improve water quality and flow by generating an additional 150 million+ gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration. Sincerely, Russell Baker
9/23/2021 17:20	Volusia		No	Yes			1 time	Fishing Fishing (shoreline/structure)					
9/23/2021 17:20	Collier		No	No					Breach the Rodman/Kirkpatrick Dam.	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. I fear that our water quality in Florida will continue to suck. That we will lose ALL our wildlife and birds.	No. It's past time. ACT on this.	To truly save Florida's biodiversity and magic, we must act now....and aggressively. Tourism and development will also dry up if this state continues to ignore our environment.
9/23/2021 17:20	Alachua		No	Yes	2-5 times		Fishing Canoeing / kayaking Wildlife viewing		Remove the dam, please. It's time.	Interest group research, government reports, social media, personal experience.	The status quo is not its best self, ie it could be better in many respects.	Anything less than it's natural state is, well...unnatural.	The dam is a relic of a failed idea. Let's finish what President Nixon tried to do a half century ago, shut it down.
9/23/2021 17:21	Outside of state / other	Washington State, San Juan County	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. We have to do everything possible to restore vital habitat and climate cooling ecosystems as soon as possible. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	
9/23/2021 17:21	Alachua		No	No					Whatever protects it	Rivers and water has been under attack in our state	The loss of ecosystems and natural resources		
9/23/2021 17:23	Palm Beach		No	No					The Ocklawaha River is the heart of the Great Florida Riverway, which, if restored, could provide essential warm water habitat for hundreds of manatees in the winter. Manatees have already reached a record number of deaths this year - and if we don't restore additional areas of their natural habitat, we could lose even more manatees in the future.	the death of so many manatees this year this river system has to be restored to save them	that the manatees would go extinct	no	
9/23/2021 17:25	Duval		No	Yes	2-5 times		Canoeing / kayaking Boating Wildlife viewing Other: Exploring, my family lived at Rodman		I'd like to see the dam removed.	1. Dam is obsolete - past it's useful life. 2. Economic studies indicate that the higher value is with dam removed. 3. Conservation studies support the dam's removal. 4. Better for water quality and fishing.	Diminished economics; diminished water quality.	Let the dam remain but drain the lake and let the river run unimpeded.	I think the fishing lobby overstates it's case.
9/23/2021 17:26	Pinellas		No	No									
9/23/2021 17:28	Dade		No	No					whatever needs to to help the manatees!!	I have not been informed- however anything that saves the lives of our manatees and our waterways is crucial! Anything that needs to be done to preserve the lives of our wildlife is most important	that we will loose our manatee population and they will become extinct - its already hard enough on them with the waterways filled with boats, and ski jets its bad enough our waters are getting polluted as well and now with this idiot president - all he is doing is talking about Covid sending vaccine to all the world -while he produces money that what we have her and that we could be using for our wildlife and eventually as the idiot he is we will have to pay for all this stuff instead of being able to give some extra money to charity to do what they need to keep our wildlife alive and safe. De Santis looks after our state and the demented idiot socialist president tries to tear us down!	Learn to live with Wildlife we have infringed so much already! They have as much right as we to live here and be safe! We must come to terms with what is best for both- in this case we must protect them!	
9/23/2021 17:29	Outside of state / other		No	No									Even while manatees are still struggling with starvation from seagrass loss, the greatest long-term threat to these animals is the loss of warm water habitat that manatees need to survive the winter. Right now, 60% of Florida's manatees depend on power plant outfalls to keep warm and survive the winter - an unsustainable and unnatural situation. Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.
9/23/2021 17:30	Hillsborough		No	No					Breach the Rodman/Kirkpatrick Dam	Hundreds of manatees would gain access to a much needed habitat at a time when manatees are experiencing the deadliest year on record	Hundreds of manatees will lose access to essential warm water winter habitats	No. Breaching the Dam is overdue	Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost effective springs protection project in Florida today.
9/23/2021 17:31	Santa Rosa		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000 + acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida Black bears, Florida panthers, bobcats, bald eagles and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,000 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats and white-tailed deer that CANNOT easily travel through this vital section of the Florida Wildlife Corridor.	NO. Breaching the dam is 50 years overdue!! Wildlife and water quality CANNOT WAIT ANY LONGER!!	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 9/23/2021 17:31	Marion		No	No							Wildlife restored		
9/23/2021 17:31	Washington		No	No						Open it	Wildlife restored		
9/23/2021 17:32	Brevard		No	Yes		1 time	Wildlife viewing		Removal/breaching of the dam to restore natural flow of waters	$50+ million gallons a day of natural flow would be restored to the Lower Ocklawaha and St. Johns Rivers, providing a safe haven for manatees which are being pushed out of their habitats due to lack of food.	That the state misses out on available funding and the project is postponed, thus continuing to harm multiple Florida waterways	No. The dam has caused years of harm to area flora and fauna, it needs to go!	
9/23/2021 17:32	St Johns		No	No					I believe breaching the Rodman Reservoir/Kirkpatrick Dam is crucial to Florida wildlife surviving for many decades to come. As a Florida native and taxpayer I don't want to see money wasted to restore this dam, I want to see countless springs restored and thriving the way they were designed by Mother Nature. I want to take my children's children to springs in North/Central Florida in years to come and not be looking at a wasteland of dead fish and no wildlife. Please, don't doom the future generations to come by trying to play God with a dam.	Permanent consequences of fresh, clean water availability. Millions of tax dollars resulting in MORE problems we can't put a bandaid on.	Time is of the essence, this needs to be addressed NOW. I don't want to look back as we blow millions to further ruin our precious ecosystem and say I did nothing.	No	Breach the Dam.
9/23/2021 17:32	Volusia		No	Yes	2-5 times		Wildlife viewing Other: Manatees		Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	The Ocklawaha River is the heart of the Great Florida Riverway, which, if restored, could provide essential warm water habitat for hundreds of manatees in the winter. Manatees have already reached a record number of deaths this year - and if we don't restore additional areas of their natural habitat, we could lose even more manatees in the future.	That the Gentle giants the Manatee's all die off and we are left without them.	No	
9/23/2021 17:34	Brevard		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. I appreciate your time!
9/23/2021 17:35	Lake		No	Yes		1 time	More than 5 times	Fishing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. It's time to restore the river to its natural state and allow it to recover.	$50+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers	The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam is 50 years overdue. It's time.	I am a fisherman and have enjoyed fishing Rodman on many occasions; however, the environmental harm that has been caused and continues is not worth the limited recreation within Rodman. We will still be able to catch fish on the natural river once it is restored. Please do the right thing, and restore the Ocklawaha River to its natural state.
9/23/2021 17:35	Brevard		No	No					Yes - free flowing waters ...	The natural world needs this. this will open up so much to the animals who are struggling	The continued disrespect and disregard of what needs to happen without financial gain	No	
9/23/2021 17:37	Alachua		No	Yes			More than 5 times	Canoeing / kayaking Wildlife viewing Other: Seeing the springs when the reservoir is drawn down	Remove the dam as soon as possible, as part of a planned process of restoring the Ocklawaha River and it's floodplain.	Removal of the dam will enhance restoration of water quality and of aquatic and wetland habitats for 3 rivers (the Ocklawaha, Silver, and St. Johns) and about 50 springs.	Millions of dollars of public funds may be unnecessarily and irresponsibly spent to repair the Rodman/Kirkpatrick Dam, which does not provide flood protection, power, water supply or any other broad public benefit.	Absolutely not. The dam should have been removed a half century ago. It's time.	Follow the science, much of it your own! There is abundant evidence that removing the dam will provide vastly more public benefits than maintaining (and repairing) it.
9/23/2021 17:37	Duval		No	No					Remove the dam and restore the natural flow of the Ocklawaha River. This will create better water quality and restore wildlife habitat and migration, which, in turn, will create economic opportunity for the area. The dam is detrimental to health of the Ocklawaha, St. Johns, and the over 50 negatively affected, naturally-flowing springs.	Restoration of free-flowing rivers (Oklawaha, Silver, and St. Johns) and the restoration of the springs.	The death of the three rivers mentioned above as well as the springs, which leads to destruction of habitat and change of animal migration (as well as possible extinctions), and the loss of some of our greatest natural resources in the state of Florida. The public will is there, the money is available, and the time is now.	No. President Richard Nixon saw how destructive this project was, so much that he put a halt to it. This is decades overdue.	This system of rivers and springs is a legacy which should be left to future generations. The destruction we have already caused is evidenced by the impact on animal and fish migration, Cypress forest death, and poor quality of water. We know what we need to do, we have the facts, and to turn away from this would be a conscious decision to leave behind a legacy of environmental failure. It is well past time to act. We don't have other rivers, streams, and springs. We have only what was given to us by our Creator. We have damaged, polluted, and nearly put these beautiful resources to death. But we can change that. We can reverse it. Nature is resilient, as is evidenced by what happens during the drawdown. We need to remove this dam so the river can breathe and come back to life.
9/23/2021 17:37	Outside of state / other		No	No									Protect the manatees and other species that inhabit this ecosystem.
9/23/2021 17:38	Brevard		No	No									Please do what's best for the manatees and other wildlife
9/23/2021 17:38	Broward		No	No					to saved the manatees	Animals they don't belong to us to the nature	My desires like many others will be achieved because we are care for the manatees	I always will be support no matter what	Made this to happen

9/23/2021 17:38	St Johns		No	No					Breach the Rodman/Kirkpatrick Dam	The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs. This would also restore 20 Florida springs bringing back manatee and large part of the fish population.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. In addition to water quality decline further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	MANNATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/23/2021 17:41	Marion		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/23/2021 17:41	Hillsborough		No	No					Breach the Rodman/Kirkpatrick Dam	Hundreds of manatees would gain access to much needed habitat at a time when manatees are experiencing the deadliest year on record	Hundreds of manatees lose access to an essential warm water winter habitat	No. Breaching the Dam is long overdue.	The Rodman Kirkpatrick Dam to restore the Ocklawaha River is the most cost effective springs protection project in Florida today
9/23/2021 17:41	Outside of state / other	Hawaii	No	No					Restoring the Ocklawaha River to protect habitat and food source critical to the survival of endangered manatees	Even while manatees are still struggling with starvation from seagrass loss, the greatest long-term threat to these animals is the loss of warm water habitat that manatees need to survive the winter. Right now, 60% of Florida's manatees depend on power plant outfalls to keep warm and survive the winter - an unsustainable and unnatural situation. Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	Loss of habitat and food sources for manatees and adverse impacts for their survival. Even while manatees are still struggling with starvation from seagrass loss, the greatest long-term threat to these animals is the loss of warm water habitat that manatees need to survive the winter. Right now, 60% of Florida's manatees depend on power plant outfalls to keep warm and survive the winter - an unsustainable and unnatural situation.	Need to fully restore the Great Florida Riverway. So NO there is no other scenario I can support.	Florida manatees like the wildlife in the Florida Everglades are important to the Florida economy in other ways like ecotourism. Significant dollars come in from visits.
9/23/2021 17:42	Pinellas		No	No					Restore habitat for manatees and other animals	Statistics showing record numbers of manatee deaths this year.	There is no Planet B. Once animals and habitat are gone, they're gone.	No.	
9/23/2021 17:44	Pasco		No	No					Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No	I've lived in Florida since birth and loved the beautiful springs and nature they support. It's ecosystems are under more pressure than ever now and will soon face a breaking point with the level of irresponsible overdevelopment and lax protections of critical areas. An opportunity like this to restore important environmental conditions is rare and should be taken without a second thought regardless of the financial benefits or losses. Florida's wildlife is immeasurably more valuable than any damn dam.
9/23/2021 17:44	Outside of state / other	ohio	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Roman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor	No. Breaching the dam is 50 years overdue. No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	
9/23/2021 17:55	Duval		No	Yes		1 time	Wildlife viewing		Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat. 100-mile St. Johns River Estuary from Welaka to Palatka to jacksonville is healthier 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers $4-14 Million in dam repairs saved on a dam past its life expectancy Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. $57 million in potential flood damages avoided to downstream property owners	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe. Historic fish and manatees return as breach opens creating a free-flowing river $5 million in damages. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling campy, and recreation benefits. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.
9/23/2021 18:01	Alachua		No	Yes	1 time		Canoeing / kayaking		Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ockawaha, Silver and St. Johns Rivers, and 50 springs are restored	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait. OR	Please take it down!
9/23/2021 18:01	Outside of state / other	Perth, Australia	No	No					I would like to see the Ocklawaha River restored by breaching ithe Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. It would also keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No.	- urge you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/23/2021 18:01	Marion		No	Yes		1 time	Canoeing / kayaking		Take it down. Stops free flowing River.	Not needed. outdated, expensive to maintain	Further. Destruction of environment	Partial breech	

9/23/2021 18:03	Volusia		No	No					Breach the Rodman/Kirkpatrick Dam	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue	This reservoir was created as a result of a falled canal through Florida. The canal failed because policy-makers realized the canal would ruin Florida's aquifer and therefore our clean water supply. There are no benefits of keeping the dam, it's not even cheaper. There are plenty of other premier large-mouth bass fishing spots.
9/23/2021 18:03	Duval		No	No								NO	
9/23/2021 18:04	Outside of state / other	Los Gatos, California	No	No					Restoring the Ocklawaha River by breaching the dam will provide endangered manatees access to warm water springs. This is critical to ensuring the survival of manatees in the winter and beyond.	Manatee tourism provides livelihoods to numerous residents of Florida. The greatest long-term threat to manatees is the loss of warm-water habitat that they need to survive the winter.	The outlook for manatees survival will become even more bleak than it is right now and thousands of people in Florida who depend on manatee tourism will lose their means of livelihood.	Find another natural and sustainable way to provide manatees with access to warm water springs (power plant outfalls are unsustainable and dangerous).	I love visiting Florida for it's varied and unique natural preserves and wildlife such as manatees, coral reefs, and the other numerous marine life. Please do whatever is needed to protect these into the future.
9/23/2021 18:04	Brevard		No	No					Removal of the dam	Would lead to restoring the health of the St. Johns River.	Continued deterioration of the St Johns River and tributaries associated with the dam.	I cannot conceive of any.	Removal of the dam is long overdue.
9/23/2021 18:06	Alachua		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	Dam removed and the springs and river improved and conservation lands purchased.	The crumbling of the damn, destruction of springs that promote tourism, opening the river to manatees. Stopping the build up of invasive plants and sediments which decrease water quality	The damn collapses, the springs are lost and manatee habitat not being restored	Dam must be removed.	There will always be fish but manatees need help, we deserve to have our springs back, and the river should be restored
9/23/2021 18:07	Outside of state / other	UK	No	No					Please open up the waterways to Manatees and other wildlife that need it		The Ocklawaha River is the heart of the Great Florida Riverway, which, if restored, could provide essential warm water habitat for hundreds of manatees in the winter. Manatees have already reached a record number of deaths this year - and if we don't restore additional areas of their natural habitat, we could lose even more manatees in the future.	no	
9/23/2021 18:08	Duval		No	Yes		More than 5 times		Canoeing / kayaking Wildlife viewing	I would like to see the dam demolished.	Restoration of the natural flow of the river will save springs and avoid costly cleanup every few years when it's drained.	That we will continue to waste money maintaining the dam & the water quality/springs will decline	No. The dam should be removed	
9/23/2021 18:10	Seminole		No	No					Breach the Rodman/Kirkpatrick Dam	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	Hundreds of manatees loose access to essential warm water winter habitat.	No. Breaching the dam is 50 years overdue.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/23/2021 18:12	Pinellas		No	No					I am an advocate of restoring natural safe waterways in Florida to their historical place in the landscape. Removing these dams especially ones that impede the living conditions for Florida wildlife are my desire.»	I have no specific information other than man-made structures tend to ultimately harm wildlife in ghastly ways.	For the safety and health of the creatures in the area. Once they are gone they may be gone forever. Florida must stay pristine and a place for natural living by both man and wildlife.	If this dam and reservoir are serving a great improvement in the area then a greater action to monitor effects upon those in the area must be done on a regular basis.	Knowing our history is sometimes a great source of comfort and one aspect of that feeling is one's opportunity to visit areas kept as they were in past natural situations. My ancestors lived in Emeralda area of Lake Griffin and the Ocklawaha in late 19th century. So that area's historical look is very important to me who hopes to visit for research. Seeing the rivers as they were would help my study and present also to visitors a beautiful trip as they take a step back in time with few man-made interferences.
9/23/2021 18:12	Outside of state / other	Olympia WA	No	No					Want Manatees protected	They are dying much faster than typically; they need more space and warmer water.!	Manatees might go extinct	No	
9/23/2021 18:13	Outside of state / other	Lucas County, Toledo Ohio	No	No					Preserve in a natural state Goal for making area handicap accessible		I would never visit area or Florida. Why should I ?		
9/23/2021 18:14	Outside of state / other	UK	No	No					Please make it a haven for wildlife and a place for Manatees to spend the winter	The Ocklawaha River is the heart of the Great Florida Riverway, which, if restored, could provide essential warm water habitat for hundreds of manatees in the winter.	Manatees have already reached a record number of deaths this year - and if we don't restore additional areas of their natural habitat, we could lose even more manatees in the future.	no	
9/23/2021 18:14	Outside of state / other	St. Louis, MO	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. 9/23/2021 18:32	Outside of state / other	33408 hwy 190 springville, ca usa	No	No				We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/23/2021 18:36	Putnam		No	Yes	1 time		Boating	Dam removed.	Natural water flow.	Continued disruption of natural systems.	Continuously open dam.	
9/23/2021 18:38	Polk		No	Yes	1 time		Wildlife viewing	It should be breached	The river would still be dammed for no good reason other than bureaucratic inertia	No		The dam is an anachronism As a 73-year-old native Floridian who was born and raised along the St. Johns River, I find this dam offensive.
9/23/2021 18:38	Broward		No	No				Restoration of the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. Unless of course the Florida legislature wants manatees to become extinct !	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	How many manatees will die before Florida does the right thing? Restoring the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees, is the right thing to do. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor.
9/23/2021 18:39	Outside of state / other	San Cristóbal-Venezuela	No	No				To preserve and protect it all the time				
9/23/2021 18:42	Franklin		No	No								I don't live in Florida but have been there many times. It's an environmental mess but I live in a environmental mess too.
9/23/2021 18:43	Hillsborough		No	Yes		1 time	Canoeing / kayaking Wildlife viewing	Breach the dam	Flow from the dam will provide much needed restoration to valuable and vulnerable ecosystems and could help restore manatee populations in decline.	Continued algal blooms, eutrophication, poor water quality, loss of habitats, waste of taxpayer money.	No this is long overdue	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration
9/23/2021 18:43	Flagler		No	No				I want the best outcome for manatees.	I want the best outcome for manatees.	I want the best outcome for manatees.	I want the best outcome for manatees.	
9/23/2021 18:45	Outside of state / other	UK	No	No				Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway	Manatees would be able to access the habitat that they require.	That the manatees and other wildlife were not able to benefit from the habitat that they need. Manatees are amazing creatures who can attract people to areas for tourism	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Please do all you can to help the manatees and restore the environment so that it benefits the wildlife that relies on it
9/23/2021 18:46	Volusia		No	No				Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Please help restore these waterways, and provide the much needed habitats to protect manatees and the many other animals that need them to survive and thrive!
9/23/2021 18:46	Duval		No	No				I would like to see it removed/ breached to restore the natural flow	Federal money is available at the moment to achieve this. Who knows for how long it will be available.	It will breach on it's own or it will cost millions to repair	No	
9/23/2021 18:47	Pinellas		No	No				Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. It's 50 yrs overdue	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
9/23/2021 18:47	Nassau		No	No				We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer. 9/23/2021 18:55	Osceola		No	No								
9/23/2021 18:57	Outside of state / other	Australia	No	No				If the dam that holds back the Ocklawaha River is breached, it will help hundreds of manatees by allowing them to access additional warm water habitat.	The known rate of manatee death and decline.	The continued loss of manatees at a rate which means they are heading towards extinction.	No - the dam needs breaching	Our planet is in crisis through species loss, habitat loss, and pollution (including carbon and plastic) - If we don't start considering the impacts of our actions on natural ecosystems, our only planet may become unliveable! We must start saving species, not watch them go into extinction.
9/23/2021 18:57	Duval		No	No				The dam should be removed .	Information about the need for a free-flowing river for the health of the St. Johns, the springs, and wildlife in the area. A dam needing frequent costly repairs and a body of captive water are not in anybody's best interest at this point. The dam should have been taken down years ago. Now is absolutely the time to finally get it done.	Further damage to rivers and springs , detrimental impact on wildlife, and evidence that Florida cannot make sensible decisions.	No	This really has gone on long enough.
9/23/2021 18:57	Martin		No	No				I would like it restored for the benefit of manatees or other wildlife.				

9/23/2021 18:58	Outside of state / other	Hackensack, NJ	No	No					I would like to see restoration of the Ocklawaha River by removing the Kirkpatrick Dam.	Restoring the Ocklawaha River will provide essential warm water winter habitat for hundreds of manatees. Also, the Florida Wildlife Corridor will be restored, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. It would also keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Removal of the dam is overdue. Wildlife and water quality cannot wait any longer.	
9/23/2021 18:59	Duval		Yes	Yes		2-5 times			Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this singe project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No. Breaching the dam is 50 years overdue.	
9/23/2021 18:59	Orange		No	Yes		2-5 times	More than 5 times	Canoeing / kayaking Other: Bird watching and photography	I would like to see the dam breached/ removed.	Breaching the dam would restore both the historic hydrologic and wildlife connection. It would increase fisheries viability, restore spring flows, would increase recreational connectivity. It would also reduce costs associated with the dam and increase ecotourism to the area.	This is an opportunity to utilize state and federal funding to restore this valuable river system and may be lost. This are will provide additional habitat to manatee which are currently experiencing historic threats and not acting will miss an opportunity to assist this species. This is an opportunity yo increase the long term water quality of the basin by removing the impoundment which will only decline as time goes on. Not acting will also result in a lost opportunity to increase ecotourism, canoeing and kayaking and wildlife viewing opportunities. We should not lose this opportunity.	No. The dam and impoundment of this river are a result of an abandoned project. The values associated with natural river flow must be restored.	
9/23/2021 19:00	Pinellas		No	No					I would like to see the dam breached to allow natural water flow to help with spring snd habitat restoration.	Environment studies.	Further degradation of the springs and water system.	No	No
9/23/2021 19:05	Citrus		No	Yes			1 time	Canoeing / kayaking	Breach the dam and return the Ocklawaha to its natural state.	I've lived in Florida for over 50 years and I have knowledge of natural Florida and damage done by the ill-conceived Cross Florida Barge Canal.	Continued degradation of what was one a pristine waterway.	No.	The dam should have been removed when the CFBC project was abandoned.
9/23/2021 19:07	Outside of state / other	NH	No	No						Save the animals!	The animals		Please remove the dam!!! Thank you!
9/23/2021 19:07	Outside of state / other	Attleboro,MA	No	No						Protect all manatees			
9/23/2021 19:09	Duval		Yes	Yes		2-5 times			Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this singe project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No	Breaching the dam is 50 years overdue.
9/23/2021 19:09	Clay		No	Yes		2-5 times			Restoring the natural flow of the Ocklawaha River to the St Johns by breaching the Rodman Dam	The dam limits the movement and migration of wildlife. The St Johns needs the undisrupted flow the the Ocklawaha River, which promotes a healthier St Johns River.	When would another opportunity present itself? Over a dozen lost springs would no longer be submerged, natural habitats would be restored, and vital flow would be restored to the St Johns River. Which I might add is in poor health, additional flow would improve both rivers.	No. Remove the dam.	
9/23/2021 19:10	Leon		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Breach the Rodman/Kirkpatrick Dam.	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs. There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	Please PLEASE do the right thing. Think of the wild life, think of our children and future generations.
9/23/2021 19:11	Outside of state / other		No	No					Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer. What would be your biggest concern if your desired outcome is not achieved? Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer. What would be your biggest concern if your desired outcome is not achieved? Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.		no	
9/23/2021 19:11	Polk		No	No					Breach the expired dam.	Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs.	The health of Florida's spring and wildlife is at stake. Algae growth, manatee death and lack of diverse populations are all massive problems.	No. This dam is overdue to be demolished and natural flow restored.	Please listen to your heart and realize spending millions of tax payer's dollars to prevent natural water flow is not the answer Florida needs.
9/23/2021 19:11	Outside of state / other	New Hampshire	No	No									
9/23/2021 19:12	Outside of state / other	Meadville PA	No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue - it's time to take it off life support.	This exciting restoration will improve water quality and flow by generating an additional 150 million+ gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration. (characters: 536)
9/23/2021 19:13	Wakulla		No	No					The dam should be opened.	There are a lot of springs, I think about 20, that would get back to normal if the dam were breached. My understanding is that breaching the dam would also provide more habitat for the manatees.	We would miss an opportunity to do this now when the dam needs expensive repairs.	no	
9/23/2021 19:13	Putnam		No	Yes			1 time	Wildlife viewing	I would like to see the dam removed and the reservoir cleaned	natural flow of the ocklawaha river	death of the ocklawaha river and its inhabitants	No!	
9/23/2021 19:14	Outside of state / other	San Diego County	No	No					I would like to see the restoration of the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees who have been dying at alarming rates. We can't let these majestic sea clowns starve to death. Restoring 15,000+ acres will additionally benefit other species including black bears, panthers, bald eagles, bobcats and deer.	It will aid in the extinction of the manatee. Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer. As a species, we tend to wait until an event is a crisis. We are in the midst of a crisis right now and can begin to right the wrongs which began years ago by poor decisions and compounded by poor leadership.	I grew up in the 70's watching all the nature shows and fell-head over heels in love with this planet. I believe we are committing accicide and we have very little time to stop our eventual extinction. We must all work together, especially our leaders because 1 as one person can only do so much, but I by myself do make a difference. Please listen.
9/23/2021 19:14	St johns		No	No					Open the dam.	Springs could be revived that have been drained because of the dam. Manatees can flourish agam.		No	
9/23/2021 19:15	Outside of state / other	Partlow VA	No	Yes		1 time		Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/23/2021 19:18	Dade		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	The loss of precious habitat for these I on creatures and endanger animals	We are in the midst of the the 6th mass extinction, lead my the actions of humans in habitat destruction, killing, and climate change. This is all happening on our watch for the sake of profit or human convenience. We need to stop making excuses and be brave to stop this irreversible change.	
9/23/2021 19:22	Outside of state / other	NJ	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. 9/23/2021 19:23	Outside of state / other	PA	No	No					Conservation	Conservation	The loss of a good ecosystem	Not really	
9/23/2021 19:24	Pinellas		No	Yes			1 time	Wildlife viewing	I would like to see a breach of the dam to free up the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	That the breaching of the dam would open up the warm water habitats for manatees.	The deaths of manatees would continue to rise and endanger the entire population.	No	I believe that The St. Johns River Water Management District must act quickly and decisively to ensure that these issues are resolved and th at the preservation of our wildlife and environment receive the priority they deserve.
9/23/2021 19:25	Outside of state / other	Brantwood, Mo.	No	No					Make it safe for manatees. All our waterways need immediate attention.				
9/23/2021 19:26	Nassau		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	A full breach of the dam, with eventual removal of the dam.	The dam has outlived its useful life span and is a danger to property owners downstream, is too costly to repair, and is an anachronism to what we know now about wildlife conservation (such as helping manatees), recreation (canoeing and kayaking, especially), and fishing (which would be much improved if the dam were removed).	Millions of dollars will be needlessly spent to repair an unnecessary and unsightly structure that could instead be invested in critical wildlife habitat resiliency, enhanced recreational activities, and property protection.	A gradual drawdown of the lake could be a temporary measure, but no, a breach of the dam is what is needed.	A breach of the dam is supported by so many federal, state, and local agencies, as well as by hundreds of thousands (maybe millions) of individuals, including a majority of local residents for so many good reasons. It is an idea whose time has come (and is long overdue, in my opinion).
9/23/2021 19:27	Hillsborough		No	Yes			1 time	Wildlife viewing	I would love to see more environmental protections in place to protect the invaluable nature of the area.	Florida's springs and other waterways are being polluted at a fast rate and immediate action needs to be taken before we pass a breaking point.	Our springs and waterways will become unusable toxic wastelands and can potentially kill and harm wildlife and humans.		
9/23/2021 19:29	Manatee		No	Yes	1 time	2-5 times	More than 5 times		Breach the damn dam!	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. hundreds of manatees loose access to essential warm water winter habitat. Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer	As a Florida Resident who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("COO") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me and will greatly benefit Florida's people, environment and wildlife.
9/23/2021 19:47	Outside of state / other	Santa Clarita, CA	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. 9/23/2021 19:48	Palm Beach		No	No										
9/23/2021 19:49	St Johns		No	No					Restore the area back to its original state We need the ecosystem restored	Florida Wildlife Federation information	Continued loss of Florida's ecosystem	Restoration of some wetlands to improve our ecosystem	We need the black bears back!
9/23/2021 19:49	Outside of state / other	Outside of state	No	Yes			1 time	Wildlife viewing	Have it breached to create warm water habitat for manatee and expansion/enhancement of wildlife corridors	The impact of the dam on warm water habitats and wetlands (destroyed by flooding) are well known	The continuing decline of manatees to possible extinction and decline of other species that are also struggling.	No - we are at a time where half measures are not working- and are losing us time we don't have.	I live in Washington state where we are also losing precious species due to habitat loss and the call for breaching dams is growing. I traveled to Florida for the purpose of seeing its magnificent wildlife and natural beauty. It would be a tragedy to lose all that as well as creating significant economic impact in regards to tourism. Please do the right thing for the survival of manatees as a species and for future generations who should be able to enjoy them as have we. Thanks for your consideration.
9/23/2021 19:49	Outside of state / other	Hoover, AL	No	No					Remove the Kirkpatrick Dam, releasing the Rodman Reservoir and restoring the Ocklawaha River.	The Ocklawaha River, if restored, would be an important haven for manatees.	That the manatee population of Florida will diminish, possibly to extinction.	Don't know.	
9/23/2021 19:50	Pasco		No	No					I think the only and best option is to see this dam removed.	This would provide much needed habitat restoration for our beautiful state. There are 20 drowned springs that would be restored by this single project, making the removal of the Dam the most beneficial and cost-effective springs protection project in Florida. This year has also been devastating to our manatee population. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	My biggest concern is the water quality continues to decline fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. In addition, the money that would be wasted on repairing this damn. Not to mention the economic and tourism impact restoring the 20 springs could have on the area and state. This would bring much needed jobs and tax revenue to the area and state.	No, removing the damn is a must. Our environment, economy, and future generations are depending on this damn removal.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/23/2021 19:51	Polk		No	No					Breach the Rodman/Kirkpatrick Dam	Hundreds of manatees would have access to much needed habit at a time much needed when manatees death has been the deadliest ever.		The manatees are dying at a such disturbing rate, we human being must protect all species and specially the manatees because they live right here at our back yard. They can't defend for themselves so our obligation is to defend and protect and give back their habit. Just think about all the fish that will also benefit from it.	Can you imagine yourself dying of hunger because your habit was taken away? Can you imagine yourself dying from frostbite because your environment was taken way and you cannot get warm during winter season, and what about those painful sores in your body caused for frostbite?
9/23/2021 19:52	Outside of state / other	Portland, Oregon	No	Yes				Wildlife viewing	WE need to restore the Ocklawaha River by breaching the Kirkpatrick Dam	Restoring the Ocklawaha river is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. IT will also enhance habitat for other Florida wildlife species like Florida panthers, bobcats, black bears, bald eagles and white tailed deer.	Harming future survival of manatees	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait.	I graduated from the University of Florida and have many family members and friends still in the state. I love Florida's unique wildlife and wildlands and hope to return there to live soon. As a state holder who cares about Florida's environment I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for the state's people and wildlife, especially manatees.
9/23/2021 19:53	Broward		No	No					Repair and restore the dam.	Too many manatee deaths.	More manatee deaths.	No	
9/23/2021 19:53	Citrus		No	Yes		1 time	2-5 times	Wildlife viewing	Remove both	It is an artificial zoo/manatee that serves no purpose other than to disrupt a natural watercourse.	That my grandchildren will have no idea what Florida was when we had clean water.	I ponder this but come up with blanks.	Florida has squandered its most valuable resource. It is time to start fixing the problems.
9/23/2021 19:54	Outside of state / other	Maryland	No	Yes			1 time		Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway	$57 million in potential flood damages avoided to downstream property owners	Hundreds of manatees lose the opportunity to access essential warm water winter habitat.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait	
9/23/2021 19:54	Outside of state / other	Jefferson, NH	No	No					Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	Manitees are dying!! we are losing them at an astonishing speed!	Survival of the Manitee	no	
9/23/2021 19:56	Outside of state / other	Indiana	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. 9/23/2021 19:57	Outside of state / other	Houston, TX	No	No						Restoration of the water reservoir	Continuing pollution and less water available		
9/23/2021 19:58	Duval		No	No					Get rid of it	It doesn't do anything	Same crappy river	No	
9/23/2021 19:58	Jefferson		No	Yes		More than 5 times		Fishing	We would like to see protection for manatees. If we don't restore additional areas of their natural habitat, we could lose even more manatees in the future.	We have lost so many manatees this year and 60% of them require power plant outfalls to keep warm and survive the winter - an unsustainable and unnatural situation.	We will lose these wonderful creatures.		
9/23/2021 19:59	Volusia		No	No					Breach the Rodman/Kirkpatrick Dam	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue.	
9/23/2021 19:59	Outside of state / other	clark county, nevada	No	No					breach the dam and restore the ocklawaha	the breach will restore habitat for manatees	manatees and other species in the area would suffer the consequences	NO	
9/23/2021 19:59	Lake		No	No					Breach the Rodman/Kirkpatrick Dam	Manatees and fish populations would have access to a much needed habitat	Tons of tax payers money is spent making unnecessary fixes to a dam that doesn't provide any flood protection, power, or water supply	No the dam needs to be breached	This has been the deadliest year for manatees and breaching the dam would give manatees a very useful warm water habitat in the winter
9/23/2021 20:03	Alachua		No	Yes		1 time	2-5 times	Canoeing / kayaking	Removal of the is essential to the health of the Ocklawaha River	Restoration of the river and its 20+ springs	The Ocklawaha River will die	A complete and permanent drawdown	
9/23/2021 20:03	Putnam		No	Yes	1 time	2-5 times	More than 5 times	Wildlife viewing	I support breaching the dam	There are 20 springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. It would restore native wildlife habitat and save taxpayer dollars.	We waste taxpayer dollars repairing a structure that depletes our local environmental resources (fish/ manatees!)	No, the dam needs to be drawn down	Manatees are having a severe population decline and this would be a fantastic way to support Florida's most iconic animal
9/23/2021 20:03	Okaloosa		No	No					Restore to it's original state.	manatees could gain access to warm water springs.	Millions of taxpayer dollars unnecessarily spent.	No, this is long overdue.	I am a native Floridian, 85 years old. I have seen much destruction of the environment. It is time to change.
9/23/2021 20:03	Pinellas		No	Yes	1 time	1 time	2-5 times	Canoeing / kayaking	Should be breached	Nature and the planets health	That money would once again run wildlife.	No	
9/23/2021 20:05	Charlotte			No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing Other: wildlife photography	We would like to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Would be great for manatees who we love and keeping the Ocklawaha dammed would mean that 1000s of acres of forested wetlands would be preserved by the Rodman Reservoir. This would benefit many animals like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	no wildlife preservation, especially panthers and manatees, both of whom are endangered.	NO! This project should have been done decades ago and is desperately needed to protect wildlife and water!	Our water and wildlife is irreplaceably precious! Let's protect the Ocklawaha River by breaching the Kirkpatrick Dam. before it's too late!
9/23/2021 20:05	Marion			No	Yes			2-5 times	Canoeing / kayaking Boating Wildlife viewing	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway. Many fish species and manatees cannot migrate, many freshwater springs are covered- water quality is declined.	Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife $50+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers $4-$4 Million in dam repairs saved on a dam past its life expectancy Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. $57 million in potential flood damages avoided to downstream property owners Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 10 lost springs and Silver Springs ecosystem are restored	Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. A storm event triggers a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	I have spent almost 30 years doing tours on the Silver and Oklawaha rivers- watching it deteriorate, as flows are changed, migratory fish and manatees cannot migrate easily, inviting invasive species, water quality destroyed, and nitrates and algae taking over... removing the dam will help restore the ecosystem and the springs, allowing canoers and kayakers to enjoy what once was. Fish will be restored for good fishing, with diversity increased. We have been fighting to remove the dam for decades-the cost of maintaining a failing system is ridiculous- Remove the Dam!!!
9/23/2021 20:06	Duval			No	Yes	1 time	1 time	2-5 times	Canoeing / kayaking Wildlife viewing	Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam to reunite the natural connection of Silver Springs, the Ocklawaha and the St. Johns River.	The science supports restoration. Studies by federal and state agencies have clearly demonstrated that restoration of a free-flowing, connected system is cost-effective and will provide significant ecological benefits to the St. Johns, Ocklawaha and Silver Rivers as well as Silver Springs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No	Breaching the dam and restoring the Ocklawaha are 50+ years overdue. Dam safety issues and improved water quality, wildlife habitat, and recreational opportunities can't be ignored or delayed any longer.
9/23/2021 20:10	Marion			No	Yes		More than 5 times		Canoeing / kayaking Wildlife viewing	I'd love to see the dam disabled and enjoy the nature springs that are hidden along the beautiful River	The dams purpose was canceled, the project didn't happen. it doesn't make sense having the dam operating with cost for no reason. People enjoying fishing tournaments is not a reason for the cost of maintaining the dam. Return it to its natural state. The whole project was canceled because it wasn't natural to area and ruined so many things so why keep a dam running? It shouldn't have been in operation when canal wasn't built	That a dam disrupting natures natural environment was kept for no good reasons. Our state isn't benefiting from it, but our waters and wildlife are being hurt by it. We shouldn't have to pay for operating a dam that isn't necessary		
9/23/2021 20:12	Outside of state / other	Ohio	No	No									
9/23/2021 20:13	Outside of state / other	New York	No	No					Restore the waterway by breaching the dam	This portion of the waterway is essential in saving hundreds of manatees as well as aiding in the survival of endangered and treasured species like the florida black bear, florida panther, bald eagle, bobcat and white tailed deer.	The daath of many of these species and therefore further endangerment and possible extinction.	No	
9/23/2021 20:16	Outside of state / other	Oregon	No	No					Whatever is needed to protect the ecosystem and wildlife such as manatees	The decline of this special species	The manatees would become extinct and other species of birds, wildlife and fish drastically affected or endangered.		
9/23/2021 20:16	Outside of state / other	Marin County, CA	No	No					Restore the Oklawaha River by breaching the Kirkpatrick dam.	Restoration of the Oklawaha River will provide essential warm water winter habitat for Florida manatees and will be the most impactful manatee restoration project in Florida. Florida black bears, Florida panthers, bobcats, bald eagles and white tailed deer will all benefit with the additional 15,000 + acres of the Florida wildlife corridor that will be restored or enhanced.	Keeping the Oklawaha damned, deprives hundreds of manatees from warm water wintering habitat that would improve their chances of survival for the future, and it continues to keep 7,500 + acres of forested wetlands (flooded by the Rodman reservoir) from providing Florida black bears, Florida panthers, bobcats, bald eagles and white tailed deer with desperately needed habitat as a wildlife corridor.	No. Breaching the Kirkpatrick dam is 50 years overdue. Precious, irreplaceable wildlife can not wait. I cannot wait to visit Florida and see the restoration of the Oklawaha River and all the precious wildlife it supports! Thank you.	
9/23/2021 20:16	Marion			No	Yes		2-5 times		Fishing Canoeing / kayaking	Removed	Restoring the springs		
9/23/2021 20:17	Outside of state / other			No	No				make sure the dam and the river it feeds are the best for wildlife dependent on it's cleanliness and life supporting operations.	dead manatees, other encroachments from overgrowth and algae, and likely human laziness	you'd likely start an extinction catastrophe for all wildlife depending on the river	as in "no"	how about we prove our worth as good stewards instead of the evident sloth in our management of earth's resources which mean wildlife as much or more than physical resource exploitations
9/23/2021 20:17	Alachua			No	No					It limits migration of manatees and blocks over 20 natural springs.	The St. John's river would turn saltier sooner from sea level rise.	Replace DeSantis with somebody who isn't capricious about environmental issues.	
9/23/2021 20:18	Leon			No	No				Breach the dam. Get rid of it	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	That millions of taxpayers dollars will continue to be wasted.	No.	
9/23/2021 20:18	Alachua			No	Yes			1 time	Wildlife viewing	Restore the Ocklawaha River, breach the dam, because everyday it stays in place, it harms water quality, wildlife and the economy.	Millions of gallons a day of natural flow restored to the lower Ocklawaha and St. John's Rivers.	Thousands of acres of forest would not be restored that could improve wildlife habitat, water filtration, natural flood protection and cooling canopy to reduce global warming.	No. Breaching the dam is decades overdue.	Water quality is essential for preventing harmful algae blooms, support coastal resiliency and counter saltwater intrusion. It will revive over 15,000 acres of forested wetlands essential for combating global warming. Thank you for your consideration of my concerns.

9/23/2021 20:18	Putnam		No	Yes	More than 5 times			Canoeing / kayaking Wildlife viewing	To breach the damn so it is available for aquatic wildlife migration	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4.14 Million in dam repairs	A huge mossed opportunity for ecosystem health and overall wellbeing for the local community	No	
9/23/2021 20:21	Hillsborough		Yes	Yes			2-5 times	Fishing Canoeing / kayaking Wildlife viewing	Breach the Rodman/Kirkpatrick Dam, saving $-$4.14 Million in dam repairs and help hundreds of manatees gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. As well as the earlier mentioned manatees being able to thrive again.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No, what makes Florida great is the wildlife. There is no compromise when it comes to saving what makes Florida great.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
9/23/2021 20:22	Putnam		No	Yes	1 time	2-5 times		Boating Wildlife viewing	return River to its natural state	that water quality, fish migrations and overall health of the river system will be improved	lake become full of silt and the area is blighted	not sure, I doubt it.	
9/23/2021 20:22	Walton		No	Yes		1 time		Wildlife viewing	Dam removed so wildlife can move freely & be restored	Conservation efforts, better understanding of why removing dam is best for future wildlife	Future generations, continue disruption to wildlife, long term affect	I don't know I would need to know the alternate solution	
9/23/2021 20:27	Outside of state / other	Radcliff, KY	No	No					Destroyed	It is harmful to Manatee's	More Manatee's will die.	Don't know.	
9/23/2021 20:27	Sarasota		No	No					it's time to do the right thing and restore Manatee habitats	we support safe habitats for Manatee and all wildlife	would be very disappointing	support and protect manatee and wildlife, it's the right thing to do	Do the right thing and provide safe habitats for Manatee and all wildlife
9/23/2021 20:28	Outside of state / other	Dayton, OH	No	Yes			2-5 times	Wildlife viewing	I'd like to see the dam removed.	Manatee habitat relies on restoring this river.	Manatees will continue to starve and die.	Not really.	
9/23/2021 20:30	Outside of state / other	Pgh, PA	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. $5,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/23/2021 20:31	Outside of state / other	Asheville, N C	No	No					It needs to be restored	Wildlife are suffering and restoring the area would greatly benefit it.	Natural habitat is vital to all forms of wildlife. Balance is the key	Time is running out. To delay or fail short will ensure the demise of many plants and animals.	
9/23/2021 20:32	Pinellas		No	No					* We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	* Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	* Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. * * Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	* No. Breaching the dam is 50 years overdue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/23/2021 20:32	Outside of state / other	Strasburg, Colorado	No	No									
9/23/2021 20:34	Citrus		No	Yes			1 time	Canoeing / kayaking	see it gone for wildlife conservation	taxpayer also a home owner	poison water with lack of wildlife conservation	just implode the dam it worth loss	I'm an avid spring hopper an resident wch supportive of doing and wildlife conservation along with more tourist spending in our state to off set Florida's loss off tourist revenue
9/23/2021 20:34	Outside of state / other	PA	No	No					Destroy dam to support river	Need to help manatees	manatees		
9/23/2021 20:34	Sarasota		No	No					The Ocklawaha River is the heart of the Great Florida Riverway, which, if restored, could provide essential warm water habitat for hundreds of manatees in the winter. Manatees have already reached a record number of deaths this year - and if we don't restore additional areas of their natural habitat, we could lose even more manatees in the future.	Even while manatees are still struggling with starvation from seagrass loss, the greatest long-term threat to these animals is the loss of warm water habitat that manatees need to survive the winter. Right now, 60% of Florida's manatees depend on power plant outfalls to keep warm and survive the winter - an unsustainable and unnatural situation. Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	The recovery of manatees has been a conservation success story until now - we can't let this progress backslide on our watch.	We must do everything in our power to protect and restore Florida's natural areas and wildlife habitat.	
9/23/2021 20:35	Manatee		No	No					Demolish	Financial and environmental benefits	Financial and environmental consequences	No the dam must go	Thank you

9/23/2021 20:59	Marion		No	No					Breach the dam, restore the ock	Hidden springs	The river is historic, we're taking statue's down which is a shame. let's save the ocklawaha.	No	
9/23/2021 21:03	Putnam		No	Yes			1 time	Fishing	The dam needs to be taken down. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs. There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	* We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. * The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. * Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. * Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. * Hundreds of manatees loose access to essential warm water winter habitat. * Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	1. No. Breaching the dam is 50 years overdue. 1. Open ended section to add additional comments Make your own comments here, examples include: MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.	Save the manatees please.
9/23/2021 21:04	Leon		No	No					I support restoring manatee habitat	Declining populations, especially recently	Loss of yet another species		
9/23/2021 21:04	Hillsborough		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	$5,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/23/2021 21:05	Putnam		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	For it to be be removed.	To allow manatees to expand their habitat since this has been the deadliest year on record for manatees.	That the manatee population would suffer.	No	

9/23/2021 21:09	Alachua		No	Yes		1 time	Wildlife viewing	Please restore the Ocklawaha River by breaching the dam. Every day the dam is in place, there is harm to the economy, water quality and wildlife throughout the Great Florida Riverway,	5 rivers, the Ocklawaha, Silver, and St.Johns Rivers and 50 springs are restored.	1000s of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy and recreational benefits.	No. Breaching of the Rodman Dam is 50 years overdue. Dam safety, water quality and wildlife can't wait.	This exciting restoration will improve water quality and flow by generating an additional 150 millionn gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration. (characters: 516)
9/23/2021 21:10	Orange		No	No				Breach the dam	The amount of springs it's blocking, preventing the manatees to travel, and all the other ecological damage it has caused since the start	The Heath of the springs	No	
9/23/2021 21:12	Alachua		No	Yes	2-5 times		Wildlife viewing Other: Camping	I would like to see the dam removed and the river flow restored.	I would like to see the dam removed and the river flow restored.	Failure of the dam is imminent endangering Welaka properties when the dam fails.	No. This is long overdue.	This dam and the damage it is causing the environment is unnecessary this dam removal could help restore all the involved rivers, and bring in recreational uses to the area. Currently due to weeds motorboats cannot even get on the Rodman.
9/23/2021 21:13	Outside of state / other	Virginia	No	No				Preserve wildlife				
9/23/2021 21:16	Palm Beach		No	Yes	1 time		Wildlife viewing	Reunite the Ocklawaha, Silver, and St. Johns River and historic Silver Springs	Science and Economics - Restoration is vital to improving the environmental and economic health on this riverway and its communities.	Continued degradation of Florida's wetlands, rivers, and waterways. Also, infrastructure failure of a damn past it's 50-year life expectancy.		
9/23/2021 21:17	Alachua		No	No				Tear it down.	With the rising rate of storms damage to man made infrastructure resisting natural water migration patterns will be damaged. Removing the dam will increase ecological health to Northern Florida. The Florida springs have been damaged and having algal blooms.	If we continue to not choose the health of our land and water resources and degrade our community, then what are we doing? What are we sustaining? Our springs are the mirrors to our aquifer which houses our drinking supplies! We would die after 3 days without water!	If you were to implement high income projects towards Springs Water protection and restoration.	
9/23/2021 21:18	Lake		No	No				Make the Dam disappear!!	No natural flow! Impeding river flow	End of the Ocklawaha River.	NO	
9/23/2021 21:18	Pinellas		No	No				Breach it	Manatees need the springs habitat/ the dam will need expensive repairs that will cost taxpayers / restoring the springs environment will help the ecosystem and fish populations	Continued loss of biodiversity due to climate change and habitat loss - our natural wonders make living in Florida worth it.	No	
9/23/2021 21:18	Outside of state / other		No	No				Breach the Rodman/Kirkpatrick Dam.	Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/23/2021 21:19	Manatee		No	No				Breach the dam	Restores over 20 springs, supports fish regeneration and gives manatees more habitat as they are dying at alarming rates.	We are moving in the wrong direction in the state of Florida not doing enough to protect Our precious ecosystem	No	You have the opportunity to right a wrong and to help the springs
9/23/2021 21:21	Outside of state / other	Texas	No	No								
9/23/2021 21:23	Hillsborough		No	Yes		2-5 times	Canoeing / kayaking Wildlife viewing	I would like to see the Rodman/Kirkpatrick Dam breached.	The dam is old and deteriorating, which means that expensive repairs would be needed, as opposed to simply breaching it, which would allow for springs restoration, manatee habitat expansion, and a resurgence of wildlife in the affected areas, both marine and terrestrial.	Water quality would further decline with the reduced water flow created by the dam. This would make invasive weeds, harmful algaes, mass fish die-offs, and impactful droughts far more prevalent and harmful than they need to be.	No - the benefits far outweigh the downsides, and it would be fiscally responsible to taxpayers to breach the dam, as well.	Thank you for your time and consideration in this matter. I hope you have a lovely day.
9/23/2021 21:24	Seminole		No	No				Breach the Kirkpatrick Dam.	Hundreds of manatees would gain access to a much needed habitat and native fish populations could be restored	Hundreds of manatees lose access to warm water winter habitat and taxpayers spend millions in unnecessary repairs for the dam	No	
9/23/2021 21:24	Orange		No	Yes		1 time		Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Also, Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years.	No	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
9/23/2021 21:24	St Johns		No	No				Breach the dam	Restoration of natural habitat	Loss of an opportunity to do the right thing	No	
9/23/2021 21:25	Outside of state / other	Annapolis, MD	No	No								
9/23/2021 21:32	Duval		No	Yes		1 time	Canoeing / kayaking Wildlife viewing	Get rid of it	It's not necessary. Has no environmental benefit.	It's a money suck. It harms the health of the rivers.	No	
9/23/2021 21:34	Outside of state / other	Chicago, IL	No	No				Make safe for Manatees				
9/23/2021 21:36	Hillsborough		No	No				Breach the Rodman/Kirkpatrick Dam	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs. Fish and manatee populations are suffering (see additional info in other answers).	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. If that happens, the lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees lose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Fish are also affected negatively by the dam. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Thank you for your consideration.
9/23/2021 21:39	Manatee		No	Yes		More than 5 times	Canoeing / kayaking Wildlife viewing	Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	Even while manatees are still struggling with starvation from seagrass loss, the greatest long-term threat to these animals is the loss of warm water habitat that manatees need to survive the winter. Right now, 60% of Florida's manatees depend on power plant outfalls to keep warm and survive the winter - an unsustainable and unnatural situation.	Manatees have already reached a record number of deaths this year - and if we don't restore additional areas of their natural habitat, we could lose even more manatees in the future.	No	It's time to restore the Ocklawaha River for Florida's wildlife
9/23/2021 21:40	Outside of state / other	Marina Ca.	No	No		1 time	Wildlife viewing	Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.!	Hundreds of manatees loose access to essential warm water winter habitat.	- No. Breaching the dam is 50 years overdue.	MANNATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/23/2021 21:40	Outside of state / other	California	No	No				We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/23/2021 21:40	Outside of state / other	Erie, NY	No	No				I would like to see the dam breached	It would reunite the springs allowing for a return of historic tourism routes along the Oklawaha River, such as we had in the golden age of Florida tourism of 1920s-1930s.	Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years.	No, the dam is 50 years over it's lifespan and needs to be breached.	I would book travel and encourage others to do so as well if the historic springs and biodiversity of Florida was returned.
9/23/2021 21:40	Alachua		No	Yes	1 time	2-5 times	More than 5 times	Other: To access the Ocklawaha River for fishing/boating/kayaking. We don't need the reservoir. The reservoir blocks the river and wildlife.	The partial restoration plan of breaching 2k ft of the earthen dam at the point where the historic river channel would flow should happen to allow manatees and migratory fish access to the rest of the Ocklawaha River connecting to Silver Springs. There should be a bridge instead of a dam.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife. Restoring the Ocklawaha River also restores Silver Springs with native fish biodiversity. There is a lot of bang for your buck when you consider the wide scope of benefits all the way to Jacksonville estuaries that would benefit from freshwater flow of a restored Ocklawaha.	Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Migratory fish would not have the chance to rebound in the Ocklawaha River and Silver Springs if the dam is not breached. Also the huge amount of aquatic herbicide sprayed into the reservoir is concerning.	No. Breaching the dam is 50 years overdue and should not have been built in the first place. Dam safety, improved water quality and wildlife can't wait. Give manatees and migratory fish their home back and let the forest grow back!	The reservoir floods the Marjorie Harris Carr Cross Florida Greenway named after my grandmother. There are over 20 springs that flow in to the Ocklawaha River but the reservoir blocks them out with stagnant dark water. I would like for the springs of the Ocklawaha River flow and not be flooded by the State anymore so I could go swimming in crystal clear springs anytime on the Ocklawaha with my daughter.
9/23/2021 21:40	St Johns		No	No				Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	Hundreds of manatees loose access to essential warm water winter habitat.	No. Breaching the dam is 50 years overdue.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. 9/23/2021 21:52	Broward		No	No				Breach the dam	Beauty of the springs	Loss of wildlife habitat		
9/23/2021 21:53	Outside of state / other	Asheville NC	No	No				Removal to restore natural ecological systems	Manatees are declining	Loss of incredible species diversity found nowhere else in the world	Other measures to mitigate native species loss	
9/23/2021 21:54	Duval		No	Yes		2-5 times	Wildlife viewing	Remove the dam and restore river.	Restoration of ecosystems	The dam could collapse and cause damage to property or harm to people.	No	

9/23/2021 21:55	Outside of state / other	Phoenix, AZ	No	No					What would you like to see happen with the Rodman Reservoir and Kirkpatrick Dam moving forward? We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam. What is the most important piece of information that supports your position? Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer. What would be your biggest concern if your desired outcome is not achieved? Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor. Is there any scenario short of fully achieving your desired outcome you could support? No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer. Other comments: As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor.				
9/23/2021 21:56	Brevard		No	Yes	2-5 times	More than 5 times	2-5 times	Canoeing / kayaking Wildlife viewing	Breach the dam, please!	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	• We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. • The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. • Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. • Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. • Hundreds of manatees loose access to essential warm water winter habitat. • Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No! Breaching the damn is 50 years overdue	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/23/2021 21:59	Alachua		No	Yes			2-5 times	Canoeing / kayaking	Breach the dam	Declining fish populations in Silver Springs, manatee access negatively impacted, recovery of the "lost springs"	Millions spent on unnecessary dam repairs. Missing this opportunity to do what is right for the health of these ecosystems.	No, breaching the dam is long overdue	I love paddling the ocklawaha, and camping along the banks. My hope is to pass this love onto my son, on a restored river.
9/23/2021 21:59	Seminole		No	No					Breach the dam and repair the dsmage done to the river. This is long overdue. Should have happened once the cross Florida barge canal was seen for the boondoggle it was.	The river cannot flow free from Silver Springs to the St. Johns. Manatees are starving elsewhere. They need this stretch of river. Silver Springs needs to be connected to the St. Johns for fish and wildlife reasons.	See above. Siltation will fill behind the dam, aquatic organisms will not be able to move freely.	P. of that can be done is removing the dam (not fully restoring the river), then breach the dam and work toward the rest of the goal.	This is long overdue.
9/23/2021 22:00	Pinellas		No	Yes					remove the dam. open the river.	President Nixon stopped the Cross Florida Barge Canal way back. The lake is a weed infested mess. the DAM requires maintenance and money. It should never have been allowed to be built and should be demolished.	The natural River flow and beautiful springs will continue to covered by that nasty lake.	no	let the river run free
9/23/2021 22:00	Duval		No	No					Take the damn dam down and restore the river way.	Rivers support wildlife, the natural environment and are important to our economy. A restored river helps Florida		Best strategy is to free the rivers.	Please protect the value of our environment and restore our rivers.
9/23/2021 22:00	Outside of state / other	Asheville nc	No	No					Breach and remove all trace of the dam		Needless and continued los of manatee and fish habitat	No.	
9/23/2021 22:02	Brevard		No	Yes	2-5 times	More than 5 times	2-5 times	Canoeing / kayaking Wildlife viewing	Brach the dam	Restoration of the natural springs and environment that supports fish and manatees • There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. • Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. • Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. • The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	• We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. • The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. • Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. • Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. • Hundreds of manatees loose access to essential warm water winter habitat. • Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Braching the dam is 50 years overdue	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/23/2021 22:02	Duval		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Wildlife viewing	Keep the dam and reservoir in place , with better management practices for the health of the waterway .	My 40 years of fishing experience on Rodman . The misinformation being put out by various groups about how the dam restricts the flow of water to the St. John's river , which is a complete fallacy . The same amount of fresh water still flows down the ocklawaha river . even more water is released into the st John's river every time the locks are operated . Why is that amount of water never included in any of the water flow estimates ? Rodman would be used even more than it is if the department of greenways and trails would actually clear the channels of stumps like it used to. The last drawdown was completely unnecessary. All it served to do was kill all of the native vegetation that was flourishing at the time , which has yet to recover . I feel Rodman has been intentionally mismanaged in an attempt to reduce usage and help further the proponents of the dam's removal agenda .	Loss of habitat for numerous species of wildlife that flourish in the present environment.	The lock system could be disabled to reduce long term costs	
9/23/2021 22:03	Marion		No	Yes			1 time	Wildlife viewing	Save the river for the wildlife, not humans.	Right now, 60% of Florida's manatees depend on power plant outfalls to keep warm and survive the winter - an unsustainable and unnatural situation. Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	You would be responsible for murder of innocents.		We need to make sure we use every tool to help save manatees and other wildlife from habitat destruction and pollution. The recovery of manatees has been a conservation success story until now - we can't let this progress backslide on our watch.
9/23/2021 22:04	Outside of state / other	Eureka, CA	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation.
9/23/2021 22:06	Outside of state / other	Wisconsin	No	No					Restoration of the Ocklawaha River by breaching the dam that impounds the river so that manatees can access Ocklawaha's natural springs currently submerged by the dam's artificially high water levels.	Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. The restoration would also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees.	We risk losing this valuable species in the face of the mass extinction we've instigated. We simply MUST safeguard every single remaining species on Earth because each is inextricable from the next--including our own.	I'm fairly certain we're beyond the point of half-measures to achieve life's desired outcome.	This restoration project will additionally revive over 15,000 acres of forested wetlands as the project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor that will allow greater freedom for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife to roam. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to protecting our remaining biodiversity.
9/23/2021 22:07	Brevard		No	No					Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Historic fish and manatees return as breach opens creating a free-flowing river	Hundreds of manatees lose the opportunity to access essential warm water winter habitat.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/23/2021 22:08	Outside of state / other	South Carolina	No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Removed entirely	Manatees need a clear route to freshwater springs currently blocked. Overload of invasive plants that get endless spray treatments with no progress. No access to boat landings. Flooded springs that draw tourism and benefit the economy	Flooding from dam failure. Lost economic opportunities	Wide breach of the dam to allow the water to flow freely	The economic and safety risks are high if the dam is left in place and allowed to continue to deteriorate. My family traveled 500 miles to see the springs during the last drawdown and haven't been to the area since, even though we visit the springs several times a year. The Florida springs generate millions in local tax revenue. Breaching the dam and allowing the river to flow would save taxpayers in maintenance costs, while increasing tourism revenue and business growth.
9/23/2021 22:13	Volusia		No	No					Tear it down!	The dam prevents manatees and fish from being able to travel through minimizing their habitats.	The population of manatees and fish would continue to decline rapidly.	No. Open it back up.	
9/23/2021 22:13	Leon		No	Yes			1 time	Fishing Canoeing / kayaking	Breach the Rodman/Kirkpatrick Dam	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	Basically any outcome seems to hurt Florida agriculture and wildlife. And I want to try to help both as much as possible.	Absolutely. While I understand that breaching the dam would be the most strait forward I would also like to be part of anything to help our ecosystem thrive.	
9/23/2021 22:14	Washington		No	No					Restoration of riverbed to save and protect wildlife				
9/23/2021 22:15	Duval		No	Yes			1 time		Free the damn and restore to natural environment	Environmental impacts	Continued negative impact to natural resources	NO	
9/23/2021 22:16	Outside of state / other	Alabama	No	No					As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. 9/23/2021 22:16	Outside of state / other	New Jersey	No	No					Breach the dam to restore the Ocklawaha River, allowing manatees and other animals in the area to survive and thrive.		Manatees will die and other animal populations will suffer.	No	
9/23/2021 22:17	Outside of state / other	Josephine County, Oregon	No	No					I would like to see whatever action taken necessary for the health of the river and all critters living there.	Manatees dying	To lose this species or any other of Gods creatures living there. They cannot speak for themselves. We have to advocate for them.	I cannot answer that. Need more information	I hope you will consider the lives of Gods creatures.
9/23/2021 22:17	Orange		No	No					Closure of the dam and restoration of the natural waterflow.	I am aware of the history of the dam and think that it's past time that it was removed to preserve the various ecosystems it has ruined.	The continued harm on the springs and wildlife.	No. The dam must go. It was a mistake and has caused too much harm.	
9/23/2021 22:18	Outside of state / other	Los Angeles CA	No	No					We need to restore the Ocklawaha River by letting water to flow into it form the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most significant way to restore the manatees' habitat in the state and will provide essential warm water winter habitat for hundreds of manatees. This can also benefit species like Florida black bear, Florida panther, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. This also impacts species like Florida panther, Florida black bear, bobcat, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is the only way and it's way overdue. Wildlife should not wait any longer.	This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more manatees killed in the future. Although most manatees died in part by starvation from loss of sea grass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat, which now is mostly provided by warmth from power plant outfalls - an unsustainable situation. Lowering the water level by breaching the dam can give manatees access to Ocklawaha's 20 springs to provide them with natural winter-time warm water habitats. Thank you for your attention to this important issue. Restoring the Great Florida River way is critically important and will greatly benefit Florida, environment and wildlife.
9/23/2021 22:19	Alachua		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	I would like to see the dam removed and the natural flow of the river and springs restored.	The need to restore a beautiful river back to its natural state, allow for native fish, manatees, and other wildlife to return to natural levels, and save money on unnecessary infrastructure.	Continued decline in freshwater wildlife, endless infrastructure maintenance costs	No. Draw downs, even if more frequent, still don't address the physical blockage that is the dam. It needs to go.	This single action would be one of the biggest, far reaching springs restoration projects to ever help return our waters to their earlier glory
9/23/2021 22:20	Outside of state / other	Connecticut	No	No					Hurry up and restore adequate food and habitat for sea mammals, such as the manatees!!	All animals deserve adequate habitat to not only survive, yet also thrive. Humans must STOP polluting and destroying our Planet immediately, not years from now when its too late. ACT NOW.	Big money continuing to destroy and pollute our beautiful planet and ecosystems for stupid status and greed, which, (by the way) you can Not survive on eating money. If this continues, it'll spill over, as it already has, into other species. Humans can not live alone on this planet. We are here together amongst diversified species that help to keep the planet in balance. Live with Nature, because it'll provide more fulfillment than money can ever buy. THINK CRITICALLY & ACT CORRECTLY NOW.		
9/23/2021 22:20	Pinellas		No	No					I would like to see the dam breached with the three rivers involved & the numerous springs all restored to natural setting.	The critical need for water restoration to save wildlife & water quality for environmental purposes.	The continued decline in the manatee population which is facing a worsening crisis in the last year. These ancient mammals can not be allowed to become more endangered due to human neglect.	No, now is the best time to act while there is high interest in environmental issues & improving the quality of our natural outdoor settings.	Please act to improve our Floridian state.
9/23/2021 22:22	Bay		No	Yes			1 time	Wildlife viewing					As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. 9/23/2021 22:22	Escambia		No	No									
9/23/2021 22:24	Outside of state / other	Maine	No	No									
9/23/2021 22:25	Sarasota		No	Yes		2-5 times	More than 5 times	Fishing Wildlife viewing	Removing the dam and returning it to the original state of flow.	By doing so, this would restore several springs which in turn restore the flow of the ecosystem in time which would have a likelihood with support of restoring fish populations as well. I also understand from reading different reports it would allow further extend areas of access for manatees.	This is a perfect time with the support from different agencies and the public to cost effectively restore the area and allow for restoration. The opportunities for collaboration for a successful outcome is prime, not moving forward would be a missed ecological opportunity to restore springs, wildlife and improve the well being of the area for all to enjoy.	We collectively are at a critical juncture in maintaining and restoring these areas. Allowing for a well thought out plan to restore this area by removing this dam judiciously will allow for the area to thrive as it regenerates its ecosystem.	This restoration can be purposeful and in doing so restore the habitat for manatees, restore the springs and the associated ecosystems. This will promote wildlife, support sustainable ecotourism, encourage other forms of business that thrive and continue to offer recreational opportunities ten fold. I appreciate you taking the time to consider our thoughts and our feedback as citizens to support this endeavor. Thank you.
9/23/2021 22:26	Outside of state / other	California	No	No					I am pleading with you to restore inamte habitats before it is too late.				

9/23/2021 22:26	Alachua		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers $4-$14 Million in dam repairs saved on a dam past its life expectancy Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. $57 million in potential flood damages avoided to downstream property owners	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized. A storm event triggers a dam failure or overtopping resulting in potential damages to 537 property owners and up to $57 million in damages. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Manatees, the gentle giants of FL are dying at an unprecedented rate and need all the help they can get! Save Wild Florida!
9/23/2021 22:26	Outside of state / other	Woodville, Alabama	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees.
9/23/2021 22:28	Outside of state / other	Dallas, TX	No	Yes			1 time	Other: Observe/View	To work with/be used/in harmony with wild life that are suffering/dying bc if overpopulation of disrespectful/ignorant activities	The group/article supporting this ovettion	The irreversible harm to to local Wildlife	The irreversible harm to to local Wildlife	Thank you for your time & consideration
9/23/2021 22:29	Outside of state / other		No	No					Please restore the Ocklawaha River by breaching the Kirkpatrick Dam. Please provide a healthy environment for the manatees. Thank you kindly for considering my position.	Decline in quality of river and increased deaths of manatees.	Further decline of the river and especially the eventual loss of more manatees.	Accomplish all you can to support these objectives.	Please, please protect the remaining manatees. Florida will never be the same without them.
9/23/2021 22:29	Sumter		No	Yes		2-5 times		Other	Breach	All of it	Wildlife will not flourish.	No	
9/23/2021 22:29	Pinellas		No	No					Breach the dam and restore natural water flow.	Low manatee and fish populations that need additional habitat as well as resorting multiple natural springs that have dried up as a result of the dam.	Endangered manatee populations being negatively impacted.	No.	
9/23/2021 22:30	Washington		No	No					Restoration of manatee habitat	Declining manatee populations and manatee injuries from boat strikes.	Loss of the manatee species from North America. THEY WERE HERE FIRST.	NO	Human arrogance has destroyed the Florida ecosystem and threatens manatees with extinction. Shame on you!
9/23/2021 22:31	Hillsborough		No	No					I would like it to be removed	Doing what is right for our mother earth.	The senseless extinction of more species.	No!	Please do the right thing. We all know what is right and what is wrong. Just think before you act, for the good of the environment and all living creatures.
9/23/2021 22:32	Leon		No	No					Remove the Dam and Reservoir and free the 20 drowned springs.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We would miss the best opportunity to do this. State and Federal funds are available, public interest is high, environmental needs are critical for manatee, water quality, wild life habitat and the dam is UNSAFE.	NO! Breaching the dam is 50 years overdue.	Breaching the dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. Do the right thing and restore our springs!
9/23/2021 22:37	Outside of state / other	Las Vegas	No	No					Restoring the Ocklawaha River is critical to ensuring the survival of manatees in. Someone needs to breach the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	To protect it so the manatees and other wildlife don't face habitat destruction and pollution.	Habitat loss, pollution, and worst of all no more manitees.		
9/23/2021 22:46	Outside of state / other	Rock Hill, SC	No	No					Since manatees need warm water habitat to live, it is crucial that the Kirkpatrick Dam be removed to allow manatees access to warmer water in the Ocklawaha River.	Manatees are dwindling in number and you need to restore their natural range in order to save them. Their natural range includes the warmer water of rivers. Dams prevent manatees from accessing their natural habitat.	If nothing is done to restore habitat, manatee numbers will continue to decline to a point where they are unable to be saved. From an economic standpoint, manatees are a tourist draw. From a moral standpoint, humans should preserve the lives of all species.	To my knowledge, there is no way to partially remove a dam to give manatees access to the Ocklawaha River.	As a native Floridian, the loss of natural habitat makes me sad. My native state has not done enough to preserve wildlife habitat. The Florida where I grew up is mostly gone now, and it is a great loss. Please try to preserve what is left.
9/23/2021 22:47	Sumter		No	Yes	1 time	More than 5 times		Fishing Wildlife viewing					
9/23/2021 22:48	Broward		No	No					For many reasons, to breach the dam and help restore the natural flow of the river and that in turn will help restore multiple important waterways.	As we are finding out more snd more, multiple waterways that were changed/rerouted/damed by us, keeping them the way nature made them is the most beneficial to the environment and those that live in it or in the case here, lived in it. We humans think we know better than nature and we've come to realize maybe we really don't when you consider all the ecological damage caused by interfering and changing natural processes that wind up causing other problems which winds up costing a large sum of money to maintain/fix. The obvious choice is to restore what once was a thriving ecosystem that would benefit all.	My biggest concern is a lost opportunity to help restore multiple important waterways, especially with what is currently happening in our state's waterways. We have out of control growth, out of state corporations taking our state's water to make a profit, causing future unknown negative ecological impacts that we, the citizens of Florida will have to pay to mitigate, in state corporations polluting our state's waters causing past, present and future ecological disasters such as the algae blooms of death. Climate change is here as well. What else can our state's waters and the life that depends on them, endure and survive? It is time to help our states's waterways and the life that depends on them, including us.	No. We cannot afford to not breach the dam and restore the Ocklawaha River. Take advantage of state and federal funds to achieve this outcome wanted and supported by many. Restoring the river will create opportunities to make money, not spend money maintaining an unnecessary dam.	Thank you for reading and considering my input. I truly hope you help to restore life by choosing to breach the dam. We need some ecological and environmental good news in our state. The ongoing devastating algae blooms, continous habitat loss and escalating environmental damage seem to be happening more and more and more. Please please please choose to restore a part of our state that is critically needed right here and now. Choose to right the great wrong and the good will flow from it and benefit all. All life is interconnected and we are all counting on you to do the best thing for all of us. Thank you.
9/23/2021 22:51	Outside of state / other	Calexico,CA	No	No					the dam needs to be taken out.	the high number of manatee deaths.	more deaths of manatees.		
9/23/2021 22:51	Outside of state / other	Sacramento county California	No	Yes			1 time	Wildlife viewing	I would like motor boats banned from all manatee habitats.	Manatees are are peace loving gentle creatures who just want to live their lives and raise their families without our interference.	The extinction of a species but also the lives of the moms and babies killed by motor boats and the careless humans who are killing	An increase of areas free from motor boats so manatees can have a chance of survival.	
9/23/2021 22:55	Clay		No	Yes			2-5 times	Other	Dwmolish for rebuilding the ecosystem and estuaries	The state of my environment	Health of our environment	No	
9/23/2021 22:58	Broward		No	No					I would like to see it breached & to go inactive.	20 Florida springs would be restored by the breach of this dam, creating a healthier and more balanced ecosystem. This would lead the way for healthier land and healthier animals, and could contribute to and help those aquatic species that are endangered or at risk, such as manatees. The dam is also very old and needs to go either way, this was is more productive.	There is a very costly repair project for the dam, both hurting the future of the dreams and waterways that the dam blocks and our ability to put tax dollars towards something more relevant.	No. The dam should have been breached 50 years ago. It's antiquated and harmful to our Florida environs.	This has been a deadly year for manatees and many other aquatic animals, it's within our power to give them some help in the midst of the climate crisis that is rearing it's head.
9/23/2021 22:58	St Johns		No	Yes			2-5 times	Canoeing / kayaking					
9/23/2021 23:00	Alachua		No	Yes	2-5 times			Fishing Wildlife viewing	Breach it.	Cost benefit ratio in long term: it was a bad idea on a boondoggle plan and it is time to restore the springs and natural water pathways	Denigration of Florida's most unique natural resources - artisan springs need restoration. And manatees need more habitats and waterways	No	Let it fall! This will help communities like silver springs and fisherman can fish elsewhere! Nothing else can do as much long term good as breaching this dam. And why keep pouring repair money into it? it's low payoff and high cost to maintain.
9/23/2021 23:00	Outside of state / other	Orange California	No	No					That whatever is best for the marine life	Marine life is one of the most important ecosystems on our planet and supporting that supports our longevity as humans	That we are moving backwards as a society		
9/23/2021 23:01	Duval		No	Yes			2-5 times	Wildlife viewing	Would like a free-flowing Ocklawaha and the restoration of this natural system by breaching the Rodman/Kirkpatrick Dam.	I am most concerned with all wildlife and especially manatees. The Great Florida Riverway can provide a much-needed habitat for manatees and so many other species.	The manatees will go extinct.	no	We need to restore Florida's waterways to help save and protect wildlife and our natural resources for now and future generations.
9/23/2021 23:02	Outside of state / other	Pasco, WA.	No	No					Open the waterway to the Ocklawaha River by breaching Kirkpatrick Dam in order to save Manatee habitat.	Restoration of thousands of acres will be restored for wildlife habitat.	Manatees need favorable habitat to survive.	No. When human activity negatively impacts the environment, restoration means breaching the Kirkpatrick Dam.	
9/23/2021 23:03	Palm Beach		No	Yes			1 time	Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/23/2021 23:05	Alachua		No	No									
9/23/2021 23:06	Outside of state / other	Hartford	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Free flowing springs generate tourism and are like a strong heartbeat of our state.	Further decline of marine diversity for the plants and animal life that rely on this river system. Loss of habitat. Loss of treasure for future Florida adventurers and advocates.	No		
9/23/2021 23:47	Dade		No	No					Remove the dam to restore water flow	The dam is derelict and too expensive to repair. PLUS we need habitat restoration	Even greater loss of manatee habitat.	No.		
9/23/2021 23:52	Duval		No	No										
9/23/2021 23:55	Hillsborough		No	No					I believe the dam and reservoir should be opened up.	The Florida Spring Counsel	The loss of natural habitat - as our resources continue to be stressed you should do what you can now to make them as healthy as possible for the future	Not at this time		Thank you for asking
9/23/2021 23:55	Palm Beach		No	No										
9/23/2021 23:56	Washington		Yes	Yes	1 time	2-5 times	2-5 times	Boating Wildlife viewing	restore the Great Florida Riverway	manatees	death of even more manatees	restore the Great Florida Riverway		restore the Great Florida Riverway for the manatees
9/23/2021 23:56	Outside of state / other	Colorado	No	No					Reunite the rivers and remove the dam.	Protecting beloved manatees and giving them better waters to feed and live in.	The manatees would be harmed even more than they already are-	No		
9/23/2021 23:59	Marion		No	Yes			2-5 times	Other: I do not use it in any way. I have launched my kayak nearby.	I would love to see the natural flow of the Ocklawaha River restored by breaching the Rodman/Kirkpatrick Dam.	The historic native fish population and manatee population would return if the dam were taken down. This greatly impacts the River as well. Native fish population has decreased by 78% in 1979 and by 92% in 2004 according to scientists.	Native fish populations would not be regained in the Ocklawaha or the Silver River. Exotic blue talipia population would continue to dominate and diminish the survival of native fish. Manatees would not have access to the warm springs of the Ocklawaha and Silver Rivers in the winter. Water quality suffers.	No. The dam needs to go. It's long overdue and serves no purpose.		As a child in the 50's and 60's I remember seeing such a large variety of fish from the glass bottom boats while visiting Silver Springs. There were many catfish. You don't see them anymore. They have diminished as well as the striped mullet, which is one of the few species that eat the algae coating on the once bright green eelgrass in the springs. Water quality is suffering as algae is growing.
9/24/2021 0:07	Alachua		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Breach the Rodman/Kirkpatrick Dam.	The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	Putnam County and Silver Springs economics lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years.	No. Breaching the dam is 50 years overdue.		SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
9/24/2021 0:09	Broward		No	No					The Ocklawaha River is the heart of the Great Florida Riverway, which, if restored, could provide essential warm water habitat for hundreds of manatees in the winter. Manatees have already reached a record number of deaths this year - and if we don't restore additional areas of their natural habitat, we could lose even more manatees in the future.	Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	That would be the Florida's concern.	The FL state needs to act and act fast.		Thank you
9/24/2021 0:11	Union		No	No					I would love to look forward to someone keeping their word about helping the environment to preserve the Earth for a few more decades.		My biggest concern is the planet running out of water and the ones in charge pushing the planet further to extinction when I'm not ready to live on another planet.			
9/24/2021 0:11	Dade		No	No										
9/24/2021 0:34	St Johns		No	No					open it for the manatees	the manatees	the manatees becoming extinct	n/a		
9/24/2021 0:35	Alachua		No	No					Breach the Rodman/Kirkpatrick Dam.	Breaching the dam can rejoine multiple springs, help many fish populations, and costs less money than a repair	That we will waste money repairing something that gives no substantial benefit	None. Breach it!		
9/24/2021 0:39	Alachua		No	Yes	1 time	2-5 times	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	This exciting restoration will improve water quality and flow by generating an additional 150 million gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefiting water quality through enhanced biofiltration. Thank you for your consideration.
9/24/2021 0:41	Outside of state / other	British Columbia, Canada	No	No					I would like to see the Ocklawaha River restored by removing the Kirkpatrick Dam.	Restoring the Ocklawaha River would restore or enhance habitat for Florida black bears, Florida panthers, bobcats, bald eagles, white-tailed deer, and hundreds of manatees.	Keeping the Ocklawaha dammed imperils hundreds of manatees by depriving them of essential warm water winter habitat. In addition keeping the Ocklawaha dammed keeps 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continues to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. I fear the manatees and other wildlife, in addition to water quality cannot wait any longer.	Restoring the Ocklawaha River will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect reduced future survival. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River will allow manatees access the Ocklawaha's natural springs, several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital Ocala to Osceola Wildlife Corridor for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife.
9/24/2021 0:42	Outside of state / other	Spokane	No	No					I would like to see the dam breached so that the river can flow naturally.	The extremely high mortality rate of manatees, current unable to access the warm water habitat of the Great Florida Riverway because of this dam blocking the Ocklawaha River.	The extremely high mortality rate of manatees would continue, potentially leading to their extinction.	no		I am the daughter and granddaughter of Floridians who were inspired by the state's amazing nature to become scientists. Preserving that nature is our responsibility.
9/24/2021 0:46	Sarasota		No	No						Rivers should be restored to their natural flow to support fish and wildlife	Manatees and other fish cannot access their natural habitats	No		
9/24/2021 0:53	Escambia		No	No					Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.		MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
9/24/2021 0:59	Outside of state / other	USA	No	No										
9/24/2021 1:03	Outside of state / other	New York, NY	No	No					Breach it.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored. Why would we turn our backs on the identity we claim as "The Real Florida"	Not only the continued disruption of a unique natural system, but the creation of a dynamic and framework that rationalizes idiotic decisions like this dam	There is no alternative		The world is watching
9/24/2021 1:05	Outside of state / other		No	No					I would like to see the dam removed	The river needs to be restored, in my opinion dams are not good for the environment in most cases. Many dams were created in the past without needed study as to the full effects of the action. Nowadays scientists are much more informed as to the consequences of altering the natural environment.	That manatee and wildlife in general would continue to suffer, and numbers would decrease, even to the point of extinction.	No, I don't think they could create something like fish ladders for the manatee & other creatures.		I am 73 yrs, live in California where many old & unnecessary check dams are now being removed from the mountain streams & rivers. However, I was born & raised in Florida & have swum with the manatee back when the water was clear & it was not a tourist attraction. They have remained close to my heart, even tho I can no longer be there.
9/24/2021 1:09	Outside of state / other	California	No	Yes			More than 5 times	Wildlife viewing Other: Running	I believe that we need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. In addition, 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. It also would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No, because breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a frequent visitor to the area who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor.
9/24/2021 1:09	Outside of state / other	utah	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.
9/24/2021 2:20	Brevard		No	Yes			1 time	Canoeing / kayaking	Dam removed and natural river flow restored.	The cross-Florida canal project is defunct. The natural river flow should be restored.	Maintenance would need to be continually funded and the dam is ageing. I think cost/benefit analysis would favor removal.	No. The dam should be removed.	I believe more people would benefit from river restoration than currently benefit from the Rodman reservoir.
9/24/2021 2:20	Lake		No	Yes	More than 5 times	More than 5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	I would like for it to be removed so the vegetation can be restored and our ecosystem can recuperate.	I have seen the drastic decline in the quality of life along Florida's most precious ecosystem.	My fear is that Florida would lost a piece of its magical history as well as the lives of many animals.	Yes, if the damn is removed and the proper measures are taken to preserve the river.	I am born in these swamps and I swim through these rivers. I respect nature to its core and do my due diligence to keep it safe & eco friendly.
9/24/2021 2:24	Collier		No	No					Breach the dam and restore the Ocklawaha River.	To survive, manatees need the river restored to provide more access the their winter habitat.	Continued destruction of wildlife habitat and the death of more manatees.	No	
9/24/2021 2:28	Alachua		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway. Once the dam is breached, the Ocklawaha, Silver, and St. Johns Rivers, and 50 springs will be restored. Further, more than 150 million gallons a day of natural flow will be restored to the Lower Ocklawaha and St. Johns Rivers and millions of dollars in dam repairs will be saved on a dam past its life expectancy.	$4-14 Million in dam repairs saved on a dam past its life expectancy. $17 million in potential flood damages avoided to downstream property owners.	We will miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the river-way. This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $17 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.
9/24/2021 2:37	Outside of state / other	Jorado Springs, CO 80906 United State	No	No					Restoration of the Ocklawaha River, beginning with breaching the Kirkpatrick Dam.	Restoration of the Ocklawaha River is the most impactful manatee habitat restoration project in Florida and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting numerous species including but not limited to: Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Additionally, keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to negatively impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is at least 50 years overdue. Critical wildlife habitat and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/24/2021 3:14	Outside of state / other	Spokane, WA	No	No					Vanities and Florida waterways are an imperative part of a healthy ecosystem that must be sustained for future generations. If biologists have determined that the river way must be returned to its original flow, then breaching the dam makes sense.	Manatees and other wildlife are suffering greatly I need the warm water flow brought through the rivers original pathway.	Manatees and other wildlife will continue to be decimated at an alarmingly rapid rate eventually leading to extinction.	If there's a workaround to allow increased water flow and increased warm winter habitat for manatees.	
9/24/2021 3:16	Lee		No	Yes		1 time		Wildlife viewing	Get rid of the Dam	Dams are a thing of the past. They actually destroy the environment.	The environment would not be restored. This is harmful for manatees and other wildlife	What would restore the river short of getting rid of the Dam?	
9/24/2021 3:19	Broward		No	Yes			1 time	Canoeing / kayaking	Breach the dam		Adverse effect on wildlife		
9/24/2021 3:26	Orange		No	No					Breach it and restore/reconnect the springs	Manatees and fish need the habitat	Another deadly year for manatees, further loss of unique Florida ecosystems	No	
8/24/2021 3:30	Orange		No	Yes	1 time	1 time	1 time	Wildlife viewing	Take down the dam.	Manatee protection research.	Loss of wildlife including manatees.	No.	
9/24/2021 3:35	Outside of state / other		No	Yes					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam. 9/24/2021 5:50	Duval		No	Yes	1 time	1 time	Fishing	Remove the dam and allow the river to flow freely to restore our river system to its natural state	The quality of the water in the St Johns River is getting worse and worse.	Fishing and other wildlife will cease to exist in the st. johns river area	no	
9/24/2021 5:52	Broward		No	Yes		2-5 times	Wildlife viewing	Breach the Rodman/Kirkpatrick Dam	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs.	Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	
9/24/2021 6:04	Jackson		No	Yes		1 time	Wildlife viewing	Please protect this area for manatee habitat.		Danger to manatees		
9/24/2021 6:31	Alachua		No	No				I would like to see the Ocklawaha River restored by breaching the Rodman/Kirkpatrick Dam.	Strengthening and restoring our rivers and springs and providing more habitat for our hard-hit manatees.	Continued damage to our wildlife and natural ecosystems, all while wasting public tax dollars on a project that ultimately is not good for the state.	No. This dam must be shut down.	We cannot truly plan for FL's future without giving serious priority to the quality of our waters. My family has been in this state for 3 generations now and it breaks my heart to hear my grandmother's stories of the beautiful FL that once was. Obviously, we can't ever get that back, but we do have a real opportunity here to benefit future generations by undoing the mistakes of the past. This exciting restoration will improve water quality and flow by generating an additional 150 millions gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
9/24/2021 6:12	Palm Beach		No	No				As a life long Florida resident and natural environment enthusiast I would like the see the dam removed and the water flow restored to the springs.	Ecological impacts to birds and fish	Lack of eco tourism	Restoring partial flow, smaller dam	
9/24/2021 6:12	Bay		Yes	Yes	2-5 times	More than 5 times	2-5 times	Canoeing / kayaking Boating Wildlife viewing	FL relies on wildlife for a host of issues and they need our help	Loss of wildlife		
9/24/2021 6:21	Brevard		No	No				The Dam needs to be removed to allow for the natural flow of the river.	Draining the Rodman Reservoir would benefit numerous plants and animals, restoring the flood plain which is natural to this area. Many native and endangered fish and plants would benefit.	Continued expense to maintain a Dam with no purpose, as well as herbicide treatments, resulting in perpetual cost to the taxpayers. Continued loss of native plants, fish and other wildlife, as a result of loss of water quality.	No. The removal of the Dam is long overdue.	
9/24/2021 6:21	Marion		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	Permanently drawn down and restoring the Ocklawaha.	Opens migratory pathway for fish such as American Eel and allows manatee to move freely without the possibility of being crushed in the lock.	More costs (financial and environmental) down the road to shore up a monument to man's stubbornness. This dam has no real purpose except for those who live on it and like living on the waterfront.	No	Look, this is one of Florida's oldest environmental issues. Let's do something right and restore this gash on the Ocklawaha.
9/24/2021 6:22	Leon		No	Yes				Remove the dam and restore the river to the benefit of the natural environment.	One only has to too look at other river systems that have been damaged by impoundments in Florida. The Jim Woodruff Dam on the Apalachicola River is one of the best examples where the hydrological changes have diminished the flooding of the river floodplain and associated creeks. In addition, the reduced flow has altered the water quality and habitat of Apalachicola Bay and adjacent barrier islands.	Continued degradation of the Oklawaha River/ floodplain and associated fish and wildlife habitat	no	
9/24/2021 6:22	Hillsborough		No	No				Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter.
9/24/2021 6:33	Hillsborough		No	Yes	1 time			Canoeing / kayaking Boating Wildlife viewing	Remove it. Allow for free flowing waterway.	The environmental impact. Restoring the waterway will bring back more tourism than the few that come for fishing. The dam has limited the potential for the area, including the financial impact for the area. This is a win-win.	Poor environmental conditions continue and worsen for an economically suppressed area.	The environment must be reistored so the area can thrive.	
9/24/2021 6:33	Putnam		No	Yes	2-5 times	More than 5 times	More than 5 times	Canoeing / kayaking Boating Wildlife viewing	Leave it alone.	No one has any idea what will happen, it could turn out completely different than they are expecting.	Putnam County will be the one who will be stuck cleaning up the mess if the "do gooders" are WRONG!	No, just leave things alone.	Funny how you always see people from other areas of Florida or the USA who are convinced that they know more than those who live and play in Putnam County. They need to mind their own business and simply go away.
9/24/2021 6:37	Clay		No	No				Breach the Dam!	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	No. Breaching the dam is 50 years overdue	
9/24/2021 6:40	Alachua		No	Yes		1 time	Wildlife viewing	Remove that darned dam and let the river run freely.	Ecological and economic studies that PROVE the value of removing the dam.	That the SJRMD is catering to a few influential people and ignoring the data, and the majority of people who want the dam removed.	No. Remove it!	
9/24/2021 6:41	Orange		No	Yes		1 time	Wildlife viewing	Restore the Oklawaha and floodplain forest	Floodplains and springs would be restored would remove a barrier to the Osceola to Ocala Wildlife corridor Would improve the Oklawaha, Silver and St.John's rivers Recreational fishing would be enhanced Monies would be saved that would otherwise be spent on the repair of the dam	Water quality would further decline Flora and native plants would be lost Loss of springs	No. This issue has been discussed, debated and considered for TOO long. It's time to take action on a failed plan from decades ago.	
9/24/2021 6:42	Brevard		No	Yes		2-5 times		Wildlife viewing	Take down the locks and let the river run free to restore the flow.	The river has all but dried up downstream due to the dam and man made canals and locks and nature is suffering because of it.	No concerns	No	Let the river run free again!
9/24/2021 6:43	Outside of state / other	Alabama	No	Yes			1 time	Wildlife viewing	Preserve manatee habitat!	Death statistics for manatees	extinction	no	Save the manatee!
9/24/2021 6:44	Volvucia		No	Yes		2-5 times	2-5 times	Wildlife viewing	Please add my voice to the REMOVE SIDE OF THIS DEBATE	Nature is best when left natural.	The natural watershed will continue to be an unnatural drained area.	No	
9/24/2021 6:48	Pinellas		No	No				Breach the Rodman/Kirkpatrick Dam	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No. Breaching the dam is 50 years overdue.	Breaching the Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
9/24/2021 6:57	Outside of state / other	Washington, DC	No	Yes		1 time		Boating Wildlife viewing	The Ocklawaha River is the heart of the Great Florida Riverway, which, if restored, could provide essential warm water habitat for hundreds of manatees in the winter. Manatees have already reached a record number of deaths this year - and if we don't restore additional areas of their natural habitat, we could lose even more manatees in the future.	Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	Destruction of a vital ecosystem.	No	
9/24/2021 6:57	Outside of state / other	Phoenix, Arizona	No	Yes	2-5 times				Please restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation				
9/24/2021 6:58	Sarasota		No	Yes		1 time	1 time	Canoeing / kayaking	Please remove the dam and restore the River				
9/24/2021 7:02	Alachua		No	No					I would like to see the dam removed.	Water quality, fish, manatees and wildlife	More manatees have died this year than any other year. Water quality in Florida is diminishing and we are pulling drinking water from springs nearby. Open the dam to help preserve the area.	No, please remove the dam. It's the right thing to do for the environment and the residents that live there.	
9/24/2021 7:02	Duval		No	Yes			1 time	Fishing	Have the dam breached and the natural flow of water that my grandfather and great-uncles talked about with reverence.	The restoration of a key piece of the St. John's River system and restoring migration routes for native fish and manatees. 2021 has been the most deadly year for manatees. It's time to take action while we still can.	Economic loss. Having the dam breached would allow the natural beauty of the area to blossom and attract an economic uplift to the area.	No. Breach the dam.	
9/24/2021 7:03	Seminole		No	No					Breach the Rodman/Kirkpatrick Dam	The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs. Manatees will have more places to roam.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No. Breaching the dam is 50 years overdue.	The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
9/24/2021 7:04	Alachua		No	Yes			1 time	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	• 20 lost springs and 2 Silver Springs ecosystem are restored • Historic fish and manatees return as breach opens creating a free-flowing river • 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife • $50+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers • $4-14 Million in dam repairs saved on a dam past its life expectancy • Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs.	• Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized • Hundreds of manatees lose the opportunity to access essential warm water winter habitat. • Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase • Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. • The 160-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an undistructed riverway.	Restoration of the Ocklawaha River, the heart of the Great Florida Riverway, would ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, tought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration
9/24/2021 7:08	Volusia		No	Yes	2-5 times		2-5 times	Wildlife viewing	Remove them both and restore the river . keep access to the river at that point and turn it into a nice state park				
9/24/2021 7:18	Alachua		No	Yes		2-5 times	2-5 times	Canoeing / kayaking Wildlife viewing	I would like to see the dam gone so that the river can come back to its former glory, complete with curves and springs, and fish and manatees will be able to move freely and the river above the dam will stop dying.	That the dam is in such poor condition that it would be cheaper to take it down than to leave it.	That we lose the natural beauty of the Oklawaha forever.	No/	Ff the dam were taken down, the fiscal consequences to the surrounding area would all be positive because a. fishing would be just as good or better than it has been with the dam in place and b. the river would attract more visitors more often because of the enhanced recreational opportunities and those visitors would stay longer than competition-entrenrs and spend more money locally.
9/24/2021 7:18	Pinellas		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking	Breach the Rodman/Kirkpatrick Dam	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	Please bring our springs back to life. It's one of Florida's gems. We've already robbed enough. MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
9/24/2021 7:19	Marion		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
9/24/2021 7:21	Volusia		No	Yes		1 time		Canoeing / kayaking	Removed. Open the waterway	Manatees need access.	Manatees will become more endangered	No open the waterway	Manatees need help.
9/24/2021 7:23	Calhoun		Yes	Yes		2-5 times		Wildlife viewing	Please do what is best for wildlife	The air I breath. The benefits of a healthy ecosystem. My faith	All the consequences we don't even know are coming	No	Please do what is best for nature. It will save us all
9/24/2021 7:23	St Johns		No	Yes		2-5 times		Boating Wildlife viewing	remove the dam and restore the Oklawaha	Restoration of several springs and reestablishment of throughways for fish and manatees. Increase flow will clean the river and provide food for the desperate population of manatees. It it is time to re-veld natural areas that no longer support their original mission. And it is expensive for the use of otherwise needed public funds.	A continued diminished quality of the St. Johns River.	No	Incredible natural areas like the Oklawaha are rare . We made a mistake with the Cross Florida Barge Canal and did damage to the system. It is now time ta fix that mistake. Thanks for your consideration.
9/24/2021 7:27	Outside of state / other	Connecticut	No	No					Freedom	Lack of freedom	Deaths of sea animals		
9/24/2021 7:29	Duval		No	Yes			1 time	Other	Remove it to allow the natural flow of the river	That is the way that the river was originally and it would allow access to 20 hidden springs and natural feeding and migratory habitats for animals, which will be big for tourism/economic growth and Florida's environment at the same time - a true win/win	We continue to lose access to the lost springs and manatees, which are currently losing numbers, remain strained with less access to these areas	No - let's tear the dam down	We should look at doing something to throw a bone to the bass fisherman who want to keep the dam, while keeping in mind that removing the dam helps all of Florida both economically and environmentally, and not just pacify a small powerful special interest. I personally will volunteer to show those guys how to fish and enjoy the river and springs way more than they do now once the dam is removed.
9/24/2021 7:31	St Johns		No	No					That it is either partially or totally removed to allow the River to flow naturally.	Striped bass are not able to travel to the ocean and breed and beautiful Florida springs are buried under the blocked water flow.	The state of the dam further deteriorates and becomes dangerous to people trying to access this area for recreation.	Partial removal	Since the canal was a failed venture and research showing the best resolution was paid for by Florida taxpayers, this just needs to be taken care of ASAP. A few fisherman who oppose removal should not overrule what is best for the River,wildlife and the state.
9/24/2021 7:32	Putnam		No	No					Prioritize the natural land and allow it to do its thing: provide important habitat to the ecosystem which in turn protects humans.	Natural wetlands, springs and other earth water systems are critical to absorbing natural disaster AND in the same breath provide healthy habitat to all the living ecosystem around it . It's DUMB to continue to ignore the interconnectedness of humans ' wellness and survival to the naturally occurring earth . Track the data people . 12 year olds in biology class getting a 's, b's and c's understand this. Why not policy makers ?	Continued long term destruction of all life including humans.	Idk	Thanks!
9/24/2021 7:32	Alachua		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Breach the dam	There are 20 springs that no longer flow because of the dam. The recreational and economic potential of those springs is too high to waste tax payer money on maintaining a defunct dam. Furthermore, the manatee mortality crisis in its current state is hideous. The water quality is poor and the vegetation is completely choking everything up. It's easily the most disappointing water way in Florida, for any recreation other than sport fishing. Breaching the dam will allow the waterway to be useful for manatee watchers, swimmers, fishermen, and kayakers, and be attractive option for recreation once again.	The absolute wasted potential of those springs and the complete waste of tax money into maintaining that dam.	There is only one smart choice here that widely benefits the public instead of catering to a single group. Breach the dam.	I recently graduated from UF. In one of my classes we held an academic debate about the Rodman dam. There were many people who were pro-keeping the manatee in the dam due to sense of place and supposedly better fishing. After hearing the actual research on the reservoir and how it is doing and hearing about the springs hidden beneath, every single one of my classmates changed sides. No one supported the dam after that debate. Similarly, I think that anyone with enough understanding and research under their belt and without bias in the form of personal monetary gain/loss would agree, it's time to breach the dam.
9/24/2021 7:33	Orange		No	No					Destroy the dam and restore the natural river's flow.	20 springs are unable to be experienced by nature lovers and critical manatee winter habitat is lost.	A chance to correct this travesty again will be a long time coming.	No.	The purpose of the dam was never realized and natural conditions should be returned to.
9/24/2021 7:33	Alachua		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	I would like to see the Rodman/Kirkpatrick dam breached to restore the natural flow of the waterway.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years.	No. Breaching the dam is 50 years overdue.	I grew up in Palatka and spent many days around the dam and on the reservoir and Ocklawaha river. The thought of seeing the river restored to it's natural state brings me a lot of joy. Putnam county deserves to benefit from it's natural wonders and restoring the flow of the Ocklawaha and the drowned springs would be a boon for the local tourism economy.
9/24/2021 7:35	Walton		No	Yes	1 time		2-5 times	Fishing Canoeing / kayaking Wildlife viewing	Breach the Rodman/Kirkpatrick Dam	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 long overdue.	Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.

9/24/2021 7:37	Seminole		No	Yes		More than 5 times		Canoeing / kayaking	Remove it and restore the Oklawaha	Rivers are best left alone. Dams are unnatural and harmful to the natural environment. It was built to create a canal across the state, it never happened, remove the dam.	The Oklawaha remains unhealthy.	no	
9/24/2021 7:38	Pasco		No	No					For it to be dismantled.	It would give us back 20 springs and much needed wildlife habitats	There wouldn't be more area available to manatees when this has been the deadliest year for them. The rivers flowing would give them safer retreats	No.	
9/24/2021 7:40	Duval		Yes	Yes			1 time	Canoeing / Kayaking	I dont go to Rodman often because it is terrible. Behind the dam is a dangerous lake where loose trees float and can damage your boat. Below the dam, I have put in to kayak. It was wonderful, but the dam itself is an eyesore. I'd go much more often if it wasnt such a wide open unappealing lake. The Ocklawaha River itself is the gem.	The Ocklawaha River in its natural position is more beautiful and appealing for fishing and recreation than the artificially wider segment impacted by the dam. The invasive spraying needs, logs and debris that get caught behind the dam plus the lack of canopy from the wider segment - AND the chance to see 20 new springs. That is what I want to see. I'd pay to visit.	We will invest millions to repair the dam that continues to hold Putnam County back from seeing economic tourism dollars - if invested in restoration instead.	Partial restoration seems to be middle ground. Full restoration removes the entire dam and all of its locks and parts. Partial restores the river without removing all of the structures. I'd be upset if we dont do all we can to allow migrating fish and manatee to reach Silver Springs naturally. But, that is up to you.	Please think about the economic potential for Putnam County as a homebase for tourism to the Ocklawaha River in the cost for restoration. If you can create jobs and fund a multi year tourism plan for the new "found" springs (etc.), it would help gain support for doing what needs to be done. This dam has reached the end of its life.
9/24/2021 7:42	Alachua		No	Yes			2-5 times	Canoeing / Kayaking Wildlife viewing	I would like to see the removal of the dam and the restoration of the Ocklawaha natural flow to the springs- it supported	Manatee deaths in 2020. Restoring the river would provide habitat manatees.	The dam will be restored at great cost both financial and ecological.		
9/24/2021 7:44	Seminole		No	No					Removal of obstacles which prevent the natural flow of waters.	The FNPS presentation.	Continued and extended destruction of the natural wetlands.	Possibly, that would depend on the projected outcome.	
9/24/2021 7:54	Orange		No	Yes		2-5 times	More than 5 times	Fishing Canoeing / Kayaking Boating Wildlife viewing	Breached. The dams serve no public purpose and damage our natural Florida ecosystems.	There are 20 submerged springs, an absence of natural fish migratory routes, and a lack of manatee habitats.	The continued and ongoing environmental damage as well as the massive waste of taxpayer funds to repair a worse than useless dam.	No	I grew up in Marion county and my family still lives on Lake Kerr; less than 10 miles from Rodman dam. Since the mid-30s, five generations have fished on the Oklawaha river and, after the misguided cross Florida Barge Canal was finally abandoned at Eureka, at Rodman as well. I have lived my lifetime with this wasteful, damaging structure and damaged Florida rivers and springs. It should have been removed 50 years ago and our natural waterways restored. It's more than time to do so now.
9/24/2021 7:54	Baker		No	Yes	1 time	1 time	1 time	Other	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Support wildlife and manatees	Manatee loss	No	
9/24/2021 7:55	Levy		No	No					Breach the Rodman Reservoir and Kirkpatrick Dam	Would be a very beneficial springs protection project for the Sate of Florida . Also would benefit Manatee habitat that's needed for their protection	Taxpayer money will be wasted on dam repairs when the economy in the area would be helped with the springs recovered and manatees in their natural habitat	No	Florida springs are a special gift in this state and help with groundwater quality , recreation, and beauty for all . A spring recovery project would benefit all citizens of the state and attract visitors helping the economy . Spending taxpayer money to repair this dam is not sustainable for present and future taxpayers. Thank you
9/24/2021 8:00	Escambia		No	Yes		More than 5 times		Boating Wildlife viewing Other: Enjoying the springs during the drawdown	I would like to see the dam be removed. It's not in use and it's preventing the natural flow of the water and migration of many species.	The knowledge of how dams affect natural biological processes and the fact that tannic water is covering 20+ springs for no reason.	The Ocklawaha's full potential as a river would not be reached. The issue of floating aquatic plants is still occurring even though the drawdown was support to "help" that without the use of herbicides.		
9/24/2021 8:04	St Johns		No	Yes		2-5 times		Canoeing / Kayaking Wildlife viewing	I would like the dam to be removed and the river restored to its natural flow.	The vegetation that builds up and then causes the the dam to be opened every few years is costly and harmful to the environment	The concern is for the welfare of the river. If the river is not restored, we will continue to have to use taxes to support a dam that is harmful to wildlife and ecosystem functions	No, the dam needs to be removed.	
9/24/2021 8:05	Palm Beach		No	No					Breach the damn	Revitalization of over 20 springs and wildlife	Seeing natural Florida disappear forever		
9/24/2021 8:05	Outside of state / other	Chicago	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/24/2021 8:07	Alachua	No	No						Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. The greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/24/2021 8:15	Alachua		No	No					breach the dam	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.		The chance will be missed and tourism will suffer	
9/24/2021 8:18	Pinellas		No	Yes		2-5 times	2-5 times	Canoeing / Kayaking Wildlife viewing	Breached so wildlife can flourish.	Wildfire preservation.	The effect it has on our marine and wildlife that are already in danger .		
9/24/2021 8:22	Outside of state / other	Harris County TX	No	No						Restore the waters to the river. Manatees can be saved.	Loss of the manatees. We were very lucky to visit back in the 1980's.	Not really. We are losing them because of greed and politics. Time to start listening to what nature needs instead of what people need	
9/24/2021 8:24	Marion		No	Yes		More than 5 times		Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing	Keep the dam open, free the river!				
9/24/2021 8:27	Duval		No	No					Break the damn dam	Stop screwing with nature			
9/24/2021 8:27	St Johns		No	Yes		1 time		Canoeing / kayaking	Dam removal	Adverse impacts on water quality and wildlife are well documented	Stagnant water, loss of habitat related to free flow of water, continuing the harm done by the dam	no, because there is no good reason to maintain the dam in place	Please help restore water flow and circulation in our rivers, stream, estuaries, marshes and lakes. Humans have done so much damage, it is time to take action to restore when and where we can. Rodman Reservoir and Kirkpatrick Dam are THE PLACES TO TAKE ACTION NOW.
9/24/2021 8:29	Dade		No	No					Remove	Wildlife restoration	Loss of biodiversity	No	
9/24/2021 8:30	Dade		No	No					Restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/24/2021 8:31	Dade		No	Yes		1 time	2-5 times	Canoeing / kayaking Wildlife viewing	I support partial removal of the dam structure and return of the river to its original banks so that restoration of the wildlife corridors can be achieved.	The entire purpose of the dam was ill-conceived and rightly-terminated, and the remnants of those bad decisions should be mitigated by removal of the dam. Removal of the dam, whether completely or using the less costly "breaching" option, would allow restoration of an important part of the ecosystem. The human value of restoration is significant as it would provide new and improved opportunities for fishing, hunting, and especially eco-tourism.	Water quality would continue to decline, and a crucial piece of wildlife corridors would remain impeded further endangering the survival of listed species. Failure to remove or breach the deteriorating dam would also increase future and on-going maintenance costs for no net benefit.	Instead of complete removal of the dam and supporting structures, breaching the dam would provide a more cost-effective method of mitigating the harm caused by its presence and remove the possibility of gross failure of the dam in the near future.	thanks for the public comment period and i trust the the WMD will make the right decision to benefit residents of Florida and the eco-tourists we want to encourage.
9/24/2021 8:32	Outside of state / other	Montgomery, IL (Kendall County)	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No. Breaching the dam is 50 years overdue. 9/24/2021 8:40	Putnam		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	Restore the Oklawaha by breaching the dam.	Army corps of engineers approved location and process for breaching the dam.	Death of cypress tree forest by drowning. Build up of sediment in Rodman basin. Loss of a revenue and international recognition which would be gained by restoring the river.	I don't see any. By restoring the river/ breaching the dam all interests: environment, fishing, economic, will be served.	
9/24/2021 8:41	Lake		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing Other: hiking, camping	remove dam, restore waterway	hydrologic balance	environmental degradation	No	
9/24/2021 8:42	Putnam		No	Yes			2-5 times	Canoeing / kayaking Boating	Breach the dam and stop poisoning the water with herbicides. Return it to it's natural state.	The dam serves no useful purpose, and a lot of money is spent on "maintenance". More people would benefit by having a free flowing River with all it's springs for recreation. With the natural habitat restored, wildlife would abound.	Continued destruction of a precious Florida resource.	No	Please just do this. It's been too long. We shouldn't have to fight so hard to restore and protect our natural areas!
9/24/2021 8:44	Putnam		No	Yes		2-5 times	More than 5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every additional day the dam and reservoir remain in place results in additional environmental degradation.	• Thousands of acres of the lower Ocklawaha's historic riverine floodplain; an incalculable springs; and many miles of natural river channel that were drowned as a result of dam construction would be restored. • Thousands of acres of submerged aquatic plant communities would be able to regenerate in the restored river channel, and in the re-emerged spring run streams that drained into the Ocklawaha historically. • 6,000 acres of stressed floodplain wetland located downstream of the dam would be enhanced. • Imperiled plant species like the endangered Star Anise and threatened Hartwrightia, which are native to the banks of this region's spring run streams, could expand their range into the restored spring systems. • Draining the Rodman Reservoir would remove the single greatest barrier to plant and animal movement along the Ocala to Osceola (O2O) Wildlife Corridor by replacing the open water expanse of the Reservoir with a restored floodplain forest, to the benefit of many listed plant species native to the region including the federally listed Clasping Warea and Scrub Buckwheat. • Three river systems - the Ocklawaha, Silver and St. Johns - would experience significant environmental improvement from restoration. • Manatees would regain open access to the warm water habitats of the Ocklawaha and Silver Springs. • Migratory fish including the Striped Bass, American shad, American eel, and the critically Endangered Atlantic Sturgeon and Shortnose Sturgeon would once again have open access to the Ocklawaha system if the dam is breached. • Recreational sport fishing would be enhanced by allowing the Florida strain of the Striped Bass to reclaim what used to be its primary spawning habitat - the Ocklawaha. • At least 150 million gallons a day of additional natural flow, and potentially much more, would be restored to the Lower St. Johns River, improving water quality and increasing resiliency of the entire St Johns/Ocklawaha River system by impeding the salt water intrusion resulting from sea level rise. • An estimated $14 Million in dam repairs, measured in 2006 dollars, would be saved by avoiding money to a dam that has exceeded its life expectancy and never fulfilled the purpose for its	• The broad array of environmental benefits to native flora and fauna, including many imperiled species, that would result from restoration would not be possible. • Water quality in the Rodman Reservoir and Lower Ocklawaha/St Johns River system would continue to decline. • The economic benefits that would result from increased and enhanced recreational usage would be denied to the surrounding local communities. • Residents and business owners in areas immediately downstream of the dam would continue to be under threat in the event of failure of a dam that has never, and will never, satisfy the purpose of its construction. • Thousands of acres of submerged aquatic plant communities would be unable to regenerate in a restored river channel and in the re-emerged spring run streams, and 7,500 acres of floodplain forest would not be restored. • The Reservoir would continue to be a barrier to movement by native wildlife and plant life along the length of the O2O Corridor, and compromise the value of Florida's investments in conserving lands like the Etonian Creek State Forest, and approved Florida Forever projects. • Taxpayers will perpetually be on the hook for repair and maintenance of the dam and Reservoir, and continue to be liable for any loss of life or property damage that would result from a dam failure. • Imperiled plant species like the endangered Star Anise and threatened Harbwrightia, which are native to the banks of this region's spring run streams, would be unable to expand their range into the unrestored spring systems.	No. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration.	Please take the critical step of breaching this dam. Saving our Fl natural spaces and ecosystems is my #1 priority for all public matters.

9/24/2021 8:46	Highlands		No	No					Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every additional day the dam and reservoir remain in place results in additional environmental degradation.	• Three river systems - the Ocklawaha, Silver and St. Johns - would experience significant environmental improvement from restoration. • Manatees would regain open access to the warm water habitats of the Ocklawaha and Silver Springs. • Migratory fish including the Striped Bass, American shad, American eel, and the critically endangered Atlantic Sturgeon and Shortnose Sturgeon would once again have open access to the Ocklawaha system if the dam is breached. • Recreational sport fishing would be enhanced by allowing the Florida strain of the Striped Bass to reclaim what used to be its primary spawning habitat - the Ocklawaha. • At least 150 million gallons a day of additional natural flow, and potentially much more, would be restored to the Lower St. Johns River, improving water quality and increasing resiliency of the entire St Johns/Ocklawaha River system by impeding the salt water intrusion resulting from sea level rise. • An estimated $14 Million in dam repairs, measured in 2006 dollars, would be saved by avoiding repairs to a dam that has exceeded its life expectancy and never fulfilled the purpose for its construction. • The large expenditures required for herbicide treatments to control the growth of invasive aquatic weeds and to conduct other ongoing maintenance needs, including periodic drawdowns, in a futile attempt to maintain water quality and recreational access in the stagnant waters of the Reservoir, would become unnecessary. • $57 million in potential flood damages to downstream areas around the community of Welaka would be avoided in the event of a dam failure. • Economic analyses conducted by researchers at the University of Florida demonstrate the economic impact from eco-tourists who use the natural portions of the Ocklawaha River is twice that of the anglers and boaters using the Rodman Reservoir, and annual use of the Reservoir's recreation sites has been on a downward trend since records began in 2004 as water quality and fish production have continued to decline year after year. • When accounting for revenues generated by increased recreational usage, a cost-benefit	The broad array of environmental benefits to native flora and fauna, including many imperiled species, that would result from restoration would not be possible. • Water quality in the Rodman Reservoir and Lower Ocklawaha/St Johns River system would continue to decline. • The economic benefits that would result from increased and enhanced recreational usage would be denied to the surrounding local communities. • Residents and business owners in areas immediately downstream of the dam would continue to be under threat in the event of failure of a dam that has never, and will never, satisfy the purpose of its construction. • Thousands of acres of submerged aquatic plant communities would be unable to regenerate in a restored river channel and in the re-emerged spring run streams, and 7,500 acres of floodplain forest would not be restored.	No. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration.	
9/24/2021 8:47	Lake		No	Yes	1 time		Other	Ice a way		Compels flow n water	Natures fish	No	
9/24/2021 8:48	Lake		No	Yes	2-5 times		Fishing Wildlife viewing	Breach the Kirkpatrick dam	The impact on water quality upstream and down as a result of increased flushing, decrease of salinity down stream, and opportunity for wildlife like manatees and other species to move to new habitat.	Continuing degradation of water quality upstream and down.	Breaching is a compromise from complete removal.	All user group needs should be considered. As well as the economic benefits from many uses. In addition to the value of a functioning natural area, benefiting water, wildlife, and a biologically functioning region.
9/24/2021 8:50	St Johns		No	Yes	1 time		Wildlife viewing	Breach the dam.	Restoration benefits to the natural waterways.	Continued damage to the natural waterways and we continue to limit warm shelter and food sources for the manatees.	No.	
9/24/2021 8:53	Pinellas		No	Yes	2-5 times		Canoeing / kayaking Wildlife viewing	Breach the dam!	Allowing manatees access to habitats, recovering 20 drowned springs.	Millions of dollars in dam repairs for a dam that harms ecosystems and wildlife habitats		Breach It!!! Save the Spring State!!
9/24/2021 8:54	Hernando		No	No				remove the dam	PAPS position paper	Continued deterioration of the river	partial removal	
9/24/2021 8:54	Dade		No	No				Dismantled to save the manatee habitat		Manatees are dying	More manatees will die	Maybe	None
9/24/2021 8:54	Pasco		No	No				Start restoring the waterways being destroyed for profit. Water SUSTAINS LIFE...WITHOUT ALL LIFE WILL PERISH INCLUDING POLITICIANS HELLO	Water sustains life	All life will perish	Politicians not caring becus its all about that bribery/lobbying money going in their pockets	
9/24/2021 8:58	Alachua		No	Yes	2-5 times		Canoeing / kayaking Boating Wildlife viewing	Restoration of the Oklawaha River by decommissioning and removal of the Kirkpatrick Dam	Environmental studies that have shown the harmful affects.	Stagnation, overgrowth		
9/24/2021 8:58	Hillsborough		No	Yes		2-5 times	Canoeing / kayaking	Breach the Rodman Kirkpatrick dam	Restoring the drowned springs and restoring fish populations and natural migratory patterns	The continued decline in water quality - algae, invasive plant species choke out the natural habitat	no	We must do more to protect and preserve our springs for the sustainability of natural, beautiful Florida. This is an important step in the right direction.
9/24/2021 8:59	Leon		No	Yes		2-5 times	Canoeing / kayaking	Removal of the dam.	The economic impact from an increase in springs related tourism along the ocklawaha will be larger than the economic impact from maintaining the reservoir for fishing.	We will miss one of the biggest opportunities in generations to dramatically improve water quality, restore habitat for threatened wildlife, and significantly improve quality of life for residents in the region.	Opening the dam during the winter and closing it in the summer would provide some of the environmental benefits and keep a smaller reservoir for fishing and boating.	
9/24/2021 8:59	Outside of state / other		No	No				Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	The fact that Florida manatee populations are suffering from multi-pronged stressors, it is imperative that we attempt to mitigate any and all hazards that adversely impact their collective ability to thrive.	The loss of manatees in their native Florida habitat.	Strong actions that strongly support restoration of manatee habitat.	Please act now to protect this iconic, extremely vulnerable species.
9/24/2021 9:00	Duval		No	Yes		1 time	Canoeing / kayaking Wildlife viewing Other: Passive recreation, photography, picnicing	Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam to connect Silver Springs, the Ocklawaha and the St. Johns River.	Science supports this position. Freeing up the Ocklawaha would improve the health of many Florida springs that are under assault from development, introduction of nutrients into once clear and healthy waters and support jobs, ecotourism and more diverse recreational experiences.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam and restoring the Ocklawaha are the critical issues. Dam safety issues and improved water quality, wildlife habitat, and recreational opportunities can't be ignored or delayed any longer. This is fifty years overdue.	Thank you for the opportunity to offer citizen input. I am a US Citizen, taxpayer and Florida permanent resident.
9/24/2021 9:02	Santa Rosa		No	Yes		1 time	Wildlife viewing	Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every additional day the dam and reservoir remain in place results in additional environmental degradation.	At least 150 million gallons a day of additional natural flow, and potentially much more, would be restored to the Lower St. Johns River, improving water quality and increasing resiliency of the entire St Johns/Ocklawaha River system by impeding the salt water intrusion resulting from sea level rise	Water quality in the Rodman Reservoir and Lower Ocklawaha/St Johns River system would continue to decline.	No. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration.	Draining the Rodman Reservoir would remove the single greatest barrier to plant and animal movement along the Ocala to Osceola (O2O) Wildlife Corridor by replacing the open water expanse of the Reservoir with a restored floodplain forest, to the benefit of many listed plant species native to the region including the Federally listed Clasping Warea and Scrub Buckwheat
9/24/2021 9:03	Union		No	No				Breach the Rodman/Kirkpatrick Dam.	The dam is past its life expectancy so breaching it would save millions in taxpayer money to constantly repair it. The dam has negatively affected wildlife. Fish populations in Silver Spring declined by 92% partly as a result of the dam. Manatees would gain access to habitats that they desperately need. Breaching the dam would also restore 20 drowned springs.	This might be our only chance to do this while public interest is high and it is still within budget. As stated above, the economical and environmental costs would be great if the dam is not breached.	No. This is 50 years past due.	We need to do this, now while we still can. I can't stress enough the costs that keeping this dam would incur on our economy and environment. The springs are essential to our healthy environment in Florida. Also, keeping a dam that is way past its life expectancy is costly to taxpayers. Marine wildlife populations such as manatees, fish, and others are also suffering as a result of keeping the dam.
9/24/2021 9:03	Pinellas		No	No				Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	100s of manatees gain essential warm water winter springs habitat. Historic fish and manatees return as breach opens creating a free-flowing river.	Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Historic fish populations are not regained in the Ocklawaha River and Silver Springs and exotic fish like the Blue Tilapia increase.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/24/2021 9:03	Outside of state / other	Atlanta, GA	No	No					Please restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring this river will provide manatee habitats for hundreds of manatees. Manatees have been dying at an alarming rate due to human interference, and restoring the river will provide critical habitats that are necessary for their survival.	No; this is the only way to ensure manatees can have the habitat they need to survive.	Thank you for allowing the public an opportunity to speak out regarding this matter.
9/24/2021 9:05	Duval		No	Yes	1 time	2-5 times	More than 5 times	Boating	The dam needs to go. The pool is not nearly as attractive or productive as the wild Ocklawaha. It should be breached to allow boats and fish to travel freely up and down stream.	Decades of science about the loss of species and damage to the 100 mile estuary in the St. Johns River.	That we will continue to see the dam become a deeper money pit for repairs and maintenance.	No. The dam was a bad idea to start with and even Nixon could see that. Florida needs wild rivers and wetlands to sustain everything from our quality of life to our drinking water. The dam, and any legislators who support keeping it, need to go.	The science is undeniable that a natural river is better than a snag-filled pool behind a dam that serves no purpose other than damaging an ecosystem.
9/24/2021 9:08	Outside of state / other	Bristol, CT	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/24/2021 9:09	Alachua		No	Yes			Canoeing / kayaking Wildlife viewing	Breach the Rodman/Kirkpatrick Dam	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
9/24/2021 9:09	Osceola		No	Yes			Wildlife viewing	I am an avid birdwatcher and after visiting the Ocklawaha River on a birdwatching boat tour I became fascinated with the story of the Cross Florida Barge Canal. Upon seeing the dam and the reservoir I was dismayed that something so ugly and destructive to the river had been allowed to remain. I want to see the dam removed and the river to flow as it should. I think we know in 2021 that this is an environmental disaster for the river and politics should not stop the dam from being removed. Thank you.	I also followed the Kissimmee River restoration and to think that people once thought that ditching the river would benefit wildlife was proven wrong 100%. Restoring the Ocklawaha river would bring back the wildlife and fish habitat that was taken away all those years ago. We know better now.	That the ignorance of the past on water management issue would be allowed to remain.	No	Let the river run free.
9/24/2021 9:09	Suwannee		No	Yes		1 time	Wildlife viewing	Restoration of natural Florida which will restore our springs and allow our rivers to flow naturally - creating a healthy ecosystem.	Spring flow	Further degradation of Florida's fragile environment.	No	
9/24/2021 9:11	Duval		No	No				Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife $57 million in damages.	A storm event triggers a dam failure or overtopping resulting in potential damages to 537 property owners and up to	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
9/24/2021 9:12	Duval		No	Yes	1 time	1 time	Fishing	Remove the dam	Restoration of natural water flow	Increased salinity and loss of nursery habitat in lower St Johns	Not that I would feel comfortable with	My experience going back to the 80's is the restoration of natural systems results in positive surprises. The increased salinity has destroyed a lot of natural habitat north of the Buckman Bridge.
9/24/2021 9:12	Dade		No	Yes		More than 5 times		Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
9/24/2021 9:14	Outside of state / other	New Hampshire	No	No				If the Rodman Reservoir and Kirkpatrick Dam projects can help protect/preserve manatees, by all mines they should be utilized to do so. These magnificent species reminiscent of prehistoric animals must be assisted to continue surviving on the planet.	the number of deaths of manatees in the past few years indicates the species are endangered and must be protected in order to survive.	The manatees will become extinct.	No	Protect/preserve. Humans are the cause of species extinction so humans must be the solution to resolve the deaths of the manatees.
9/24/2021 9:14	Columbia		No	No				Breach the Rodman/Kirkpatrick Dam.	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/24/2021 9:15	Duval		No	Yes		1 time	Canoeing / kayaking	I would like the Kirkpatrick Dam breached, open or removed so that the natural three-rivers - St. John's, Ocklawaha and Silver Springs could flow naturally like they once did.	Water quality, wild-life habitats, and the release of many natural springs.	Increasing degradation of water quality, including the loss of natural springs, and wildlife habitat loss.	I join with thousands to seek a free-flowing river system that once reigned in northeast Florida. My forebear, Robert Forte, was one of the original ferry operators across the Ocklawaha in the 1850s. I have a vested interest in restoring these river systems to their original and natural state.	
9/24/2021 9:16	Clay		No	No				It is essential to restore the Ocklawaha River and remove the Kirkpatrick Dam.	Manatee's are severely stressed and need increased protected warm water habitat to survive. In addition there would be benefits to multiple wildlife species in this area.	If the dam is not removed, the manatee's would be denied the warm water habitat they desperately need and restore beneficial habitat for other species as well.	No, increased pressures, environmental degradation and climate change make the habitat restoration essential.	
9/24/2021 9:16	Marion		No	Yes		2-5 times	Fishing Canoeing / kayaking Wildlife viewing	Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No	
9/24/2021 9:17	Sarasota		No	No				Restore the Ocklawaha River by breaching the Kirkpatrick Dam	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor.
9/24/2021 9:19	Duval		No	Yes			2-5 times	I would like to see the dam breached so that the downstream estuaries in the lower St. John's river basin can get the necessary freshwater that is lacking from overdevelopment if the river.	Scientific data from the Jacksonville University MSRI	the decline of the estuaries at the mouth of the St. John's river		
9/24/2021 9:20	Alachua		No	Yes		2-5 times		Breach the Rodman/Kirkpatrick Dam	Manatees need access to the drowned springs and fish migratory routes need to be restored.	We need to seize the opportunity for funding to help the wildlife. Also, millions in taxpayers' money are unnecessarily spent to repair which had no public benefit.	No, this is overdue.	Please please see why this is important to local people who care deeply about the place they live and recreate. Please use your positions to uplift our concerns and make change.
9/24/2021 9:22	Broward		No	No				Breach the Rodman/Kirkpatrick Dam.	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	Hundreds of manatees lose access to essential warm water winter habitat.	No. Breaching the dam is 50 years overdue.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future.
9/24/2021 9:22	Alachua		No	No				Breach the Rodman/Kirkpatrick Dam	Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	No. Breaching the dam is 50 years overdue.	The springs and rivers, along with the wildlife, is what makes Florida beautiful and special. No reason to hold back with a dam, that's costing millions in repairs, when the land can flourish. Why is the restoration and protection of our springs ever a question that needs to be asked?
9/24/2021 9:26	Dade		No	Yes		1 time	Canoeing / kayaking Wildlife viewing	Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
9/24/2021 9:28	Lake		No	Yes		1 time	Wildlife viewing	Let the Dam be taken away	the Dam interferes with the natural flow of the water	That everything would remain the same		
9/24/2021 9:29	Seminole		No	Yes		1 time	Other	Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam to reunite the natural connection of Silver Springs, the Ocklawaha and the St. Johns River.	Time and again, studies illustrate that restoration of a free-flowing, connected system is cost-effective and will provide significant ecological benefits to the St. Johns, Ocklawaha and Silver Rivers as well as Silver Springs. With climate change exacerbating many impacts seen from shocks and stressors, restoration to natural functionality would serve wildlife, water quality and quantity, and utilize natures green infrastructure to manage increased rainfall events.	The 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	No. Breaching the dam and restoring the Ocklawaha are 50+ years overdue. Dam safety issues and improved water quality, wildlife habitat, and recreational opportunities can't be ignored or delayed any longer.	This restoration will improve water quality and flow, support inland and coastal resilience, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.
9/24/2021 9:31	Marion		No	No				I would like to see it breached to allow free flowing water..	It would open up more springs which are essential to the health of our springs as well as the health of the mantees.	would cost millions of state funds to repair the dam plus if it is not done it would mean more fish die offs and invasive species populations increasing	NO!!	
9/24/2021 9:31	Marion		No	Yes		2-5 times		Fishing	Remove it	Get river back to normal	Fisheries	No	
9/24/2021 9:32	Outside of state / other	usa	No	No									
9/24/2021 9:33	Marion		No	Yes		1 time	Canoeing / kayaking	Removal of enough of or all of the Kirkpatrick Dam so to permit the Ocklawaha River, its tributaries and wetlands to return to a state as close to natural as possible.	The return of the Ocklawaha's natural flow and water levels would improve the access to and quality of natural habitats vital to fish, bird and mammal populations, including manatees. The natural water levels would also expose and improve flows from springs now covered by the reservoir.	Continued decline of another Florida waterway. I have grown up in Florida and in my lifetime I have seen first-hand the decline of water quality, destruction of wildlife habitats and declines in wildlife populations. The decline in the environment in just one lifetime is striking.	No.	As SJRWMD knows, the federal government, by executive order, halted the Cross Florida Barge Canal project in 1971. The halting of the project was a recognition of the project's misguided goals, its significant adverse environmental impacts and its lack of relevancy due to contemporary transportation/commerce modes. The Rodman Reservoir and Kirkpatrick Dam have no purpose and their lingering adverse impacts on the Ocklawaha/Silver/St. Johns River basin should be ended. Please breach the dam.
9/24/2021 9:33	Alachua		No	Yes	1 time	More than 5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Breach the dam	The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/24/2021 9:34	Brevard		No	Yes		1 time		I would like to see the Oklawaha River restored to its natural channel by breaching the old Kirkpatrick dam	7,500 acres of floodplain forest will be restored and a total of 15,000 acres of the Florida Wildlife Corridor are restored or enhanced for wildlife and recreation.	Wasting money on repairing an aging dam when we could substantially increase the Florida Wildlife Corridor for the benefit of the people here now and for preserving the natural beauty of Florida for future generations.	No, this should be done now. There is no sense in postponing the benefits of restoration.	Even the governor has recognized the Wildlife Corridor is critically important for Florida. This is a substantial opportunity to support it.

9/24/2021 9:35	Lake		No	Yes		2-5 times		Wildlife viewing	Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every additional day the dam and reservoir remain in place results in additional environmental degradation.	Draining the Rodman Reservoir would remove the single greatest barrier to plant and animal movement along the Ocala to Osceola (O2O) Wildlife Corridor by replacing the open water expanse of the Reservoir with a restored floodplain forest, to the benefit of many listed plant species native to the region including the Federally listed Clasping Warea and Scrub Buckwheat. Also, An estimated $14 Million in dam repairs, measured in 2006 dollars, would be saved by avoiding repairs to a dam that has exceeded its life expectancy and never fulfilled the purpose for its construction.	The broad array of environmental benefits to native flora and fauna, including many imperiled species, that would result from restoration would not be possible. Water quality in the Rodman Reservoir and Lower Ocklawaha/St Johns River system would continue to decline. Thousands of acres of submerged aquatic plant communities would be unable to regenerate in a restored river channel and in the re-emerged spring run streams, and 7,500 acres of floodplain forest would not be restored.	No. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration.	
9/24/2021 9:36	Duval		No	Yes					return to nature	human powered bulldout	death	no		
9/24/2021 9:36	Brevard		No	No										
9/24/2021 9:36	Broward		No	No					Help provide warm water habitat for the Manatees	Manatees need more access to warm water to survive the winters	More loss of Manatees, which are severely declining due to loss of food and warm water they need to survive the winters	Anything that can be done to help the manatees survive, their numbers are declining rapidly	Manatees are special, they need to be protected or we will lose them forever	
9/24/2021 9:38	Marion		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking	Breach the dam	Bringing back the springs, improving the fish population/diversity and helping manatees to find food and shelter	More decline in wildlife, more pollution of springs with algae, never getting closer to the original beauty and usefulness of the water and wildlife of all the (should be) connected waterways	No	It would save taxpayer money, it would bring back the beauty and diversity and economic usefulness of the connected waterways all the way from Silver Springs to the Atlantic. The ocklawaha would return to its free-flowing natural state	
9/24/2021 9:39	Duval		No	Yes				Other: It was a sight see boat trip over 10 years ago and I was appalled at the environment.	in favor of restoration of this natural system by breaching the Rodman/Kirkpatrick Dam.	restore this river way for people and wildlife while fortifying the 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville	Restoring the water system back to it's original state	no		This water way has been a debate for my entire life (I'm 70!). It has been a very politicize debate and it's typically about money and politicians in power. This should not be about money and power but about the health of the water way environment. Water affects people, animals, fowl and fisheries. Please remove the dam and improve the health of Florida's water ways.
9/24/2021 9:39	Pinellas		No	No					Destroy it! Help breathe life back into Florida's springs!	Our fish population is down 92% our eco system is so important!	Death to the ecosystem that would effect so many people's lives. And Florida would lose majority of its visitors with the furthering decline of our Springs, which would effect the Florida economy!	Blow the damn!		
9/24/2021 9:39	Marion		No	Yes		2-5 times		Other: I wanted to see what the dam looked like and how busy it was there.	I would like to see the dam removed and the free flow of the river returned so that I can travel from Conner/Grahamville area all the way to Jacksonville or the Atlantic without going through a dam or lock.	My wife's Great Grandfather was a river boat captain on the Ocklawaha River. His boats where named Helcat and Sharp Shooter. He used to take freight from Conner Landing to Palatka. It would be nice to be able to travel this route unhindered. The recreational value would be beneficial to the people recreating and also to local businesses that would benefit from people buying gas, groceries and camping supplies.	The water quality of the Ocklawaha will continue to degrade without free flowage.	No	Please remove the dam. I have seen dams removed on rivers in Maine and the health of the river has improved. More fish and a bigger variety of fish have been found in places upriver from where the dam was removed. The Kennebec river is cleaner and healthier than before the dam removal.
9/24/2021 9:41	Outside of state / other	Chandler, Arizona	No	No										
9/24/2021 9:42	Alachua		No	Yes		1 time		Wildlife viewing	Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	The dam's benefits to bass fishing do not outweigh the cons ans costs that this dam continues to cnsate.
9/24/2021 9:45	Outside of state / other	Oceanside, CA	No	No					Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	The Ocklawaha River is the heart of the Great Florida Riverway, which, if restored, could provide essential warm water habitat for hundreds of manatees in the winter	Extinction of Manatees	I'm not aware of any		
9/24/2021 9:46	Outside of state / other	Texas	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefiting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/24/2021 9:48	Hernando		No	Yes		1 time			Restore the River including removing the dam	Years of research verifying environmental damage from the river alteration and the dam.	Continued reduction of ecosystem benefits,			
9/24/2021 9:49	Osceola		No	No					Breach the dam.	Breaching the dam would restore habitats for fish and manatees.	The health and safety of Florida's manatee population.	No.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.	
9/24/2021 9:49	Duval		No	Yes		More than 5 times		Fishing Fishing (shoreline/structure) Boating Hunting Other	Remove the Dam and allow the manmade reservoir and river to return to its natural equilibrium.	The Dam's intended purpose died decades ago in conjunction with the barge canal, it continues to be an unnecessary monetary drain on State/County finances, and it interferes with the natural flow of the river.	A manmade, unnatural, and unnecessary ecosystem will remain in place and thereby continue to cause unnatural manmade environmental interference for no reasonable long-term purpose.	No. The Dam should be removed and thereby allow the environment to return as close as possible to its natural state prior to human intervention for economic reasons.	I am an avid long-time Florida fisherman and hunter who, after purchasing annual hunting and fishing licenses for 20+ years, invested in Florida's environmental conservation by purchasing a Lifetime Sportsman License in 2002. I have thoroughly enjoyed fishing on the reservoir over the years, however, as an outdoorsman who tries to look at the "bigger picture", does a good amount of research and endeavors to consider all points of view, I cannot come to any other conclusion other than the Dam should be removed. Respectfully Submitted.
9/24/2021 9:51	Marion		No	Yes		1 time		Fishing Boating	Remove the dam	Look at the vegetation that clogs the channel. And the flooding.				
9/24/2021 9:51	Marion		No	No					The Rodman reservoir dam needs to be breached	The springs and aquatic species are dying.	The Springs, manatees, migratory fish would die.	no	We have lived in Ocala for 43 years and have made visiting the springs an essential part of our life. Please do what is necessary to keep the springs and the aquatic species inhabiting them healthy.	
9/24/2021 9:52	Outside of state / other	Green Bay, Wisconsin	No	No					Restore the Great Florida Riverway. For all wildlife, water, air, (and people) especially manatees.	protection of habitat	Once habitat or an animal species is gone, it's gone for good. We MUST start to treat the Earth like we need it, which we DO. Please do not cave in to big money, big business, and lousy politicians.	Not sure	Thanks much.	
9/24/2021 9:55	Alachua		No	Yes		1 time		Fishing Boating	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored	Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years.	stop thinking short term economically! long term smart economic planning should prioritize healthy natural resources in our area.	worked in local economic development for 10 years.	
9/24/2021 9:56	Outside of state / other		No	No					The dam needs to be removed to restore the natural habitats and flow to the river and estuaries.	Removing the dam will reestablish corridors for many species of fish and other life as well as expand foraging area for the suffering manatees who have been no longer able to feed and explore upstream since the dam was put in place.	Florida manatees and the Ocklahawa River are incredible important to local and global biodiversity. It is unacceptable for the dam to remain. My concern would be for all the wildlife that is greatly suffering as as those fed by the rivers estuaries.	I must be firm on this and say that I will not stop supporting efforts until this dambis removed.		
9/24/2021 9:57	Seminole		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Canoeing / kayaking Wildlife viewing	Just leave it alone		We could ruin something that's really important	No	Leave it alone	
9/24/2021 9:57	Putnam		No	No					Take the damn out and let the water flow freely	Free flowing water the way nature made it	And just more government not letting happen with the people one	Open the damn for three years and see how nature reacts to it	Thank you for your time	
9/24/2021 9:58	Lee		No	Yes		1 time		Wildlife viewing	In a world where our land is continually being gobbled up by commerce couldn't we at least set some of it aside for nature and wildlife?	Remember how beautiful it once was.			Why spend millions to replace the dam when it could just be removed.	
9/24/2021 9:58	Broward		No	Yes				Wildlife viewing	This is our last chance to protect our wonderful wildlife from further annihilation. I am devastated to constantly read and hear about the death of our wildlife and sea animals.	The death numbers and the realization that the numbers are climbing and will do so until they are all gone. We have reached a point of no return. More destruction, more people and more growth does not equal progress.	Nature will not be able to rebuild what is lost. Technology can't solve it either.	Sadly, it is an all or nothing game.	The environment should get a permanent win for once. It needs to be preserved and we are not doing a good job protecting the earth and the animals who have lived near for centuries.	
9/24/2021 10:00	Volusia		No	Yes			1 time	Wildlife viewing	1. What would you like to see happen with the Rodman Reservoir and Kirkpatrick Dam moving forward? Possible answer: Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term Water is life, water is Sacred. There is no other appropriate choice but to restore Florida's natural waterways.
9/24/2021 10:02	Outside of state / other	Buenos Aires, Argentina	No	No			1 time	Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/24/2021 10:02	Alachua		No	No										
9/24/2021 10:03	Lake		No	Yes			2-5 times	Wildlife viewing	Free the Ocklawaha River	Restore the habitat. It's the environmentally responsible thing to do.				
9/24/2021 10:03	Orange		No	Yes		2-5 times		Wildlife viewing	Remove so that natural ecosystem can begin to be restored. At minimum, the dam should be breached.	Reports of damage to the ecosystem, cost of maintenance of the dam, and reports of limited wildlife migration due to the dam being in place.	Continued depression of the springs and the potential for the dam to fail in a way that would be harmful to the river and surrounding area.	None.	Recent studies have shown there are social and economical gains that can be gained by removing the dam. The failure by state and federal agencies to properly maintain the dam is unforgivable and represents a danger to to wildlife, habitat and to the people of the area.	
9/24/2021 10:05	Marion		No	Yes			More than 5 times	Canoeing / kayaking Wildlife viewing	I would like to see the dam removed. It serves no purpose and never has. It is a remnant of a failed project from over 50 years ago.	Removal would restore and directly connect the Silver, Ocklawaha, and St Johns Rivers. These rivers were once an inland transportation waterway. Also, having grown up in Marion County, I cannot help to see the damage we have done to our spring system, especially Silver Springs. I would love to see the restoration of the springs that were submerged form this environmental mistake! It would be nice to see parks,, such as Juniper Springs created sometime in the future for tourism and recreation, if possible.	Taxpayers money will be wasted in restoration of a dam and lock that again serves no purpose when it can just be removed. The opportunity for marine wildlife to travel upstream continues to be blocked. Silver Springs continues its rapid and noticeable decline, and a Florida heritage and icon is lost for all future generations.	No, not really. The damn is a waste of resources both in dollars and manpower. These funds would better be served in a cool spring on a hot day, glass bottom trips down the Silver River. I now have teenage children that couldn't see the beauty in these resources because they have been compromised. What will their children see if we don't protect and restore these waterways? Thank you again.	Thank you for considering my views. Again, having grown up in Marion County, I can see the physical changes that have taken place to these great waterways. When we were children, we were able to enjoy these great resources. A swim in a cool spring on a hot day, glass bottom trips down the Silver River. I now have teenage children that couldn't see the beauty in these resources because they have been compromised. What will their children see if we don't protect and restore these waterways? Thank you again.
9/24/2021 10:06	Marion		No	No					remove the dam	returning the area to its natural state		partial release of water if that's even possible		
9/24/2021 10:11	Outside of state / other	New York	No	Yes			1 time	Wildlife viewing	Restoration through opening the dam.	I'm concerned about restoring ecosystems. This would benefit the endangered manatees by provoding them with wintering habitat.	Further decimation of manatees and continued degrading of biodiversity.	No, we are running out of time to protect endangered flora and fauna.	Help to restore Florida's beauty by reestablishing and preserving vital ecosystems.	
9/24/2021 10:15	Dade		No	No					I would like to see the Rodman/Kirkpatrick dam breached.	The dam is in need of repairs in the range of 4-12 million dollars. Taxpayer money will go to this if it is not breached.	That the ecosystem which was flooded on one side of the dam or left high and dry on the other will absolutely never recover.	No, the dam breach is the only option which restores the ecosystem and relieves taxpayers of the burden.	2021 has had most manatee mortalities on record. Breaching the dam can help restore manatee ecosystem.	
9/24/2021 10:16	Outside of state / other		No	Yes			2-5 times	Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor. Equally important to that, keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/24/2021 10:17	Indian River		Yes	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Conservation of Florida waterways have reached a critical moment, the tipping point has been reached. We have unprecedented fish kills, manatee deaths and algal blooms. The time to restore flow and hopefully alleviate these dire outcomes is now.	

9/24/2021 10:20	Alachua		No	Yes		1 time		Other: Nature/area exploration	The removal and demolition of the Rodman/Kirkpatrick Dam	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	Too much of tax payer dollars are wasted on the restoration of the dam, it needs t cease now! Also lettingeoven more time pass where fish and manatees are not able to take their traditionally migratory paths and we further disrupt environmental chains in the area.	The opening of 20 more springs could bring so much more economic benefit for the communities in their surrounding areas as well as restoring natural environmental scapes that should be allowed to flourish naturally ! Dave the springs! Remove the dam!
9/24/2021 10:20	Marion		No	Yes			Fishing	I would like to see the ocklawaha river restored to its original condition without the dam	lack of the ability of all springs associated with this area of rodman reservoir to sustain themselves	continued demise of the springs	no	
9/24/2021 10:21	Leon		No	Yes		2-5 times	Wildlife viewing	I'd like the dam to be removed and the original hydrology of the area reosired.	The fact that a huge amount of wildlife habitat was destroyed, with the only justification for continued damage to be the support of the fishing and boating community.	That a few user groups get precedence over far more user groups.	The dam either gets removed or it doesn't. One option makes ecological and economic sense, and one does not.	
9/24/2021 10:22	St Johns		No	Yes		2-5 times	Boating Wildlife viewing	Breaching the dam to restore the Ocklawaha and improve the water quality for the river systems and help the manatee with access to warm water springs.	20 lost springs and the Silver Springs ecosystem restored.	Water quality declines further with increases in toxic algae, fish kills and loss of aquatic vegetation which could help feed the manatees.	No. It is time now (actually long overdue) to restore the lost springs and improve the water quality for the large over 200 mile riverway system involved.	There are many benefits for breaching the dam and restoring the Ocklawaha River. We are in dire need of protecting the freshwater resources in Florida for humans as well as wildlife needs. Manatees need access to warm water springs and healthy aquatic vegetation which will also mean clean water for fish and other wildlife. Protection from a possible catastrophic dam failure after a hurricane or other cause will be an added benefit.
9/24/2021 10:22	Orange		No	Yes		1 time	Other	Remove the dam restore our natural flow of water	Restoring the flow would increase manatee population and benefit our delicate ecosystem	More environmental damage	No. Restore our waiters to their natural flow	
9/24/2021 10:24	Sumter		No	Yes		1 time	Other: Viewing. It is an unwarranted riverway obstruction.	First breaching of the obstruction to provide more natural water flow and wildlife and recreational traffic flow and then removal of all of the obstruction as feasible.	Probably the detrimental effect on the spring flow and visibility of the nearly two dozen springs that are functionally and visually impaired by the now unlawful, unwarranted, unnecessarily expensive Rodman/Kirkpatrick obstruction.	My concern for the continued detrimental effect on the spring flow and visibility of the nearly two dozen springs that are functionally and visually impaired by the now unlawful, unwarranted, unnecessarily expensive Rodman/Kirkpatrick obstruction.	As a partial solution, breaching of the Rodman/Kirkpatrick obstruction to provide more natural water flow and wildlife and recreational traffic.	I believe that breaching and ultimate removal of the anachronistic Rodman/Kirkpatrick Ocklawaha River obstruction would be a net win-win for nature and all concerned.
9/24/2021 10:28	Marion		No	Yes		More than 5 times	Wildlife viewing	Removed or breached to let the Ocklawaha river run free.	Studies show the natural river fish have declined a lot and no manatees can travel past the dam.	Loss of fish etc. for the future generation.	I would have to see what was in the plan.	
9/24/2021 10:30	Duval		No	Yes		1 time	Boating	I would like to see the restoration of a free-flowing Ocklawaha River by removing the Rodman/Kirkpatrick Dam to reunite connection between Silver Springs, Ocklawaha and the St. Johns River.	Enhancing the water quality of the lower St. Johns estuary and restoration of wildlife migration patterns.	Significant water quality declines in the lower St. Johns River and estuary.	Unfortunately, no. Removal of the dam is really the only way of ensuring a significant impact on water quality.	
9/24/2021 10:31	Sumter		No	No				I would like to see the dam removed and the river restored to its natural flow.	The dam currently blocks fish such as the striped bass and manatees from going upriver as they naturally would.	We will waste more money on dam upkeep and the natural fishery that was once there will not be restored.	I don't see how it could be done in a fiscally responsible manner without breaching the dam.	In the short term breaching the dam would affect the bass fishery in the area but in the long run the striped bass and other opportunities will cancel this out.
9/24/2021 10:32	Citrus		No	Yes		2-5 times	Fishing Wildlife viewing	Please remove the damn and restore the normal flow of the river. Please!!	It would return the normal flow, expose all the Springs, get rid of all the invasive plants.	Our beautiful river will stagnate.	No	
9/24/2021 10:32	Outside of state / other	Chicago, IL	No	No				We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	* Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 🐳 * 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	* Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. 🐳 * Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/24/2021 10:34	Hillsborough		No	Yes	1 time	2-5 times	Canoeing / kayaking Wildlife viewing	I would like it to go away. The river is incredible -- it needs to run free.	The condition and wildlife use of the river and its tributaries both upstream and downstream of the reservoir	The access to native aquatic wildlife species will continue to be mostly blocked. The reservoir and backwater areas will remain a giant weedy mess.	No	
9/24/2021 10:39	Lake		No	Yes	1 time	1 time	2-5 times	Wildlife viewing	Breach the Rodman and Kirkpatrick Dam	20 drowned springs would be restored by breaching the Rodman and Kirkpatrick dam	Manatees and other important native wildlife would continue to struggle to survive as their natural environments are continuing to shrink	
9/24/2021 10:40	Clay		No	No				I would like to see waterway restored by taking down dam	Common sense and historical findings. It appears the purpose of the dam is obsolete and benefits of rethinking this far outweigh any maintaining of the status quo	More damage to the ecology. This is Florida and with all the population growing it is that much more important to restore and restore what makes us unique	I would trust the leadership if all info is honestly considered.	
9/24/2021 10:40	Pasco		No	Yes			Other: I was part of a support team for friends completing the Coast to Coast adventure race.	Complete removal of the dam and restoration of the reservoir area, however, I realize that might be very costly. If not complete removal, then removal of enough of the dam to restore the river to as close to pre-dam conditions as possible	It is seldom possible to undo environmental impacts created by humans to the extent possible through complete or partial removal of this dam. We should take this opportunity to undo the impacts and restore the natural habitats.	A missed opportunity to undo the environmental harm done and dam failure in the future.	From what I have read, partial removal is the best path forward. Why consider a different scenario.	
9/24/2021 10:42	Putnam		No	No				Remove the dam	Restore the natural flow of the rivers	Dead wild life.	Allow the dam to free flow	
9/24/2021 10:44	Duval		No	Yes		1 time	Canoeing / kayaking Wildlife viewing	Please remove it!	Returning the Ocklawaha River and its ecosystem to its former glory!	saltwater intrusion and habitat destruction		For the River!
9/24/2021 10:44	Pinellas		No	No				Breach the dam to restore the Ocklawaha River.	Three river (St Johns, Ocklawaha, Silver) would be restored supporting many native species. 20 lost spring and the Silver Spring ecosystem would be restored Manatees would return to the springs Native fish would return to the rivers St Johns River estuary from Welaka to Palatkha to Jacksonville would be healthier. Dam repair costs avoided. Adds diversity of job opportunities. Ecotourism increases: bird watching, snorkeling, kayaking, hiking, fishing, etc. Avoids flood damage to property owners downstream of the dam, especially Welaka. The dam is at end of life.	More algae, less native fish, more costs to repair aging dam. Lose economic value of having more springs to visit, more river miles to explore.	No. Breaching the dam is already a compromise, compared to removing it and filling in the canal.	
9/24/2021 10:44	Pasco		No	No				I would love to see the springs flow normally and not have them drowned out by the dam.	It would be nice to have the natural springs flow.	The springs will be browned out and the spring will not be known about or protected.	No, the springs should be let go	
9/24/2021 10:45	St Johns		No	No				I would like to see the restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway. Breaching the dam would give visitors like me a reason to go there as the ecosystems are restored.	Currently, we have momentum with the Florida Wildlife Corridor as land acquisition and conservation easements are being implemented via Florida Forever. If the Ocklawaha is restored, 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife.	That if we do not support the goals of the very popular Florida Wildlife Corridor, thousands of acres of forests will not be restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a native Floridian, I have sadly watched the degradation of much of our natural resources, much of what makes Florida so special. This restoration could have enormous impact by improving water quality and flow, supporting coastal resiliency, and strengthening the vital wildlife corridor I've mentioned here. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.
9/24/2021 10:45	Orange		No	No							No	The dam is old and doesn't benefit anybody.
9/24/2021 10:45	Outside of state / other	Houston texas	No	No								
9/24/2021 10:47	Alachua		No	Yes		1 time	Wildlife viewing	Remove dam and restore the river	Affected water quality.	Continued degradation of the Oklawaha.	No. It's way past time to do what is right for the river and environment.	
9/24/2021 10:48	Lee		No	No					In favor of restoration.			
9/24/2021 10:49	Outside of state / other	Illinois	No	No				Breach the Kirkpatrick Dam to restore the Ocklawaha River	It will benefit Florida people & wildlife. Restoring the Ocklawaha River will restore manatee habitat, provide essential warm water winter habitat for hundreds of manatees and restore over 15,000 acres of the Florida Wildlife Corridor to benefit Florida black bears, Florida panthers, bobcats, bald eagles and white-tailed deer	Keeping the Ocklawaha dammed threatens the survival of manatees and blocks this vital section of the Florida Wildlife Corridor.	No. Wildlife and water quality cannot wait any longer.	
9/24/2021 10:49	Sumter		No	Yes		1 time	Fishing	Knock the dam down	The fact that 2 governors aaproved the removal.	Further water contamination all the way to the Harris COL.	The dam is the main barrier that has to be removed	
9/24/2021 10:52	Marion		No	Yes		2-5 times	Fishing	Free the river	I live here	The river will die	No	Free the ocklawaha
9/24/2021 10:53	Brevard		No	No				To please restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees AND 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/24/2021 10:55	Outside of state / other	Stanardsville, Virginia	No	No					I would like for you to take into serious consideration the severe impact that this project will have on the manatee population. Manatees have been struggling against starvation from seagrass loss, and the greatest long-term threat to these animals is the loss of warm water habitat that manatees need to survive the winter. Currently, 60% of Florida's manatees depend on power plant outfalls to keep warm and survive the winter - an unsustainable and unnatural situation. Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	Manatees have already reached a record number of deaths this year - and if we don't restore additional areas of their natural habitat, we could lose even more manatees in the future. This is unacceptable.	The loss of a great number of manatees. We must strike a balance between protecting wildlife and satisfying human needs. That means getting creative.	No. I just want a lot more thought to be given to creatures other than humans. Far too often, animals are sacrificed for human "progress" and "needs." I want to see that stop.	Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.
9/24/2021 10:56	Outside of state / other	98117	No	No				We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/24/2021 10:58	Outside of state / other	Orange county, CA	No	No				We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Thank you for your time.
9/24/2021 10:58	Outside of state / other	Teaneck NJ (Bergen County)	No	No					Please restore & maintain it to help the manatees & other wildlife that depend upon it to live .	That all the wildlife kingdom , all the plant kingdom , all the animal kingdom on land, in the air & sea, are God's Children too. & they deserve life, respect, safety & love	The fall of Mother Nature & Father Sky , unfortunate cruelty to wildlife .	A beautiful day in Nature & the Wildlife , Plant & Animal Kingdom .	
9/24/2021 10:59	Palm Beach		No	No								
9/24/2021 10:59	Bradford		No	Yes		1 time	Fishing Boating Wildlife viewing Other: Camping	I would like to free the Ocklawaha River and allow it to do it's job of replenishing our rivers and springs.	Restoring the Ocklawaha uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.	We are on a serious track of losing 20 springs if the Ocklawaha River is not set free. We thought it couldn't happen but it is. They are all critically low. We should be ashamed!	No. It is unfortunate but it needs to go.	Every river has a job- it maintains thousands of creatures, wildlife and plants. Sometimes we ask it to give more and install power plants and offshore oil rigs. This is wrong. The Ocklahawa needs to be restored to its natural setting so it can support the ecological system that will make it healthy again.
9/24/2021 11:00	Outside of state / other	Portland, OR	No	No				Breaching the Kirkpatrick Dam in order to restore the Ocklawaha River.	This will restore essential warm water winter habitat for manatees, which are currently in a crisis. This would also benefit many other species, such as Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer. We must do all we can to protect our already at-risk wildlife.	That we deprive hundreds of manatees of essential habitat, harming their chances of survival in the future.	No; wildlife and water quality cannot wait any longer.	Thank you for taking my comments into consideration.
9/24/2021 11:00	Broward		No	No				I'd like to support its removal to allow Manatees the access and restore the natural springs	Water quality and wildlife support groups	I believe the Manatee population is already experiencing major decline and this is an important step to help reverse that.	I do not believe that mitigation will work to restore natural aquifers needed for springs to flourish, only removal.	
9/24/2021 11:01	Marion		No	No				Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
9/24/2021 11:01	Alachua		No	Yes		1 time		I would like to see the Kirkpatrick Dam breached.	Breaching the dam would help to restore fish populations and steward Manatees into vital winter waters.	A waste of taxpayer money in repairing a dam that has cause significant environmental damage to the natural state of Central Florida.	No, the dam has been destructive since its inception.	The springs and waterways of Central Florida have been something I've cherished my whole life. I grew up with them and preserving the wildlife and natural state of these areas is so important.
9/24/2021 11:03	Outside of state / other		No	No				We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	

9/24/2021 11:03	Polk		No	No					Full restoration of a free flowing Ocklawaha River which I am led to understand is best accomplished by breaching the Rodman/Kirkpatrick dam.	It is my understanding that breaching the dam would restore approximately 7500 acres of the lower Ocklawaha's forested floodplain and restore many miles of the natural river channel as well as 20 freshwater springs. Additionally, imperilled native plant species would be able to expand their range into the restored spring systems. Also, this would give manatees an opportunity to, once again, regain open access to the warm water habitats of the Ocklawaha and Silver Springs. It is also my understanding that breaching the dam would result in a substantial increase of natural water flow to the lower St. John's River which would be expected to assist in impeding salt water intrusion from expected sea level rise. Also breaching the dam would save taxpayers significant money required for repairs to a dam that has exceeded it's life expectancy and which probably never accomplished it's intended purpose. I understand that anglers and boaters will oppose breaching the dam; however it is my understanding that economic analyses performed by researchers at the University of Florida have demonstrated that the economic impact of ecotourism on the natural portions of the Ocklawaha River is twice that of the anglers and boaters using the Rodman Reservoir.	This would be a missed opportunity to restore an important part of the natural Florida ecosystem which is needed to maintain the climate and other amenities which draw residents and tourists to our state.	Based on the above mentioned reasons favoring breaching the dam, I don't see any.	Based on my understanding of how this dam came into being, breaching it would be tantamount to undoing a past mistake.
9/24/2021 11:03	Alachua		No	Yes	1 time	2-5 times	More than 5 times	Wildlife viewing Other	Removal of dam and restoration of natural water flow	Removing the dam would improve bass fishing (see Dead Lakes Dam removal on the Chipola River), reduce management costs, improve water quality, and improve habitat for endangered species like the indigo snake.	Environmental and fishing instability, ugly harmful dam remains in place for no good reason.	Keep the dam but restore the flow by creating a new open canal right next to it...	Please remove the dam
9/24/2021 11:03	Sarasota		No	No					Take into consideration the needs of Manatees	They're starving and suffering	Endangered Manatees		
9/24/2021 11:04	Outside of state / other	Massachusetts	No	No					please restore habitat for manatees and other wildlife				
9/24/2021 11:05	Alachua		No	Yes	1 time	2-5 times	More than 5 times	Wildlife viewing	I would like to see restoration of the Ocklawaha River via breaching the Rodgman/Kirkpatrick Dam. This project which was never completed as planned has cut off natural water flows of the river, impounded areas that endanger wildlife and plants and trees, and stifle the natural fish and plant and fresh springs that would ordinarily be part of the river system Water quality is affected and the whole natural system of the area is damaged.	Three rivers would be brought back to their natural life and restored... the Ocklawha, the Silver and St Johns River and 50 springs would also be restored! Historic fish and manatees will return to sections of the river that were blocked by the dam once the river is free flowing. Millions of dollars spent to build and now repair the dam that was wrong in the first place would be saved.	Flooding, ongoing repairs to a failed dam, loss of habitat, springs, wetlands, for fish, manatees, and birds.	No. The dam is impeding free flowing rivers and needs to be removed.	The time to do this is now. There is public support for removing the Rodman dam and we should take this opportunity to protect Florida's valuable freshwater rivers and the wildlife they support. Recreational use will be improved by opening free flowing access to the three rivers.
9/24/2021 11:07	St Johns		No	No					I would like to see the dam removed.	Lots of things. A useless dam. The need to improve fish movement and Manatee habitats. This dam doesn't do anything except block needed water to other places.	Just more environmental chaos. Why is that dam there, anyway?? When I was a child, Silver Springs was a beautiful place full of life, and now 98% of the fish there are gone.	No	Breach the dam.
9/24/2021 11:08	Outside of state / other	rings, but former resident of Monroe	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation.
9/24/2021 11:09	Dade		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. 🌊 Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No, because breaching the dam is 50 years overdue. Wildlife and water quality absolutely cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment & wildlife.
9/24/2021 11:09	Pinellas		No	No					Breach the dam	Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	That manatee and fish populations would continue to decline, affecting ecosystems and resulting in further damage to wildlife/water quality	No. The dam is old and should be breached.	Not only would it help the manatee/fish populations, it would increase tourism and educational opportunities
9/24/2021 11:11	St Johns		No	Yes		2-5 times		Canoeing / kayaking Other: Not in the lake, but in river that flows	Remove the dam. It's recognized by most as a mistake. Let the river run free and the beautiful springs that are there be seen.	Fish population would benefit if the dam is removed as well as a better habitat for manatees. The ability to see the 20 or so springs would make the area a destination for both in state and out of state visitors. This would be financially beneficial to the area. The dam serves no purpose except to block the flow of the Ocklawaha because of an ill-conceived plan of the canal. Provides no flood protection, drinking water, or electricity. And cost money to maintain.	I would be highly disappointed that the state would fail its citizens again not to restore the Ocklawaha, lower St. Johns and Silver Rivers to a better natural state. The springs are jewlos. Don't miss the opportunity to save maintenance cost an increase tourist dollars.	No. Absolutly not. It's a 50 year MISTAKE.	Please, lets not miss another opportunity to free the springs, restore the environment to a place that is beneficial to fish, wildlife and more for our citizens. And removing the dam would be the single most beneficial thing to insure that our manatees would continue be with us. Let's not have a specie die out on our watch. ST. JOHNS RIVER MANAGEMENT DO THE RIGHT THING TEAR DOWN RODMAN DAM.
9/24/2021 11:11	Marion		No	Yes	1 time	1 time	2-5 times		I'd like to see it gone!	The loss of springs, the water clarity, the access for wildlife migration. Recreational diversity.	Continuing the current cycle of degradation of what was once a paradise!	Not frequent, and lower drawdown levels, for longer periods.	The current situation is a mess. It's useless except for bass fishing, and that would still be possible, if it were removed
9/24/2021 11:12	Brevard		No	No					Breach it to restore natural habitats	It would save tax payers around 5-15 million in repairs/upkeep. I can't think of any other programs that would make the shot callers look like heroes as they restore springs, fish, and manatee habitats while saving 5-15 million all together or to spend elsewhere.	Hey continue to waste millions on something that doesn't provide flood protection, power or water supply, or really anything for the population at larges benefit. Additionally there's once again the natural habitat consideration. How much money would local tourism be losing by not uncovering 20 springs and bringing in fish and manatee populations; Some estimates say $50 million in the next decade! So save 5-15 million... and make 50 million.	No, just breach it and be done with it. We don't need any half measures when it comes to saving tax payer dollars and restoring the beauty and natural habitat of Florida.	
9/24/2021 11:14	Palm Beach		No	Yes			2-5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Wildlife viewing	break the dam	manatees dying at too rapid a pace	wildlife messed up all over the area	not really-remove the dam	
9/24/2021 11:16	Outside of state / other		No	No					Remove the dam and restore the springs!	Info from the Springs Council citing 92% loss of water/functioning since dam creation.	That Florida will continue to lose valuable ecosystem integrity. Florida will lose ecosystems that are crucial to its functioning for not just animals and plants, but for humans as well.	Just remove the dam.	
9/24/2021 11:16	Hillsborough		No	Yes			1 time	Other: I hate seeing it because I know what it has done to our fisheries	Get rid of it! It has killed our natural springs and is in need of repair	Engineering has damaged the natural flow of our waters	The damn will fail and our natural waterways are destroyed	No!!!	
9/24/2021 11:17	St Lucie		No	No					The problems with the Okeechobee run off have been destroying the Florida I grew up in and love. The impact to the manatees has been horrific. They have been starving to death because the algae blooms kill off their food. Anything to help them is needed right now. It is an emergency.	The proof of how the death toll keeps rising, because no one can ever seem to fix the Lake Okeechobee problem. Maybe this dam will help the manatees.	The loss of more precious wildlife. Money wasted.		
9/24/2021 11:17	Duval		No	No					Breach the Dam and restore the springs.	The cost to maintain this old Dam vs the benefits of removing it. Taxpayers should not pay to maintain this Dam when it does not provide flood protection or any real benefits. If it is removed, there will be great economic income gained by restoring 20 springs. This is a situation where $$ and the environment can both benefit!	The continued loss of manatee habitats, losing public interest while pending the publics money.	No.	Please consider doing the right thing for floridas taxpayers and floridas wildlife.
9/24/2021 11:19	Lee		No	No					Open the dam and drain the reservoir	The safest, least expensive way in the future is to let Mother Nature take over.	Continued maintenance costs and engineering problems	No	The Cross Florida Barge Canal is no more and this portion of it should be returned to its natural state. There are so many benefits to be gained.
9/24/2021 11:19	Brevard		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam	Restoring the river is the most impactful manatee restoration project - 15,000+ acres of the Florida Wildlife Corridor will be restored benefitting many species	Manatees will be deprived of winter warm water habitat harming the chances of survival for manatees and many other species	No - this project is already 50 years overdue	
9/24/2021 11:39	Marion		No	No					We	unsustainable and unnatural situations for wildlife and our reservoir.	manatees and other wildlife	yes and all that would help in some way!	
9/24/2021 11:39	Orange		No	Yes		2-5 times		Boating	Breach the Dam to restore the springs.	spring advocacy groups.	The health of the Florida springs	I don't know enough details.	
9/24/2021 11:39	Sumter		No	Yes		1 time		Canoeing / kayaking Wildlife viewing	I have see what happens to the area during the lake draw downs.	I have see what happens to the area during the lake draw downs.	Degradation of the lake and lost of forest for carbon sequestration.	?	
9/24/2021 11:40	Duval		No	No					Dam removed	The restoration of the river to improve water quality	Continued water quality declines	No this is long overdue	
9/24/2021 11:41	Volusia		No	Yes			2-5 times	Wildlife viewing	To see the dam removed or breached.	The dam and reservoir are an unneeded impediment to the Oklawaha River.	That the dam will never be removed.		
9/24/2021 11:44	Marion		No	Yes		2-5 times	More than 5 times	Boating Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored, and Historic fish and manatees return as breach opens creating a free-flowing river	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a native Floridian, I've seen the issues that have been created by neglecting our natural habitats. The Everglades is a prime example. This is a wonderful opportunity to do the right thing.
9/24/2021 11:44	Duval		No	No					Breach the dam	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No,should've been breached 50 years ago	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/24/2021 11:48	St Johns		No	Yes		1 time		Canoeing / kayaking Wildlife viewing Other: I would only visit this area during the drawdown. While the dam blocks the natural cycle it is of no interest to me.	I want the Ocklawaha restored to a free-flowing state to revitalize the St. Johns River basin and the rivers, springs and lakes that are part of it. Dismantle the dam	Science informs me that the environmental benefits will be enormous - not just to wildlife but to the people who depend upon the ecosystem services, including fishermen. The cost of maintaining the dam past what will be it's predicted life cycle is coming out of our pockets. It's a situation of diminishing returns that do not justify the expenditures.	Loss of the springs that we can see. Loss of the springs we now can't. Ecotourism will suffer (and so will fishing because of degraded habitat). More manatees will starve and fish that need the migration routs will decline. Water quality in the St. Johns will decline all the way up through Jax.	Breach the dam. It's not worth the risk of failure, which could indeed happen, and cause irreparable harm to communities that such a failure could impact.	Policy and decision-makers need to pay attention to the science, not a small well-funded coalition. The math justifies itself and respects the needs of ALL your constituents, not just the big boat owners.
9/24/2021 11:52	Dade		No	Yes			1 time	Wildlife viewing Other: enjoy the open space with the quietness	return to the natural flow. natural meaning as it was	the benefits to wildlife especially the manatee communitie.	the degradation of all wildlife in the area and also into the Ocala park system.	Sorry I really believe that the past has shown us that this obstruction has been and will continue to harm Floridas	I wish that you all shine a wider light on this destructive dam and see what it is causing to the environment and the loss to not just long-time Floridians and wildlife here but to the country.
9/24/2021 11:56	Escambia		No	Yes			1 time	Wildlife viewing	Manatees are experiencing widespread decline across FL as a result of human disturbance and habitat loss (sea grass beds). Preserving/converting space for them is vitally important to keep this species thriving.	Loss of additional habitat, loss of nature, loss of species/biodiversity. I really enjoyed my time wildlife-viewing and would love to see it converted for species.	NA		
9/24/2021 12:02	Clay		No	Yes		1 time		Boating	Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam to reunite the natural connection of Silver Springs, the Ocklawaha and the St. Johns River.	The science supports restoration. Studies by federal and state agencies have clearly demonstrated that restoration of a free-flowing, connected system is cost-effective and will provide significant ecological benefits to the St. Johns, Ocklawaha and Silver Rivers as well as Silver Springs.	We miss a historic opportunity to stop the ongoing ecological degradation caused by the dam and finally reunite the natural flow of these rivers. Breaching the dam would restore the natural flow of 150 mgd of fresh water, improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. A free-flowing Ocklawaha will reestablish 15,000 acres of forested wetlands and fortify downstream submerged grasses from Welaka to Jacksonville in the St. Johns River that are critical to river health and fish habitat.	No. Breaching the dam and restoring the Ocklawaha are 50+ years overdue. Dam safety issues and improved water quality, wildlife habitat, and recreational opportunities can't be ignored or delayed any longer.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway.
9/24/2021 12:03	Nassau		No	No					Restoration of the Ocklawaha River by breaching the Kirkpatrick Dam.	20 lost springs and Silver Springs ecosystem are restored	The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	This is a once-in-a-lifetime opportunity to correct one of Florida's greatest mistakes and return the ecosystem to a thriving wonderland for people, plants and animals, sparking increased tourism, combating climate change and preventing extinction of endemic Florida animals.
9/24/2021 12:04	Duval		No	No					Breach the Rodman/Kirkpatrick Dam to reunite the natural connection of Silver Springs, the Ocklawaha and the St. Johns River and restore a free-flowing Ocklawaha River.	Studies by federal and state agencies show that restoration of a free-flowing, connected system is cost-effective and will provide significant ecological benefits to the St. Johns, Ocklawaha and Silver Rivers. Twenty lost springs and Silver Springs ecosystem would be restored, historic fish migration patterns and essential manatee habitat would be reestablished, and it would return a $50 million net benefit over 10 years, remove an estimated $57 million dam safety risk, and increase regional visitor traffic by a projected 28%.	That water quality will continue to decline, further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. This is our best opportunity to reverse the damage. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam and restoring the Ocklawaha are 50+ years overdue. Dam safety issues and improved water quality, wildlife habitat, and recreational opportunities can't be ignored or delayed any longer.	I'm a millennial with young children and a fisherman husband. I want my children and children's children to be able to swim with the manatees like I did growing up. 2021 has been the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. Restoration would provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and give them access to Silver Springs. My husband wants to see the return of migratory fish species. We want improved water quality and flow, coastal resiliency, and a stronger wildlife corridor. Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. It will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Thank you for considering the community's interests as you make this important decision.
9/24/2021 12:06	Madison		No	No					I would like to see it dismantled.	I believe the loss of the springs, manatee winter protection and access to warm waters, revitalize drowned springs.	Damage to the environment, money wasted on a project that is was never completed.	I don't know.	
9/24/2021 12:07	Marion		No	No					It needs to be breached to save our springs!	Finding out the harm that the dam has been doing to our springs is detrimental	Death to our springs!!!!		Get rid of the dam
9/24/2021 12:08	Alachua		No	No					Restoration of the Ocklawaha River by breaching the Rodman Dam. Harm is don to our water quality, the wildlife and our economy every day that dam remains in place.	Historically native fish and manatees return with the return of a free-flowing river.	We would miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Springs are beautiful, clean rivers; manatees and fish; wildlife and their habitats have historically been some of the most precious and unique treasures of Central Florida. In the face of ever-increasing population and the loss of our wild spaces, it's more vital to all of us today than it ever was before to do whatever we can to preserve, restore and protect what we love so much about Florida before it's gone forever.
9/24/2021 12:10	Outside of state / other	Washington State	No	No					Not	Defenders of wildlife who I have sponsored for decades	The effects on the natural environment which is disappearing at an alarming rate due to our short sightedness	No	Time to start behaving more responsively as the stewards of our planet.
9/24/2021 12:10	Hillsborough		No	No					Breach the Rodman/Kirkpatrick Dam	Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs.	Hundreds of manatees loose access to essential warm water winter habitat.	No. Breaching the dam is well overdue.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
9/24/2021 12:10	Brevard		No	No					Breach the Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees, unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the great
9/24/2021 12:31	Outside of state / other	San Diego, CA	No	No					Restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No. Only by breaching the dam will wildlife and water quality see the needed improvements.	
9/24/2021 12:33	Martin		No	Yes			More than 5 times		open it up	water quality across all of florida			This needs to be done
9/24/2021 12:36	Outside of state / other	Annapolis, MD	No	No					I was born and raised in Miami and plan to return to Florida when I retire. We need to restore the Oklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000 acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water cannot wait any longer.	Restoration of the Ocklawaha River, the heart of the Great Florida Riverway, will not only help the manatees survive, it will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Restoration will also reunite rivers and springs to benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees. Unless their natural habitat is restored, we will see more die-offs in the future. While this year's crisis is caused mainly from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. Sixty percent of Florida's manatees depend on power plant outfalls to keep warm in the winter -- an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds it, will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. The restoration project will also revive more than 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. I remember learning about manatees in elementary school in Miami and thinking it was funny that mariners of old thought that they were mermaids. I would be devastated if my beloved "swimming sweet potatoes" disappeared from the Florida landscape, especially when we have the means to save them. Thank you for the opportunity to provide comments on this important matter.
9/24/2021 12:38	Outside of state / other	Tallmadge, OH	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/24/2021 12:39	Volusia		No	No									
9/24/2021 12:45	Alachua		No	No					Breach the Rodman/Kirkpatrick Dam.	There are 30 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue.	
9/24/2021 12:46	Alachua		No	Yes		2-5 times	Canoeing / kayaking Boating		Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every additional day the dam and reservoir remain in place results in additional environmental degradation.	Once back on the lower Ocklawaha (Outlaw Hodges Run) reverseable springs, and many miles of natural river channel that were drowned as a result of dam construction would be restored. • Thousands of acres of submerged aquatic plant communities would be able to regenerate in the restored river channel, and in the re-emerged spring run streams that drained into the Ocklawaha historically. At least 150 million gallons a day of additional natural flow, and potentially much more, would be restored to the Lower St. Johns River, improving water quality and increasing resiliency of the entire St Johns/Ocklawaha River system by impeding the salt water intrusion resulting from sea level rise. • An estimated $14 Million in dam repairs, measured in 2006 dollars, would be saved by avoiding repairs to a dam that has exceeded its life expectancy and never fulfilled the purpose for its construction. • The large expenditures required for herbicide treatments to control the growth of invasive aquatic weeds and to conduct other ongoing maintenance needs, including periodic drawdowns, in a futile attempt to maintain water quality and recreational access in the stagnant waters of the Reservoir, would become unnecessary. • $57 million in potential flood damages to downstream areas around the community of Welaka would be avoided in the event of a dam failure. • Economic analyses conducted by researchers at the University of Florida demonstrate the economic impact from eco-tourists who use the natural portions of the Ocklawaha River is twice that of the anglers and boaters using the Rodman Reservoir, and annual use of the Reservoir's recreation sites has been on a downward trend since records began in 2004 as water quality and fish production have continued to decline year after year. • When accounting for revenues generated by increased recreational usage, a cost-benefit analysis determined restoration would produce a cumulative net benefit of $47.2 million over the first 10 years, versus a cumulative loss of $5.3 million with repair and maintenance of the dam. • The recreational development component included in the restoration plan would benefit nearby	The broad array of environmental benefits to native flora and fauna, including many imperiled species, that would result from restoration would not be possible. • Water quality in the Rodman Reservoir and Lower Ocklawaha/St Johns River system would continue to decline. • The economic benefits that would result from increased and enhanced recreational usage would be denied to the surrounding local communities. • Residents and business owners in areas immediately downstream of the dam would continue to be under threat in the event of failure of a dam that has never, and will never, satisfy the purpose of its construction. • Thousands of acres of submerged aquatic plant communities would be unable to regenerate in a restored river channel and in the re-emerged spring run streams, and 7,500 acres of floodplain forest would not be restored.	No. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration. The survey concludes with the option of providing additional comments (at your own discretion if you wish to elaborate on anything or add personal reflections or considerations). Remember that you do not need to be a local resident, or even a Florida resident, to participate in the survey! Take an expansive view of ecotourism and recreational usage by including Silver Springs, the Ocala National Forest, the St Johns River, and important land conservation projects like the Etonah Creek/Cross Florida Greenway Florida Forever project. Ultimately, we all have a stake, environmental and economic, in whether Florida finally restores a free flowing Ocklawaha River.	The science and economic analyses are clear. The dam should be removed.
9/24/2021 12:47	Pinellas		No	No					I would like to see the restoration of the flow of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. The dam has been causing substantial environmental damage to the river and associated natural communities. The interrupted normal flow of the river has caused reduced opportunities for ecotourism revenue in the counties affected.	As pointed out above, the natural communities that have been affected by the dam are losing their ability to to perform their functions. This would include maintaining diversity of flora and fauna, sequestering carbon from the atmosphere, ensuring nursing areas for fish, mitigating effects of extreme rainfall events (floods), and unsustainable other extremely important functions. In addition, fishing in the reservoir is not as profitable as it once was, and ecotourism would be a much more profitable source of revenue to the local communities, such as hiking, kayaking, camping, and fishing along the restored river.	My biggest concern is that we are causing the deterioration of natural communities without economic return. Restoring the dam would cost many millions of dollars, which will result in further deterioration of the natural reasonies in Florida.	No. There should be no compromise in saving the river and associated natural communities. For that, the dam needs to be breached.	
9/24/2021 12:47	Columbia		No	No					Return to natural state	The wildlife that already is being removed from so many habitats that could flourish in this location if given back the opportunity	Another piece of water that important animals need being ruined	No	
9/24/2021 12:51	Pasco		No	No					I think the only and best option is to see this dam removed.	This would provide much needed habitat restoration for our beautiful state. There are 20 drowned springs that would be restored by this single project, making the removal of the Dam the most beneficial and cost-effective springs protection project in Florida. This year has also been devastating to our manatee population. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	My biggest concern is the water quality continues to decline fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. In addition, the money that would be wasted on repairing this dams. Not to mention the economic and tourism impact restoring the 20 springs could have on the area and state. This would bring much needed jobs and tax revenue to the area and state.	No, removing the damn is a must. Our environment, economy, and future generations are depending on this damn removal.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/24/2021 12:52	Outside of state / other	Colorado	No	No									
9/24/2021 12:56	Alachua		No	No					I would like to to be breached	20 springs would be restored by this one project. And the fish and manatee population would be positively impacted if they had access to their habitats.	The health of the springs. And if they decide to restore the dam that is a lot of money being spent without any significant public benefit (power generation, flood protection, water supply, etc)	No, the dam should come down.	
9/24/2021 13:01	St Johns		No	Yes		2-5 times	Canoeing / kayaking Wildlife viewing		Eliminate or breach the dam	Eliminating the damn helps fish and wildlife populations grow and thrive. This is healthy for Florida and for the living things that could populate the springs created by eliminating the dam. How much are we spending on maintenance on the outdated damn anyway?	My biggest concern is we waste money on something that doesn't serve our best interest.	No, wildlife, like public tax dollars, are valuable. We could save both by eliminating the this dam.	Do what is right. This dam is obsolete. The wildlife that could benefit from the dam being breached could benefit so much and add to our quality of life. Think of the new possibilities.
9/24/2021 13:02	Duval		No	Yes		1 time	Other: I have visited		To restore the Ocklawaha River by removing the Rodman Dam.	Restoration of natural waterways, habitats, fisheries, migration patterns (including warm waters for the manatee). The St. Johns River Estuary from Welaka to Palatka to Jacksonville would be healthier. It was foolish to dam this river in the first place and should be removed.	Now is the time to do this. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. We are spending Millions in taxpayers' money to unnecessarily repair the Rodman Dam, a dam that does not provide flood protection, power, water supply or other public benefit.	No.	This dam never should have been built, and should not be maintained for another year. The only benefit is to the bass fishery. I am an avid bass fisherman, and I think it should be removed. It's not safe, its expensive and it doesn't do anything good or valuable. Thank you for your consideration.
9/24/2021 13:09	Putnam		No	Yes		2-5 times		Wildlife viewing	I request that the dam be breached.	The restoration of the natural springs in this area is essential to the state-wide restoration of Florida's wetland ecosystems. Restoring and preserving these ecosystems will not only provide services that we rely on (i.e., natural water purification, resilience to storms, decreased flooding, restoration of the aquifer, etc.), but it will also result in direct income. These springs will attract wildlife tourists and the opportunity to fish will still be available.	There should be no scenario in which the dam is not taken down. Breaching this dam will aid in larger-scale attempts to preserve and protect Florida's natural habitats, habitats that are unmatched across global ecosystems and that attract people from all over the world. If Florida values these visitors and their dollars, then it has no option but to prioritize the natural systems that sustain its income. The breach of this dam is integral to that plan and it has to come down.	No. This dam needs to be taken down.	
9/24/2021 13:10	Duval		No	Yes		2-5 times	Boating Wildlife viewing		Breach the dam and restore the natural flow.	The restored health of the Ocklawaha when draw-downs are made.	Continued deterioration of the Ocklawaha basin and health of tributary springs.	No	
9/24/2021 13:13	Seminole		No	Yes	1 time	1 time	Wildlife viewing		Restoring the Ocklawaha river to its' historic glory.	Flooded forests	artificial lake instead of a free flowing river	no	
9/24/2021 13:13	Palm Beach		No	No					Save the springs	Manatee and habitat restoration	Springs not thriving		
9/24/2021 13:13	Outside of state / other	Brown County, Green Bay, Wisconsin	No	No					I share the concerns of the Defenders of Wildlife organization. The action needed to restore the Ocklawaha River is by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	I care about Florida's environment, I trust the Defenders of Wildlife organization and their recommendations. I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees.
9/24/2021 13:14	Osceola		No	No					Breach the Rodmon/Kirkpatrick Dam.	Manatee return	Lack of habitat for fresh water wildlife	No	
9/24/2021 13:14	Marion		No	Yes			1 time	Other	Breach the Rodman Reservoir and Kirkpatrick Dam.	Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No. Breaching the damn is long overdue.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and a key to restoring Silver Springs, one of the largest artesian springs in the world.
9/24/2021 13:14	Duval		No	No					I would like to see the dam removed and the river restored	The possibility of the positive effects such action would have on St Johns River	Maintaining as dam and reservoir as is hurts the environment going forward, and hampers tourism of the river and springs.	I don't know	
9/24/2021 13:18	Alachua		No	Yes		1 time	2-5 times	Boating Wildlife viewing	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam…	To restore the hidden springs along the flooded section and migration of Striped Bass, American shad, American eel, and the critically Endangered Atlantic Sturgeon and Shortnose Sturgeon.	Continued environmental degradation and reduction in wildlife populations, including the above mentioned fish. Ongoing expense to rebuild and maintain a dam that was a mistake to build in the first place. During the dam draw down, it is sad to travel the channel to see the massive graveyard of cypress stumps. The flood plain must have been magnificent before the dam was built. If given the chance, the floodplain trees will not regrow to their former stature in my lifetime, but this can occur over many decades for future generations to enjoy.	NO	I appreciate the opportunity to comment. The breaching of the dam for natural restoration is the most cost effective option. It will increase the habitat quality for wildlife, conserve water during global warming, and continue to provide recreational opportunities. Unlike the very costly restoration of the Everglades which will always be on "life support," this restoration will save money and can occur with minimal intervention or maintenance over time.
9/24/2021 13:19	Dade		No	Yes	1 time	1 time	2-5 times	Wildlife viewing	I would like to see it breached to restore the natural water flow and habitats that are currently drowned by it	The knowledge of the habitat restoration that can be achieved in the restoration of natural water flow	The further decline of wildlife populations who are at risk from habitat destruction due to human development	No, the dam is old and repairs would be needlessly expensive	As a wildlife biologist who has done work in Freshwater Ecology, I am aware of the importance of natural water flow to the habitats and wildlife along this river. Breaching the dam and allowing this restoration would be a huge step in the right direction for the restoration of these habitats and the future of the wildlife who rely on them, providing their benefits for our children for generations to come.
9/24/2021 13:19	Alachua		No	Yes	1 time	2-5 times	More than 5 times	Other: To access the Ocklawaha River for fishing/boating/kayaking. We don't need the reservoir. The reservoir blocks the river and wildlife.	The partial restoration plan of breaching 2k ft of the earthen dam at the point where the historic river channel would flow should happen to allow manatees and migratory fish access to the rest of the Ocklawaha River connecting to Silver Springs. There should be a bridge instead of a dam.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife. Restoring the Ocklawaha River also restores Silver Springs with native fish biodiversity. There is a lot of bang for your buck when you consider the wide scope of benefits all the way to Jacksonville estuaries that would benefit from freshwater flow of a restored Ocklawaha.	Hundreds of manatees lose the opportunity to access essential warm water winter habitat. Migratory fish would not have the chance to rebound in the Ocklawaha River and Silver Springs if the dam is not breached. Also the huge amount of aquatic herbicide sprayed into the reservoir is concerning.	No. Breaching the dam is 50 years overdue and should not have been built in the first place. Dam safety, improved water quality and wildlife can't wait. Give manatees and migratory fish their home back and let the forest grow back!	The reservoir floods the Marjorie Harris Carr Cross Florida Greenway named after my grandmother. There are over 20 springs that flow in to the Ocklawaha River but the reservoir blocks them out with stagnant dark water. I would like for the springs of the Ocklawaha River flow and not be flooded by the State anymore so I could go swimming in crystal clear springs anytime on the Ocklawaha with my daughter.
9/24/2021 13:21	Manatee		No	No					Breach the dam	It will help restore 20 other springs and allow for more ecological areas of growth	More springs die out and there's a body of water not being used to it's fullest potential because man kinda put up a dam	To breach the dam	
9/24/2021 13:21	Alachua		No	No					Breach the Kirkpatrick Dam.	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	Absolutely not.	
9/24/2021 13:24	Collier		No	Yes		2-5 times	Other: canoeing the Ocklawaha River and Silver River		Please remove Kirkpatrick Dam and restore the Ocklawaha River. This has been planned for years and we have been waiting.	Removal of the Dam will restore the Ocklawaha River and forested areas. This action is needed to provide the manatee warm water habitat and for numerous wildlife species such as panthers and bear. It is projected to be part of the Florida Wildlife Corridor. And I understand that it is part of the planned Great Florida Waterway. We've known for decades that the Kirkpatrick Dam was a mistake for the ecosystem, the watershed and the wildlife.	Loss of the flowing waterways, tremendous harm to manatees and other wildlife that face eventual extinction thru loss of habitat.	No. Please remove (or breach) the Kirkpatrick Dam. Please.	

9/24/2021 13:25	Broward		Yes	Yes				Other: I own property on the Rainbow River. I rely on Florida to protect our people and wildlife throughout the State. The Rodman Reservoir/Kirkpatrick Dam is a piece of the big picture of conserving and restoring the health of our State's entire ecosystem.	Breach the dam and restore the natural flow of the Oklawaha River.	The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	Negative effects on wildlife and water conservation continue to worsen.	No. The Kirkpatrick Dam should be breached.	This dam was a part of the boondoggle that was once the Cross Florida Barge Canal. Once that was abandoned, the Ocklaway River should be restored.
9/24/2021 13:32	Outside of state / other	Maine	No	No					Restore the Oklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Continued devastation of ecology and wildlife of the Florida Wildlife Corridor.	No
9/24/2021 13:32	Duval		No	Yes		1 time	Wildlife viewing		Breach the dam	Fish and manatee populations are down, and breaching the dam would provide habitats for them. It could also improve the water quality.	Loss of wildlife	I have not heard or read any proposals short of breaching the dam that I could support.	
9/24/2021 13:34	Hillsborough		No	No					I'd like to see it removed to help the springs around it	Saving the springs and all the wildlife that inhabit them	That the springs will continue to be destroyed	Maybe. Depends on what it is	Save our springs and help the manatees
9/24/2021 13:41	Seminole		No	Yes		1 time	Other: I do not use it.		It to be breached. It should never have been built.	A drastic drop in fish populations through the springs	That we continue to fail our state by trying to control it's natural resources.	No. Restore the natural flow of the water. There is no benefit to leaving the dam in place	
9/24/2021 13:44	Hillsborough		No	Yes	1 time	2-5 times			Breach the dam	For the health of wildlife. ecosystem resiliency in the face of climate change, saving money	money to repair dam. wildlife species population. downstream spring impact	no. breach the dam	
9/24/2021 13:45	Alachua		No	Yes	1 time		Canoeing / kayaking Wildlife viewing		Restoration of the Ocklawaha River/Great Florida Riverway by breaching the Rodman/Kirkpatrick Dam. The cost of maintaining the reservoir/dam is too high in terms of the economy, harm to native wildlife, degradation of water quality, and damage to natural ecosystems.	Three rivers (Ocklawaha, Silver, St. Johns) and 50 springs would be restored, and millions of dollars would be saved in dam repairs and potential flood damage costs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue.	As a Floridian born and raised who cares about our unique environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.
9/24/2021 13:47	Duval		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
9/24/2021 13:51	Broward		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer. Unless you propose a 24/7/365 wildlife shuttle system to move wildlife across the dam/flooded areas.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/24/2021 13:51	Bay		No	No					Restoration & preservation! I want species to propagate!! I want wildlife to be free to roam! I want to visit!	Expanding the wildlife corridor is essential to preserving species!	loss of species	no	
9/24/2021 13:54	Brevard		No	Yes		2-5 times	Canoeing / kayaking Wildlife viewing		Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every additional day the dam and reservoir remain in place results in additional environmental degradation.	• 7,500 acres of the lower Ocklawaha's historic forested floodplain, 20 freshwater springs, and many miles of natural river channel that were drowned as a result of dam construction would be restored. • Thousands of acres of submerged aquatic plant communities would be able to regenerate in the restored river channel, and in the re-emerged spring run streams that drained into the Ocklawaha historically. • 8,000 acres of dressed floodplain wetland located downstream of the dam would be enhanced. • Imperiled plant species like the endangered Star Anise and threatened Hartwrightia, which are native to the banks of this region's spring run streams, could expand their range into the restored spring systems. • Draining the Rodman Reservoir would remove the single greatest barrier to plant and animal movement along the Ocala to Osceola (O2O) Wildlife Corridor by replacing the open water expanse of the Reservoir with a restored floodplain forest, to the benefit of many listed plant species native to the region including the Federally listed Clasping Warea and Scrub Buckwheat. • Three river systems - the Ocklawaha, Silver and St. Johns - would experience significant environmental improvement from restoration. • Manatees would regain open access to the warm water habitats of the Ocklawaha and Silver Springs. • Migratory fish including the Striped Bass, American shad, American eel, and the critically Endangered Atlantic Sturgeon and Shortnose Sturgeon would once again have open access to the Ocklawaha system if the dam is breached. • Recreational sport fishing would be enhanced by allowing the Florida strain of the Striped Bass to reclaim what used to be its primary spawning habitat - the Ocklawaha. • At least 150 million gallons a day of additional natural flow, and potentially much more, would be restored to the Lower St. Johns River, improving water quality and increasing resiliency of the entire St Johns/Ocklawaha River system by impeding the salt water intrusion resulting from sea level rise. • An estimated $14 Million in dam repairs, measured in 2006 dollars, would be saved by avoiding repairs to a dam that has exceeded its life expectancy and never fulfilled the purpose for its construction. • The large expenditures required for herbicide treatments to control the growth of invasive aquatic weeds and to conduct other ongoing maintenance needs, including	The broad array of environmental benefits to native flora and fauna, including many imperiled species, that would result from restoration would not be possible. • Water quality in the Rodman Reservoir and Lower Ocklawaha/St Johns River system would continue to decline. • The economic benefits that would result from increased and enhanced recreational usage would be denied to the surrounding local communities. • Residents and business owners in areas immediately downstream of the dam would continue to be under threat in the event of failure of a dam that has never, and will never, satisfy the purpose of its construction. • Thousands of acres of submerged aquatic plant communities would be unable to regenerate in a restored river channel and in the re-emerged spring run streams, and 7,500 acres of floodplain forest would not be restored. • The Reservoir would continue to be a barrier to movement by native wildlife and plant life along the length of the O2O Corridor, and compromise the value of Florida's investments in conserving lands like the Etonian Creek State Forest, and approved Florida Forever projects. • Taxpayers will perpetually be on the hook for repair and maintenance of the dam and Reservoir, and continue to be liable for any loss of life or property damage that would result from a dam failure. • Imperiled plant species like the endangered Star Anise and threatened Hartwrightia, which are native to the banks of this region's spring run streams, would be unable to expand their range into the unrestored spring systems.	No. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration. The survey concludes with the option of providing additional comments (at your own discretion if you wish to elaborate on anything or add personal reflections or considerations). Remember that you do not need to be a local resident, or even a Florida resident, to participate in the survey! Take an expensive view of ecotourism and recreational usage by including Silver Springs, the Ocala National Forest, the St Johns River, and important land conservation projects like the Etonian Creek/Cross Florida Greenway Florida Forever project. Ultimately, we all have a stake, environmental and economic, in whether Florida finally restores a free-flowing Ocklawaha River.	
9/24/2021 13:58	Dade		No	No					Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit	No. Breaching the dam is 50 years overdue.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ockawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/24/2021 14:01	Manatee		No	Yes		1 time		Other: Swimming in Canon Spring during the last drawdown	I'd like to see the dam breached and the river flowing naturally again.	There are 20 drowned springs that would be restored. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	I hope to live to see a free flowing Oklawaha River again and to see the St. John's River re-connected to the Silver River and Silver Springs by the Oklawaha , as it should be. Thank you for your consideration.
9/24/2021 14:07	Alachua		No	Yes		2-5 times	More than 5 times	Other: Research	The George Kirkpatrick Dam should be breached and the water levels at the Rodman pool should be lowered so the Ocklawaha can recover and the balance between the Ocklawaha River, Silver Springs and St. Johns River can be restored as an interconnected water system.	Over a half century of scientific reports provided by Florida Defenders of the Environment, the St. Johns Riverkeeper and the Florida Springs Institute.	The dam has been in place for over a half-century, even though the Cross Florida Barge Canal was halted in 1971. We cannot let another 50 years go by with a disastrous dam in place that serves no purpose and is devastating to the Ocklawaha's natural riverine ecosystem.	A partial breach of the dam would be preferable to no dam removal. Restoration of the Ocklawaha could still proceed under this scenario.	
9/24/2021 14:09	Alachua		No	Yes			1 time	Fishing Boating Wildlife viewing	Free the Oklawaha!	Free the Oklawaha!	The further devastation of this beautiful treasure.	No,	Free the Oklawaha!
9/24/2021 14:09	Brevard		No	No					Breach the Rodman/Kirkpatrick Dam.	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years.	No. Breaching the dam is 50 years overdue.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ockawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/24/2021 14:11	Alachua		No	No									
9/24/2021 14:14	Charlotte		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/24/2021 14:16	Marion		No	Yes		2-5 times		Fishing Fishing (shoreline/structure) Hunting Wildlife viewing	Not to toar it down. My family grew up fishing and camping up and down the river. Safe place to bring your children to fish.	Living along the river. Camping with the kids. Why again destroy the eco system which will take years to return to normal. Destroy businesses and fishing places that a whole new generation can enjoy.	Putting people out of business, destroying property again family homesteads taken away again. Destroying eco systems just to put the river back	Yes, leave it be.	We made mistakes in the past let's not do it again. I know some have good intentions to restore the river but once again in a whole new century with a lot more people now than in the past. The aftermath would be a disaster more than what we bargain for.
9/24/2021 14:16	Orange		No	Yes		2-5 times	More than 5 times	Fishing (shoreline/structure) Wildlife viewing Other: Picnics	Breach the dam	20 drowned springs would be restored. It is the most beneficial and cost effective springs protection in Fla. Historic migratory fish routes would be restored which is essential to Silver Springs. Hundreds of manatees would gain access to much needed habitat when they are dying at record numbers. Dam is past life expectancy so millions to be saved in repairs	Missing the best opportunity when state and federal funds are available, public interest is high, environmental needs are critical, and dam is unsafe. 20 lost springs, millions spent in repairs when the dam does not provide flood protection, power water supply, or any broad public benefit. Water quality declines further fueling invasive weed blockage, blue green algae, fish kills, and aquatic vegetation. Manatees loose access to essential warm water habitat.	No, breaching the dam is 50 years overdue.	This is the best opportunity to help the environment, people economically, save taxpayers money, help water quality, and save wildlife.
9/24/2021 14:17	Outside of state / other	GA	No	No						Take down harmful Kirkpatrick Dam.	Help all FT wild animal habitat but especially manatees.	Manatees need warm water in wintar other than power plants.	Improve the Great Florida Riverway.
9/24/2021 14:18	Walton		No	No						full restoration of the natural water system -- as much as possible	The dam was produced as part of a larger project THAT NEVER came to fortition, NOR should ever.	That the native wildlife (all creatures and plants) may never be able to reproduce.	After the dam is destroyed, past the flood plain forest, the water may be prevented from flooding populated areas.	I fully support the Free the Ocklawaha River Coalition for Everyone. FORCE. Thank you so much for giving us public folks the opportunity to voice our concerns.
9/24/2021 14:19	Pinellas		No	No						It should be re-engineered to allow for restoration of the Great Florida Riverway.	Scientific research has concluded this dam contributes to the degradation of the natural environment.	Further degradation of the natural environment.	Of course	
9/24/2021 14:21	Lake		No	No					Remove structures that prevent the previously traditional migration of sea creatures to their habitats and provide actions restoration of the past natural habitat in that region.	There are many scientific studies that show that endangered manatees and other wildlife that rely on that river system have been negatively affected by the construction of the lock and the dam.	Florida is in the throes of major development. Along with that has come the destruction of the land and waterways that have historically been part of the natural environment, to the detriment of the environment that has traditionally supported so many now-threatened and endangered wildlife and plant species. We have a chance to restore part of the native scene, and protect the natural heritage of our state. If we as developers don't protect the native environments, we will lose what this state contributes the beauty of our natural world here. SAVE THE MANATEES! and so many other species that are important. Work on decreasing the pollution from developed areas that damage these water systems.	It's time for all of us to focus on the needs of our natural world. Continued human development is taking a toll on what has supported so many species in the recent past. Let this action to remove the reservoir and locks stand to show that we care about the welfare of all aspects of our state.	
9/24/2021 14:31	Clay		No	Yes		2-5 times		Fishing	I would like to see the dam breached to allow water to freely flow up the ocklawaha again	All the data that suggests it's what's best from an ecological standpoint	The continued decline of some of Florida's most natural beauty.	No.	
9/24/2021 14:33	Duval		No	No					Restore the natural flow of the river	Science.	Ecological degradation	Nope	Think about the animals that would benefit
9/24/2021 14:33	Orange		No	No					Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ockawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
9/24/2021 14:36	Lake		No	Yes		1 time	2-5 times	Canoeing / kayaking Wildlife viewing	Remove the Dam	Science about the benefits to the river and its inhabitants	Continued burial of beautiful springs under water	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.
9/24/2021 14:39	Alachua		No	Yes		1 time		Wildlife viewing					
9/24/2021 14:39	Outside of state / other	new york	No	No									

9/24/2021 14:40	Hillsborough		No	Yes		1 time	Canoeing / kayaking	Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees lose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
9/24/2021 14:40	Hernando		No	No				Remove the dam and restore the original watershed to its biological diversity and hydrological functions.	The fact that the original reason for building it as part of the Cross Florida Canal was abandoned years ago so this part of it that was competed will never function as intended; why sustain an unnatural revision to the original watershed when the dam can be removed and the waterway restored?	Loss of biodiversity and beneficial restoration of this watershed when no apparent reason exists to not remove the dam and restore this area to its original condition. No one has provided any reason to suggest that it cannot be successfully restored.	No	Thank you for pursuing this; it is way overdue.
9/24/2021 14:42	Marion		Yes	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Kayaking Wildlife viewing	I would like to see Rodman Reservoir preserved in its current state. It's an amazing and important wildlife refuge. It is single handedly saving the manatee in this area. It is a world class fishery. I operate as a guide on Rodman and personally guide on it over 300 days per year. I also have 3 other guides that I share business with and it is vital to our way of life which would be destroyed if the lake were gone. It's so important to do many businesses here! It would be a travesty to displace all the wildlife that depends on it also. Please help us to preserve our way of life!	It is a world class fishery that is supported by the Florida Game and Fish Commissions TrophyCatch Florida program where the data is recorded on the number of Trophy Bass it produces and it's also one of Florida's most visited state parks. All of this is easily confirmed. It is a vital part of the economies of Putnam and MarionnCounties which are typically lower end financial counties.	That many people that rely on The Reservoir for income. Fishing guides, bait stores, gas stations, hotels local air BnB's couldn't recover from its loss. Also all the wildlife it would displace. It is there now and nature has adapted marvelously. It needs to be retained and made a wildlife preserve. In a time where manatee deaths are at an all time high. It can't be denied the amount of manatee that are surging because of it!	No	
9/24/2021 14:44	Orange		No	Yes		2-5 times	Boating Wildlife viewing	Restoration of the Ocklawaha, Silver and St John's rivers and springs by breaching th Rodman/Kirkpatrick Dam.	Historic fish and manatees return as a breach creates a free flowing river and underground fresh water springs.	Hundreds of manatees lose the opportunity to access essential warm water, winter habitat.	No	
9/24/2021 14:44	Duval		No	Yes		1 time	More than 5 times	Canoeing / kayaking Wildlife viewing	Remove the Dam	The positive impact on the ecology of the Silver and Ocklawaha Rivers and on the local economy.	The basin will continue to deteriorate, losing more wildlife.	Partial removal of the dam.	
9/24/2021 14:44	Orange		No	Yes				Canoeing / kayaking Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	Breaching the dam would allow for the recovery of plant communities in the the lower Ocklawaha's floodplain as well as many freshwater springs and natural river channel that were drowned after the dam was constructed. Aquatic plants could regenerate in the restored river channel, and in the re-emerged spring run streams historically feeding the Ocklawaha.	The Ocklawaha basin water quality and ecosystems would continue to degrade. Threatened and endangered species would continue to face an open water barrier to movement along the Ocala to Osceola Wildlife Corridor by instead of a restored floodplain forest.	No. Breaching the dam is long overdue. No compromise measure would achieve the environmental and economic benefits of restoration. The cost to the environment and to taxpayers to keep the dam can't be justified.	
9/24/2021 14:45	Citrus		No	Yes		2-5 times	Other: Nothing	Take it down and help bring back our springs and manatee/fish populations	The fact that fish and manatee populations are down 92% since this dam was built	Manatee extinction and also manatees starving because there's not enough food elsewhere	No	
9/24/2021 14:47	Franklin		No	No					Open it for natural use	Loss of habitat for native species	No	
9/24/2021 14:49	St Johns		No	No				Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/24/2021 14:52	Leon		No	Yes		1 time	Canoeing / kayaking Boating Other: I would like to use the river but the reservoir has drowned so much of it	The dam needs to come down. it's impeding the natural flow of the river, hurting species like manatees and migrating fish and drowning springs. We've had the means to do this, the studies show it needs to be done. Why we aren't doing it is a strange political mystery.	There are free flowing springs and a gorgeous river that have been drowned. It makes very little sense. The # of fishermen who use the dammed reservoir are a fraction of the people who would visit a restored river and springs.	That we would continue as it is now for even more wasted years instead of restoring the river	No - the dam needs to come down.	It would be an amazing thing to see the Ocklawaha restored and for so many to enjoy the springs and the vegetation, the river banks, the floodplain forests - all of it.
9/24/2021 14:54	Seminole		No	No				Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. 9/24/2021 15:05	Alachua		No	Yes		1 time	Boating Wildlife viewing	Remove the Rodman/Kirkpatrick dam to restore the Oklawaha River to its original flow. Do it for our endangered wildlife, outdoor recreation, and most importantly, water quality.	We can restore 150 gallons a day of natural water flow while restoring 3 rivers: Oklawaha, Silver and St. Johns, not mention saving millions on continual repairs to a dam that should not have been built.	We would lose out on state and federal funding at a time when environmental needs are critical for our dwindling manatees and our water quality. Let's stop wasting money on dam repairs and be proactive on restoring our natural rivers.	Not really - No. Temporary fixes aren't working. Drawdowns are not enough and repairs will grow ever more expensive and frequent.	As a long time resident of Florida (1957), I have witnessed so much of our natural spaces, clear waters, pristine beaches be destroyed. Now is the time to pull back the Oklawaha to it's original state and let our wildlife, water, and residents enjoy all that true nature has to offer.
9/24/2021 15:09	Volusia		No	Yes				Fishing				
9/24/2021 15:14	Outside of state / other	Tuscarawas county Ohio	No	Yes		More than 5 times	More than 5 times	Fishing	Leave it like it is	Most beautiful place to fish and see wild life and manatees	Loose a piece of beauty	No	Have been fishing for trophy bass for over 30 years
9/24/2021 15:14	Levy		No	Yes		2-5 times	More than 5 times	Fishing Boating Wildlife viewing	Continue as is	This reservoir is a world class bass fishing destination. The statistics accumulated by the Florida's TrophyCatch program will show the amazing numbers and health of the bass population. Also, consider that the numbers may be unstated. I personally know fishermen who catch trophy bass in Rodman but choose not to specify location when registering their fish. Other than fish, the waters and surrounding area support amazing amounts of wildlife.	The wildlife habitat I've described will be significantly reduced or dispersed	I can't think of any	Any action that would effectively "drain" the reservoir even if returned to the free flowing river defies logic in my opinion
9/24/2021 15:14	Alachua		No	No								
9/24/2021 15:15	Duval		No	Yes		1 time	2-5 times	Canoeing / Kayaking Wildlife viewing	I would like to see the dam breached thus restoring a free flowing river from Silver Springs to the Oklawaha and then to the St. Johns River.	It has been recommend by state and federal studies over the years to restore it to its natural flow. It would increase fresh water to the upper St. Johns River, reducing salinity, increasing the diversity of fish species as well as increasing manatee access. It would restore forest and wetlands to help filter water. It would increase tourism and financial support for local communities. It would increase underwater grasses that support fish and manatees.	That we would miss an opportunity that is 50 years in the making. The dam is in bad repair and it makes no sense to continue to support a dam that was created for the Cross Florida Barge Canal that fortunately President Nixon scrapped. It didn't make sense then and certainly doesn't make sense now. As a boy 60 years ago I remember how clean and pristine Silver Springs was with huge green river grass growth and large areas where you could see the bottom. Now there are 2 small areas that are clear at the Springshed and the minimal grass has a brown sludge on it. River restoration would help not only this spring but uncover 20 "buried" springs. Without River free flow these issues will remain unaddresses.	No	This is a decision whose time has come. Breach the dam.
9/24/2021 15:17	Hernando		No	Yes		2-5 times		Canoeing / kayaking	Remove them: free the Oklawaha River	Environmental education - a degree from Florida State University	The continued disruption of the Oklawaha River	No.	
9/24/2021 15:20	Alachua		No	Yes		1 time		Other: Observing native plants and wildflowers on a field trip	Remove the dam and restore the river and springs area to flow naturally and become wildlife habitat	Information from environmental biologists who have studied the possibilities of restoration of the area and scientists at the St Johns Water Management district	The continued costs of maintaining the dam	No	This issue has been continued for too many years as a political issue and restoration needs to be based on scientific evidence for allowing the river and its springs to renew their natural course
9/24/2021 15:20	Marion		Yes	Yes		More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Wildlife viewing Other: Camping	Keep it the way it is!	The reservoir is a huge source of freshwater, has become a safe haven for manatees, fuels the local economy through fishing and ecotourism, and is a wildlife refuge to many species of fish, birds, reptiles, etc	My biggest concern is that we are even talking about the future of the dam. My desire would be that it stays and this conversation never happens again!	There is no scenario. It's keep the dam or don't keep the dam. I say keep the dam.	
9/24/2021 15:21	Putnam		Yes	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing Other	Keep it just like it is !. Don't change a thing	The wildlife. The manatees that call Rodman home.	The loss of uniqueness to Rodman. it's a sanctuary for fisherman and wildlife alike. It truely separates the commercialized St John's River from the true natural habitat that thrives in Rodman. If you open it up… it will be just another creek or Avenue for party boats and casual boaters. Keep it natural!!!	No. Keep it just like it is	
9/24/2021 15:21	Outside of state / other	Hooksett nh	No	No					save it always	protecting the environment is important	no more green space		
9/24/2021 15:25	Duval		No	Yes		More than 5 times			Stay as is	Outstanding fishery	Loss of habitat		
9/24/2021 15:26	Marion		No	Yes	More than 5 times			Fishing Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Hunting Wildlife viewing	Stay the same	Paradise	Wildlife		Save the Rodman
9/24/2021 15:27	Hillsborough		No	No					I would like to see the Rodman/Kirkpatrick Dam breached, helping tp restore the Ocklawaha River	Buried springs would be allowed to exist. Manatees could return to the area. It is very important that we restore 15,000 a ras of the Florida Wildlife Corridor	This is the one time chance to restore the natural flow of this beautiful river. If the dam is restored and money is foolishly spent on the maintenance of an outdated structure, all of us in Florida lose.	No. The only desired outcome is breaching the dam.	Please, please, please listen to old Floridians who love our state for its natural flora and fauna, and allow the Ocklawaha to flow again!
9/24/2021 15:30	Alachua		No	Yes	1 time	2-5 times		Fishing (shoreline/structure)	Break the dam, release the river.	The history and ecology of the area. The dam was fatly to begin with, and what better time than now to restore the flow of the beautiful springs now sunken beneath the lake.	Continued inflow of invasive plants and animals harboring in the reservoir.	No.	Please, be brave and do the right thing.
9/24/2021 15:32	St Johns		No	Yes	1 time	2-5 times	More than 5 times	Fishing Canoeing / kayaking Boating Hunting Wildlife viewing	Removal of the dam and restoration of the Ocklawaha river back to the way God made it.	The fishing is no longer what it used to be. Restoration may require initial upfront cost but the dam will soon need extensive repairs and will require continual maintenance that will be a perpetual drain on taxpayer resources. Restoration will provide a more diverse mix of species, greater wildlife connectivity and and a greater range of recreational activities for all.	I would be concerned an inordinate amount of resources would be spent to maintain an area that has less ecological and recreational value than a restoration scenario.	I would support creation/retention of open water areas if technically/economically feasible. I would also support retaining parts of the barge canal as a boating access point to the St. John's River. I think upstream sections of the barge canal could also be retained and graded/planted as wetland filtration and a way to keep the lower aforementioned canal access to the St. John's from stagnating.	I hope all interest groups are considered when making decisions on the future of this resource, whether is is fishing, hunting, boating, kayaking, wildlife viewing etc. I would like to see a restoration design where access and allowable uses are incorporated for all user groups. I know that some fishing groups do not support restoration because they are afraid of losing a valuable resource, but I do believe in the long term restoration will be a greater benefit to fisheries.
9/24/2021 15:41	Polk		No	Yes		1 time		I would like to see the Dam removed or breached in order to (1) restore 1,000s of acres of conservation lands and habitat and (2) save the taxpayers of Florida millions of dollars in Dam repair costs.	There are so many reasons to breach/remove the Dam that it is difficult to pick just 1. Here are a few reasons: (1) restore plant and animal movement along the Ocala to Osceola (O2O) Wildlife Corridor, (2) restore 1,000s of acres of wetlands and floodplain of natural, (3) provide warm waters for Manatees, and (4) improve water quality in the St. Johns and Ocklawaha rivers.	The ongoing environmental degradation caused by the Dam - poor water quality in the St. Johns and Ocklawaha rivers and the lack of natural corridors and habitat for animals and plants, including a number of endangered species.	No.	The benefits of removing/breaching the Dam far outweigh the true costs of both repairing the Dam and the harm that it does to our plants and animals.
9/24/2021 15:41	Brevard		Yes	Yes		1 time	Wildlife viewing	Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
9/24/2021 15:42	Marion		No	Yes	2-5 times			Fishing Boating Wildlife viewing	Nothing, leave it alone	Personal experience	Loss of jobs, detrimental to wildlife	No	
9/24/2021 15:43	Pinellas		No	No				Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every additional day the dam and reservoir remain in place results in additional environmental degradation.	• 7,500 acres of the lower Ocklawaha's historic forested floodplain, 20 freshwater springs, and many miles of natural river channel that were drowned as a result of dam construction would be restored. • Thousands of acres of submerged aquatic plant communities would be able to regenerate in the restored river channel, and in the re-emerged spring run streams that drained into the Ocklawaha historically. • 8,000 acres of stressed floodplain wetland located downstream of the dam would be enhanced. • Imperiled plant species like the endangered Star Anise and threatened Hartwrightia, which are native to the banks of this region's spring run streams, could expand their range into the restored spring systems. • Draining the Rodman Reservoir would remove the single greatest barrier to plant and animal movement along the Ocala to Osceola (O2O) Wildlife Corridor by replacing the open water expanse of the Reservoir with a restored floodplain forest, to the benefit of many listed plant species native to the region including the federally listed Clasping Warea and Scrub Buckwheat. Preserving, conserving and restoring the native plants and native plant communities of Florida • Three river systems - the Ocklawaha, Silver and St. Johns - would experience significant environmental improvement from restoration. • Manatees would regain open access to the warm water habitats of the Ocklawaha and Silver Springs. • Migratory fish including the Striped Bass, American shad, American eel, and the critically Endangered Atlantic Sturgeon and Shortnose Sturgeon would once again have open access to the Ocklawaha system if the dam is breached. • Recreational sport fishing would be enhanced by allowing the Florida strain of the Striped Bass to reclaim what used to be its primary spawning habitat - the Ocklawaha. • At least 150 million gallons a day of additional natural flow, and potentially much more, would be restored to the Lower St. Johns River, improving water quality and increasing resiliency of the entire St Johns/Ocklawaha River system by impeding the salt water intrusion resulting from sea level rise. • An estimated $14 Million in dam repairs, measured in 2006 dollars, would be saved by avoiding repairs to a dam that has exceeded its life expectancy and never fulfilled the purpose for its construction. • The large expenditures required for herbicide treatments to control the growth of invasive aquatic weeds and to conduct other ongoing maintenance needs, including periodic	• The broad array of environmental benefits to native flora and fauna, including many imperiled species, that would result from restoration would not be possible. • Water quality in the Rodman Reservoir and Lower Ocklawaha/St Johns River system would continue to decline. • The economic benefits that would result from increased and enhanced recreational usage would be denied to the surrounding local communities. • Residents and business owners in areas immediately downstream of the dam would continue to be under threat in the event of failure of a dam that has never, and will never, satisfy the purpose of its construction. • Thousands of acres of submerged aquatic plant communities would be unable to regenerate in a restored river channel and in the re-emerged spring run streams, and 7,500 acres of floodplain forest would not be restored.• The Reservoir would continue to be a barrier to movement by native wildlife and plant life along the length of the O2O Corridor, and compromise the value of Florida's investments in conserving lands like the Etonah Creek State Forest, and approved Florida Forever projects. • Taxpayers will perpetually be on the hook for repair and maintenance of the dam and Reservoir, and continue to be liable for any loss of life or property damage that would result from a dam failure. • Imperiled plant species like the endangered Star Anise and threatened Hartwrightia, which are native to the banks of this region's spring run streams, would be unable to expand their range into the unrestored spring systems.	No. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration.	
9/24/2021 15:44	Outside of state / other	Tennessee; I own land in Lafayette Cou	No	No					I want the dam removed and the water flow restored as closely as possible to its original state.	There is a vast body of environmental research establishing the harmful effects of dams on local ecology, wildlife, and aquatic life.	The continued degradation of the environment.	I think either the dam is there or it is not, so I have to say I don't see that a realistic compromise is possible.	This is a chance to do something wonderful for the environment, support the local economy, save money on repairs to the dam, and unblue many years of harm.
9/24/2021 15:45	Brevard		No	Yes		2-5 times		Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation.
9/24/2021 15:45	Alachua		No	Yes		2-5 times		Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Nothing. Repair the Dam	Wildlife preservation	Drain the reservoir	No	Please keep Rodman as it is.
9/24/2021 15:48	St Johns		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Canoeing / kayaking	Nothing, maintain it as is.	Not really a specific question. I would not like to see us going backwards and destroying what has evolved as a very unique and viable ecosystem.	You cannot bring it back to what is was before while trying to fix something that's not broken.	NO!	
9/24/2021 15:49	Alachua		No	Yes		2-5 times		Boating Wildlife viewing	remove the dam and return the Ocklawaha R. to its natural flow	Several things: 1) the lost springs, 2) submerged habitat, 3) free movement of animals (e.g. manatees and fish) within the river, 4) stopping the wasteful use of funds to maintain poor dam infrastructure, 5) eco-tourism money will easily replace the "fish tournaments" (which, by the way, existed before the dam as well so they do not need the dam), 6) economic development resulting from new ecologically friendly tourist sites (after all, tourists come to FL for the natural beauty not just Disney).	The environmental impact would be worse than the cural. Continued degradation of the river system ecologically and economically, loss of ecosystem services, wasting funds on a dam that is crumbling.	No. The dam needs to be removed.	
9/24/2021 15:50	Marion		Yes	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing	Leave to dam! Allocate funds to do the proper maintenance on it.	The ecosystem that has been created by the dam is magnificent! The destruction of the dam will cause utter devastation for decades to come. It's a refuge for so many manatees and migratory birds. As well as home to some of the largest bass fishing in the entire country.	Total destruction of the ecosystem that has developed from the dam being put in place.	Saving the dam is the only outcome I can support	
9/24/2021 15:51	Dade		No	No					Restoration of the Ocklawaha River through the breaching of the Kirkpatrick Dam.	The restoration of thousands of acres of natural habitat for the protection of so many native plants, birds, butterflies, reptiles, amphibians, mammals....	That the remaining patches of natural habitat will be less successful at maintaining wild, natural communities of life, and the ongoing loss of outdoor recreational opportunities for people to enjoy being outdoors and seeing what all of Florida once was.	No, not that I'm aware of.	
9/24/2021 15:51	Volusia		No	Yes	2-5 times			Fishing Boating Hunting Wildlife viewing	Keep it. Improve it!	The dam is great for the environment and provides thousands of dollars to the local community	Would get rid of an iconic Florida lake known all over America.	Keep the dam!	World class fishery. Keep the dam
9/24/2021 15:54	Hillsborough		No	No					Breach the Rodman/Kirkpatrick Dam.	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.

9/24/2021 15:55	Hillsborough		No	No					Breach the Rodman/Kirkpatrick Dam.	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	Hundreds of manatees loose access to essential warm water winter habitat.	No. Breaching the dam is 50 years overdue.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/24/2021 15:57	Marion		No	Yes		More than 5 times	Fishing Boating	Remain as is	Witnessing several Manatees in very safe environment along with other wildlife and the many businesses that rely on this fishery for their livelihood	Many resident families and businesses will be greatly affected		
9/24/2021 16:05	Manatee		No	Yes		1 time	Other: I visited in graduate school to see the impacts of the dam on the ecology of the river	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	If the dam is breached, almost 2 dozen springs will again flow (now covered with tannic water) and the Silver Springs ecosystem will be restored. Historic fish and manatees will be able to return when the breach opens, creating a free-flowing river. Manatees will gain essential warm water winter springs habitat and 15,000+ acres of the Florida Wildlife Corridor will be restored.	The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	Please breach the dam now to allow the springs and river to flow free.
9/24/2021 16:05	Lake		No	No				The dam removed and natural flow restored to the Ocklawaha River.	Various environmental papers and articles.	Continued decline of Ocklawaha and continued silting of the reservoir, as well as proliferation of exotic species within the reservoir.	Nothing short of dam removal.	
9/24/2021 16:07	Bay		No	No				breach the dam	it will help manatees	more manatee deaths	no	
9/24/2021 16:07	Alachua		No	Yes		More than 5 times		Let the waters flow and animals migrate! I want to see Cannon Springs flourish.	The negative ecological impacts of allowing the dam to remain.	A dam will remain for practically no purpose whatsoever instead of a healthy river and ecotourism economy	No	I paddle, I vote, and I spend money in rural communities. I want to see cannon restored.
9/24/2021 16:13	Outside of state / other	Pennsylvania	No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing Fishing Wildlife viewing	I would like to see Rodman reservoir continue to be managed in a manor that promotes ecotourism and a sustainable habitat for wildlife.	My Personal experience at Rodman reservoir.	Loss of habitat for multiple species of wildlife.	Negative	
9/24/2021 16:18	Duval		No	Yes		1 time		Boating Wildlife viewing Free the oklawaha, bring it back to its natural state	Growing up in Fruitland (near Weirska) gave me a significant appreciation for the ecology of this area. It's gorgeous, special, and deserves protection to bring it back to its natural purpose.	Sadly, the region will continue to be devoid of its potential.	Nope.	Let it flow.
9/24/2021 16:20	Duval		No	Yes	1 time	1 time	2-5 times	Other: No use, but I would use it if it were a river again	Remove or breech the dam and return it to its natural state as a river. The dam was put there for a purpose that ceased to exist many years ago.	Studies at both the federal and state levels support removing the dam.	The dam would continue to submerge springs, prevent manatees from reaching the area behind the dam, prevent the trees from re-growing where they once were.	I don't see how there is a halfway or compromise position on this. Either you have the dam or you don't and I strongly support eliminating the dam.	Government and the populace have supported removing the dam for many years. Only a small group of people with a special interest stand in the way of doing the right thing and removing the dam.
9/24/2021 16:21	Alachua		No	No				Get rid of it and let the Ocklawaha flow freely		The damn is falling apart as it is and a controlled dismantling will be far less harmful than a catastrophic failure. The reservoir itself offers little benefit to residents of the state of Florida and it places further strain on our state's shared, strained water resources.	That the dam is dismantled and the reservoir drained in a controlled manner that does not threaten lives or homes of the nearby residents. Not that I can think of, but compromise is always on the table.	
9/24/2021 16:21	Leon		No	Yes				Wildlife viewing	Remove the Dam and return the rivers and springs to their natural state increasing wildlife and fish populations for the enjoyment of Floridians and tourists.	The Dam has had a negative impact on Florida's springs and waterways. It is 50 years old is in disrepair. The cost of repairs are very high.	The continual deterioration of some of our greatest assets in Florida, our springs and waterways. I grew up in Ocala and was fortunate to have enjoyed Silver Springs and many other springs in the area before they were impacted. Natural plantlike and fish have greatly declined over the years as have other wildlife dependent on these Florida treasures.	No. It should be removed.	It breaks my heart to see the changes in our beautiful springs. We can continue to expand our ecotourism in Florida if we take opportunities such as removal of this dam and perhaps build tourist destinations for boating and wildlife viewing in these areas.
9/24/2021 16:23	Seminole		No	No					Breached	Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs.	The fish population and the manatee migration.	No	
9/24/2021 16:26	Clay		Yes	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing	I would like to see it left alone and be allowed to flourish as it has since the failed Cross Florida Barge.	The wildlife that flourishes in the lake to include Manatees, Bald Eagles, and multiple species of waterfowl.	That the wildlife would be disrupted and loose their habitat. That the water table will also be affected for everyone living around the lake.	None	
9/24/2021 16:27	Alachua		No	Yes		2-5 times		Fishing (shoreline/structure)	Return the River	Common sense	Continued water quality degradation	Return the River	Return the River
9/24/2021 16:32	Columbia		No	Yes		More than 5 times		Fishing Boating Wildlife viewing	Stay like they are.		The wild life would be destroyed. Manatee, all fish species water flow all would be destroyed.		
9/24/2021 16:35	Broward		No	Yes		1 time		Wildlife viewing Other: day trip	Restore the river. It's a lingering nightmare from the Kirkpatrick's affects on the river. Time to rethink this.	We are hard wringing ourselves as we watch the wildlife deplete and fail to survive the conditions we created with the dam. I would like to see the manatees survive, as well as other fauna. It's a heritage I wish to pass on to my children.	Watching the manatees suffer and starve is already bad enough, but to deprive them further of habitat and access to warmer water is simply the wrong way to manage these wild spaces. The possibility of restoring these wetlands to a balance to support the apex predators and how this further restores these rare wild spaces is critically important. Here's our chance to see this actually happen. I'm hopeful.	We are in the habit of delaying these fixes. We study. We fund studies. We kick it down the road. But we are denying the fix by doing this. Enough is enough. It's time to make this happen. It would be a wonderful improvement to those wild spaces.	Restore the Ocklawaha River. Imagine the incredible possibilities. Imagine the images and optics of Florida having this rare claim to such a space. It's more precious as a wild space than as a mismanaged and abused man made disaster.
9/24/2021 16:35	Alachua		No	Yes			2-5 times	Fishing Fishing (shoreline/structure)	Remove and restore the springs.		Florida will not have one of its most beautiful and crucial ecosystems restored.		
9/24/2021 16:35	Marion		No	Yes			2-5 times	Canoeing / kayaking	Take down the dam.			No	
9/24/2021 16:37	Gulf		No	No					The cost to rebuild the dam is not worth it	The cross Florida canal was a bad idea and the dam and reservoir sacrificed thousands of acres of floodplain forest. The water quality in the reservoir is deteriorating because it is an unnatural condition and repairing the dam would be throwing good money after bad.	The continued deterioration of the ecology of the area as well as the cost and liability of maintaining the dam.	I don't think that there is a half measure. If the dam is repaired all the ecosystem problems will continue, the water quality above and below the dam will get worse and Florida will probably be revisiting this problem in another 20 years.	
9/24/2021 16:37	Outside of state / other		No	No					Protect manatee habitat	The decline of habitat is destroying an important environment not only the manatee but other important species	Loss of habitat we cannot restore	As little destruction as possible	I respectfully ask you to seriously consider protecting the manatee habitat and do the right thing
9/24/2021 16:39	Alachua		No	No					I would like for it to be removed.	Restoring the springs and the wildlife that depends on these waterways.	That the wildlife populations continue to die off/leave the area.	No	
9/24/2021 16:40	St Johns		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	20 lost springs and Silver Springs ecosystem are restored	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	Thank you.
9/24/2021 16:47	Marion		Yes	Yes	1 time	2-5 times	2-5 times	Other	Free the ocklawaha	The effects on the ecosystem		Partially freeing	
9/24/2021 16:50	Hernando		No	No					Dam removal and restoral of the Ocklawaha River	As Florida experiences unprecedented growth and the environmental destruction that comes with it, it's more important than ever to restore and conserve natural resources.		Unfortunately there doesn't seem to be much room for compromise, as it's a black or white issue. The dam can't 'sort of' be removed.	
9/24/2021 16:50	Brevard		No	Yes		1 time			Open the dam	the lack of biodiversity	killing the natural biodiversity in the waterways	I am not a centrist, no.	
9/24/2021 16:52	Marion		Yes	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing	I would like to see Rodman Reservoir preserved in its current state. It's an amazing and important wildlife refuge. It is single handedly saving the manatee in this area. It is a world class fishery. I operate as a guide on Rodman and personally guide on it over 300 days per year. I also have 3 other guides that I share business with and it is vital to our way of life which would be destroyed if the lake were gone. It's so important to its many businesses here! It would be a travesty to displace all the wildlife that depends on it also. Please help us to preserve our way of life!	It is a world class fishery that is supported by the Florida Game and Fish Commissions TrophyCatch Florida program where the data is recorded on the number of Trophy Bass it produces and it's also one of Florida's most visited state parks. All of this is easily confirmed. It is a vital part of the economies of Putnam and MarionnCounties which are typically lower and financial counties.	That many people that rely on The Reservoir for income. Fishing guides, bait stores, gas stations, hotels local air BnB's couldn't recover from its loss. Also all the wildlife it would displace. It is there now and nature has adapted marvelously. It needs to be retained and made a wildlife preserve. In a time where manatee deaths are at an all time high. It can't be denied the amount of manatee that are surging because of it!	No	
9/24/2021 16:54	Outside of state / other	South Carolina	No	No					Breach the Rodman/Kirkpatrick Dam.	The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years.	No, breaching the dam is 50 years overdue.	I'm appealing to your financial concerns but my real concerns are the manatees. MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/24/2021 16:57	Leon		No	No					Breach the dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	That the manatees would be harmed	Nope	
9/24/2021 16:57	Outside of state / other	Somerset NJ	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm-water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/24/2021 16:58	Palm Beach		No	Yes	1 time	2-5 times	More than 5 times	Fishing	Maintain the dam & reservoir as it is currently. The system is healthy & is a world class fishery drawing bass fisherman from all over.	The success of the local guides producing more trophy bass as recognized by the FWC TrophyCatch program. Also the current Florida manatee crisis is being supported by the readily available food source for the migrating manatees into Rodman reservoir.	Loss of the best bass fishery in the state of Florida.	No	
9/24/2021 16:59	Seminole		No	No									
9/24/2021 17:00	Duval		No	No					I want to see the Rodman/Kirkpatrick dam breached to connect the Ocklawaha River to Silver Springs and the St Johns River.	Studies by the federal and state governments show that restoring a free flowing connected river system is cost effective and provides ecological benefits to the St Johns, Ocklawaha, and Silver Rivers. The FL Dept of Environmental Protection in 2019 commissioned an engineering firm to evaluate the condition of the dam finding it is not about to fail but it is subject to catastrophic failure which has catastrophic consequences.	If the breach does not occur, a huge opportunity to stop the ecological degradation that the dam causes is lost. Breaching the dam restores the water quality, fish and wildlife habitats, and decreases salt water intrusion State and federal funds are available, environmental needs are critical and the dam is unsafe, risking serious consequences of property damages to an estimated $38 parcels totaling more than $57 million.	no The issues are too serious: ecological and safety - not to forget recreational.	A couple of years ago I signed up to kayak on the Rodman reservoir, but the trip was cancelled so I have yet to see this area. I would love to be able to visit and use a restored water system.
9/24/2021 17:03	Pasco		No	Yes	2-5 times	More than 5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	respect of nature and animals.	The lack of respect for nature.	The destruction of nature.	Nature not being respected or protected.	
9/24/2021 17:04	St Johns		Yes	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Boating Other: Florida trail	I want the dam removed. I have a cabin on the Ocklawaha and it is pitiful what the dam has done to the river. The size of the fish is in decline and the water lettuce is such a mess that I can't get my boat through half the time! 1 year of the money allotted to maintaining that damn dam and weed control could restore the river. More neighbors are shore fishing, crabbing, swimming etc during the draw downs than ANY day the other years. Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	I have a cabin on the Ocklawaha River. I see first hand the difference between the abundance of recreation and wildlife during the draw downs compared to the daily waterlettuce mess I deal with. I cant even get my boat out due to all of the water lettuce right now. Even if I want to get good dish, I have to go beyond the dam to the branch open the the St John's. It's pitiful.	We already know the dam is structurally compromised. I drive over that thing DAILY and worry each time. An ounce of prevention is a pound of cure folks.	Not really.. Openning the dam to draw down heights might be a favorable compromise IF the damn wasn't structurally unsafe, so...no.	I have neighbors who are concerned about their wells needing to be redrilled if the dam goes away. I have done some math on this and suggest a 1 time grant to each homeowner faced with this scenario. The monies are there if you get rid of your yearly dam maintenance budget. Also, for the record, there is a sign in the dam that says it has weekly maintenance (Wednesdays) this is a flat out lie. Get ride of it. Thank you for your time.
9/24/2021 17:04	Outside of state / other	Missouri	No	Yes			1 time	Canoeing / kayaking Wildlife viewing Other: Enjoying nature	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/24/2021 17:10	Polk		No	Yes			More than 5 times	Wildlife viewing	Don't let anyone change the environment or waste management practices in the area and surrounding areas	All scientific journal articles pertaining to the the strength of biodiversity and health of an environmental systems. There's quite a few so it's a bit of reading!	How far business' and government entities will further detrimate that habitat and surrounding ones	No	
9/24/2021 17:11	Hillsborough		No	No					Yes	The Manatees not being able to reach the areas where they forage. Manatees are special creatures & should be treasured!	How to make it happen!		
9/24/2021 17:14	Alachua		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	Would love to see the area protected!! It's a treasure.	My experience as a springs goer over the last 3 decades.	That the springs would be destroyed	No	
9/24/2021 17:19	Escambia		No	No					Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	- No. Breaching the dam is 50 years overdue.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
9/24/2021 17:21	Outside of state / other	Nicholasville, Kentucky	No	Yes		More than 5 times		Fishing Canoeing / kayaking Boating Wildlife viewing	Nothing. Keep it exactly as it is.	Wildlife ecology and management, Fisheries management and aquaculture; Tourism; Business	Devastation of a unique ecosystem; Decline in local population business ventures; Reduction of critical bird and manatee habitat.	No. Removal or alteration of Kirkpatrick Dam is unnecessary as it is a flow through dam which allows for the migration of fish species. The dam serves the purpose of impounding the Owahalla River system but does no prevent that river system from thriving or flowing regularly. This has ultimately created an outstanding ecological preserve and nothing should be done to alter that in any way.	
9/24/2021 17:25	Pasco		No	Yes		1 time		Wildlife viewing	Breach the dam and restore the river	Studies show it will improve the river and downstream watershed	Florida will continue to lose visitors as the natural attractions of the State are lost	Not really	
9/24/2021 17:26	Duval		No	Yes		1 time		Canoeing / kayaking	Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam to reunite the natural connection of Silver Springs, the Ocklawaha and the St. Johns River.	Nature is the best way to protect the environment. Man made changes cause all kinds of problems to the natural order of life and the symbiotic relationship of all living things	Continued degradation of the springs and wildlife	Not that I know of. The current process of breaching the dam on a quarterly or whatever it is basis is only shocking to whatever life has started below the dam. Nature is smart about how to maintain environmental balance.	
9/24/2021 17:29	Leon		No	No					Remove the dam	Restoring the river will restore 20 drowned springs and migratory fish access to Silver Springs as well as provide much-needed manatee habitat.	Millions in taxpayers' money are unnecessarily spent to repair and maintain a dam that does not provide flood protection, power, water supply or other broad public benefit.	No. Breaching the dam is 50 years overdue	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River would be the most cost-effective springs restoration project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
9/24/2021 17:32	Leon		No	No					Removal of the dam and restoration of the natural waterways	Water quality continues to decline, dam failure or overtopping results in potential damages to 557 property owners and up to $57 million in damages, historic fish populations are not regained and manatees continue their decline into oblivion	Manatees and water quality continue to decline.	No. I moved to Florida 49 years ago and the Rodman Dam should have been gone by then. Instead it has continued to be a threat to wildlife, water quality, and downstream property owners. Get rid of this idiotic boondoggle ASAP	We must have clean water to live. Remove the dam and start the healing process.
9/24/2021 17:43	Lake		No	No					Remove and return river to natural flow.	Everything man tries to improve in nature generally screws something up. Let nature be what it is and keep man and his dollars out of the picture.	Continued degradation of our river systems.	A spillway that would allow sufficient flow to maintain the rivers but not completely remove the resivoir.	Make the decision based on the science to protect the rivers and not on the $$$$ and economic concerns of the special interest that have built up since the dam was built. Money should not preclude the correction of a mistake or an original bad decision.
9/24/2021 17:44	Marion		No	Yes		2-5 times	More than 5 times	Fishing Boating					
9/24/2021 17:46	Duval		No	No					A bit afraid of the underground impact of changing the flow the dam created. Don't we have enough sinkholes? Maybe we need to restore the flow...	Sinkholes in florida	Sinkholes	Don't really know	
9/24/2021 17:48	Dade		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor All of these animals deserve our protection as we've taken their lands and waterways.	I'm sorry but No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm-water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife.
9/24/2021 17:49	Orange		No	No					Breach the Rodman/Kirkpatrick Dam	Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs.	Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	
9/24/2021 17:56	Duval		No	No					remove the Dam!	I've seen the results of the dam	continued problems with springs, etc	no	
9/24/2021 17:56	Volusia		No	Yes		1 time	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Keep it maintained and operational.	Local business and the great fishery it is. There's only 1 "Rodman" lets not ruin that too.. The spray programs around the state have already gutted most of them. Semi annual draw downs are all that's neeeded.	All the fishable water gone. Local business and bait shops that rely on the reservoir, gone.	Not really, no. Tearing down the damn will ruin, well eliminate, the reservoir.	Stop the spray!
9/24/2021 17:56	Hillsborough		No	Yes		1 time			Restore the Ocklawaha River to it's natural state and breach the Kirkpatrick Dam and the Rodman Reservoir.	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. It's taking resources away from an endangered species that's currently experiencing dramatic rates of death.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No. Breaching the dam is 50 years overdue.	The dam is already busted up and past it's life expectancy, don't waste more money on it.
9/24/2021 17:58	Outside of state / other	Frederick, Maryland	No	Yes		More than 5 times		Fishing Boating Wildlife viewing	Nothing, maintain the dam as it currently is	The lake has a thriving bass population.	I would never visit the general area again. I would fish elsewhere in Florida	No. Maintain the stats quo	None

9/24/2021 18:07	Outside of state / other		No	No					I would like to see the Kirkpatrick Dam removed, so that waterways are once again connected. This will improve the health and future of these vital ecosystems, that previously have been separated by the dam, which breaks up the fluvial ecosystem into smaller, and less healthy communities.	Free flowing rivers are the natural ecosystem, and as such are far superior to broken up systems, that prevent the free flow of water, and marine life, along the length of the waterway. One of the greatest benefits of the removal of the dam will be to allow the endangered Florida manatee the ability to move to a warm water area in the winter, and avoid the cold water which accounts for many manatee deaths, as so many of their natural habitats have been lost to development.	In addition to extra costs related to maintaining the dam, we will miss the opportunity to join these ecosystems together and improve its health.	The dam is past its design life, provides no power, and is in danger of an unplanned breach, with resulting flood damage. The dam should be removed in a controlled manner, and the natural ecosystem be allowed to improve.	I'm a native Floridian who grew up exploring the natural beauty of our state, and I would like to see the river systems connected once again. Removal of the Rodman/Kirkpatrick Dam, in a controlled manner instead of an accidental breach, will allow for the natural ecosystems to be rejoined, which will improve its health, and beauty. In addition, the removal of the dam will allow for the Florida manatee to have a protected wintering home, to avoid deadly cold water which causes so many of their deaths. They will even be able to swim up to Silver Springs and winter there. As a kid, I enjoyed going to Silver Springs and riding the glass bottom boats, and it would be a wonderful sight to see a manatee enjoying the springs, safe from the winter cold. Thank you, Ian Kress
9/24/2021 18:09	Alachua		No	Yes		1 time	Canoeing / kayaking	I would like to see the dam breached.	Breaching the dam would allow recreational activities at multiple springs that are currently submerged.	My biggest concern is the impact on manatees, fish populations, and algae growth-all which can be better balanced with the breaching of the dam.	No.	By breaching the dam, there will be positive economic and environmental changes. Ecotourism is growing and springs bring in thousands of visitors every year. The revenues from people visiting the springs (currently swamped by the dam) would be greater than the visitors using the dam.
9/24/2021 18:11	Alachua		No	Yes		1 time	Canoeing / kayaking Wildlife viewing	I would like to see the Ocklawaha River restored to its natural state so the ecosystem is able to recover from the damage caused by the dam.	Environmental impact statements and publications. I think it's important to note that this dam was part of the defunct cross FL barge canal and that the canal would have been an even bigger environmental disaster. Florida's beautiful nature is what draws so many to live and work and visit here. It's critical to me that we preserve and rehabilitate wherever possible.	Continued damage to the ecosystem. The decline of native fish populations. Future generations being deprived of the unimaginable beauty of a restored Ocklawaha. The deterioration of the Silver River and Silver Springs an absolutely stunning example of the beauty we are so fortunate to live near and are responsible to preserve.	I would need to hear more from environmental scientists on the impact of any compromise.	Please do the right thing for the river. Thanks.
9/24/2021 18:18	Broward		No	Yes		2-5 times	Fishing Boating Wildlife viewing	Remove the dam. Make the Oklawaha a free flowing river again.	Poor water quality on the Rodman reservoir ; submerged springs should be returned to their natural state.	Continue poor water quality in the reservoir and oklawaha rivers.	No	It's time for the dam to go. Restore the river.
9/24/2021 18:20	Marion		No	Yes		2-5 times	Canoeing / kayaking Wildlife viewing	I would like to see the restoration of the Ocklawaha River by removing the Rodman/Kirkpatrick Dam so that the Ocklawaha can return to its past state, improving water and wildlife quality.	The return of the many 20 lost springs and restored Silver Springs ecosystem.	The loss of the opportunity for the manatees to access the essential warm water habitat.	NO. It is long overdue. The dam is unsafe, the constant poisoning of the weeds behind the dam no doubt harms wildlife and fish, adding to the sludge beneath the water. There is nothing positive about keeping it.	Breaching the Rodman/Kirkpatrick Dam is the most cost effective way of restoring the Ocklawaha River, the Silver Springs Ecosystem, and the Great Florida Riverway. It will uncover 20 lost spring, allow manatees to freely move about, bring a return of the fish populations and enhance the local economies. Thank you for your consideration.
9/24/2021 18:23	Alachua		No	Yes		1 time	1 time	Other: I've only used the river for boating	I would like to see dam removed so the Ocklawaha and 20 freshwater springs can flow naturally. I make it difficult for boaters/enjoying the submerged springs during a drawdown helped me realize what a jewel we have on the Ocklawaha - a piece of old Florida that could be monetized differently.	Resources continuing to be wasted on repairing the dam and aquatic life being choked out by invasive plants	This is a good question that I don't have an answer for. Ideally, un-damming the river is my highest priority, but I can't see another option around it that would be satisfactory.	Thanks for considering these comments!
9/24/2021 18:36	Outside of state / other	Vermont	No	No					Breach	Cost savings	Cost of repairs	None. Breach

Historic Fish and Manatee is return as a bridge opens creating a free flowing river! 100s of manatees gain essential warm water Winter Springs habitat!	Temporary drawing the reservoir down to 11 or 12 feet mean sea level until resort reservation occurs and will avoid downstream flooding from a potential dam failure and still provide continuing recreational benefits! A drawdown alone does not provide environmental benefits for fish, amenities, water quality, water flow and an unobstructed blue way.	
9/24/2021 19:18	Marion		No	No					Get rid of it. Tllapia is taking over and killing native plants. WE NEED THE FLOW OF WATER GET RID OF THESE USELESS DAMS	NYT WAPO Ocala Star Banner The Miami Herald Friends of Florida and more	our water stolen by nestle and others will slow to an algae filled trickle.	NO tell the water boards to PROTECT THE WATER	
9/24/2021 19:19	Nassau		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing	Keep the Dam. Actually manage the pool to remove floating logs from channel and barge canal	Fish multiple tournaments a year on Rodman and the St John's river. keep a Camper on the river and spend a significant amount of money in Putman county. Removing the dam is a mistake.	Loss of a great fishery. Displacement of many birds, manatees and animals.	No	Save Rodman
9/24/2021 19:22	Bay		No	Yes		More than 5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 20 lost springs and Silver Springs ecosystem are restored	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. A drawdown can provide short-term safety needs as permit and plans are finalized.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.
9/24/2021 19:22	Orange		No	Yes				Canoeing / kayaking Wildlife viewing	Restore the river; remove the dam.	The SJRWMD, FDEP, and other groups have studied the impact of river restoration and the studies show benefit to the environment and fisheries.	Continued decline in the health of the river and ecosystem.	No.	
9/24/2021 19:30	Outside of state / other	New Hampshire	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. This is even more important now with their death rate at a new high. Also, 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer. It is critical to keep/restore habitat and support species diversity.	My concern is that all the wildlife species that are currently threatened will continue to suffer. Also, havens for wild flora and fauna prove to have benefits for both the environment, its inhabitants, and the soul of we humans. The pandemic has reminded many who forgot it, that the natural world is more important to us than we usual keep in mind on a daily basis. Everyone needs to keep that in mind all the time!	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Restoring the Ocklawaha River, the heart of the Great Florida Riverway, is the right thing to do for the long-term well being of Florida. It puts nature and Florida residents above the private interests of a few.
9/24/2021 19:47	Hillsborough		No	No					I would like to see the Rodman/Kirkpatrick Dam breached, helping tg restore the Ocklawaha River	Buried springs would be allowed to exist. Manatees could return to the area. It is very important that we restore 15,000+ as res of the Florida Wildlife Corridor	This is the one time chance to restore the natural flow of this beautiful river. If the dam is restored and money is foolishly spent on the maintenance of an outdated structure, all of us in Florida lose.	No. The only desired outcome is breaching the dam.	Please, please, please listen to old Floridians who love our state for its natural flora and fauna, and allow the Ocklawaha to flow again!
9/24/2021 19:52	Alachua		No	Yes		1 time	2-5 times	Canoeing / kayaking Wildlife viewing Other: Bird watching	Remove the dam	Buried springs	Drowned forest	No	
9/24/2021 19:59	Outside of state / other	Newport, TN	No	Yes		2-5 times		Fishing	I would like to see Rodman protect from any attempt to drain or otherwise change the current habitat.	It produces more trophy class largemouth bass than any similar size body of water in the US.	Palatka would lose much revenue from fishermen and the fishermen would lose a world class fishery.	No	
9/24/2021 19:59	Duval		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. Additionally, 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future, and would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir (and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/24/2021 20:02	St Johns		No	No						Restore the area back to its original state We need the ecosystem restored	Florida Wildlife Federation information	Continued loss of Florida's ecosystem	Restoration of some wetlands to improve our ecosystem	We need the black bears back!
9/24/2021 20:03	Orange		No	No						I'd like to see manmade changes (that is, damns) be reversed and let nature take its course.	People I trust in Florida Native Plant Society.	Continued man-made trouble created by non-native plants, wildlife, etc.	If you think "partial-dam" would be better than reversing God's creation completely, at least do the "partial dam." We can fix it in another 50 years.	Please take into account that humans attempt to do better than what has been provided is abysmally short of wisdom.
9/24/2021 20:08	Alachua		No	Yes		1 time	Wildlife viewing		Breach the Rodman Reservoir/Kirkpatrick Dam	Wildlife relies on the spring waters. This project alone would free nearly 2 dozen spring habitats.	Florida relies on hundreds of millions of tourist dollars and the resulting springs would encourage tourism. State visitors are interested in Florida wildlife and the resource cost is low relative to benefit.	No - now is the time to do this for current and future generations.	This year has seen record loss of embangered manatee populations. The added springs habitats could provide a foothold for population stabilization and growth.
9/24/2021 20:12	Outside of state / other	Valdosta Georgia	No	Yes		1 time	Canoeing / kayaking Wildlife viewing		Far it to be breached or taken down over time.	That it would return the Ocklawaha to its natural state and help the water quality of the Silver and St. John's rivers. Wildlife will flourish and people could start paddling to see the current hidden springs. A paddle or hiking trail would make amazing recreational activities and opportunities.	That the springs and water quality will suffer more as well as the wildlife. There are many indian sites that will be lost permanently before they can be explored further.	I would like it to be gone but if they could do more draw downs or even slowly breech it over a number of years, maybe that would show that it isn't going to be a sudden and chaotic change for the worst. And give people time to use the positive changes for their selves.	
9/24/2021 20:13	Marion		No	Yes	More than 5 times	More than 5 times	Wildlife viewing Other: Magnet fishing		The dam be removed.	Permitting animals needing refuge in colder months to get to where they'll have what they need to survive	Dead animals such as manatees who ultimately freeze to death.	No the dam stops so much wildlife.	I think the native Florida wildlife thatd benefit from that ecosystem and being able to find refuge from cold water in winter months.
9/24/2021 20:14	Outside of state / other	86323	No	No						Minimize environmental impact of the dam. Environment first.	over cascading ill effects of global warming and climate change	no	If we are not willing to incur economic limitations now, if we selfishly go out for short term economic gains, then we will suffer far worse economic devastation in the future as the intense destruction of weather and other natural events increases due to our continued neglect of the planetary ecosystem and all its parts
9/24/2021 20:19	Marion		No	Yes		2-5 times	Other: Only to drive across		Remove it!	Access for Manatees and Strip bass , cleaner river.	We lose some great springs along this part of the river. Catastrophic dam failure would possibly flood some folks down stream.	Partial removal could restore the river, maybe the Cyprus tree can return.	Thanks for looking for our input.
9/24/2021 20:20	Hillsborough		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 Million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	2021 is the deadliest year on record for manatees with over 946 manatee deaths reported by FWC as of 9/17/21; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/24/2021 20:25	Marion		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Wildlife viewing	Keep it the way it is. The people fish there and the wildlife depends on it along with the bait shops, businesses etc	The news and talking with people that use the place and recreation	What happens to the wild life and shops and fishing	Not really	Imagine the flooding in the area and the losses
9/24/2021 20:26	Marion		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Improve the dirt road leading to the other fishing dock.	When we get a heavy rain it gets washed away.	The local economy that relies on Rodman's for a living.		
9/24/2021 20:30	Outside of state / other	Oklahoma	No	No					Remove the dam' dam. Blow it, bust it, breach it!	I love natural wildlife tourism. I am a wildlife Tourist. I used to visit Florida regularly.	Destruction of habitat for wildlife, including big cats, manatees and other wildlife. If they are gone, I won't visit Florida anymore.	Absolutely not! Free the river, save the wildlife, from sea cows to Panthers! Save tourism.	
9/24/2021 20:30	Putnam		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	Let's remove the dam and restore the Oklawaha to its original form------a place of beauty, great fishing and a revitalization of that part of Florida---	I've lived and owned property in Putnam County for 40+ years------close contact with the Dam/Reservior/St. Johns River. Science supports the removal of the Dam----and my guts tell me it's the right time to move forward.	Further degradation of the Oklawaha River and surrounding forests----	I could support an agreement to breach the Dam, restore the Oklawaha area---that would be phased in over several years. All parties would finally agree that it's time to do the right thing------and would accept a plan that might take several years(3-10to fully complete.	
9/24/2021 20:33	Levy		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing	I would like to see it maintained in its current state.	I find the fishing and wildlife viewing to be unlike any other truly Florida experience. I have fished the Ocklawaha and St. Johns river my whole life. The Ocklawaha river above the pool and below the dam are beautiful. However, they do not provide the unique outdoor opportunity that the Rodman pool provides.	My biggest concern is that multiple generations of potential outdoor enthusiast and fisherman will not learn to love the outdoors because the reclamation of the pool to its natural state will take away so much local opportunity for learning about and experiencing the diversity we have available with Rodman in the mix of opportunities.	I can see the money that would go to reclaiming Rodman used to promote its uniqueness and draw more people into the outdoors instead of just dividing the ones who already participate in outdoor activities in the local area.	Thank you for taking the time to gather information in an easy to use digital format.
9/24/2021 20:41	Duval		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Boating	Leave it alone	The lake has been there for years. It has became its own environment. It will become a mudpit. It will take millions of dollars and 50 plus years to recover if the damn is taken away. The Rodman resvoir is a destion place for lots of people.	Environment	No	
9/24/2021 20:41	Polk		No	Yes		More than 5 times		Fishing Boating	Leave it alone!!!!!!!!!!!!!!	Look at the wildlife, fishing, habitat.	Loosing the greatest fishery, wildlife habitat in Florida.. all because of a very few tree hugging rich canoers that want a tiny skinny river for their own paddling use.	Not draining Rodman reservoir. Period. The way it is,, it suites all concerned, except for a tiny few selfish asses.	This bs comes up every few years, fueled by the same few selfish rich tree hugging canoers that want it for themselves. Look at the enjoyment for everyone, look at the habitat for wildlife, look at the revenue for local areas that soooo many people rely on. Just like everything else in this country, those few that bitch get what they want. Put this ongoing draining issue to rest. Leave the reservoir alone
9/24/2021 20:41	Lake		No	No					Have nonessential portions removed to restore waterways.				Florida relies heavily on eco-tourism. Despite this knowledge, barely regulated housing markets and unsustainable growth have overtaken swaths of Florida state. Without action to restore the natural beauty, Florida will not only suffer in the loss of wildlife and land, but economically because we will no longer be able to boast of the natural beauty for which we OE so famous.
9/24/2021 20:43	Leon		No	No					It ought t be torn down.	It is expired and blocking off multiple freshwater springs that would provide much needed habitat for our manatees.	Manatees will continue to starve and so much taxpayer money would be wasted to repair the dam.	No. It's demolition is 50 years overdue.	Florida's freshwater springs and manatee populations are among our most wonderful natural resources. Restoring springs and protecting the manatees, who have had the most deadly year ever thanks to our pollution killing their food sources, should be a priority for every Floridian.
9/24/2021 20:44	Duval		No	No					Take them down.	Free flowing river	Waste	No	
9/24/2021 20:50	Lake		No	Yes		1 time	2-5 times	Fishing Boating	stay as is	recreation opertunitys	the reservoir is lost	no	

9/24/2021 20:51	Alachua		No	No				Fishing Wildlife viewing	Breach the dam. It's gat to go and it's 50 years overdue.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss this opportunity where the funds are available and the springs and wildlife need our support.	No. There is no alternative.	Please put the animals and the waterways first. It's critical
9/24/2021 21:02	Seminole		No	Yes	1 time	More than 5 times	More than 5 times	Wildlife viewing						
9/24/2021 21:06	Duval		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	Preserve it	Wildlife				Awesome Fishery
9/24/2021 21:08	Lake		No	Yes			More than 5 times		Breach it	Wildlife, over health of the water ways, lost springs	More death of wildlife			
9/24/2021 21:12	Alachua		No	No					Breach the dam	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	Tanpayer money being used to repair the dam that would be better off taken down now to emotive environmental conditions	No.		This is the deadliest year on record for manatees, and the dam keeps them from habitat that they could be otherwise thriving in!
9/24/2021 21:16	Marion		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing	Remove	The natural way the water flows, the habitats, wildlife, water life and springs	To keep fighting	Not at the moment.		Keep plugging and trying and getting the word out to more people and to the right people. God Bless!

9/24/2021 21:24	Volusia		No	Yes	1 time	1 time	1 time	Canoeing / kayaking Wildlife viewing Other: Hiking around the area	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick dam	20 lost springs and Silver Springs ecosystem are restored Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat	Our natural springs and rivers not restored during a time that federal money is available to do so now.	Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. A drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.		2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/24/2021 21:34	Marion		No	Yes		2-5 times		Canoeing / kayaking Boating Other: Quiet enjoyment, hiking.	Breach it please	Manatees, springs, fish and wildlife are all in jeopardy due to the dam that was built when environmental concerns were not studies and addressed yet. With more knowledge we can be kinder to our environment and protect the beauty for many generations to come	That Florida will be ruined just like many areas already are.	I recently visited Palatka, an ugly example of how the need for environmental care and measures could turn a potentially abomination into a nice city with a great waterfront. I noted some signs there about "saving " The dam. Please provide the population with objective information regarding detrimental effects of saving this dam....but also couple the info with ways folks can still fish have other recreation a tournament etc.	Please help save our beautiful State of Florida . Remove the dam and free up the reservoir.
9/24/2021 21:42	Nassau		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/24/2021 21:55	Alachua		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	Remove the dams, restore the unbroken riverways, restore MANATEE habitat!	Record deaths of manatees in the first 6 months of 2021 in Florida waters. Their habitat is increasingly threatened, and the Rodman Dam in particular has been a controversy for decades. Sportsmen and fishing should not overrule threatened marine populations and the watershed issues for Florida's water resources.	More extended debate over the issue of the Rodman Dam that goes nowhere...and continued negative impact on manatees and other threatened marine life.			
9/24/2021 21:56	Alachua		No	Yes	1 time	2-5 times	More than 5 times	Fishing (shoreline/structure) Boating	Remove the dam and allow nature to restore and connect the river to its natural state.e.	Science based observation that support the increased amount of wildlife, the return of the natural Forrest land for camping , fishing tourism , cleaner water and increased economic benefits from having a fully functioning world class connection of Florida rivers that function as one living unit.	The loss of one of the greatest tourist attractions in the State of Florida(...!	have not been exposure to a scenario.		Please apply your best science based thinking and make a mistake made 50 years ago no longer have the life force to keep the River from flowing freely.
9/24/2021 21:58	Outside of state / other	Iowa	No	No					I'd like to see the Ocklawaha River dam to be breached, so that the river can return to its natural state and afford endangered manatees life-saving warm water habitat.	I believe it is our sacred duty to preserve biodiversity and functional ecosystems on our planet... for future generations to enjoy and to enable all species to make their home here by our side.	The fate of the manatees becomes perilous without decisive action.	No.		
9/24/2021 22:06	Outside of state / other	Massachusetts	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.		
9/24/2021 22:09	Alachua		No	Yes		1 time		Canoeing / kayaking Wildlife viewing	Breach the dam.	The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue.		Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
9/24/2021 22:10	Orange		No	Yes		1 time		Canoeing / kayaking Wildlife viewing	I would like to see the dam breached and full hydrologic connectivity restored to the Ocklawaha.	Breaching the dam would restore the natural water flow of springs and rivers and restore the floodplain while providing enhanced recreational opportunities	Continued degradation of the river ecosystem and loss of spring function.	No. It doesn't seem like there is a compromise scenario, and breaching the dam is overdue.		
9/24/2021 22:22	St Johns		Yes	Yes		2-5 times		Canoeing / kayaking Wildlife viewing Other: Diving	Breach of the dam and restoration of the flow of the river.	There are 20 vital springs that supplement Florida's natural ecosystem and without water flow from the river, the natural ecosystem will die off.	Loss of many natural ecosystems and resources for Florida's wildlife and habitats.	No		
9/24/2021 22:22	Duval		No	Yes	More than 5 times			Fishing	Keep it. it provides better habitat than river would for wildlife	Wildlife habitat and quality fishing	Lost of habitat for wildlife	No		The rainone provides better wild life habitat than a restored river Chanel
9/24/2021 22:22	Alachua		No	Yes		2-5 times	More than 5 times	Other: To look at the outrageously expensive dam.	Please remove the dam and restore the river. It's foolish to spend tax dollars fighting nature for the pleasure of a few fishermen.	The budget of the State of Florida.	Tax dollars should be spent wisely. Climate change will cause flooding. The Ocklawaha's natural drainage basin could accommodate water that would otherwise stack up to flood homes.	It will be best to remove the dam all at once and stop the waste. However, if a compromise is necessary, reduce the in flow by 10% a year and in 10 years the problem will be solved.		A free-flowing Ocklawaha would offer more recreation opportunities to the tourist industry, increasing appreciation for our state as well as revenue.
9/24/2021 22:23	Citrus		No	No					I'd like to see it removed and the natural water flow between springs and rivers restored. The dam serves no purpose at this time and impedes the manatee's ability to access the warm water springs in winter months. Other wildlife in this corridor needs to flourish as well.	Manatee deaths due to vanishing habitat and the deteriorating water quality on the St Johns River estuary due to habitat destruction and pollution	Continued stress on natural areas for both people and wildlife from artificial man made impediments like this dam and the decreased flow of water through the natural riverways	No! This is the time and it is highly overdue! Now FL has the money, resources, and the political will to get this done. It would be such an ecological win for our state. Please right this wrong and restore the natural river way. I love our FL springs. Please be their advocate for their natural beauty, the wildlife, Manatees, environment, and the people who find solace and peace and recreation at the springs and rivers. Thank you so much!		
9/24/2021 22:25	Marion		No	Yes			More than 5 times	Fishing Wildlife viewing						
9/24/2021 22:28	Alachua		No	No					I would like to see the dam breached, and the water restored to the springs.	There are 20 drowned springs that would be benefited. Manatees are also in danger, dying off in 2021 at higher rates than ever before. Public interest is high at the moment and this is the opportune time.	I'm concerned about the fish, manatee and springs themselves suffering.	No. Breaching the dam is 50 years overdue.		
9/24/2021 22:31	Manatee		No	No					would like it breached	hundreds of manatees would get access to a much needed habitat at a time when our beloved manatees are dying, we need this access to more springs and food, more warm water habitat	our water quality will decline, more blue algea blooms, more fish kills	no		our manatees need you, we need this warm water habitat and access to new springs for our manatees
9/24/2021 22:32	St Johns		No	No										
9/24/2021 22:36	Alachua		No	Yes		1 time	More than 5 times	Canoeing / kayaking	I would like to see natural waterway restored.	Fish and manatees are blocked by the dam, and populations have declined drastically because of it	My biggest concern is for the ecosystem that is disrupted by the dam	No, I am advocating for full restoration.		Thank you for the opportunity to share my thoughts.
9/24/2021 22:40	Lake		No	No					Please remove this man-made obstruction to return the river to it's natural flow. The reason it was put there is no longer valid, it was never a good plan to begin with.. Thank you.		No Go - No Flow!	NO!		
9/24/2021 22:43	Broward		No	No					living space for our Manatees	to protect Florida's wildlife	Year that we will lose some of our wildlife			
9/24/2021 22:45	Marion		No	Yes		More than 5 times		Wildlife viewing	Breach the dam. Free the springs. Make off shoot ponds/small lakes near the oxbows. Reforest banks.	History	Little usage of area continues	Make the dam hydroelectric		Push DeSantis to act
9/24/2021 22:52	Duval		No	No					Remove the dam to restore the natural, free-flowing ecology of this section of the St John's River.	Science informs my position. A free-flowing river is the natural state for all of the organisms that have evolved to live and depend on this river system, especially migratory species and floodplain-dependent species.	My biggest concern if we retain the dam is continued alteration of the river's natural hydrology and the negative effects on ecosystem function and especially loss of riverine biodiversity.	No. We need to remove the dam and restore this river to something closer to its natural, free-flowing state. We need to undo this unnecessary over-engineering of mother nature.		I one-hundred percent agree with the St Johns Riverkeeper position, as below. As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This exciting restoration will improve water quality and flow by generating an additional 150 million+ gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
9/24/2021 22:54	Outside of state / other	Marin County, California	No	No										I live in California and want to see manatees protected.
9/24/2021 22:55	Outside of state / other	Raleigh NC	No	No										
9/24/2021 22:57	Outside of state / other		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/24/2021 22:59	Duval		No	No					Breach the Rodman/Kirkpatrick Dam	We must protect the springs for future Floridians as well as the wildlife both plants and animals that need each other in order to be healthy. There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. We all depend on water to sustain life.	No. Breaching the dam is 50 years overdue.		Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. In addition, we must protect manatees and restore their habitats. When I moved to Florida four years ago, seeing the manatees in Blue Springs brought me so much joy at a very difficult and stressful time in my life. I would hate to think that one day others would not be able to share in joy of seeing manatees swimming in the spring because we did not do all we could to restore and protect them. I have previously taken family members to the springs and introduced friends to them; they are truly a treasure in Florida. Let's keep them going by breaching the dam.
9/24/2021 23:09	Dade		No	Yes	1 time	2-5 times	More than 5 times	Wildlife viewing Other: Just enjoying nature	Restore animal habitats	Wildlife updates	We lose manatees			
9/24/2021 23:28	Marion		Yes	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing	Keep the dams	Great fishing	Flooding on st johns	No		
9/24/2021 23:30	Washington		No	No					Even while manatees are still struggling with starvation from seagrass loss, the greatest long-term threat to these animals is the loss of warm water habitat that manatees need to survive the winter. Right now, 60% of Florida's manatees depend on power plant outfalls to keep warm and survive the winter - an unsustainable and unnatural situation. Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	The Ocklawaha River is the heart of the Great Florida Riverway, which, if restored, could provide essential warm water habitat for hundreds of manatees in the winter. Manatees have already reached a record number of deaths this year - and if we don't restore additional areas of their natural habitat, we could lose even more manatees in the future.	The death of Manatees possibly to extinction.	No.		
9/24/2021 23:36	Marion		No	Yes			More than 5 times	Fishing Wildlife viewing	Left alone. It is a beautiful place	The surroundings, the fishery, the wild life, nature.	The impact on the environment. The clean up would be tax dollars wasted. The economic impact on the surrounding towns would suffer	I would support better ramps, parking areas, more natural walking paths		
9/24/2021 23:38	Broward		No	No					Remove the damn and restore water flow.	The environment and ecology relies on it	Mismanagement of money spent to maintain a damn that's old and serves to further harm Florida's wildlife.	No		
9/24/2021 23:41	Jackson		No	Yes				Wildlife viewing	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.		
9/24/2021 23:49	Leon		No	No										
9/25/2021 0:28	Citrus		No	Yes			More than 5 times	Fishing	Leave it as is.	There is a tremendous amount of birds and wildlife that depend on it.	The birds and wildlife and fishermen that would lose the use of it.	No		

9/25/2021 0:36	Marion		No	No					I would like to see this aging dam breached, in as efficient and environmentally compatible way as possible, in order to restore the natural flow of the Ocklawaha River.	By restoring the natural flow of the Ocklawaha, over 150 million gallons of water per day will flow into the St. Johns and lower Ocklawaha rivers, providing improved water quality, improved habitat for fish and wildlife, and enhanced recreational opportunities along the restored waterway.	The entire riverway will suffer: the water quality, the ecosystem, and the habitat for fish and wildlife (including manatees).	Probably not, unless there is agreement that a temporary drawndown is but a step toward total restoration of the river. Postponing the restoration of the Ocklawaha will undoubtedly cost more in the long run.	The primary disadvantage of breaching the dam seems to be the loss of fishing and boating on the artificially-created Rodman Reservoir. However, the benefits of restoring the Ocklawaha River far outweigh this disadvantage, especially since a myriad of other opportunities for fishing and water recreation will become available if the riverway is restored to its natural state. If the dam remains as is, it is only a matter of time before: (1) expensive repairs are necessary, and/or (2) the dam fails, causing millions of dollars of damage. The benefits of restoration are huge: water quality improves, habitat for fish and wildlife improves, health of the St. Johns Estuary improves, beautiful springs are restored, manatees are able to access warm waters, eco-tourism will grow, and the overall economy of the area will be enhanced. It will be important to include folks who currently use the reservoir for fishing in discussions of future plans, and help them recognize that the recreational opportunities will be enhanced, rather than eliminated.
9/25/2021 0:41	St Johns		No	No					Remove the damn	Maintaining this old structure is costly fiscally. It is an outdated idea of how to maintain local ecosystems and habitats. Breaching the damn will provide manatees with much needed living space. I have seen first hand the decline of these populations while working in the Saint Johns river where bulkheads have prevented spartina grasses from growing and up he waterway from cleaning itself properly. This damn is outdated and would provide new territory for manatees to thrive in.	Further loss of wildlife populations due to loss of habitat.	Not at this time. Maintaining the damn isnt the best scenario for us neither monetary cost wise to upkeep nor for the habitat. Allowing springs to refill naturally is the best future path. It could even prompt tourism to the areas affected providing potential educational opportunities to visitors of Florida about the importance of our natural spaces and native species.	
9/25/2021 0:42	Marion		No	Yes	More than 5 times			Canoeing / kayaking Wildlife viewing	Leave it alone. It's fine as is and very popular among locals and more.		What would become of it, and the manatees, as well as losing such a beautiful get away so close to home.		
9/25/2021 0:51	Outside of state / other		No	No					Breach the Kirkpatrick dam and restore the Ocklawaha river	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. When the manatees are dead, so will much of the tourism that brings people to Florida.	No. It is time to breach the dam and save the Wildlife of Florida.	
9/25/2021 1:06	Outside of state / other	Leavenworth, WA	No	Yes			2-5 times	Wildlife viewing	Restore manatee habitat	The declining population	Manatees' sustaining numbers, continued de line. boat strikes		
9/25/2021 1:08	Alachua		No	No					Take it down to restore the springs!	Environmental concerns!	The terrifying negative environmental impact!!!	No, the dam needs to be taken down	
9/25/2021 1:36	Putnam		No	No					I would like to see the dam removed so the river can be connected again and wildlife will be able to easily travel along it. I'd like to see the springs return, and see native fish and manatee populations grow.	The current decline of the manatees and native fish population is what motivates me to speak for this position.	Continued loss of wildlife through having an encumbered waterway.	These are great questions! I would host a community workshop to generate new ideas entirely (with scientific and conservation experts as well).	I appreciate the opportunity to share my viewpoint. I hope action can be taken in service of the manatees especially.
9/25/2021 1:43	Alachua		No	No					breach the rodman/kirkpatrick dam	drowned springs could be restored by this project, manatees could regain important habitats when they are borderline extinct, and fish populations could rejuvenate. we are at a time in this world when it is absolutely imperative to do our part, as a community, to restore natural animal habitats and populations. we cannot sit still when these important florida species are about to be extinct.	selfishly, i want my children to be able to enjoy the springs as i have in my childhood. nothing has brought me more joy growing up as seeing manatees, alligators, birds, and fish like the florida springs have. in addition, it is a financial waste to spend taxpayer money on repairing this nonsense dam that doesn't provide flood protection, power, or water supply. why should we waste money on something that does more harm than good?	no, we ought to breach the dam. it is 50 years overdue.	please, for the love of god, do breach this dam in honor of the manatee. manatees are one of the most majestic, strange, beautiful creatures i have ever had the pleasure of encountering. there is something absolutely awing about encountering a manatee. 2021 has been their deadliest year on its planet and they desperately need their habitat restored. habitat restoration provided by breaching the dam will allow manatees to keep warm in the winter and thrive. wouldn't it be amazing to be a part of this survival process for them?
9/25/2021 2:33	Outside of state / other	San Francisco	No	No					I would like to see that the dam is breached to a capacity that allows the native populations to have a proper chance at recovering.	At a time when we are seeing powerful effects of the impacts of climate change, it is gravely important that we do what we are able in order to support biodiversity and restore habitats as much as we are able. I understand that there's been a decrease of native fish populations due to the dam cutting native predators that might help curb invasive blue tilapia and thereby allow some of the natural habitat to bounce back. I also understand that this would restore migratory fish channels, and restore access for manatees which I had the great honor of seeing in my recent travels west of here. I do not understand this piece as deeply, but I have also read that this would revive up to 20 drowned springs which could have an important impact as well-restoring other habitat not in this exact location.	The impacts on climate change. Think: toxic algae blooms, more invasive species, fish kills, less safe clean water, weaker flood protection, less species biodiversity, a less beautiful county, state, country, planet.	I cannot imagine anyone being capable of imagining a solution that resolves all of the things aforementioned. Mother Nature has a lot of ways to restore naturally (bad with some help) that we have never been able to engineer without many adverse side effects.	I have not been to Silver Springs, but I've recently been able to see the beauty of Crystal River, Three Sisters Springs, Hunter Springs, the Suwannee River, and Weeki Wachee Springs. I have fallen in love with this area of the country, and have gained an incredible appreciation for its unique beauty, charm, fragility. I've read about the underground connection between these Floridian waterways and have followed along with conservation efforts via the Florida Wildlife Corridor Coalition. I know I'm not from the area but I hope you are able to take my thoughts into consideration.
9/25/2021 2:36	Outside of state / other	California	No	No					save the manatees by breaching the dam	Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	Manatees have already reached a record number of deaths this year.	we need to do everything possible to restore habitat and access to the starving manatees	
9/25/2021 2:50	Duval		No	Yes			More than 5 times	Boating Wildlife viewing	Restored to its natural state	Manatee safe haven at Silver Springs	Loss of manatees	Free the river to its natural state	Restoring the springs would be greatly beneficial to the Ocklawaha and St. Johns Rivers
9/25/2021 3:10	Volusia		No	No					I would like to see it demolished.	This will restore the natural environment and improve water quality.	The continued destruction of natural resources.	No. It's the right thing to do.	
9/25/2021 4:20	Outside of state / other	Virginia	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/25/2021 6:00	Putnam		No	Yes			1 time	Fishing Fishing (shoreline/structure) Boating Wildlife viewing Other: Enjoyed Camping, just relaxing get away, watch growing family's. learn and play there.	Leave it along !! Let Putnam county use the beauty of its fishing and wildlife... stop thrivating the county with the destruction ever few years ..we have already voiced our approval of the Dam for 50 years.. there is other areas to be considered for destruction or renovating in Florida than to destroy a place that is a food source for many families..Just leave it along !!! Improve it not destroy it ...	Same old liberal bunch wanting to keep people fighting in these surrounding counties.. we love the dam.. the important piece of information is to do your research of the papers of past years ....The majority of the people and the state have been already spoken on this , time and time again.. we need the Dam for resources to Florida now ... leave it along ...!!!	It would be destroyed and become a housing development .... then no one would be able to enjoy it but for a few developments.. restrictions .. no food supply for familys.. water sources destroyed .. ral pollution factors for the environment .... leave it along !!!	No.. no..no.. leave it along ! .. I want the Dam to thrive for family's and the livelyhood of Florida ... it is not just our scenario.. nature has adapted to the project over time .. it is a beautiful place that just needs some help to keep it maintained... leave it along !!! keep the Dam flowing for Putnam county	Do you get the point .....stop trying to divide our state and county, with ever few years placing this out to stir up the people.. with a threat to remove the dam.. more than ever now we need it for resources for families .. help us keep it and improve it .. the environment has taken care of itself these ,leave it along ! This has been our answer for years.. LEAVE IT ALONG !
9/25/2021 6:39	Marion		No	Yes	1 time	2-5 times	More than 5 times	Fishing Canoeing / kayaking Wildlife viewing					
9/25/2021 6:40	Marion		No	Yes			2-5 times	Wildlife viewing	Breach the damn permanently	Wildlife	Manatees	Not that I would be happy with	
9/25/2021 7:01	Sarasota		No	No					Breach the dam	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	- No. Breaching the dam is 50 years overdue.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
9/25/2021 7:11	Columbia		No	Yes			1 time	Other: I don't use it. Take it down.	Breach that thing!! Take it down. Let nature do it's thing.	Nature supports my position.	Springs drying up	Nope. Take it down.	
9/25/2021 7:16	Alachua		No	No					remove the reservoir and dam	wildlife restoration and environment improvement			
9/25/2021 7:17	St Johns		No	No					Breach the Rodman/Kirkpatrick Dam	The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs. This would also restore 20 Florida springs bringing back manatee and large part of the fish population.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. In addition to water quality decline further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/25/2021 7:22	Outside of state / other	IL	No	No					Please Restore the Ocklawaha River by getting rid of the dam.	The life of manatees. We are losing biodiversity at an alarming rate and must do everything we can to preserve animals and wild spaces that still exist.	I am concerned that the balance of nature will continue to break down, further endangering all life including humans. I am also concerned about the lack of awareness and empathy of/for sentient beings such as manatees.	The habitats that the river provides are in crisis. Please Restore the Ocklawaha River and get rid of the dam.	The breakdown of nature is happening right before our eyes. We either work to fix the problem or we ruin this beautiful planet.
9/25/2021 7:27	Alachua		No	No					Breach the dam, let nature be as it should be	This is a major cost effective restoration project that will save millions in repairs to restore 20 springs and aquatic wildlife	A continued decline in water quality and aquatic life for wasted repair costs and wasted economic opportunity for a dam that provides no energy, no flood protection or water supply	NO, breach the dam already!	This dam has caused a 92% decline in migratory fish and is preventing our manatees, who are struggling to survive enough as it is, from reaching a warm water habitat they need to live. On top of having little to no benefit, this dam is in need of costly repair. Save the money, save our springs, save the animals and open the doors for economic growth. Breach the dam!
9/25/2021 7:32	Citrus		No	Yes		2-5 times	2-5 times	Boating Wildlife viewing	Removal	Restoring feeding areas for manatees and breeding fish grounds, also restoring drowned springs	losing manatee	no	
9/25/2021 7:33	Palm Beach		No	No					I would like the see the dam breached	The potential restoration of natural habits in the surrounding area and springs	Further destruction of natural areas	Not at this time	
9/25/2021 7:46	Brevard		No	No					Have it breached/taken down.	The restoration of several springs, fish migration and manatee habitat.	That trying to restore the dam would be very costly and that the springs wouldn't be able to be restored to their original wonder. Also the higher risk of algal blooms.	No	
9/25/2021 7:49	Alachua		No	No					Open up the damn	Filling the springs back up	The springs dry up and destroys the springs natural ecosystem		
9/25/2021 8:04	Outside of state / other	Michigan	No	No					Breach the dam	Even while manatees are still struggling with starvation from seagrass loss, the greatest long-term threat to these animals is the loss of warm water habitat that manatees need to survive the winter. Right now, 60% of Florida's manatees depend on power plant outfalls to keep warm and survive the winter - an unsustainable and unnatural situation. Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond. One critical step will be breaching the dam that holds back the Ocklawaha River, which will help hundreds of manatees by allowing them to access additional warm water habitat.	manatee will die		
9/25/2021 8:05	Seminole		No	Yes			1 time	Wildlife viewing Other: I am the past president of Seminole Audubon & presently an active member. I love nature and open spaces and I look for wildlife but if it is restored I can't wait to go see the springs once it is drawn down! I would kayak often & of course look for birds.	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs would be restored allowing over 150 MILLION gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers. This would also mean many of the suffering and dying manatees will be able to gain essential warm water winter springs habitat.	I am concerned that the 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow that is necessary to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. This will cause the water quality to decline further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Also we have had many manatee die recently. Manatees would lose the opportunity to access essential warm water winter habitat.	No. In fact the dam is a safety issue meaning something must be done. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	I am a 62-year old Florida native & I live on the St John's River. I have always loved the natural side of Florida and I am mainly sad that my 3 year old granddaughter may witness an increased decline of Florida's environment and wildlife . I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for her and the rest of our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This exciting restoration will improve water quality and flow by generating an additional 150 million+ gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration.
9/25/2021 8:18	Hillsborough		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	I would like to see the dam removed and the river restored		the continued decline of the river		
9/25/2021 8:19	Putnam		No	Yes	1 time	2-5 times	More than 5 times	Fishing Canoeing / kayaking Boating Wildlife viewing	I would like to see it stay.	The fact that an ecosystem has formed and if the dam is demolished, that ecosystem would disappear.	The flora and fauna that has created a home would be affected, as well as the time it would take for everything that is currently submerged to either be removed or rebound.	Maybe a permanent drawdown...?	
9/25/2021 8:27	Outside of state / other	MA	No	No									
9/25/2021 8:28	Polk		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait. Oh	Please breach the dam to restore the river to its natural state. It doesn't seem that there could be a better time to do this, I understand that maintenance on the aging dam has been neglected and the burden to taxpayers to repair will be costly, not to mention the liability if it were to fail. Restoration would replenish the water ways by adding 150 million gallons of water a day into the St. Johns Estuary and reunite the Great Florida Riverway. Manatees have died of starvation in record numbers this year due to the depletion of native seagrass. 60% of manatees depend on warm water outfall from power plants to survive the winter, but reuniting the rivers would provide warm water sanctuary for hundreds of manatees. Migratory fish species will return to the area.
9/25/2021 8:33	Marion		No	Yes		2-5 times	More than 5 times	Fishing	I would like to have the dam removed for several reasons. The natural Striped bass population is unable to reproduce due to the dam stopping egg flow. The Saint Johns River species are effected from the lack of flow exiting the Ocklawaha river. Tilapia are taking over the Ocklawaha due to lack of predators and are causing a decrease in the amount of all game fish species from large mouth bass, mullet, striped bass, catfish, and most all other species of fish. There are several springs that are hidden from the public due to being flooded by the reservoir . People love these springs and they would frequent the area to get exposure to them. We are also losing a large amount of the water in the Ocklawaha due to evaporation out of the Rodman pool. The dam was part of a major failure in the cross Florida barge canal plan. The rest of the project was scraped so why did the dam stay? It provides no positive purpose. People argue that it provides a good fishery, but all the natural game fish in the Ocklawaha are declining. Fishing is the only real leg anyone has to stand in the argument to save the Rodman dam. But if we are saving a constant reduction in fish since the dam was established than what good is it?	Removal of the dam would being back the natural ecology of the Ocklawaha River and St. John's River. Since it's introduction there has been a steady decrease in native fish populations. Economic opportunities will increase from the dams removal. Increased fish populations will bring fisherman and the spring exposure will bring many tourists to the area. There are absolutely no arguments that would help preserve the structure of the Rodman Dam.	If the Rodman Dam is not removed we will see a continuing decrease in native species of fish and animals. Populations have been on a steady decrease since the dams introduction.	There is no way to achieve the goal of restoring natural game populations without its removal.	If the Cross Florida Barge Canal was proven such a terrible idea for the environment why are we still preserving the pieces of it from the 1960's.
9/25/2021 8:33	Orange		No	No					Destroy the dam and restore the natural river's flow.	20 springs are unable to be experienced by nature lovers and critical manatee winter habitat is lost.	A chance to correct this travesty again will be a long time coming.	No.	The purpose of the dam was never realized and natural conditions should be returned to.
9/25/2021 8:35	Santa Rosa		No	No					Remove the dam. Restore the ocklawaha River.	Dams degrade rivers and cut off habitat for many species.	The fate of manatees	No	Removing the dam would provide a winter refuge for the manatees.
9/25/2021 8:36	Orange		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs,.	The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit.	No. Breaching the dam is 50 years overdue.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/25/2021 8:36	Volusia		No	No					Return the river to its natural state	With global warming occuring to restore it to its natural state would allow young and old to see what nature can do to make things beautiful for a time. The experience maybe short lived.	The slow decline of what man made that is not longer in use or necessary to stand as a scar of ugliness and decay.	If you don't use it remove it.	
9/25/2021 8:37	Lake		No	Yes		2-5 times		Fishing Boating Other: Picnic	Nothing, leave it alone, it's a refugee for manatees and an wonderful ecosystem full of species that are Endangered. The FWC said it's the third best bass lake in Fla. its one of the last examples of old Florida. Truly a wonderful place to see nesting eagles and birds.	Fwc, a 12 pound bass from Rodman on my wall and all u have to do is go on Rodman to see manatees as the Buckman lock master counter over 500 coming thru the locks last year.	The loss of a wonderful place for wildlife and it would become a mud hole. We pay for motel and restaurants when we come and use a local guide to fish. The economic result for the area would be deviation.	No	Rodman is a giant water filter for bad dirty water coming out of the Harris chain going into the St. John's. So many benefits for thousands that visit it each year.

9/25/2021 8:38	Polk		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs.	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. This restoration will improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Reuniting the rivers will additionally provide essential habitat for hundreds of manatees and enhance the local economy by returning a $50 million net benefit over 10 years and removing an estimated $57 million dam safety risk, and increasing regional visitor traffic by a projected 28%. Additionally, sought-after migratory fish species such as striped bass will return, and additional bank fishing opportunities will open up along the Ocklawaha. Thank you for your consideration.
9/25/2021 8:39	Pasco		No	Yes		More than 5 times	More than 5 times	Fishing	Leave it as is but remove more of the hycine	Great fishing	Decrease in quality of fishing	No	I generally hire guides, stay in local motels, and eat out on trips
9/25/2021 8:46	Outside of state / other	MT	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam. Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. ±5,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("OSO") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/25/2021 8:51	St Johns		No	No					Breach the dam	I am a new student of water management in Florida. I grew up here and have been studying and learning more about the interconnected was of all the water systems in our state and the wider impacts including aquatic life and larger ecosystems dependent on them.	I am very concerned that we do not prioritize natural resources and water in our policies. To me the bigger picture here is the need to establish and maintain the value of FL's natural resources - starting first and foremost with water - or we lose our most valuable asset. We become another wasteland.	Of course. Compromise is important but the corporate interests here need to recognise their role too. To me the biggest implication is the long term viability of the waterway, wildlife that depend on it and other estuaries that could be restored by the dam being breached. I don't know enough (yet) to state specifics but I am going g to do more recon.	Thank you for protecting FL's most valuable assets.
9/25/2021 8:55	Outside of state / other	Raleigh, NC	No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife			
9/25/2021 9:03	Clay		No	Yes			1 time	Other: Just to look at what it has done to the Ocklawaha. As a child my parents & I used to boat the Ocklawaha, I'm very sad.	Removed and restore the Ocklawaha.	No information, I would just like to see things back the way they used to be, the reservoir may be a good fishing spot but it isn't pretty with some of the trees and stumps still visible that were bulldozed over and you remember what it used to look like.	That some NON conservationists will continue to destroy our state.	At least get rid of the lake and restore the river, I guess breach the dam.	
9/25/2021 9:05	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Canoeing / kayaking Boating Wildlife viewing	Removal and restoration	The massive ecological impact of an obsolete ans decaying structure	The slow death of the river	No	
9/25/2021 9:13	Alachua		No	Yes	1 time			Canoeing / kayaking Wildlife viewing	Breach the Rodman/Kirkpatrick Dam	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. Not only will it improve water quality, it'll provide refuge for many Florida endemic species. It will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/25/2021 9:24	Pinellas		No	No					Breach the dam.	Increased recreation and wildlife habitat	Wasted money on dam replacement and lost opportunity for habitat improvement	No.	Rodman Dam was a bad idea from the beginning. It should have been removed decades ago. This is the time to save money and right a wrong in one easy action. Breach Rodman Dam and save the Ocklawaha River.
9/25/2021 9:25	Outside of state / other	Marietta, GA	No	Yes			2-5 times	Fishing Boating Wildlife viewing	Leave it undisturbed to protect the manatees, game fish, and other wildlife.	Rodman is a special place with incredible wildlife and trophy bass.	Loss of the refuge for manatees, trophy bass, and other wildlife.	Not that I can identify.	
9/25/2021 9:33	Volusia		No	Yes			2-5 times	Fishing Boating Wildlife viewing	Breach the Dam	Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. 9/25/2021 9:37	Gilchrist		No	No					I'm not against any dam or reservoir usage as they play critical roles in our lives, BUT, we can't destroy springs with their usage. If there is no work around that allows us to have both then cut the dam/reservoir and open the springs.	California. Historical context is absolutely critical when looking at major state intervening events that have an effect on the public and on the environment. California drained owens valley/mono lake, causing extreme dust storms and severe economic disaster in those areas. They cut the Sierra and Lake Tahoe forests which is one of the main reasons for their insane forest fire issues. They dammed Hetchi Hetchy valley in yosemite, destroying one of the last and largest glacier carved valleys. They dewatered the San Joquin River, annihilating that eco system and now the water transfer system is 1 break away from cutting water to a huge population of california. These decisions (mostly) were publicly supported decisions that were embraced for their beneficial, short term benefits to the population, but in the end they were ALL destruction incarnate. We should do everything we can to not follow in the footsteps of a collapsing state who once held some of the greatest beauties in the states, and now just holds high taxes.	The domini effect. Utilizing this as a stepping stone of 'progress' to then go further and further away from the natural beauty that makes our state so great.	If there is a way to achieve both the dam and/or reasevoir but also not hurt the springs, I'm for it. I don't think it is possible, but if it is somehow, I'm for it.	Go Florida!
9/25/2021 9:37	Putnam		No	Yes	1 time			Fishing (shoreline/structure) Wildlife viewing	Keep it as is.	Tourism.	You will be destroying an ecosystem that has occurred over the years to create another. How do you know that destroying what is there will make the ecosystem go back to the original? People enjoy what is there. Does not make sense to destroy one to create another.	Keep it as is.	
9/25/2021 9:42	Alachua		No	Yes			1 time	Canoeing / kayaking	I would like to see the lost springs return and be a safe place for manatees to return to for wnyver as.it was intended.	Manatee die off this yr was at all time high with over 900 dead. If they had more safe springs and eatgrass this die off would not have been as bad.	Over 20 prings will continue to be lost which could be a source of revenue and recreation open and if this doesn't happen we will continue to see mass manatee die offs and they'll be ka k on endangered list if not already.	No	Free The Springs!!!!
9/25/2021 9:46	Putnam		No	Yes			2-5 times	Other: Stops me from further travel up the Ocklewah	Tear it down!	Rodman pool hard to access from St. John's and poor to navigate once it is accessed	Should have never been built. I look forward to traveling up the river to the Silver river and beyond. I also want to see the springs that will be revealed when pool is drawn down to natural river	Put a break in dam if it is not fully torn down	I have lived in Welaka, owned Welaka Lodge for 17 years. Never have I had a guest be excited or anxious to access the pool from the St.John's. There is so much accessible fishing and boating water that it will not be missed
9/25/2021 9:47	Putnam		No	Yes	1 time	More than 5 times	More than 5 times	Canoeing / kayaking Wildlife viewing Other: Picnicking	The dam needs to be breached and the river needs to be restored.	Doing so would restore the Ocklawaha, Silver, and St. Johns rivers; 50 springs; and the OJO Wildlife Corridor.	The environment will continue to decline and Putnam County will miss an opportunity to create new jobs related to restoration and ecotourism.	No. A drawdown needs to begin as soon as possible. 50 years of damage to the environment needs to be repaired.	Florida needs to show the U.S. and World how to restore its rivers and floodplain forests. It's an important means of preventing further global warming and resultant flooding.
9/25/2021 9:53	Palm Beach		No	No					Restore the Ocklawaha River.	Manatees need help.	Manatees would continue to suffer & die.	No!	
9/25/2021 9:55	Alachua		No	Yes			1 time		Breach the Rodman/Kirkpatrick Dam. There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. * * The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. * The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. * The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. * Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. * Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. * Hundreds of manatees loose access to essential warm water winter habitat. * Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
9/25/2021 10:05	Seminole		No	Yes			2-5 times	Fishing (shoreline/structure) Wildlife viewing	I would like to see the Ocleawaha returned to the way it was. In 1965 I lived in Citrus County and remember the cross Florida Barge canal mess. It ruined the watershed north of Ocala.	While the intent of the federal government was to advance shipping, it did nothing to further wildlife management and water conservation. Our rivers must be allowed to flow freely again.	Development on the uplands (dried out land) will be developed and then there will be no hope of ever restoring the river as is happening on the south end of the St. John's river and the Kissimmee River Basin.	no	
9/25/2021 10:08	Okeechobee		No	No					As I have read it really serves no REAL purpose, so open the the damn thing up! Enough with the political lies and influence from the rich that only care about $$$$	.....	.....	.....	
9/25/2021 10:10	Pinellas		No	No					Clean and fresh for wildlife	Manatee needs	Lack of manatees	No	
9/25/2021 10:13	Orange		No	Yes			1 time		For the Rodman/Kirkpatrick Dam to be breached.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
9/25/2021 10:27	Alachua		No	No					Breach the Rodman reservoir and Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years.	No. Breaching the dam should've happened decades ago!	The springs, manatees, and economies would all benefit from breaching the dam.
9/25/2021 10:27	Outside of state / other	Rochester, MN	No	Yes			2-5 times	Fishing Boating Wildlife viewing	I'd like to see it remain in place to support the fantastic fishery and wildlife refuge it has become.	This body of water has become a vibrant wildlife preserve.	All the businesses and the many jobs that rely on this resource will be decimated. To say nothing of the devastating effects on the wildlife that depend on lake and river which would return to its mud flat state without the dam.	No	I like to consider myself a conservationist and I often support the removal of antiquated dams on rivers where they support no useful purpose or where they have a negative impact on wildlife. That is not the case with this dam, quite the opposite.
9/25/2021 10:28	Putnam		No	Yes	2-5 times	2-5 times	More than 5 times	Fishing Boating Hunting	Maintain it!	The cost to the taxpayers that built it. Ecosystem that evolved is beyond any thing good that has ever been done in Florida!	150 years+ of useless waste land and lost of habitat.	NO!	
9/25/2021 10:32	Orange		No	No					Breach the Rodman/Kirkman Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkman Dam the most beneficial and cost-effective springs protection project in Florida.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Thank you for your consideration.
9/25/2021 10:39	Outside of state / other	California	No	No					I would like to see the river restored and access ensured for manatees.	Manatee populations are plummeting and in need of protection and habitat restoration	Manatees continuing to die off in Florida		
9/25/2021 10:39	Seminole		No	No					Preservation & funding to keep it the thing of beauty it is.	Take a look at how many surveys have been filled out supporting the preservation of this area & then ask yourself that question again. The people have spoken.	Continued destruction of precious birds.	Nope	
9/25/2021 10:41	Pasco		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure)	Maintaining the dam and Rodman Reservoir		Complete loss of Rodman Reservoir And eliminating fishing	No. But would be willing to listen to alternatives	
9/25/2021 10:41	Outside of state / other	Ky	No	Yes		2-5 times		Fishing	Leave it as is.	It is a wonderful resource. It creates tourism and tourism dollars.	I would not be able to visit Florida and fish in that location.	Not that I am aware of at the moment.	
9/25/2021 10:44	Alachua		No	Yes		2-5 times		Fishing Canoeing / kayaking Boating Wildlife viewing	I would like to see a dangerous dam removed and the restoration of the St. Johns, the Ocklawaha and Silver Springs that would follow.	The expense of repairing an aged and useless dam versus the projected boost in the local economy when new fish and more manatee return.	Lives would be endangered and a river system further degraded.	Nothing short of replacing a dangerous dam and fully recovering a valuable ecosystem.	Generations of Floridians once enjoyed the benefits of a healthy, free-flowing Ocklawaha and future generations deserve the same!
9/25/2021 10:47	Lake		No	Yes		1 time		Wildlife viewing	Whatever is most ecologically helpful	Climate change	Continued destruction of surrounding ecosystems.	Yes	
9/25/2021 10:50	Dade		No	No					I'd like to see it breached.	Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs.	We'd continue to lose valuable wildlife, jeopardizing the ecosystem as a whole.	No	Floridians need to take back their state from the grips of corporations with nothing but profit on the mind. The springs are for our wildlife and for us as citizens to enjoy and respect.
9/25/2021 10:55	Marion		No	Yes			1 time	Canoeing / kayaking	Remove the dam	Allow springs to flow into Oklawaha River and allow access to Manatee	Current conditions will only get worse.	Anything that will benefit the springs, rivers and protect the Manatee.	
9/25/2021 10:57	Walton		No	Yes			More than 5 times	Fishing	retain the beautiful nature and fishing	The use rates of the local public and number of active citizens involved in keeping the Reservoir as-is	Asking what was so important to change things that did not leave nature the way it has been for many decades	No	
9/25/2021 11:05	Outside of state / other	Ann Arbor, Michigan	No	No					Please take all efforts to protect and conserve this habitat sustainably. Do everything to protect the biodiversity of this important area.	Environmental and animal welfare. Biodiversity and ecological aspects.	That we will lose more biodiversity, manatee (and other) populations and once again put profit over nature.		
9/25/2021 11:10	Dade		No	Yes			2-5 times	Canoeing / kayaking Boating Wildlife viewing	The opening of the dam to restore water ways for wildlife to flourish in the area as it once did.	Species such as manatees depend on ecosystems such as rodman reservoir to reproduce and protect offspring.	My biggest concern would be aiding in the extinction of florida native wildlife.	The damn is opened for less than 30 days	
9/25/2021 11:12	Martin		No	Yes					Gradual lowering of the Rodman Reservoir in preparation for removal of the Kirkpatrick Dam and restoration of the free flow of the Ocklawaha River to the St. Johns River without obstructions.	A free flowing Ocklawaha River would allow striped bass and American shad to migrate upriver from the Atlantic Ocean and St. Johns River to spawn in freshwater habitats again. That is blocked now, except for periodic navigation locks openings and closings for boats to move past the dam in both directions.	Continued loss of the Ocklawaha River connection to the St. Johns River and Atlantic Ocean adds to the ongoing depletion of Florida populations of striped bass and American shad for recreational fisheries in north Florida.	No...spawning runs of striped bass and American Shad require a full reconnection of the Ocklawaha River with the St. Johns River. The 50 year delay in achieving that is 50 years too long. This delay is all because of politics of 50 years ago, and sora lowers.	
9/25/2021 11:14	Palm Beach		No	No					Breach the Rodman/Kirkpatrick Dam.	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No, breaching the dam must be done and is long overdue.	
9/25/2021 11:19	Charlotte		No	Yes			1 time	Other: It doesn't offer anything in its current state that I want to use. I just looked.	I'd like to see restoration of the river by taking away the dam which is not part of the natural system and disrupts Florida water flows.	I know that over 70% of Floridians support protection of the environment and Florida's wildlife. Surveys repeatedly indicate this. The percentage in many instances is much higher. And restoration would greatly benefit the ecosytem of Florida springs, like Silver Springs - which I have long visited and care much about.	Estuarine systems will continue to be deprived of their natural water flow. The wildlife will continue to suffer. That would be catastrophic as so many animals (and native plants too) have lost ground in the last several decades. We cannot continue to cater to short term benefits of the few. If we think only of people and what they might care most about, they will actually not be happy should Florida lose its character.	No, and I remain surprised as always that this project has waited so long.	I care about the beauty and health of the state. I have lived here 45 years. It troubles me greatly when manatees suffer and bears come out of the woods because their habitats are reduced. When people cause upset, it is felt throughout.
9/25/2021 11:25	Outside of state / other	Veneta, OR	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. ±5,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("OSO") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/25/2021 11:32	Bradford		Yes	Yes	1 time	More than 5 times	More than 5 times	Canoeing / kayaking	Please restore our natural habitat. It is time to make things right and to allow the animals to have access to the land and water that is rightfully there's. This dam is an ecological disaster.	Science. Ecologists have been talking about this for years now	Our future and health as a people and the land. We don't know what and who we will lose due to this negligence.	I think if we were to restore the springs I would be happy. I don't think there is room for compromising when this has been such a long struggle.	
9/25/2021 11:34	Marion		No	No					Breach the dam	Restoration of springs and wildlife	Declining fish and manatee population in affected areas	Unaware	
9/25/2021 11:38	Volusia		No	Yes			2-5 times	Canoeing / kayaking	Dam removed		Continued degradation of the river in the reservoir area , wasted money repairing the dam	NO	The dam is a travesty to nature

9/25/2021 11:38	Marion		No	No					Breach the Dam	Breaching the dam would restore 20 springs and allow manatee and fish back into Silver springs (down 92% since dam was built)	The springs and rivers in Florida continue to suffer	I don't know other options	The springs are super important and in my eyes the best part of Florida! Please help restore and protect these water ways.
9/25/2021 11:40	Duval		No	Yes			1 time	Boating	Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam to reunite the natural connection of Silver Springs, the Ocklawaha and the St. Johns Rive	Three rivers, Ocklawaha, Silver and St. Johns, and 50 springs are restored	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	No. Breaching the dam and restoring the Ocklawaha are 50+ years overdue. Dam safety issues and improved water quality, wildlife habitat, and recreational opportunities can't be ignored or delayed any longer.	Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 150-mile lower St. Johns River.
9/25/2021 11:40	Putnam		No	Yes			More than 5 times	Boating Wildlife viewing	ultimately I would like to see the dam removed, and the river(s) restored to natural flow, over the course of a period of years. there could be parks, and boat ramps and camping facilities that would generate revenue for the state maintenance and restoration funds.	the Kissimmee river restoration, would be a model for this case. wildlife and native species of plants birds etc have returned.	long term maintenance and practicality of the dam. why would we keep fixing an eyesore, that allows nothing but fisher people to race back and forth to shoot fish in a barrel. dams like this are coming down all over the US, because people realize the long term implications.	maybe some "ponds" or overflow land, in case of widespread flooding, the water could go into smaller controllable spillways, mimicking nature's way of life in the swamp. still with the ultimate goal of dam removal.	The Ocklawaha is a very important river, not only to me, but to the manatees that reside there. but my grandfather had a fish camp. that he was forced off of, when the state decided to come thru with CFBC. I would like to see a restoration because I believe he would like to see it as well.
9/25/2021 11:41	Hillsborough		No	No					Whatever it takes to protect and restore the manatee population	The manatees need places to eat and live, away from boat propellers.	My biggest concern is extinction of the manatee	More Research into how to save the manatees	
9/25/2021 11:43	Wakulla		No	Yes			More than 5 times	Wildlife viewing	The dam needs to be permanently breached. This will repair the environmental damage the dam has caused and enhance recreation.	The Kirkpatrick Dam is in danger of failing. It would cost millions of Dollars to replace it.	Recreational access would NOT be expanded and enhanced.	No.	Both recreation and the environment would be enhanced by creating a dam breach
9/25/2021 11:43	Duval		No	No					Breach the dam.	Breaching the dam would help many springs thrive, as well as help restore fish populations that have been declining since the dam was built.	Loss of revenues for businesses around the newly flourishing springs. Many restaurants, outdoor outfitters, etc could benefit from more outdoor recreation in the area.	No.	I am a recent graduate of the University of Florida with a Bachelors in Environmental Management and it is time this dam is breached and the waters are restored back to their healthier state.
9/25/2021 11:45	Outside of state / other	Milwaukee, WI	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/25/2021 11:47	Marion		No	Yes			More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Hunting Wildlife viewing	Keep it where it's at and leave it alone	Wild like have formed a habitat around the dam. Many people use the dam to fish. Many people life wages come from the Ocklawaha.	It will destroy much wild life habitat and take away a main source of food from people		
9/25/2021 11:52	Orange		No	No					Breach it	Animal life	Animal life	I do not know	
9/25/2021 12:06	Putnam		No	Yes			2-5 times	Wildlife viewing	I would like to see the Ocklawaha restored.	Keeping the Dam merely so people can fish and party isn't a good long term solution.	That the good ol' boys have won. Again.	No.	Restore the river. Please.
9/25/2021 12:36	Marion		No	Yes			More than 5 times	Wildlife viewing Other	Remove the dam totally. The original flow of the Ocklawaha River needs restores ASAP in order for the manatees to have any chance from extinction. The manatees should've never!!!!!! been taken off the endangered list. Now look, dead manatees everywhere dying of starvation from no Seagrams. That is literally the most pathetic, inhumane, unnecessary, sickening, heartless, cold hearted gesture that could've ever been placed on the beautiful symbols of the peace and beauty of Florida. All for what? Greed, stupidity and arrogance are the first three words that come to my mind among many others but we can start there. Oh yes, let's not forget the powerful gas powered motor that someone HAS to use (there are still things called paddles and electric) to gouge the manatees bodies so deeply they either die or have to be placed in a care facility for 7-8 months, maybe longer, to be able to survive back in the river to possible be attacked by another big propeller blade again. That's just so very unavoidable if the Powers That Be controlling OUR precious river wake up, stop with their false "Act Like They Are Doing Everything They Can," programs and studies and actually remove that dam. They're lots of places yo fish and have recreational activities, but the merciless killing of nearly 900 manatees last year(or more because an accurate count probably is impossible) and more next year and the next is something that really needs to be taken seriously right now!!! Not tomorrow, or next week, or put on the next meeting to talk about, or say they're planning this or that. The right thing needs to be done to save our rare beauties and sweeping it under the rug until next session is unacceptable. Thank goodness that horrible canal wasn't built across our entire state, maybe we'd all be in the verge of extinction. Get rid of the Rodman Dam once and for all and let our wildlife roam an live as nature intended. A little trickle of a recruited river isn't making the grade and our dead manatees are proof!	All the hundreds and hundreds of dead and starving manatees	Their extinction	No!	
9/25/2021 12:42	Hillsborough		No	Yes			2-5 times	Wildlife viewing	A transition back to a natural state. It is understood that a lake or wet area is needed due to all the other species that now use the area and it will take time for a good transition back to a natural state to occur. You asked in the survey if I use this area often or use the reservoir for business purposes, but I grew up in Florida starting in the early 1960s with my father assisting with the All Florida Magazine published in Ocala. I have see the degradation of the natural environment, which has affected the built and social environments. Having this return to a natural state benefits not only direct users of the reservoir, but all of us that depend on healthy environments within our state.	See the previous statement. But a return to integrated systems provides greater health to ecosystems directly and indirectly. Respective systems allows for resident and tourist uses and it provides for green space, which is available to every social dynamic. Studies may be conducted to analyze existing habitats and identify if these areas may also serve as future habitats as our climate continues to change (as well as protect existing flora and fauna. Added, it allows for a continuation of green spaces to provide assistance in maintaining non-built areas and assist in minimizing impervious areas where endangered species live. There is also the quality of aquifer recharge and better protection of areas within karst topography. There is so much that has been written regarding the benefits of healthy eco-systems and relationships to built environments and respective social dynamics. As our state continues to grow, integrated natural systems become even more important. You can find documents at IFAS and within the St Johns WMD own documents; especially, those developed to assist with the development of Comprehensive Plans in the late 1980s and early 1990s.	Loss of Florida's natural habitats and the ability to have an integrated system that supports existing and future species (some endangers). Also, it will be a loss to the social wellbeing between major metropolitan areas that cannot be replaced or recreated.	An integrated system with corridors surrounding the reservoir that are maintained in a healthy state to support existing and future habitats. Added, ensure a level of protection is provided to these areas to ensure adjacent uses do not pollute or cause harm. Also, ensure penetration of the area is not performed outside of controlled spaces and adjacent property owners do not have open uncontrolled access to corridors; whereby, migrating or species movement is disturbed. This will also require the acquisition (or conservation easements) of some adjacent areas to have zoning and future land-use designations changed to serve as a governmental regulatory protection of actual areas to be protected. This may be performed in the framework of resilience and funding may be obtained through grants as your team works with local communities. Funding may be from the state's FDEP Resilience Program and through FEMA's BRIC and FMA programs (HMGP Post Fire as well in some areas).	Although, I am a few counties away, an integrated system benefits all of Florida. I grew up in Florida on the St. Lucy River then later in South Florida. There is a direct benefit to all Floridians with healthy eco-systems. The benefits are widespread and this has been well documented -- I will defer to you to look to source materials from FSU, UF, FAM, USF pollute or cause harm. Also, ensure penetration of the area is not performed outside of controlled spaces and adjacent property owners do not have open uncontrolled access to corridors; whereby, migrating or species movement is disturbed. This will also require the acquisition (or conservation easements) of some adjacent areas to have zoning and future land-use designations changed to serve as a governmental regulatory protection of actual areas to be protected. This may be performed in the framework of resilience and funding may be obtained through grants as your team works with local communities. Funding may be from the state's FDEP Resilience Program and through FEMA's BRIC and FMA programs (HMGP Post Fire as well in some areas).
9/25/2021 12:44	Putnam		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing	Keep it	Tourism and property value. I moved from out-of-state to Interlachen just to retire near the Rodman Reservoir	Loss of tourism. Huge change for wildlife using Rodman as it is	No	
9/25/2021 12:47	Outside of state / other	CA	No	No					Breach the Kirkpatrick Dam, restore the Ocklawaha River. Actions such as these are being taken all over the country to restore natural areas. Friends of mine who live in Florida will see a benefit to their recreational possibilities, and to the overall health of their natural environment.	This action restores parts of the Florida Wildlife Corridor, helping to provide winter habitat for the manatee, and benefitting your state's great wildlife: Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	This reservoir occupies areas that should be serving as habitat for wildlife. Without it, wild species are forced to live in smaller areas, and deprived of wilderness corridors that support foraging species.	No.	Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. Humans value wilderness. We support it, we visit it and use it for recreation. Natural systems require it for habitat, and to replenish themselves. For these reasons alone, dam removal is the natural and obvious course of action.
9/25/2021 12:52	Outside of state / other	california	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/25/2021 12:57	Alachua		No	Yes			1 time	Other: I used the Silver river regularly for 20 yrs, until it was mostly destroyed by this project	The dam needs to be completely removed. The destruction of the first growth trees cannot be replaced, but a cypress planting project would help. The Core was crushing first growth trees into the mud. Because of the anaerobic mud conditions, I suspect much of that first growth cypress, magnolia, etc is salvageable... That would provide jobs in that area	This dam has no economic benefit to anyone at this point	The Rodman reservoir will continue to be a blight on central Florida. The canal was not ever going to be economically viable. The restoration of the river will allow the restoration of tourism, guided fishing, and etc in the area		
9/25/2021 13:07	Marion		No	Yes				Other: I don't use rodman dam	Remove and let the river go back to it's natural state.	I remember the river before it was destroyed. Fishing was excellent, the water was clear, there were banks to fish from, could see mullet jumping all the time, even had crabs, that we don't have now. I could go on and on talking about the benefits of the river being released, please do it in my lifetime.	I don't have a concern, let the river be the way GOD created it.	not really.	
9/25/2021 13:08	Alachua		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Canoeing / kayaking Wildlife viewing	Remove the dam.	Environmental studies for the distribution of native species with a free-flowing Ocklawaha River.	Everything remains the same with expanding cost of maintenance for a project that was never needed, was canceled 50 years ago, and which promotes an artificial environment rather than a healthy natural one.	No.	
9/25/2021 13:08	Lee		No	No					I would like to see the dam removed and the river and estuaries returned to what they were to support nature	Scientific Studies on what can happen to wildlife in the area if the dam is removed. Also the dam is past its life expectancy and no longer serves a purpose.	The pollution already there and the use of herbicides to remove non native plants would continue. Nature fish would continue to decrease and the tilapia which are not native would continue to thrive	not at this moment.	
9/25/2021 13:12	Lee		No	Yes			1 time	Wildlife viewing	Like to see dam removed.	Most dams are bad for the ecosystems.	Same old bad system would remain in place.	None that I can think of.	
9/25/2021 13:13	St Johns		No	No					Breach the Rodman/Kirkpatrick Dam.	The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs. There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/25/2021 13:13	Marion		No	Yes			More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Hunting Wildlife viewing	Leave it along like it is.	Its own ecosystem	We would lose a beautiful waterway and wildlife habitat.	No	Keep this as it presently is.
9/25/2021 13:15	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Boating	Leave it	Bass fishing	Kayaking	Drawdown	
9/25/2021 13:20	Orange		No	No					Breach the Rodman/Kirkpatrick Dam.	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	
9/25/2021 13:28	Dade		No	Yes		1 time			Breaching the dam	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wild life)	No, the dam needs to be breached	Silver Springs could be even more beautiful, bountiful, and economically lucrative than it is now. We can't miss this amazing opportunity to restore manatee habitat, native fish populations, and revitalize this area
9/25/2021 13:28	Dade		No	Yes			2-5 times	Canoeing / kayaking	breach the dam				
9/25/2021 13:32	Alachua		No	No					Breach the Dam. It makes no sense economically or ecologically to let this dam stay.	The preservation of the original integrity of the river system. Stopping the natural flow is useless. You want the revenue from nature tourism? The nature has to be there.	Continued harm to the natural migration patterns of the native fish populations.	No	
9/25/2021 13:36	Duval		No	Yes			More than 5 times	Other: I drive over it to get to the springs in the Ocala National Forest.	I would like to see it taken down.	I want to see the springs that have been drowned by the dam recover. I want native fish populations to rebound and flourish. I want manatees to have access to the Silver River and Silver Springs. Taking down the dam is vital to these ecosystems, which benefit our state through tourism and recreation.	Further decline of fish and manatee populations, degradation of our unique springs, algae blooms behind the dam	As this project went defunct and funds ran out, our state is left to pay for the damage. I support full removal and restoration. Science supports a boost to bass populations if it is taken down, so I see no reason to keep it up.	This was a horrible, destructive idea when it was constructed and has caused so much damage to the river and spring ecosystems. Taking it down is a step in the right direction to balancing human needs with the natural systems that sustain us. If this dam does fails and causes millions in damage, why not pre-emptively remove it and help restore what was taken from us?
9/25/2021 13:51	Outside of state / other	Louisville, Ky.	No	Yes			More than 5 times	Fishing Canoeing / kayaking Wildlife viewing	Keep it the same!	The wildlife, habitat has an amazing diversity that is unrivaled in the country.	That we lose that biodiversity that is unique to Rodman.		Please consider not just the loss of habitat and wildlife, but also all the people that rely on the Rodman for their livelihood.
9/25/2021 13:51	Lake		No	Yes			2-5 times	More than 5 times Fishing	I would like to see the Reservoir maintained. I believe it has become an huge asset in maintaining the water quality and quantity available for potable water service. I think it is also a huge aid to the Manatee population in the river.	The production of trophy size bass in Rodman Reservoir is a clear indication of the water quality and fish habitat available due to the Kirkpatrick Dam.	As Florida has continued to grow exponentially the need for potable water will also increase. As a former member of the Lady Lake Zoning and Planning Board, I have often questioned where will all the water come from for the influx of new residents. Removing the dam makes no sense in light of the growth rate.	I fully believe in the need to keep the reservoir in place for future growth. Once eliminated, it will never be able to be reconstructed.	If there is any doubt of the future growth of Florida, just open any newspaper in any county and you will see that the need for water is only going to increase. Please do not eliminate the Rodman Reservoir.
9/25/2021 14:10	Volusia		No	Yes			2-5 times	Other: Ecotourism during the drawdowns. I visit the springs, river banks, and historical sites and enjoy the beauty, plants, and wildlife of the natural river.	Returning the natural connection between Silver Springs, the river, and the St. Johns by removing the dam and allowing the Ocklawaha River to resume its banks and flow.	Multiple studies document the benefits of restoring the Ocklawaha -- ecological, economic, recreational.	The dam is expensive to maintain (currently unsafe?) and the ecosystems the Ocklawaha could support need the water and other benefits of a connected system. Mother Nature knows best!	Not really. There are so many benefits to removing the dam and restoring the free flow, and halfway measures just won't do.	Now is the time! Florida needs this wrong to be made right!
9/25/2021 14:11	Manatee		No	Yes			More than 5 times	Canoeing / kayaking Wildlife viewing Other: Hiking, the Florida National Scenic Trail goes over the dam	Leave it alone! Beautiful nature preserve and refuge for scores of manatees	Owned property on Rodman Reservoir for 14 years. First hand awareness and much research of government documents.	Decades of mud, lost manatee and nature habitat, lost water purification as it passes through the Reservoir, as has been documented through IFAS with over a decade of regular water samplings.	Leave it alone! It has been there over 50 years. Mother nature has balanced this environment. It would take decades to rebalance if dam is destroyed.	PLEASE leave it alone. Local property owners wells will likely go DRY if the Reservoir is removed. Who pays for remedying this loss of their only water source?? This Reservoir is not stagnant, as millions of gallons a day flow over the dam. How about using this for hydro power?
9/25/2021 14:15	Alachua		No	Yes			1 time	Other: Hiking on the Florida Trail - Ocala section. Passed by Rodman dam going south to north.	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs are restored 10 lost springs and Silver Springs ecosystem are restored Historic fish and manatees return as breach opens creating a free-flowing river 100s of manatees gain essential warm water winter springs habitat 100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers $4-14 Million in dam repairs saved on a dam past its life expectancy Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs. $17 million in potential flood damages avoided to downstream property owners	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.

9/25/2021 14:16	Volusia		No	Yes		More than 5 times		Wildlife viewing	Remove the damn thing	Information that supports a free flowing river provided by St John's River keeper and Audobon	Not allowing nature as God made it effecting fish and all wildlife that depends on the river	NO !!!!!	Don't screw with Mother Nature. Ever hear that one? Destroy this abhrivone piece of interference.
9/25/2021 14:21	Dade		No	No					Breach the Rodman Dam and restore the Ocklawaha River, thereby restoring 1000s of acres of forested wetlands and 3 rivers.	Removing the dam is essential to improving the health of Silver Springs. It is necessary to restore suffering migratory fish populations. And it is needed for the hundreds of manatees that could better access Silver Springs and other restored springs along the river, at a time with Florida's manatee population is experiencing unprecedented mortality. Florida already has enough money set aside next year to restore the Ocklawaha fifty times over. Most importantly of course, is the fact that all life depends on healthy ecosystems aka NATURE.	See above. We must not continue to destroy the very nature upon which all life depends.	We MUST free up the 20+ springs that are rendered useless by the reservoir. The dam is in disrepair and millions of $ would be needed to repair, when removal is the best solution for nature, for natural system flow. Anything short of this will doom us to further suffering of humanity as we continue to destroy the systems which sustain life on this planet.	
9/25/2021 14:23	Clay		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	remove it and FREE THE OKLAWAHA!!!!!	restore the river and all the springs back to their original beauty			
9/25/2021 14:29	Marion		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Wildlife viewing	Keep it as is.Do not drain it.	Trophy fishing.	Fishing will be affected. Manatee will lose food source.	No	Please keep Rodman as it is now.Mother Nature has adapted.
9/25/2021 14:33	Marion		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Canoeing / kayaking Wildlife viewing	Keep it the way it is now.	Beauty nature and fishing.	Losing a source for fishing and seeing nature.	Not really.	Please leave it as it is now.Nature has adapted to it.
9/25/2021 14:33	Pinellas		No	No					Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam	Three river systems - the Ocklawaha, Silver and St. Johns - would experience significant environmental improvement from restoration. Manatees would regain open access to the warm water habitats of the Ocklawaha and Silver Springs. The recreational development component included in the restoration plan would benefit nearby residents and expand eco-tourism, and more than compensate for loss of the Reservoir. Draining the Rodman Reservoir would remove the single greatest barrier to plant and animalmovement along the Ocala to Osceola (OZO) Wildlife Corridor by replacing the open water expanse of the Reservoir with a restored floodplain forest.	Water quality in the Rodman Reservoir and Lower Ocklawaha/St Johns River system would continue to decline. The economic benefits that would result from increased and enhanced recreational usage would be denied to the surrounding local communities. Failure of the dam that has never, and will never, satisfy the purpose of its construction. Taxpayers will perpetually be on the hook for repair and maintenance of the dam and Reservoir, and continue to be liable for any loss of life or property damage that would result from a dam failure.	NO. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration	Kayak and SUP and plan to go down the river from Silver Springs to St. Johns River once the dam has been breached. I will be spending money locally also.
9/25/2021 14:37	Marion		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing	Keep it as is.	Beautiful scenery ,many manatee sightings.	Very upset,as Rodman is perfect as it is now.	Not really.	Keep Rodman as it is.
9/25/2021 14:38	Broward		No	No					Remove it.	Seeing the freshwater springs emerge during drawdown. Ability for manatees to return.	The springs remain covered.	Drawdown half the year. Every other month.	A lot more visitors will come to visit the springs if you can see them. Increase in tourism and local business.
9/25/2021 14:47	Outside of state / other	Kearney NE	No	No					Keep the manatees safe from harm.	All of earths creatures has a purpose. Even if we can't see them.			
9/25/2021 14:51	Hillsborough		No	Yes		1 time		Canoeing / kayaking	Breach the Dam.	It is covering numerous natural springs in Florida Breaching it would improve the natural habitat for fish, birds, and manatees.	The natural habitat of wildlife would not be restored.	No.	
9/25/2021 15:02	St Johns		No	Yes			More than 5 times	Canoeing / kayaking Wildlife viewing	Complete removal and restoration of original stream flow.	The continued need to drawdown the reservoir.	Dam failure Continued degredation of the local fish population Loss of spring flow and continued degredation of shrimp and crabs in the St Johns	No	
9/25/2021 15:20	Pinellas		No	Yes			1 time	Fishing Canoeing / kayaking Hunting	Removal and restoration to free flowing river.	The many studies of positive benefits achieved by other dam removal	Continued environmental degradation.	No	
9/25/2021 15:26	Pinellas		No	Yes			1 time	Wildlife viewing	I would like to see enough of it removed to allow free movement of water, boats and fish	Restore much needed fresh water into the St. Johns due to salt water intrusion	Marine life and manatee kills due to increasing salt water intrusion	Not really	I think there would be an overall economic benefit to removing the dam and locks
9/25/2021 15:27	Orange		No	Yes			2-5 times	Fishing Wildlife viewing	Breach the Rodman/Kirkpatrick Dam	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	Hundreds of manatees loose access to essential warm water winter habitat.	- No. Breaching the dam is 50 years overdue	MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/25/2021 15:30	Bay		No	No					Breach the Rodman/Kirkpatrick Dam.	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/25/2021 15:34	Outside of state / other	t and moving back to Pinellas or Hills	No	No					Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	Three river systems - the Ocklawaha, Silver and St. Johns - would experience significant environmental improvement from restoration. Manatees would regain open access to the warm water habitats of the Ocklawaha and Silver Springs. The recreational development component included in the restoration plan would benefit nearby residents and expand eco-tourism, and more than compensate for loss of the Reservoir. Draining the Rodman Reservoir would remove the single greatest barrier to plant and animalmovement along the Ocala to Osceola (OZO) Wildlife Corridor by replacing the open water expanse of the Reservoir with a restored floodplain forest.	Water quality in the Rodman Reservoir and Lower Ocklawaha/St Johns River system would continue to decline. The economic benefits that would result from increased and enhanced recreational usage would be denied to the surrounding local communities. Failure of the dam that has never, and will never, satisfy the purpose of its construction. Taxpayers will perpetually be on the hook for repair and maintenance of the dam and Reservoir, and continue to be liable for any loss of life or property damage that would result from a dam failure.	NO. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration	I have seen all of the coverage and don' need to physically visit the site to understand how critical this issue is to our state and planet
9/25/2021 15:39	Alachua		No	Yes	1 time			Canoeing / kayaking Wildlife viewing	Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/25/2021 15:40	Palm Beach		No	No					TheOcklawaha River needs to be restored by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most important manatee habitat restoration project in FL and it will provide essential warm water winter habitat for hundreds of manatees.	This deprives manatees of essential warm water in winter harming chances for survival now and in the future. Keeping the Ocklawaha dammed keeps 7,500 acres of forested wetlands flooded and impacts Florida panthers, Florida black bears, bobcats and white-tailed deer because they canned easily travel through this area.	NO! This is 50 years overdue. Florida wildlife and water quality cannot wait any longer.	
9/25/2021 15:43	Marion		No	Yes			1 time	Fishing Wildlife viewing	The dam should be destroyed with the natural flow of the river restored	Recent articles in the news media explaining why this would benefit the ecosystems.	More damage		
9/25/2021 15:49	Marion		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Canoeing / kayaking Boating Wildlife viewing	Breach the Rodman/Kirkpatrick Dam to improve water quality, help wildlife including fish and manatees have more places to thrive, and provide new economic opportunities due to much better and broader water flow.	Research done that supports that water quality would improve, Manatees could swim freely thru the river and find safe havens in the winter in the springs which would provide additional economic opportunities for communities and fish diversity would improve and reduce invasive species that are currently taking over the rivers.	Water quality would further decline fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No, breaching the dam is way overdue. It would be crazy to pump millions of dollars to repair a dam that is hurting the water quality and wildlife of these waterways.	As a native Floridian who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. WATER QUALITY: This exciting restoration will improve water quality and flow by generating an additional 150 millions gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration. (characters: 536)
9/25/2021 15:54	Putnam		No	Yes	2-5 times			Fishing		Any meeting in which the Florida Destructors (Defenders) of the Environment show up too and spew their rhetoric.	The major blow to the economy of Putnam County .	No, because if the Reservoir isn't fully protected then the debate will never end, nutty environmentalists will just continue to try and get legislation to drain and ruin a world-class fishery.	
9/25/2021 16:02	Alachua		No	No					Breach the Dam!	Protecting manatee and fish species.	Taxpayer dollars going towards repairing Rodman dam and preventing the migration of many species of wildlife.	No, removal of the dam is 50 years overdue.	Protect manatees and migrating fish!
9/25/2021 16:05	Hillsborough		No	Yes			2-5 times	Other: Sitting	Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	Three river systems - the Ocklawaha, Silver and St. Johns - would experience significant environmental improvement from restoration. Manatees would regain open access to the warm water habitats of the Ocklawaha and Silver Springs. The recreational development component included in the restoration plan would benefit nearby residents and expand eco-tourism, and more than compensate for loss of the Reservoir. Draining the Rodman Reservoir would remove the single greatest barrier to plant and animalmovement along the Ocala to Osceola (OZO) Wildlife Corridor by replacing the open water expanse of the Reservoir with a restored floodplain forest.	Water quality in the Rodman Reservoir and Lower Ocklawaha/St Johns River system would continue to decline. The economic benefits that would result from increased and enhanced recreational usage would be denied to the surrounding local communities. Failure of the dam that has never, and will never, satisfy the purpose of its construction. Taxpayers will perpetually be on the hook for repair and maintenance of the dam and Reservoir, and continue to be liable for any loss of life or property damage that would result from a dam failure.	NO. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration	
9/25/2021 16:07	Pinellas		No	No					Get rid of the dam. It's destroying Florida's environment. We need the river to flow freely.	Free flowing rivers are the freshwater equivalent of wilderness areas. They provide crucial habitat for a host of animals, and support the survival of both people and nature around the world. Just one-third of the world's longest rivers remain free-flowing.	further degradation of the water body and surrounding habitats	No. Get rid of the dam.	
9/25/2021 16:12	Marion		No	No					Maintain it's current status. It is a great environmental success. plenty of thriving wildlife and a beauty to behold.	Personal observations; been there many times over the past 10 years and it is a beauty to behold.	Destroying a great wetland and safe haven for Florida wildlife.	No.	Keep Rodman as it is; it's a wonderful eco-system and it would be terrible to eliminate it.
9/25/2021 16:14	Leon		No	Yes	More than 5 times			Fishing Boating Wildlife viewing	Maintain as is!	quality of fishing and wildlife viewing--manatee habitat	loss of one of best bass fishing lakes in FL and the world.	no. drain the lake, lose the habitat	I am generally a fan of removing dams and freeing rivers. This is an exception. The Ocklawaha is mostly intact and gaining 12 more miles will not help much. aLSO, what we would gain ecologically is far less than what we'd lose if the dam were removed.
9/25/2021 16:14	Leon		No	No					Breach the dam to allow natural water flow.	The drowned springs that would be restored plus the welfare of fish and manatees that live in these and connected waters.	Funds should be used that are available now. Missing this opportunity would be tragic as economic growth would continue to be stifled, manatee health would continue to suffer, water quality would continue to decrease and fish migration would continue to be blocked.	No. The dam is of no use and repairing it is a waste of taxpayer money.	The health of this planet is in decline and we should do everything possible to reverse this direction.
9/25/2021 16:18	Hillsborough		No	No									
9/25/2021 16:20	Outside of state / other	Kent, Wa	No	Yes			1 time	Fishing	Leave it alone as is for fishing and wild land refuge	I saw all kinds of fantastic wildlife during my one day trip fishing. The birds the fish, etc; all was beautiful	Losing the catch and release fishing, and the industry that goes with it	No	
9/25/2021 16:26	Pinellas		No	Yes		2-5 times		Boating Wildlife viewing	The Rodman/Kirkpatrick dam is breached and removed.	Restoring 20 springs. Removing a haven for invasive aquatic plants.	The sentiment that development is more important than healthy native natural habitat will persist.	No. The dam should have been removed when the cross Florida canal project was abandoned.	The natural destruction the state of Florida, among the most unique and beautiful places on earth, has endured over the past 2 centuries is nothing short of an embarrassment. What we have lost is far more valuable than what we have gained from development and exploitation. History will remember the legislators responsible for the present state of our environment with disdain and mockery. Removing the dam would be one small step towards redemption.
9/25/2021 16:27	Alachua		No	Yes			2-5 times	Canoeing / kayaking Boating Wildlife viewing	Restore to its original beauty, allow native habitat to live. Stop nestle from stealing from the earth for business profit. We only have one planet.	95% of the native species are unable to survive because of the dam. Manatees are endangered for this gluttony and corporate greed.	The habitat would continued to be devastated	Get rid of the dam is the only option.	
9/25/2021 16:27	Lee		No	No					clean it up				
9/25/2021 16:33	Lake		No	Yes		2-5 times	More than 5 times	Fishing	Leave it as it is. It's a fantastic fishing and natural habitat.	Leave it as it is.	End of a major trophy bass fishery.	No	
9/25/2021 16:35	Orange		No	No					Remove the dam.	The negative environmental impact of the dam.	The continued negative environmental impact of the dam.	Not sure. I know the dam needs to be removed. Anything that gets us closer to that would be better than nothing. But, really, full removal is what needs to happen.	Thank you for collecting these comments.
9/25/2021 16:37	Marion		No	Yes		1 time	2-5 times	Fishing Boating	Breach it. Let the rivers flow naturally.	It was erected as part of a project that never came to fruition and is impeding the natural flow of the river. It needs to go.	Fish population and manatees	No.	
9/25/2021 16:48	Broward		No	No					Place a bicycle or multi use path there	There is one around the reservoir and other public areas and they are used quite a bit.	More street riding which is very dangerous here in Florida	No	
9/25/2021 16:49	Madison		No	Yes			1 time	Fishing	That it remains the same and is protected	The wildlife depends on it	Less wildlife habitat	No	
9/25/2021 16:56	Broward		No	No					Restore the natural flow	We have poorly managed the water in the past it is time to restore Florida back to its natural state.	More habitat destruction, negative impact on native animals and plants	No!	Time for Florida to start taking care of its unique and natural environment before none of it is left!
9/25/2021 16:57	Seminole		No	Yes		1 time		Wildlife viewing	Breach the dam and reunite the natural connection of Silver Springs, the Ocklawaha and the St. Johns River.	cool springs and Silver Springs ecosystem are restored	We miss the only opportunity to reestablish 15,000 acres of forested wetlands and fortify downstream submerged grasses from Welaka to Jacksonville in the St. Johns River that are critical to river health and fish habitat.	No	The Great Florida Riverway restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway.
9/25/2021 17:00	Alachua		No	No					I would like to see the dam breached to restore the Ocklawaha River.	The restoration of three rivers, Ocklawaha, Silver and St. Johns Rivers, and 50 springs coupled with historical habitat rightfully opened back up to aquatic animals.	That this opportunity would not come again considering funds are currently available, the public is interested in the issue, and environmental needs will worsen as long as the dam stands.	No. The dam should have been breached decades ago.	
9/25/2021 17:10	Bradford		No	Yes	1 time	2-5 times	More than 5 times	Fishing Canoeing / kayaking Boating Wildlife viewing	Leave it as is! It is an absolute wildlife paradise. Not to mention many people in the area have created businesses and they rely on the existence of the dams. My degree is in Environmental Science and I worked as an environmental consult in the area for years. I understand both sides of this argument. For the life of me fail to see the greater good of removing the dams and turning the reavior into the mosquito pit. "Let's return it to it's original form they say". If we used this logic for everything we might as well begin bull dozing neighborhoods.	Personally, I can tell you that my family spends thousands of dollars each year because the existence of the reivior. From fishing charters, bait and tackle shops, restaurants, gas stations. If this fishing destination were not here we would have no reason to go their and contribute to the local economy.	Loss of a pristine, recreational wildlife and recreation area. Loss of tourist dollars to the area. Most of all, loss of a place my family has created many memories at.	Can't think of any.	
9/25/2021 17:16	Outside of state / other	St. Charles, Missouri	No	No						Restoration of the Ocklawaha River.			
9/25/2021 17:18	Clay		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Canoeing / kayaking Boating Wildlife viewing	Left alone.	The manatees and wildlife are breath taking and the fishing is some of the best in the country .	The local economy will suffer from it.	Not at this time,Rodman Reservoir is important to folks all over around here . Fathers sons and daughters come here to fish,family's make memories here. Keep it alive...	Thank you.
9/25/2021 17:23	Brevard		No	No					I would like it removed. Breach the Rodman/Kirkpatrick Dam.	First of all, breaching the dam means restoration of 20 drowned springs on the Oklawaha River. The springs are a very important ecologic and economic asset of Florida. Second of all, removing the dam would also benefit fish and manatee populations. Finally, the dam is past its life expectancy, and breaching the dam would save $4-14 million in dam repairs.	This is an important opportunity and we don't want to waste it. Now is the time to achieve the benefits listed above. My biggest concern is that the springs and wildlife will never be protected and restored.	Unfortunately no I don't see any way to compromise, the dam should be removed.	We need Florida's springs and wildlife to continue to support ecotourism and our water quality.
9/25/2021 17:36	Brevard		No	No					Breach the Rodman/Kirkpatrick dam	There are 20 drowned springs that would be restored by this single project making breaching the dam the most beneficial and cost effective springs protection project in Florida.	The lower St. John's, ocklawaha, and silver rivers, 20 lost springs of the ocklawaha and one of Florida's largest artesian springs, silver springs, are not reunited and restored.	No breaching the dam is long overdue!	Would help save the manatees!
9/25/2021 17:38	Alachua		No	Yes			1 time	Wildlife viewing	Please restore the Ocklawaha River by breaching the dam. Every day the dam is in place, there is harm to the economy, water quality and wildlife throughout the Great Florida Riverway,	3 rivers, the Ocklawaha, Silver, and St.Johns Rivers and 50 springs are restored.	1000s of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy and recreational benefits.	No. Breaching of the Rodman Dam is 50 years overdue. Dam safety, water quality and wildlife can't wait.	This exciting restoration will improve water quality and flow by generating an additional 150 millionn gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration. (characters: 536)
9/25/2021 17:43	Outside of state / other	Georgia	No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	100s of manatees gain essential warm water winter springs habitat	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/25/2021 17:44	De Soto		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. £5,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	
9/25/2021 18:02	Putnam		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Wildlife viewing Other: Watch wildlife and sunsets	Keep dam maintained and manage as a trophy bass lake.	The dams keep large inboard boats from traveling further up the river destroying the river grass like they did pre dam.	An eyesore, loss of tourism, big boats destroying the river, loss of a potential water source.	Keeping the dam is my bottom line.	Boating was destroying the river before the dam and would be destroyed if dam is removed.
9/25/2021 18:06	Brevard		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Wildlife viewing Other: Hiking	Demolish the Rodman damn	I was fishing during the drawdown and saw the trees that were pushed aside for the cross Florida canal thousands open thousands of cedar trees just killed due to high waters	The people that live and have relied on the water ways that not only connect to the reservoir but down steam as well need to be allowed to function the way they were intended water flow is essential to healthy habitats	Break down the damn and any other locks that prevent flow	Free the rivers
9/25/2021 18:15	Outside of state / other	Connecticut	No	Yes			More than 5 times	Fishing Boating	Leave everything as is, it was an awesome place to visit. Very beautiful and wild.	I was able to see a manatee, while fishing with my guide. Never saw one before, and the wildlife was abundant.			This was a true highlight of my trips to Florida. I love coming to this wild place, the wildlife and fishing was unbelievable. And the ride up the river, you can't put a price on it. I'd hate to see this lovely place changed in any way.
9/25/2021 18:25	Alachua		No	Yes			1 time	Other: I do not use Rodman/Kirkpatrick because the dam should never have been established in the first place.					
9/25/2021 18:27	Pinellas		No	Yes		1 time		Canoeing / kayaking	We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. £5,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Restoring the Ocklawaha River will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees.
9/25/2021 18:42	Marion		No	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing Other: Nature therapy with my family					
9/25/2021 18:46	Putnam		No	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Wildlife viewing	stay in place	I like wildlife	sad	on	keep rodman
9/25/2021 18:49	Hernando		No	No					Breach	Manatees	Manatee and other animals harmed		
9/25/2021 18:50	Alachua		No	No					To take action test will provide the most ecosystem benefits for the River and the life it supports	Ive followed the issue in the Gainesville Sun for wears. We appear to be at a critical juncture	That we would continued loss of biodiversity, habitat loss and perhaps eventual extinction of some species	I wondered about the in remential draw down to prevent flooding down stream	I hope we can reach a decision that is best for the long term health of the river (s) and the ecosystem
9/25/2021 19:01	Putnam		No	Yes		More than 5 times	More than 5 times	Canoeing / kayaking	Free the river	20 drowned springs,replace critical manatee areas	Un-natural state of the closed river to my land	No	
9/25/2021 19:04	Volusia		No	Yes		1 time		Fishing	Remove it.	I believe the removal of dams allows nature to return to its original state. I believe this is another step is necessary for the Everglades to be restored	The water flow will not return to normal.	I really don't know	

9/25/2021 19:11	Alachua		No	Yes			1 time	Other: I do not use Rodman/Kirkpatrick because the dam should never have been established in the first place.	Return the Ocklawaha to its free-flowing state so that it can naturally replenish related springs, rivers and what would be natural wetlands.	We are losing endangered manatees because they don't have enough underwater vegetation for food and in winter they do not have access to enough warm water. Other species are in decline as well.	We would lose much of what makes Florida so significant as a peninsula. Also, the dam will soon need expensive repairs and money should not be wasted on this.	NO.	There are both State and Federal funds available to restore the Oklawaha and its 50 yrs past time to take action for the sake of our wildlife and water worries. Thank you, Darrow Moon
9/25/2021 19:16	Hillsborough		No	No					It be completely removed and the river be free flowing again as it's suppose to.	Florida's wildlife populations have been drastically impacted by the existence of this dam and the land has been defiled by the dam. As well as the dam being past it's life expectancy and not worth repairing.	Florida's wildlife would continue to dwindle.	No.	
9/25/2021 19:21	Marion		No	Yes			1 time	Other: Just walking					
9/25/2021 19:23	Sumter		No	Yes		2-5 times	More than 5 times	Fishing Wildlife viewing	Keep it exactly as it is at the present time	The scenery, fishing and all wildlife within the reservoir. A wonderful place to just visit. An area in the state of Florida that should be preserved for future generations to learn and enjoy all it has to offer. It would also take away all recreational activities it is providing the public.	To destroy it would not only harm all wildlife in the area, including manatees; but rob all future generations of a great environmental spectacle. On a much smaller scale, it would be like destroying one of our national forests. It is great to see wildlife in their natural settings.	None what so ever. To touch it in any way would leave it less that what it should be. A wildlife preserve for so many of our beautiful creatures.	Touching the Rodman in any way would take away from it's beauty and greatly harm the wildlife as well as the recreational opportunities it affords for all Floridians.
9/25/2021 19:48	Palm Beach		No	No					Break down the damn	Restoring natural water flow is crucial to preserving our ecosystems and water quality	Our springs and natural water systems finally meet their end		
9/25/2021 19:58	Duval		No	No					Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	Draining the Rodman Reservoir would remove the single greatest barrier to plant and animal movement along the Ocala to Osceola (COZO) Wildlife Corridor by replacing the open water expanse of the Reservoir with a restored floodplain forest, to the benefit of many listed plant species native to the region including the Federally listed Clasping Warea and Scrub Buckwheat.	The broad array of environmental benefits to native flora and fauna, including many imperiled species, that would result from restoration would not be possible.	no	
9/25/2021 20:07	Putnam		No	Yes	2-5 times			Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating	Leave it alone!				
9/25/2021 20:12	Outside of state / other	Long Beach, NY	No	No									
9/25/2021 20:13	Outside of state / other	Washington DC	No	No					The Ocklawaha River is the heart of the Great Florida Riverway, home to Florida's iconic wildlife. If restored, this river will provide essential warm water habitat for hundreds of manatees in the winter, by allowing them to access additional warm water habitat. One critical step will be breaching the dam that holds back the Ocklawaha River.	There have been many manatee deaths already this year: manatees are still struggling with starvation from seagrass loss, but the greatest long-term threat to these animals is the loss of warm water habitat which manatees need in order to survive the winter. Right now, 60% of Florida's manatees depend on power plant outfalls to keep warm and survive the winter - this is an unsustainable and unnatural situation. We must restore additional areas of their natural habitat!	As is evident if anyone pays attention to the news, we can no longer postpone action to save the earth and its magnificent wildlife. Restoring the Ocklawaha River is critical to ensuring the survival of manatees in the winter and beyond.	No- as the earth is in peril. You are so fortunate to have these magnificent animals- it is your responsibility to protect them. it's time, past time, to restore the Ocklawaha River for Florida's wildlife.	
9/25/2021 20:14	Seminole		No	No					Let the river return to what it does best--support the manatees and fish habitats. Ideally, take the dam down.	How many manatees we've been losing. The dam cuts off a rich spring area where they could huddle in the cold snaps. The fishing that was supposed to be so much better with the dam in operation hasn't happened. The canal it was built for never happened either--and will never happen. So, be done with it.	Potentially, manatee losses; continued hampering of a natural spring fed river; all the ripple effects from both of these issues.	Open. If you want to leave it to stop potential storm surge, maybe. But has it ever been used for that?	No time like the present. Take the repair costs and repurpose for other projects.
9/25/2021 20:18	Pinellas		No	No					Removal of the dam and restoration of the native / historic habitat		The state will miss an opportunity to restore wetlands and learn about pre-Columbian culture	No	
9/25/2021 20:29	Orange		No	No					Restored to original natural condition.	Internet	Continued abuse of natural movement of water.	Can't think of one. Whaddaya got?	Thank you!
9/25/2021 20:29	Orange		No	No					Breach it	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	Hundreds of manatees loose access to essential warm water winter habitat.	No. Breaching the dam is 50 years overdue.	Breach the dam!
9/25/2021 20:30	Hillsborough		No	No					Breach the dam	Restoration of 20 drowned springs, increased health of wildlife and of the springs, increased natural habitat for manatees who are dying off, millions of dollars in saving from reports of an unwanted dam.	Now is the absolute best time to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatee, water quality, wildlife habitat), and the dam is unsafe.	No, breach the dam.	
9/25/2021 20:50	Seminole		No	No					It is time for this dam to be removed. It is harming the natural environment in many ways and we are losing species of water life.	Manatees need warm water and are being lost by alarming numbers.	Manatees are desperately in need of warm water to survive in the winter time.	No. Breaching the dam is 50 years overdue.	
9/25/2021 21:01	Marion		No	No					Removal of the dam	The dam is in need of repair and it would restore the ecosystem to it's former glory. Fish, manatees, and wildlife can move freely between the waterways as nature intended	Costly repairs for something that was not needed in the first place.	No	
9/25/2021 21:04	Alachua		No	Yes		2-5 times		Wildlife viewing	Eliminate the dam amd the reavoir. By elimination of the dam in the reservoir you will restore 20 different Springs that are along the river. Spurring economic commerce. FPS AND SJRWMD should strike a deal to help businesses that will be affected by the removal of the reavoir. So no one is forgotten.	The pictures of cannon springs. During drawdown on FDE's website	The 20 springs along the river.	Unless there is another way to restore the historic flow I dont see and short senario.	It is the goal of SJRWMD , FDEP FPS to protect the natural resources first then provide recreation...without protection there is no recreation.
9/25/2021 21:13	Orange		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("COZO") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/25/2021 21:16	Putnam		Yes	Yes	More than 5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	keep it like it is.	I am on the reservoir a lot and see the wildlife abounding. The fishing is outstanding.	This beautiful wildlife reserve will be destroyed and it will take many decades for the eco system to recover.	No	Please leave this reservoir alone. Don't mess it up by taking out the dam. Removing the dam would ruin a great eco system. We might not should have ever built the reservoir back in the 60's, but we sure don't need to mess up this eco system for another 50 or 60 years. Can you imagine the boat traffic going up and down the Ocklawaha river today compared to traffic back in the 50's and 60's. It would be terrible. You would not be able to fish or enjoy the wildlife for fear of being run over. Please leave it alone.
9/25/2021 21:25	St Johns		No	Yes	1 time			Wildlife viewing	Bring it back to. Close to former natural . Natural river.	Many years ago, I was on the river many times, boating and fishing. I lived in Gainesville, and my family loved the river as it was, in its natural state.	Too many of our natural springs, waterways and lakes have been changed and ruined in Florida. The Oklawaha River needs, to have more of its original river returned.	I am sure there could and would be some negotiating.	Thank everyone who brings conversation and solutions to bringing back the River we all love.
9/25/2021 21:31	Alachua		No	Yes	1 time			Wildlife viewing	Breach the dam	It's cheaper to not repair the dam	It's bad for the environment considering fish populations have been reduced since the construction of the dam	No	
9/25/2021 21:36	Alachua		No	No					For the dam to be removed	It's killing off wildlife /manatees and fish and getting rid of the dam would restore the springs	The wildlife and springs would suffer	The dam being breached	Get rid of the damn dam!
9/25/2021 21:39	Outside of state / other	Columbia, Missouri	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("COZO") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/25/2021 21:42	Escambia		No	Yes				Other: I don't use it, I have just looked at it, and read all about how it came into existence.	We need to end the life of the Rodman Dam. It should never have been built in the first place. All of the springs and flood plain were covered up, and it greatly diminished the Ocklawaha River.	The degradation of the Ocklawaha River, and the loss of the natural springs. The loss of floodplain has been very damaging to wildlife. Also, we could possible have the Florida Manatee return to the river.	That is hopefully not an option. The dam is at the end of it's lifespan, and the cost of repairing it is unacceptable. If this dam is not removed, the Ocklawaha River may never return to it's original function and beauty.	No.	Please bring this to an end. So much damage has already been done. Florida has endured so much environmental damage already, it is time to begin to fix some of our mistakes.
9/25/2021 21:42	Putnam		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Boating Hunting Wildlife viewing Other: Camping	Leave it standing; make repairs where needed.	My father and I fished the area when I was a boy before the Dam was there. The beauty of the river back then can still be found there today. Now, my children and grandchildren (and soon my great-grandchildren) enjoy all that the area has to offer. We're still boating, fishing and enjoying the natural beauty there.	The loss of a place where individuals and families can go to supplement their food needs; loss of revenue for the county from fishing tournaments; loss of habitat for a multitude of wildlife; the decades it will take to restore the river to its original form.	I haven't heard one as yet.	It's one of the places I take out of town/state visitors/family. I'm very proud to live here. This is my heaven. Leave it be for us and future generations.
9/25/2021 21:47	Volusia		No	Yes		2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	It needs to go away.	It was a government screw up, that desperately needs to be corrected.	The state will continue killing a river.	No. Fix this ecological disaster, now.	
9/25/2021 21:54	Alachua		No	Yes		2-5 times		Fishing Fishing (shoreline/structure) Canoeing / kayaking	I would like to see it remain as a reservoir.	The great recreational opportunity there for Florida residents and visitors from around the world.	The loss of a great resource for fishing, hunting, and wildlife viewing.	Maintain the reservoir at a reduced level to partially restore the riverine system.	
9/25/2021 21:59	Putnam		No	Yes	1 time	More than 5 times	More than 5 times	Fishing Boating Wildlife viewing Other: Camping	Do not take it away.	I'm originally a city girl. Palatka's rivers, parks, camping and wildlife are precious blessings. It would be a shame to lose any one of those places, especially the Rodman recreational area. I don't know what the Oklawaha River used to look like, but I'm guessing it will be many years before it could be restored. And what would that task do to the wildlife that's there now?	Tearing down the dam will negatively impact a lot of people, animals, and income for the county.	No.	Please leave Rodman Dam as is.
9/25/2021 22:08	Hillsborough		No	Yes			2-5 times	Wildlife viewing	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	First of all, 3 rivers - Ocklawaha, Silver and St. Johns Rivers - AND 50 springs are restored. (NOTE: As many as 20 lost springs AND the Silver Springs ecosystem are restored. 15,000+ acres of the Florida Wildlife Corridor are restored or enhanced for people and wildlife AND 150+ million gallons a day of natural flow restored to the Lower Ocklawaha and St. Johns Rivers. Also, it is estimated that $57 million in potential flood damages will be avoided to downstream property owners.	Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits. Alas, the 100-mile St. Johns River Estuary continues to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion.	NO. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. RE: MANATEES: 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. RE: WATER QUALITY: This exciting restoration will improve water quality and flow by generating an additional 150 million+ gallons per day of fresh water into the St. Johns River and Estuary. This infusion of cool, clear water into the system will help to prevent harmful algal blooms, support coastal resiliency, and counter saltwater intrusion for the benefit of many species of wildlife, aquatic vegetation, and important fish and shellfish resources. Restoration will additionally revive over 15,000 acres of forested wetlands, benefitting water quality through enhanced biofiltration. Thank you for your consideration. RE: SPRINGS: Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most beneficial and cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world. Silver Springs provides approximately 66% of the flow to the Ocklawaha River. For an estimated cost of $26 million, hundreds of manatees would have essential warm water winter habitat and 150 million gallons a day of natural water flow would help restore the 100-mile lower St. Johns River.
9/25/2021 22:25	Sarasota		No	No					Open it up to restore the natural flow	Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record.	Manatees would lose habitat in what is already the deadliest year on record for them, in large part due to starvation	increased water flow thru dam	Water stewardship is extremely important for future generations. Thanks!
9/25/2021 22:31	Marion		No	Yes	More than 5 times			Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Hunting Wildlife viewing	Stop the spraying. It's killing the grass this is an awesome place an one of the few left to catch nice fish We even release them	My family has a bait store that makes most of its income off of the guys that fish this area	Not returning to natural state due to the large change and probable loss of fish habitat	Not really	Save it as it is
9/25/2021 22:50	Marion		No	Yes		2-5 times	More than 5 times	Fishing	save fishing there and observing the wildlife in the process!	Great fishing...none better!	Hard to answer, since I don't know what the plans in the future are for said area. Typical governental question!	SEE PREVIOUS ANSWER!	Wonderful place to take friend fishing and to watch wildlife.. you need to keep it available. Once again it would have been nice of you to give us your future plans for the area prior to this questionnaire.
9/25/2021 22:51	Lake		No	No					Remove it.	Rivers need to flow freely in Florida for the health of our ecosystems. Saving our unique environment is crucial in saving us from the devastation of climate change.	Death of endangered species.	No	Thank you
9/25/2021 23:55	Alachua		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	Restore the ocklawaha to a free flowing river.	The decades of scientific study conducted that support restoration from bot an ecological and scientific standpoint	Inability to provide warm water refuge for the threatened manatee (which has had serious deaths this year). Lake of ability for the public to enjoy the springs that are covered by the mucky pool, continual decline of the ecosystem, increased salt water intrusion downstream, dam safety concerns,	The partial restoration plan in the EIS and FDEP permit application	Numerous studies have shown that restoring the ocklawaha to a free flowing river will have significant economic benefits to the area, as well as enormous ecological benefits for manatees and other species, and will provide unparalleled recreational opportunities for the people of Florida. This can be achieved at a modest cost and would save taxpayer money in the long run by eliminating the need for draw downs, herbicide spraying, and rebuilding and maintaining the unsafe dam. Note- I don't visit the dam much because the pool is a mucky unpleasant mess. I kayak and boat on the free flowing river numerous times per year.
9/26/2021 0:07	Brevard		No	No					Breach the dam and restore the Ocklawaha River.	Manatees cannot be properly sustained by power plant effluents indefinitely, and it is unnatural	Manatees will become extinct.		
9/26/2021 0:18	Marion		No	Yes		2-5 times		Fishing	The reservoir and dam should be maintained and retained.	Rodman reservoir has been there a long time and has created it's own eco system. Rodman and the dam create a much larger fishing acreage than the river alone. Rodman could be used as a freshwater resource as Florida continues to grow. How do you plant 200 or 300 year old cypress trees that once lived the river?	loss of recreational opportunities in a fast growing area nobody knows what will happen to the Ocklawaha river if you just demolish the dam, will it turn into a muddy ditch? loss of jobs and revenue that Rodman generates	depends on the scenario that is offered	
9/26/2021 0:30	Marion		No	Yes		2-5 times		Fishing Boating Wildlife viewing	The reservoir and dam should be maintained and retained.	Rodman reservoir has been there a long time and has created it's own eco system. Rodman and the dam create considerably more fishing acreage than the river alone. Rodman could be used as a freshwater resource as Florida continues to grow. 9/26/2021 1:31	Putnam		Yes	Yes	2-5 times	More than 5 times	More than 5 times	Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Hunting Wildlife viewing Other: Camping, enjoying the outdoors around the reservoir.	I would like to see the Kirkpatrick Dam and Rodman Reservoir maintained and continue to thrive in its current state.	I grew up visiting the Rodman Reservoir from the 1960's to current time. I have seen what once was destroyed for commercial traffic, to grow and flourish into a much larger habitat. I believe the reservoir has created a better habitat for the Bald Eagle, Osprey, Alligator as well as untold species of other animals and aquatic life. It has also created greater recreational benefits for Putnam County as well as visitors from all over.	I believe that if the Kirkpatrick Dam is destroyed that the much larger ecosystem that has grown over the decades will be much more harmful than any previous damage that was done.	Throughout the years the question of removing the Kirkpatrick Dam has come and gone, I believe because as I see it, there is no sound reason to destroy the larger ecosystem and tourism benefits.	What does the St. Johns River Water Management District stand to gain with this survey? Where does the St. Johns River Water Management District officially stand on the matter of the current ecosystem?
9/26/2021 1:42	Outside of state / other	Ohio	No	No					Free the waterways for manatees	scientific data compiled by oceanography institute	what happens to manatee populations	improvements to manatee habitat	
9/26/2021 2:51	Seminole		No	Yes			2-5 times	Canoeing / kayaking Wildlife viewing	Free the Ocklawaha river by restoring the waters and springs by removing the Rodman Dam	Restoring the springs and river for the health of the waters and bioragion	the continued loss of restoring this beautiful river within our life time.		
9/26/2021 3:01	Outside of state / other	United Kingdom	No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway. 9/26/2021 7:44	Alachua		No	Yes			1 time	Other: Looking at the dam	Remove the dam, restore hydrology	We don't need the dam, the cross Florida barge canal was a failed project. Remove all failures.	Pouring tax money into unnecessary infrastructure and maintenance of something that is not used	Drain the reservoir as a trial, test the "economic benefit" theory, collect data, then remove the dam	
9/26/2021 8:03	Outside of state / other	Santa Fe, NM	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. Also, 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Also, keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	As a stakeholder who cares about Florida's environment, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. Thank you for carefully considering my request; and for your work toward a healthy, just, and peaceful planet; because the earth is the only planet for all of us. Sincerely, Russell Fletcher
9/26/2021 8:03	Duval		No	No					Broken so preserve marine life	The % of marine life in the area are down 94%. Reversing the man made mistakes will help to restore the marine life population	The marine life in the area will completely deteriorate.	No	
9/26/2021 8:05	Alachua		No	No						Sue free	The dam was never used for it's intended use.	environmental	no
9/26/2021 8:07	Flagler		No	No						Removed and have the water flow naturally.	Environmental groups and community input.	The springs water flow keeps going down and can't support the wildlife	Anything that helps the water flow
9/26/2021 8:32	Putnam		No	Yes		2-5 times	More than 5 times	Canoeing / kayaking Boating Wildlife viewing	Please beach the dam to restore it to its natural beauty and allow wildlife to travel the rivers	The springs are suffering due to the head pressure and negatively impacting the river quality	Continued impact to wildlife	A partial breach would at least be a step in the right direction	
9/26/2021 8:33	Hillsborough		No	No					open it up	the devastated cypress field	continuation of the loss of our springs and water level and quality of all of the springs	not sure	
9/26/2021 8:36	Manatee		No	Yes			1 time	Fishing	An overall approach to restoring the natural waterways in our state that will ensure future generations of Floridians can enjoy our rivers, springs and streams while protecting species and habitats.	Personal time out on the waterways and the surrounding areas and seeing them so negatively impacted by the decisions of others.	That our beautiful waterways will become a thing of Florida past, like so much of the beauty of "old Florida" already has.	As a whole, we all need to use a common sense approach and lean more natural and less artificial. It's what is best to ensure a fine balance of people and nature going forward.	
9/26/2021 8:44	Alachua		No	No						Not needed, the intended purpose was not fulfilled			
9/26/2021 8:47	Hillsborough		No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("O2O") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/26/2021 9:07	Clay		No	Yes		2-5 times		Canoeing / kayaking Wildlife viewing	I would like to see the dam removed and this outstanding waterway restored. Removing the dam will give people access to the many springs that are currently flooded from damming the river. It will have a huge economic impact attracting people from all over to this rural area for wildlife viewing, kayaking, swimming, and fishing. Also, allow manatees to swim up the river again and find sanctuary in the winter.	There are 20 drowned springs that would be restored by this single project, making broaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy. Breaching the dam saves $4-14 Million in dam repairs.	Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	It has been the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/26/2021 9:18	Volusia		No	No					Take it down	it's best for our environment to have it gone.	Continued destruction of our ecosystem	No	
9/26/2021 9:21	Pinellas		No	No					I would like to see the dam completely eliminated	It is an environmental disaster and, since the canal, was never finished, it only serves bass fisherman that live in a state that has a history of not taking care of its environment. I live in Pinellas County and see everyday what dreg and fill has done to our county. waterways.	It would be a real slap in the face of what makes Florida beautiful. Also, the dam resides in a a county that could use an influx of jobs. Recreational jobs could make a big difference in the county.	No	Useless dams all over the country are being taken down. The reasons are many, but we as a country are realizing how man, for his limited benefits, are destroying the beauty of what we hold dear. Let's do the right thing and help what God created instead of destroying it.
9/26/2021 9:26	Pinellas		No	Yes			1 time	Canoeing / kayaking Wildlife viewing	Remove it and restore the river.	Dams are not good for the health of most river wildlife.	Same old same old. Big business and greasy politicians not doing what is best for the environment	Yes	
9/26/2021 9:29	Marion		No	Yes	2-5 times			Fishing Boating	Keep in and stop the spraying	Fishing	Environmental impact	No	
9/26/2021 9:31	Pinellas		No	No					restoration of a free flowing ochlacla river by building the Rodman/ Kirpatrich Dam	A river systems would have great environmental improvement	Water quality would improve	No	
9/26/2021 9:40	Alachua		No	No					Remove the dam and allow water mgmt distincts property manage flow				
9/26/2021 9:49	Indian River		No	Yes			1 time	Other: I do not use it. I went tonit only to assess the situation and was appalled that such a project was ever approved.	I want it taken down.	Other than common sense? I am a 54 year old native Floridian. College educated, voter and taxpayer. I read. I get involved. The two main things to My are the renewal of the 20 springs and the return of an historic manatee migratory pathway where they can access warm water.	The voices of citizens not being heard	No!	What advantage is there to not removing the dam? It makes no sense. Removing it; on the other hand, is advantageous both financially and environmentally.
9/26/2021 9:52	Outside of state / other	Nashua NH	No	Yes		2-5 times		Canoeing / kayaking Boating Wildlife viewing	Restore it	Manatees need the warm water this would provide	Manatees die off needlessly	No	
9/26/2021 10:02	Seminole		No	No					Have the natural waterway restored		Loss of critical habitats	Sure	

9/26/2021 10:10	Marion		No	No					Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every additional day the dam and reservoir remain in place results in additional environmental degradation. I thought it wasn't a well-thought out plan from the start and i was 9 years old at the time.	Three river systems - the Ocklawaha, Silver and St. Johns - would experience significant environmental improvement from restoration. Water quality would improve. Their floodplains and corridor value for wildlife, pollinators and native plant propagule dispersal would be enhanced. Manatees would finally regain open access to the warm water habitats of the Ocklawaha and Silver Springs. Migratory fish including the Striped Bass, American shad, American eel, and the critically Endangered Atlantic Sturgeon and Shortnose Sturgeon would once again have open access to the Ocklawaha system if the dam is breached. This is a win all the way around.	The Reservoir would continue to be a barrier to movement by native wildlife and plant life along the length of the CSO Corridor, and compromise the value of Florida's investments in conserving lands like the Etonian Creek State Forest, and approved Florida Forever projects. Taxpayers will perpetually be on the hook for repair and maintenance of the dam and Reservoir, and continue to be liable for any loss of life or property damage that would result from a dam failure. We have already paid too much for this environmental failure. Thousands of acres of submerged aquatic plant communities would be unable to regenerate in a restored river channel and in the re-emerged spring run streams, and 7,500 acres of floodplain forest would not be restored. Water quality in the Rodman Reservoir and Lower Ocklawaha/St Johns River system would continue to decline. Manatees would continue to suffer from a lack of access to warm spring waters.	NO. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration.	This awful dam project has pained me for nearly my entire life. I would be willing to work as a volunteer to help see this restoration project to fruition.
9/26/2021 10:13	Putnam		No	Yes		More than 5 times		Fishing (shoreline/structure) Canoeing / kayaking Wildlife viewing Other: Enjoyment, peace, quiet and tranquility	Take it out!!! Let the river, springs and nature return. Yes it will take decades but lets get it done. Enlist volunteers like myself to help replant. Allow foresters in to reclaim the sunk cypress. Put crews on removing all of the hazards to navigation.	It would allow us to stop using herbicides to control natural vegetation. I used to have a couple of acres of eel grass in my back yard. It is now all gone, dead, killed by herbicides.	Continuance of a travesty for no good reason.	Yes, just open the dam and leave it open until a flood or other natural disaster takes it out.	Get on with it!
9/26/2021 10:18	Duval		No	Yes		2-5 times	More than 5 times	Canoeing / kayaking Boating Wildlife viewing	I would like to see it restored to its natural state.	The restoration of the st johns river watershed system and the benefits that would bring for recreation and wildlife. The reservoir as is is pretty disgusting.	The continued degradation of the surrounding ecosystem as the climate warms and makes the reservoir even more stagnant.	Not really.	
9/26/2021 10:22	Duval		No	Yes		2-5 times	More than 5 times	Canoeing / kayaking Boating Wildlife viewing Other: I visit the Lost Springs whenever there is a drawdown.	I want to free the Ocklawaha so marine life can migrate freely to the springs. a LOT of people would visit this natural treasure and eco-tourism could be a big attraction.	We spend tons of tax $$ to maintain this boondoggle. the boat ramps get clogged with vegetation which blocks access. then herbicides are applied which just YUCK.	More tax $$ wasted on a 50 year old boondoggle project. and the springs being buried for most of the years.	can't imagine one.	
9/26/2021 10:25	Orange		No	No									I am sorry I know nothing about this issue.
9/26/2021 10:32	Brevard		No	No									
9/26/2021 10:32	Hillsborough		No	Yes			1 time	Canoeing / kayaking Wildlife viewing Other: Swimming	Manatee conservative outreach, and clean-ups				
9/26/2021 10:32	Volusia		No	No									Provide sustainable habitat for manatees.
9/26/2021 10:33	Pinellas		No	Yes		1 time		Canoeing / kayaking					
9/26/2021 10:33	Charlotte		No	No									
9/26/2021 10:33	Polk		No	No					The environmental problems need to be fixed, and the Dam needs to be fixed, so as to not let another Disaster happen.	Newspaper coverage, and News stories	The environment will suffer, and the Creatures that live in Florida will have their Health and Well being put in Danger, so something must be done.	Any efforts to come to a good outcome I support.	None at the present time.
9/26/2021 10:34	Orange		No	No					What is necessary to protect the manatee population and other wildlife.	Endangerment to wildlife is occurring and is totally unacceptable!	Destruction of habitat and animals	Possibly if it would protect wildlife including manatees	not enough actually being accomplished quick enough in my view.
9/26/2021 10:34	Brevard		No	No									
9/26/2021 10:34	Bradford		No	Yes		1 time		Wildlife viewing					
9/26/2021 10:34	Citrus		No	No					anything favorable for the manatees and all our wildlife				
9/26/2021 10:35	Orange		No	Yes			1 time	Other: Just to see the dam	I believe it should be removed. Its only purpose is some ecotourism which could be financially replaced by the appearance of spring waters that the reservoir is hiding.	Manatees need more riverways to travel until the seagrass in the IRL is restored.	The continued decline of manatee populations.	No.	
9/26/2021 10:35	Broward		No	No					Restoration!	Ecology	There was a several-part project, NEVER COMPLETED. Restoration is needed for the River!	Protection for Manatees and other river-life!	
9/26/2021 10:35	Citrus		No	No					Most dams provide questionable service	my interested in fish travelling up rivers currently being dammed	Not sure	No	IN the North East, dams are regularly being removed to provide free flowing rivers and the results have been very encouraging - rivers quickly remove unwanted debris and become as intended
9/26/2021 10:35	Duval		No	No									
9/26/2021 10:37	Flagler		No	No									
9/26/2021 10:38	Monroe		No	Yes			1 time	Other	Blow them up.	Must be kidding	Deterioration of the stream	No	Free the rivers.
9/26/2021 10:39	Outside of state / other	Ky	No	Yes		2-5 times		Fishing	Leave it as is.	It is a wonderful resource. it creates tourism and tourism dollars.	I would not be able to see Florida and fish in that location.	Not that I am aware of at the moment.	
9/26/2021 10:39	Dade		No	No							Manatees		
9/26/2021 10:40	Seminole		No	No					That restoring the river will lead to return of migratory fish, connecting ecosystems, lead to more warm waters for the manatees which is necessary for their survival in the cooler months.		The manatees have had a devastating year and need more areas for warm water survival, this area would especially be helpful as the lack of development, human interaction would hopefully be associated with pure, clean waters with ample seagrass growth to sustain them through the seasons.	Stop the amount of development throughout the entire state. I am a Native Floridian and just hate what the almighty $$$ has done to ruin this beautiful state. There was a song in 1970 with a line 'paved paradise, put up a parking lot', that is what the politicians have allowed to happen to this wonderful state.	
9/26/2021 10:40	Outside of state / other		No	No							Manatees would suffer	No	
9/26/2021 10:40	Outside of state / other	Schess County, Poughkeepsie, NY 126	No	No					Have it designated as a protected area for Manatees and other wildlife.	The gentle giants need our protection because it's human interaction in a negative way that is diminishing their numbers	Manatees will have to struggle on their own to make it in the wild where humans vote in their propellers strike the manatees and pollute the water they live in	The manatees need protection point blank	
9/26/2021 10:41	Outside of state / other	St Paul	No	No					I would like to see a restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	With restoration, an estimated $4-14 Million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages.	Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages.	No.	As someone who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for Florida's people and wildlife.
9/26/2021 10:41	Palm Beach		No	No					I want to make sure that the manatee population is always protected.	Statistical evidence of Manatee deaths every year.	We will continue to see an escalation of Manatee deaths.		
9/26/2021 10:42	Sarasota		No	No									
9/26/2021 10:43	Putnam		No	No					I would like to see it taken down to restore the waterways	It's what is best for the environment	Concerns for the well being of the environment and wildlife	No	
9/26/2021 10:43	Volusia		No	Yes	2-5 times	More than 5 times	More than 5 times	Canoeing / kayaking Wildlife viewing					
9/26/2021 10:43	Brevard		No	No					It's past time to reunite the Ocklawaha, St. Johns, and Silver Rivers and Silver Springs,	Restoring the riverway by removing portions of the dam will re-establish access to essential habitat for manatees, migratory fish, connect three river ecosystems and Silver Springs, and restore a riverway for anglers and paddlers from Ocklawaha's Harris Chain of Lakes to the Atlantic.	This may be our last chance to restore the riverway. We need to restore habitat for manatees who are dying in record numbers.		
9/26/2021 10:44	Outside of state / other	North Carolina	No	No					Remove key portions to re-establish essential habitats for manatees and other migratory fish species	Dam was constructed for something that was then not completed and has caused damage to the local ecosystem	Is that the ecosystem is irreperably damaged and many species of wildlife are damged or disappear entirely	No	We are a critical moment in history where we have a chance to right the wrongs of the past in the way we treat the world we have been given as caretakers. We must not delay or it will be catastrophic. Every action helps.
9/26/2021 10:44	Flagler		No	No					Clean up	Wildlife dying	More death	Stop pollution	
9/26/2021 10:45	Outside of state / other	New York	No	No									
9/26/2021 10:45	Nassau		No	No					I would like to see the the Great FL Waterway restored. Believe us will help save the manatees and other wildlife.	We don't do enough to save our wildlife. We need to do more before certain species become extinct.	Our wildlife, especially the manatees will no longer exist. They are beautiful creatures that humans continue to not respect. It is very disturbing to see what is happening to our environment. Very, very sad.	No, we need to start putting our wildlife first for a change.	Please help to save our wildlife. We can't do it without you. I'm concerned what we are living for our future generations. Climate change is real. We need to act now. We can no longer deny our world is changing and not for the better. Thank you for listening.
9/26/2021 10:46	Outside of state / other	surprise az	No	No					restoration	freedom for manatees	continued decline in manatee pop		
9/26/2021 10:46	Outside of state / other	Pearland, Texas	No	No									
9/26/2021 10:46	Seminole		No	No					I would like to see if removed so that it will restore manatee waterways.	Save The Manatees has researched what removing key parts of this dam will do and all of the benefits will only improve it's water systems and also help manatees.	That the dam will continue to block off essential waterways and also continue to flood farmland.	Removing key parts of the dam if not the whole thing, that will at least help this situation.	
9/26/2021 10:46	Outside of state / other	Salem Ohio	No	No									I'm from out of state. So I have no comment
9/26/2021 10:46	Outside of state / other	Charleston, SC	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 Million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/26/2021 10:47	Outside of state / other	Sonoma County, California	No	No									I have never been to Florida and have never actually seen a manatee except in photos and films. Still, I find them fascinating, unique and adorable. I want them to be protected for future generations; their extinction would be a tremendous loss for Florida and the entire world.
9/26/2021 10:48	Marion		No	Yes			2-5 times	Fishing	Get rid of the dam	Our fish, water and wildlife	We will lose native fish and manatees	No	
9/26/2021 10:49	Outside of state / other	Louisiana	No	Yes			2-5 times	Wildlife viewing	I would like to see it restored.	I want to protect that wonderful natural wildlife that live in the area.	Wildlife losing their natural habitat and dying.	It needs to protect the wildlife, especially the manatees.	
9/26/2021 10:49	Marion		No	Yes			1 time	Wildlife viewing	It should be removed, and the river allowed to run its natural course.	Because the dam blocks the natural flow of the river, it disrupts natural fish and wildlife migration, hurts the overall ecosystem, and has disconnected critical habitats. With development and pollution threatening so much of Florida's natural ecosystem already, this is an opportunity to right a wrong and do some good. Especially when we have record manatee deaths from starvation, the dam poses a threat to them that can be easily fixed.	Manatees go extinct, other species follow, the entire ocklawaha ecosystem suffers, and we lose the opportunity. The few special interest businesses that benefit from the dam have been fighting this forever, but it's time to stop catering to the few and look at the big picture. Many more ecotourism, fishing and other business opportunities would be created by a restored, healthy ecosystem.	No	
9/26/2021 10:49	Hillsborough		No	No					Increased funding for conservation projects	The increasing lack of vegetation	Manatee deaths	Progress of any kind toward ongoing conservation efforts	
9/26/2021 10:50	Indian River		No	No					Breach the Kirkpatrick Dam.	15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, manatees and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	
9/26/2021 10:51	Hillsborough		No	No					Breach the dam to restore the Oklawaha River	The dam has a huge impact on the natural environment: rivers, springs, and wetlands. As with other manmade obstacles, dams thwart the natural migration of wildlife. Breaching the dam would do a great deal to restore habitat and balance the ecosystem.	A huge missed opportunity to help our manatees which have had a horrible year. We need to do as much as possible to provide habitat for them wherever and whenever we can. The dam is just one more obstacle for them to overcome ... an unnecessary and expensive obstacle at that.	No!	I moved to Florida largely because of the natural environment and the critters that inhabit it. Since coming here, it seems as though the "powers that be" are working overtime to destroy as much of that as possible. Getting rid of this old and unnecessary dam and restoring the Ocklawaha River is one way to bring hope for a better future for residents and wildlife.
9/26/2021 10:51	Marion		No	Yes			1 time	Wildlife viewing					
9/26/2021 10:52	Dade		No	No					Remove the dam to restore the 20 springs that need the water, restoring our fisheries, and provide more habitat for manatees.	The good that will happen to Florida by doing this. We have the needed funds, interest from public is high, and so much good will come of this dam removal. Let the waters flow free	That our environment will continue to degrade, and animals, fishes, birds and the waterways will suffer.		
9/26/2021 10:53	Citrus		No	Yes			1 time	Other: To view the damage it is causing by reducing fresh water flow	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam and thereby restoring fresh water flow.	Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 Million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Cost would be much less to breach the Dam rather than continuing to maintain it. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	In today's world, money comes first. Save money by breaching the dam. But to me personally, the environment comes first. Save the flora and fauna by restoring freshwater. Give our environment and our people back our blue waters to enjoy!

However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	For too long, this area has been neglected and, for the sake of all nature, needs to be transformed back into how it was decades ago. Wildlife deserves a chance of survival: wildlife needs to be with us forever.
9/26/2021 10:58	Volusia		No	Yes			More than 5 times		Use the marijuana plant to get rid of red tide and other chemical mess killing our wild life stop being such a jerk about what is right	Use the marijuana plant to clean up our water	Stupidity of the Floridas fish and wildlife and other idiots who want the status quote	Byes the anoce	Stop being the status quo. Scientists have fallen into the political trap. Stop it. Be bold

9/26/2021 10:58	Marion		No	Yes			1 time	Other: I do not use it. I went there to check it out.	The Rodman Damn is falling apart, and has outlived its life span. I would like to see the damn breached in stages (nothing radical all at once). We should not as FL taxpayers pay to build a new damn.	The dam restricts the natural flow of the Ocklawaha, and the natural migration of fish into the Silver River. The University of FL study shows that there will be more fish, more diversity of fish and more manatees in the Silver River if the dam is breached. It also shows enhanced economic growth by breaching the damn. There will actual be more fishing opportunities by breaching the dam..The dam is causing hundreds of manatees to be unnaturaly landlocked at Blue Spring State Park. The period drawdown, in which toxic herbicides are sprayed, is horrible.	Biggest concerns are the continued degradation of the Ocklawaha and Silver Rivers, and the continued toxic pesticides that are sprayed into the water, that we eventually drink.	Partial bricgdown of the Rodman Damn. Give it a while and see how it transpires. Please note that in the fishing tournaments at Rodman Dam - the participants are going outside of the Rodman Reservoir to catch their fish and then bringing it back to the reservoir to claim their trophy. There are videos that support this.	There are many recreational areas within Ocala National Forest to be enjoyed aside from Rodman Dam. We cannot play to the few squatters who built homes out there and in doing so - destroy our environment in the long run. The Ocklawaha and Silver Rivers are some of the most endangered rivers in America - due to dam. There are examples all over the country where dams were breached and things were much better after that.
9/26/2021 10:59	Seminole		No	Yes			1 time	Other: Parents used to have property on it	Restore it back to the way nature intended	Balanced ecosystem & manatees	Manatees	Not sure, but open to listen

9/26/2021 11:03	Bradford		No	Yes		More than 5 times	Wildlife viewing	Too much of nature is being destroyed or has been destroyed by humans.	Preservation			Preservation of these precious areas.	
9/26/2021 11:04	Escambia		No	Yes		1 time	Wildlife viewing	Remove part of the dam (breach) to make the river free flowing again. Constructed for the cross-Florida barge canal it was never used or needed. This dam is not generating electricity or managing flood control.	I am a Florida native, born and raised in Florida and I strongly believe it's time to preserve a piece of Old Florida. With so much development and so many people moving to and now living in Florida -- can't we roll back the clock on this? Seems a "vocal group of bass fishermen" outweigh the larger public and environmental good.	That this long overdo correction of an ill-conceived idea continue to be dragged out until after I'm dead. Seems like the bass fishers have decision makers in their pockets. Disgusting!	No, absolutely NOT ! This foot-dragging has carried on for far too long. Reports indicate this dam is old and potentially dangerous.	Enough is enough - what is it going to take to partially breach this damn and get the river back to free flowing? This has been going on for what, 40 years or more? Long as I can remember.
9/26/2021 11:06	Outside of state / other	New York	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 Million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/26/2021 11:07	Outside of state / other	Richmond VA	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. 9/26/2021 11:13	Clay		No	Yes	1 time	2-5 times	More than 5 times	Canoeing / kayaking Wildlife viewing	I would like to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	Unfortunately, No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	the Great Florida Riverway, to ensure a bright future for our state's people and wildlife, especially manatees. This restoration will also improve water quality and flow, support coastal resiliency, and strengthen a vital wildlife corridor. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("OSO") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkeys, white-tailed deer and other wildlife. Thank you for your attention to this important issue. Restoring the Great Florida Riverway is critically important to me as a stakeholder and will greatly benefit Florida's people, environment and wildlife.
9/26/2021 11:13	Palm Beach		No	No					Restore the wet lands for manatees and other wildlife.	The canal was never completed anyway!!!	Wildlife dying.	No	
9/26/2021 11:14	Manatee		No	No									
9/26/2021 11:14	Dade		No	Yes				Canoeing / kayaking	Let the river flow, destroy the dam. Fish, wildlife ,forests will thrive. Anglers, canoeists, campers , we all will be so happy. It is good for the local economy!	All the Sierra Club and other organizations repeated publications and efforts!!	We are doomed.		We need to restore our planet, save what we can for future generations,
9/26/2021 11:14	Broward		No	Yes			1 time	Other: 20 years ago Wildlife viewing	Connect them.	I feel it is the natural way and would restore habitat, for example, for manatees.	Loss of many of our precious manatees.	I can't think of any.	beginning at home, the everglades, our rivers.
9/26/2021 11:15	Manatee		No	No					Breach the dam to reunite he Ocklawaha, St. Johns, Silver Rivers and Silver Springs to restore the Great Florida Riverways. Removing key portions of the dam will reestablish access to essential habitat for manatees and migratory fish.	Manatees are dying in record numbers. Many are dying of starvation from loss of seagrass and habitat, along with boat strikes and cold stress. Manatees status should NEVER have been downgraded from endangered to threatened. Government findings to downgrade manatee status were inaccurate. We are the voice for the manatees, and we need to speak out to protect them.	My biggest concern is that the manatee population will continue to decline in record numbers. The manatee species cannot survive without food and warm waters habitats.	NO	The Florida waters are the home to manatees and many other local marine species. The waters are NOT OUR HOME. The waters are for us to enjoy, but not to disturb or do harm to the creatures that reside in them. FWC needs to advocate more for our waters and its inhabitants and enforce the rules for the waterways more stringently. The waterway rules should advocate for the marine life over recreational use of boaters, kayakers, anglers, etc.
9/26/2021 11:16	Brevard		No	No									

9/26/2021 11:17	Outside of state / other	Michigan	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. MAKE SURE CULPRITS PAY FOR THE DESTUCTION THEY CAUSED. ..... THANK YOU for all that you are doing
9/26/2021 11:27	Dade		No	No					Remove the dam	The ability for manatees and fish to migrate through the springs.	Fish populations are down 92% and manatees are endangered. Habitat destruction is more and more common	No	
9/26/2021 11:28	Outside of state / other	Texas	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 Million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economins have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/26/2021 11:38	Indian River		No	No									Whatever is necessary to maintain the lives of all manatees is extremely important to me.
9/26/2021 11:29	Hillsborough		No	No					Best interest for manatees	All needless deaths because of toxic Florida waters being allowed	removing political insanity	remove murderers of our wildlife and environment	
9/26/2021 11:39	Brevard		No	No					Removed	Healthy ecosystems and rivers need natural water level fluctuations to maintain healthy wetland ecosystems	Continued degradation of water quality and biodiversity in the local area	No	
9/26/2021 11:31	Dade		No	No					I have not visited, but lam informed about what is happening. We need an ecoenvironment solution in order to finish with the problem for the Nature and our drinking water.	Treath to the Nature and the people	Drinkable water and Ecosystem	Plans with science and professional support.	
9/26/2021 11:31	Putnam		No	Yes	2-5 times			Canoeing / kayaking Wildlife viewing	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 Million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economins have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/26/2021 11:32	Citrus		No	No					Restoration of natural rivers	Native animals are suffering with all the development of FL.	Native wildlife.		Save the manatee and other wildlife.
9/26/2021 11:33	Brevard		No	No					I would like the Rodman Reservoir and Kirkpatrick Dam breached to restore the Ocklawaha River. We have a florida period of time to restore this waterway for our wildlife. In addition, it will help with cleaner water, reduce potential taxpayer expenses and create additional water recreation areas to support our increasing population.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife.	Total extinction of wild manatees and other species. If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe.	No.	We are obligated as stewards of this states wild spaces and species to act in their interests for them and for future generations. I do not want to be part of a generation that destroyed the possibility of clean air and water and the beauty of our natural surroundings and wildlife. Do you? As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/26/2021 11:33	Nassau		No	No					restored back to re-establish traditional access to essential habitat for manatees, bring back migratory fish, connect three river ecosystems	the canal was NEVER completed and the ecosystem would benefit our commitment to protected what makes Florida special.	some species that are endangered and struggling will continue to decline.	allowing some points to be restored	
9/26/2021 11:33	Marion		No	Yes			More than 5 times	Canoeing / kayaking	Dam down	So the manatees can go thru			
9/26/2021 11:34	Brevard		No	No					Remove key portions of the dam	Seeing too many manatees dying and rivers not flowing to establish natural habitats for sea life, etc.	More sea life, wild life and vegetation would perish. The dam was never needed in the first place.	No.	
9/26/2021 11:34	Duval		No	Yes	1 time	1 time	2-5 times	Fishing Hunting	Restoration of the Ocklawaha River by broaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	100-mile St. Johns River Estuary from Welaka to Palatka to Jacksonville is healthier. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs.	Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. Thousands of acres of forests are not restored that could provide improved wildlife habitat, water filtration, natural flood protection, cooling canopy, and recreation benefits.	No. Breaching the dam is 50 years overdue. Dam safety, improved water quality and wildlife can't wait.	
9/26/2021 11:34	Outside of state / other	Placer County California	No	No					Reunite the Ocklawaha, St. Johns, and Silver Rivers and Silver Springs waterways.	Restoring the Great Florida Riverway by removing key portions of this dam will re-establish traditional access to essential habitat for manatees, bring back migratory fish, connect three river ecosystems and historic Silver Springs, and restore a lost riverway for anglers and paddlers from Ocklawaha's Harris Chain of Lakes to the Atlantic.	Loss of habitat for manatees.		
9/26/2021 11:36	Pinellas		No	No					Please keep this important riverway open for wildlife.				
9/26/2021 11:41	Leon		No	Yes				Other: I don't use the reservoir. If it was restored, I would bird watch and kayak the river system. I would show the restored river to my two grandsons who are just beginning to explore natural Florida.	The Kirkpatrick dam needs to be removed. This is an incredible opportunity to restore a beautiful river system for all Floridians.	I could write you an essay on this, but don't think that it is needed. You know the reasons. We have all known the reasons for forty years - water quality improvement, restoration of one of the most beautiful riders in Florida, expansion of manatee habitat, increased fishing diversity, reduction of maintenance costs for the dam and reservoir, safety reasons, expanded economic options for local governments, accessibility to other species and recovery of all the lost springs. All these reasons and more justify the removal of the dam and restoration of the river system.	The continued loss of all the above benefits to Floridians and wildlife. This is a state resource, as all Florida rivers are. It has been managed as a local fishing hole for way too long. It is time to free the river for all Floridians. It was a Florida treasure. It is managed as a reservoir, which in no universe is a treasure except for a limited number of fishermen.	NO. Please don't suggest that there is a compromise that leads to a viable river system. There isn't. I find it insulting that water managers, who are amongst the most highly qualified scientists in the state of Florida would make such a suggestion. PS The title of this survey suggests that you are most interested in local feedback. This sounds like you are assigning more importance to what locals want then other Floridians. This will of course lead you to the same old conclusion...locals like it for fishing, so no need to restore it. If this was put to a state wide vote, it overwhelmingly would be for removal of the dam and restoration. Restore it!	
9/26/2021 11:43	Outside of state / other	Sunriver, Oregon	No	No					I would like to see the waterways restored for the sake of the natural environment, especially the manatees.	Based on the information provided by the Save the Manatee Club, the natural ecology would greatly benefit from restoration of the waterways.	That the impact of past interference in the natural flow of the land and waters will forever leave the animals of the area struggling to survive.	I am not seeing how a dam can be only half removed, so no, I don't see a compromise.	
9/26/2021 11:47	Outside of state / other	grew up in Florida...family there still	No	No					protection of wildlife and all species habitat.	Water quality and availability for all species, including humans.	Above...	A clarification as to the justification for why denigrate water quality and overall health of all sentient beings.	If priority number one were QUALITY of life for now and for the next seven generations, this would not be a debate.
9/26/2021 11:48	Putnam		No	Yes	1 time	2-5 times	More than 5 times	Fishing Fishing (shoreline/structure) Wildlife viewing	Remove the dam, restore the river. It never should have been there in the first place.	Huge ongoing costs for maintaining the dam and impoundment cannot be justified against the benefits to a relatively small group of the fishing public (and the even smaller group who derive income there). Especially when you consider the economic benefit of removal. There is no respectable study that has ever said the impoundment is worth its cost. All economic benefit claims are picked out of thin air. What is really comical is that the winners of most of the fishing tournaments in the area caught their fish in the St Johns River, not the impoundment. Serious scientific and economic studies both say we all (and especially the surrounding environment) will be better off with the dam removed.	Cost and continued environmental degradation.	No. If the dam isn't removed or totally breached soon either we have to spend a huge amount of money to basically rebuild a mistake or there is a unanticipated dam failure in the future which will cause untold problems.	I fished the Ocklawaha and Silver Rivers before the dam and they were wonderful places to boat and fish. Not so much now, believe it or not. Dam removal help the environment in many many ways. Probably bring better fishing and a larger variety of fish. The specious claims otherwise, that dam and impoundment offer nothing good other than a convenient spot to fish. There is no need now or in the future for such an impoundment. Study what real science says about the situation. Don't deny science the way so many people in government seem prone to do. The barge canal was a bad idea and the impoundment is a costly problem that can and should go away.
9/26/2021 11:48	Outside of state / other	oles, CA, former resident of Seminole	No	No					I would like to see the Ocklawaha River restored by breaching the Rodman/Kirkpatrick Dam.	Ocklawaha River restoration will improve the Silver Springs ecosystem as well as downstream water quality. The impact will be beneficial to Florida wildlife such as manatees, as well as residents and tourists who flock to Florida for its natural beauty, unique wildlife, and recreational opportunities at springs and waterways. So, the benefits are both ecological and economical.	My biggest concern is that manatees are dying in alarmingly huge numbers in the past year. If the dam is not breached, allowing manatees unninhibited passage to warm water discharges necessary for their survival, numbers may decline further and this threatened, vulnerable species could become endangered again. Furthermore, overall water quality and ecosystem health is my concern. The dam helps fuel blue green algae events, fish kills (fish populations in Silver Springs have declined by 92%), invasive weed blockages, and the loss of underwater vegetation. All of this is detrimental to the ecosystem as well as recreational and economic opportunities for residents and tourists.	I could not support another outcome like temporarily drawing the reservoir down to 11 ft. mean sea level. A drawdown will not result in unobstructed water flow, which is critical for improving water quality and the health of ecosystems, as well as allowing manatees unobstructed passage to critical warm water habitats.	At least 841 manatees died in Florida waters during Jan. 1-July 2, 2021, making 2021 the deadliest year on record for Florida's manatees. At this critical moment, now is the time to act to help ensure the situation for Florida's manatees improves. Since Florida's manatees depend on power plant outfalls to stay warm in winter, breaching the dam is vital to allow them unobstructed access to Silver Springs. Additionally, breaching the dam will restore 20 lost "drowned" springs in the Ocklawaha, providing critical warm water habitat for hundreds of manatees. The health and vitality of Florida's waterways and ecosystems depends on you. I wholeheartedly thank you very much for your consideration.
9/26/2021 11:53	Nassau		No	No					Breach the reservoir and dam	Old dams are dangerous and have created more problems every year- they are outdated and no longer helpful	More and more manatees will be dead because water flow is being cut off and both animals and humans have been impacted due to failure to solve problems.no	no	Dams all over the US are being dismantled and cleaned up- Do your research and help make Florida a state that is ahead of another greater cleanup problem.
9/26/2021 11:54	Manatee		No	No					Restore the riverway by removing portions of the dam	Re-establishing the habitat for manatees	Loss of more manatees.	no	
9/26/2021 11:55	Palm Beach		No	No					Restoring the Riverway by removing key portions of this dam to re-establish access to essential habitat for manatees.	Manatees are dying.	Manatees will continue to die.	Don;t know	
9/26/2021 11:57	Alachua		No	Yes			2-5 times	Wildlife viewing	Dismantled	Cross Florida barge canal does not exist	Water management doesn't serve natural watershed

However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a snowbird from Canada, I want to make sure there is a reason to visit (and spend my money) in Florida year after year. The Florida springs and the manatees are what make Florida so special for me, not Disney and other tourist attractions. Protect your natural environment, wildlife habitat before it is too late. Restore the Ocklawaha River, save the manatees.
9/26/2021 12:05	Dade	No	Yes	2-5 times	Canoeing / kayaking	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide unimbibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/26/2021 12:06	Putnam	No	Yes	More than 5 times	Fishing Fishing (shoreline/structure) Boating Wildlife viewing	The existing ecosystem live in the current status of the waterways. Changing that will affect what is there trying to get back what used to be. I say leave it alone	I have grown up here and experience first hand the benefits	The ecosystem would be effected in unreversable ways		
9/26/2021 12:06	Alachua	No	Yes	2-5 times	Wildlife viewing	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. 9/26/2021 12:57	Broward	No	No					Protect manatees	We enjoy watching manatees on the Intracoastal in Fort Lauderdale	Sadness		

9/26/2021 12:58	Outside of state / other	Berkley, MA	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 Million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to $37 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/26/2021 13:00	Outside of state / other	Washington State	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	Restoring the Ocklawaha River, the heart of the Great Florida Riverway, will provide essential warm water winter habitat for hundreds of manatees. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, an important food source for manatees, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoring the Ocklawaha River by breaching the dam that impounds the river will allow manatees to access the Ocklawaha's natural springs that are currently submerged by artificially high water levels caused by the dam. Several of the Ocklawaha's 20 springs could provide natural warm water habitat for as many as 100 manatees each. This restoration will also allow manatees unimpeded access to the Silver River and Silver Springs, both of which present great potential as warm water habitat for hundreds more manatees. This exciting restoration project will additionally revive over 15,000 acres of forested wetlands, strengthening a vital wildlife corridor. The project area contains a vital linkage in the Ocala to Osceola ("OSO") Wildlife Corridor, a vital part of the Florida Wildlife Corridor, and restoration will allow greater freedom to roam for Florida panthers, Florida black bears, wild turkey, white-tailed deer and other wildlife. Thank you for your attention to this important issue.
9/26/2021 13:02	Outside of state / other	Maricopa County,Glendale, Arizona	No	No					Something to preserve animal sanctuaries.	Too much land development in areas that shrink areas for precious animals.	The loss of more natural land and animal species...		
9/26/2021 13:03	Palm Beach		No	No					Remove them and restore the natural water flow of the area.	The science clearly proves that restoring the natural water flow is beneficial for the ecosystem, not to mentioning endangered manatees.	A missed opportunity to boost the ecotourism of the area and the long term viability of the ecosystem.	No.	
9/26/2021 13:03	Outside of state / other	Cumberland WI	No	Yes		More than 5 times	Canoeing / kayaking Wildlife viewing		To never let anything that could harm the excistance of manatees to end. Protect wildlife as it has been intended to be.clear watered	Clear waters and to help with all marine animal wildlife	Loss on Manatees	After retirement to help SMC organization with rehabilitation	I've lived my whole life watching the Norther part of the USA save the bald eagles and it's time to protect the manatees as well.
9/26/2021 13:06	Sumter		No	Yes					Restore the river connections to support wildlife access/habitat.	Manatees need assistance to survive and this would provide more habitat for them.	Manatees will not be provided additional habitat support		I don't know
9/26/2021 13:07	St Lucie		No	No		1 time	Wildlife viewing		Opening the Rodman/Kirkpatrick Dam to reunite the Ocklawaha, St. Johns, and Silver Rivers and Silver Springs as habitat restoration which would water quality broadly.	Scientific sources (journal articles), NGO whitepapers produced by scientific research staff, agency scientists (e.g. FWC, FDEP, etc).	Cascade ecological failure of aquatic habitats which will invariably impact terrestrial habitats as well. Florida's overall ecology is unique on the continent, and the problems created by increasing the resident human population can/should no longer be avoided or rephrased in ways which refuse to acknowledge that fact and the attendant problems high populations present.	Placing caps on incoming population levels? Strengthening environmental pollution laws, water quality standards, and wildling real and stringent enforcement powers for individuals, corporations, and industries alike, fairly?	
9/26/2021 13:08	Duval		No	No					Open up the natural water system being blocked by what is described as a non-beneficial dam.	Literature and analysis of the issue.	A missed opportunity to help sustain Florida's eco system and support it's wildlife.	Cannot answer without knowing options, alternate recommendations and reasoning behind them.	Without humans, wildlife would thrive; without wildlife, humans would die. It is in the best interest of all concerned parties to keep in mind the big picture of the balance of nature and our role as humans to be responsible in decisions we make affecting our natural habitat.
9/26/2021 13:09	Putnam		No	Yes		More than 5 times	Fishing (shoreline/structure)		Remove the dam and restore the natural flow of water.	Removing the dam will actually improve recreational opportunities and benefit the native species that are now hampered by the dam.	Continued herbicide applications to aquatic vegetation along with denying the native species a healthy habitat.	No	
9/26/2021 13:10	Volusia		No	No					Gather enough elected officials to make it happen	Engineering studies	More of the same Florida environmental damage	don't know	
9/26/2021 13:12	Outside of state / other	31522	No	No					Please restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	I am a frequent birder in the coastal Georgia area and I have traveled to areas of FL simply to see manatees and enjoy their gentle presence.I would appreciate their opportunities to use these marine areas. My understanding is that the Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/26/2021 13:12	Outside of state / other	Illinois	No	Yes		2-5 times	Wildlife viewing		Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 Million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation, and adds supporting jobs, which would be an economic win for the surrounding communities.	The 100-mile St. Johns River Estuary will continue to be deprived of 150 mg of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow, and an unobstructed blue way.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is the loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. 9/26/2021 13:31	Manatee		No	No						Nature is first and foremost	Nature before humans		
9/26/2021 13:39	Orange		No	No						Take it out and free the Ocklawaha!	the manatees need access to more food and open waterways		Thank you!
9/26/2021 13:40	St Johns		No	Yes		More than 5 times	Canoeing / kayaking Other: Enjoy hiking on Florida trail and bird watching			Open the dam to restore the natural river environment	The dammed river will not provide the ecological diversity needed to sustain a long term healthy environment	No	
9/26/2021 13:41	Alachua		No	Yes		1 time	More than 5 times	Wildlife viewing		Take it out and restore the natural hydrology of the river	The ecosystem of the river and surrounding environs will continue to degrade because of the extended, unnatural hydroperiod which stifles vegetative diversity and leads to a monocultural habitat that benefits far less wildlife than would be under a free-flowing Oklawaha River that existed before the US government decided we needed to essentially split Florida in half for maritime shipping efficacy. It was a bad idea then and it's even worse now given how much our knowledge of aquatic ecosystems has improved in the decades since this boondoggle was built.	During the drawdown periods, it is obvious that wildlife usage of the river floodplain increases dramatically. Once reflooded, you basically have a deepwater reservoir with little benefit to the larger food chain but mostly benefitting a small group of special interests such as fishermen.	I suppose the next best outcome would be to physically leave the dam infrastructure and simply "pull out the weirs" and let it flow. This is a half measure since the dam is an impediment to some wildlife but I think this would be the only "Plan B" acceptable to me.	What are we waiting for to get this done? Political gerrymandering has kept this project in place for decades, long past the time when it should have been excised from the Oklawaha River floodplain ecosystem.
9/26/2021 13:42	Outside of state / other	Daphne , Al	No	No									
9/26/2021 13:48	Outside of state / other	Travis County, Texas	No	No						Abandon the plan and devote those resources toward improving existing businesses along the existing waterways. Improvements can include those to water treatment and usage.	The development of dams in Texas (and other states) has resulted in large scale financial damage to communities downriver from the impoundments. The reservoirs themselves have suffered from tremendous siltation and localized eutrophication. Large scale lake over by invasive species (both plant and animal) have diminished recreational use of the reservoirs. Populations of native species of plants and animals have been lost to invasive (pest) species.	Loss of habitat (down river) and opportunities for communities to enjoy the natural waterways. During periods of drought, waterways below dams often have minimal flow or , in some cases, no flow.	Inform communities around the proposed reservoir about efficient use of water in order to minimize the demand for more water. Work with businesses and community leaders to improve their enjoyment of the existing waterways. Many areas of the country have native plants and animals which are an attraction to tourists as well as local residents. There is much that can be done to maintain these populations as well as improve access for people to enjoy them.	I have lived in states (Texas and Arizona!) where the construction of dams has produced very costly and ongoing problems for communities around the reservoir and for communities below the dam. These problems include loss of water quality, very large scale siltation, water quantity downriver and the need to find alternate water sources, loss of income and livelihood for populations downriver, and cost of clearing shallow areas in the reservoir of invasive plants.
9/26/2021 13:49	Dade		No	Yes		2-5 times	Fishing Canoeing / kayaking Wildlife viewing		Remove the dam and restore the waterway to natural flow.	The dam/reservoir was never used as intended. It has wiped out springs, disrupted normal water flow and adversely impacted wildlife and the environment. Additionally, it is an expensive to maintain eyesore.	Continued deterioration of the river system and environment including wildlife. Expensive maintenance and repair costs on a dam that has reached its lifespan.	No	
9/26/2021 13:49	Outside of state / other	but we own residential property in Bi	No	No					Remove them and restore the natural waterways. I am opposed to dams in principle.	Data on habitat destruction for manatees, birds, fish, untold plants, etc.	Further destruction of the Florida ecosystems on which we all depend.	Removing key portions in order to restore habitat and access.	I am a native Floridian. I've lived out of state for many years but have continued to spend a lot of time in FL and several years ago bought a house in Titusville. An important reason that I and many other people have visited or stayed in Florida is its natural beauty. If that beauty disappears, a lot of folks will leave. Apart from our moral and practical duty not to destroy the land that sustains us, restoring Florida's ecosystems would be a smart investment in the economic future of the state.
9/26/2021 13:52	Putnam		No	Yes		2-5 times		Fishing Fishing (shoreline/structure) Canoeing / kayaking Boating Hunting Wildlife viewing	Keep it just the way it is.	The tourists dollars generated help support many small businesses in our area.	Loss of revenue.	Keep the dam. Close the locks and build a boat ramp on the lake side and the river side.	The removal of the dam has been a project for a small group of non Putnam county residents for years. They claim one of the reasons is poor water quality. It's my opinion that the real motive Rodman has been targeted is it's lack of homeowners. If this group should receive a favorable ruling allowing the removal of the dam then they could move up river to the Harris Chain,Kissimmee Chain and even Okeechobee.
9/26/2021 13:55	Volusia		No	No					Whatever is feasible to help the manatees and other aquatic residents.	...a video I watched about the loss of wildlife.	species dying out, water issues in the connecting lakes.	don't know	
9/26/2021 13:56	Volusia		No	No					remove portions of this dam to allow for improving our Great Florida riverway	Protect our environment by allowing wildlife to flourish in this area	Environmental impact	no	
9/26/2021 14:00	Duval		No	Yes		2-5 times	Wildlife viewing		Restoring the Great Florida Riverway by removing key portions of this dam will re-establish traditional access to essential habitat for manatees, bring back migratory fish, connect three river ecosystems and historic Silver Springs, and restore a lost riverway for anglers and paddlers from Ocklawaha's Harris Chain of Lakes to the Atlantic.	The fact that removing the dams would help the survival of manatees and other species	Manatees and other species of animals will die and go extinct		Please remove the dam so that manatees and other animals have the traditional habitat needed
9/26/2021 14:03	Outside of state / other	CT	No	No					Take down the dam.	Helping the manatees			
9/26/2021 14:05	Pinellas		No	No					It should be restored for the health of environment, stop any wastewater runoff and dumping.	Food source and clean, healthy water for manatees	Manatee starvation	No	Climate change and the current Florida government are destroying Florida.
9/26/2021 14:05	Alachua		No	Yes		1 time		Other: First hand look at the environmental disaster cause by the damming of the Ocklawaha River.	Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam to reconnect the Ocklawaha, Silver and St. Johns Rivers! Breaching this dam will re-establish access to essential habitat for manatees, bring back migratory fish, reconnect three river ecosystems, historic Silver Springs, and restore a lost riverway for anglers and paddlers from the Ocklawaha to the Atlantic. It would also restore 1000s of acres of forested floodplain wetlands essential for flood control. water quality and wildlife habitat.	A first hand look at the adverse effects of the dam including 1000s and 1000s of dead trees sticking up like skeletons in and a big un-natural lake full of non-native vegetation where there once was a beautiful river swamp.	Continued water quality degradation, permanent loss of a valuable wildlife corridor	No. No this dam has no purpose other than to provide habitat for game fish. There are many bass fishing lakes in north central Florida. Why support such large scale environmental destruction just so a relatively few people can catch fish for fun.	Restoring the Ocklawaha River can be a huge environmental "win" for north central Florida on par with the restoration of the Kissimmee River. With the many, many environmental challenges Florida faces, this is a great opportunity to restore the spectacular Ocklawaha River for generations to come, if we make it that long.
9/26/2021 14:05	Duval		No	No					Restored to original conditions	Growing concerns for obvious climate changes. We must preserve and protect all of our natural spaces for everyone, not manipulate just to please some.	The natural ecological systems of this area will be lost	No	
9/26/2021 14:07	Orange		No						Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 Million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to $37 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the

9/26/2021 14:10	Outside of state / other	Arizona	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/26/2021 14:11	Outside of state / other	Santa Barbara California	No	No					I would like to see a complete removal of the dam as this will help to not only provide migratory access to manatees but will re-establish important ecosystems that will protect the area.	Research has shown that restoring the river will promote great changes. Historically manatees have traveled up and down the Ocklawaha River during migration season since there are many natural springs, such as Silver Springs they can inhabit. Because of the Rodman Dam, it is much harder for them to get to the natural springs. The Rodman Dam that created the Ocklawaha reservoir is also causing many additional problems for the surrounding habitats. Trees have been unable to grow and the river is filled with exotic vegetation which is causing the river to lose its normal homeostasis. If the river were to be restored to its natural state there would be greater fish diversity. The construction of the dam has eliminated and greatly reduced various fish species. Restoration of the river would help restore Silver Springs and allow the survival of fish such as the catfish and mullet. Additionally, this would decrease the amount of algae that is accumulating in the springs and killing vegetation both in and around the springs. Restoring the river would allow for natural water flow and help the movement of animals through the Osceola to the Ocala Wildlife Corridor. The US Fish and Wildlife Service has also concluded that the fish and wildlife that currently live in the reservoir will not be harmed or negatively impacted by the restoration of the river.	My biggest concern is that the current ecosystem in the dammed part of the river will not have enough biodiversity to sustain itself.	No, the dam needs to be removed and the river restored.	
9/26/2021 14:13	Citrus		No	Yes			1 time	Canoeing / kayaking	Have it removed.	The health of the rivers and manatees.			
9/26/2021 14:13	Lake		No	No					Restoration of the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every day that the dam is in place, harm to the economy, water quality, and wildlife is inflicted throughout the Great Florida Riverway.	Water quality!!	I have visited many springs in Florida. I just recently learned about this. The springs our one of Florida's most valuable assets. They are not only breathe taking but support wildlife. We must allow it to flow naturally!! It will bring economic and restore wildlife. Florida should be for all of us to enjoy.	No	I will be visiting. I hope that you find the value in releasing the damn.
9/26/2021 14:16	Hillsborough		No	No					Restored & preserved for spicies in the area & mankind	Habitats for manatees		No	
9/26/2021 14:16	Outside of state / other	Pflugerville, TX	No	Yes			1 time	Wildlife viewing	Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. 9/26/2021 14:17	Putnam		No	Yes	2-5 times			Fishing	Torn Down			No	Just like it the way God made it. In its natural habitat.
9/26/2021 14:18	Duval		No	Yes				Canoeing / kayaking Wildlife viewing	Remove the dam and restore the river to its original, natural flow that joins the Ocklawaha to Silver Springs and the St. Johns River	Climate change data and the effect of dams (this one serves no practical purpose) on the natural water flow.	Giant loss for our region.	No.	
9/26/2021 14:20	Leon		No	No					Restoration of a free-flowing Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Every additional day the dam and reservoir remain in place results in additional environmental degradation.	I look to the endangered species act. Breaching the dam would allow manatees to regain important habitat, the American eel, Atlantic Sturgeon, and Shortnose Sturgeon would have open access to the river system, a restored floodplain forest would result- providing habitat for the Federally listed Clasping Warea and Scrub Buckwheat, and a restored wetland would allow the endangered Star Anise and threatened Hartwrightia to expand their ranges.	The Reservoir would continue to be a barrier to movement by native wildlife and plant life along the length of the OZO Corridor, and compromise the value of Florida's investments in conserving lands like the Etonian Creek State Forest, and approved Florida Forever projects. Residents and business owners in areas immediately downstream of the dam would continue to be under threat in the event of failure of a dam that has never, and will never, satisfy the purpose of its construction.	No. Breaching the dam is 53 years overdue and there is no compromise measure that would achieve even a fraction of the environmental and economic benefits of restoration.	The benefits to removing the dam are varied and many - covering biodiversity protection, supporting the endangered species act- and bringing in ecotourism dollars to local communities. Economic analyses conducted by researchers at the University of Florida demonstrate the economic impact from eco-tourists who use the natural portions of the Ocklawaha River is twice that of the anglers and boaters using the Rodman Reservoir, and annual use of the Reservoir's recreation sites has been on a downward trend since residents began in 2004 as water quality and fish production have continued to decline year after year. When accounting for revenues generated by increased recreational usage, a cost-benefit analysis determined restoration would produce a cumulative net benefit of $47.2 million over the first 10 years, versus a cumulative loss of $5.3 million with repair and maintenance of the dam. The recreational development component included in the restoration plan would benefit nearby residents and expand eco-tourism, and more than compensate for loss of the Reservoir.
9/26/2021 14:20	Marion		No	Yes	1 time	1 time	1 time	Wildlife viewing	Open for full water flow.	Ocklawaha river flowing naturally again.	Keep fighting !!!	No !!!	Do it now !!!
9/26/2021 14:26	Lee		No	No									
9/26/2021 14:28	Pinellas		No	No					The dam removed and natural environment restored.	The dam inundated 9,000 acres of the Ocala National Forest, smothering 20 natural springs and blocking migrating manatees, striped bass and other marine life.	The loss of the natural springs, the effect it has on the endangered manatees.	I would support anything to help restore habitat for manatees and their future.

9/26/2021 15:01	Outside of state / other		No	No					Measures must be taken proactively to ensure that manatee populations thrive despite multiple challenges that currently adversely impact these gentle giants.	Human-derived decisions have further imperiled these animals. Since this is known, we must mitigate as many of these factors as possible.	The loss of the Florida manatee would be a major loss to this planet and an avoidable one.	As long as significant, impactful changes could be implemented that prioritized the safety and well-being of the Florida manatee population, then I would be amenable to other possible scenarios.	Now is the time to make impactful change.
9/26/2021 15:04	Putnam		No	No					Remove dam.	Historical health of Ocklawaha river and surrounding wetlands including habitat for manatees.	Water quality deterioration of St Johns river. continued manatee deaths.	No. dam should be removed.	
9/26/2021 15:11	Bradford		No	Yes			1 time		I would like to see the dam removed and allow the river to flow free the way it was naturally.	The dam was constructed for a defunct canal project. Environmental studies have shown removing the dam will improve the health and fisheries of the St John's river as well as improve opportunities for recreation on the ocklawaha river.	Lost opportunity to preserve natural Florida and the health of the rivers for future generations.	I don't think so.	
9/26/2021 15:16	Alachua		No	Yes			1 time	Other: Was just passing through and stopped for a moment.	It be removed and the river restored to its historical flow. I would be more interested in visiting then also.	I'm a Florida wildlife enthusiast and the dam disrupts traditional migration routes of aquatic life that was in place long before it was dammed.	Continued disruption/disfunction of a natural system from human interaction.	Nope. Kind of all or nothing with this one.	
9/26/2021 15:18	Volusia		No	Yes			2-5 times	Wildlife viewing	I'd like to see the dam breached and the Oklawaha River restored to its original condition as a part of the connected waterway between the St Johns, the Oklawaha and other natural water bodies.	Numerous scientific studies have shown both environmental and financial benefits to a restored river. It's costing thousands of dollars per year to maintain the swamp created by the dam. Breaching it restores the river's natural flow and means good things for all of us.	Breaching the dam would restore the natural flow of 150 mgd of fresh water, improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Besides, for over 50 years thousands of Floridians across the state have begged for this dam's removal. It's time their voices were listened to.	No. It's time to end the half measures that have been put forward for years to silence the majority's pleas for the dam to be demolished. The pleas from some fishermen that tout how great the bass fishing is in Rodman Reservoir are from people who have no idea how great the fishing would be in a restored river.	Please, it's time to remove this last vestige of the ill conceived Cross Florida Barge Canal. Even Nixon was convinced it was a bad idea. In Jurassic Park the mathematician says at one point, "They are so focused on whether they can do something. They never stop to ask if they should do something." The barge canal should never have been started. Let's end its dirty heritage now. Thank you.
9/26/2021 15:18	Putnam		No	Yes	2-5 times			Other: Nice place for a relaxing Sunday drive	Renovate to maximize tourist income and local use of both the Locks and the current Ocklawaha River ...maximize tourist and commercial fishery	Some four years ago, at a public meeting on taking down the dammed dam, I listened to Tommy Underwood (386.659.2461) and a volunteer fireman form Interlachen way. Underwood detailed how each drawdown is accompanied by a three foot drop in water levels of surrounding lakes of Interlachen and north ... he showed a Water Management recording strip in proof. The cause is the loss of the 'capping effect" of the water column of the Rodman pond. We then listened to the fireman talk of how he has spent a full year getting certification /authorization to use the Keystone lakes and others as water sources for fire fighting. He said absent the damn dam the lakes would not support fire fighting causing the entire area to loose out on homeowners insurance that would become unavoidable. Aside from that I have traveled up the Ocklawaha as it now exists. We were impressed with how deep, clear, and fast running the water is currently. We were impressed with the numbers of boaters going up and down the river as it now exists. We were impressed with the lack of consideration by commercial crabbers leaving crab pots here, there and the otherwhere without appawent regard for recreational boaters. There is as lot to be said for the river as it now exists. It could easily be improved with a little help from FWS Habitat Restoration people doing their job	all the progressicators running off at the mouth spouting off about 'what will be' are wrong leaving a loss of the bass tournament / fishing / camping benefits of the Rodman Pool in exchange for a river that offers little more than what it is now.	irrelevant as my 'desired outcome' isn't mainstream	I understand .... My opinion counts for nothing. The politics of big business / big lobby/ big environmental organsiations run the show.
9/26/2021 15:19	Hillsborough		No	No						Better safety measures	The risk to wildlife	Wildlife safety	Na	Na
9/26/2021 15:23	Seminole		No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	As a stakeholder who cares about Florida's environment and wildlife, I am asking you to restore the Ocklawaha River, the heart of the Great Florida Riverway, to ensure a bright future for our state's people and wildlife. The Great Florida Riverway is a 217-mile system of rivers and springs that flows north from the Green Swamp near Lake Apopka, is fed by Silver Springs, and continues past Palatka to the Lower St. Johns River estuary on the Atlantic Ocean. Restoration will reunite these rivers and benefit communities, economies, and ecosystems all along the Riverway. 2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/26/2021 15:37	Marion		No	Yes			2-5 times	Boating Wildlife viewing Other: hiking	The dam should be removed and other measures taken to restore the pre dam environment.	The large bulk of scientific research strongly indicates that the water system, plantlife, and animal life (including fish and birds) will benefit from removal of the dam.	Further degredation and collapse of wildlife populations.	No.	
9/26/2021 15:40	Duval		No	Yes			2-5 times	Wildlife viewing	Breach the Rodman/Kirkpatrick Dam.	There are 20 drowned springs that would be restored by this single project, making breaching the Rodman/Kirkpatrick Dam the most beneficial and cost-effective springs protection project in Florida. Fish populations in Silver Springs have declined by 92%, in part due to the construction of the dam. Restoring historic routes for migratory fish is essential to the health of Silver Springs. Hundreds of manatees would gain access to much-needed habitat at a time when manatees are experiencing the deadliest year on record. The dam is past its life expectancy, breaching the dam saves $4-14 Million in dam repairs.	We miss the best opportunity to do this. State and federal funds are available, public interest is high, environmental needs are critical (manatees, water quality, wildlife habitat), and the dam is unsafe. The lower St. Johns, Ocklawaha, and Silver Rivers, 20 lost springs of the Ocklawaha and one of Florida's largest artesian springs, Silver Springs, are not reunited and restored. Millions in taxpayers' money are unnecessarily spent to repair the Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Putnam County and Silver Springs economies lose opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. Hundreds of manatees loose access to essential warm water winter habitat. Water quality declines further fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss.	No. Breaching the dam is 50 years overdue.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration. Breaching the Rodman/Kirkpatrick Dam to restore the Ocklawaha River is the most cost-effective springs protection project in Florida today. The project uncovers 20 springs submerged by the waters of the dam and is key to restoring Silver Springs, one of the largest artesian springs in the world.
9/26/2021 15:44	Outside of state / other	New York	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide uninhibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.

9/26/2021 15:45	Outside of state / other	Illinois	No	No					Restore the Ocklawaha River by breaching the Rodman/Kirkpatrick Dam.	The Rodman Dam impacts three rivers, more than 50 springs and over 15,000 acres of forested wetlands. It prevents the natural migration of Florida's native fish and prohibits hundreds of manatees from obtaining refuge and forage in cold winter months. Breaching the dam would restore freshwater flow, uncover drowned springs in the Silver Springs ecosystem, which are essential habitat for manatees, and provide thousands of acres within the Florida Wildlife Corridor for birds, bears, panthers and other wildlife. Restoring the Ocklawaha River will provide 150+ million gallons a day of natural freshwater flow to the Lower Ocklawaha and St. Johns Rivers, making them more resilient to saltwater intrusion and improving water quality downstream. The 100-mile St. Johns Estuary from Welaka to Palatka to Jacksonville will be healthier. The dam is more than 50 years old and has surpassed its life expectancy, without ever being used for its intended purpose. With restoration, an estimated $4-14 Million in dam repairs will be saved in taxpayer money. Also, an unexpected breach has the potential to result in more than $57 million in flood damages. Restoration creates more diverse recreation opportunities for everyone, increases visitation and adds supporting jobs, which would be an economic win for the surrounding communities.	If Florida does not act now, we miss the best opportunity to provide essential warm water and forage habitat for manatees in a time when they are dying at an alarming rate due to habitat loss in other areas. Although manatees use the Ocklawaha and Silver Rivers, they must pass through a manually operated lock that is both intermittent and perilous. Breaching the dam is necessary in order to provide unimbibited passage, particularly during cold winter months when springs provide critical warm water discharges for manatees. Native fish populations also rely on free passage through the system and we are seeing an increase in invasive fish downstream of the dam. State and federal funds are available, public interest is high, environmental needs are critical and the dam is unsafe. Millions in taxpayers' money will be needed to repair Rodman/Kirkpatrick Dam, a dam that does not provide flood protection, power, water supply or other broad public benefit. Thousands of dollars are spent each year to remove invasive weed blockages to maintain access to the reservoir. Further, a dam failure or overtopping could result in potential damages to 537 property owners and up to $57 million in damages. The dam is an economic boondoggle. Conversely, removing the dam means that Putnam County and Silver Springs economies have an opportunity for economic growth from increased visitation, construction, and hospitality jobs and an estimated $47 million in economic benefits over 10 years. The 100-mile St. Johns River Estuary will continue to be deprived of 150 mgd of natural water flow to improve water quality, restore fish and wildlife habitat, and reduce saltwater intrusion. Water quality declines are fueling invasive weed blockages, blue-green algae events, fish kills and submerged aquatic vegetation loss. The rivers and estuary impacted by Rodman Dam provide resilience for our agricultural communities and nursery for commercial and recreational fish. They are the literal lifeblood of this region and should be restored.	No. Breaching the dam is 50+ years overdue. Dam safety, improved water quality and wildlife can't wait. Temporarily drawing the reservoir down to 11 or 12 ft. mean sea level until restoration occurs will avoid downstream property damages from a potential dam failure and still provide continued recreational benefits. However, a drawdown alone does not provide significant environmental benefits for fish, manatees, water quality, water flow and an unobstructed blueway.	2021 is the deadliest year on record for manatees; unless their natural habitat is restored, we can expect more die-offs in the future. While this year's crisis was caused in large part by starvation from loss of seagrass, the greatest long-term threat to the manatee is loss of natural warm water winter habitat. 60% of Florida's manatees depend on power plant outfalls to keep warm in the winter - an unsustainable situation. Restoration will provide essential warm water habitat for hundreds of manatees in the Ocklawaha's "drowned" springs and by providing access to Silver Springs. Thank you for your consideration.
9/26/2021 15:45	Volusia		No	No					We would like to breach the Rodman/Kirkpatrick Dam to reunite the Ocklawaha, St. Johns, and Silver Rivers and Silver Springs - The Great Florida Riverway.	This may be our last great opportunity to restore this riverway for manatees, other wildlife, and people.	The manatees and other wildlife will be restricted from vital habitates.	no	
9/26/2021 15:49	Outside of state / other	Outside of U.S.	No	No					We need to restore the Ocklawaha River by breaching the Kirkpatrick Dam.	Restoring the Ocklawaha River is the most impactful manatee habitat restoration project in the state and will provide essential warm water winter habitat for hundreds of manatees. 15,000+ acres of the Florida Wildlife Corridor will be restored or enhanced, benefitting species like Florida black bears, Florida panthers, bobcats, bald eagles, and white-tailed deer.	Keeping the Ocklawaha dammed deprives hundreds of manatees of essential warm water winter habitat, harming their chances of survival in the future. Keeping the Ocklawaha dammed would keep 7,500 acres of forested wetlands flooded by the Rodman Reservoir and continue to impact species like Florida panthers, Florida black bears, bobcats, and white-tailed deer that cannot easily travel through this vital section of the Florida Wildlife Corridor.	No. Breaching the dam is 50 years overdue. Wildlife and water quality cannot wait any longer.	
9/26/2021 15:49	Pinellas		No	No					Restored to natural state	FWC reports manatees dying because of sea grass die off.	More manatee deaths.	No	
9/26/2021 15:50	Outside of state / other	Huntington Station, NY	No	No					Preserve it.	Don't know	We need to protect our natural world.	no	
9/26/2021 15:50	Outside of state / other	San Jacinto, Ca	No	No					Remove dam thereby restoring natural waterways.	Removal of this dam will re-establish traditional access to essential habitat for manatees, bring back migratory fish, connect three river ecosystems and historic Silver Springs, and restore a lost riverway for anglers and paddlers from Ocklawaha's Harris Chain of Lakes to the Atlantic.	Loss of manatees and other wildlife.	Remove portions of the dam.	Restore nature to what it was meant to be.
9/26/2021 15:50	Putnam		No	No					Remove dam to free Ocklawaha river	Removing dam would allow free flow of springs to reduce nutrient load in St Johns river	Increased algae bloom in river and manatee death due to habitat loss.	No, it should be removed	No money to properly maintain dam, sudden break endangers those of us on the river
9/26/2021 15:52	Brevard		No	No					I would like to see it removed to bring the Ocklawaha River back to its natural state.	I read the book The 3 Marjories and learned about how this all happened. So many native Florida species of fish and animals were adversely affected by the dam.	We will lose this possibly once in a lifetime chance to undo the wrong of the past.	Don't think there is any middle ground on this subject.	The only thing I'm not sure about is how the families living on the created lake will be compensated for losing waterfront status or if that is even a thing.
9/26/2021 15:52	Seminole		No	No					Removed and the river restored	The on-going cost of maintaining the reservoir and the need to improve aquifer recharge and river flow to meet the demand of a growing population	The on going cost to taxpayers for the maintenance of an under utilized resource.	None I can think of	
9/26/2021 15:54	Outside of state / other	Portland, OR	No	Yes			1 time	Canoeing / kayaking Wildlife viewing	I would like to see the Great Florida Riverway restored and remove portions of the Dam to do this.	Restoring the Great Florida Riverway by removing portions of this dam will re-establish traditional access to essential habitat for manatees, bring back migratory fish, connect three river ecosystems and historic Silver Springs, and restore a lost riverway for anglers and paddlers from Ocklawaha's Harris Chain of Lakes to the Atlantic. Because of this, Florida is more likely to get visitors who want to come and see wildlife, which will bring in money to Florida.	That species will continue to die out. I don't know that I would visit this part of Florida again if this doesn't happen.	Not asking for the whole dam to be pulled, just key areas that will help restore the habitat.	
9/26/2021 15:56	Broward		No	No					The area for the manatees should be preserved. The manatees are in danger and their habitat is declining, so we should do everything we can to help preserve areas for them to live in.	The annual census shows that the manatees in Florida are declining.	Manatees, a natural inhabitant of our state, might not be able to live here any more. They might become extinct.	Some areas should be set aside for the protection of the manatee population.	The manatee species depends on us for their continued survival.
9/26/2021 15:58	Seminole		No	No					Restore The Great Florida Riverway by removing key portions of the dam.	This Riverway needs to be restored to a better habitat for manatees and fish.	The loss of manatees and migrating fish.	No	We need to think more about our environment and what we are going to lose if we don't care for it. Why are people so consumed with paying over Florida? So sad we are losing not only manatees but our wildlife and your birds.
