## INTRODUCTION

Water use data is collected annually for the 19 counties within the St. Johns River Water Management District (Figure 1). As in past years (1978, 1979, 1980, 1981) the 1982 data has been published in a Technical Report. This report summarizes water use in the St. Johns River Water Management District for 1982. In addition to this Technical Report the 1982 data has been published in a Map Series (83-2) to illustrate water use within the District.

Water use figures are in million gallons per day (MGD). Water use is shown for fresh ground and surface water sources along with total fresh water use. Water use is also shown for the following categories, Public supply, Domestic self-supplied, Industrial self-supplied (including Institutional self-supplied), Agricultural Irrigation (including Livestock use), Thermoelectric Power Generation and Heat Pump/Air Conditioning.

Data for public suppliers (125), self-supplied industries (67), institutions (13) and thermoelectric power plants (13) is collected by the SJRWMD. Agricultural water use is estimated from the data provided by representatives of the Institute of Food and Agricultural Sciences (IFAS), the USDA Soil Conservation Service (SCS), and the USDA Agricultural Stabilization and Conservation Service (ASCS). Supplemental irrigation needs for crops in this report were computed using the 30 year mean of rainfall and temperature. Previous reports utilized only the prior years rainfall and temperature data. This procedure provides a more accurate account of water use in agricultural. The heat pump/air conditioning figures are calculated from the Brevard County well inventory list 1975-77, the Volusia County Vol-Data File (USGS 11/20/80) and conversations with Heating Ventilation Air Conditioner (HVAC) dealers in Putnam County. This category is calculated for only three counties, Brevard, Volusia and Putnam. Data for the remaining 16 counties is presently being inventoried.

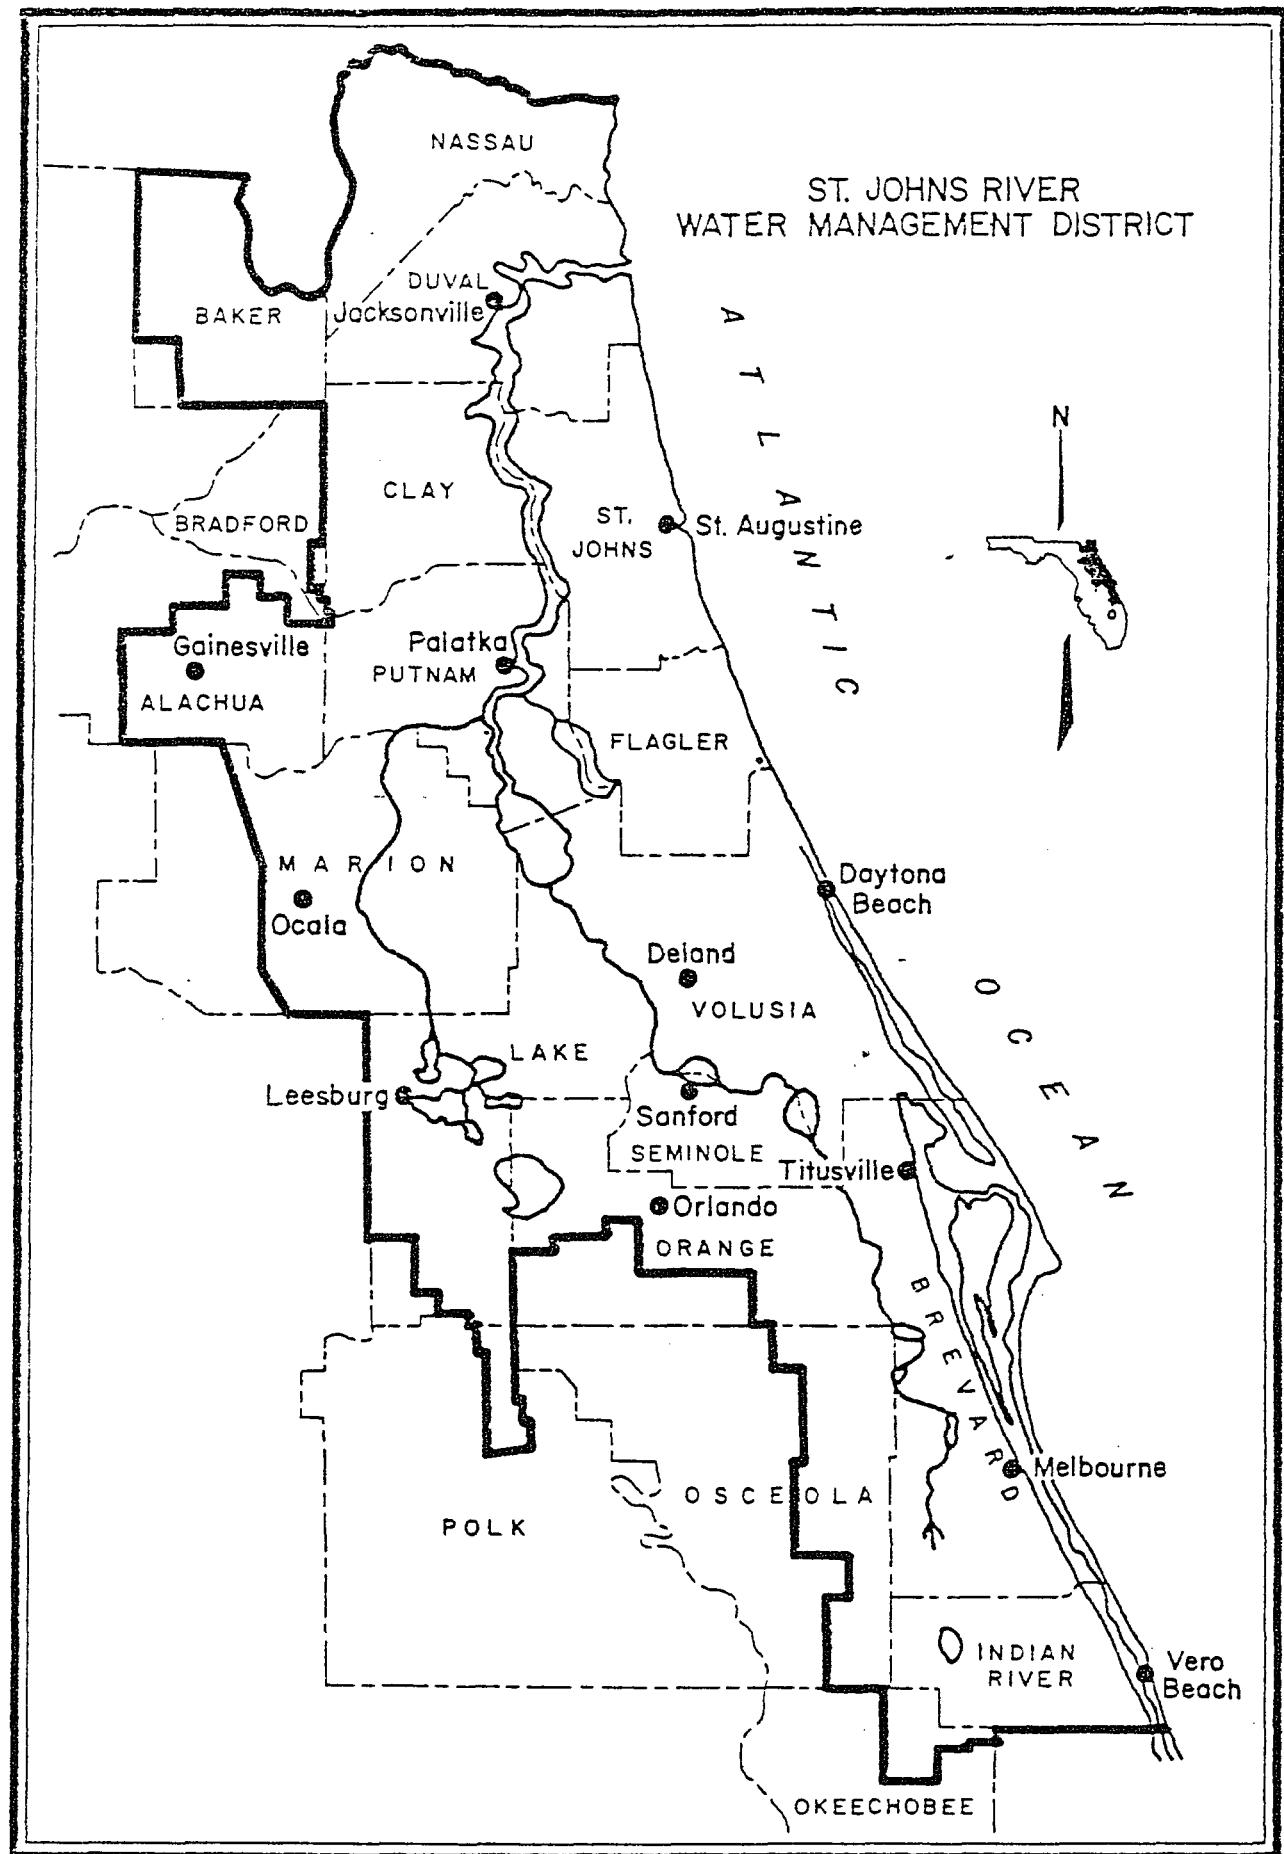

Figure 1. St. Johns River Water Management District

## WATER USE BY CATEGORY

### Public Supply

The total fresh water use for Public supply in 1982 amounted to 291.52 MGD of which 280.19 MGD (96%) was ground water and 11.33 MGD (4%) surface water. Orange (83.16 MGD) and Duval (70.19 MGD) were the counties with the largest public water use for 1982 (Table 1). Orange County's total includes water withdrawn for the City of Cocoa in Brevard County (16.44 MGD). Duval (466,891) and Orange (381,500) counties also have the largest number of people served by public supply systems. Total population served by the 125 public or private suppliers (utilities that serve 500 or more) accounted for 78% (1,888,517) of the District's population.

TABLE 1. Public Fresh Water Use (MGD): 1982

### Dometric self-supplied

Domestic self-supplied fresh water use in 1982 amounted to 88.20 MGD of ground water. In 1982, an estimated 521,332 people were served by small utilities not inventoried, or are self-supplied. In order to calculate domestic water use, gallons per capita day (GPCD) were estimated for each county, then multiplied by the population not served by public supply. The District 1982 average GPCD was 154, although this figure accounted for public supplied commercial and industrial water use as well as a single family use.

In addition to GPCD, total Domestic self-supplied water use was calculated for each county (Table 2). Duval (17.08 MGD), Indian River (11.77 MGD) and Lake (8.78 MGD) were the counties with the largest domestic self-supplied water use for 1982.

TABLE 2. Domestic self-supplied Fresh Water Use (MGD): 1982

COUNTY	GROUND	SURFACE	TOTAL	PERCENT
ALACHUA	1.66	-	1.66	2

### Industrial self-supplied

Industrial self-supplied fresh water use for 1982 accounted for 169.69 MGD of which 128.82 MGD (76%) was ground and 40.87 MGD (24%) surface. Industrial self-supplied use for 1982 includes 8.52 MGD of Institutional self-supplied water use. Putnam (55.59 MGD), Nassau (42.07 MGD) and Duval (35.81 MGD) were the counties with the largest industrial water use for 1982 (Table 3). Pulp and Paper processors are the major water users in Putnam, Nassau and Duval counties.

### Agricultural Irrigation

Agricultural Irrigation fresh water use, which includes Livestock water use, was the largest water use category in 1982 accounting for 698.77 MGD. Total ground water withdrawn amounted to 484.01 MGD (69%) and the remaining 214.76 MGD (31%) was surface water. Indian River (250.91 MGD), Lake (100.44 MGD) and Brevard (91.96 MGD) were the counties with the largest Agricultural Irrigation water use for 1982 (Table 4). Citrus and improved pasture are the largest irrigated crops in these three counties (see appendix). Total agricultural acreage for 1982 was 1,099,172 of which 31% was irrigated (340,589). Indian River (94,688), Lake (69,813), Brevard (36,106) and Orange (33,382) counties accounted for 69% of the irrigated acres in 1982.

TABLE 4. Agricultural Irrigation Fresh Water Use (MGD): 1982

\* less than 1.0%

### Thermoelectric Power Generation

Thermoelectric Power Generation fresh water use in 1982 amounted to 10.79 MGD. Ground water use totaled 4.05 MGD (38%) while surface water use totaled 6.74 MGD (62%). The total fresh water use in this category represents less than 1.0% (0.8%) of the total water use in 1982. The majority of water use in this category is saline surface water (1,373.02 MGD) used for once through cooling. Volusia County (5.19 MGD) was the only county with a significant fresh water use value for 1982 (Table 5).

TABLE 5. Thermoelectric Fresh Water Use (MGD): 1982

### Heat Pump/Air Conditioning

Heat Pump/Air Conditioning (HP/AC) water use data was only collected for three counties; Brevard, Putnam and Volusia. Total water use for this category amounted to 149.27 MGD. Each county's totals are as follows:

- Brevard; 16,175 HP/AC units - 141.51 MGD
- Putnam; 500 HP/AC units - 2.29 MGD
- Volusia; 1,346 HP/AC units - 6.16 MGD

Data for the remaining 16 counties is presently being inventoried.

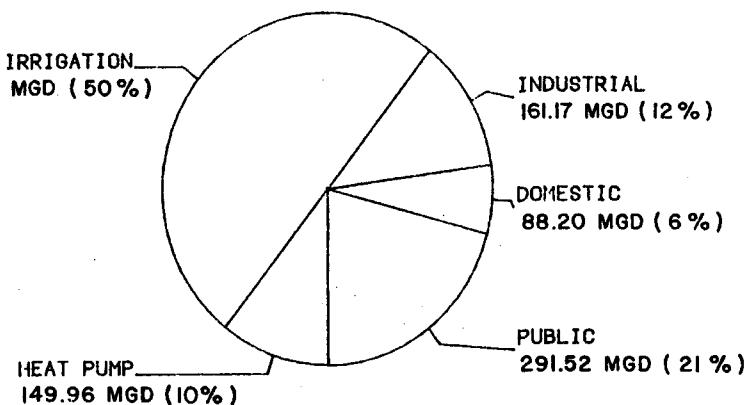

### Water Use By Category Summary

Agricultural Irrigation (which includes Livestock water use) was the largest fresh water use category for 1982 (Table 6). This category accounted for 42% of the ground water and 78% of the total fresh surface water used within the District (Figure 2). The second largest category was Public supply using 25% of the total fresh ground water and 4% of the total fresh surface water. Other categories were substantial amounts of ground water were used are Heat Pump/Air Conditioning with 13%, Industrial self-supplied (which includes Institutional self-supplied water use) 11% and Domestic self-supplied 8%. Thermoelectric Power Generation accounted for less than 1% (0.4%) of the total ground water used in 1982. The two major fresh surface water use categories were Agricultural Irrigation (78%) and Industrial (15%) accounting for 93% of the total used in 1982. Public supply and Thermoelectric Power Generation accounted for the remaining 7% of total fresh surface water use.

TABLE 6. Total Fresh Water Use (MGD) by Category: 1982

#### WATER USE BY COUNTY

Indian River and Brevard Counties were the largest fresh water use counties for 1982 (figure 3) accounting for 270.70 MGD (19%) and 256.11 MGD (18%) respectively. Orange (148.99 MGD), Lake (140.21 MGD) and Duval (132.12 MGD) are the next three largest fresh water use counties for 1982.

Brevard County, the largest fresh ground water use county in 1982, accounted for 229.51 MGD (20%). Other counties which withdrew over 100 MGD of fresh ground water are Orange (144.37 MGD), Duval (129.86 MGD), Lake (118.39 MGD) and Indian River (108.26 MGD).

Indian River County was the largest fresh surface water use county in 1982 accounting for 162.44 MGD (59%). Other counties using substantial amounts of surface water were Putnam (38.70), Brevard (26.60 MGD) and Lake (21.82 MGD).

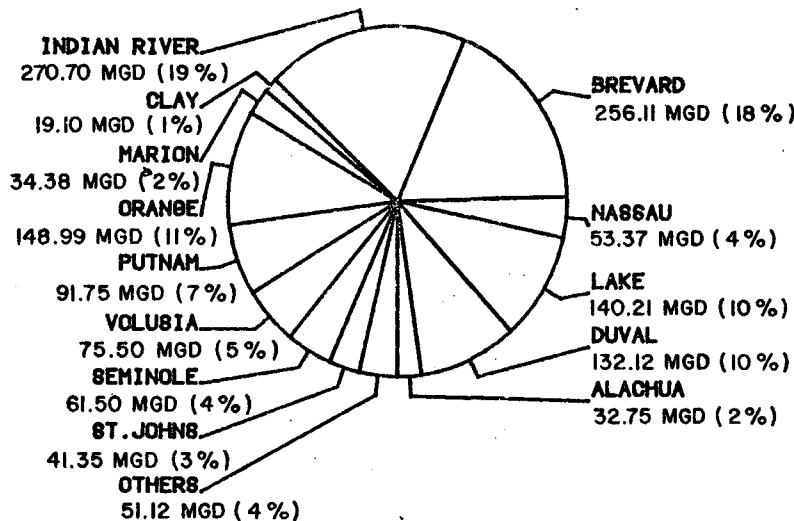

Figure 4 shows what portion of each county's fresh water use is ground and surface water (refer to Table 7 for actual values).

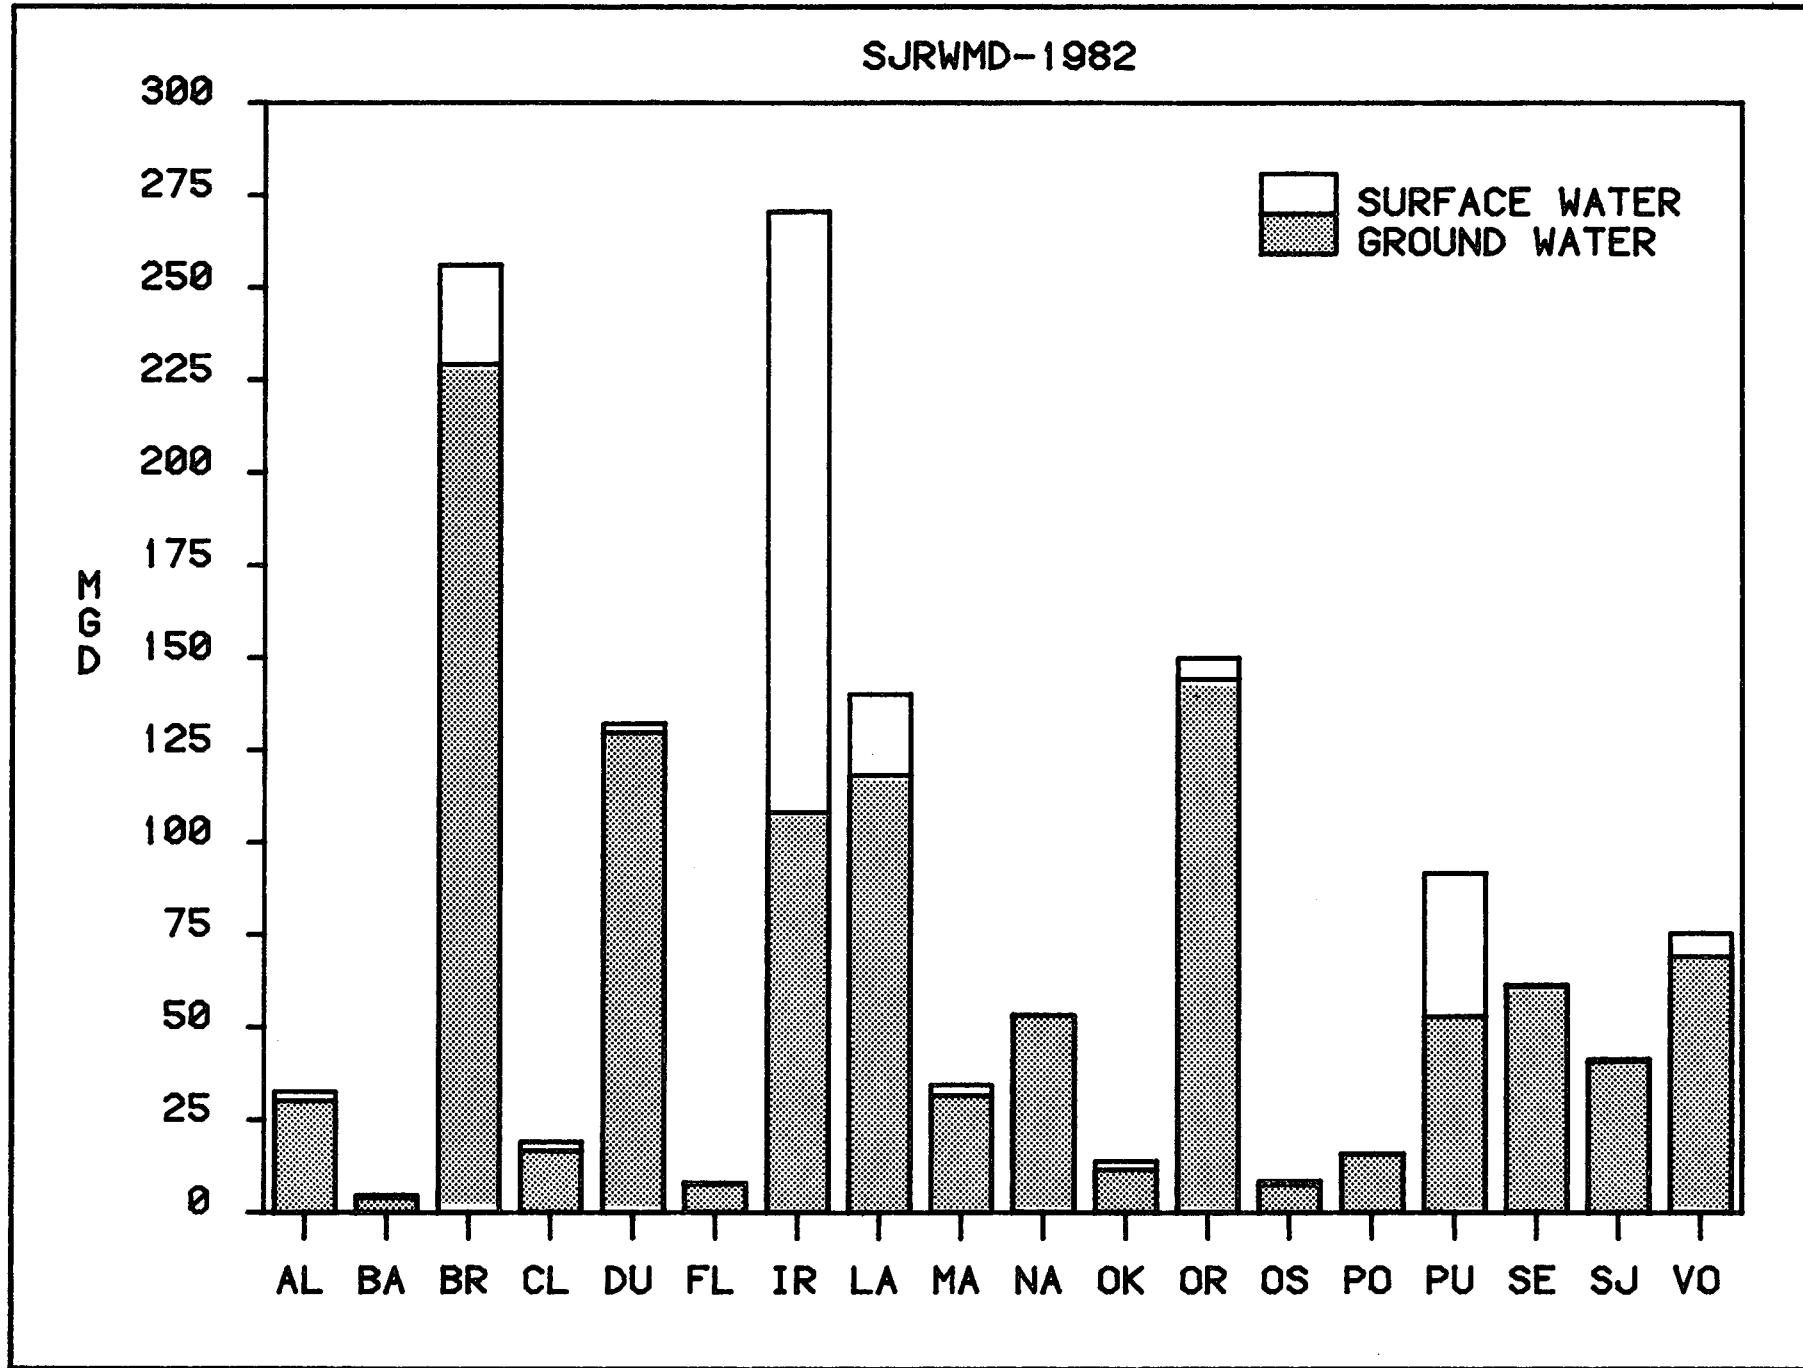

FIGURE 4. 1982 COUNTY WATER USE BY SOURCE

### WATER USE BY SURFACE WATER BASIN

The Upper St. Johns River Basin is the largest fresh water use basin (357.43 MGD) for 1982 (Figure 5). This basin was the largest fresh surface water use basin accounting for 148.30 MGD (54%) of the total fresh surface water used in 1982 (Table 8). The Lower Coastal Basin (44.36 MGD) and the Lower St. Johns River Basin (40.21 MGD) are the only other significant users of fresh surface water for 1982.

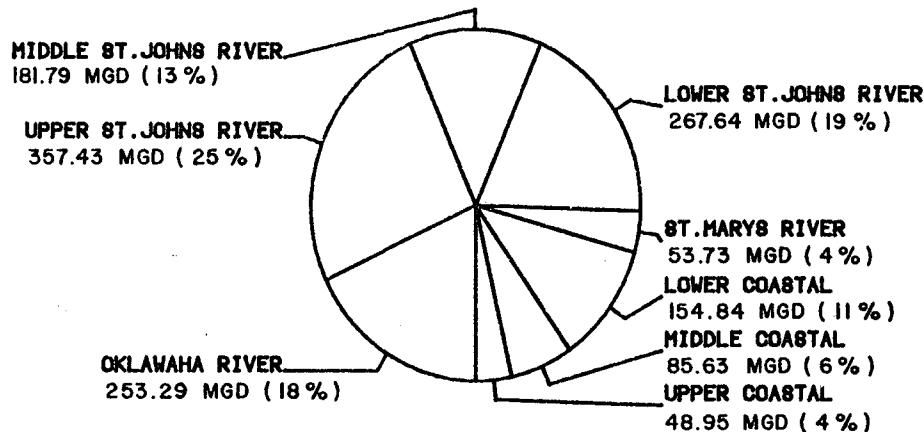

The Oklawaha River Basin (227.80 MGD), Lower St. Johns River Basin (227.43 MGD) and the Upper St. Johns River Basin (209.13 MGD) are the largest fresh ground water use basins in 1982. These 3 basins account for 58% of the ground water withdrawals for 1982 (Refer to Figure 6 for surface water basin locations).

TABLE 8. Surface Water Basin Fresh Water Use (MGD): 1982

Surface Water Basin	Ground	Percent	Surface	Percent	Total	Percent
