## INTRODUCTION

Water use data is collected annually for the 19 counties within the St. Johns River Water Management District (Figure 1). As in past years (1978 thru 1982) the 1983 data has been published in a Technical Report. This report summarizes water use in the St. Johns River Water Management District for 1983.

Water use figures are in million gallons per day (MGD). Water use is shown for fresh ground and surface water sources along with total fresh water use. Water use is also shown for the following categories, Public supply, Domestic self-supplied, Industrial self-supplied (including Institutional self-supplied), Agricultural Irrigation (including Livestock use), Thermoelectric Power Generation and Heat Pump/Air Conditioning.

Data for public suppliers (132), self-supplied industries (58), institutions (17), and thermoelectric power plants (11) is collected by the SJRWMD. Agricultural water use is estimated from the data provided by representatives of the Institute of Food and Agricultural Sciences (IFAS), the USDA Soil Conservation Service (SCS), and the USDA Agricultural Stabilization and Conservation Service (ASCS). Supplemental irrigation needs for crops in this report were computed using the modified Blaney-Criddle irrigation computer model<sup>(1)</sup> and the 30 year mean of rainfall and temperature. The heat pump/air conditioning figures are calculated from the Brevard County well inventory list 1975-77, the Volusia County Vol-Data File (USGS 11/20/80) and conversations with Heating Ventilation Air Conditioner (HVAC) dealers in Putnam County. This category is calculated for only three counties: Brevard, Volusia and Putnam. Data for the remaining 16 counties is presently being inventoried.

### WATER USE BY CATEGORY

#### Public Supply

The total fresh water use for Public Supply in 1983 amounted to 299.40 MGD of which 287.49 MGD (96%) was ground water and 11.91 MGD (4%) surface water. In 1983 the ground water total of 287.49 MGD includes 0.55 MGD ground saline water used for Reverse Osmosis (R/O). Orange (83.78 MGD) and Duval (70.45 MGD) were the counties with the largest public water use for 1983 (Table 1). Orange County's total includes water withdrawn for the City of Cocoa in Brevard County (16.70 MGD). Duval (467,539) and Orange (382,764) counties also have the largest number of people served by public supply systems (Figure 2). Total population served by the 132 public or private suppliers (utilities that serve 500 or more) accounted for 79% (1,956,792) of the District's population.

TABLE 1. Public Fresh Water Use (MGD): 1983

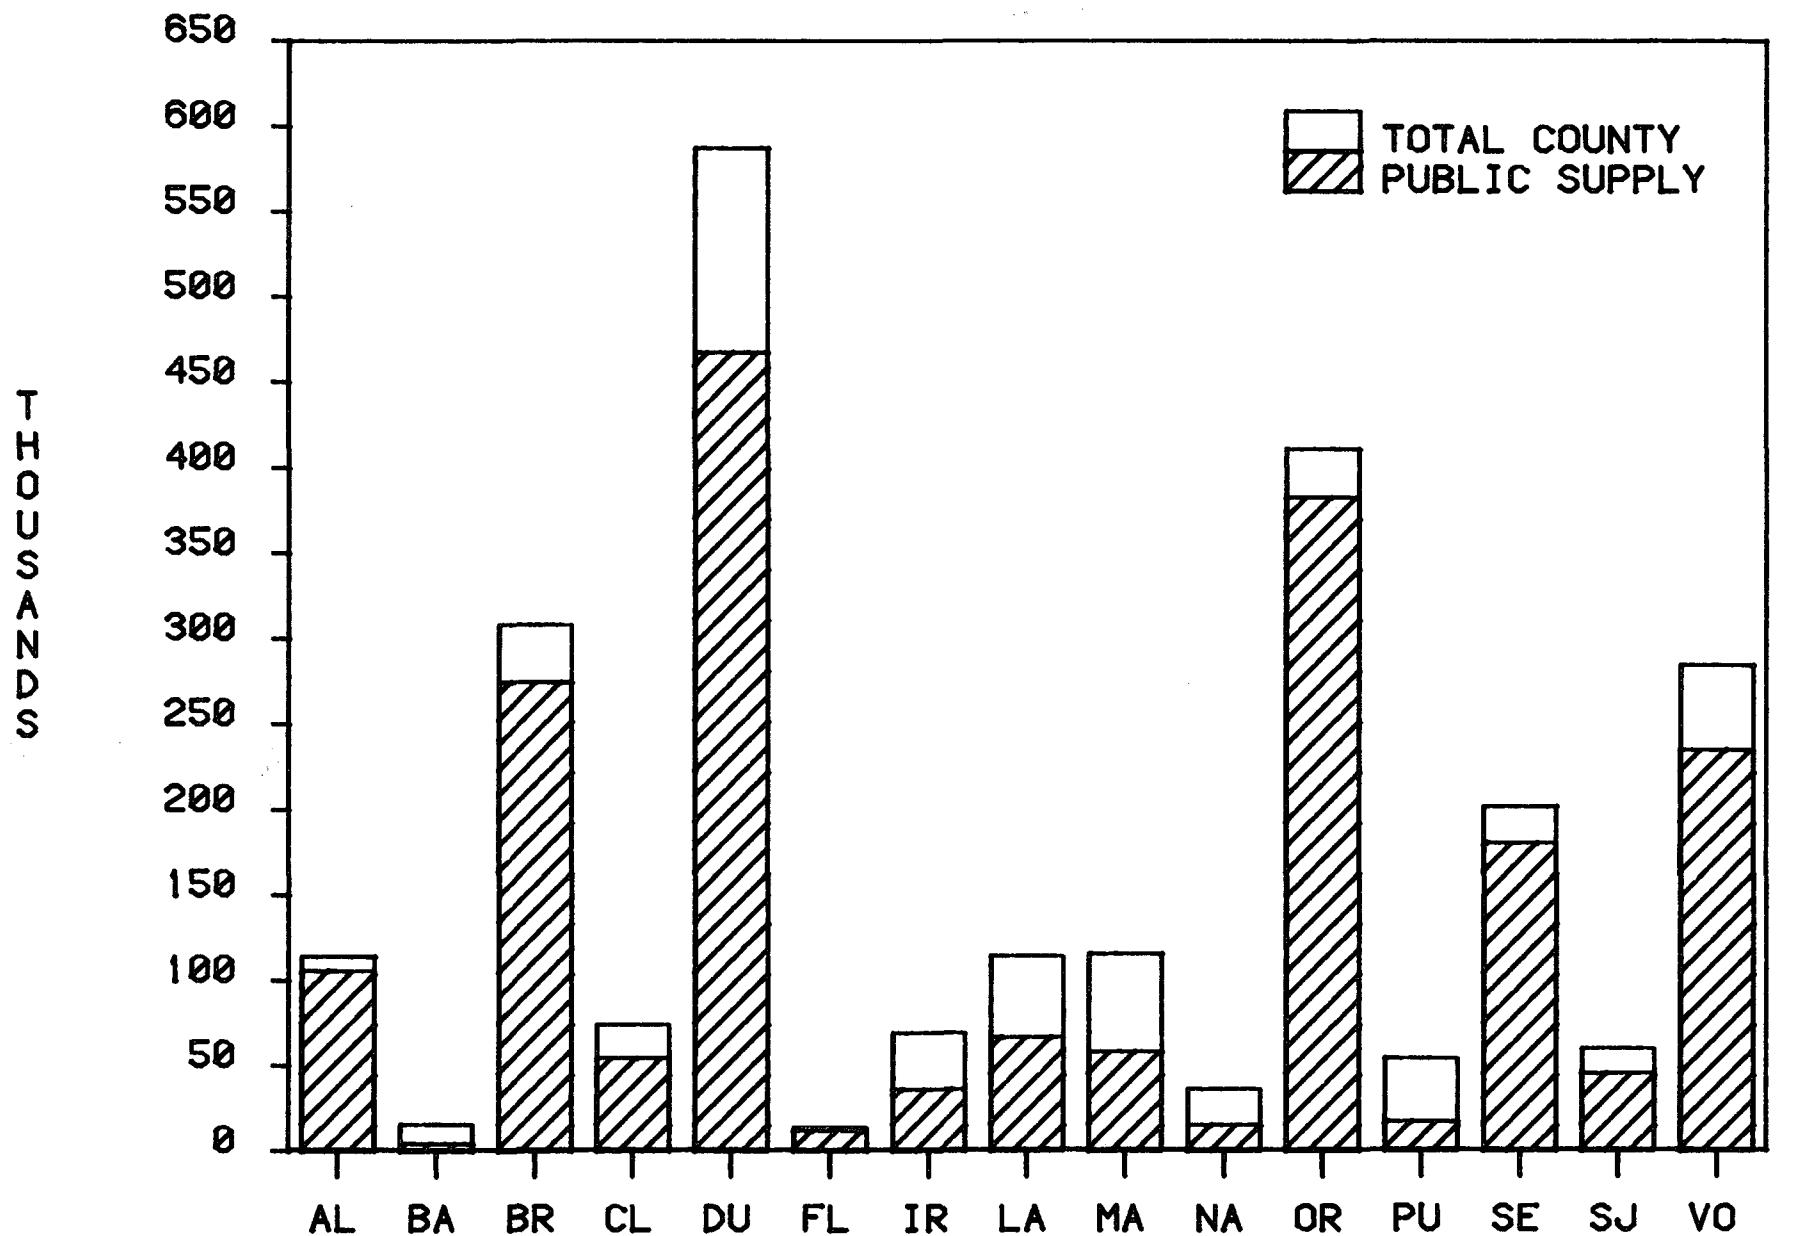

FIGURE 2. County Population within the SJRWMD Served by Public Supply - 1983.

### Domestic Self-supplied

Domestic self-supplied fresh water use in 1983 amounted to 80.99 MGD of ground water. In 1983, an estimated 512,355 people were served by small utilities not inventoried, or are self-supplied. In order to calculate domestic water use, gallons per capita day (GPCD) were estimated for each county, then multiplied by the population not served by public supply. The district 1983 average GPCD was 153, although this figure accounted for public supplied commercial and industrial water use as well as a single family use.

In addition to GPCD, total Domestic self-supplied water use was calculated for each county (Table 2). Duval (18.05 MGD), Lake (8.56 MGD), Indian River (8.19 MGD) and Marion (7.82 MGD) were the counties with the largest domestic self-supplied water use for 1983.

TABLE 2. Domestic Self-supplied Fresh Water Use (MGD): 1983

COUNTY	GROUND	SURFACE	TOTAL	PERCENT
ALACHUA	1.28	-	1.28	2
BAKER	1.49	-	1.49	2

\* less than 1.0%

### Industrial Self-supplied

Industrial self-supplied fresh water use for 1983 accounted for 163.67 MGD of which 120.91 MGD (74%) was ground and 42.76 MGD (26%) surface. Industrial self-supplied use for 1983 includes 8.73 MGD of Institutional self-supplied water use. Putnam (55.42 MGD), Duval (38.69 MGD) and Nassau (32.01 MGD) were the counties with the largest industrial water use for 1983 (Table 3). Pulp and paper processors are the major water users in Putnam, Duval and Nassau counties.

### Agricultural Irrigation

Agricultural Irrigation fresh water use, which includes Livestock water use, was the largest water use category in 1983 accounting for 748.45 MGD. Total ground water withdrawn amounted to 493.47 MGD (66%) and the remaining 254.98 MGD (34%) was surface water. Indian River (264.77 MGD), Lake (100.73 MGD), Brevard (92.63 MGD), and Orange (77.77 MGD) were the counties with the largest Agricultural Irrigation water use for 1983 (Table 4). Citrus is the largest irrigated crop in these four counties (see appendix). Total agricultural acreage for 1983 was 1,129,400 of which 33% was irrigated (375,412). Indian River (108,507), Lake (69,813), Orange (51,103), and Brevard (36,106) counties accounted for 71% of the irrigated acres in 1983 (Figure 3).

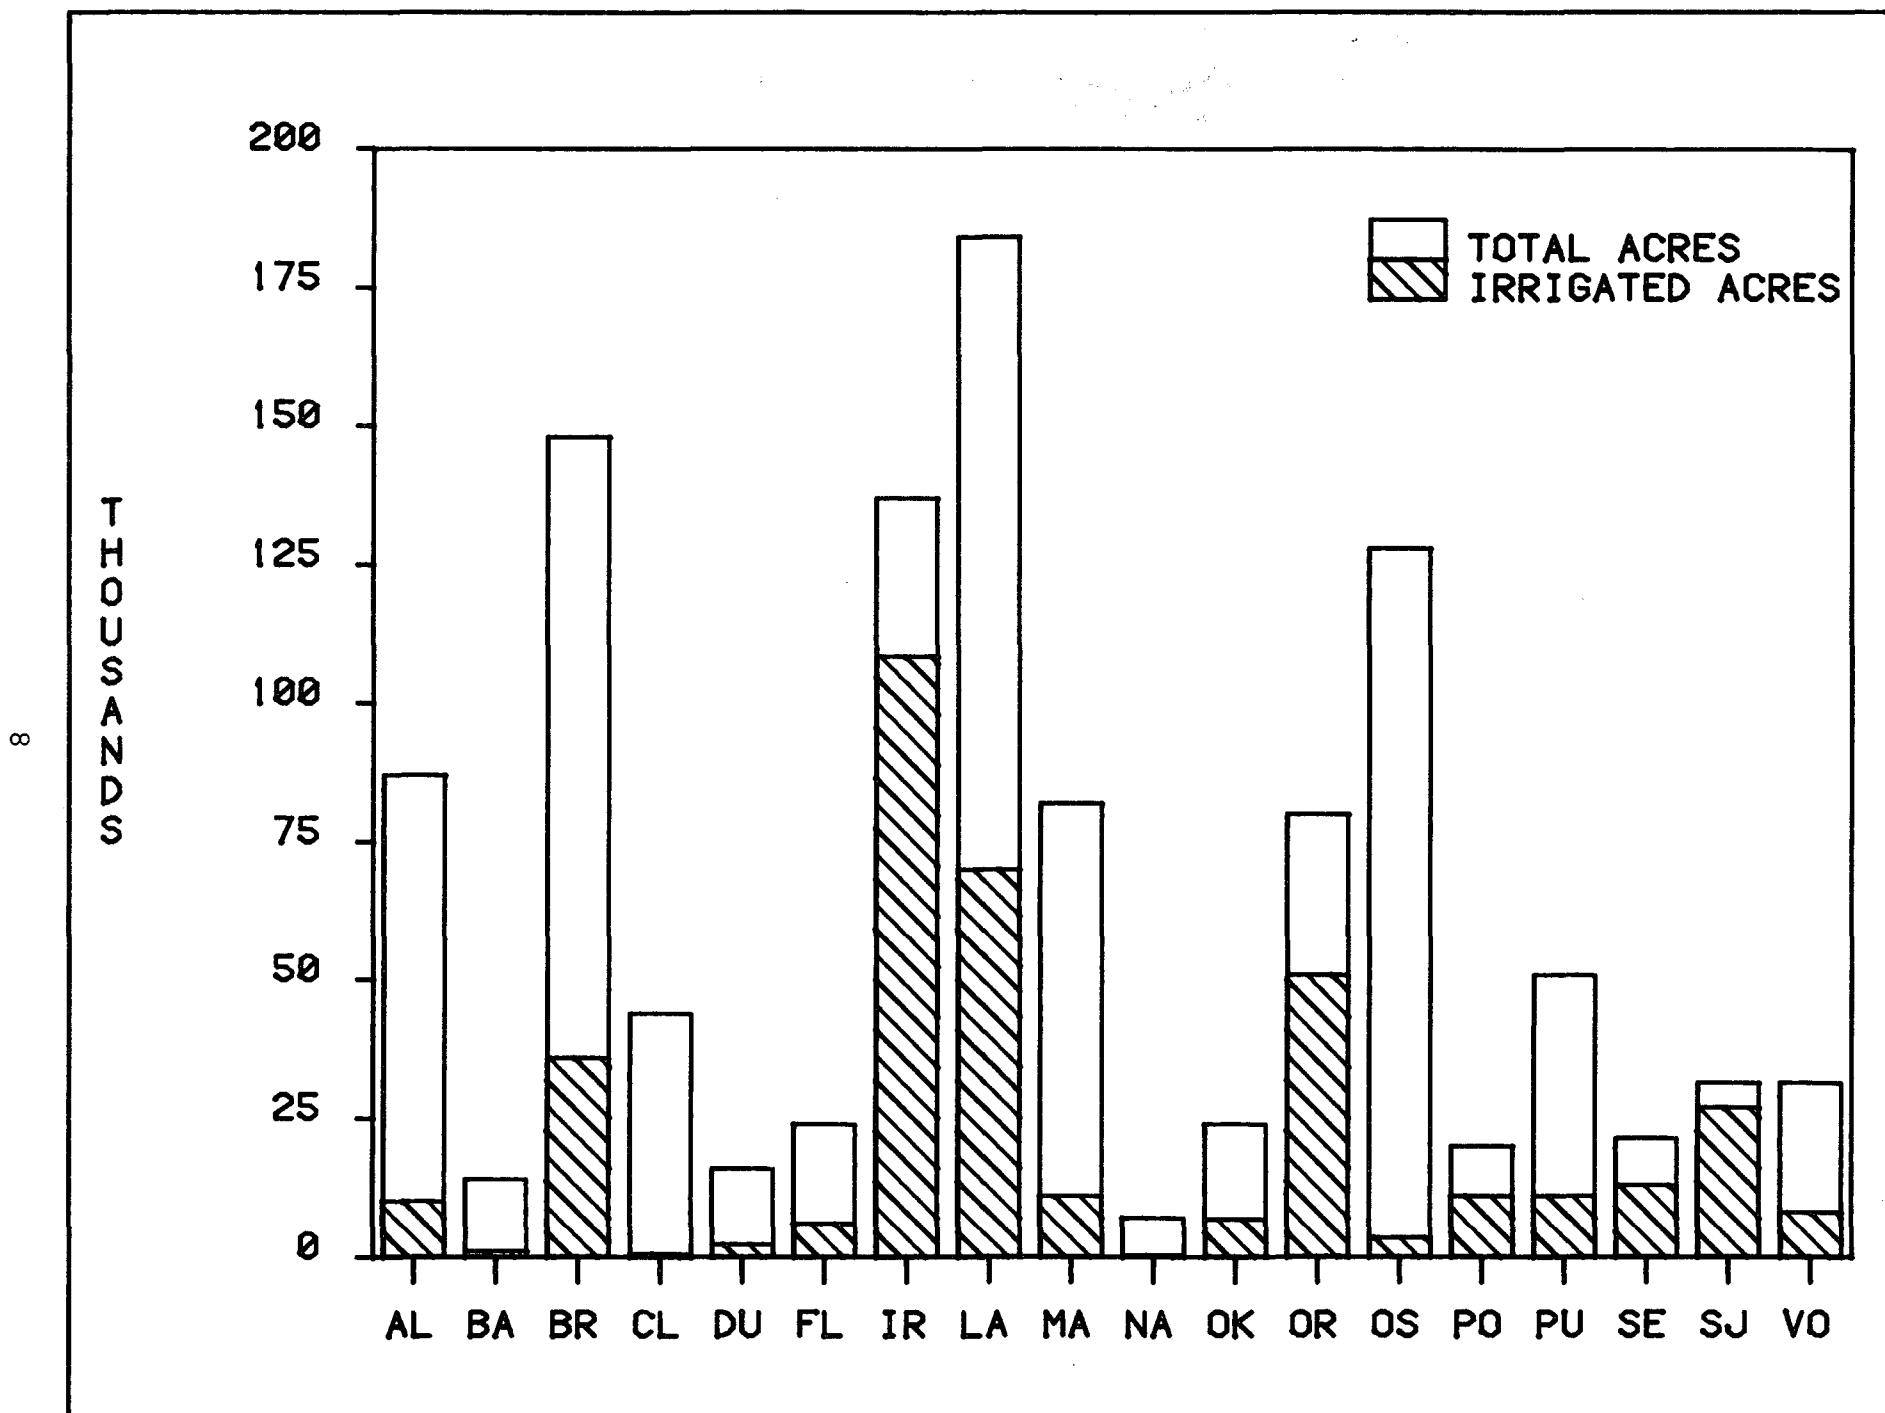

FIGURE 3. Acres Farmed and Irrigated within the SJRWMD by County - 1983.

### Thermoelectric Power Generation

Thermoelectric Power Generation fresh water use in 1983 amounted to 6.84 MGD. Ground water use totaled 4.54 MGD (66%) while surface water use totaled 2.30 MGD (34%). The total fresh water use in this category represents less than 1.0% (0.5%) of the total water use in 1983. The majority of water use in this category is saline surface water (3,560.33 MGD) used for once through cooling. Putnam (2.06 MGD) and Duval (1.98 MGD) were the two counties with a significant fresh water use value for 1983 (Table 5).

\* less than 1.0%

### Heat Pump/Air Conditioning

Heat Pump/Air Conditioning (HP/AC) water use data was only collected for three counties; Brevard, Putnam and Volusia. Total water use for this category in 1983 amounted to 149.96 MGD. Each county's estimated totals are as follows:

- Brevard: 16,175 HP/AC units - 141.51 MGD
- Putnam: 500 HP/AC units - 2.29 MGD
- Volusia: 1,346 HP/AC units - 6.16 MGD

Data for the remaining 16 counties is presently being inventoried.

### Water Use by Category Summary

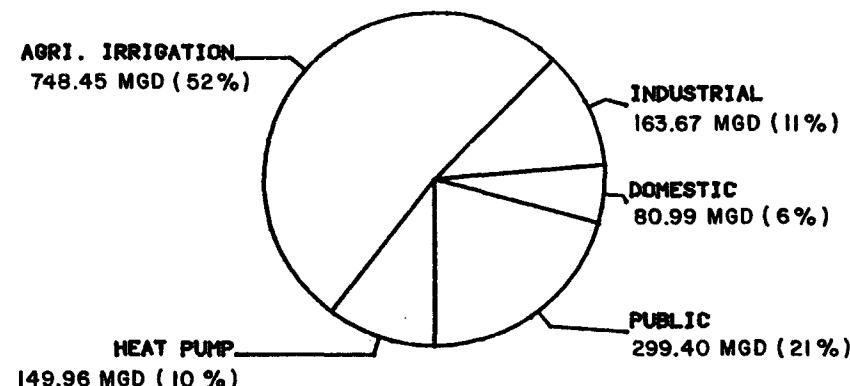

Agricultural Irrigation (which includes Livestock water use) was the largest fresh water use category for 1983 (Table 6). This category accounted for 44% of the ground water and 82% of the total fresh surface water used within the District (Figure 4). The second largest category was Public supply using 25% of the total fresh ground water and 4% of the total fresh surface water. Other categories where substantial amounts of ground water were used are Heat Pump/Air Conditioning with 13%, Industrial self-supplied (which includes Institutional self-supplied water use) 11% and Domestic self-supplied 7%. Thermoelectric Power Generation accounted for less than 1% (0.4%) of the total ground water used in 1983. The two major fresh surface water use categories were Agricultural Irrigation (82%) and Industrial (14%) accounting for 96% of the total used in 1983. Public supply and Thermoelectric Power Generation accounted for the remaining 4% of total fresh surface water use.

TABLE 6. Total Fresh Water Use (MGD) by Category: 1983

## WATER USE BY COUNTY

Indian River and Brevard Counties were the largest fresh water use counties for 1983 (Figure 5) accounting for 282.30 MGD (20%) and 258.19 MGD (18%), respectively. Orange (172.28 MGD), Lake (140.28 MGD) and Duval (136.18 MGD) are the next three largest fresh water use counties for 1983.

Brevard County, the largest fresh ground water use county in 1983, accounted for 230.64 MGD (20%). Other counties which withdrew over 100 MGD of fresh ground water are Orange (142.12 MGD), Duval (133.89 MGD), Lake (119.13 MGD), and Indian River (106.52 MGD).

Indian River County was the largest fresh surface water use county in 1983 accounting for 174.78 MGD (56%). Other counties using substantial amounts of surface water were Putnam (42.64 MGD), Orange (30.16 MGD), Brevard (27.55) and Lake (21.15 MGD).

Figure 6 shows what portion of each county's fresh water use is ground and surface water (refer to Table 7 for actual values).

## WATER USE BY SURFACE WATER BASIN

The Upper St. Johns River Basin is the largest fresh water use basin (376.53 MGD) for 1983 (Table 8). This basin was the largest fresh surface water use basin accounting for 167.30 MGD (53%) of the total fresh surface water used in 1983 (Figure 7). The Oklawaha River Basin (51.76 MGD), Lower St. Johns River Basin (44.16 MGD), and the Lower Coastal Basin (39.16 MGD) are the only other significant users of fresh surface water for 1983.

The Lower St. Johns River Basin (227.94 MGD), Oklawaha River Basin (255.58 MGD) and the Upper St. Johns River Basin (209.23 MGD) are the largest fresh ground water use basins in 1983. These three basins account for 59% of the ground water withdrawals for 1983 (refer to Figure 8 for surface water basin locations).

TABLE 8. Total Fresh Water Use (MGD) by Surface Water Basin: 1983
