INTRODUCTION

Water use data is collected annually for the 19 counties within the St. Johns River Water Management District (Figure 1). This data has been published annually by the District since 1978. This report summarizes water use in the St. Johns River Water Management District (SJRWMD) for 1985.

Water use figures are in million gallons per day (MGD). Water use is shown for fresh ground and surface water sources along with total fresh water use. Reclaimed water use (reuse) is also presented in this report. Water use is compiled for the following categories: public supply; domestic self-supplied; industrial self-supplied (including institutional/recreational self-supplied); agricultural irrigation (including livestock use); thermoelectric power generation; heat pump/air conditioning; and free-flowing wells. Water use is compiled for all of the following counties: Brevard, Clay, Duval, Flagler, Indian River, Nassau, Putnam, Seminole, St. Johns, and Volusia. Water use is also compiled for those portions of Alachua, Baker, Bradford, Lake, Marion, Okeechobee, Orange, Osceola, and Polk Counties which lie within District boundaries.

In addition to this report, a supplemental report with detailed pumpage data is available. The supplemental report shows pumpage for individual public suppliers, industries, institutions, and thermoelectric power plants. Pumpage data is shown in million gallons per month as well as total million gallons and MGD. This detailed report (Technical Publication SJ 86-5: Supplemental Data)

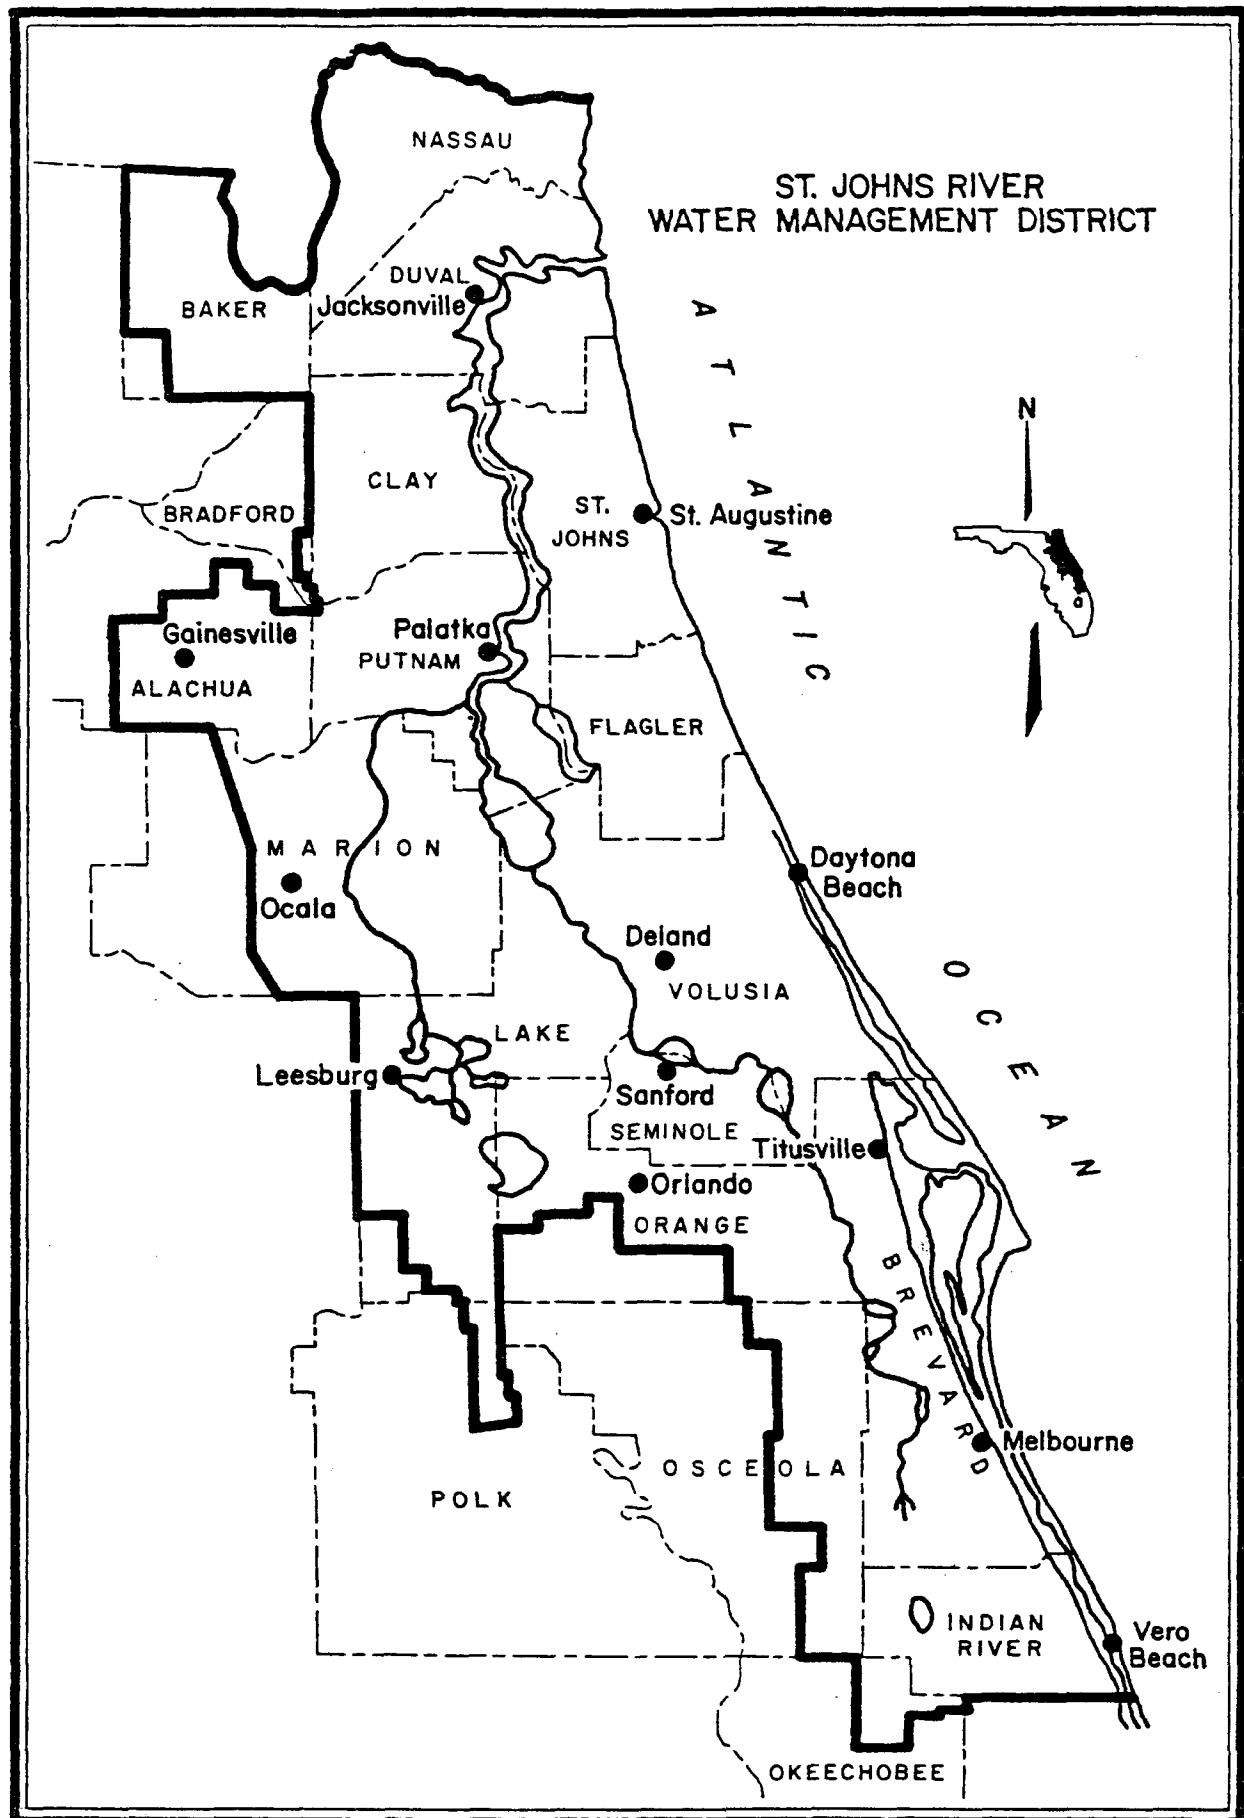

FIGURE 1 .

St. Johns River Water Management District

is available through the Department of Water Resources of the St. Johns River Water Management District.

Data for public supplies (177), self-supplied industries (50), institutions (28), and thermoelectric power plants (11) is collected by the SJRWMD. Agricultural water use is estimated by utilizing the modified Blaney-Criddle irrigation computer model,⁽¹⁾ the University of Florida "AFSIRS" program,⁽²⁾ and SJRWMD Benchmark Farms program data in combination with the crop data supplied by the Institute of Food and Agricultural Sciences (IFAS), the USDA Soil Conservation Service (SCS), the USDA Agricultural Stabilization and Conservation Service (ASCS), and the SJRWMD consumptive use permit files (CUP). The heat pump/air conditioning figures are calculated from the Brevard County well inventory list 1975-77, the Volusia County Vol-Data File (USGS 11/20/80), conversations with Heating Ventilation Air Conditioner (HVAC) dealers in Putnam County and the District CUP files. Residential use for this category is calculated for only three counties: Brevard, Volusia, and Putnam. Data for the remaining 16 counties is presently being inventoried. Non-residential use (industrial and commercial) was collected through the CUP files for all counties. Data for the free-flowing well inventory is collected by the District as part of its compliance with the requirements of the Florida Water Quality Assurance Act of 1983.

WATER USE BY CATEGORY

Public Supply

The total fresh water use for public supply in 1985 amounted to 359.42 MGD, of which 345.33 MGD (96%) was ground water and 14.09 MGD (4%) was surface water. The surface water was withdrawn from Lake Washington in Brevard County for the City of Melbourne's public supply system. This was the only public supplier within the District to use surface water. The ground water total of 345.33 MGD includes 1.00 MGD saline ground water used for reverse osmosis (R/O). Orange (101.94 MGD) and Duval (84.86 MGD) were the counties with the largest public supply water use (Table 1). Total water withdrawn for public supply in Orange County totaled 122.60 MGD, of which 101.94 MGD was withdrawn in the St. Johns River Water Management District and the remaining 20.66 MGD was withdrawn in the South Florida Water Management District. Orange County's total also includes 22.10 MGD withdrawn for the City of Cocoa's (Brevard County) public supply system. Duval County's total includes the District's single largest public supplier, the City of Jacksonville, which accounted for 58.23 MGD.

Duval (527,827) and Orange (430,870) counties also have the largest number of people served by public supply systems (Figure 2). Total population served by the 177 public or private suppliers (utilities that serve 400 or more) accounted for 82% (2,201,080) of the District's population.

TABLE 1.--Public Fresh Water Use (MGD): 1985

(5) Includes 1.00 MGD saline ground water

SJRWMD

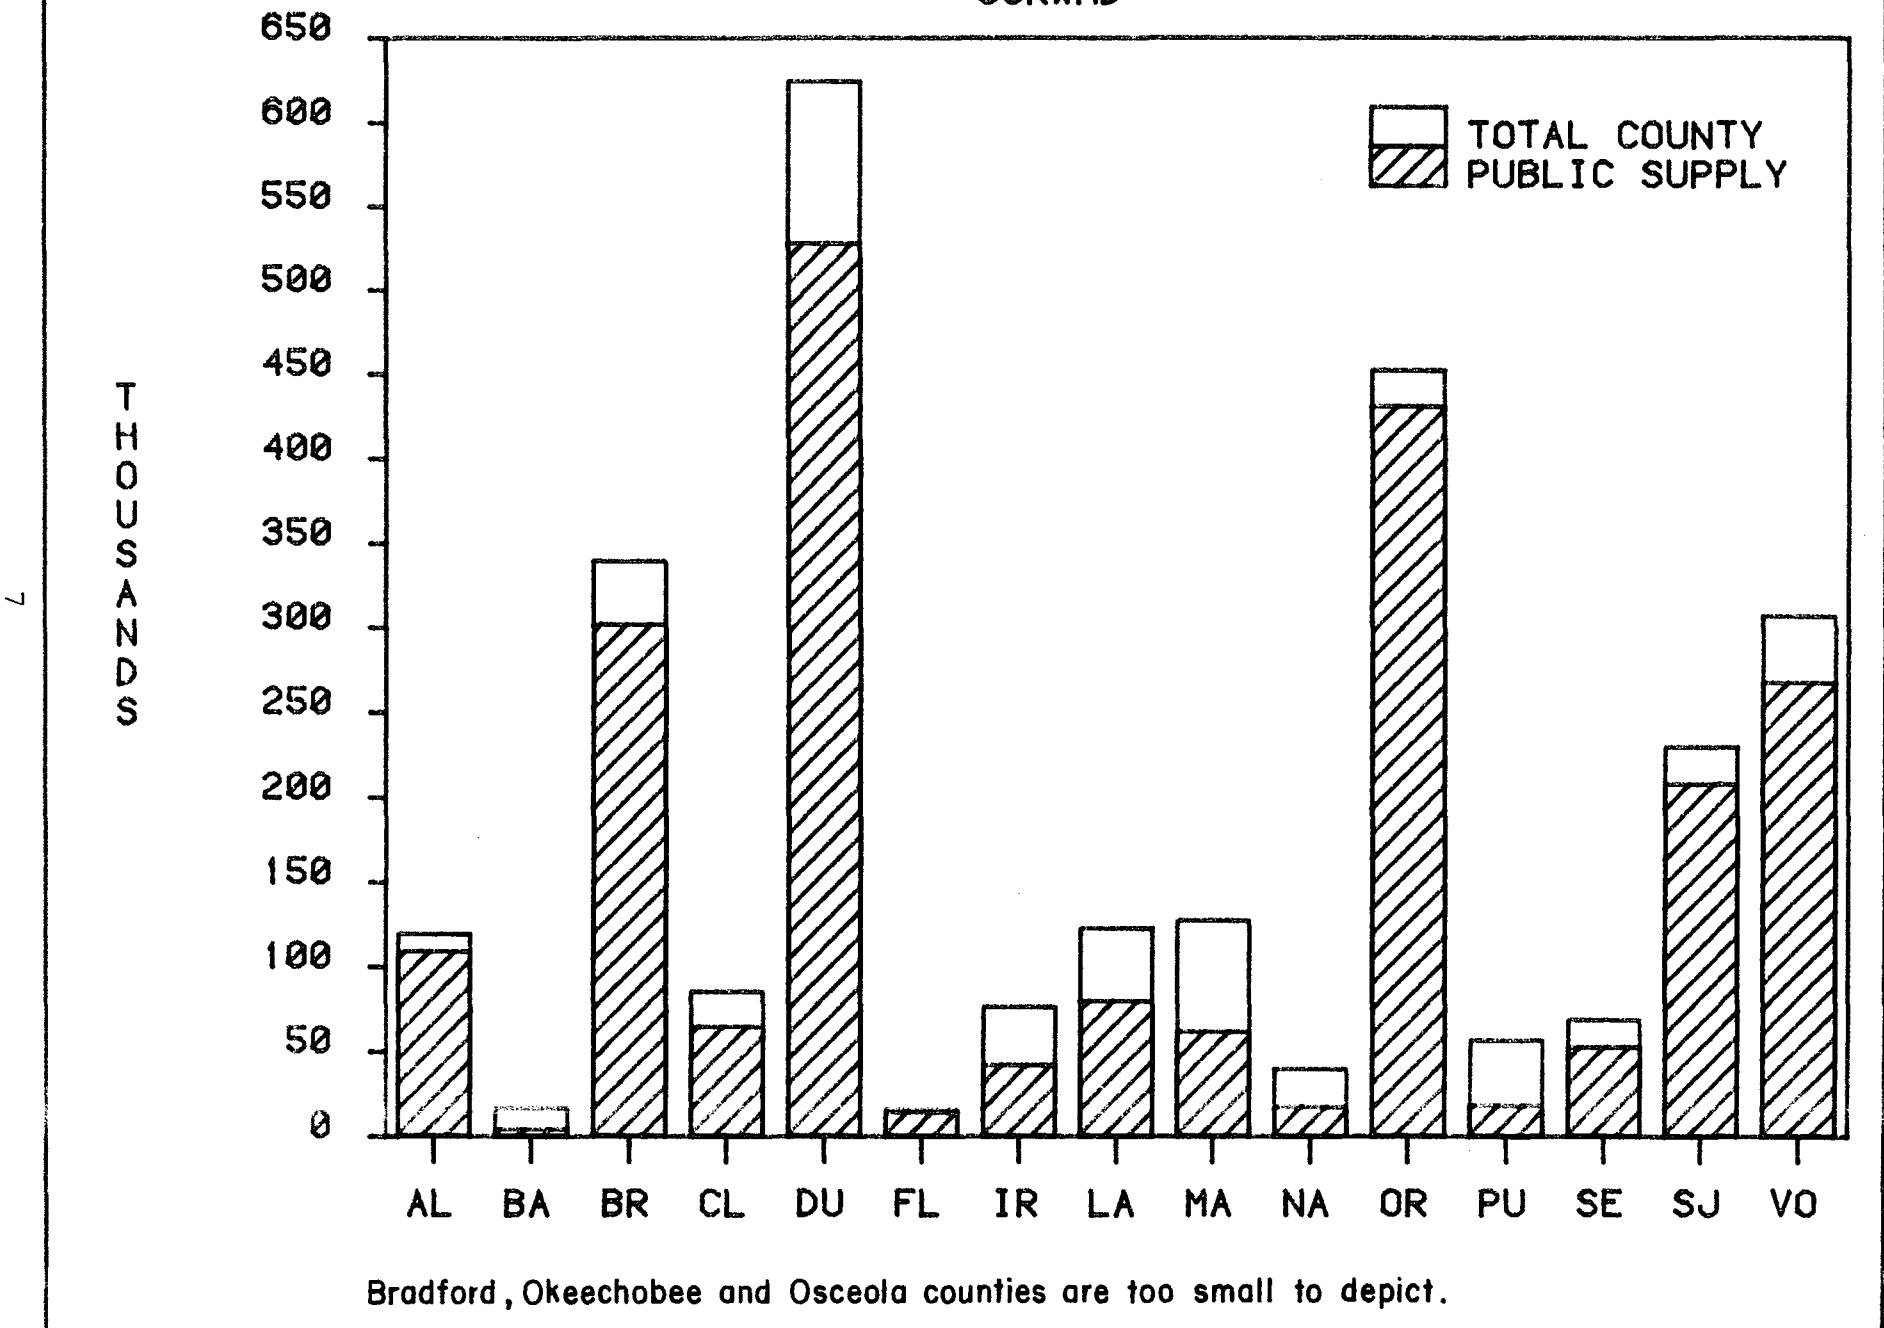

FIGURE 2

County Population Served by Public Supply : 1985

In 1985, data available through the CUP files enabled the District to determine the disposition of water withdrawn for public supply purposes. This disposition is shown in Figure 3. In 1985, 70% of public supply water was used for household-domestic use. This includes indoor and outdoor residential uses such as lawn irrigation and car washing. The remaining uses include commercial 10.5%, industrial 7.5%, and water utility 7% (includes line flushing, fire fighting, and water lost to leakage). The remaining 5% (other category) was used directly for irrigation (metered irrigation use) and heating/cooling.

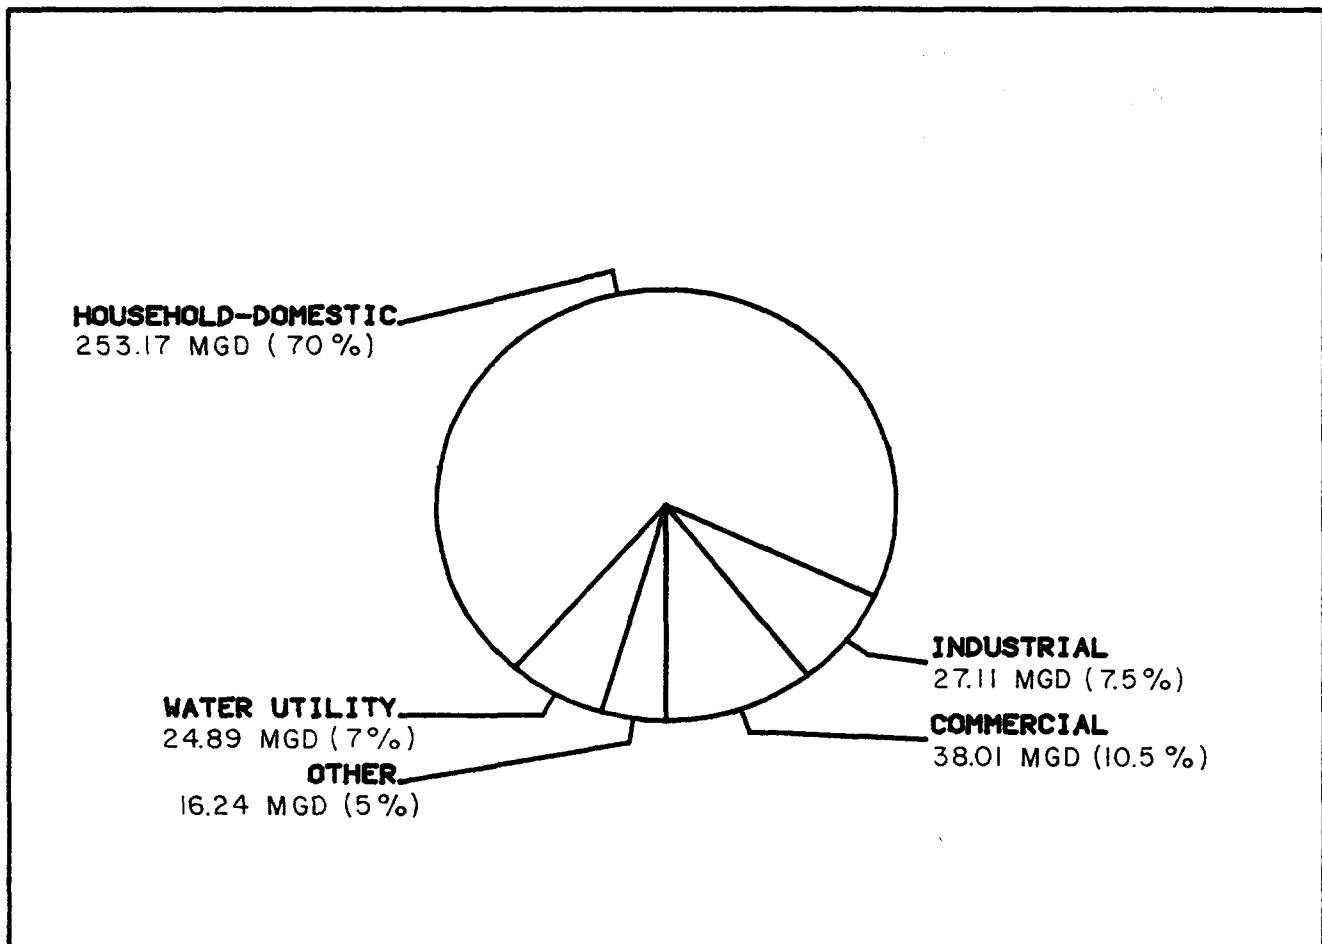

FIGURE 3 . Disposition of Public Supply Water Use : 1985

Domestic Self-Supplied

The quantity of domestic self-supplied fresh water use in 1985 was 80.76 MGD. All of this was ground water. An estimated 492,322 people were served by small utilities not inventoried, or were self-supplied. In order to calculate domestic water use, gallons per capita day (GPCD) were estimated for each county, then multiplied by the population not served by the public supply system(s) within each county. Within the District in 1985 the average GPCD was 163. This figure includes public-supplied commercial and industrial water use as well as single family domestic use, water used for fire fighting, system flushing, and water lost to leakage (refer to Figure 3). Although the overall per capita use includes all uses, the District's actual per capita residential use is 94 gallons per person per day. This number was derived by dividing the 253.17 MGD of public supply delivered to households by the population served.

In addition to GPCD, total domestic self-supplied water use was calculated for each county (Table 2). Duval (15.50 MGD), Marion (11.48 MGD), Lake (8.28 MGD), and Indian River (7.29 MGD) counties were the counties with the largest domestic self-supplied water use for 1985.

TABLE 2.--Domestic Self-Supplied Fresh Ground Water Use (MGD) : 1985

Industrial Self-Supplied

The quantity of industrial self-supplied fresh water use for 1985 was to 172.34 MGD, of which 152.59 MGD (88%) was ground water and 19.75 MGD (12%) surface water. Industrial self-supplied use includes 11.34 MGD of institutional/recreational self-supplied water use. Putnam (53.05 MGD), Duval (38.08 MGD), and Nassau (37.40 MGD) were the counties with the largest industrial water use (Table 3). Lake (15.65 MGD) and Clay (11.74 MGD) counties were the only other counties with a substantial amount of industrial water use.

Pulp and paper processors located in Putnam, Duval, and Nassau counties were the major industrial water users. Fresh water use for pulp and paper processors in 1985 totaled 105.76 MGD, of which 96% (101.46 MGD) was ground water. Other industries using substantial amounts of water are mining (34.29 MGD) and food processing (15.81 MGD) which includes citrus processing.

Agricultural Irrigation

Agricultural irrigation fresh water use, which includes livestock water use, was the largest water use category in 1985 accounting for 584.68 MGD. Of this amount the total ground water withdrawn amounted to 375.14 MGD (64%), and the remaining 209.54 MGD (36%) was surface water. In addition to ground and surface water use, 6.36 MGD of reclaimed (reuse) water was used for irrigation purposes. Reclaimed water was used for irrigation on pasture, turf grass (golf courses), and sod.

Indian River (135.61 MGD), Brevard (126.02 MGD), and Orange (83.18 MGD) were the counties with the largest agricultural irrigation water use (Table 4). Citrus and improved pasture were the largest water use crops in the District for 1985 (see Page 37).

Total agricultural acreage for 1985 was 962,506 of which 39% was irrigated (374,712). Brevard (123,084), Indian River (75,480), and Orange (58,261) counties accounted for 68% of the irrigated acres (Figure 4). Differences in irrigation acreage between 1984 and 1985 show gains in sweet corn (2,190), sod (2,015), potatoes (2,000), turf grass (1,770) and ferns (1,589).

During 1985 irrigated citrus acreage decreased by 58,554 acres. Of this amount a decrease of 39,000 acres and 6,719 acres were experienced in Lake and Brevard counties, respectively. Through 1985 the total reduction in irrigated citrus acreage since 1983 is 61,045 acres. This reduction is primarily the result of the severe freezes of 1983 and 1984.

Pumpage data for selected crops is currently being inventoried through the District's Benchmark Farms program. This program will enable the District to evaluate actual water use for irrigation purposes and help in determining supplemental irrigation requirements.

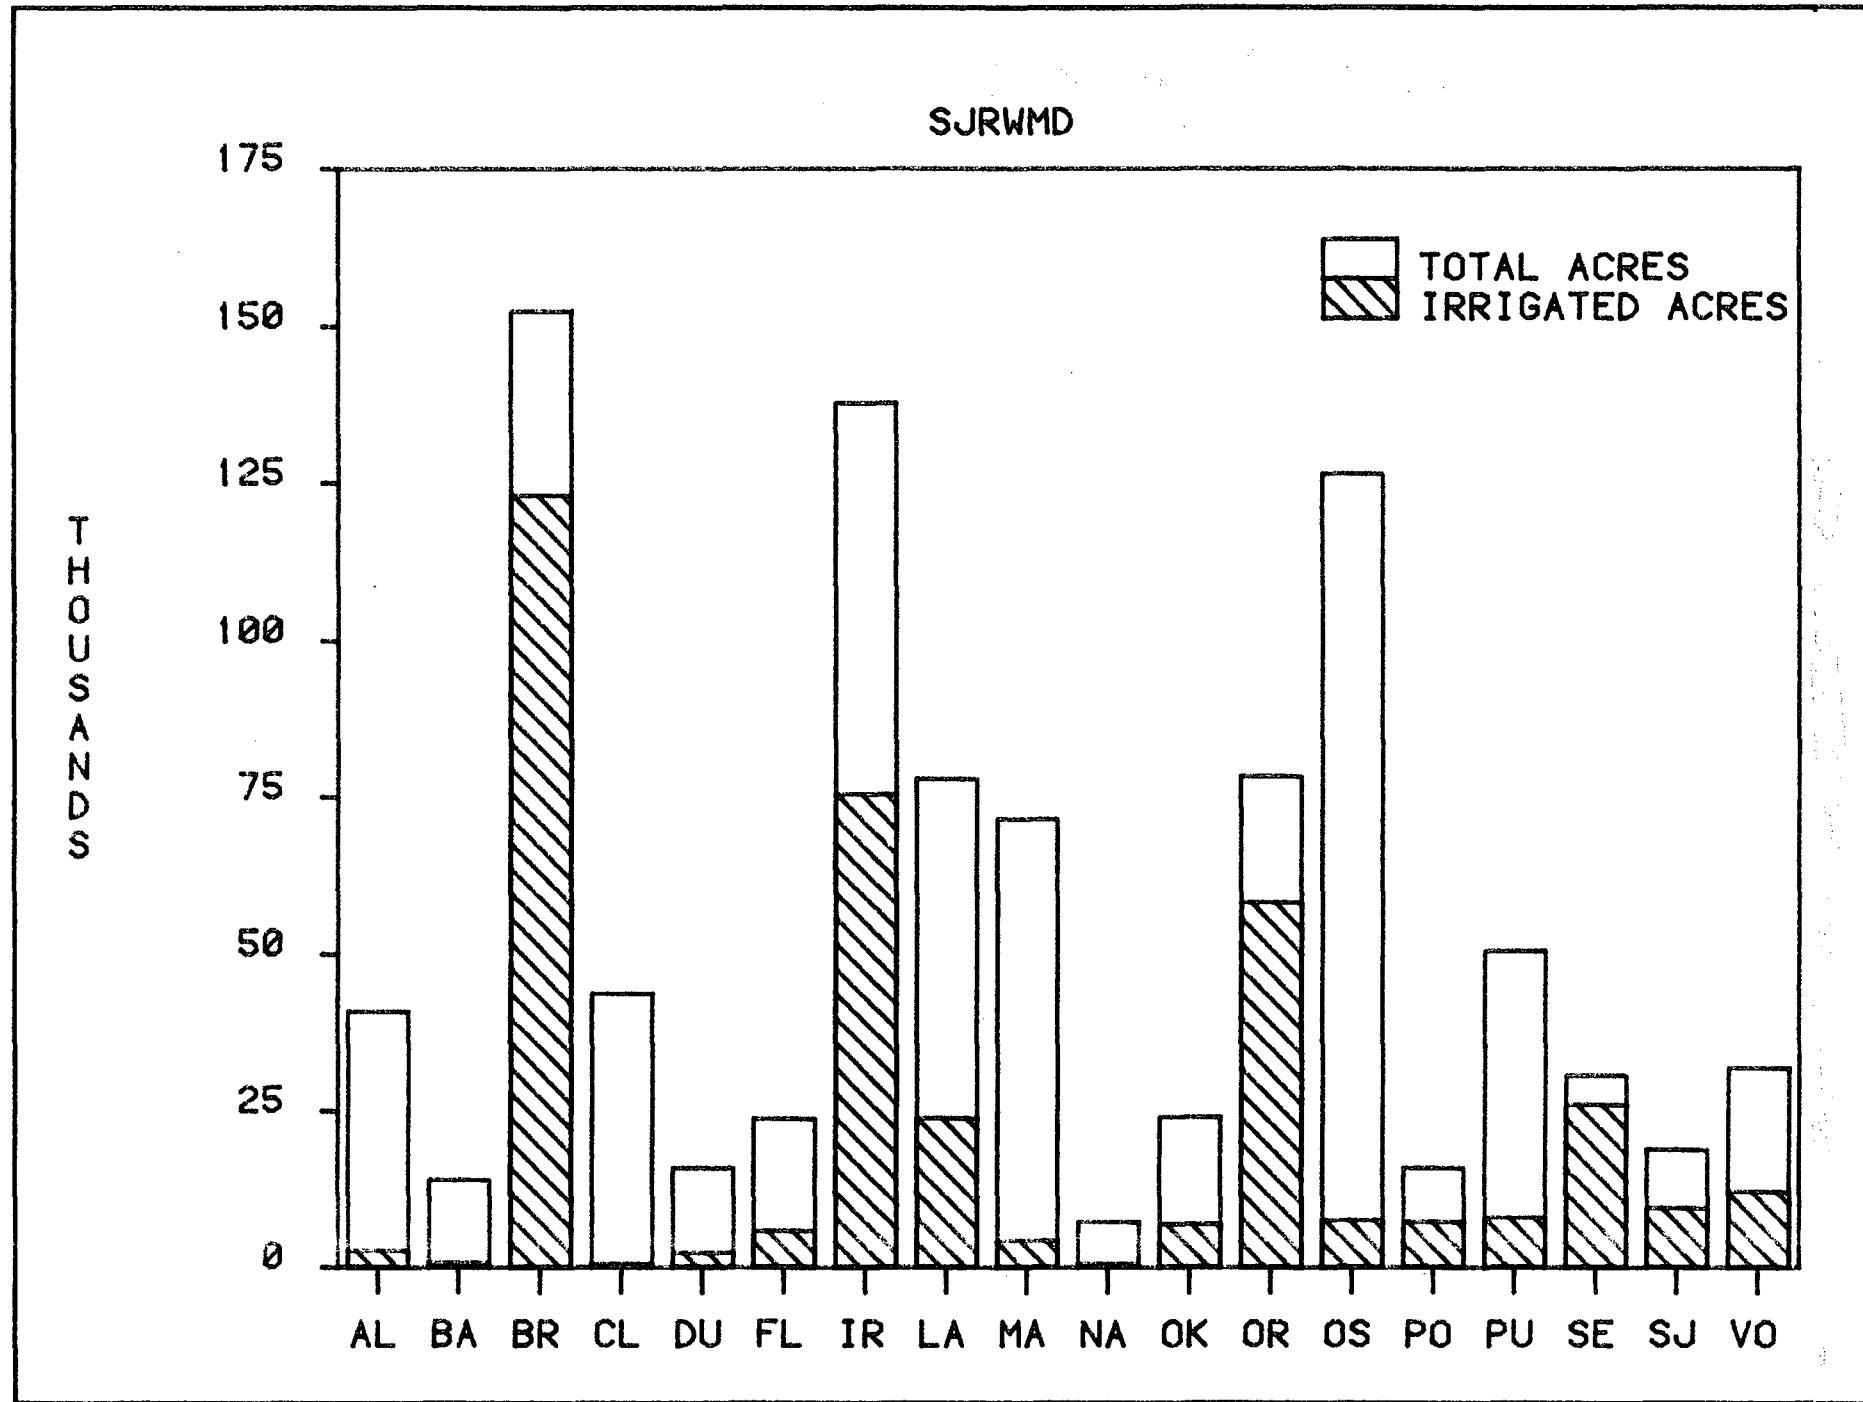

FIGURE 4 Acres Farmed and Irrigated by County : 1985

Thermoelectric Power Generation

Fresh water used for thermoelectric power generation fresh water use in 1985 amounted to 124.41 MGD. Of this ground water use totaled 4.03 MGD (3%) while surface water use totaled 120.38 MGD (97%).

The fresh water use from the 11 power plants within the District represents 7% of the total water use for this category. The majority of water use for thermoelectric power generation is saline surface water (not accounted for in this report). In 1985, total saline surface water use for this category amounted to 1,630.45 MGD.

Heat Pump/Air Conditioning

Heat pump/air conditioning (HP/AC) water use data was collected for residential units in three counties: Brevard, Putnam, and Volusia. Non-residential (industrial and commercial) data was collected for Alachua, Duval, Orange, Putnam, St. Johns and Volusia. Water use for this category in 1985 amounted to 75.05 MGD. Each county's estimated totals are as follows:

Alachua: 0.97 MGD

Brevard: 59.00 MGD

Duval: 5.63 MGD

Orange: 0.82 MGD

Putnam: 2.30 MGD

St. Johns 0.10 MGD

Volusia 6.23 MGD

Data will continue to be collected for the remaining counties.

Free-Flowing Wells

Free-flowing wells are those artesian wells that flow freely at land surface. Many of these wells are old wells drilled for domestic, agricultural, mosquito control, or test purposes. In many cases these wells are abandoned with leaking or broken control devices. The Florida Legislature enacted the Water Quality Assurance Act of 1983 to address the problems caused by free-flowing wells. As part of this legislation, each water management district was directed to prepare an inventory of these wells.

It is estimated that there are 800 - 1000 free-flowing wells in the District. The total flow from the existing 378 inventoried flowing wells amounts to 33.08 MGD. In Brevard County, 259 wells have been inventoried and estimated flow from these wells is 26.0 MGD (Table 6). Other counties with substantial amounts of discharge from free-flowing wells are Marion (1.71 MGD), Volusia (1.26 MGD), and St. Johns counties (1.04 MGD). Due to hydrologic conditions, only portions of the District have the potential for free-flowing artesian wells. These areas are shown on Figure 5.

Generalized Area of Potential Free-Flowing Wells

Summary

Agricultural irrigation was the largest fresh water use category for 1985 (Table 7). This category accounted for 35% of the ground water and 58% of the total fresh surface water used within the District (Figure 6). The second largest category was public supply using 32% of the total fresh ground water and 4% of the total fresh surface water. Other categories with substantial amounts of ground water use were industrial self-supplied (14%), domestic self-supplied (8%), and heat pump/air conditioning (7%). Free-flowing wells accounted for 3%, and thermoelectric power generation accounted for less than 1% (0.5%) of the total ground water used in 1985.

The major fresh surface water use category in 1985 was agricultural irrigation, which accounted for 58% of the total surface water used in the District. Thermoelectric power generation accounted for 33% of total fresh surface water use. Industrial self-supplied (5%), and public supply (4%) accounted for the remaining 9% of total fresh surface water use.

FIGURE 6 1985 Water Use by Category

WATER USE BY COUNTY

Brevard County was the largest user of fresh water for 1985 (Table 8), accounting for 240.49 MGD (17%). Volusia (204.32 MGD), Orange (195.35 MGD), Duval (166.81 MGD), and Indian River counties (152.66 MGD) were the next four largest fresh water users. These five counties accounted for 68% of the total fresh water use (Figure 7).

Brevard County experienced the largest fresh ground water use by county in 1985, with 200.70 MGD (19%). Other counties which withdrew over 80 MGD of fresh ground water were Duval (165.44 MGD), Orange (144.44 MGD), and Volusia (86.57 MGD). Indian River County withdrew the largest amount of saline ground water (0.97 MGD) for reverse osmosis.

Volusia (117.75 MGD) and Indian River (107.18 MGD) counties experienced the largest fresh surface water use by county in 1985, accounting for 62 percent combined. Other counties using substantial amounts of surface water were Orange (50.91 MGD), Brevard (39.79 MGD), and Putnam (20.07 MGD). Lake (2.48 MGD) and Duval (1.14 MGD) counties used the largest amount of reuse water (57%).

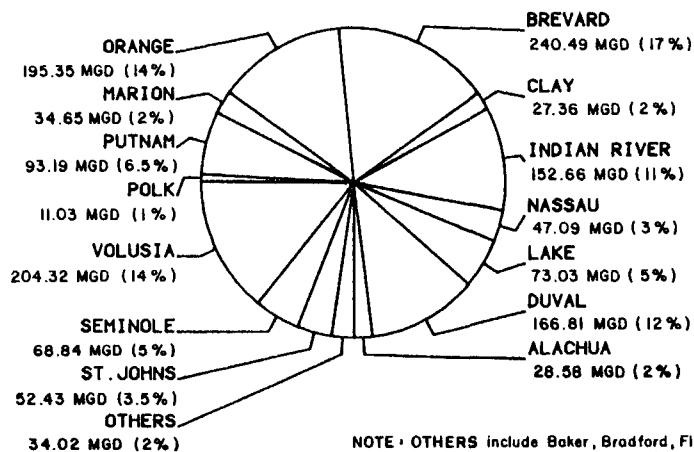

Figure 8 shows each county's fresh water use by source (refer to Table 9). Water use shown for those counties partially within the SJRWMD (Alachua, Baker, Bradford, Lake, Marion, Okeechobee, Orange, Osceola, and Polk) represents the data from the St. Johns portion only. The remaining portions of those counties are not accounted for in this report.

FRESH WATER USE (MGD) BY COUNTY - 1985

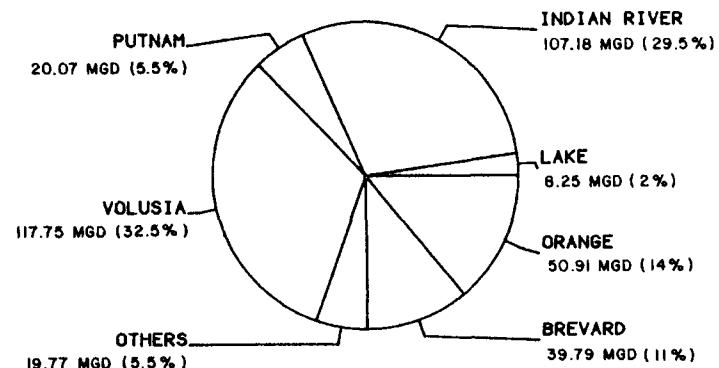

NOTE: OTHERS include Baker, Bradford, Flagler, Okeechobee and Osceola counties.

FRESH GROUND WATER USE (MGD) BY COUNTY - 1985

NOTE: OTHERS include Baker, Bradford, Flagler, Okeechobee and Osceola counties.

FRESH SURFACE WATER USE (MGD) BY COUNTY - 1985

NOTE: OTHERS include Alachua, Baker, Clay, Duval, Flagler, Marion, Nassau, Okeechobee, Osceola, Polk, Seminole and St. Johns counties.

FIGURE 7 1985 Water Use by County

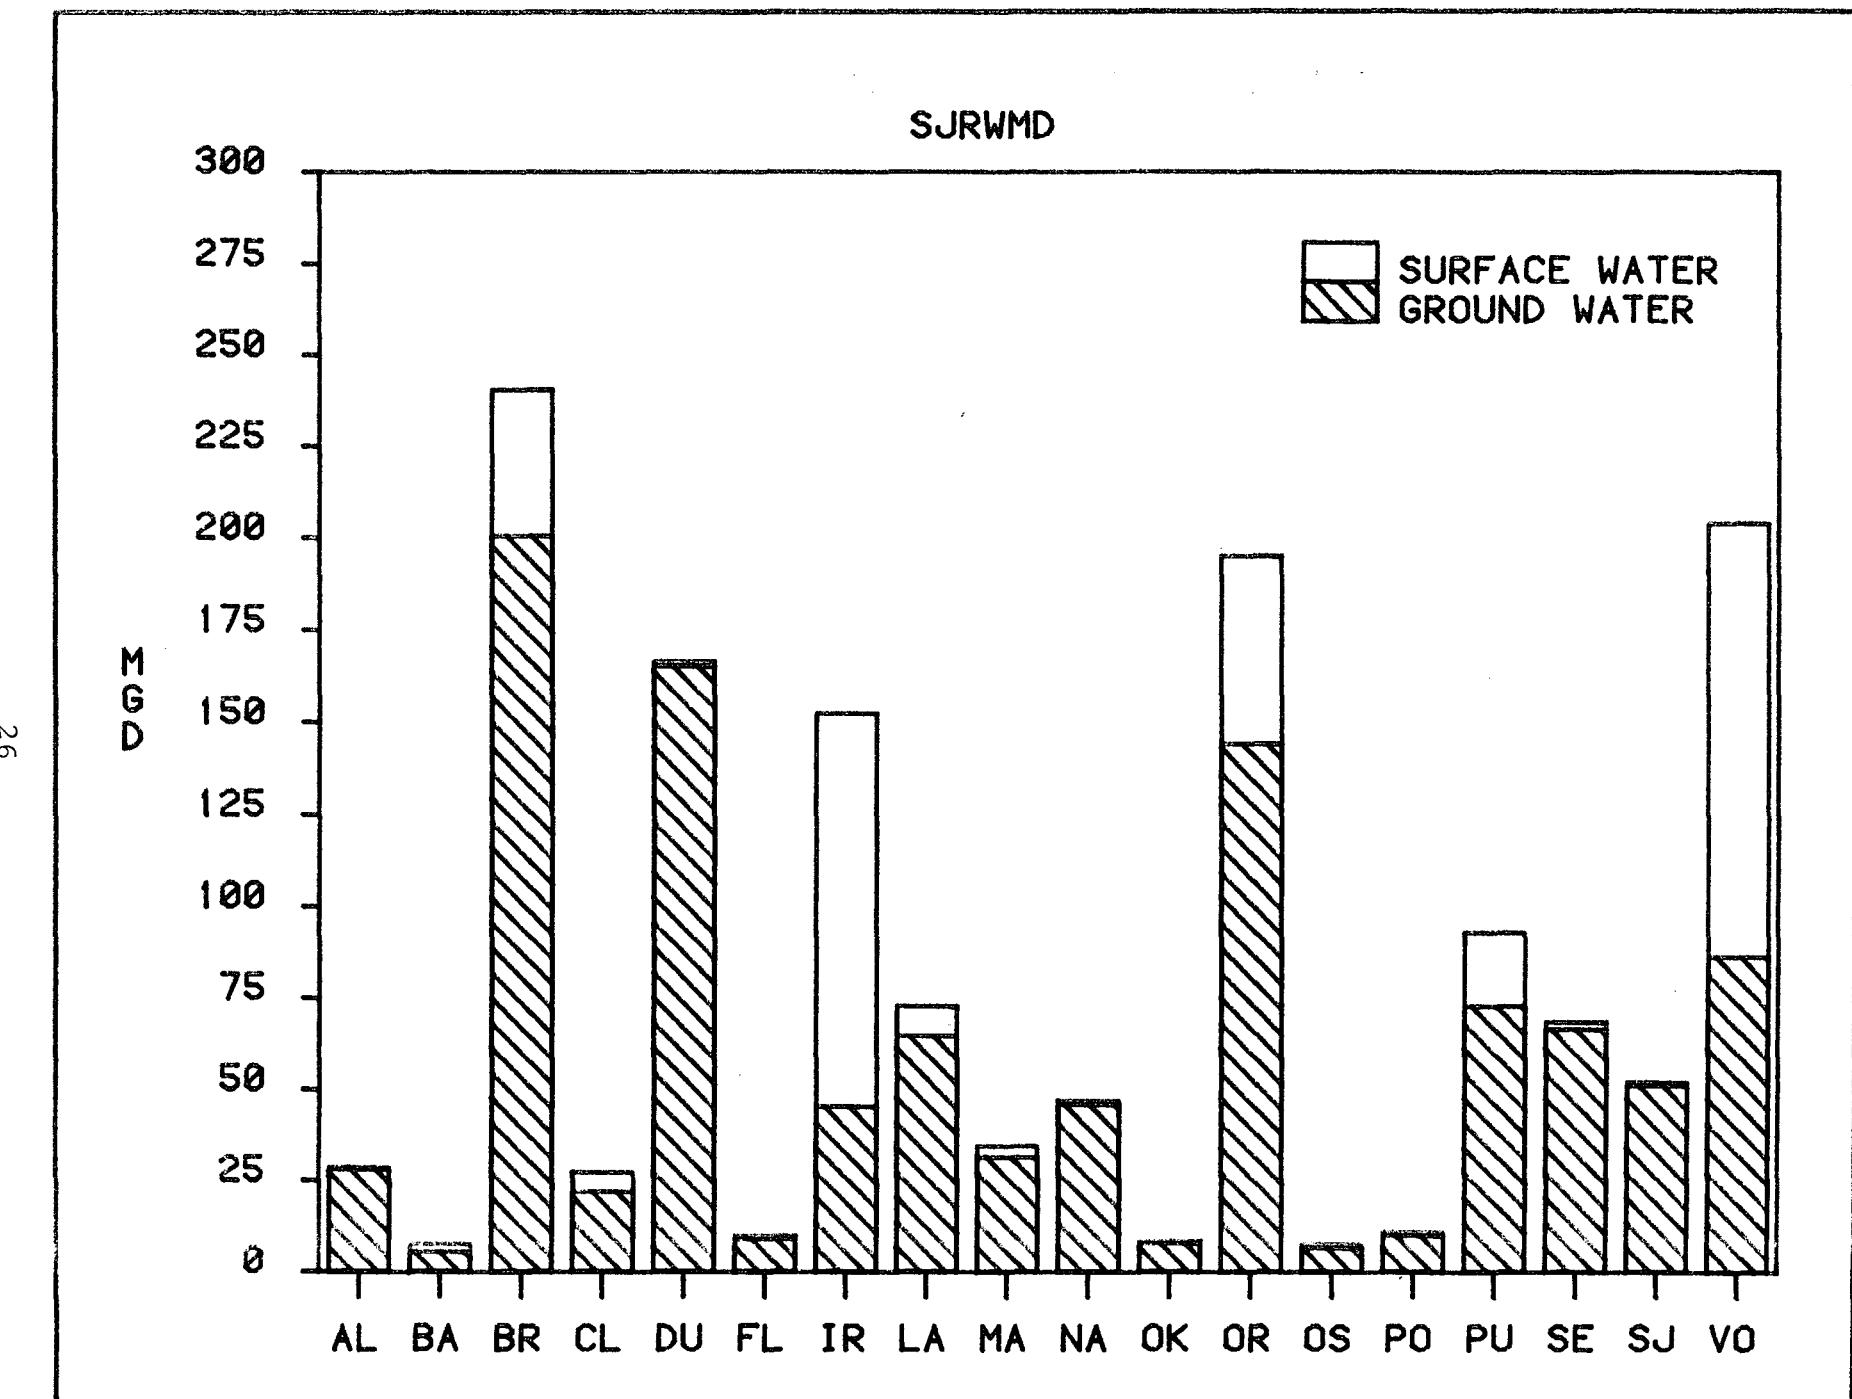

FIGURE 8 County Water Use by Source : 1985

WATER USE BY SURFACE WATER BASIN

In addition to water use by county, the 1985 data is presented by surface water basins (Table 9). The Middle St. Johns River Basin (116.79 MGD) and the Lower Coastal Basin (106.51 MGD) accounted for 61.4% of the fresh surface water used in 1985 (Figure 9). The Oklawaha River Basin (67.93 MGD), and Upper St. Johns River Basin (41.35 MGD) were the only other significant users of fresh surface water.

The Lower St. Johns River Basin (288.75 MGD), Middle St. Johns River Basin (187.13 MGD) and the Oklawaha River Basin (157.87 MGD) were the largest fresh ground water use basins in 1985. These three basins account for 59.5% of the ground water withdrawals (refer to Figure 10 for surface water basin locations).

TABLE 9.--Total Fresh Water Use (MGD)
by Surface Water Basin: 1985

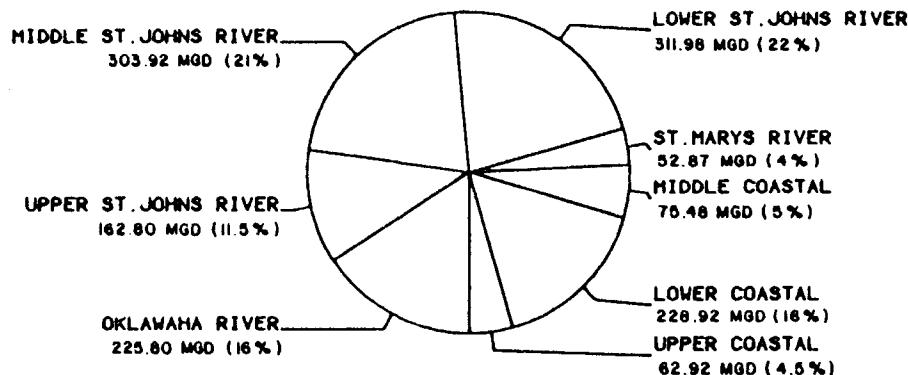

SURFACE WATER BASIN	GROUND MGD	%	SURFACE MGD	%	TOTAL MGD	%
Nassau R.	4.54	0.5	0.62	*	5.16	*
St. Marys R.	50.15	5	2.72	0.5	52.87	4
Lower St. Johns R.	288.75	27	23.23	6.5	311.98	22
Middle St. Johns R.	187.13	17.5	116.79	32	303.92	21
Upper St. Johns R.	121.45	11.5	41.35	11.5	162.80	11.5
Oklawaha R.	157.87	15	67.93	19	225.80	16
Upper Coastal	60.26	5	2.66	0.5	62.92	4.5

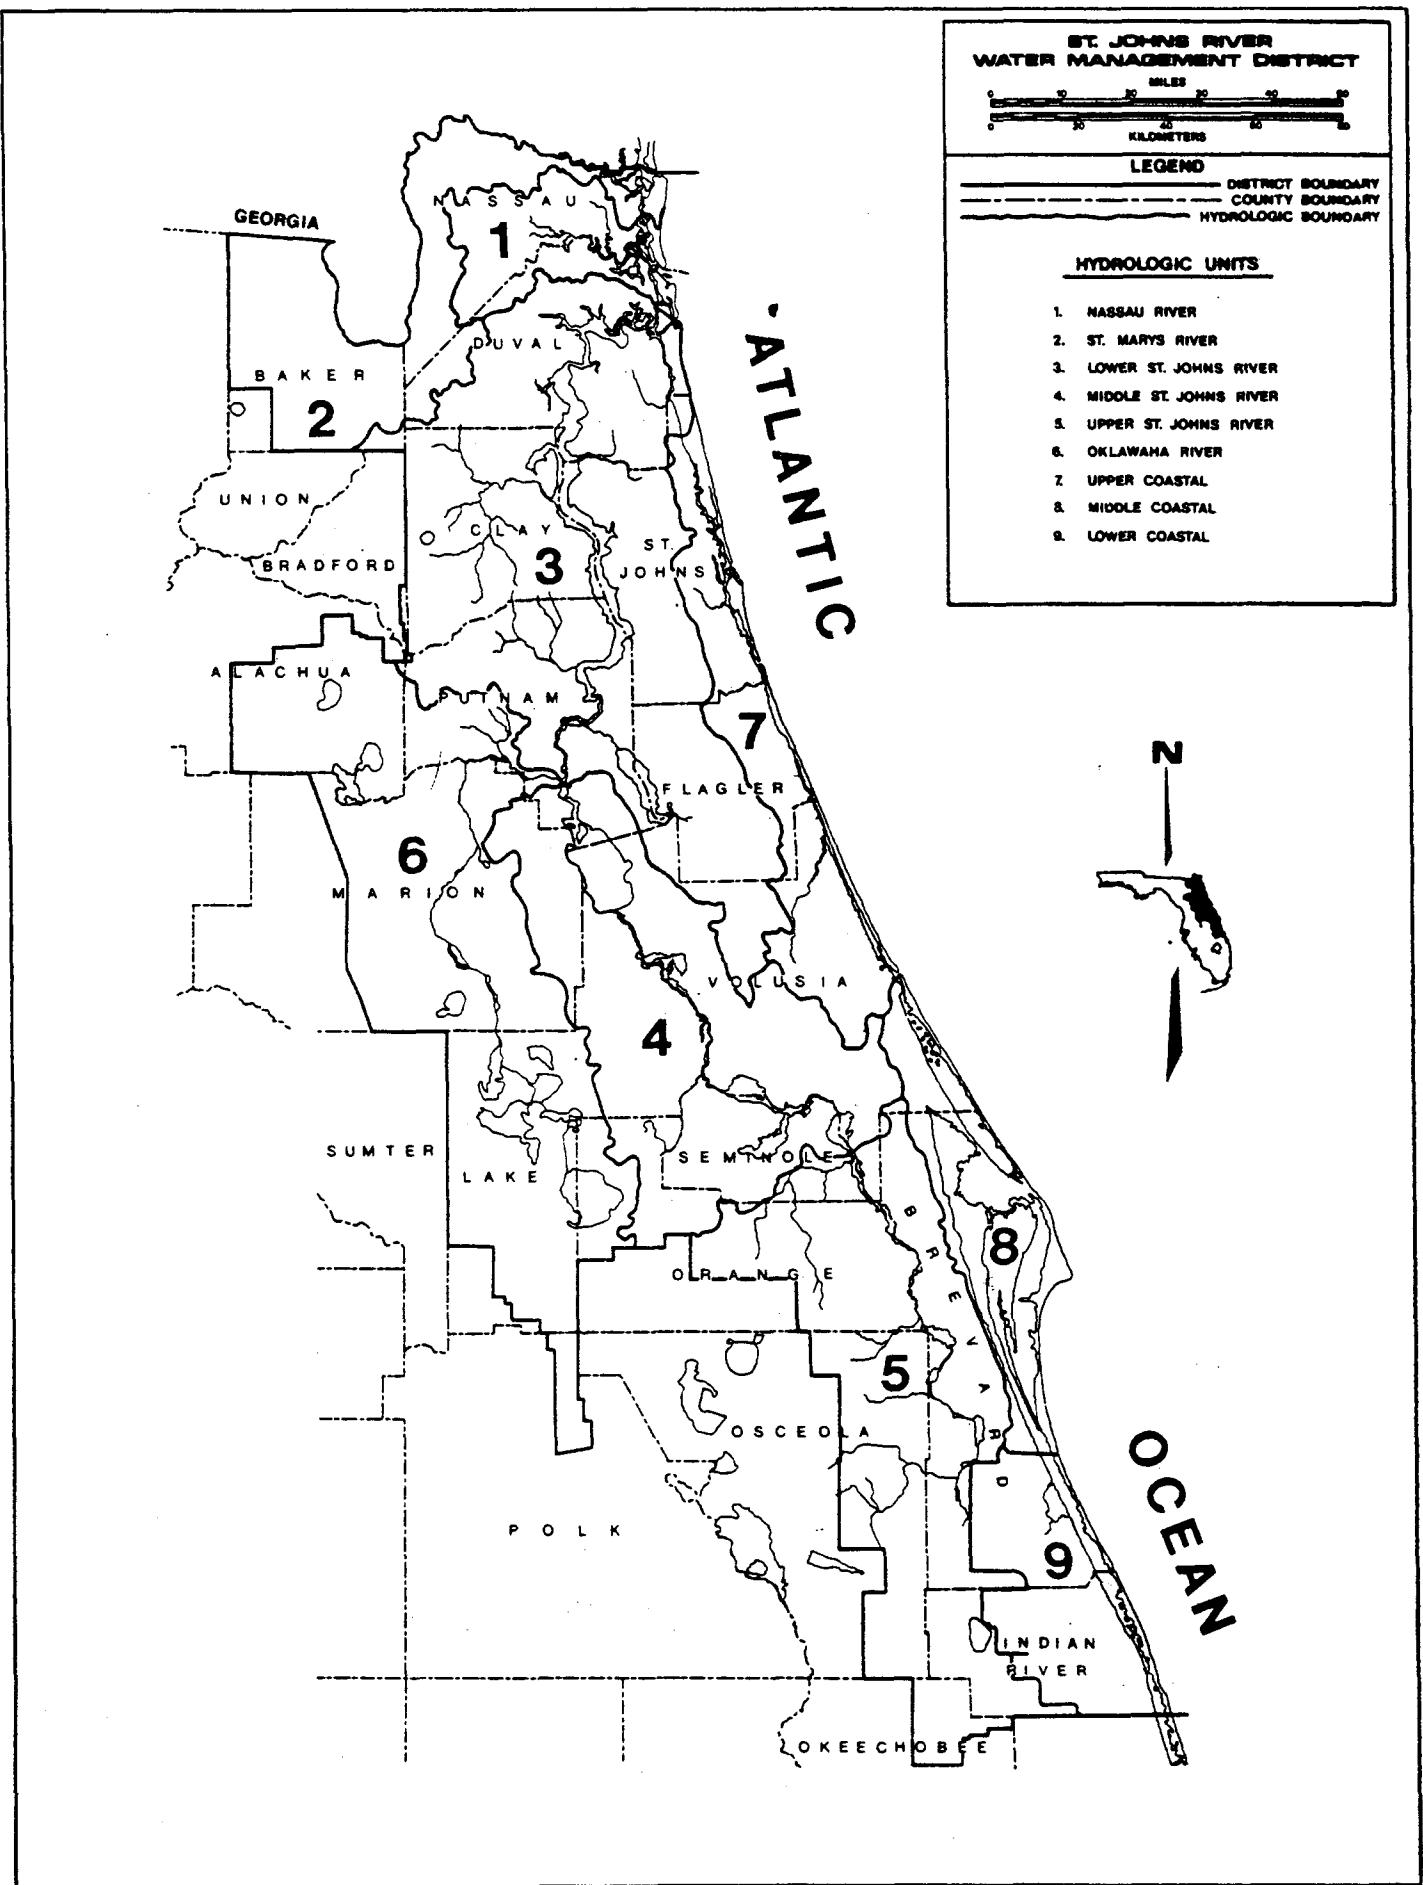

FIGURE 10. St. Johns River Water Management District Hydrologic (Surface) Basin Map

WATER USE BY AQUIFER

The 1985 data has been tabulated such that the aquifer supplying the ground water is identified. For purposes of this tabulation the ground water is delineated by two systems, the Floridan aquifer and non-Floridan (includes the intermediate and surficial aquifers). The Floridan aquifer is the primary source of ground water in the SJRWMD due to its ability to produce large quantities of good quality water. The intermediate and surficial aquifer areas of primary use occur where the Floridan has poor water quality (Figure 11). The intermediate and surficial aquifers are also used for domestic self-supplied wells due to the depth of the top of the Floridan in many areas.

Total ground water use in 1985 was 1,066.09 MGD, of that total an estimated 958.21 MGD or 90% was withdrawn from the Floridan aquifer. The remaining 107.88 MGD was withdrawn from the surficial or intermediate aquifer. Domestic self-supplied accounted for 51% of the ground water withdrawals from the non-Floridan aquifers (Table 10). Figure 12 shows each county's ground water use by aquifer source.

TABLE 10. Ground Water Withdrawals (MGD) by Source: 1985

	Total Withdrawn	Floridan	Non-Floridan
Public	345.44	323.01	22.43

THE PUBLIC AND INDUSTRIAL PUMPAGE IN POLK COUNTY
WITHIN THE ST. JOHNS RIVER WATER MANAGEMENT DISTRICT
FOR 1985 WAS TOO SMALL TO DEPICT.

COUNTY: POLK - 1985

Total Population: 366,268

Total Land Area: 2,048 sq. miles

St. Johns River Water Management Portion

Population: 5,300

Population Public Supply: 770(1)

Population Domestic Self-Supplied: 1,400

Gallons Per Capita Day: 200 - Total County Average

Land Area: 63 sq. miles (40,320 acres)

Acres Farmed: 15,955

Acres Irrigated: 7,305

Fresh Water Use 1985 (MGD)

	GROUND	SURFACE	REUSE	TOTAL

FIGURE A-17 MONTHLY FRESH WATER USE IN ST. JOHNS COUNTY FOR 1985

COUNTY: ST. JOHNS - 1985

Total Population: 68,822

Total Land Area: 660 sq. miles

St. Johns River Water Management Portion

Population: 68,822

Population Public Supply: 52,809

Population Domestic Self-Supplied: 16,013

Gallons Per Capita Day: 133

Land Area: 660 sq. miles (422,400 acres)

Acres Farmed: 30,781

Acres Irrigated: 26,100

Fresh Water Use 1985 (MGD)

	GROUND	SURFACE	REUSE	TOTAL
Public	7.01	0.0	-	7.01
Domestic	2.13	0.0	-	2.13
Industrial	0.08	0.0	-	0.08
Agr. Irrigation	41.00	1.07	0.42	42.07(1)
Thermoelectric	0.0	0.0	-	0.0
Heat Pump/air cond.	0.10	0.0	-	0.10
Free-flowing wells	1.04	0.0	-	1.04
 TOTALS	 51.36	 1.07	 0.42	 52.43(1)

(1) Reuse is not included in Total water use.
